1.0 Introduction

This Environmental Protection Plan (EPP) was developed to supplement the Tree Removal Operations Plan (TROP) to address the hazards associated with removing wildfire-impacted trees in the Camp Fire Burn Scar Area (Project Area) in Butte County (County) on non-federal land. These documents were prepared to support the Hazard Tree Removal Program (Program) developed by the California Governor's Office of Emergency Services (Cal OES) to remove approximately 300,000 fire-impacted trees. The November 8, 2018 Camp Fire incident is a federal- and state-declared disaster, respectively, DR-4407 and the Governor's Executive Order (EO) B-17-18 (Exhibit 1) for which each emergency service organization has responsibility to ensure that delivery of disaster response and recovery activities are compliant with applicable federal and state environmental laws.

There are several terms for wildfire-impacted trees and are cited below with source information for reference:

- "*Vegetative Debris*" is a term that originates in the FEMA Public Assistance Program and Policy Guide (PAPPG, 2018), and is defined as consisting of whole trees, tree stumps, tree branches, tree trunks, and other leafy material.
- "*Immediate Threat*" per the PAPPG (as related to the Program) is a hazard tree that has the potential to fall due to fire damage or structural defect within *five years* from the start of an incident (i.e., the Camp Fire, November 8, 2018) and strike a target of value.
- "*Target of Value*" for the Program is associated with potential of a hazard tree to pose an "*Immediate Threat*" to the public right-of-way (ROW) or public-improved property.
- "*Hazard Tree(s)*" is a term that originates in the U.S. Forest Service (USFS) Pacific Southwest Region Field Guide for Hazard-Tree Identification and Mitigation on Developed Sites (USFS, 2014) and refers to "vegetative debris", tree or tree part that has some level of failure potential within striking distance of a permanent or transitory "*Target of Value*."

Cal OES is the lead emergency response agency delivering disaster response and recovery support in the County. As necessary, Cal OES will engage support resources from the California Environmental Protection Agency (Cal EPA, e.g., Cal Recycle, State and Regional Water Boards, etc.) and the California Natural Resources Agency (CNRA, e.g., California Department of Fish and Wildlife (CDFW)) to fulfill its responsibilities in compliance with state laws. Similarly, FEMA may engage the support of the U.S. Army Corps of Engineers (USACE), National Marine Fisheries Service (NMFS), and U.S. Fish and Wildlife Service (USFWS) to support disaster recovery activities in compliance with federal regulations. This EPP is a basis for obtaining environmental clearances (e.g., waivers, permits, permit exemptions, avoidance and minimization measures) and managing compliance requirements to enable Program

implementation.

2.0 Environmental Protection Plan Objective

The purpose of this Environmental Protection Plan (EPP) is to summarize a process to promote compliance with applicable federal, state, and local environmental and cultural resources laws and regulations for the Program. Proposed operational guidelines are identified herein to ensure that the Program Statement of Work (Section 3.0, SOW – the Cal Recycle Assessment and Monitoring/ Tree Removal contractors’ accepted Scope of Work) addresses:

- Applicable federal, state, local environmental laws/regulations (Table 1),
- Operational support areas (i.e., Table 2, Potential Log Deck, Tree Sorting and Processing Sites) for which permits may be required from local agencies (e.g., Exhibit 2, Butte County Temporary Log Storage Yard Ordinance), and
- Program Best Management Practices (BMPs) and Avoidance and Minimization Measures (AMMs) contained in Exhibit 3, Proposed Environmental Compliance Plan (ECP) and ECP Exhibit 1, Environmental Trigger Matrix. Note that Exhibit 3 will be superseded by state and federal resource agency environmental clearances and/or guidance during the course of Program implementation.

In Section 4.0, Environmental Compliance Framework, there is a description of applicable federal, state and local regulations and description of how they may be integrated with the Governor’s EO B-57-18 that allows certain State statutes, rules, regulations and requirements to be suspended and substituted with “Waivers” issued by the Secretaries of Cal EPA and CNRA upon approval of an EPP. The Governor’s EO does not apply to applicable federal laws for which FEMA is the lead federal agency for presidentially declared disasters such as the Camp Fire DR-4407.

The approach to sorting out the necessary and applicable regulations is contained in Section 5.0, Environmental Protection Plan. The importance of determining the applicable federal, state and local environmental laws and regulations cannot be overstated. This is because non-compliance with applicable environmental laws and regulations may result in de-obligation of federal and state Public Assistance Grant funding.

In addition, this document contains a Training section (Section 6.0) for the staff and contractors comprising the Incident Command Structure (ICS) to learn their responsibilities to:

- Promote activities to be compliant with environmental regulations,
- Communicate within the chain of command, and
- Document Program implementation activities to comply with applicable

environmental regulations and FEMA requirements.

3.0 Program Statement of Work

The Program SOW is contained in the Tree Removal Operations Plan (TROP) incorporated herein by reference. The number of Program-eligible trees addressed in the Hazard Tree Removal Program (HTRP) is contingent on the number of Rights-of-Entry (ROEs) received by the County for privately owned eligible required parcels located along public rights of way (ROW) and certain private roads. The required eligible parcels are within the following five Program Operational Area Branches (five branches) illustrated in Figure 1.0: Concow, East and West Paradise, Lower Butte Creek, and Magalia. Nine map quadrants representing the Project Area are depicted in Figure 1.1 in which relevant environmental Program data are contained and described in this document and include: Stirling City, Paradise West, Paradise East, Pulga, Chico, Hamlin Canyon, Cherokee, Berry Creek, and Shippee.

The Program Operational Areas along publicly- and privately- maintained ROWs, respectively, are up to 300 feet (Public) and 225 feet (Private) perpendicular from either side of the centerline. These areas on either side of an eligible ROW centerline will serve as buffer areas during the performance of tree removal activities. Hazardous trees are eligible if they are at the distance from within the ROW, as equal to two times the trees height. CalFire has identified the tallest tree in the burn area as 130 feet. This baseline takes into account, the road and edge of ROW from centerline being 40 feet (80 feet total) and all dead, or dying trees taken, within a maximum of 260 feet.

The maximum number of trees anticipated to become part of the Program is between 258,084 and 303,473 as established by an inventory completed by CAL FIRE in 2019. This assessment has been broken down into four separate categories, of which Category 1 and 3 are the focus of this mission:

CATEGORY 1: Hazard trees on public property that are a threat to the public ROW/public improved property

CATEGORY 2: Hazard trees on private property* that are a threat to the CalRecycle debris removal effort and/or the CalRecycle crews and the public ROW.

CATEGORY 3: Hazard trees on non-PPDR parcel, private property** that are a threat to the public ROW/improved property.

CATEGORY 4: Hazard trees on private property*** that constitute a threat to abutting or neighboring improved private property.

To date, approximately 4,860 properties, of about 13,500 eligible property owners

have submitted ROEs in the Program. More ROEs are expected during the HTRP implementation and will be addressed at that time. The Program-eligible Required Parcels and Roads are illustrated in Figures 2.1- 2.9 by Map Quadrant and Operational Area Branch. Please note that there are long stretches of eligible roads that have no required parcels adjacent to them. Surveying these areas in advance of the Program is necessary to determine presence or absence of a required hazard-tree abatement.

3.1. Environmental Work Scope

Although there was an environmental work scope for the 2019 Camp Fire Debris Removal Operation Program (DROP) Private Property Debris Removal (PPDR) program), the HTRP SOW activities will require additional federal, state, and local environmental agency consultations and/or permits in advance of Program implementation. This is because the AMMs and/or BMPs need to be reviewed for applicability by either the federal and state resource agencies and tailored for the new SOW tasks identified below:

- Hazard Tree and Environmental Assessment and Monitoring,
- Hazard Tree Harvesting (e.g., felling, extraction and transfer to log deck),
- Hazard Tree Processing (e.g., de-barking and chipping),
- Hazard Tree Transportation to End Use Facilities, and
- Operation Team Basecamp Housing.

Prior to these activities occurring within or proximate to the five branches, the environmental compliance requirements will be identified to address the following potential impacts:

- Federal and/or State protected species' habitat or occurrences,
- Surface waters,
- Standing structures (existing residences and commercial buildings or those in construction),
- Infrastructure improvements (i.e., utilities),
- Local and/or regional transportation routes, and
- Historical, archaeological, and tribal cultural resources.

Figures 3.1-3.9 illustrate by Map Quadrant and Operational Area Branch the hazard trees to be removed within the Town of Paradise(Town) and unincorporated communities in the County within the five Operational Area Branches. The hazard trees include the 10,500 trees within the Town, and County trees that were inventoried initially as "Category 1 and 3 Trees" to be considered for the Program. In addition, 263 hazard trees that were inventoried as "Category 1 Trees" by the Paradise Irrigation District and the Town Recreation and Park

District are illustrated as well. Note that the highest concentrations of hazard trees occur within incorporated and unincorporated communities.

3.1.1 Hazard Tree and Environmental Assessment and Monitoring Program

The baseline tree and environmental data will need to be updated or validated by the Cal Recycle Hazard Tree and Environmental Assessment and Monitoring Program, which will commence in April 2020. In addition, the physical environmental constraints such as topographic contours, wetlands and stream classes illustrated in Figures 4.1-4.9 will also need to be validated by Cal Recycle and its contractors prior to Program initiation. The Concow, East and West Paradise, Lower Butte and Magalia operational branches have stream crossings that may require bridge and/or culvert upgrades prior to work commencing. The greatest number of stream crossings appear to be concentrated in the East and West Paradise Branches.

Based on the Cal Recycle Request for Proposal (RFP) dated November 15, 2019 the Assessment and Monitoring surveys of the program eligible trees will be conducted in advance of tree felling; and will take up to 9 months, or more, during which eligible owners will continue to submit ROEs, or the county posting a Notice to Abate and submitting the property into the Program. An additional two months for post-removal documentation may be needed, as noted below [this will need to be updated].

- Anticipated start: May 1, 2020,
- Anticipated completion date (Survey): continuous through the Program; individual ROE data are expected to be returned to the Cal OES and FEMA Environmental Team on a daily basis,
- Anticipated release of Information for Bid (IFB) for tree removal: May 1, 2020
- Anticipated start date (Tree Removal): June 15, 2020,
- Anticipated completion date (Tree Removal): 270 working days (March 12, 2021), and
- Post-removal documentation anticipated start date: March 12, 2021.

The anticipated start of Tree Removal is dependent on the Invitation for Bid (IFB) to be issued by Cal Recycle in April 2020, subsequent review of bids, and contractor selection in May 2020. Ideally, the Assessment and Monitoring work will commence and live data will be integrated into the HTRP and EPP in advance of the IFB Scope of Work being released in May 2020. The Cal OES and FEMA Environmental Team will use the process below to categorize eligible properties until information from the Assessment and Monitoring task are submitted for review and evaluation. Because trees within the Town and County ROWs were

inventoried in 2019, it is expected that those sets of trees will be among the first to be subject of the Assessment and Monitoring activities.

3.1.2 Eligible ROE Environmental Review Process

Figures 5.1-5.9 illustrate baseline environmental data for the Operational Branches from the California Natural Diversity Database (CNDDDB), Critical Habitat, and 2019 DROP observations.

Without the data generated from the Assessment and Monitoring work to validate, or update the baseline data (to be provided by Cal Recycle), all eligible required parcels will be considered to need Environmental Assessment, or have work restricted. This will be in order to check if these areas are inhabited with state and/or federally listed species, habitats, watercourse, and tribal and/or archaeological resources. This assumption is because the Program area is in the process of recovering from the Camp Fire and the periods of late winter through summer are the most active for aquatic and terrestrial species. Therefore, until the baseline environmental data are validated with current surveys, the required parcels will be categorized in one of the following two Environmental Constraint Zones:

1. Yellow Zone, Properties that are suspected to be either habitat and/or inhabited by state and/or federally listed species and/or archeological or cultural resources.
2. Red Zone, Properties that are known to be either habitat and/or inhabited by state and/or federally listed species and/or archeological or cultural resources in which work must be restricted, or postponed until consultation and/or permits are secured.

The application of the two Environmental Constraint Zones are illustrated in Figures 6.1-6.9.

The updated data from Cal Recycle Assessment and Monitoring activities will be the basis for the Cal OES Environmental Team reclassifying ROE sites among the following three Environmental Constraint Zones (e.g., from red to yellow or to green zone) prior to the start of the hazard tree harvesting activities. It is assumed that the necessary local, state, and federal environmental clearances will be obtained in advance of the Program commencing.

However, the BMPs and AMMs as summarized in the ECP (Exhibit 3) are considered conservative Program guidance standards for planning purposes and may be updated and revised upon receipt of the 2020 Cal Recycle Assessment and Monitoring surveys and/or superseded by state and federal resource agency environmental clearances.

1. Green Zone, ROEs with minimal environmental constraints that will be confirmed by a CDFW/USFWS-qualified on-site environmental monitor, an archaeologist and/or tribal monitor that will report back to the Cal OES and FEMA Environmental Team for approval to proceed with tree harvest activities, in accordance with, respectively, local, state, and/or federal agency permits, waiver BMPs, or AMMs;
2. Yellow Zone, ROEs with moderate environmental constraints that will be confirmed by an CDFW/USFWS-qualified on-site environmental monitor, an archaeologist, and/or tribal monitor that will report back to the Cal OES and FEMA Environmental Team for approval to proceed with tree harvest activities, in accordance with local, state, and/or federal agency, respectively, permits, waiver BMPs, or AMMs; and
3. Red Zone, ROEs for which work is restricted to protect seasonal species and habitat. Environmental conditions will be confirmed by a qualified on-site environmental monitor and/or tribal monitor that will report to the Cal OES and FEMA Environmental Team for approval to proceed with tree harvest activities, in accordance with local, state, and/or federal agency, respectively, permits, waiver BMPs, or AMMs.

3.1.2 Hazard Tree Harvesting

The process of timber harvesting is comprised of five tasks:

1. Timber acquisition (e.g., moving and staging equipment to the tree),
2. Felling and tree preparation for extraction (e.g., delimiting, topping, and bucking),
3. Extracting the tree to a log deck, or landing (e.g., skidding or forwarding),
4. Processing (e.g., chipping or loading it onto a log truck), and
5. Transporting processed tree to an end use facility.

“Light-on-the land” harvesting techniques that are expected to be used to protect the Operational Area’s environmental characteristics:

- Combine and integrate management activities to reduce traffic;
- Avoid unnecessary site re-entry;
- Operate on snow or when soils are frozen or dry;
- Avoid rutting within the site and hydrologic impacts from roads and skid trails;
- Divert water from roads, skid trails (if developed), and landings;
- Infrastructure (roads, skid trails (if developed), and landings);
 - Minimize within the harvest site,
 - Share between harvest sites,
 - Use designated roads or skid trails (if developed);
- Operate equipment and machinery along the contours, rather than up and down slopes;
- Store lubricants and fuels in appropriate (e.g., approved, labeled) containers that are located away from water; and
- Incorporate and administer appropriate environmental regulations in the HTRP.

3.1.2.1. Timber Acquisition

Timber acquisition is the process of moving and staging equipment to the target tree(s) for removal. The Operational Area for Program-eligible publicly maintained and privately maintained ROWs, respectively, is 300 feet and 225 feet perpendicular from either side of the centerline. It is expected that moving and staging equipment will use the public and private ROWs for which encroachment permits will be obtained in accordance with Town and County requirements (Exhibits 4 and 5). Construction of temporary access roads may be necessary to acquire trees located either up- or down-slope from the Operational area as identified in the TROP. Options for accomplishing tree acquisition include driving, swinging equipment to the tree(s) and can include rubber or tracked tree-harvesting equipment.

Although construction of new temporary, new/improved permanent roads, or temporary/permanent water course crossings, are neither planned nor expected to be needed to access the eligible hazardous trees, there may be need of developing

temporary roads to access hazard trees on a limited basis on non-federal lands. Those areas will be identified in the Cal Recycle Assessment and Monitoring activities during the course of the program. However, if new roads, or permanent water course crossings, grading or other ground disturbing activities are needed to support timber acquisition activities, these will be performed in accordance with the ECP (Exhibit 3), and will be permitted for Federal, State, and local regulations separately from the Timber Harvest Plan (THP) Exemption. The chosen THP Exemption is prohibited from the building of new roads and crossings. If a temporary road, or crossing would be necessary options for exemptions may need to be waived by the CNRA Secretary, or fall under the 1052.1.b Emergency Notice; or for new roads, or crossings, may fall under the 1051 Modified Timber Harvest Plan, or a full Timber Harvest Plan, may prove necessary per the discretion of Cal Fire. These activities would be isolated plans for the affected area, beyond the inaccessible crossing, or road. These plans and exemptions would require individual land owner signatures.

New temporary, new/improved or permanent roads, or temporary/permanent water course crossings, may include the following:

Roads

- Skid trails: including removal of vegetative brush from a location to provide access for tree removal equipment. This would be accomplished by moving brush to the side for an access path for personnel and equipment.
- Spur roads: Use of equipment to grade and grub the ground. Placement of a temporary gravel access. Placing aggregate base rock either on top of existing, over a cleared pathway (above), over geotextile filter fabric.
 - Access could be expanded and extended to provide access for temporary bridges. An increase is needed on the amount of materials and types to make these improvements.
- Road improvements: The grading of road and drainage ditches, compaction, and use of rock to improve and harden an existing road, which has been deemed impassable, due to heavy rutting, road washout, or other issue. Road building standards will follow Forest Practice Law.

Crossings

Temporary Bridges

A temporary bridge is used when either access is not available or the existing access is not adequate. Bridges are rented by the contractor and arrive on site for installation. Size and length are specified by the span and the anticipated loading needed. Approaches are needed for travel onto and off the bridge Temporary abutments may

be needed to support the bridge over the span. It can also be used as the termination point for the approach. A common example is a row of concrete blocks can be used to support the bridge, the block is also used as a barrier for the compacted approach to end.

Culverts

Culvert can be used for water crossings where the installation of a bridge is not feasible and the impact to fish and other aquatic is minimal. Culverts are appropriately used for access across drainage ditches, intermittent streams and small waterways. Most of the existing culverts encountered in this project will be existing in various states of use. Some will be in good condition with the ability to carry the intended flow while the capacity of others will be impacted by blockages from lack of maintenance.

Lastly, temporary culverts may be needed to allow for access. Placement and materials for temporary culverts will be supervised to ensure environmental conditions are understood and met by the contractors. An example of this would be a culvert needed to provide temporary vehicle access across a small waterway. The culvert would be placed and backfilled with cleaned washed rock, then a layer of geotextile filter fabric would be placed to separate the washed rock from the aggregate base. Additional aggregate base would be added and compacted to create a stable surface for equipment. The materials would be removed after the need for access is completed; or before a 100-year storm event.

Low Water Crossings

Low water crossings are a useful alternative when a bridge is uneconomical. These may have limited application during storm events. Some of the roads within the project area have existing low water crossings. These vary from a minimally approved ford crossing a stream to concrete aprons crossing the stream with the water flowing over. Vented fords use pipes (culverts) under the crossing to allow low flows to pass through. Boxed culverts are one of the best alternatives, allowing a natural stream bottom for channel function.

Low water crossing need maintenance to maintain function. Contractors may place metal plates over the concrete to better distribute the loading for equipment. Sediments and vegetative debris may also have to be cleared out. Build up occurs over time and can impact the functioning of the vents.

3.1.2.2 Hazard Tree Felling

Felling is the process of cutting standing trees and may include the following activities: felling, limbing, topping, and bucking into individual products. Felling will be undertaken in accordance with federal and state Occupational Health and Safety Administration (OSHA) standards, which require that a separation of

200 feet between adjacent felling activities.

Of the three types of harvesting systems, shortwood, tree-length, and full tree, only the first two are expected because of the degraded condition of the hazard trees. Therefore, the methods of felling to likely be used for the Program include:

- Hand-crews (e.g., "no bunching," using qualified loggers/sawyers, working on gentle slopes, all sizes of trees),
- Feller-bunchers (e.g., a motorized vehicle that grabs each tree with a grapppler, cuts at base, shreds branches resulting in a log that is ready for loading in a log deck),
- Masticators (e.g., rubber-tire only, reach from the road, focusing on steep slopes with a long-arm and use a grinder end, chip small trees from top to bottom), and
- Grapple-saws (e.g., a remote-controlled knuckle crane with reach of up to 150 feet that may be stationary with use of freeboard legs. Cuts trees from the top-down and can directly load cut sections onto logging trucks).

Cable logging is a technique that may also be used, only as necessary, for tree extraction from steep slopes. As noted in the TROP, Rope Access Work will be allowed per California Code of Regulations, Title 8, Section 3270.1.

Wood chips may remain in place for erosion control, upon CalFires' approval of the Timber Harvest Exemption.

Because there is potential for ground to be disturbed during the felling operations, pre-work assessment surveys and on-site monitoring for environmental, archaeological, and tribal monitoring may be required, as specified in the ECP.

3.1.2.3 Tree Extraction

The method of tree extraction may likely require use of either:

- Boom-loading log truck (short logs), or
- Loader (e.g., skid steers, loaders with grapples, excavators with grapples).

The log trucks are likely to be 32 feet in length and will transport the felled trees to a central landing or log deck along public roadways as described in the Tree Removal Traffic Management Assessment.

It may be necessary to upgrade, or more likely protect existing bridges with plates, or other means to carry the weight of the felled timber to a central landing or log deck for which local, state, and federal permits may be required as noted in Table 1. In addition, because there is potential for there to be ground disturbance during the Tree Extraction, on-site monitoring for archaeological and

cultural resources will be required, as specified in the ECP.

3.1.3 Hazard Tree Processing

The trees will be sorted for processing as either timber for forest products or biomass chips for off-site energy facilities.

The biomass chips will be produced at the log deck sites using a tub grinder in accordance with the required size and moisture specifications of one of the three energy end use facilities. The chips will be transported to the energy end use facilities likely using the following equipment:

- Ten-wheelers (chipped materials),
- End Dumps (chipped materials), and
- Roll-off boxes (chipped materials).

It is possible that due to the degraded condition of the trees that chipping the trees may need to occur on individual properties using chip vans (with either a walking bottom or end dump capacity) for which either the Town or County may require a conditional use permit for the temporary industrial land use.

3.1.3.1 Processing at Log Deck Sites

Table 2 summarizes the 17 potential log deck, timber sorting, and processing sites within the five HTRP operational branches; two is publicly owned and 15 are privately owned. All of the sites are illustrated in Figure 7.0.

Unincorporated Butte County timber processing is an allowed (permitted) use in the Timber Mountain (TM), Timber Production (TPZ), Heavy Industrial (HI), and General Industrial (GI) zones. This Urgency Ordinance expires December 31, 2020. In addition Chapter 53, the Camp Fire Recovery Ordinance, allows up to 15 temporary log storage and processing yards with an administrative permit in the following specified zones:

- Agriculture (AG), limited to lands classified as “grazing and other lands” by the Department of Conservation’s Farmland Mapping and Monitoring Program,
- General Commercial (GC),
- Foothill Residential (FR),
- Planned Development (PD),
- Public (P), and
- Neal Road Recycling, Energy, and Waste Facility Overlay (-RW).

Cal OES and FEMA evaluated potential sites 1 through 10 for environmental constraints on January 15, 2020. The initial Environmental Constraint Zone criteria were applied to these sites; the first eight sites were determined to be in the Yellow Zone, and facilities (Nos. 9 and 10) were determined to be Red Zone and eliminated from further consideration because they are within designated Critical Habitat for the federally listed vernal pool tadpole shrimp. The County Temporary Log Storage Yard Ordinance (Exhibit 2) explicitly prohibits development of such land for temporary log decks.

Potential site nos. 11 through 13 were added on February 20, 2020 for consideration for which the County has identified the Paradise Airport, no. 11, as unsuitable for potential log deck use. This is because the parcel has an "AIR zone" land use designation and the log deck usage is prohibited within this zone, as specified in the County's Zoning Ordinance (Chapter 24 of the Butte County Code). Site No. 12 has an unassessed surface water that may need to be evaluated for Waters of the U.S prior to development. Site No. 13 is adjacent to Site 12; both are designated as "Yellow Zone" properties that would need further environmental assessment to determine whether their development would be allowed in accordance with the County Temporary Log Storage Yard Ordinance. Site No. 14 was added February 28, 2020 as a possible site, in an active rock quarry, with an assessed Waters of the US determination, 404 permits, biological assessment, CEQA documentation, and a County Urgency determination for the Camp Fire as a lay down yard. In the area are vernal pools, including vernal pool tadpole shrimp critical habitat; and Dry Creek in the vicinity. This site may require consultation between the contractor and Department of Conservation due to its designation as a mine.

Table 2 – Potential Log Deck, Timber Sorting, and Processing Sites

Map # and Public/Private	Parcel Size /Potential Usable area (acres)	Location	Uses (e.g., Decking, Chipping, Loading, Materials Storage)	Attributes
1 -Private	>120/>40	3100 Skyway Road, Paradise, CA 95969 (Tuscan Ridge) APN 040-520-100 APN 040-520-103	All	Developed, Previously reviewed by FEMA EHP, Accessible

22 - Public	70	34.5	Pullout		330'x110'	39.729571, -121.494496
23 - Public	70	35.75	Chain on area		585'x75'	39.744537, -121.489070
24 - Public	70	39.1	Pullout		340'x45'	39.762153, -121.472680
25 - Public	70	42.15	Pulga	Pulga Maint Station will be of use part of the summer	640'x60'	39.805725, -121.438374
26 - Public	191	2.0	Pullout	Clark Rd. South of Paradise, just South of airport	360'x100'	39.706827, -121.610545

The potential log deck, timber sorting, and staging facilities may require local, state and federal agency consultations and environmental permits prior to being developed for the temporary uses, including processing, to support the Program as summarized in Table 1.

3.1.3.2 Biomass and Forest Product End Uses

As described in the Tree Removal Traffic Management Assessment, the biomass chips and timber will be transported to one of the following end use facilities for hazard tree disposition summarized in Table 3 and illustrated in Figure 8.0. These facilities are within 100 miles of the Operational Area. The hazard tree end uses are in alignment with sustainable reuse of high hazard zone wood waste, which is 75 percent to biomass, and approximately 25 percent to alternative forest product manufacturing facilities (e.g., sawmills, landscape industry, wood products).

Table 3 – End Use Facilities for Hazard Tree Disposition

Company	Location	End Use
Apex Lumber	4288 State Highway 70, Oroville, California 95965	Forest Products
ARP Loyalton Cogen	100 Railroad Ave, Loyalton, California 96118	Energy
Honey Lake Power / Greenleaf Power	732-025 Wendel Rd, Wendel, California 96136	Energy

Old Durham Wood	1156 Oroville Chico Hwy, Durham, California, 95938	Forest Products
Sierra Pacific Industries	1440 Lincoln Blvd, Lincoln, California 95648	Forest Products
Wheelabrator	20811 Industry Rd, Anderson, California 96007	Energy

3.2 Private Properties on Federal Lands

Some of the properties with private entity inholdings, required to have hazardous tree removal, exist within, or intersect Federal lands, including the USFS and the Bureau of Land Management (BLM). With this finding, it may be necessary to consult with Federal partners from the US Forest Service and BLM. Figure 9 shows approximately 28 required parcel, which may be eligible for the program, including four properties that have submitted Right of Entry (ROE) forms as of February 28, 2020 for this mission. These ROE properties, reside along Pulga Road, and Camp Creek Road, within the Plumas National Forest.

3.3 Operation Team Basecamp Housing

The HTRP operation team is expected to be deployed to temporary accommodations within 100 miles of the Program area. Basecamp housing accommodations at Tuscan Ridge and Oroville Industrial Parks that were used, may be used for the HTRP operations. These basecamps have been permitted by the county up to December 2020.

In the event that the referenced basecamp housing may be used, there may be local permitting requirements for temporary occupancy and/or modifications to existing facilities that may be required. Consultation with FEMA EHP and State Regulators, may need to occur

4.0 Environmental Compliance Framework

The project area is located in the Eastside Sacramento River Watershed whose prominent surface waters include Butte Creek, the West and North Forks of the Feather River, the latter forming the border of the Upper Feather River Watershed. Pine forests, or, timberlands dominate the higher elevations on eastern portion of the project area. These areas hosted Native American settlements and contain a complement of protected aquatic and terrestrial species.

The Program will entail removal of up to 300,000 hazard trees that pose an immediate threat to public health and property in the project area that are on

public and/or private properties that could fall onto public rights of way or public structures. This work will be performed in compliance with applicable federal, state, and local environmental laws and regulations that are summarized below and presented in Table 1:

Federal

- Clean Water Act (CWA), e.g., Section 401, United States Environmental Protection Agency (USEPA)/State Water Resources Control Board (SWRCB) water quality certification; Sections 301 and 402, National Pollutant Discharge Elimination System (NPDES)/Storm Water Pollution Prevention Plan (SWPPP); Section 404, fill and wetlands U.S. Army Corps of Engineers (USACE),
- Endangered Species Act (ESA, e.g., Section 7, USFWS, and the NMFS),
- Magnuson-Stevens Act (MSA)
- Migratory Bird Treaty Act (USFWS),
- Bald and Golden Eagle Protection Act (USFWS and CDFW),
- National Historic Preservation Act (e.g., Section 106), FEMA, California State Historic Preservation Officer (SHPO), and federally recognized tribes,
- Resource Conservation and Recovery Act (RCRA, e.g., Subtitle D - Non-Hazardous Waste for Timber and BioMass disposal, USEPA), and
- National Environmental Policy Act (NEPA, FEMA).

State

- Clean Water Act (CWA, i.e., Porter-Cologne Act/ California Water Code § 13260; California Code of Regulations, Title 23, § 3855 et seq., water quality certification from the appropriate regional board or state board, SWRCB)
- California Endangered Species Act (California Fish and Game Code § 2050-2115.5),
- California Fish and Game Code (CFGF) Section 1600 (e.g., Lake and Streambed Alteration Agreement), CDFW),
- California Migratory Bird Protection Act (CFGF Section 3513, CDFW),
- California Clean Air Act (CCAA)
- California Native American, Historical, Cultural and Sacred Sites Act ('Sacred Sites Act', SHPO, and FEMA/Cal OES tribal Liaison),
- E.O. B 10-11 (California Native Tribal Consultation),
- AB-52, Gatto. Native Americans CEQA Consultation,
- Z'Berg-Nejedly Forest Practice Act (2019 California Forest Practice Rules (FPR), CAL FIRE),
- Native Plant Protection Act (CFGF Section 1900 et seq.)

Local

- California Planning and Zoning Laws (Planning Departments of Butte County and the Town of Paradise), and

- Butte County and Town of Paradise Emergency and Urgency Ordinances

Each government entity will exercise an Environmental Protection Approach for the Program that is described below:

4.1 Federal Process

FEMA will initiate and conduct an Environmental and Historical Preservation (EHP) review of a project when a federal Public Assistance grant is generated for the Program. Federal Laws and Regulations that may apply, in addition to State Laws and Regulations, include the following that are identified below by SOW activities:

- *CWA Section 402, NPDES/SWPPP.* Storm Water Pollution Plan(s) (SWPPPs) will be developed and followed during the Program as required for the operational areas and facilities. It is likely that either the consultant, or its contractors may be responsible for developing the SWPPPs for submittal to the State Water Resources Control Board (as a federally delegated agency for CWA Section 402) and complying with their terms and conditions. This document will need to be developed following a Notice to Proceed and before work begins, incorporating the requirements in the ECP, mandates from CalFire and the Central Valley Water Board, pertaining to all work areas and log decks. This SWPPP will need to be approved by the Central Valley Water Board.
- *CWA Sections 404 and 401.* Permit authorizations by the USACE and the Central Regional Water Quality Control Board (CVRWQCB) for the placement of fill material and temporary bridges below the Ordinary High Water Mark of any body of water or in wetlands. This would likely be necessary over the course of the project as temporary crossings, or crossing repairs need to be implemented. It is likely that Cal OES will be the lead and responsible for preparing the applications for permits associated with CWA Sections 404 and 401 in collaboration with FEMA. These permits will likely run under the category of Regional General Permit 8, for Emergency Projects; or under the Nationwide Permit 3, Maintenance (non-reporting). These permits will need to be produced and submitted in a manner, in which the project has 14 days to begin. Time restrictions will be in place to conduct these projects.
- *ESA Section 7.* Consultation between FEMA (or possibly the with the USACE) with USFWS, and/or National Oceanographic and Atmospheric Administration (NOAA) NMFS will occur if FEMA determines that any component of the project may affect Federally Listed, Endangered, Threatened or Proposed Species (e.g., Anadromous Salmonids) or designated critical habitat. This consultation may take up to 60 days to complete, and work near Federally Threatened, or Endangered Habitat may not proceed.

For natural resource considerations, in 2019 FEMA Region IX has entered into a Programmatic Biological Opinion (PBO) with the USFWS (Sacramento Region, Exhibit 6a), and a separate PBO with NMFS (statewide, Exhibit 6b, need from FEMA) to enable consistent application of the ESA for disasters in California. Each PBO may assist to

expedite the necessary consultations between federal resource agencies for protected federally listed species in the project area if FEMA, in coordination with USFWS and NMFS determines they are applicable to the Program.

In addition, FEMA has entered into a Programmatic Agreement (Agreement) with the State Historic Preservation Officer (SHPO) and Cal OES that governs FEMA's compliance with Section 106 of the National Historic Preservation Act (NHPA). FEMA is responsible for conducting consultations with federally recognized Native American Tribes and with the SHPO in accordance with the NHPA. The Agreement identifies the process FEMA follows to consider effects of projects on historic properties (i.e., historical, archaeological, and tribal cultural resources that are on or eligible for listing on the National Register of Historic Places) and identifies activities that may be exempt from consultation. When the ROEs are received for the properties whose owners will become part of the Program, the necessity of developing an Archaeological Monitoring Program will be determined by FEMA in consultation with the SHPO and tribes. It is FEMA's responsibility to assess, avoid, minimize, and/or mitigate potential adverse effects to historic properties in the Program area in accordance with the NHPA.

4.2 State Process

Governor's Executive Orders

Unlike the federal process, in accordance with the Governor's Executive Order (EO) B-57-18:

"...the state statutes, rules, regulations and requirements may be suspended to the extent they apply to: removal, storage, transportation, and disposal of hazardous and non-hazardous solid waste and debris resulting from wildfires that are subject to the jurisdiction of agencies within the Cal EPA and the CNRA, and necessary restoration and rehabilitation of timberland, streams, rivers, and other waterways. Individuals that desire to conduct activities under such a suspension of statutes, rules, regulations, and requirements shall first request that the appropriate Agency Secretary, or his delegate, make a determination that the proposed activities are eligible to be conducted under the suspension."

Suspensions that are granted in accordance with a Governor's EO are referred to as "waivers." An EPP, or equivalent document, is generally required, prepared and submitted to either or both Cal EPA and CNRA Secretaries to obtain a waiver. The EPP addresses the potentially impacted resources and identifies BMPs that can be implemented to minimize potential impacts to natural resources associated with temporary emergency response and recovery construction work. Such waivers were granted for the Debris Removal Program by Cal EPA and CNRA Secretaries for the DROP (Exhibits 7 and 8) and are expected to be either extended or modified to support the HTRP implementation.

The principal differences in the DROP and HTRP are that the trees are habitat for protected avian species, many of which have been impacted by private property and USFS tree removal programs over the past year. In addition, the timing of the HTRP implementation will coincide with protected avian species nesting seasons for which there are limited operating periods between March and October of each year for which biological surveys and consultations with the state and federal resource agencies is expected. The purpose of the agency consultations is to refine or revise the existing waiver BMPs and AMMs and validate those that are contained in the ECP (Exhibit 3) are appropriate and can be authorized by the Agency Secretaries to support the HTRP implementation.

Emergency Rulemaking for Timber Harvest

Although the EO allows for a waiver process associated with many of the environmental permits required by the state, the lead agencies for the timber harvests on non-federal land are the California Department of Forestry and Fire Protection (CAL FIRE) and Board of Forestry (BOF) under the CNRA. The BOF drafted an emergency rulemaking in an effort to expedite the removal of hazard trees associated with the Camp Fire incident by initiating an Emergency Rulemaking to Facilitate Post-Fire Recovery Efforts within the County of Butte. This was adopted as a Post Fire Recovery Exemption for Timber Harvest (Title 14 of the California Code of Regulations, Division 1.5, Chapter 4, Subchapter 7, Article 2 § 1038.6) and expired and was replaced in November 2019 with Permanent Post-Fire Recovery Regulations for which a Timber Harvest Exemption may be used for the Program work.

Due to the large number of trees that will be subject to the HTRP, CAL FIRE has determined that the Timber Harvest Plan Exemption for ROW and Utility Projects (i.e., Exhibit 9) under Article 2 § 1104.1b would be better suited for the Program due to the number of trees along eligible public and private ROWs to be removed. This rulemaking exempts the Program from commercial Timber Harvest Plan permit requirements for which an Exemption Form will need to be completed for eligible required parcel ROEs within each of the five Operational Area branches, which are summarized in Table 4, Required Parcel Rights of Entry for Timber Harvest Plan Exemption.

There are limitations for trees to be taken without special provisions under the Section 1104.1 Harvesting Plan Conversion, specifically:

- Trees that existed before 1800 A.D.
- Sierra or Coastal Redwoods greater than sixty (60) inches in diameter at stump height.
- All other trees, greater than forty-eight (48) inches in diameter at stump height.

In addition, per the Vegetation Removal Best Management Practices noted in Exhibit 3, disturbance or removal of vegetation will be kept to the minimum necessary to complete project related activities. Slash and woody debris will be managed using the following treatments: burying, chipping and spreading/piling, and removal to end use facilities.

If any of the hazard trees to be removed are in the categories noted, or within the standard width of a Watercourse or Lake Protection Zone (WLPZ), special provisions will need to be developed with CAL FIRE (under 1104.1.i of the Forest Practice Rules) in advance of felling that particular tree (see Exhibit 3 ECP). In addition, as described in Section 4.4, neither of the cited exemptions apply to known sites of cultural resources; rare, candidate, threatened or endangered plants and animals.

Waste Discharge Requirements

The State Water Resources Control Board and the Regional Water Quality Control Boards (collectively Water Boards) administer and works jointly with CAL FIRE and the Board of Forestry (BOF) to ensure that timber harvest activities, such as the DR-4407 HTRP, are protective of state waters. General Order No. R5-2017-0061 on June 9, 2017 for Discharges Related to Timberland Management Activities for Non-Federal and Federal Lands (2017 Order, Exhibit 10 Part A).

The 2017 Order specifies that the CVRWQCB is responsible for coordinating with CAL FIRE and the California Board of Forestry (BOF) for timber harvest activities on non-federal lands, in accordance with the FPA and California Forest Practice Rules (FPR). The provisions of the 2017 Order for non-federal land state that the Discharger shall conduct timberland management activities in accordance with the CAL FIRE-approved Plan, CAL FIRE-accepted Exemption (EX) or Emergency (EM) Notice, or CDFW-executed Master Agreement for Timber Operations (MATO) or Lake or Streambed Alteration Agreement (LSAA), in the case of timberland management activities on non-federal timberlands. The MATO or LSAA for the DR-4407 may be substituted with a Waiver from the CNRA Secretary, in accordance with the EO, under the assumption that either BMPs and/or AMMs (i.e., Exhibit 3) that would be identified as conditions proposed in an EPP for timber harvest operations.

The CDFW is responsible for ensuring that the following provisions of the CFGC are addressed with the CVRWQCB, CAL FIRE, in accordance with the 2017 Order:

- Sections 1600 (LSAA); Section 2000 (e.g., taking is unlawful except as provided),
- 3503 (e.g., protection of bird nests and eggs and birds of prey), and
- Sections 5650 and 5652 (e.g., deposition of deleterious material into waters of the state).

Other provisions of the 2017 Order require that the discharger, or applicant, will incorporate management practices and or water quality protective measures in consultation between the CVRWQCB, CAL FIRE, and CDFW, in addition, comply with the Monitoring and Reporting Program specified in the 2017 Order. The first step in determining the appropriate BMPs is determining a project's Criteria and Condition Specifications by Category per Table 1, Summary of Timberland Management Activity Categories and Requirements that appears on page 13 of the 2017 Order (below):

Table 1. Summary of Timberland Management Activity Categories and Requirements¹

	Cat.	Plans/Projects Covered	NOI, operation notification, and monitoring requirements	
Lead Agency	CAL FIRE (non-federal)	1	<ul style="list-style-type: none"> • 1038 EX Notices^{2,3} • 1052.1-1052.5 EM Notices² (except <i>fire salvage</i>) • 1104.1 Conversion Exemptions² 	<ul style="list-style-type: none"> • Automatically enrolled • Agency Monitoring
		2A	<ul style="list-style-type: none"> • 1052.1 EM Notice² for fire salvage on: <ul style="list-style-type: none"> ○ Industrial timberlands; or ○ Non-industrial timberlands when no residence is within EM 	<ul style="list-style-type: none"> • Automatically enrolled contingent on submittal of <i>NOI</i> and <i>Erosion Site Table</i> within 30 days of EM Notice acceptance by CAL FIRE • <i>Post-Fire Management and Reforestation Plan</i> (if applicable) • Annual Agency, Implementation, Forensic, and Effectiveness Monitoring and Summary of Operations • Updates to <i>Erosion Site Table</i> and if applicable, <i>Post-Fire Management and Reforestation Plan</i>
		2B	<ul style="list-style-type: none"> • 1052.1 EM Notice² for fire salvage when a non-industrial timberland owner's residence is within EM 	<ul style="list-style-type: none"> • <i>NOI</i> prior to operations • Agency and Effectiveness Monitoring
		3A	<ul style="list-style-type: none"> • THPs, PTHPs, WFMPs, NTMPs, and other Plans⁴ 	<ul style="list-style-type: none"> • <i>NOI</i> prior to operations • Annual Agency, Implementation, Forensic, and Effectiveness Monitoring and Summary of Operations
		3B	<ul style="list-style-type: none"> • 1051-1051.7 modified THPs²; or • THPs, PTHPs, WFMPs, NTMPs, and other Plans that meet all the low threat criteria in Part III.D.2.a.ii. 	<ul style="list-style-type: none"> • <i>NOI</i> prior to operations • Agency and Effectiveness Monitoring
CDFW	4	<ul style="list-style-type: none"> • Watercourse crossing work conducted under CDFW MATO or LSAA on timber production zoned land for replacement/reconstruction of <i>existing</i> watercourse crossings outside of a Plan or EM Notice 	<ul style="list-style-type: none"> • Submit copy of CDFW notification 30 days prior to work commencing • <i>NOI</i> 30 days prior to operations • Implementation, Forensic, and Effectiveness Monitoring 	

¹This table only provides an abbreviated summary of the criteria, conditions, and monitoring for categories; refer to category specific criteria/conditions and Attachments B and C for complete information.
²California Code of Regulations, title 14, section (as cited in table)
³Excludes the cutting and removal of timber and other solids wood forest products for: Christmas trees, structure protection (160 and 300 feet), and woody debris and slash removal (see Attachment A definition of "timber land management activities").
⁴THP – timber harvesting plan, PTHP – program timber harvesting plan, NTMP – non-industrial timbermanagement plan

The DR-4407 Hazard Tree Removal Program appears to be within the definitions of Categories 2A, Industrial Fire Salvage and Non-Industrial Fire Salvage with No Residences, and 2B, Non-Industrial Fire Salvage with Residences for which the conditions are expected to be those specified in Exhibit 10 Part B, pages 16 through 20. This requires that CAL FIRE provide an Emergency Notice (EM) to enable the Program to qualify for the WDRs and conditions specified in the 2017 Order. This may be a factor in determining the monitoring and restoration requirements, more importantly CDFW notifications for watercourse crossing and CAL FIRE notices where aquatic or wetland habitat for rare, threatened or endangered species may exist.

In addition, the Order Attachment D addresses the need to evaluate significant existing or potential erosion sites as part of the compliance activities for roads for which Equipment Limitation Zones (ELZs) may be identified. Generally, ELZs comprise a minimum 50-foot watercourse buffer zone on either side of a surface water body. The intent of the ELZ is to reduce or eliminate the likelihood of ground disturbance from

heavy equipment that may result in ruts, erosion and direct sediment delivery to the watercourse.

4.3 Local Process

Both the Town and the County are responsible for administering California Planning and Zoning Laws and have recently exercised their Emergency Ordinances to initiate local response and recovery activities. Recently each has enacted Urgency Ordinances to support (Exhibits 11 and 12) the upcoming state Program and activate the Private Tree Removal Program. The state and private tree removal programs are mandatory to facilitate the abatement of the immediate threat to public ROW and property of the wildfire-impacted trees in the project area.

4.4 Regulatory Process Integration

The overarching state and federal environmental laws, respectively, are the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA), and project proponents are generally employed to prepare environmental impact assessment documents in which a project's potential impacts and mitigation measures are identified. These analyses are developed in accordance with all applicable environmental laws and regulations, the results of which become a basis for an applicant to apply for discretionary permits from local, state, and federal agencies.

To expedite emergency response and recovery actions CEQA exemptions may be exercised by local or state agencies or NEPA exclusions may be exercised by federal agencies. However, in these circumstances other local, state and/or federal environmental regulations may still apply as described in the previous sections. When the SOW is defined, the environmental compliance framework will be refined so that the local, state and federal regulations that apply to timber harvest activities may be appropriately integrated to streamline the environmental permitting or permitting relief requirements for the DR-4407 recovery.

Hazard Tree Removal Permit Planning

An aspect of the proposed Program that will need to be addressed between all government entities is how the Timber Harvest Exemption(s) will apply in concert with the 2017 Order requirements that require the protection of "... sites of rare, candidate, threatened or endangered plants and animals if the sites will be disturbed or damaged." This is mirrored in 14 CCR § 895.1. Also, the 14 CCR § 1038.6(a)(3)(G-H) states that no timber operations may occur within a buffer zone of listed, or sensitive species which are defined by 14 CCR § 1038.6(a)(3)(I), which states: "No timber harvesting is permitted within the standard width of a WLPZ per 14 CCR § 916.4 [936.4,

956.4](b) (exceptions do apply see below) or within a WLPZ of a watershed identified as Anadromous Salmonids Planning watersheds (ASP) per 14 CCR § 916.9 [936.9, 956.9](s).”

It is expected that the results from the Cal Recycle Assessment and Monitoring program will identify current terrestrial and aquatic biological characteristics within the Operational Area branches. The data will be reported to the Environmental Team in real time. The assessment data will enable collaboration among the three government entities to determine the necessary resource agency permits and consultations, and refine the sequencing of the Program SOW implementation to reflect the environmental green, yellow and red zone criteria. Survey work would also include stream crossing inventories to determine the Class of potential stream crossings and map the WLPZ buffers as noted below and in the ECP, which includes protective measures that were outlined from the FPR:

Waterbody	Distance
Perennial Streams (Class I) – Domestic supplies, springs, fish always, or seasonally present.	75 feet (<30% slope) 100 feet (30-50% slope) 150 feet (>50% slope)
Intermittent Streams, Wetlands, Lakes (Class II) – Fish always or seasonally present within 100 feet. Aquatic habitat (non-fish).	50 feet (<30% slope) 75 feet (30-50% slope) 100 feet (>50% slope)
Ephemeral Streams (Class III) – No aquatic habitat present. Capable of delivering sediment.	25 feet (<30% slope) 50 feet (30%+)
Man-Made Ditches (Class IV) – Domestic, agricultural, hydroelectric supply.	Same as Class III, or, if present existing riparian vegetation, whichever is more conservative.

Biological monitors will be required to perform focused screening surveys to capture the seasonal variations for which release of environmental conditions to release ROEs for tree harvesting may be considered.

Log Deck and Timber Sorting Site Permit Planning

The environmental and permitting requirements for log deck and timber sorting sites will be addressed when the specific sites are identified by Cal Recycle and their selected tree removal contractor(s). This will include compliance with the NPDES SWPPP requirements in accordance with the state and federal Clean Water Acts. The Program facilities will be addressed by either the County or Town as a CEQA lead agency for discretionary permits, in addition to the CVRWQCB for SWPPPs. Because the development of these sites are a connected action to a federally funded action coordination with FEMA will be necessary in advance of

site development for FEMA, as the lead federal agency, to comply with NEPA, Section 7 of the ESA, Section 106 of the NHPA, and applicable Executive Orders, and, to consult with Federally-recognized Native American Tribes.

Timber and Biomass End Use Disposition

The creation and transportation of non-hazardous waste from timber will need to be compliant with the cradle to grave provisions of RCRA and will be addressed when the SOW is provided. A Tree Removal Traffic Management Assessment is expected to be developed and include discussion of log deck and timber sorting sites.

Operation Team Basecamp Housing

Whether or not the Tuscan Ridge and Oroville Industrial Park base camps used during the DROP are available for Program contractor and staff use is unknown at this time. Status of the permits obtained as part of the DROP will need to be determined for applicability to the HTRP and the facilities' availability for the HTRP as well.

5.0 Environmental Protection Plan

This section addresses an approach to developing an environmental protection plan that builds on data developed during the DROP and the requirements of removing hazard trees that pose an immediate threat to public health or property.

Once a SOW is released by FEMA and Cal OES, the final environmental scope of work can be identified for Cal Recycle and its contractor for evaluation using the three-step process below:

- 1) Environmental Compliance Planning
 - a) Identify qualifying private and public property locations, contractor basecamp, and log processing sites,
 - b) Conduct environmental review of existing environmental data and identify data gaps, and
 - c) Obtain additional data, including via current biological surveys, and identify required local, state and federal permits, waivers, AMMs/BMPs, Tribal consultation/monitoring requirements by SOW/HTRP and a timeframe to obtain them.

To amplify item 1(b), it is envisioned that biological resource surveys would be performed to determine the presence or absence of resident and migratory protected species and surface water crossings that will need to be addressed with regulatory agencies and in Program operation

sequencing. When this information is available, appropriate permitting and consultation with the regulatory agencies AMMs, and BMPs will be determined along with necessary Program sequencing to accommodate the environmental conditions within the Burn Scar Area.

It is presumed that the locations with previously recorded historical, archaeological, or tribal cultural resources will require archaeological and/or tribal monitoring. If the data review indicates that portions of the Program footprint (including log decks, timber sorting sites, etc.) have not been previously surveyed (or have not been surveyed in the preceding 10 years) archaeological and tribal surveys may be necessary prior to Program activities in areas where ground disturbing activities are likely to occur. Final determinations on survey and monitoring protocols will be determined through consultation between FEMA, Native American Tribes and SHPO, as required under the NHPA Section 106.

- 2) Environmental Compliance Permitting (to occur when Program contract is activated with oversight of Cal OES/Cal Recycle/FEMA, as appropriate)
 - a) Conduct Pre-application interagency and tribal consultations
 - b) Prepare and submit environmental permits, waivers, AMMs/BMPs, and verify tribal consultation and monitoring requirements, and
 - c) Obtain permits, waivers, AMM/BMP documents and confirmation of tribal consultation requirements.

- 3) Environmental Compliance Plan (Exhibit 3) Implementation (to occur during Operations and updated as warranted):
 - a) Prepare and obtain environmental permits, waivers, AMMs/BMPs, tribal monitoring scope as needed for inclusion in the Environmental Compliance Plan.
 - b) Prepare and deliver Training Programs for Program staff and contractors.
 - c) Implement environmental permit terms and conditions, document and file with local, state and federal agencies:
 - records of environmental surveying results, and
 - changes in environmental site conditions (as necessary), occurrences of unexpected environmental conditions for which local, state, or federal agency coordination is necessary (per permit conditions).
 - d) Submit the names and qualifications of all biologists assigned to monitor tree removals to the USFWS for approval at least 10 calendar days prior to the date of the start of the proposed project.

6.0 Environmental Awareness Training

All HTRP personnel will attend a mandatory environmental education program delivered by the Cal OES and FEMA Environmental team. Such training is mandatory for Cal OES, FEMA, Cal Recycle staff and contractors prior to any tree cutting, tree clearing, vegetation clearing, or other field activities. Training may also be provided for tribal representatives, as determined by FEMA.

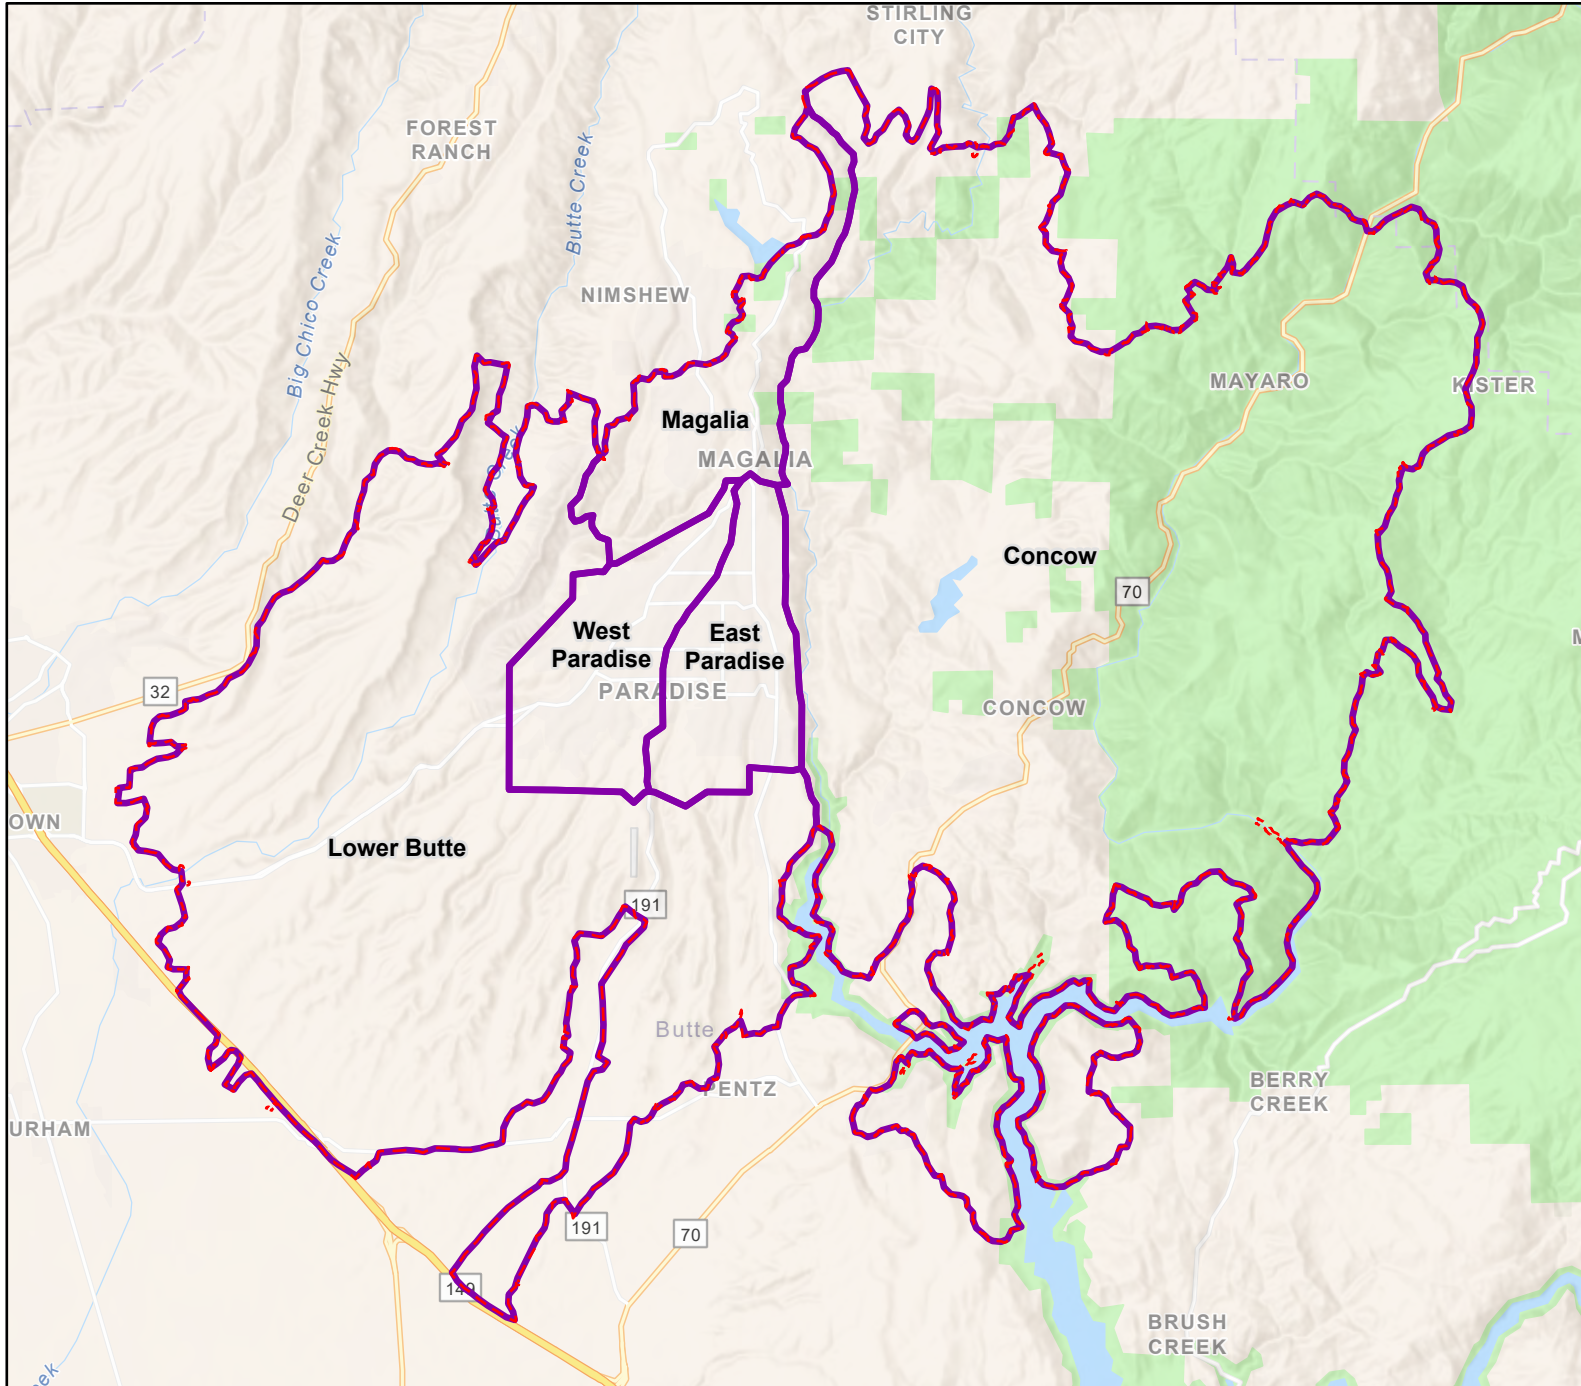

This training program will focus on the Chain of Command associated with the Environmental Compliance Program, proper use of BMPs and AMMs, and what to do if state and/or federally listed species may be present within an active operational area branch. At a minimum, the training will include a description of all pertinent laws, environmental concerns in the five branches, water quality, state and federally listed species of concern, their status and protection, and the possible penalties for non-compliance. Documentation of the training, including sign-in sheets, will be kept on file and available to the state and federal resource agencies on request.

The Cal OES and FEMA Environmental team will review the Cal Recycle Environmental Awareness Training for their contractors prior to it being delivered by their work force. It is recommended that the Cal Recycle Environmental Training be delivered by CDFW/USFWS-approved, biologist(s), Registered Professional Forester, and archaeologist(s), as appropriate.

TABLES

DR-4407 CAMP FIRE - HAZARDOUS TREES REMOVAL

Environmental Regulations Matrix

This table is intended to provide a list of potential federal, state and local environmental permitting and regulatory review requirements related to hazardous tree removal in the Camp Fire burn area, Butte County, California. Federal and state environmental permitting and regulatory review requirements are often referred to as “NEPA/CEQA” requirements whose acronyms are derived from, respectively, National Environmental Policy Act and California Environmental Quality Act. Although NEPA and CEQA are reference points generally referring to environmental review and permitting requirements, federal and state resource specific laws and regulations may apply to individual or resource specific disaster recovery projects (e.g., National Historic Preservation Act, federal or state Endangered Species Acts).

In California, local governmental organizations, including cities, counties and special districts (e.g., irrigation districts, fire districts) are responsible for administering regulations and procedures allowing for the planning and development of lands and/or services compliant with State requirements. To facilitate disaster response and recovery, Governor Edmund G. Brown, Jr. on November 14, 2018 issued Executive Order B 57-18 that provides that state statutes that fall within the jurisdiction of the California Environmental Protection Agency and California Natural Resources Agency could be waived for the purpose of a) removal, storage, transportation and disposal of non-hazardous and hazardous debris and solid waste and b) restoration, rehabilitation of timberlands, streams and other waterways that were affected by the Camp Fire. Because approximately one year has passed since the disaster event, it is presumed that such “waivers” may not apply for the proposed hazard tree removal project and the following federal, state and local agency environmental regulations may apply. Once a Statement of Work is available, the totality of the environmental permitting scope will be determined.

California Environmental Quality Act

CEQA applies only to discretionary government activities that are defined as “projects,” or actions that have the potential for resulting in either a direct physical change in the environment or a reasonably foreseeable indirect physical change in the environment (Public Resources Code § 21065; Guidelines § 15378 (a)). The proposed hazardous tree removals in the Camp Fire burn area would constitute a project under CEQA.

CEQA exemptions that may be applicable may include:

- Public Resources Code section 21080(b)(4) (emergency);
- CEQA Guidelines, Title 14, Cal. Code of Regulations; sections
 - 15269 (emergency);
 - 15269 (a) Projects to maintain, repair, restore, demolish, or replace property or facilities damaged or destroyed as a result of a disaster in a disaster stricken area in which a state of emergency has been proclaimed by the Governor pursuant to the California Emergency Services Act.
 - 15269 (b) Emergency repairs to publicly or privately owned service facilities necessary to maintain service essential to the public health, safety or welfare.
 - 15269 (c) Specific actions necessary to prevent or mitigate an emergency. This does not include long-term projects undertaken for the purpose of preventing or mitigating a situation that has a low probability of occurrence in the short-term.
 - 15304 Minor alterations to land; and/or
 - 15307 Actions by regulatory entities for resource protection.

National Environmental Policy Act

The Federal Emergency Management Agency (FEMA) will ensure compliance with the National Environmental Policy Act (NEPA) and other federal laws and regulations noted below.

Environmental Regulations & Permit Requirements	Regulatory Agencies	Applicability			Regulation Summary	Project Activities to be Evaluated with Regulations
		yes	no	maybe		
Federal Regulations & Permit Requirements	Agency Lead					
National Environmental Policy Act (NEPA)	Federal Emergency Management Agency (FEMA)	X			Projects conducted or funded by the federal government must comply with NEPA. FEMA guidelines and regulations for NEPA would be applicable for FEMA Public Assistance projects.	Activities to be reviewed in accordance with NEPA are those associated with a nexus to federal environmental laws and regulations to determine potential impacts resulting from a proposed action.
Clean Water Act Section (CWA) 404 Rivers and Harbor Act Section 10	U.S. Army Corps of Engineers (USACE)			X	Applicable for potential work in or adjacent to water bodies or wetlands. The USACE regulatory program involves the regulating of discharges of dredged or fill material into Waters of the United States and structures or work in navigable waters, under section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act of 1899. A general permit is	There are a variety of activities associated with potential work in or adjacent to water bodies or wetlands (i.e., Waters of the U.S.). Such activities include: placement of temporary bridges, tree removal within the Watercourse, Lake, Protection Zone (WLPZ) or wetland containing or habitat for protected species.

DR-4407 CAMP FIRE - HAZARDOUS TREE REMOVAL

					issued for structures, work or discharges that will result in only minimal adverse effects.	
Clean Water Act Section 401	Delegated to Regional Water Quality Control Board			X	Any applicant for a Federal license or permit (e.g. Clean Water Act Section 404 Permit) to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into navigable waters, shall provide the licensing or permitting agency a certification from the State in which the discharge originates or will originate. In California, the Section 401 Water Quality Certification comes from the Regional Water Quality Control Board.	The CWA Section 401 is a companion action to the CWA Section 404 action would also be relevant for the variety of activities associated with potential work in or adjacent to water bodies or wetlands (i.e., Waters of the U.S.). Such activities include: placement of temporary bridges, tree removal within the Watercourse, Lake, Protection Zone (WLPZ) or wetland containing or habitat for protected species.
Clean Water Act Section 402	Delegated to State Water Resources Control Board	X			Dischargers whose projects disturb one or more acres of soil are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Construction Storm Water General Permit) through the RWQCB. Construction activity subject to this permit includes clearing, grading, grubbing, excavation, or any other activity that results in a land disturbance of equal or greater than one acre. Dischargers obtain coverage under the Construction Storm Water General Permit by enrolling through the California Storm water Multiple Application and Report Tracking System (SMARTS) and submitting all required Permit Registration Documents. The Construction Storm Water General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP).	Project activities that are appropriate to be considered for the CWA Section 402 would include the: preparation of log deck, storage and transfer sites, wood chip sites, equipment and fuel storage sites.
U.S. Endangered Species Act	U.S. Fish and Wildlife Service (USFWS);	X			Potential impacts to federally-listed threatened and endangered species and/or critical habitat. The U.S. Endangered Species Act directs all Federal agencies to work to conserve threatened and endangered (T&E) species and to use their authorities to further the purposes of the Act. Section 7 of the Act, called "Interagency Cooperation," is the mechanism by which Federal agencies ensure the actions they take, including those they fund or authorize, do not jeopardize the existence of any listed species. Consultation may be required as a result of potential impacts to T&E species, to be determined based on the final SOW.	There are approximately 20 federally-listed protected species identified in the California Natural Diversity Data Base in the Butte County Burn Scar area that would need to be addressed in accordance with the federal ESA prior to tree removal operations commence.
U.S. Endangered Species Act	National Oceanic and Atmospheric Administration, National Marine Fisheries Service			X	Potential impacts to federally-listed threatened and endangered species and/or critical habitat. The U.S. Endangered Species Act directs all Federal agencies to work to conserve threatened and endangered (T&E) species and to use their authorities to further the purposes of the Act. Section 7 of the Act, called "Interagency Cooperation," is the mechanism by which Federal agencies ensure the actions they take, including those they fund or authorize, do not jeopardize the existence of any listed species. Consultation may be required as a result of potential impacts to T&E species, to be determined based on the final SOW.	There are approximately 20 federally-listed protected species identified in the California Natural Diversity Data Base in the Butte County Burn Scar area that would need to be addressed in accordance with the federal ESA of which certain will be addressed by the NOAA/NMFS prior to tree removal operations commence..
Migratory Bird Treaty Act	U.S. Fish and Wildlife Service	X			Substantial tree removal will occur during the project, and work will be performed during nesting bird season and bird migration periods. Biological monitoring may be required to limit impacts to migratory birds in accordance with the Migratory Bird Treaty Act and will be determined based on SOW details.	There are approximately 5 migratory bird species that inhabit the Butte County Burn Scar Area whose habitat includes trees proposed to be removed prior to tree removal operations commence.
National Historic Preservation Act	FEMA Lead with California Natural Resources Agency-State Historic Preservation Officer (SHPO)	X			Section 106 of the NHPA mandates federal agencies undergo a review process for all federally funded and permitted projects that will impact sites listed on, or eligible for listing on, the National Register of Historic Places. Specifically it requires the federal agency to consider the effect a project may have on historic properties. SHPO consultation should be	The potential for the project's ground disturbing activities to impact known or unknown cultural resources during tree removal activities will require consultation between FEMA and SHPO when detailed tree removal plans are developed.

DR-4407 CAMP FIRE - HAZARDOUS TREE REMOVAL

					performed if tree removals have the potential to affect historic properties in the project area.	
Resource Conservation and Recovery Act (RCRA)	U.S. Environmental Protection Agency (USEPA), Subtitle D; California Environmental Protection Agency (Cal EPA), RCRA Subtitle C.			X	The USEPA regulates the use, storage and disposal of hazardous and non-hazardous materials from “cradle to grave.” Any hazardous materials used during project operations (e.g. petroleum-based fuels) should be managed in accordance with RCRA. Cal EPA, Department of Toxic Substances Control, has USEPA delegated authority to enforce RCRA Subtitle C that establishes standards for the generation, transportation, treatment, storage, and disposal of hazardous waste in Treatment Storage and Disposal Facilities (TSDF). USEPA administers RCRA Subtitle D for Non-hazardous waste such as vegetative debris.	Manifesting trees removed from private property to the end use site will be required as the BioMass is considered a non-hazardous waste. Disposal of BioMass at landfills and BioMass Energy facilities may require additional record keeping to comply with their respective permitting compliance requirements.
Executive Order 11988 and 11990 – Floodplain and Wetlands Protection	FEMA (lead federal agency)			X	FEMA reviews all projects that take place in the floodplain as required by Executive Order 11988. For major projects, this could require the “8-Step” process, which evaluates practicable alternatives and includes public review. Projects with potential to modify a wetland would require USACE CWA permitting in accordance with Executive Order 11990 and the CWA.	There are a variety of activities associated with potential work in or adjacent to water bodies or wetlands (i.e., Waters of the U.S.). Such activities include: placement of temporary bridges, tree removal within the Watercourse, Lake, Protection Zone (WLPZ) or wetland containing or habitat for protected species.
State Regulations & Permit Requirements		yes	no	maybe		
California Environmental Quality Act (CEQA) review	Cal Recycle	X			Cal Recycle is the lead agency under the proposed Mission Task, CalOES is a partnering agency. CEQA is applicable for the project in absence of a waiver such as that received in 2019 for statewide priority vegetation management projects.	CEQA will likely apply to project actions for which waivers issued in accordance with Executive Order B-57-18 from the California Natural Resources Agency and Environmental Protection Agency are not applicable such as log deck, storage and transfer sites, wood chip sites, equipment and fuel storage sites for which either Butte County or Town of Paradise would be the lead CEQA agency.
Forest Practice Act	Department of Forestry and Fire Protection (CAL FIRE)	X			CAL FIRE reviews timber harvest plans and logging projects. Emergency regulations for tree removals were adopted in January 2019 following the Camp Fire in Butte County, ‘Butte County Post-Fire Recovery Exemption.’ This provides for licensed timber operators to complete forms associated with notice of exemption to CAL FIRE for the harvesting of dead or dying trees of any size within 300 feet from any point of a structure damaged or destroyed by wildfire without filing a Timber Harvest Plan.	The removal of approximately 300,000 dead or dying trees would be addressed by the ‘ Post-Fire Recovery Exemption.’ However, because the trees would be removed from public rights of way (ROW), the THP Exemption for ROW under Forest Practice Act Section 1104.1(b) to provide for operational flexibility for the volume of trees proposed for removal. .
California Endangered Species Act	California Department of Fish & Wildlife (CDFW)	X			Consultation with CDFW is required for protection of California-listed T&E species and other California special status species and habitat.	There are approximately 20 state-listed protected species identified in the California Natural Diversity Data Base in the Butte County Burn Scar area that would need to be addressed in accordance with the CESA prior to tree removal operations commence.
Section 1600 Streambed Alteration Agreement	California Department of Fish & Wildlife (CDFW)	X			The CDFW Lake and Streambed Alteration Program reviews projects that would alter any river, stream, or lake and conditions projects to conserve existing fish and wildlife resources. CDFW must be notified for projects that would change the bed, channel, or bank of any river, stream, or lake. The notification requirement applies to any river, stream, or lake, including those that are dry for periods of time (ephemeral/episodic) as well as those that flow year round (perennial). A Streambed Alteration notification should be prepared for potential tree removal work in or adjacent to stream beds for CDFW review.	The variety of activities associated with potential work in or adjacent to water bodies or wetlands include: placement of temporary bridges, tree removal within the Watercourse, Lake, Protection Zone (WLPZ) or wetland containing or habitat for protected species. Depending on the presence of state and/or federal listed species in such zones, consultations with other state and federal resource agencies may be required.
Native Plant Protection Act (NPPA)	California Department of Fish and Wildlife	X			The NPPA prohibits take of endangered or rare native plants, but includes some exceptions for agricultural and nursery operations; emergencies; and after properly notifying CDFW for vegetation removal from canals, roads, and other sites, changes in land use, and in certain other situations.	There are approximately 5 state-listed protected species identified in the California Natural Diversity Data Base in the Butte County Burn Scar area that would need to be addressed in accordance with the NPPA prior to tree removal operations commence.
Porter-Cologne Water Quality Act	State Water Resources Control Board, Central Valley Regional Water Quality Control		X		The Porter-Cologne Act, also known as the California Water Code, Section 7 governs water quality regulation in California. It was established to be a program to protect water quality as well as beneficial uses of water. Waste discharges that “could affect the quality of waters of the state”	The California Regional Water Quality Control Board, Central Valley Region, adopted Waste Discharge Requirements General Order No. R5-2017-0061 on June 9, 2017 for Discharges Related to Timberland Management Activities for Non-Federal and Federal Lands (2017

DR-4407 CAMP FIRE - HAZARDOUS TREE REMOVAL

	Board				require permits from the State Water Resources Control Board. Some waste discharge requirements also serve as Clean Water Act NPDES permits.	Order). The 2017 Order supersedes the Timber Waiver (Order No. R5-2014-0114).The 2017 Order facilitates interagency coordination with CAL FIRE and CDFW to address and develop BMPs to address compliance conditions to meet the WDRs for Timber Harvesting Plan (THP) requirements.
California Clean Air Act	California Air Resources Board	X			Regulates emissions from point and non-point sources.	Air quality impacts from tree processing equipment and vehicle traffic.
California Native American, Historical, Cultural and Sacred Sites Act	Tribal Historic Preservation Officers	X			California Assembly Bill 52 required an update to Appendix G (Initial Study Checklist) of the CEQA Guidelines to include questions related to impacts to tribal cultural resources. Consultation with local Tribal Historic Preservation Officers should be conducted for project work with the potential to affect Native American cultural resources or Sacred sites.	Tribal consultations would be led by FEMA and Cal OES Tribal Liaisons would be apprised of potential impacts to Native American cultural resources or Sacred sites associated with the Tree Removal.
California Superfund	California Environmental Protection Agency; Office of Environmental Health Hazard Assessment				California Superfund is applied to prevent hazardous material and substance handling from becoming a hazardous materials site. In addition, the regulation as administered provides for clean-up of hazardous materials and substances that have impacted soils and groundwater to be protective of human health and environment.	Any hazardous materials used during project operations should be managed in accordance with California EPA regulations.
Local Regulations & Permit Requirements		yes	no	maybe		
Butte County		X			Responsible for administering California Planning and Zoning Laws, Government Code Sections 6500 through 66499.58 and CEQA	Project activities that are appropriate to be considered for either CEQA and/or over the counter permits would include the: preparation of log deck, storage and transfer sites, wood chip sites, equipment and fuel storage sites.
Town of Paradise		X			Responsible for administering California Planning and Zoning Laws, Government Code Sections 6500 through 66499.58 and CEQA	Project activities that are appropriate to be considered for either CEQA and/or over the counter permits would include the: preparation of log deck, storage and transfer sites, wood chip sites, equipment and fuel storage sites.
Paradise Irrigation District			X		Responsible for administering applicable regulations for PID delivery of water to agricultural and residential customers, and operation and maintenance of infrastructure.	Not applicable except in the rare occasion where the tree removal operation directly or indirectly impacts the PID infrastructure.

Executive Department
State of California

EXECUTIVE ORDER B-57-18

WHEREAS on November 8, 2018, a state of emergency was proclaimed in Butte County as a result of the Camp Fire; and

WHEREAS on November 9, 2018, a state of emergency was proclaimed in Los Angeles County and Ventura County as a result of the Hill Fire and Woolsey Fire; and

WHEREAS red flag fire weather conditions, including extremely high temperatures and low humidity, coupled with particularly dry vegetation, have made the 2018 fire season the most destructive and deadly on record; and

WHEREAS California will require immediate additional resources to assist in responding to, recovering from, and mitigating the effects of these wildfires; and

WHEREAS the wildfires have destroyed thousands of homes and other structures, creating an enormous amount of hazardous debris; and

WHEREAS this hazardous debris, which is comprised of dangerous toxins including heavy metals such as arsenic, cadmium, copper, lead, and asbestos and must be removed cautiously and expeditiously; and

WHEREAS under the provisions of Government Code section 8571, I find that strict compliance with the various statutes and regulations specified in this order would prevent, hinder, or delay the mitigation of the effects of the wildfires; and

NOW, THEREFORE, I, EDMUND G. BROWN JR., Governor of the State of California, in accordance with the authority vested in me by the Constitution and statutes of the State of California, and in particular, Government Code sections 8567 and 8571, do hereby issue the following order to become effective immediately:

IT IS HEREBY ORDERED THAT:

1. All provisions contained in the above-referenced Proclamations shall remain in full force and effect.
2. State statutes, rules, regulations and requirements are hereby suspended to the extent they apply to the following activities: (a) removal, storage, transportation, and disposal of hazardous and non-hazardous solid waste and debris resulting from the wildfires that have burned and continue to burn in areas that are subject to the jurisdiction of agencies within the California Environmental Protection Agency and the California Natural Resources Agency; and (b) necessary restoration and rehabilitation of timberland, streams, rivers, and other waterways. Such statutes, rules, regulations and requirements are hereby suspended only to the extent necessary for expediting the removal and cleanup of debris from the wildfires, and for implementing any restoration plan. Individuals who desire to conduct activities under this suspension of statutes, rules, regulations, and requirements shall first request that the appropriate Agency Secretary, or his

delegate, make a determination that the proposed activities are eligible to be conducted under this suspension. The Secretary for the California Environmental Protection Agency and the Secretary for the California Natural Resources Agency shall use sound discretion in applying this Executive Order to ensure that the suspension serves the purpose of accelerating cleanup and recovery, while at the same time protecting public health and the environment. This order shall apply to, but is not necessarily limited to: solid waste facility permits; waste discharge requirements for storage and disposal; emergency timber harvesting; emergency construction activities; and waste discharge requirements and/or Water Quality Certification for discharges of fill material or pollutants. To the extent it is within their administrative authority, the boards, departments and offices within the California Environmental Protection Agency and the California Natural Resources Agency shall expedite the granting of other authorizations, waivers or permits necessary for the removal, storage, transportation, and disposal of hazardous and non-hazardous debris resulting from the wildfires, and for other actions necessary for the protection of public health and the environment.

3. The Governor's Office of Emergency Services shall ensure adequate state staffing to expedite disaster response and recovery efforts. Consistent with applicable federal law, work hour limitations for retired annuitants and permanent and intermittent personnel are suspended. Furthermore, reinstatement and work hour limitations in Government Code sections 21220, 21224(a), and 7522.56(b), (d), (f), and (g), and the time limitations in Government Code section 19888.1 and California Code of Regulations, title 2, sections 300-303 are suspended. The Director of the California Department of Human Resources must be notified of any individual employed pursuant to these waivers.
4. The provisions of Penal Code section 396, subdivisions (b) and (c), prohibiting price gouging in times of emergency, will remain in effect until November 8, 2019, for Butte, Los Angeles, and Ventura Counties. The time limitations under those subdivisions are hereby waived.
5. The fourteen day time period in Health and Safety Code section 101080, within which local governing authorities must renew a local health emergency, is hereby waived. Any local health emergencies proclaimed as a result of the debris generated by these wildfires debris will remain in effect until each local governing authority terminates its respective health emergency.
6. The thirty day time period in Government Code section 8630, within which local governing authorities must renew a local emergency, is hereby waived. Any local emergencies proclaimed as a result of these wildfires will remain in effect until each local governing authority terminates its respective emergency.
7. The United States Environmental Protection Agency, the Federal Emergency Management Agency, or any other individual or entity performing work at their direction, shall have full power to provide mutual aid to the State of California and any areas affected by a local health emergency and will have the authority to enter private property in all impacted counties to remove debris that may contain hazardous substances, and to conduct any testing appropriate to ensure the hazards are mitigated. Any section of the Health and Safety Code permitting the immediate removal of this hazardous debris, including but not limited to section 101085, shall apply to and include the actions of the United States Environmental Protection Agency, the Federal Emergency Management Agency, or any individual or entity performing work at their direction, as if those agencies were a political subdivision or state agency for all purposes related to this operation.

8. State statutes, rules, regulations and requirements set forth in the Mobilehome Parks Act (Health and Safety Code section 18200 et seq., and California Code of Regulations, title 25, section 1000 et seq.), and the Special Occupancy Parks Act (Health and Safety Code section 18860 et seq., and California Code of Regulations, title 25, section 2000 et seq.), are suspended in Butte, Los Angeles, and Ventura Counties, as these laws pertain to disaster survivors in the impacted counties, for three years after the date of this Executive Order in order to quickly provide housing for those displaced by the wildfires.
9. The Department of Housing and Community Development and local enforcement agencies, including those with delegated disaster authority, will jointly develop permitting, operating, and construction standards to maintain reasonable health and safety standards for the disaster survivors, the residents and the surrounding communities in the impacted areas in Butte, Los Angeles, and Ventura Counties. Such standards shall provide reasonable consistency with appropriate fire, health, flood, and other factors normally considered in the mobilehome or special occupancy park approval process for the construction of a new park or manufactured home installation standards and accessory buildings or structures during the three-year suspension authorized by this Executive Order.
10. All fees assessed by the state and local enforcement agencies that are authorized by the Mobilehome Parks Act, as required by Health and Safety Code section 18500 et seq., and the Special Occupancy Parks Act section 18870 et seq., are suspended and shall be waived by the Department of Housing and Community Development for three years after the date of this Executive Order with regard to manufactured home installation and recreational vehicle use for disaster survivors who are owners or occupants of a manufactured home or mobilehome, or recreational vehicle, whose homes were damaged or destroyed as a result of the wildfires located in Butte, Los Angeles, and Ventura Counties.
11. All fees assessed by the state and local enforcement agencies that are authorized by the Mobilehome Parks Act as required by Health and Safety Code section 18503 and California Code of Regulations, title 25, section 1020.1, are suspended and shall be waived by the Department of Housing and Community Development, including fees for any required inspections or plan checking, for any disaster survivor who is an owner or occupant of a manufactured home or mobilehome whose home was damaged or destroyed as a result of the wildfires located in Butte, Los Angeles, and Ventura Counties.
12. All fees assessed by the state and local enforcement agencies that are authorized by the Manufactured Housing Act (Health and Safety Code section 18000 et seq., and California Code of Regulations, title 25, section 4000 et seq.), as required by Health and Safety Code section 18031 and California Code of Regulations, title 25, section 4044, are suspended and shall be waived by the Department of Housing and Community Development, including fees for any required inspections or plan checking, for any owner or occupant of a manufactured home or mobilehome whose home was damaged or destroyed as a result of the wildfires located in Butte, Los Angeles, and Ventura Counties.

13. All fees assessed by the state and local enforcement agencies that are authorized by the Manufactured Housing Act, as described in Health and Safety Code sections 18075, 18114, and 18116, are suspended and fees shall be waived by the Department of Housing and Community Development, including any fees for the late renewal of registration certificate or certificate of title for a manufactured home or mobilehome, by any owner or occupant that is a disaster survivor and whose home was damaged or destroyed as a result of the wildfires located in Butte, Los Angeles, and Ventura Counties.
14. All fees assessed by the state and local enforcement agencies that are authorized by the Manufactured Housing Act, as set forth at Health and Safety Code section 18075 and chapter 5 (commencing with section 5510) of the California Code of Regulations, title 25, related to establishing proof of ownership, are suspended and shall be waived for any mobilehome or manufactured home resident whose home was damaged or destroyed by the identified wildfires located in Butte, Los Angeles, and Ventura Counties, for three years of the date of this Executive Order. This waiver shall include, but not be limited to, processing fees for duplicate certificates of title or registrations, salvage applications and salvage certificates, the processing fees and costs for establishing registered ownership pursuant to article 3.5 (commencing with section 5535) of the California Code of Regulations, title 25, and other related fees.
15. The planning and zoning requirements in Government Code sections 65853 through 65863.13 as applicable to housing projects in the impacted counties, are suspended for three years after the date of this Executive Order, for recreational vehicles, mobilehomes and manufactured homes and mobilehome and special occupancy parks damaged or destroyed as a result of the wildfires in Butte, Los Angeles, and Ventura Counties.
16. Any local government zoning and land use ordinances in Butte, Los Angeles, and Ventura Counties, as authorized by the state statutes and regulations suspended by paragraphs 8 and 15 of this Executive Order, that would preclude the placement and use of a manufactured home, mobilehome, or recreational vehicle on a private lot outside of a mobilehome park or special occupancy park for use during the reconstruction or repair of a home damaged or destroyed by the wildfires or subsequent floods and debris flows, are suspended for three years after the date of this Executive Order for the individuals impacted by those events. Those individuals placing manufactured homes, mobilehomes, or recreational vehicles on lots pursuant to this paragraph shall obtain permits as described in paragraph 9.
17. In order to quickly provide relief from interest and penalties, the provisions of Revenue and Taxation Code sections 6592 and 6593, requiring the filing of a statement under penalty of perjury setting forth the facts for a claim for relief, are suspended for a period of 60 days after the date of this Executive Order for any individuals or businesses who are unable to file a timely tax return or make a timely payment as a result of the wildfires in the impacted counties.

18. Under the Property Tax Postponement program, homeowners who are seniors, blind, or have a disability may defer current-year property taxes on their principal residence if they meet certain criteria, including 40 percent equity in the home and an annual household income of \$35,500 or less. To allow counties time to reappraise the value of property to account for fire damage, the requirement in Revenue and Taxation Code section 20622 that the homeowner file the claim with the Controller by February 10, 2019, is waived as to homeowners in the affected counties. Claims must instead be filed by June 1, 2019.
19. The Franchise Tax Board, the Board of Equalization, the Department of Tax and Fee Administration, and the Office of Tax Appeals shall use their administrative powers where appropriate to provide those individuals and business impacted by the wildfires with the extensions for filing, audits, billing, notices, assessments, and relief from subsequent penalties and interest.
20. Any fairgrounds that the Office of Emergency Services determines are suitable for temporary sheltering for fire survivors shall be made available to the Office of Emergency Services pursuant to the Emergency Services Act, Government Code section 8589. The Office of Emergency Services shall notify the fairgrounds of the intended use and can immediately utilize the fairgrounds without the fairground board of directors' approval.
21. Any state-owned properties that the Office of Emergency Services determines are suitable for temporary sheltering for fire survivors shall be made available to the Office of Emergency Services for this purpose.
22. The Office of Emergency Services shall evaluate state properties that can be refurbished or improved to be made suitable for temporary sheltering. The costs associated with making these properties suitable for temporary sheltering shall be paid for utilizing California Disaster Assistance Act funding, pursuant to Government Code section 8680 et seq., and Code of Regulations, title 19, section 2900 et seq.
23. In order to ensure hospitals, clinics and other health facilities remain open, the Director of the Department of Public Health may waive any of the licensing requirements of Chapters 1 and 2 of Division 2 of the Health and Safety Code and accompanying regulations with respect to any hospital, clinic or health facility identified in Health and Safety Code section 1200, section 1206, subdivisions (d) and (h), and section 1250, that is impacted by the fires. Any waiver shall include alternative measures that, under the circumstances, will allow the facilities to remain open while protecting public health and safety. Any facilities being granted a waiver shall be established and operated in accordance with their disaster and mass casualty plan. Any waivers granted pursuant to this paragraph shall be posted on the Department's website.
24. To address the needs for assisted living facilities, adult residential facilities, child care facilities, children's residential facilities, resource family homes, and other similar facilities within the Department of Social Services' jurisdiction, the Director of the Department of Social Services may waive any provisions of the Health and Safety Code or Welfare and Institutions Code, and accompanying regulations or written directives, with respect to the use, licensing, or approval of facilities or homes within the Department's jurisdiction set forth in the California Community Care Facilities Act (Health and Safety Code section 1500 et seq.), the California Child Day Care Facilities Act (Health and Safety Code section 1596.70 et seq.), and the California Residential Care Facilities for the Elderly Act (Health and Safety Code section 1569 et seq.). Any waivers granted pursuant to this paragraph shall be posted on the Department's website.

This Order is not intended to, and does not, create any rights or benefits, substantive or procedural, enforceable at law or in equity, against the State of California, its agencies, departments, entities, officers, employees, or any other person.

I FURTHER DIRECT that as soon as hereafter possible, this Order be filed in the Office of the Secretary of State and that widespread publicity and notice be given of this Order.

IN WITNESS WHEREOF I have hereunto set my hand and caused the Great Seal of the State of California to be affixed this 14th day of November 2018.

EDMUND G. BROWN JR.
Governor of California

ATTEST:

ALEX PADILLA
Secretary of State

1 **CHAPTER 53 - CAMP FIRE RECOVERY**

2 **Article I. Findings and Title**

3 **Section 53-1. Emergency Findings.**

4 This Urgency Ordinance is adopted pursuant to California
5 Government Code Sections 25123(d) and 25131 and shall take effect
6 immediately upon its approval by at least a four-fifths vote of
7 the Board of Supervisors. The Board, in consultation with the Local
8 Health Officer, finds that this Ordinance is necessary for the
9 immediate preservation of the public peace, health and safety,
10 based upon the following facts:

11 A. Conditions of extreme peril to the safety of persons and
12 property within the County were caused by the Camp Fire,
13 commencing on the 8th day of November, 2018, at which time
14 the Board of Supervisors was not in session.

15 B. California Government Code Section 8630 empowers the County
16 Administrator to proclaim the existence of a local emergency
17 when the county is affected or likely to be affected by a
18 public calamity, subject to ratification by the Board of
19 Supervisors at the earliest practicable time.

20 C. On November 8, 2018, the County Administrator of the County
21 of Butte proclaimed the existence of a local emergency within
22 Butte County due to the Camp Fire.

23 D. On November 8, 2018, the Acting Governor of the State of
24 California proclaimed a State of Emergency for Butte County
25 pursuant to the California Emergency Services Act, commencing
26 with Section 8550 of the Government Code, and on November 14,

1 2018, the Governor issued Executive Order B-57-18 concerning
2 the Camp Fire.

3 E. On November 9, 2018, the Camp Fire was still burning through
4 the County and despite firefighters' best efforts, the
5 wildfire was not contained. Evacuation orders were in place
6 and numerous severe public health and safety hazards were
7 present in the Camp Fire area, including many blocked roads
8 from fallen power lines, burned trees and vehicles, numerous
9 burned vehicles were left throughout the Camp Fire area due
10 to survivors fleeing their vehicles in efforts to survive the
11 wildfire, no available utilities, no available public
12 services and the presence of human remains and animal
13 carcasses. At the time, the County estimated that 2,000
14 structures had burned in the Camp Fire.

15 F. On November 9, 2018, Dr. Andrew Miller, Butte County's Local
16 Health Officer, issued a Declaration of Health Emergency
17 pursuant to California Health and Safety Code section 101080.
18 Dr. Miller's declaration stated that the local health
19 emergency was a consequence of the debris resulting from the
20 Camp Fire that contains hazardous material in the ash of the
21 burned qualifying structures. The purpose of the Declaration
22 was to address the immediate threat to the public health and
23 the imminent and proximate threat of the introduction of
24 contagious, infectious or communicable disease, chemical
25 agents, non-communicable biologic agents, toxins and/or
26 radioactive agents present at the time in the Camp Fire area.

1 The threats included (1) the enormous amount of fire debris
2 present in the Camp Fire area, including ash and debris
3 containing hazardous materials and probable radioactive
4 materials present in ash and debris from qualifying
5 structures, (2) the threat of infectious or communicable
6 disease and/or non-communicable biologic agents due to animal
7 carcasses, radioactive waste and perishable foods, (3) the
8 potential contamination or destruction of the residential and
9 commercial water supply in the Camp Fire area and (4) the
10 potential pollution of the drinking water downstream from the
11 Camp Fire area if weather conditions caused the spread of the
12 hazardous materials in the ash and debris of burned qualifying
13 structures.

14 G. On November 12, 2018, the President of the United States
15 declared the existence of a major disaster in the State of
16 California, providing assistance from many federal agencies,
17 including the Federal Emergency Management Agency (FEMA).

18 H. On November 13, 2018, the Board of Supervisors adopted
19 Resolution No. 18-169 ratifying the County Administrator's
20 proclamation of the existence of a local emergency in Butte
21 County. The resolution also requested that the State of
22 California waive regulations that may hinder response and
23 recovery efforts, as well as make available assistance under
24 the California Disaster Assistance Act or any other state
25 funding, and that the Federal Government expedite access to
26 federal resources and any other appropriate federal disaster

1 relief program.

2 I. On November 13, 2018, the Board of Supervisors ratified Dr.
3 Miller's Declaration of Health Emergency.

4 J. On November 21, 2018, the status of the Camp Fire area was as
5 follows: firefighters had contained the Camp Fire; the
6 Sheriff had lifted some evacuation orders; work crews had
7 removed fallen power lines, burned vehicles and trees
8 blocking the roads; utilities including electric power, gas
9 and non-potable water had become available; no local
10 businesses were open to serve the public; and no public
11 services were available. Further, preliminary actions had
12 been taken to mitigate the risk from animal carcasses,
13 radioactive waste and perishable foods in the Camp Fire area,
14 however, concerns regarding the threats remained. The public
15 health hazards present in the Camp Fire area included (1) the
16 public health hazards from the enormous amount of fire
17 debris, (2) the public health hazard from the hazardous
18 materials and probable radioactive materials present in the
19 ash and debris from destroyed qualifying structures, (3) the
20 threat of infectious or communicable disease and/or non-
21 communicable biologic agent due to the presence of animal
22 carcasses, perishable foods and radioactive waste and (4) the
23 potential pollution of the drinking water downstream from the
24 Camp Fire area if weather conditions caused the spread of the
25 hazardous materials in the ash and debris of burned qualifying
26 structures. At the time, the County estimated that the Camp

1 Fire had destroyed 18,000 structures.

2 K. On November 21, 2018, Dr. Miller issued a Hazard Advisory
3 strongly suggesting residents should not reside on property
4 with qualifying structures damaged or destroyed by the Camp
5 Fire until the property had been cleared of hazardous waste,
6 ash and debris and certified clean by the Department of Public
7 Health, Environmental Health Division. When the evacuation
8 orders were lifted, the Department of Public Health provided
9 residents who chose to visit their property to collect
10 valuables with re-entry packets to improve their safety
11 during the visit. The re-entry packets included personal
12 protective equipment and information on the dangerous
13 conditions and toxic materials present in the Camp Fire area.
14 The re-entry packets were intended to improve public safety
15 from the public health hazards encountered during the visit,
16 but was not intended to encourage long-term habitation. The
17 purpose of the Hazard Advisory was to address the public
18 health hazards present at the time in the Camp Fire area,
19 including (1) the enormous amount of fire debris present in
20 the Camp Fire area, (2) the hazardous materials and probable
21 radioactive materials present in ash and debris from
22 qualifying structures, (3) the lessened but still present
23 threat of infectious or communicable disease and/or non-
24 communicable biologic agents due to animal carcasses,
25 radioactive waste and perishable foods, (4) the potential
26 contamination or destruction of the residential and

1 commercial water supply in the Camp Fire area and (5) the
2 potential pollution of the drinking water downstream from the
3 Camp Fire area if weather conditions caused the spread of the
4 hazardous materials in the ash and debris of burned qualifying
5 structures.

6 L. The Camp Fire to date has consumed 153,336 acres and has led
7 to the destruction of 13,696 residences, damage to 462
8 residences, the destruction of 276 multiple family
9 residences, the destruction of 528 commercial buildings,
10 damage to 102 commercial buildings, the destruction of 4,293
11 other minor structures, and resulted in the evacuation of
12 over 50,000 people. As a result, the Camp Fire has created an
13 enormous amount of debris.

14 M. There exists the potential for widespread toxic exposures and
15 threats to public health and the environment in the aftermath
16 of a major wildfire disaster, and debris and ash from
17 residential and commercial structure fires contain hazardous
18 materials and the harmful health effects of hazardous
19 materials produced by a wildfire are well-documented.

20 N. The combustion of building materials such as siding, roofing
21 tiles, and insulation results in dangerous ash that may
22 contain asbestos, heavy metals and other hazardous materials.
23 Household hazardous waste such as paint, gasoline, cleaning
24 products, pesticides, compressed gas cylinders, and chemicals
25 may have been stored in homes, garages, or sheds that may
26 have burned in the fire, also producing hazardous materials.

1 O. Exposure to hazardous materials may lead to acute and chronic
2 health effects and may cause long-term public health and
3 environmental impacts. Uncontrolled hazardous materials and
4 debris pose significant threats to public health through
5 inhalation of dust particles and contamination of drinking
6 water supplies. Improper handling can expose residents and
7 workers to toxic materials, and improper transport and
8 disposal of fire debris can spread hazardous substances
9 throughout the community.

10 P. Standards and removal procedures are needed immediately to
11 protect the public health and environment, and to facilitate
12 coordinated and effective mitigation of the risks to the
13 public health and environment from the health hazards
14 generated by the Camp Fire disaster.

15 Q. The Camp Fire has created hazardous waste conditions in Butte
16 County in the form of contaminated debris from household
17 hazardous waste/materials and structural debris resulting
18 from the destruction of thousands of structures. This
19 hazardous waste debris poses a substantial present or
20 potential hazard to human health and the environment until
21 the property is certified clean. The accumulated exposure to
22 hazardous waste debris over an extended period of time poses
23 a severe hazard to human health.

24 R. The Board of Supervisors previously approved urgency
25 ordinances and/or related resolutions relating to the Camp
26 Fire disaster recovery on December 11, 2018, December 21,

1 2018, January 8, 2019 and January 29, 2019. The actions
2 addressed the need for the regulation of debris removal to
3 alleviate the public health, safety and welfare concerns
4 associated with the ash and debris of qualifying structures
5 and temporary emergency housing options.

6 S. As of February 4, 2019, the status of the Camp Fire disaster
7 recovery is as follows: (1) Phase I cleanup by the U.S.
8 Environmental Protection Agency and the California Department
9 of Toxic Substances Control is complete, which has reduced
10 the public health concerns relating to the most hazardous
11 materials present in the Camp Fire area, (2) Phase II of the
12 cleanup pursuant to the Government (CalOES) Program and the
13 Alternative Program has commenced, (3) utilities are
14 available (except for potable water), (4) numerous businesses
15 have opened to serve the public, (5) public services are
16 available, including a FEMA and CalOES jointly-operated
17 Disaster Recovery Center in Paradise, California. Current
18 threats include (1) the enormous amount of fire debris present
19 in the Camp Fire area, (2) hazardous materials and probable
20 radioactive materials present in ash and debris from
21 qualifying structures, (2) the potential pollution of the
22 drinking water downstream from the Camp Fire area if weather
23 conditions caused the spread of the hazardous materials in
24 the ash and debris of burned qualifying structures. The
25 purpose of this ordinance is to allow residents to live on
26 properties in the Camp Fire area that do not contain fire ash

1 and debris from a qualifying structure destroyed or damaged
2 by the Camp Fire.

3 T. The Debris Removal Operations Plan for the Camp Fire prepared
4 by the CalOES/CalRecycle Incident Management Team provides
5 that the DTSC has issued reports regarding the assessment of
6 burn debris from wildfires in the past. The studies of burned
7 residential homes and structures from large scale wildland
8 fires indicated that the resulting ash and debris can contain
9 asbestos and toxic concentrated amounts of heavy metals such
10 as antimony, arsenic, cadmium, copper, lead, and zinc.
11 Additionally, the ash and debris may contain higher
12 concentrations of lead if the home was built prior to 1978
13 when lead was banned from household paint in the United
14 States. The reports indicated that the residual ash of burned
15 residential homes and structures has high concentrations of
16 heavy metals that can be toxic and can have significant impact
17 to individual properties, local communities, and watersheds
18 if the ash and debris is not removed safely and promptly. The
19 plan also indicates that the purpose of the structural debris
20 removal program is to remove debris that poses a risk to
21 health and/or the environment. Debris from structures smaller
22 than 120 square feet are not included in the program.

23 U. The Local Health Officer, Dr. Miller, has indicated the
24 following: (1) the Phase II cleanup of the properties
25 containing ash and debris from a qualifying structure
26 mitigates the public health hazards of the Camp Fire; (2)

1 failing to clean properties containing ash and debris from a
2 qualifying structure can have severely negative long-term
3 consequences to the public health and environment; (3)
4 therefore, the County's focus must be on accomplishment of
5 the Phase II cleanup to address the public health hazards;
6 (4) the standard for determining when a property is clean
7 from ash and debris from a qualifying structure is when the
8 Phase II cleanup work is complete and the property is
9 certified clean by the Department of Public Health,
10 Environmental Health Division; (5) as ash and debris of
11 qualifying structures is the focus of the Phase II cleanup
12 work, the significance of the public health risks is higher
13 on properties with ash and debris from a qualifying structure;
14 (6) given the progress the Camp Fire disaster recovery has
15 made with respect to the hazards identified in the findings
16 above, the remaining significant public health hazard is the
17 ash and debris from qualifying structures; (7) based on the
18 foregoing, properties that contain ash and debris from
19 qualifying structures constitute a significant public health
20 risk and therefore, those properties should be ineligible for
21 temporary emergency housing until Phase II cleanup work is
22 completed on the property and is certified clean by the
23 Department of Public Health, Environmental Health Division;
24 and (8) properties that do not contain ash and debris from a
25 qualifying structure do not pose a significant public health
26 risk and should be eligible for temporary emergency housing.

1 V. There is an immediate need for housing to accommodate persons
2 who have been displaced by the Camp Fire. This Chapter
3 temporarily relaxes some building and zoning regulations to
4 allow for additional housing both inside and outside of the
5 Camp Fire affected area for displaced persons. Due to the
6 magnitude of the destruction, there is a need to provide for
7 sufficient housing options both inside and outside of the
8 Camp Fire affected area.

9 W. It is essential that this Ordinance become immediately
10 effective (1) to mitigate the harm that could be caused to
11 the public health and safety and to the environment from the
12 improper disturbance, removal and/or disposal of debris
13 containing hazardous materials, and to facilitate the orderly
14 response to the Camp Fire disaster; and (2) to allow the
15 fastest possible transition of homeless and displaced
16 residents to interim and long-term shelter.

17 **Section 53-2. Title.**

18 This Chapter shall be known and may be cited as the Camp Fire
19 Disaster Recovery Ordinance.

20 **ARTICLE II. DEBRIS REMOVAL**

21 **Section 53-10. Definitions.**

22 **Alternative Program.** For purposes of this Article, the term
23 "Alternative Program" shall mean the requirements for inspections,
24 clean up and disposal established by the County of Butte for
25 property owners that opt out of or are ineligible for the OES
26 Program.

1 **Board.** The term "Board" means the Board of Supervisors.

2 **Director.** The term Director shall mean the Butte County Director
3 of Public Health and his/her designee.

4 **OES Program.** For purposes of this Article, the term "OES Program"
5 shall mean the fire damage debris clearance program operated by
6 the Office of Emergency Services for the Camp Fire in conjunction
7 with other State and Federal agencies.

8 **Phase I.** For purposes of this Article, the term "Phase I" shall
9 mean the hazardous waste cleanup performed by the United States
10 Environmental Protection Agency and/or Department of Toxic
11 Substances Control on certain properties impacted by the Camp Fire.

12 **Phase II.** For purposes of this Article, the term "Phase II" shall
13 mean the ash and debris cleanup work performed pursuant to the OES
14 Program and/or the Alternative Program.

15 **Private Action.** For the purposes of this Article, the term "private
16 action" shall mean the removal of fire debris from private property
17 damaged by the Camp Fire by persons not eligible for or opting out
18 of the OES Program and participating in the Alternative Program.

19 **Qualifying structure.** For the purposes of this Article, the term
20 "qualifying structure" shall mean a structure of 120 square feet
21 and over.

22 **Removal of Fire Debris.** The term "removal of fire debris" as used
23 in this Article includes all cleanup of fire debris from structures
24 resulting from the Camp Fire, including removal, transport and
25 disposal of fire debris, but it does not include the removal of
26 personal property from residential sites unless such removal of

1 personal property involves cleanup and the removal of ash from the
2 property.

3 **Right of Entry Permit.** The term "Right of Entry Permit" means the
4 Debris Removal Right-of-Entry Permit (For Providing Debris Removal
5 on Private Property) approved by the California Office of Emergency
6 Services for use in the cleanup after the Camp Fire.

7 **Temporary Log Storage Yards (AKA: Log Decks).** For purposes of
8 this Article, a site where piles of logs and other piles of
9 vegetation removed from the Camp Fire affected area are temporarily
10 stored and processed before transfer to trucks or rail. The logs
11 and vegetation must be associated with the Camp Fire recovery
12 effort, i.e., logs and vegetation that are burn-damaged or
13 otherwise removed due to safety issues associated with the Camp
14 Fire. Logs and wood waste originating from routine utility line
15 maintenance shall not be stored at Temporary Log Storage Yards.
16 This definition and Section 53-19 do not apply to logs and/or
17 vegetation harvested or cleared as part of a timber harvest plan
18 or exemption under the Forest Practice Rule that are stored and/or
19 processed on the property on which they were harvested or cleared.
20 This definition and Section 53-19 only applies to logs and
21 vegetation transported to another property. A temporary log
22 storage yard shall not exist beyond the Effective Period. No
23 structural fire debris or hazardous materials may be brought onto
24 or stored in the yard including any that may have been deposited
25 on logs or vegetation. Temporary Log Storage Yards allow for the
26 processing of logs and vegetation (e.g., chipping, milling, etc.)

1 but not the burning of logs and vegetation, and may include
2 associated equipment repair, construction trailers, employee
3 parking and portable bathroom facilities set up for use by the
4 personnel assigned to the yard, but not residences other than the
5 transitory use of a recreational vehicle for a temporary caretaker
6 quarters in conformance with Section 53-34 of this Chapter.

7 **Section 53-11. Effective Period.**

8 This Article relating to debris removal shall take effect
9 immediately upon adoption and shall remain in effect until the
10 removal of fire debris has been completed on all properties damaged
11 by the Camp Fire. Regardless of when the removal of fire debris
12 has been completed, Section 53-19 relating to Temporary Log Storage
13 Yards, as well as any sections within this Article that relate to
14 it, shall remain in effect until December 31, 2020, unless
15 otherwise specified herein, subject to extension or modification
16 by the Board of Supervisors.

17 **Section 53-12. Prohibition on Removal of Fire Debris from Private**
18 **Property.**

19 No fire debris from structures shall be removed from private
20 property except pursuant to the requirements of the table below.

21

	No structure on burned property	Non-qualifying structures (Structures less than 120 square feet	Qualifying structures (Structures 120 square feet and over on
--	--	--	--

22
23
24
25
26

			only on burned property)	burned property)
Prior to completion of Phase I cleanup	Owner may remove debris	Debris removal prohibited	Debris removal prohibited	
Prior to completion of Phase II cleanup	Owner may remove debris	Owner may remove debris with certificate from the Department of Public Health, Environmental Health Division	CalOES or Alternative Program contractors only may remove debris	
Following Phase II cleanup	Owner may remove debris	Owner may remove debris with certificate from the Department of Public Health, Environmental Health Division	Owner may remove remaining debris not removed during Phase II with certificate from the Department of Public Health, Environmental	

			Health Division
--	--	--	--------------------

For the purposes of this Article, the requirement to enter into the CalOES Program or the Alternative Program shall apply only to properties that contained a qualifying structure under the OES Program. The requirement shall not apply to properties that only contained non-qualifying structures, including but not limited to sheds, canopies, carports, well houses, greenhouses, chicken coops or fencing. Whether fire debris derived from a qualifying or non-qualifying structure shall be determined by the Director, or his or her designee, in consultation with CalOES.

Section 53-13. Removal of Fire Debris through the OES Program.

- A. Effect of the Right of Entry Permit: The Right of Entry Permit shall function as the sole permit and authorization for participation in the OES Program.
- B. Notwithstanding any contrary provision in Butte County Code, no County approvals or permits for fire debris removal are required for properties participating in the OES Program, other than the Right of Entry agreement.

Section 53-14. Removal of Fire Debris through the Alternative Program.

- A. The County shall administratively adopt and administer the Alternative Program in the unincorporated areas of Butte County under the supervision of the Chief Administrative Officer or his or her designee. The County shall utilize the state and federal standards and cleanup goals of the OES

1 Program as the standards for the Alternative Program. Under
2 the Supervision of the Chief Administrative Officer or his or
3 her designee, the County may administratively update these
4 standards as necessary to address ongoing changes in the
5 administration of the OES Program and the need to efficiently
6 remove hazardous fire debris from the community.

7 B. For those persons who are not eligible for the OES Program,
8 or who opt out of the OES Program, private action to remove
9 fire debris from fire-damaged properties is prohibited unless
10 and until a hazardous materials inspection has been performed
11 and authorization from the Department of Public Health,
12 Environmental Health Division has been provided pursuant to
13 the Alternative Program.

14 C. The Alternative Program shall require an application and work
15 plan that identifies the appropriate licensed contractors who
16 will perform the work and the submission of plans that
17 demonstrate that the standards established in the Alternative
18 Program will be met. Work shall not begin until the County
19 approves the application and work plan. The County may rely
20 upon the subject matter expertise of multiple departments in
21 deciding whether to approve the application and work plan.

22 D. Upon completion of the work described in the approved plans,
23 the Alternative Program shall require an application for
24 certification of successful completion of the work required
25 by the Alternative Program. The Alternative Program will
26 require that:(1) the debris removal and clean-up work on the

1 property meets or exceeds the standards set by the State of
2 California for debris removal; and (2) the owner completely
3 remove and dispose of the foundation or submit a letter from
4 a licensed civil or structural engineer certifying that the
5 foundation is acceptable for rebuild. The letter shall
6 certify structural reasons for the decision and include the
7 process and procedure used to reach the conclusion.

8 E. Notwithstanding any contrary provision in Butte County Code,
9 no county demolition permit shall be required for private
10 debris removal work for which the Director has issued an
11 approval allowing such work to proceed.

12 **Section 53-15. Hold on Building Permits.**

13 Any issued County of Butte building permit to repair or reconstruct
14 a fire damaged structure or private infrastructure shall be held
15 in abeyance and not acted upon until fire debris cleanup is
16 completed on the affected property and completion is confirmed to
17 the County Building Official, either through the OES Program or
18 through the Alternative Program. Notwithstanding the foregoing,
19 this section shall not apply to permits relating to power, sewer
20 or other utilities for temporary dwellings as provided for in this
21 Chapter.

22 **Section 53-16. Deadlines and Enforcement.**

23 A. The Board may set a deadline for filing an acceptable
24 application for the Alternative Program by resolution.

25 B. Properties that have fire ash and debris from the Camp Fire
26 and that have neither an approved Right of Entry Permit for

1 the OES Program nor an approved application for the
2 Alternative Program by the deadline set by the Board are
3 declared a nuisance and health hazard and such properties may
4 be abated pursuant to this Chapter.

5 C. The Board may set deadlines for the completion of work in the
6 Alternative Program by resolution. Properties that have fire
7 ash and debris from the Camp Fire after that deadline may be
8 declared a nuisance and health hazard.

9 D. The Board's intent is to facilitate orderly remediation of a
10 large scale disaster. Nothing in these deadlines shall limit
11 the authority of the County to abate hazards more quickly
12 where required by exigent circumstances. Nothing in this
13 Article or in these deadlines shall limit the authority of
14 the Health Officer to require preventive measures as defined
15 in California Health and Safety Code Section 101040.

16 E. Enforcement and Abatement.

17 (1) General Enforcement Action. When the Director determines that
18 an activity is being performed in violation of this Article,
19 the Director may initiate an enforcement action using any
20 process set forth in the Butte County Code and may seek the
21 imposition of costs and civil penalties pursuant to the Butte
22 County Code. Nothing in this provision is intended to prevent
23 alternate enforcement mechanisms, including but not limited
24 to, health officer orders pursuant to California Health and
25 Safety Code Section 101040.

26 (2) Summary Abatement. Pursuant to the authority of Cal. Const.,

1 art. XI, Section 7; California Health and Safety Code Section
2 101040, California Government Code Section 25845, and the
3 Butte County Code, if the Director determines that a violation
4 of this Article has created an emergency condition which
5 seriously endangers the public health or safety, the County
6 may abate the condition within the unincorporated territory
7 of the County of Butte. The costs shall be charged to the
8 property owners(s) and the County may, at its option, recover
9 the same in an administrative action as described below or a
10 civil action. Such charges shall be in addition to any penalty
11 for a violation of this Article.

12 i. Pre-Abatement Notice. Unless emergency conditions
13 preclude doing so, the Director shall issue a Summary
14 Abatement Notice and Order with reasonable notice. The
15 Notice and Order shall be mailed to the Property owner(s)
16 as listed on the last equalized tax roll. A summary of
17 the Notice and Order shall be posted in a conspicuous
18 location on the property to be abated at least 10
19 calendar days prior to the summary abatement action.

20 ii. Appeal and Waiver. The property owner(s) or any person
21 or entity having a legal interest in the property may
22 submit a written appeal of the Director's Order to the
23 Health Officer or his or her designee no later than 10
24 calendar days from the date of mailing of the Notice and
25 Order. The written appeal shall state the basis for the
26 appeal. The Health Officer or his/her designee shall

1 review the appeal and shall issue a written decision
2 (the "Decision") no later than 10 calendar days after
3 receipt. The Decision shall uphold, rescind or modify
4 the determination of the Notice and Order. The Decision
5 on the appeal shall be final. Failure to appeal within
6 the time prescribed shall constitute a waiver of the
7 right to contest the summary abatement.

8 iii. Post Abatement Notice. After the summary abatement is
9 completed, the Director shall serve the property
10 owner(s) with a post abatement notice that sets forth:
11 (a) the actions taken by the County; (b) the reasons for
12 the actions; (c) a statement of the costs, expenses and
13 attorney's fees, if any, of the abatement and notice of
14 the County's intent to collect those costs; and (d) right
15 to appeal the costs determination within 10 calendar
16 days of the notice. If the property owner is responsible
17 for any costs, expenses or attorney's fees, such costs
18 shall become a lien against the property and a Notice of
19 Abatement Lien may be recorded.

20 iv. Post Abatement Costs Appeal. If the property owner(s) or
21 anyone with a legal interest in the property submits a
22 timely costs appeal, the County shall schedule an
23 administrative hearing on the matter and provide the
24 appeal party with reasonable notice of the hearing. The
25 hearing conducted shall be held before a Hearing Officer
26 designated pursuant to the protocol set forth in that

1 document entitled the "Butte County Administrative
2 Hearing Officer Program." The Program is based upon an
3 alphabetical rotation through attorneys currently under
4 contract through the Program. The hearing officer shall
5 conduct an administrative hearing where each party shall
6 have the opportunity to present evidence and the County
7 shall have the obligation to establish that the costs,
8 including expenses and attorney's fees, if any, incurred
9 for the summary abatement were necessary by a
10 preponderance of the evidence. After the hearing, the
11 hearing officer shall issue a written decision and order
12 that shall be served upon the appealing party within 30
13 calendar days of the hearing unless extended by
14 agreement of the parties.

15 **Section 53-17. Judicial Enforcement Action.** The County Counsel is
16 authorized to initiate judicial enforcement as to a violation of
17 any provision of this Article without further Board approval.

18 **Section 53-18. Remedies Not Exclusive.** The remedies identified are
19 in addition to and do not supersede or limit any and all other
20 remedies, civil or criminal. The remedies provided in this Article
21 shall be cumulative and not exclusive.

22 **Section 53-19. Temporary Log Storage Yards.**

23 A. Maximum Number of Sites. The number of temporary log
24 storage yards shall be capped at a maximum of fifteen (15)
25 for the unincorporated area of Butte County.

26 B. Allowed Zones.

1 1. Natural Resource Zones. Timber Processing, as defined
2 by the Butte County Zoning Ordinance is allowed by-right
3 in the Timber Mountain (TM) and Timber Production (TPZ)
4 zones. The provisions of this section do not apply to
5 log storage yards in these zones.

6 2. Industrial Zones. Timber Processing, as defined by the
7 Butte County Zoning Ordinance is allowed by-right in the
8 Heavy Industrial (HI) zone, and with a conditional use
9 permit in the General Industrial (GI) zone. The
10 provisions of this section do not apply to log storage
11 yards in these zones.

12 C. Zones Requiring an Administrative Permit. Temporary log
13 storage yards are allowed subject to approval of a temporary
14 administrative permit and compliance with the standards set
15 forth below in the following zones:

16 1. Agriculture (AG) Zones, limited to those Agricultural
17 zones classified as Grazing or Other lands by the
18 California Department of Conservation's Farmland Mapping
19 Program. Parcels shall be located near State highways or
20 truck haul routes that access the Camp Fire area and
21 outside of urban or congested areas.

22 2. General Commercial (GC) zone.

23 3. The Neal Road Recycling, Energy, and Waste Facility
24 Overlay Zone (-RW).

25 4. Foothill Residential (FR), Rural Residential (RR),
26 Planned Development (PD), and Public (P).

1 D. Standards. All temporary log storage yards shall meet the
2 following standards:

3 1. Application for Temporary Administrative Permit. The
4 property owner or the property owner's authorized agent
5 shall obtain a temporary administrative permit for the
6 Effective Period. Written consent of the property owner
7 is required in all cases.

8 2. Site Plan Required. A detailed site plan meeting general
9 architectural or engineering standards, legible and
10 drawn to scale that shows all the proposed activities
11 that will occur on-site, as well as the approximate
12 location of each activity, shall be provided with the
13 application for a temporary administrative permit.
14 Partial site plans for a portion of a property may be
15 submitted as long as a vicinity map for the entire
16 property showing frontage streets, other uses and a
17 cross reference of the area of the partial site plan is
18 provided. All site plans shall show and label contours
19 at maximum vertical intervals of five feet; areas of
20 proposed grading and fill; the width of access roads to
21 and around parking, log piles and other piles, and
22 buildings; and turnaround areas for fire and emergency
23 services. Any change in the type of activity that will
24 occur on-site or the location of any activity requires
25 the owner or operator to apply for a new temporary
26 administrative permit.

- 1 3. Siting Criteria. To the extent practicable, temporary
2 log storage yards shall be located on flat areas of the
3 site that are already disturbed and in such a manner to
4 decrease impacts to uses on surrounding properties.
- 5 4. Parcel Size. The temporary log storage yard site shall
6 be a minimum of 5 acres in the GC zone, 10 acres in the
7 FR, RR, PD, and P zones, and 20 acres in other zones
8 regardless of the actual area used for the temporary log
9 storage yard. Adjacent parcels may be utilized to
10 achieve this standard, provided each owner's consent is
11 provided with the application. All parcels must be shown
12 on the application, the site plan, and all property
13 owners shall provide written permission.
- 14 5. Approved Access. Temporary log storage yards shall have
15 access onto a public road. If the public road is a County
16 road, the approach shall be made with an encroachment
17 permit approved by the Department of Public Works. If
18 the public road is a State highway, the approach shall
19 be made with an approved encroachment permit issued by
20 the California Department of Transportation (CalTrans)
21 District 3 Office. If the public road is accessed by a
22 private road, there shall be an approved encroachment
23 permit as required in the prior two sentences where the
24 private road connects to the public road, and there shall
25 be an approved road maintenance agreement that allows
26 for the proposed use along the private road.

1 6. On-site Roads, Driveways and Aisles. Temporary log
2 storage yards shall have on-site roads, driveways and
3 aisles. On-site roads, driveways and aisles shall have
4 a 6 inch Class 2 aggregate base, a minimum width of 25
5 feet, and shall be capable of supporting a 40,000 lb.
6 load that will allow for ingress and egress of fire
7 apparatus to within 150 feet of all piles and structures,
8 and shall have a vertical clearance of no less than 15
9 feet.

10 7. Property Line Setbacks and Defensible Space. All log
11 piles and other piles shall be setback a minimum of 150
12 feet from all outside property lines and any permanent
13 structures. There shall be an area of defensible space
14 that is a minimum of 150 feet wide around the perimeter
15 of the temporary log storage area that shall not be
16 graded but shall be kept clear of grass and vegetation
17 to support fire protection by clearing, disking,
18 grubbing, and/or scraping. CAL-FIRE shall have
19 discretion to address unique circumstances.

20 8. Biological Resources. Temporary log storage yards shall
21 not be located on lands containing wetlands, and/or
22 endangered and protected plants and animal species. A
23 biological report shall be furnished to the Department
24 of Development Services demonstrating that the site does
25 not contain wetlands and/or endangered or protected
26 plants and animal species. A temporary log storage yard

1 shall not expand without providing a site plan and a
2 biological report to cover the expanded area.

3 9. Butte County Fire Department/CAL-Fire Standards.

4 Temporary log storage yards and the associated
5 activities performed with them pose the risk of fire if
6 fire suppression measures are not taken. The activities
7 include working with and storing flammable materials in
8 areas that have little to no water on-site and that are
9 subject to fire. The County is setting the fire standards
10 it believes are appropriate, but there are also State
11 standards set out in California Fire Code Chapter 28
12 with respect to all log storage yards and incidental
13 wood products stored there. Fire officials shall enforce
14 the most stringent standards. Per California Public
15 Resource Code, Section 4428, each site shall have a
16 sealed box of tools that shall be located, within the
17 operating area, at a point accessible in the event of
18 fire. This fire toolbox shall contain: one backpack
19 pump-type fire extinguisher filled with water, two axes,
20 two McLeod fire tools, and a sufficient number of shovels
21 so that each employee at the operation can be equipped
22 to fight fire. In addition, one or more serviceable
23 chainsaws of three and one-half or more horsepower with
24 a cutting bar 20 inches in length or longer shall be
25 immediately available within the operating area.

26 a. When a fire starts, a telephone call must be made

1 to 911 immediately to inform that there is a fire.
2 The facility operator shall develop a plan for
3 monitoring, controlling, and extinguishing fires.
4 The plan shall be submitted with the application
5 for the temporary administrative permit for review
6 and approval by fire officials.

7 b. Smoking may only occur in designated locations
8 shown on the site plan.

9 c. Log piles shall not exceed 20 feet in height, 300
10 feet in width, and 500 feet in length. Log piles
11 shall be stabilized by a means approved by the fire
12 marshal.

13 d. Other piles made of incidental log related
14 materials shall not exceed 20 feet in height, 150
15 feet in width, and 250 feet in length.

16 e. All piles shall be separated from all other piles
17 by 100 feet and shall include on-site roads,
18 driveways, and aisles as discussed above.

19 f. All piles shall be monitored by a means approved by
20 the fire marshal to measure temperatures. Internal
21 pile temperatures shall be monitored and recorded
22 weekly. A plan by the permittee for restricting and
23 mitigating excessive temperatures shall be
24 submitted with the application for the temporary
25 administrative permit for review and approval by
26 fire officials.

1 g. Regular inspections of the temporary log storage
2 yard by trained fire personnel shall be allowed and
3 facilitated by the facility operator.

4 h. Cutting activities shall comply with California
5 Fire Code Chapter 35.

6 10. Butte County Public Health, Environmental Health
7 Division Standards.

8 a. Depending on the activities performed on-site, the
9 temporary log storage yard may be determined to be
10 a solid waste facility. The facility operator must
11 provide access to the facility and provide for
12 review of the activities occurring at the facility
13 to the Local Enforcement Agency, Butte County
14 Environmental Health, to determine if there exists
15 a requirement to register for a permit status as a
16 solid waste facility in accordance with Title 14 of
17 the California Code of Regulations.

18 b. For sanitation purposes there shall be a minimum of
19 one portable toilet and one handwash station at the
20 facility for employee use. The portable toilet
21 shall be routinely serviced by a licensed service
22 provider.

23 c. For water that is provided for human consumption,
24 either from an on-site well or transported to the
25 facility and held in a storage tank, the facility
26 operator must meet the following requirements: if

1 there are 25 or more people/day consuming the
2 water, the facility operator shall contact the
3 Butte County Environmental Health Division for
4 public water system permitting requirements and
5 must operate in accordance with those requirements;
6 if there are fewer than 25 people/day consuming the
7 water, the facility shall have the water tested for
8 and be in compliance with minimum bacteriological
9 standards as required by the Butte County
10 Environmental Health Division. If bottled water is
11 provided, there are no requirements for testing.

12 d. The storage of any hazardous material at or above
13 State-defined thresholds shall require the approval
14 of a Hazardous Material Business Plan by the
15 Environmental Health Division of the Department of
16 Public Health.

17 11. Butte County Public Works Department Standards.

18 a. Perimeter stormwater control - When the temporary
19 log storage yard is prepared for operations or the
20 soil is disturbed, improvements shall be designed
21 and implemented such that water accumulating within
22 the project will be carried away from the project
23 without injury to any adjacent improvements,
24 residential sites, or adjoining areas. The design
25 shall be prepared by a Qualified Stormwater
26 Developer who holds the certification required by

1 the CA Water Quality Control Board's Construction
2 General Permit 2009-009-DWQ. All natural drainage
3 that enters the project area must leave the project
4 area at its original horizontal and vertical
5 alignment and with the same pre-improvement
6 quantity. Implementation of erosion control within
7 the project area and sediment control basins at
8 drainage outlets shall conform with California
9 Stormwater Quality Association (CASQA) design
10 criteria. Sites that meet EPA's criteria for a
11 Rainfall Erosivity Waiver
12 ([https://www.epa.gov/sites/production/files/2015-
13 10/documents/fact3-1.pdf](https://www.epa.gov/sites/production/files/2015-10/documents/fact3-1.pdf)) or are fully stabilized
14 with erosion control measures are not required to
15 install sediment control basins.

- 16 b. Water quality and erosion control - When submitting
17 an application for a temporary log storage yard,
18 any surface disturbance over one acre in size shall
19 require a Storm Water Pollution Prevention Plan
20 (SWPPP) by a certified Qualified SWPPP Developer
21 and the submittal of a Notice of Intent to obtain
22 coverage under the General Permit for Discharges of
23 Storm Water Associated with Construction Activity
24 (Construction General Permit Order 2009-0009-DWQ as
25 amended). If the area of disturbance is one acre or
26 less, then along with an application for a

1 temporary log storage yard, an Erosion and Sediment
2 Control Plan (ESCP) shall be developed by the
3 facility operator, submitted for approval, and
4 adhered to for erosion and sediment control. The
5 ESCP shall contain a description detailing which
6 Best Management Practices (BMP) will be used, how
7 they will be used, and where they will be used in
8 conformance with the California Stormwater Quality
9 Association (CASQA) BMP Municipal Handbook. The
10 ESCP shall contain a description of temporary and
11 permanent measures and include ingress/egress
12 control measures and street sweeping. Plans shall
13 be prepared by a Qualified Stormwater Developer who
14 holds the certification required by the CA Water
15 Quality Control Board's Construction General Permit
16 2009-009-DWQ. Upon completion of the project, all
17 temporary sediment control measures shall be
18 removed from the site. All permanent sediment
19 control measures must be maintained by the parcel
20 owner.

- 21 12. Air Quality and Dust Control. All best practice measures
22 to reduce impacts to air quality shall be incorporated
23 by the project applicant, subject property owners, or
24 third-party contractors during activities on the project
25 site. A plan shall be provided to the satisfaction of
26 the Director of Development Services to address:

- 1 a. Mobile and stationary toxic air contaminants; and
2 b. Fugitive dust and ash. Best practice measures shall
3 comply with the Butte County Air Quality Management
4 District's Rule 205 - *Fugitive Dust Requirements*
5 and shall include, but not be limited to, the
6 following:

7 1. Reduce the amount of the disturbed area where
8 possible. Stabilize disturbed area soils
9 during use and at project completion.

10 2. Apply water or a stabilizing agent in
11 sufficient quantities to prevent the
12 generation of visible dust plumes.

13 3. Limit vehicle speeds to 15 miles per hour on
14 any unpaved surfaces at the project site.

15 4. Clean visible track-out onto adjacent paved
16 roadways daily. Track-out shall not extend
17 more than 25 feet in cumulative length from
18 the active project site.

19 5. Post a sign in a prominent location visible to
20 the public with the telephone numbers of the
21 contractor and Air District for any questions
22 or concerns about dust from the project.

23 13. Storage or Processing of Debris Prohibited. The storage
24 or processing of debris from the Butte County Camp Fire
25 Consolidated Debris Removal Program at any temporary log
26 storage yard, including the storage of trucks or

1 equipment loaded with debris, is expressly prohibited.

2 14. Noise. Quiet hours shall be maintained from 7 pm to 7
3 am seven days a week. During quiet hours, generators and
4 heavy equipment shall not be operated and noise levels
5 shall conform to Butte County Code Chapter 41 A, Noise
6 Control. Outside of quiet hours, noise sources
7 associated with temporary log storage yards shall be
8 exempt from the requirements of Butte County Code
9 Chapter 41A, Noise Control.

10 15. Outdoor Lighting. All outdoor lighting shall be
11 located, adequately shielded, and directed such that no
12 direct light falls outside the property line, or into
13 the public right-of-way in accordance with the Butte
14 County Zoning Ordinance, Article 14, Outdoor Lighting.

15 16. Reclamation Required. The application for a temporary
16 administrative permit for a temporary log storage yard
17 shall be accompanied by a detailed plan for the
18 restoration or reclamation of the subject property to
19 the satisfaction of the Director of Development
20 Services. There shall be no grading of the site without
21 the prior approval of the Director of Development
22 Services, but if grading is allowed, topsoil shall be
23 conserved to be used for reclamation. At minimum, a plan
24 for restoration or reclamation shall include:

25 a. Clearance of the site of all vehicles, equipment
26 and materials utilized as part of the temporary log

1 storage yard; and

2 b. Stabilization of the site, implementation of
3 erosion control measures, and successful
4 revegetation to the satisfaction of the Director of
5 Development Services in order to render the site
6 suitable for the use for which it was zoned, for
7 example:

8 1. Continued agricultural production in the case
9 of lands zoned Agriculture (AG).

10 17. Performance Guarantee. In approving a temporary
11 administrative permit for a temporary log storage yard,
12 the Director of Development Services shall require a
13 performance guarantee as provided by Section 24-245 of
14 the Butte County Code in the amount of \$2000.00 per acre
15 of land disturbed in order to guarantee the proper
16 completion of any approved work and to ensure that site
17 reclamation is completed to the satisfaction of the
18 Director of Development Services. Lands shall be
19 restored or reclaimed to the satisfaction of the
20 Director of Development Services prior to release of the
21 performance guarantee.

22 18. Electricity and Electrical Equipment. If new electricity
23 connections are brought to the site, a building permit
24 is required. Electrical wiring and equipment shall
25 comply with the California Electrical Code.

26 19. Additional Requirements. The temporary administrative

1 permit may be subject to additional requirements from
2 Butte County Fire, Butte County Public Works, the Butte
3 County Air Quality Management District, the California
4 Department of Transportation, the Butte County Public
5 Health Department, and the State Regional Water Quality
6 Control Board.

7 E. Notice

8 At least ten (10) days prior to issuance of a temporary
9 administrative permit, pursuant to this section, the Butte
10 County Department of Development Services shall provide a
11 mailed notice to property owners within 1,200 feet of the
12 property line of the subject parcel(s). The notice shall
13 include all applicable standards and limitations placed upon
14 the temporary log storage yard, the Butte County
15 administrative permit number, as well as the name, phone
16 number and email of a designated contact for concerns
17 regarding the yard's operation. The temporary administrative
18 permit shall be issued without a formal hearing, unless one
19 is requested by either the applicant or other affected
20 persons. If a hearing is requested, it shall be scheduled
21 for the next available Planning Commission meeting and the
22 Planning Commission shall hear the request. The Planning
23 Commission may impose conditions and requirements in addition
24 to the standards set forth above, or may deny the
25 administrative permit, to mitigate impacts to uses on
26 surrounding properties. Unless otherwise appealed, the

1 decision of the Planning Commission shall be final.

2 F. Violations, Enforcement, and Penalties.

3 1. A temporary log storage yard that is operating in
4 violation of this section poses a health and safety
5 hazard and is found to be a public nuisance.

6 2. The Director of Development Services may initiate
7 enforcement using any process set forth in the Butte
8 County Code, including, but not limited to, Code
9 Enforcement pursuant to Chapter 41 and Nuisance
10 Abatement pursuant to Chapter 32A, and may seek the
11 imposition of costs and civil penalties pursuant to the
12 Butte County Code. Nothing in this provision is intended
13 to prevent alternative enforcement mechanisms.

14 3. If the Chapter 41 Code Enforcement process is used, the
15 penalties set forth in section 41-5 are increased
16 because the health and safety hazards to the public are
17 greater than in the general code enforcement context.
18 The increased penalties are a fine of one thousand
19 dollars (\$1,000.00) for the first conviction, a fine of
20 three thousand dollars (\$3,000.00) for the second
21 conviction within a twelve (12) month period, and a fine
22 of five thousand dollars (\$5,000.00) for a third
23 conviction, as well as all additional convictions,
24 within a twelve (12) month period.

25 **ARTICLE III. EMERGENCY INTERIM HOUSING OUTSIDE THE CAMP FIRE AREA**

26 **Section 53-30. Purpose.**

1 This article is enacted for the purpose of temporarily modifying
2 various Zoning Ordinance regulations and policies to allow the
3 fastest possible transition of residents made homeless or
4 displaced by the Camp Fire to interim and long-term shelter. The
5 article relaxes certain standards in the Zoning Ordinance to allow
6 for additional temporary housing opportunities outside of the
7 boundaries of the Camp Fire to meet the urgent need for housing of
8 displaced persons. This article does not address standards that
9 will be required when displaced persons return to their properties
10 within the boundaries of the Camp Fire. Those standards will be
11 addressed in an article below.

12 **Section 53-31. Administration.**

13 This article shall be administered under the direction of the Board
14 of Supervisors, by and through the Director and other departments
15 specified herein.

16 **Section 53-32. Effective Period.**

17 A. The provisions in this article shall remain in effect until
18 December 31, 2020, unless otherwise specified herein, subject
19 to extension or modification by the Board of Supervisors.
20 Unless extended or modified by the Board of Supervisors, this
21 article shall expire on December 31, 2020, and be of no
22 further force or effect.

23 B. Except as otherwise provided herein, no residential
24 recreational vehicle use or interim housing authorized
25 pursuant to this article shall be used for permanent housing
26 after the expiration date of this article.

1 **Section 53-33. Definitions.**

2 Except where the context clearly indicates otherwise, the
3 following definitions shall govern the construction of the words
4 and phrases used in the article:

5 **Approved Mining Site.** The portion of a parcel or parcels of land
6 with a valid mining permit, reclamation plan and financial
7 assurance for surface mining operations, as required in Butte
8 County Code Chapter 13, Article II, Surface Mining and Reclamation.

9 **Basecamp.** A site that includes some or all of the following
10 features: equipment staging/storage; employee housing; commissary;
11 laundry; and other services for the purpose of providing workforce
12 housing for Camp Fire Recovery efforts or shelter of displaced
13 persons.

14 **Cal OES.** The Governor's Office of Emergency Services.

15 **Camp Fire.** A 153,336-acre wildfire that started near the community
16 of Pulga on November 8, 2018, destroying over 18,000 structures,
17 which forced the evacuation of the Town of Paradise, Berry Creek,
18 Butte Creek Canyon, Butte Valley, Centerville, Cherokee, Concow,
19 Durham, Forest Ranch, Magalia, Pulga, Stirling City, and Yankee
20 Hill, and other areas near the Cities of Chico and Oroville, and
21 proclaimed by the Board of Supervisors under Resolution 18-169, as
22 a local emergency, and also proclaimed by then Acting Governor
23 Gavin Newsom as a state of emergency. CAL FIRE maintains a map
24 showing the final boundaries of the Camp Fire, as of November 25,
25 2018 at 100 percent containment.

26 **Director.** The Director of the Department of Development Services

1 or his or her authorized representative.

2 **Displaced Person(s).** A county resident or residents whose
3 residential dwelling has been destroyed or damaged by the Camp
4 Fire, such that the resident(s) cannot occupy the dwelling.
5 Displaced person(s) may be required to provide verification to the
6 county to substantiate their eligibility for uses, permits and/or
7 approvals described in this article. Evidence may consist of
8 verification by Federal Emergency Management Agency (FEMA)
9 registration or damage assessment, and/or a driver's license or
10 other government-issued identification card or utility bill, etc.
11 with a physical address showing the resident resided on a legal
12 parcel impacted by the Camp Fire, as determined by the county.
13 Such determination may be made by the Director or other county
14 personnel.

15 **Effective Date.** The date of the Board of Supervisors adoption of
16 this article.

17 **FEMA.** The Federal Emergency Management Agency or successor agency.

18 **Mobile/manufactured home:** A housing structure transportable in one
19 (1) or more sections, designed and equipped to be used with or
20 without a foundation system, certified under the National
21 Manufactured Housing Construction and Safety Standards Act of 1974
22 (42 U.S.C. section 5401 et seq.). The County shall not grant a
23 permit for the installation of a mobile/manufactured home if such
24 mobile/manufactured home is older than ten (10) years of age. The
25 age measurement period shall be from the year of manufacture of
26 the home to the year of the permit application. Mobile/manufactured

1 home does not include recreational vehicle, park trailer, or
2 commercial modular as defined in Division 13, Part 2, Chapter 1,
3 of the Health and Safety Code.

4 **Movable Tiny House.** A movable tiny house is a structure utilized
5 as living quarters by one household that is licensed by and
6 registered with the California Department of Motor Vehicles, meets
7 the American National Standards Institute (ANSI) 119.5 or ANSI
8 119.2 (NFPA 1192) requirements and is certified by a qualified
9 third party inspector for ANSI compliance, cannot move under its
10 own power, is not longer than allowed by State law for movement on
11 public highways, has a total floor area of not less than 150 square
12 feet, and has no more than 430 square feet of habitable living
13 space.

14 **Recreational Vehicle.** A motor home, travel trailer, truck camper
15 or camping trailer that is: (1) self-contained with potable water
16 and sewage tanks and designed for human habitation for recreational
17 or emergency occupancy; (2) self-propelled, truck-mounted, or
18 permanently towable on California roadways; and (3) a California
19 Department of Motor Vehicles licensed vehicle, or a similar vehicle
20 or structure as determined by the Director.

21 **Recreational Vehicle Park.** A commercial use providing space for
22 the accommodation of more than two recreational vehicles for
23 recreational or emergency housing for displaced persons, or for
24 transient employee lodging and/or basecamp purposes.

25 **Temporary Dwelling.** A temporary dwelling that meets the water,
26 sewage disposal, and electricity hook-up standards and includes a

1 recreational vehicle, mobile/manufactured home, or movable tiny
2 house.

3 **Temporary Truck and Equipment Staging and Laydown Yard.** An
4 approved area used for the storage of unladen trucks and equipment
5 utilized to remove and haul away fire debris and hazardous
6 materials, and the storage of materials used to facilitate the
7 removal and hauling away of fire debris and hazardous materials,
8 as part of the Butte County Camp Fire Consolidated Debris Removal
9 Program. No fire debris or hazardous materials may be brought onto
10 or stored on the yard. Truck and Equipment Staging and Laydown
11 Yards may include associated truck and equipment repair,
12 construction trailers, employee parking and portable bathroom
13 facilities set up for use by the personnel assigned to the yard,
14 but not residences other than for a temporary caretaker quarters.

15 **Transitory Period.** The period of time after the Camp Fire event
16 during which recreational vehicles do not need to meet the water,
17 sewage disposal, and electricity hook-up standards. The transitory
18 period ends on July 31, 2020.

19 **Section 53-34. Residential Use of Recreational Vehicles and**
20 **Temporary Dwellings.**

21 A. FEMA Temporary Housing Sites. Federal Emergency Management
22 Agency (FEMA) temporary housing sites authorized under
23 contract to FEMA are an allowed use in the MDR (Medium Density
24 Residential), MHDR (Medium High Density Residential), HDR
25 (High Density Residential), RBP (Research and Business Park),
26 PD (Planned Development), P (Public), and Commercial and

1 Industrial zones; and, in AG (Agriculture) zones when an
2 approved residential specific plan exists, and when said
3 specific plan is identified under the Butte County General
4 Plan, or in AG (Agriculture) zones located inside a city's
5 approved Sphere of Influence that are classified as grazing
6 or other lands as defined by the State Farmland Mapping and
7 Monitoring Program and having a combined parcel size greater
8 than 20 acres and subject to all additional requirements,
9 such as the 300 foot agricultural buffer, flood zones, and
10 airport land use compatibility zones. Each FEMA temporary
11 housing site authorized under this article shall have been
12 reviewed through the housing identification process and
13 approved by the Director.

14 B. Transitory Use of Recreational Vehicles. Residential use and
15 occupancy of up to two (2) recreational vehicles without
16 water, sewage disposal, or electricity hook-ups on any lot
17 that permits a residential use outside of the area affected
18 by the Camp Fire shall be allowed for the transitory period.
19 Use after the transitory period shall be subject to a
20 temporary administrative permit, full hook-ups to water,
21 sewage disposal, and electricity, and subject to the
22 applicable standards set forth in Subsection E, Standards.

23 C. Temporary Dwellings with Utility Hook-ups. Residential use
24 and occupancy of up to two (2) temporary dwellings utilizing
25 hook-ups for water, sewage disposal, and electricity shall be
26 allowed during the Effective Period of this article subject

1 to a temporary administrative permit, and subject to the
2 applicable requirements set forth in Subsection E, Standards.

3 D. Temporary Recreational Vehicle Parks. The establishment of
4 temporary recreational vehicle parks without requiring hook-
5 ups to water, sewage disposal, and electricity in Commercial,
6 Industrial, FR (Foothill Residential), RR (Rural
7 Residential), within the City of Chico Sphere of Influence
8 VLDCR (Very Low Density Country Residential), PD (Planned
9 Development), P (Public), and RBP (Research and Business
10 Park) zoning districts, and in parking lots of religious and
11 community facilities, and in AG (Agriculture) zones when an
12 approved residential specific plan exists, and when said
13 specific plan is identified under the Butte County General
14 Plan, or in AG (Agriculture) zones located inside a city's
15 approved Sphere of Influence that are classified as grazing
16 or other lands as defined by the State Farmland Mapping and
17 Monitoring Program and having a combined parcel size greater
18 than 20 acres and subject to all additional requirements,
19 such as the 300 foot agricultural buffer, flood zones, and
20 airport land use compatibility zones shall be allowed for the
21 transitory period. Temporary Recreational Vehicle Parks that
22 are served with water, sewage disposal, and electricity hook-
23 ups may continue for the Effective Period of this article.
24 Basecamp features may be located in the same zones as
25 Temporary Recreational Vehicle Parks, except for the FR
26 (Foothill Residential), RR (Rural Residential), and within

1 the City of Chico Sphere of Influence VLDCR (Very Low Density
2 Country Residential) zones. Temporary Recreational Vehicle
3 Parks and basecamp features are subject to a temporary
4 administrative permit and subject to the applicable
5 requirements set forth under Subsection E, Standards.

6 E. Standards. After the transitory period, all residential uses
7 of recreational vehicles shall meet the following standards.
8 Use of temporary dwellings shall at all times meet the
9 following standards.

10 1. Recreational vehicles and temporary dwellings shall have
11 full hook-ups to water, sewage disposal, and
12 electricity.

13 2. The property owner or the property owner's authorized
14 agent shall obtain a temporary administrative permit for
15 the Effective Period of this article. Written consent
16 of the property owner is required in all cases.

17 3. Use of temporary dwellings is contingent on proof of a
18 damaged or destroyed residence as verified by the
19 Director based on prior final building permit or
20 Assessor's records, or other documentation satisfactory
21 to the Director.

22 4. The residential use of recreational vehicles and
23 temporary dwellings is limited to vehicles and dwellings
24 not on a permanent foundation and used to house displaced
25 persons during the Effective Period set forth in Section
26 53-32 above.

1 5. The residential use of recreational vehicles and
2 temporary dwellings shall be located outside of required
3 setbacks established in Chapter 24 of the Butte County
4 Code, unless the applicant can establish to the
5 satisfaction of the Director that there is no other
6 available location outside of the setback area.

7 6. The residential use of recreational vehicles and
8 temporary dwellings shall be located outside of the
9 boundaries of any recorded easements.

10 7. The recreational vehicle, basecamp feature, or temporary
11 dwelling shall be connected to an approved source of
12 water meeting one of the following criteria:

13 a. Public water supply;

14 b. Existing well provided that it has been approved by
15 the Department of Public Health, Environmental
16 Health Division as safe for domestic consumption;
17 or,

18 c. Other water source as approved by the Department of
19 Public Health, Environmental Health Division.

20 8. The recreational vehicle, basecamp feature, or temporary
21 dwelling shall be connected to an approved sewage
22 disposal system meeting one of the following criteria:

23 a. Public sewer system;

24 b. Existing on-site sewage disposal system that has
25 been approved by the Department of Public Health,
26 Environmental Health Division to be intact,

1 adequately sized, and functioning following the
2 disaster;

3 c. Temporary holding tank with a contract with a
4 pumping company for regular pumping. A copy of the
5 contract shall be provided to the Department of
6 Public Health, Environmental Health Division; or

7 d. Other method of sewage disposal approved by the
8 Department of Public Health, Environmental Health
9 Division.

10 9. The recreational vehicle, basecamp feature, or temporary
11 dwelling shall be connected to an approved source of
12 electricity meeting one of the following criteria:

13 a. Permitted electrical service hook-up; or

14 b. Other power source approved by the Director.

15 10. The following additional standards apply to Temporary
16 Recreational Vehicle Parks and basecamp features:

17 a. Except for AG (Agriculture) zoned parcels which shall
18 be a minimum total of twenty (20) acres and FR
19 (Foothill Residential), RR (Rural Residential), and
20 within the City of Chico Sphere of Influence VLDCR
21 (Very Low Density Country Residential) zoned parcels
22 which shall be a minimum total of five (5) acres as
23 discussed in subsection (E)(11) below, parcels shall
24 be a minimum of two (2) acres in size.

25 b. All areas occupied by recreational vehicles and/or
26 basecamp features and access aisles, driveways, and

1 roads shall have an all-weather surface capable of
2 supporting a 40,000 lb. load that will allow for
3 ingress and egress of fire apparatus to within 150
4 feet of all units and a vertical clearance of no less
5 than 15 feet.

6 c. Driveways and aisles shall have a minimum width of 25
7 feet.

8 d. A County Encroachment permit must be obtained for all
9 new and existing driveway approaches to publicly
10 maintained roads as specified in the County
11 Improvement Standards.

12 e. The temporary administrative permit may be subject to
13 additional requirements from Butte County Fire, Butte
14 County Public Works, the State Housing and Community
15 Development Department, and the State Regional Water
16 Quality Control Board.

17 11. The following additional standards apply to Temporary
18 Recreational Vehicle Parks and basecamp features in the
19 FR (Foothill Residential), RR (Rural Residential), and
20 within the City of Chico Sphere of Influence VLDCR (Very
21 Low Density Country Residential) zones.

22 a. Basecamps are not permitted.

23 b. Parcels shall be a minimum of five (5) acres in size.

24 c. No more than two (2) recreational vehicles shall be
25 allowed per acre.

26

1 d. There shall be a 25-foot setback from all property
2 lines for all recreational vehicles and related
3 improvements.

4 e. Quiet hours shall be maintained from 10 pm to 7 am,
5 during which generators shall not be operated and
6 noise levels shall conform to Butte County Code
7 Chapter 41 A, Noise Control.

8 f. All outdoor lighting shall be located, adequately
9 shielded, and directed such that no direct light falls
10 outside the property line, or into the public right-
11 of-way in accordance with the Butte County Zoning
12 Ordinance, Article 14, Outdoor Lighting.

13 g. One (1) on-site parking space shall be provided per
14 recreational vehicle.

15 12. Each temporary administrative permit application for a
16 Temporary Recreational Vehicle Park and basecamp
17 feature shall be accompanied by a detailed plan for
18 the restoration or reclamation of the subject property
19 to the satisfaction of the Director. At minimum, a
20 plan for restoration or reclamation shall include
21 clearance of the site of all recreational vehicles and
22 related structures and removal of all-weather surfaces
23 and utilities constructed for said park unless there
24 is a separate application under the Zoning Ordinance
25 to permit the improvements.

26 Lands upon which Temporary Recreational Vehicle Parks

1 and basecamp features in AG (Agriculture) zones are
2 located shall be restored to their prior agricultural
3 use or other agricultural use as approved by the Director
4 prior to the expiration of this ordinance. A
5 performance guarantee as provided by Section 24-245 of
6 Butte County Code in the amount of \$1,000.00 per acre of
7 land disturbed by the Temporary Recreational Vehicle
8 Park and basecamp feature shall be paid prior to site
9 disturbance activities to ensure that site restoration
10 and reclamation is completed to the satisfaction of the
11 Director. Lands shall be reclaimed to the satisfaction
12 of the Director prior to release of the performance
13 guarantee.

14 **Section 53-35. Use of accessory residential structures for**
15 **temporary habitation.**

16 For the Effective Period of this article, accessory residential
17 structures, which meet Residential Group R occupancies as
18 established by the California Residential Code adopted by Butte
19 County, may be used as interim housing for persons displaced by
20 the Camp Fire. During this period, said use shall not be subject
21 to the provisions of existing deed restrictions required by Butte
22 County, but shall remain subject to all other existing regulations
23 and limitations.

24 **Section 53-36. Use of Accommodations, Farmstays, Bed and Breakfast**
25 **Inns, Resorts, Retreats, Camps or other similar uses.**

26 Notwithstanding any contrary provision in the Butte County Code or

1 any use permit conditions, use of existing promotional or marketing
2 accommodations, farmstays, bed and breakfast inns, resorts,
3 retreats, camps or other similar visitor serving uses shall be
4 allowed as interim housing for persons displaced by the Camp Fire.

5 **Section 53-37. Waiver of County Use Permit Requirement for**
6 **Relocation of Damaged Child Care and Educational Facilities.**

7 Notwithstanding any contrary provision in the Butte County Code,
8 any existing small or large child day care facility or child care
9 center, elementary school, junior high school, high school or
10 institution of higher education that was housed in premises made
11 uninhabitable by the Camp Fire may be temporarily relocated to
12 existing buildings in the LI (Limited Industrial), RBP (Research
13 and Business Park), PD (Planned Development), PB (Public), GC
14 (General Commercial), NC (Neighborhood Commercial), CC (Community
15 Commercial), REC (Recreation Commercial), SE (Sports and
16 Entertainment), and MU (Mixed-Use) zones, or to any site within an
17 existing religious facility, subject to a temporary administrative
18 permit and any existing applicable standards, and subject to a
19 building permit if any renovations are required. Nothing in this
20 article waives or affects any State law requirements applicable to
21 such facilities.

22 **Section 53-38. Removal and disconnection.**

23 Every temporary dwelling allowed by this article shall be
24 disconnected from water, sewage disposal, and/or electricity hook-
25 ups and removed from the property on which it is located no later
26 than the expiration date of this article or within 30 days of a

1 final inspection or the issuance of a certificate of occupancy for
2 a replacement dwelling, whichever is earliest.

3 **Section 53-39. Temporary Truck and Equipment Staging and Laydown**
4 **Yards.**

5 Temporary truck and equipment staging and laydown yards
6 coordinated through Cal OES are allowed subject to approval of a
7 temporary administrative permit and compliance with the
8 standards set forth below in the following areas:

- 9 1. On an approved mining site when the Director determines
10 the yard will not interfere with the mining site's
11 reclamation and approved end use.
- 12 2. On the 11.98-acre parcel located at 2903 Neal Road,
13 Paradise (APN 055-350-044) that was previously the
14 location of a logging truck repair and storage facility
15 permitted by Use Permit No. UP 84-26.

16 Each Cal OES temporary truck and equipment staging and laydown
17 yard authorized under this article shall be coordinated through
18 the Cal OES Operations Director or his or her designee, and
19 approved by the Director, prior to the issuance of a temporary
20 administrative permit.

21 A. Standards. All Temporary Truck and Equipment Staging and
22 Laydown Yards shall meet the following standards:

- 23 1. Application for Temporary Administrative Permit. The
24 property owner or the property owner's authorized agent
25 shall obtain a temporary administrative permit for the
26 Effective Period of this article. Written consent of the

1 property owner is required in all cases.

2 2. Site Plan Required. A detailed site plan meeting
3 general architectural or engineering standards, legible
4 and drawn to scale shall be provided with the
5 application for a temporary administrative permit.
6 Partial site plans for a portion of a property may be
7 submitted as long as a vicinity map for the entire
8 property showing frontage streets, other uses and a
9 cross reference of the area of the partial site plan is
10 provided. All site plans shall show and label contours
11 at maximum vertical intervals of five feet; areas of
12 proposed grading and fill; the width of access roads to
13 and around parking and laydown areas and buildings; and
14 turnaround areas for fire and emergency services.

15 3. Siting Criteria. To the extent practicable, temporary
16 truck and equipment staging and laydown yards shall be
17 located on flat areas of the site that are already
18 disturbed. Yards located on approved mining sites
19 shall be located within the boundaries of that portion
20 of the parcel or parcels of land with a valid mining
21 permit, reclamation plan and financial assurance for
22 surface mining operations that have not already been
23 reclaimed

24 4. Approved Access. Temporary truck and equipment
25 staging and laydown yards shall have access onto a
26 public road. If the public road is a County road, the

1 approach shall be made with an encroachment permit
2 approved by the Department of Public Works. If the
3 public road is a State highway, the approach shall be
4 made with an approved encroachment permit issued by
5 the California Department of Transportation (CalTrans)
6 District 3 Office. If the public road is accessed by a
7 private road, there shall be an approved road
8 maintenance agreement that allows for the proposed use
9 along the private road.

10 5. On-site Roads, Driveways and Aisles. Driveways and
11 access aisles shall have a minimum width of 25 feet.
12 Roads, access aisles and driveways shall have an all-
13 weather surface capable of supporting a 40,000 lb.
14 load that will allow for ingress and egress of fire
15 apparatus to within 150 feet of all units and a
16 vertical clearance of no less than 15 feet.

17 6. Air Quality and Dust Control. All best practice
18 measures to reduce impacts to air quality shall be
19 incorporated by the project applicant, subject
20 property owners, or third-party contractors during
21 activities on the project site. A plan shall be
22 provided to the satisfaction of the Director to
23 address:

24 a. Diesel particulate matter from construction
25 equipment and commercial on-road vehicles greater
26 than 10,000 pounds;

- b. Mobile and stationary toxic air contaminants; and
- c. Fugitive dust and ash.

7. Water Quality. Any surface disturbance over one-acre in size shall require a Storm Water Pollution Prevention Plan (SWPPP) by a certified Qualified SWPPP Developer and the submittal of a Notice of Intent to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit Order 2009-0009-DWQ as amended).

8. Storage or Processing of Debris Prohibited. The storage or processing of debris from the Butte County Camp Fire Consolidated Debris Removal Program at any temporary truck and equipment staging and laydown yard, including the storage of trucks or equipment loaded with debris, is expressly prohibited.

9. Hazardous Material Business Plan Required. The storage of any hazardous material at or above State-defined thresholds shall require the approval by the Environmental Health Division of the Department of Public Health of a Hazardous Material Business Plan.

10. Outdoor Lighting. All outdoor lighting shall be located, adequately shielded, and directed such that no direct light falls outside the property line, or into the public right-of-way in accordance with the Butte County Zoning Ordinance, Article 14, Outdoor

1 Lighting.

2 11. Reclamation Required. The application for a
3 temporary administrative permit for a temporary truck
4 and equipment staging and laydown yard shall be
5 accompanied by a detailed plan for the restoration or
6 reclamation of the subject property to the
7 satisfaction of the Director. At minimum, a plan for
8 restoration or reclamation shall include:

9 a. Clearance of the site of all vehicles, equipment
10 and materials utilized as part of the temporary
11 truck and equipment staging and laydown yard; and

12 b. Stabilization of the site, implementation of
13 erosion control measures, and successful
14 revegetation to the satisfaction of the Director
15 in order to render the site suitable for either:

16 i. Continued use as an approved mine site
17 consistent with the approved mining permit,
18 reclamation plan and financial assurance for
19 surface mining operations; or

20 ii. If the site is not an approved mine site, a
21 permitted or conditionally permitted use for
22 the zone in which it is located.

23 12. Performance Guarantee. In approving a temporary
24 administrative permit for a temporary truck and
25 equipment staging and laydown yard, the Director shall
26 require a performance guarantee as provided by Section

1 24-245 of the Butte County Code in the amount of
2 \$1,000.00 per acre of land disturbed in order to
3 guarantee the proper completion of any approved work
4 and to ensure that site reclamation is completed to
5 the satisfaction of the Director. Lands shall be
6 restored or reclaimed to the satisfaction of the
7 Director prior to release of the performance
8 guarantee.

9 13. Additional Requirements. The temporary
10 administrative permit may be subject to additional
11 requirements from Butte County Fire, Butte County
12 Public Works, the Butte County Air Quality Management
13 District, the California Department of Transportation,
14 and the State Regional Water Quality Control Board.

15 B. Notice

16 Upon issuance of a temporary administrative permit,
17 pursuant to this section, the Butte County Department of
18 Development Services shall provide a mailed notice to
19 property owners within 300 feet of the subject parcel. The
20 notice shall include all applicable standards and
21 limitations placed upon the temporary truck and equipment
22 staging and laydown yard, the Butte County administrative
23 permit number, as well as the name, phone number and email
24 of a designated contact for concerns regarding the yard's
25 operation.

26 **ARTICLE IV. EMERGENCY INTERIM HOUSING INSIDE THE CAMP FIRE AREA**

1 **Section 53-50. Purpose.**

2 13,696 homes were destroyed by the Camp Fire in Paradise and
3 surrounding unincorporated areas. This disaster has created a need
4 for housing on a scale that cannot be accommodated through the
5 existing available housing in Butte County. To meet the immediate
6 need for housing, Butte County relaxed some building and zoning
7 regulations in a prior article to allow for additional temporary
8 housing outside of the Camp Fire affected area. However, this
9 additional temporary housing may not be sufficient to meet the
10 large and immediate need. This article relaxes some building and
11 zoning regulations to allow for additional temporary housing
12 inside of the Camp Fire affected area. While public safety hazards
13 are being mitigated, persons moving back to the area do so at their
14 own risk and should make themselves aware of potential public
15 safety hazards, including but not limited to falling trees or
16 telephone poles adjacent to the roadways and potable water issues.
17 The article allows persons to place temporary housing on an
18 Eligible Property. The purpose of this article is to develop
19 reasonable standards that allow persons to move back into the Camp
20 Fire affected area while a massive debris removal program is
21 implemented and, at the same time, provide interim shelter for
22 Butte County residents on private property during this housing
23 crisis.

24 **Section 53-51. Administration.**

25 This article shall be administered under the direction of the Board
26 of Supervisors, by and through the Director and other departments

1 specified herein.

2 **Section 53-52. Effective Period.**

3 A. The provisions in this article shall remain in effect
4 until December 31, 2020, unless otherwise specified
5 herein, subject to extension or modification by the
6 Board of Supervisors. Unless extended or modified by
7 the Board of Supervisors, this article shall expire on
8 December 31, 2020, and be of no further force or effect.

9 B. Except as otherwise provided herein, no residential
10 recreational vehicle use or interim housing authorized
11 pursuant to this article shall be used for permanent
12 housing after the expiration date of this article.

13 **Section 53-53. Definitions.**

14 Except where the context clearly indicates otherwise, the
15 following definitions shall govern the construction of the words
16 and phrases used in the article:

17 **Approved Mining Site.** The portion of a parcel or parcels of land
18 with a valid mining permit, reclamation plan and financial
19 assurance for surface mining operations, as required in Butte
20 County Code Chapter 13, Article II, Surface Mining and Reclamation.

21 **Basecamp.** A site that includes some or all of the following
22 features: equipment staging/storage; employee housing; commissary;
23 laundry; and other services for the purpose of providing workforce
24 housing for Camp Fire Recovery efforts or shelter of displaced
25 persons.

26 **Cal OES.** The Governor's Office of Emergency Services.

1 **Camp Fire.** A 153,336-acre wildfire that started near the community
2 of Pulga on November 8, 2018, destroying over 18,000 structures,
3 which forced the evacuation of the Town of Paradise, Berry Creek,
4 Butte Creek Canyon, Butte Valley, Centerville, Cherokee, Concow,
5 Durham, Forest Ranch, Magalia, Pulga, Stirling City, and Yankee
6 Hill, and other areas near the Cities of Chico and Oroville, and
7 proclaimed by the Board of Supervisors under Resolution 18-169, as
8 a local emergency, and also proclaimed by then Acting Governor
9 Gavin Newsom as a state of emergency. CAL FIRE maintains a map
10 showing the final boundaries of the Camp Fire and the Camp Fire
11 affected area, as of November 25, 2018 at 100 percent containment.

12 **Cargo Storage Container.** A single metal box made of steel or other
13 similar material, or a shed, which is designed for securing and
14 protecting items for temporary storage, not exceeding three
15 hundred twenty (320) square feet in size, without utilities, and
16 not used for human habitation.

17 **Director.** The Director of the Department of Development Services
18 or his or her authorized representative.

19 **Displaced Person(s).** A county resident or residents whose
20 residential dwelling has been destroyed or damaged by the Camp
21 Fire, such that the resident(s) cannot occupy the dwelling.
22 Displaced person(s) may be required to provide verification to the
23 county to substantiate their eligibility for uses, permits and/or
24 approvals described in this article. Evidence may consist of
25 verification by Federal Emergency Management Agency (FEMA)
26 registration or damage assessment, and/or a driver's license or

1 other government-issued identification card or utility bill, etc.
 2 with a physical address showing the resident resided on a property
 3 impacted by the Camp Fire, as determined by the county. Such
 4 determination may be made by the Director or other county
 5 personnel.

6 **Effective Date.** The date of the Board of Supervisors adoption of
 7 this article.

8 **Eligible Property.** A property that does not contain fire debris
 9 and hazardous materials from a qualifying structure that was
 10 damaged or destroyed by the Camp Fire. Eligible Property shall
 11 include (1) parcels with no resulting damage or fire debris from
 12 the Camp Fire, (2) parcels with fire debris from a structure that
 13 was not a qualifying structure that was damaged or destroyed by
 14 the Camp Fire and (3) parcels with fire debris or hazardous
 15 materials from a qualifying structure that was damaged or destroyed
 16 by the Camp Fire, only upon the issuance of a certificate that the
 17 parcel has been cleaned pursuant to Phase II requirements by the
 18 Department of Public Health, Environmental Health Division.
 19 Temporary housing pursuant to this article shall be permitted as
 20 reflected in the table below:

21 A.

	Property not damaged by Camp Fire	Property with a non-qualifying structure damaged or destroyed by Camp Fire	Property with a qualifying structure damaged or destroyed by Camp Fire
--	---	--	--

<p>1 Prior to 2 completion of 3 Phase II cleanup</p>	<p>Temporary housing allowed*</p>	<p>Temporary housing allowed*</p>	<p>Temporary housing prohibited</p>
<p>4 Following 5 completion of 6 Phase II cleanup 7 (property 8 certified clean 9 by the Department 10 of Public Health, 11 Environmental 12 Health Division)</p>	<p>Temporary housing allowed*</p>	<p>Temporary housing allowed*</p>	<p>Temporary housing allowed*</p>

13 *such housing shall meet all other applicable requirements in this article

14 **FEMA.** The Federal Emergency Management Agency or successor agency.

15 **Fire Debris and Hazardous Materials.** Debris, ash, metals, and
16 completely or partially incinerated substances from structures
17 that are located on properties that qualify under the CalOES Debris
18 Removal Program or the County's Alternative Debris Removal
19 Program.

20 **Mobile/manufactured home:** A housing structure transportable in one
21 (1) or more sections, designed and equipped to be used with or
22 without a foundation system, certified under the National
23 Manufactured Housing Construction and Safety Standards Act of 1974
24 (42 U.S.C. section 5401 et seq.). The County shall not grant a
25 permit for the installation of a mobile/manufactured home if such
26 mobile/manufactured home is older than ten (10) years of age. The

1 age measurement period shall be from the year of manufacture of
2 the home to the year of the permit application. Mobile/manufactured
3 home does not include recreational vehicle, park trailer, or
4 commercial modular as defined in Division 13, Part 2, Chapter 1,
5 of the Health and Safety Code.

6 **Movable Tiny House.** A movable tiny house is a structure utilized
7 as living quarters by one household that is licensed by and
8 registered with the California Department of Motor Vehicles, meets
9 the American National Standards Institute (ANSI) 119.5 or ANSI
10 119.2 (NFPA 1192) requirements and is certified by a qualified
11 third party inspector for ANSI compliance, cannot move under its
12 own power, is not longer than allowed by State law for movement on
13 public highways, has a total floor area of not less than 150 square
14 feet, and has no more than 430 square feet of habitable living
15 space.

16 **Phase I.** The term "Phase I" shall mean the hazardous waste cleanup
17 performed by the United States Environmental Protection Agency
18 and/or Department of Toxic Substances Control on certain
19 properties impacted by the Camp Fire.

20 **Phase II.** The term "Phase II" shall mean the ash and debris cleanup
21 work performed pursuant to the OES Program and/or the Alternative
22 Program.

23 **Qualifying Structure.** The term "qualifying structure" shall mean
24 a structure of 120 square feet and over.

25 **Recreational Vehicle.** A motor home, travel trailer, truck camper
26 or camping trailer that is: (1) self-contained with potable water

1 and sewage tanks and designed for human habitation for recreational
2 or emergency occupancy; (2) self-propelled, truck-mounted, or
3 permanently towable on California roadways; and (3) a California
4 Department of Motor Vehicles licensed vehicle, or a similar vehicle
5 or structure as determined by the Director.

6 **Recreational Vehicle Park.** A commercial use providing space for
7 the accommodation of more than two recreational vehicles for
8 recreational or emergency housing for displaced persons, or for
9 transient employee lodging and/or basecamp_purposes.

10 **Temporary Dwelling.** A temporary dwelling that meets the water,
11 sewage disposal, and electricity hook-up standards and includes a
12 recreational vehicle, mobile/manufactured home, or movable tiny
13 house.

14 **Temporary Truck and Equipment Staging and Laydown Yard.** An
15 approved area used for the storage of unladen trucks and equipment
16 utilized to remove and haul away fire debris and hazardous
17 materials, and the storage of materials used to facilitate the
18 removal and hauling away of fire debris and hazardous materials,
19 as part of the Butte County Camp Fire Consolidated Debris Removal
20 Program. No fire debris or hazardous materials may be brought onto
21 or stored on the yard. Truck and Equipment Staging and Laydown
22 Yards may include associated truck and equipment repair,
23 construction trailers, employee parking and portable bathroom
24 facilities set up for use by the personnel assigned to the yard,
25 but not residences other than for a temporary caretaker quarters.

26 **Transitory Period.** The period of time after the Camp Fire event

1 during which recreational vehicles do not need to meet the water,
2 sewage disposal, and electricity hook-up standards. The transitory
3 period ends on July 31, 2020.

4 **Section 53-54. Transitory Use of Recreational Vehicles.**

5 Residential use and occupancy of up to two (2) recreational
6 vehicles on any Eligible Property that permits a residential use
7 shall be allowed for the transitory period subject to the
8 applicable requirements set forth under Section 53-57, Standards.
9 Use after the transitory period shall require compliance with
10 Section 53-57, Standards, a temporary administrative permit, and
11 full hook-ups to water, sewage disposal, and electricity.

12 **Section 53-55. Temporary Dwellings with Utility Hook-ups.**

13 Residential use and occupancy of up to two (2) temporary dwellings
14 utilizing hook-ups for water, sewage disposal, and electricity on
15 an Eligible Property shall be allowed during the effective period
16 of this article subject to a temporary administrative permit, and
17 subject to the applicable requirements set forth in Section 53-
18 57, Standards.

19 **Section 53-56. Use of Cargo Storage Containers.**

20 The use of cargo storage containers during the term of this article
21 shall be allowed, subject to the applicable requirements set forth
22 under Section 53-57, Standards.

23 **Section 53-57. Standards.**

24 After the transitory period, all residential use of recreational
25 vehicles, and, at all times, all residential use of temporary
26 dwellings and storage use of cargo storage containers shall meet

1 the following standards.

2 A. At all times, the property owner or the property owner's
3 authorized agent shall obtain all county permits for all
4 temporary dwellings that are hooked-up to utilities.
5 Written consent of the property owner is required in all
6 cases.

7 B. At all times, residential use of recreational vehicles and
8 temporary dwellings is limited to vehicles and dwellings
9 not on a permanent foundation and used to house persons
10 displaced by the Camp Fire during the Effective Period set
11 forth in Section 53-52.

12 C. Use of temporary dwellings is contingent on proof of a
13 damaged or destroyed residence as verified by the Director
14 based on prior final building permit or Assessor's records,
15 or other documentation satisfactory to the Director.

16 D. At all times, recreational vehicles, temporary dwellings,
17 and cargo storage containers shall be located outside the
18 boundaries of any setbacks established by Chapter 24,
19 unless the applicant can establish to the satisfaction of
20 the Director that there is no other available location
21 outside of the setback area, as well as located outside of
22 recorded easements, roads, driveways, designated flood
23 hazard locations, or areas prone to landslide or debris
24 flow.

25 E. At all times, use of a cargo storage container shall be
26 for storage of personal and household belongings only.

1 F. For water hook-ups, the recreational vehicle, basecamp
2 feature, or temporary dwelling shall be connected to an
3 approved source of water meeting one of the following
4 criteria:

- 5 1. Public water supply;
- 6 2. Existing well provided that it has been approved by
7 the Department of Public Health, Environmental
8 Health Division as safe for domestic consumption;
9 or
- 10 3. Other water source approved by the Department of
11 Public Health, Environmental Health Division.

12 G. For sewage disposal hook-ups, the recreational vehicle,
13 basecamp feature, or temporary dwelling shall be
14 connected to an approved sewage disposal system meeting
15 one of the following criteria:

- 16 1. Public sewer system;
- 17 2. A new or existing on-site sewage disposal system
18 that has been approved by the Department of Public
19 Health, Environmental Health Director to be intact,
20 adequately sized, and functioning correctly;
- 21 3. Temporary holding tank with a contract with a
22 pumping company for regular pumping. A copy of the
23 contract shall be provided to the Department of
24 Public Health, Environmental Health Division; or
- 25 4. Other method of sewage disposal approved by the
26 Department of Public Health, Environmental Health

1 Division.

2 H. For electricity hook-ups, the recreational vehicle,
3 basecamp feature, or temporary dwelling shall be
4 connected to an approved source of electricity meeting
5 one of the following criteria:

- 6 1. Permitted electrical service hook-up; or
- 7 2. Other power source approved by the Director.

8 **Section 53-58. FEMA Temporary Housing Sites.**

9 Federal Emergency Management Agency (FEMA) temporary housing sites
10 authorized under contract to FEMA are an allowed use in the MDR
11 (Medium Density Residential), MHDR (Medium High Density
12 Residential), HDR (High Density Residential), RBP (Research and
13 Business Park), PD (Planned Development), P (Public), and
14 Commercial and Industrial zones; and, in AG (Agriculture) zones
15 when an approved residential specific plan exists, and when said
16 specific plan is identified under the Butte County General Plan,
17 or in AG (Agriculture) zones located inside a city's approved
18 Sphere of Influence that are classified as grazing or other lands
19 as defined by the State Farmland Mapping and Monitoring Program
20 and having a combined parcel size greater than 20 acres and subject
21 to all additional requirements, such as the 300 foot agricultural
22 buffer, flood zones, and airport land use compatibility zones.
23 Each FEMA temporary housing site authorized under this article
24 shall have been reviewed through the housing identification
25 process and approved by the Director.

26 **Section 53-59. Temporary Recreational Vehicle Parks.**

1 The establishment of Temporary Recreational Vehicle Parks without
2 requiring hook-ups to water, sewage disposal, and electricity on
3 an Eligible Property in Commercial, Industrial, FR (Foothill
4 Residential), RR (Rural Residential), PD (Planned Development), P
5 (Public), and RBP (Research and Business Park) zoning districts,
6 and in the parking lots of religious and community facilities, and
7 in AG (Agriculture) zones when an approved residential specific
8 plan exists, and when said specific plan is identified under the
9 Butte County General Plan, or in AG (Agriculture) zones located
10 inside a city's approved Sphere of Influence that are classified
11 as grazing or other lands as defined by the State Farmland Mapping
12 and Monitoring Program and having a combined parcel size greater
13 than 20 acres and subject to all additional requirements, such as
14 the 300 foot agricultural buffer, flood zones, and airport land
15 use compatibility zones shall be allowed for the transitory period.
16 Temporary Recreational Vehicle Parks that are served with water,
17 sewage disposal, and electricity hook-ups may continue for the
18 Effective Period set forth in Section 53-52. Basecamp features may
19 be located in the same zones as Temporary Recreational Vehicle
20 Parks, except for the FR (Foothill Residential) and RR (Rural
21 Residential) zones. Temporary Recreational Vehicle Parks and
22 basecamp features are subject to a temporary administrative permit
23 and subject to the applicable requirements set forth under Section
24 53-57, Standards, as well as the following standards:

25 A. Minimum Parcel Size. Except for AG (Agriculture) zoned
26 parcels which shall be a minimum total of twenty (20)

1 acres, the minimum parcel size for eligibility to locate
2 a Temporary Recreational Vehicle Park or basecamp
3 feature is two (2) acres.

4 B. All areas occupied by recreational vehicles and/or
5 basecamp features and access aisles, driveways, and
6 roads shall have an all-weather surface capable of
7 supporting a 40,000 lb. load that will allow for ingress
8 and egress of fire apparatus to within 150 feet of all
9 units and a vertical clearance of no less than 15 feet.

10 C. Driveways and aisles shall have a minimum width of 25
11 feet.

12 D. A County Encroachment permit must be obtained for all
13 new and existing driveway approaches to publicly
14 maintained roads as specified in the County Improvement
15 Standards.

16 E. The temporary administrative permit may be subject to
17 additional requirements from Butte County Fire, Butte
18 County Public Works, the State Department of Housing and
19 Community Development, and the State Regional Water
20 Quality Control Board.

21 F. The following additional standards apply to Temporary
22 Recreational Vehicle Parks and basecamp features in the
23 FR (Foothill Residential) and RR (Rural Residential)
24 zones.

25 a. Basecamps are not permitted.

26 b. Parcels shall be a minimum five (5) acres in size.

1 c. No more than two (2) recreational vehicles shall be
2 allowed per acre.

3 d. There shall be a 25-foot setback from all property
4 lines for all recreational vehicles and related
5 improvements.

6 e. Quiet hours shall be maintained from 10 pm to 7 am,
7 during which generators shall not be operated and noise
8 levels shall conform to Butte County Code Chapter 41
9 A, Noise Control.

10 f. All outdoor lighting shall be located, adequately
11 shielded, and directed such that no direct light falls
12 outside the property line, or into the public right-
13 of-way in accordance with the Butte County Zoning
14 Ordinance, Article 14, Outdoor Lighting.

15 g. One on-site parking space shall be provided per
16 recreational vehicle.

17 G. Each temporary administrative permit application for a
18 Temporary Recreational Vehicle Park and basecamp
19 feature shall be accompanied by a detailed plan for
20 the restoration or reclamation of the subject property
21 to the satisfaction of the Director. At minimum, a
22 plan for restoration or reclamation shall include
23 clearance of the site of all recreational vehicles and
24 related structures and removal of all-weather surfaces
25 and utilities constructed for said park unless there
26 is a separate application under the Zoning Ordinance

1 to permit the improvements.

2 Lands upon which Temporary Recreational Vehicle Parks
3 and basecamp features in AG (Agriculture) zones are
4 located shall be restored to their prior agricultural
5 use or other agricultural use as approved by the
6 Director prior to the expiration of this ordinance. A
7 performance guarantee as provided by Section 24-245 of
8 Butte County Code in the amount of \$1,000.00 per acre
9 of land disturbed by the Temporary Recreational
10 Vehicle Park and basecamp feature shall be paid prior
11 to site disturbance activities to ensure that site
12 restoration and reclamation is completed to the
13 satisfaction of the Director. Lands shall be
14 reclaimed to the satisfaction of the Director prior to
15 release of the performance guarantee.

16 **Section 53-60. Reconstruction of a legal nonconforming structure.**

17 Reconstruction of a legal nonconforming structure that has been
18 demolished or destroyed shall begin within one-year after the fire
19 debris removal is signed-off as complete by the Public Health
20 Department's Environmental Health Division and shall be completed
21 within three-years. Any reconstruction is subject to all
22 applicable permit requirements and current building standards.

23 **Section 53-61. Reconstruction of single family dwellings**

24 Reconstruction of single family dwellings shall take place under
25 the following circumstances:

- 26 A. On parcels with fire debris a building permit and plans

1 may be submitted but a building permit will not be
2 approved until debris removal is signed-off as completed
3 by the Public Health Department's Environmental Health
4 Division.

- 5 B. On vacant parcels building permits and plans may be
6 submitted and approved provided that construction is 100
7 feet or greater from neighboring fire debris.

8 **Section 53-62. Use of accessory residential structures for**
9 **temporary habitation.**

10 For the effective period of this article, accessory residential
11 structures on an Eligible Property, which also meets Residential
12 Group R occupancies as established by the California Residential
13 Code adopted by Butte County, may be used as interim housing for
14 persons displaced by the Camp Fire. During this period, said use
15 shall not be subject to the provisions of existing deed
16 restrictions required by Butte County, but shall remain subject to
17 all other existing regulations and limitations.

18 **Section 53-63. Use of Accommodations, Farmstays, Bed and Breakfast**
19 **Inns, Resorts, Retreats, Camps or other similar uses.**

20 Notwithstanding any contrary provision in the Butte County Code or
21 any use permit conditions, use of existing promotional or marketing
22 accommodations, farmstays, bed and breakfast inns, resorts,
23 retreats, camps or other similar visitor serving uses shall be
24 allowed on an Eligible Property as interim housing for persons
25 displaced by the Camp Fire.

26 //

1 **Section 53-64. Waiver of County Use Permit Requirement for**
2 **Relocation of Damaged Child Care and Educational Facilities.**

3 Notwithstanding any contrary provision in the Butte County Code,
4 any existing small or large child day care facility or child care
5 center, elementary school, junior high school, high school or
6 institution of higher education that was housed in premises made
7 uninhabitable by the Camp Fire may be temporarily relocated to
8 existing buildings on an Eligible Property in the LI (Limited
9 Industrial), PD (Planned Development), PB (Public), GC (General
10 Commercial), NC (Neighborhood Commercial), CC (Community
11 Commercial), REC (Recreation Commercial), and MU (Mixed-Use)
12 zones, or to any site within an existing religious facility on an
13 Eligible Property, subject to a temporary administrative permit
14 and any existing applicable standards, and subject to a building
15 permit if any renovations are required. Nothing in this article
16 waives or affects any State law requirements applicable to such
17 facilities.

18 **Section 53-65. Removal and disconnection.**

19 Every temporary dwelling allowed by this article shall be
20 disconnected from water, sewage disposal, and/or electricity hook-
21 ups and removed from the property on which it is located no later
22 than the expiration date of this article or within 30 days of a
23 final inspection or the issuance of a certificate of occupancy for
24 a replacement dwelling, whichever is earliest.

25 **Section 53-66. Temporary Truck and Equipment Staging and Laydown**
26 **Yards.**

1 Temporary truck and equipment staging and laydown yards
2 coordinated through Cal OES are allowed subject to approval of a
3 temporary administrative permit and compliance with the standards
4 set forth below in the following areas:

5 1. On an approved mining site when the Director determines
6 the yard will not interfere with the mining site's
7 reclamation and approved end use.

8 2. On the 11.98-acre parcel located at 2903 Neal Road,
9 Paradise (APN 055-350-044) that was previously the location
10 of a logging truck repair and storage facility permitted
11 by Use Permit No. UP 84-26.

12 Each Cal OES temporary truck and equipment staging and laydown
13 yard authorized under this article shall be coordinated through
14 the Cal OES Operations Director or his or her designee, and
15 approved by the Director, prior to the issuance of a temporary
16 administrative permit.

17 A. Standards. All Temporary Truck and Equipment Staging and
18 Laydown Yards shall meet the following standards:

19 1. Application for Temporary Administrative Permit. The
20 property owner or the property owner's authorized agent
21 shall obtain a temporary administrative permit for the
22 Effective Period of this article. Written consent of the
23 property owner is required in all cases.

24 2. Site Plan Required. A detailed site plan meeting general
25 architectural or engineering standards, legible and drawn
26 to scale shall be provided with the application for a

1 temporary administrative permit. Partial site plans for
2 a portion of a property may be submitted as long as a
3 vicinity map for the entire property showing frontage
4 streets, other uses and a cross reference of the area of
5 the partial site plan is provided. All site plans shall
6 show and label contours at maximum vertical intervals of
7 five feet; areas of proposed grading and fill; the width
8 of access roads to and around parking and laydown areas
9 and buildings; and turnaround areas for fire and emergency
10 services.

11 3. Siting Criteria. To the extent practicable, temporary
12 truck and equipment staging and laydown yards shall be
13 located on flat areas of the site that are already
14 disturbed. Yards located on approved mining sites shall
15 be located within the boundaries of that portion of the
16 parcel or parcels of land with a valid mining permit,
17 reclamation plan and financial assurance for surface
18 mining operations that have not already been reclaimed

19 4. Approved Access. Temporary truck and equipment staging
20 and laydown yards shall have access onto a public road.
21 If the public road is a County road, the approach shall
22 be made with an encroachment permit approved by the
23 Department of Public Works. If the public road is a State
24 highway, the approach shall be made with an approved
25 encroachment permit issued by the California Department
26 of Transportation (CalTrans) District 3 Office. If the

1 public road is accessed by a private road, there shall be
2 an approved road maintenance agreement that allows for
3 the proposed use along the private road.

4 5. On-site Roads, Driveways and Aisles. Driveways and access
5 aisles shall have a minimum width of 25 feet. Roads,
6 access aisles and driveways shall have an all-weather
7 surface capable of supporting a 40,000 lb. load that will
8 allow for ingress and egress of fire apparatus to within
9 150 feet of all units and a vertical clearance of no less
10 than 15 feet.

11 6. Air Quality and Dust Control. All best practice measures
12 to reduce impacts to air quality shall be incorporated by
13 the project applicant, subject property owners, or third-
14 party contractors during activities on the project site.
15 A plan shall be provided to the satisfaction of the
16 Director to address:

17 a. Diesel particulate matter from construction equipment
18 and commercial on-road vehicles greater than 10,000
19 pounds;

20 b. Mobile and stationary toxic air contaminants; and

21 c. Fugitive dust and ash.

22 7. Water Quality. Any surface disturbance over one-acre in
23 size shall require a Storm Water Pollution Prevention Plan
24 (SWPPP) by a certified Qualified SWPPP Developer and the
25 submittal of a Notice of Intent to obtain coverage under
26 the General Permit for Discharges of Storm Water

1 Associated with Construction Activity (Construction
2 General Permit Order 2009-0009-DWQ as amended).

3 8. Storage or Processing of Debris Prohibited. The storage
4 or processing of debris from the Butte County Camp Fire
5 Consolidated Debris Removal Program at any temporary
6 truck and equipment staging and laydown yard, including
7 the storage of trucks or equipment loaded with debris, is
8 expressly prohibited.

9 9. Hazardous Material Business Plan Required. The storage
10 of any hazardous material at or above State-defined
11 thresholds shall require the approval by the
12 Environmental Health Division of the Department of Public
13 Health of a Hazardous Material Business Plan.

14 10. Outdoor Lighting. All outdoor lighting shall be
15 located, adequately shielded, and directed such that no
16 direct light falls outside the property line, or into the
17 public right-of-way in accordance with the Butte County
18 Zoning Ordinance, Article 14, Outdoor Lighting.

19 11. Reclamation Required. The application for a temporary
20 administrative permit for a temporary truck and equipment
21 staging and laydown yard shall be accompanied by a
22 detailed plan for the restoration or reclamation of the
23 subject property to the satisfaction of the Director. At
24 minimum, a plan for restoration or reclamation shall
25 include:

26 a. Clearance of the site of all vehicles, equipment and

1 materials utilized as part of the temporary truck and
2 equipment staging and laydown yard; and

3 b. Stabilization of the site, implementation of erosion
4 control measures, and successful revegetation to the
5 satisfaction of the Director in order to render the
6 site suitable for either:

7 i. Continued use as an approved mine site consistent
8 with the approved mining permit, reclamation
9 plan and financial assurance for surface mining
10 operations; or

11 ii. If the site is not an approved mine site, a
12 permitted or conditionally permitted use for the
13 zone in which it is located.

14 12. Performance Guarantee. In approving a temporary
15 administrative permit for a temporary truck and equipment
16 staging and laydown yard, the Director shall require a
17 performance guarantee as provided by Section 24-245 of
18 the Butte County Code in the amount of \$1,000.00 per acre
19 of land disturbed in order to guarantee the proper
20 completion of any approved work and to ensure that site
21 reclamation is completed to the satisfaction of the
22 Director. Lands shall be restored or reclaimed to the
23 satisfaction of the Director prior to release of the
24 performance guarantee.

25 13. Additional Requirements. The temporary administrative
26 permit may be subject to additional requirements from

1 Butte County Fire, Butte County Public Works, the Butte
2 County Air Quality Management District, the California
3 Department of Transportation, and the State Regional
4 Water Quality Control Board.

5 B. Notice

6 Upon issuance of a temporary administrative permit, pursuant
7 to this section, the Butte County Department of Development
8 Services shall provide a mailed notice to property owners
9 within 300 feet of the subject parcel. The notice shall
10 include all applicable standards and limitations placed upon
11 the temporary truck and equipment staging and laydown yard,
12 the Butte County administrative permit number, as well as the
13 name, phone number and email of a designated contact for
14 concerns regarding the yard's operation.

15 **Section 53-67. Rebuilding Warning.**

16 The following statement shall be supplied to all individuals
17 applying for a building permit within the Camp Fire area: "Due to
18 the large number of structures destroyed in the Camp Fire area, it
19 is anticipated that there will be a large number of applications
20 for building permits in the Camp Fire area after fire debris and
21 hazardous materials have been cleaned up pursuant to the Butte
22 County Camp Fire Consolidated Debris Removal Program. Building
23 permits in the Camp Fire area will not be issued until after a
24 property has been cleared of fire debris and hazardous materials
25 as required by the Program. The Butte County Health Officer has
26 identified health hazards in the fire debris and hazardous

1 materials in the Camp Fire area. Even if a property has been
2 cleared of fire debris and hazardous materials or never had any
3 fire debris and hazardous materials, it does not mean that there
4 are no other health hazards or dangers on the property, including
5 dangers resulting from fire-damaged or hazard trees. Property
6 owners and residents must do their own investigation to determine
7 whether there are any other health hazards or dangers on the
8 property. The issuance of a building permit for the property does
9 not accomplish this task. A building permit is a ministerial action
10 requiring only limited review by the County to ensure that the
11 structure meets all applicable building standards. In most zones,
12 an individual is allowed by right to construct a residence after
13 receiving a building permit which only requires conformity to
14 building standards. The building permit is issued based on
15 information supplied by the applicant without independent
16 investigation by the County of the property or potential health
17 hazards or dangers. Given the limited scope of enforcement, it is
18 not possible for the County to identify potential health hazards
19 or dangers which are not directly associated with the permitted
20 structure. The applicant is in a position to inspect the property,
21 identify potential health hazards or dangers, and tailor the
22 application to avoid any potential health hazards or dangers."

23 **Section 53-68. Reconstruction of single-family dwellings damaged**
24 **or destroyed by the Camp Fire in the Butte Creek Canyon (-BCC)**
25 **Overlay Zone and the Watershed Protection (-WP) Overlay Zone.**

26 To allow the timely reconstruction of single-family dwellings

1 damaged or destroyed by the Camp Fire, after receiving the approval
2 of both the Director of Development Services and the Director of
3 Public Works, the holder of a building permit to reconstruct a
4 single-family dwelling that was damaged or destroyed by the Camp
5 Fire in the Butte Creek Canyon (-BCC) Overlay Zone and the
6 Watershed Protection (-WP) Overlay Zone is allowed to perform site
7 preparation work and install a foundation for the single-family
8 dwelling between November 15 and April 1, notwithstanding the
9 limitation in those overlay zones, provided a weather forecast
10 shows less than a 20% chance of rain during the next ten (10) days
11 and erosion control measures to prevent soil, etc., from leaving
12 the property have been put into place. Aside from this exception,
13 all requirements imposed by the Butte Creek Canyon (-BCC) Overlay
14 Zone and the Watershed Protection (-WP) Overlay Zone remain in
15 force.

16 **ARTICLE V. MANDATORY HAZARD TREE REMOVAL PROGRAM**

17 **Section 53-80. Hazard Tree Removal Program.**

18 Any tree that was fire damaged in the Camp Fire and that is in
19 immediate danger of falling onto a public right-of-way or improved
20 public property is a hazardous tree that must be removed to
21 eliminate the immediate threat to the public at large. This Article
22 establishes a hazardous tree removal program that is mandatory and
23 sets forth the manner in which hazardous trees will be identified
24 and removed.

25 **Section 53-81. Effective Period.**

26 The Hazard Tree removal program shall take effect immediately upon

1 adoption of this Article and shall remain in effect until the
2 removal of Hazard Trees has been completed.

3 **Section 53-82. Definitions.**

4 **Arborist.** The term "Arborist" shall be defined as an ISA Board
5 Certified Arborist with a Tree Risk Assessment Certificate (TRAC).

6 **Arborist's/Forester's Certification.** The term
7 "Arborist's/Forester's Certification" shall be defined as a
8 written certification verifying that all Hazard Trees have been
9 removed from a parcel participating in the Private Tree Program.
10 The certification shall be made and executed by an Arborist and/or
11 Forester as defined in this Section. The Arborist or Forester shall
12 provide evidence of the required qualifications of this Section.

13 **Board.** The term "Board" shall be defined as the Board of
14 Supervisors.

15 **Enforcement Officer.** The term "Enforcement Officer" shall be
16 defined as the Chief Administrative Officer of the County or
17 his/her designee(s). Such designee(s) may be a County employee(s)
18 or third-party provider(s).

19 **County.** The term "County" shall be defined as the County of Butte.

20 **Forester.** The term "Forester" shall be defined as a Certified
21 Registered Professional Forester, qualified pursuant to California
22 Public Resources Code Section 752, "Professional forester."

23 **Government Hazard Tree Removal Program.** The term "Government
24 Hazard Tree Removal Program" shall be defined as the Hazard Tree
25 removal program operated by the California Office of Emergency
26 Services (CalOES) for the Camp Fire area in conjunction with other

1 state and federal agencies.

2 **Government Hazard Tree Removal Program ROE.** The term "Government
3 Hazard Tree Removal Program ROE" shall be defined as the permit
4 for providing Hazard Tree removal on private property approved by
5 CalOES for use in the cleanup after the Camp Fire.

6 **Hazard Tree.** The term "Hazard Tree" shall be defined as:

7 A wildfire-damaged tree that in the professional opinion of an
8 Arborist and/or Forester:

9 A. has been so severely damaged by the Camp Fire that its
10 structural integrity is compromised; and

11 B. poses an imminent danger of falling onto a public right-
12 of-way or other public improved property.

13 A map reflecting County-maintained roads in the unincorporated
14 portion of the Camp Fire area is attached hereto as Exhibit A.

15 **Inspection Access Form.** The term "Inspection Access Form" shall be
16 defined as the permit for providing access to the Enforcement
17 Officer to inspect private property of owners opting to use the
18 Private Tree Program approved by the County for use in the cleanup
19 after the Camp Fire.

20 **Private Tree Program.** The term "Private Tree Program" shall be
21 defined as an alternative to the Government Hazard Tree Removal
22 Program, which provides the owner with the option of identifying
23 and removing Hazard Tree(s) on their property at their own cost.

24 **Section 53-83. Government Hazard Tree Removal Program.**

25 A. The Government Hazard Tree Removal Program will remove all
26 Hazard Trees at no out-of-pocket cost to the owner. If an owner

1 does not participate in the Government Hazard Tree Removal Program,
2 and there are Hazard Trees on their property, the owners are
3 required to identify and remove such trees at their own cost.

4 B. To participate in the Government Hazard Tree Removal Program,
5 owners must complete and submit a Government Hazard Tree Removal
6 Program ROE. The Government Hazard Tree Removal Program ROE shall
7 function as the sole permit and authorization for participation in
8 the Government Hazard Tree Removal Program. Notwithstanding any
9 contrary provision in Butte County Code, no County approvals or
10 permits for Hazard Tree removal are required for properties
11 participating in the Government Hazard Tree Removal Program, other
12 than the Government Hazard Tree Removal Program ROE.

13 C. If owners whose property contains Hazard Trees do not
14 participate in the Government Hazard Tree Removal Program (at no
15 out-of-pocket cost to owner) or the Private Tree Program (all costs
16 paid by owner), the County will enforce this Article V and charge
17 the owners with any administrative and abatement costs related to
18 such enforcement as described below.

19 D. In implementing this program, property owners who have
20 submitted an application for development permits shall be given
21 priority in the Government Hazard Tree Removal Program.

22 **Section 53-84. Public nuisance; violations.**

23 Maintaining a Hazard Tree is prohibited and a public nuisance
24 subject to this Article. A violation of any provision of this
25 Article shall be deemed to be a public nuisance and subject to any
26 enforcement process available at law.

1 **Section 53-85 Purpose.**

2 It is the intent of the Board of Supervisors that this ordinance
3 shall apply to the abatement of Hazard Trees threatening the roads
4 and/or right-of-ways of County-maintained roads or other public
5 improved property in the unincorporated areas of the Camp Fire
6 area.

7 **Section 53-86. Private Hazard Tree Removal Program.**

8 A. As an alternative to the Government Hazard Tree Removal Program,
9 the Private Tree Program provides the owner with the option of
10 identifying and removing Hazard Tree(s) on their property at their
11 own cost. To participate in the Private Tree Program, owners shall
12 submit either of (1) an Inspection Access Form or (2) an
13 Arborist's/Forester's Certification for their property. Following
14 the owner's identification and removal of Hazard Trees, and
15 submittal of an Inspection Access Form, the Private Tree Program
16 shall require the Enforcement Officer to make a visual confirmation
17 of the removal of Hazard Trees on the subject property. This visual
18 inspection of compliance with the Private Tree Program shall be
19 sufficient for meeting the requirements of this Section. Whether
20 the Hazard Tree removal is adequate shall be in the sole discretion
21 of the Enforcement Officer. In the alternative, a submittal of an
22 Arborist's/Forester's Certification shall be sufficient for
23 meeting the requirements of this Section.

24 B. Notwithstanding anything herein to the contrary, in the Private
25 Tree Program, owners may choose to temporarily retain and promptly
26 utilize felled Hazard Trees which were standing on their property.

1 This temporary retention and utilization by the owner shall be
2 permitted only to the extent felled Hazard Trees and incidental
3 foliage, slash, tree branches or limbs and chipped or mulched
4 vegetation do not constitute a fire hazard as prohibited by
5 applicable law, including but not limited to California Public
6 Resources Code section 4291 et seq., Title 19 of the California
7 Code of Regulations and Chapter 38A of the Butte County Code. Such
8 requirements include but are not limited to the following:

9 (1) In storing such Hazard Trees prior to utilization, an owner
10 shall be required to:

11 (a) maintain a setback of no less than 100 feet from any
12 inhabited building or structure;

13 (b) maintain a setback of no less than 30 feet from any
14 uninhabited building or structure; and

15 (c) maintain a setback around the parcel's property lines of no
16 less than 30 feet wide.

17 (2) If an owner utilizes felled Hazard Trees for wood chips, the
18 owner shall be required to spread the wood chips to a depth of no
19 greater than 3 inches while maintaining a setback of no less than
20 5 feet from any building or structure.

21 If any temporary retention and utilization of Hazard Trees
22 constitutes a fire hazard, it is a public nuisance and may be
23 abated using any available legal remedy. If the owner chooses to
24 temporarily retain and utilize felled Hazard Trees, the owner is
25 required to utilize such Hazard Trees prior to the Enforcing
26 Officer's visit to the property to confirm compliance with the

1 Private Tree Program.

2 For the purposes of this section, any temporary retention and
3 utilization of felled Hazard Trees by the property owner is not a
4 Temporary Log Storage Yard (AKA: Log Deck) as described in Chapter
5 53. Owners may not receive felled trees from other properties.

6 C. The County shall utilize the state and federal standards and
7 cleanup goals of the Government Hazard Tree Removal Program as the
8 standards for the Private Tree Program, including but not limited
9 to the criteria for determining whether a tree is a Hazard Tree.
10 Under the supervision of the Enforcement Officer, the County may
11 administratively update these standards as necessary to address
12 ongoing changes in the administration of the Government Hazard
13 Tree Removal Program and the need to efficiently remove Hazard
14 Trees from the community.

15 **Section 53-87. County Development Permits.**

16 A. No application for a County Development permit in the Camp
17 Fire area with Hazard Trees shall be considered complete until the
18 applicant has entered into the Government Hazard Tree Removal
19 Program or the Private Tree Program. This section shall not apply
20 to permits relating to power, sewer or other utilities for
21 temporary dwellings and the installation of temporary dwellings as
22 provided for in Chapter 53.

23 B. This section shall not apply to permits for wells or septic
24 systems with the Environmental Health Division of Public Health.

25 **Section 53-88. Deadlines and Enforcement.**

26 A. Properties that contain Hazard Trees and that do not have (1)

1 an approved Government Hazard Tree Removal Program ROE, (2) an
2 approved Inspection Access Form for the Private Tree Program or
3 (3) an approved Arborist's/Forester's Certification by the
4 deadline set by the Board, are declared a public nuisance and
5 health hazard and such properties may be abated pursuant to this
6 Article.

7 B. The Board may set a deadline for the completion of Hazard
8 Tree removal by resolution. Properties that have Hazard Trees from
9 the Camp Fire after that deadline are declared a public nuisance
10 and health hazard and such properties may be abated pursuant to
11 this Article.

12 The Board's intent is to facilitate orderly remediation of a large
13 scale disaster. Nothing in these deadlines shall limit the
14 authority of the County to abate hazards more quickly where
15 required by exigent circumstances.

16 **Section 53-89. Enforcement.**

17 A. Whenever the Enforcement Officer determines that a public
18 nuisance (as specified in this Article) exists, he or she shall
19 use any legal remedies available under California law to address
20 and abate the public nuisance, including but not limited to
21 Chapters 1, 32A and/or 41 of the Butte County Code.

22 B. The County may, in its discretion, abate a violation of this
23 Article by the prosecution of a civil action, including an action
24 for injunctive relief. The remedy of injunctive relief may take
25 the form of a court order, enforceable through civil contempt
26 proceedings, prohibiting the maintenance of a violation of this

1 Article, or requiring compliance with other terms.

2 C. The County may also abate a violation of this Article through
3 the abatement process established by Government Code Section
4 25845.

5 D. If a public nuisance is found to be present on the property
6 in violation of this Article, the Enforcement Officer shall pursue
7 payment for Abatement and Administrative Costs from the owner and
8 the owner of the property shall be responsible for paying all of
9 the County's Abatement Costs and Administrative Costs.

10 **53-90. Abatement costs; administrative costs.**

11 A. The term "Abatement Costs" means any costs or expenses
12 reasonably related to the abatement of conditions which violate
13 this Article of the County Code, and shall include, but not be
14 limited to enforcement, investigation, collection and
15 administrative costs, and the costs associated with the removal or
16 correction of the violation.

17 B. The term "Administrative Costs," shall include the cost of
18 County staff time reasonably related to enforcement, for items
19 including, but not limited to, site inspections, travel time,
20 investigations, telephone contacts and time spent preparing
21 summaries, reports, notices, correspondence, warrants and hearing
22 packets. The time expended by the Enforcement Officer and Auditor-
23 Controller staff, to calculate the above costs and prepare itemized
24 invoices, may also be recovered.

25 **53-91. Non-exclusive remedy.**

26 This Article is cumulative to all other remedies now or hereafter

1 available to abate or otherwise regulate or prevent public
2 nuisances. The County Counsel is authorized to initiate judicial
3 enforcement as to a violation of any provision of this Article
4 without further Board approval.

5 **53-92. Summary abatement.**

6 Notwithstanding any other provision of this Article, when any
7 Hazard Tree constitutes an immediate threat to the public health
8 or safety, and where alternative procedures would not result in
9 abatement of that public nuisance within a short enough time period
10 to avoid that threat, the Enforcement Officer may direct any
11 officer or employee of the County or third-party provider to
12 summarily abate the public nuisance. The Enforcement Officer shall
13 make reasonable efforts to notify the owner. No summary abatement
14 shall occur prior to consultation with the Office of County
15 Counsel. The County may nevertheless recover its costs for abating
16 that public nuisance in the manner set forth in this Article.

Exhibit 3 – Environmental Compliance Plan

**Best Management Practices and
Avoidance and Minimization Measures**

<u>AMM Subject</u>	<u>ID</u>	<u>Rule</u>	
Introduction	Intro-1	<p>This document is a living document (subject to change), supplemental to the Hazard Tree Removal Program (HTRP) Environmental Protection Plan (EPP), and in partnership with FEMA Environmental and Historic Preservation (EHP), California Department of Fish and Wildlife (CDFW), Central Valley Water Board, US Fish and Wildlife Service (USFWS), NOAA Marine Fisheries Service (NMFS), Butte County (County), CalOES Incident Command (IC), CalRecycle Contracts Liaison, and the Consultant. Pertinent environmental regulations from which the Best Management Practices (BMPs) and Avoidance and Minimization Measures (AMMs) were derived are summarized in Table 1 of the EPP. This document and the rules set in place will be weighed against OSHA Safety practices, when attempting to comply with Environmental Law. If a Best Management Practice, or rule, is deemed unsafe, Operations will halt work in the particularly affected area, and work with the proper authority, to allow work to continue.</p> <p>Exhibit 1 contains an Environmental Trigger Matrix that summarizes federal and state listed sensitive species with their respective limited operating period for use and reference by environmental monitors during HTRP implementation. If not superseded by federal resource agency consultations, and/or, waivers issued by the Secretaries of California Environmental Protection Agency (Cal EPA) and California Natural Resources Agency (CNRA), this document may be amended by the Cal OES and FEMA Environmental Team with concurrence from the HTRP Incident Management Team.</p> <p>Exhibit 2 contains ESA Review Form for Projects Under FEMA's PBA with USFWS in California in the Sacramento FWO Jurisdiction, with Avoidance and Minimization Measures from USFWS</p> <p>Exhibit 3 contains Draft Avoidance and Minimization Measures from NMFS</p>	
	Intro-2	<p>This document contains acronyms on the furthest right column pertaining to CalFire Forest Practice Rules, and Central Valley Water Boards Timber Harvest General Order, and where they pertain to the project geographically. Also the word Draft is used next to the NMFS AMMs, as they are pending a concurrence letter. These acronyms include:</p> <p>Right of Way Exemption (ROW EX) Emergency Exemption (EM EX) Pre-processing sites (not otherwise exempt) (PPS) Processing Sites (not in the exemption area [e.g. Log Decks in Oroville] – usually in the valley) (PS)</p>	
Environmental Unit Authority	EU-1	<p>Stop Work Authority</p> <p>Monitors (e.g., Environmental Unit, tribal monitors, qualified biologists, and environmental monitors, and Secretary of Interior qualified archaeologists) have the authority to stop work of a Task Force if any portion of this ECP, or, federal and state directives is violated; or certain environmentally or culturally sensitive resources are discovered. In such conditions, the RPF or Environmental Specialist, will immediately contact the HTRP Operations Chief, who will consult the Environmental Lead (as designated in the IAP) for concurrence on the notice to stop work.</p>	
	EU-2	<p>Non-Compliance Warning</p> <p>The Environmental Unit will determine, upon non-compliance of the ECP or EPP, whether an individual or Task Force will be issued a written warning. Once two warnings are accrued per Task Force, the crew will be referred to the HTRP Operations Chief to determine the appropriate action (e.g., termination or reassignment) is appropriate.</p>	
Regulators	R-1	<p>Inspections</p> <p>Any State, Federal, or Local Regulatory Authority has the right to inspect the project area (any portion of the burn area under the influence of the HTRP), following the rules of a landowner's Fourth Amendment Rights. CAL FIRE will notify the Central Valley Water Board for the purposes of on-site consultation prior to project implementation, mid-way through the project, and within 7 days of the anticipated completion of the project and while equipment is still on-site to implement any necessary management measures.</p>	ROW EX
	R-2	<p>The timber harvesting portion of the project will be enrolled under the Central Valley Water Board's Timberland Management General Order of Waste Discharge Requirements, Order R5-2017-0061 (Timber General Order). As a condition of enrollment, the Timber General Order requires reasonable access to the property be provided whenever requested by Central Valley Water Board staff for the purpose of performing inspections and conducting monitoring, including: sample collection, measuring and photographing/taping to determine compliance with permit conditions. Management practices and/or water quality protective measures resulting from such inspections, shall be incorporated in the project. The Timber General Order requires that additional mitigation or management measures developed as a result of inspection, during enrollment, that are necessary to achieve water quality protection be incorporated into the project.</p>	ROW EX

	R-3	The pre-processing sites and processing sites portions of the project will be enrolled under Central Valley Water Board permits as appropriate and as indicated in the sections below. As a condition of such permit coverage, reasonable access to the property must be provided whenever requested by Central Valley Water Board staff for the purpose of performing inspections and conducting monitoring, including: sample collection, measuring and photographing/taping to determine compliance with permit conditions. Any corrective measures directed by the Central Valley Water Board, or required by a permit's provisions, shall be implemented and incorporated into the project.	PPS, PS
Air Quality	AQ-1	Consultants/contractors will comply with all applicable Clean Air Act Laws and Permit Requirements.	
	AQ-2	The consultant/contractor will mitigate dust from project activities by including dust abatement measures (e.g., water trucks and non-toxic tackifiers) in project contracts.	
Forest Practice Rules	FPR-1a	Forest Practice Rules Prohibitions There are limitations for trees to be taken without special provisions under the Section 1104.1i are met (see FPR-1b) Harvesting Plan Conversion, specifically: 1. Trees that existed before 1800 A.D. 2. Sierra or Coastal Redwoods greater than sixty (60) inches in diameter at stump height. 3. All other trees, greater than forty-eight (48) inches in diameter at stump height.	ROW EX
	FPR-1b	In-lieu practices for Watercourse and lake protection zones as specified under Article 6 of the FPR Rules, exceptions to Rules, and alternative practices are not allowed. However, harvesting of large old trees (not part of a late successional stand) and work within a WLPZ shall only occur when the RPF puts in writing attached with the Exemption notice that the following conditions are met: 1. The tree(s) is a hazard to safety or property. The hazard shall be identified in writing by an RPF or professionally certified arborist; 2. The removal of the tree(s) is necessary for the construction of a building as approved by the appropriate county/city permitting process and as shown on the county/city approved site plan, which shall be attached to the Notice of Exemption; 3. The tree is dead or is likely to die within one year of the date of proposed removal, as determined by an RPF or professionally certified arborist.	ROW EX
	FPR-2	Roads and Crossings Road building, watercourse crossings, and other activities outside of timber harvesting are not covered under the Utility ROW THP Exemption (14 CCR 1104.1). If a temporary road, or crossing would be necessary, options for exemptions may fall under the 1052.1.b Emergency Notice; or for new roads, or crossings, may fall under the 1051 Modified Timber Harvest Plan, or a full Timber Harvest Plan, may prove necessary per the discretion of Cal Fire. These activities would be isolated plans for the affected area, beyond the inaccessible crossing, or road and the landowner would need to be identified.	EM EX
	FPR-2a	Roads - Existing	
	FPR-2a.i	A stable operating surface will be maintained.	ROW EX, PS
	FPR-2b	Roads - New	
	FPR-2b.i	Should new road construction be necessary, the following will apply: a Notice of Emergency Operations (1052.1.b) will be filed with CAL FIRE and enrollment under the Central Valley Water Board's Timberland General Order under either Category 2A or 2B, (as applicable to the specific property) will be obtained.	EM EX
	FPR-2b.ia	Consultation with the Central Valley Water Board and DFW will be sought prior to construction.	EM EX
	FPR-2b.ib	Construction will not exceed 600' in length per span.	EM EX
	FPR-2c	Forest Practice Road Building and BMP Standards will be met.	EM EX
	FPR-3	Equipment Restrictions	ROW EX
	FPR-3a	Tractor or heavy equipment operations will not be conducted under the following conditions:	
	FPR-3a.i	Slopes steeper than 65 percent.	
	FPR-3a.ii	Slopes steeper than 50 percent where the erosion hazard rating is high or extreme.	
	FPR-3a.iii	Slopes over 50 percent which lead without flattening to sufficiently dissipate water flow and trap sediment before it reaches a Watercourse or lake protection zone (WLPZ)	
	FPR-3a.iv	When driving through a watercourse without an established crossing.	
	FPR-3a.v	Within a WLPZ.	
	FPR-3b	Tractor or heavy equipment operations will not be conducted on known slides or unstable areas.	
	FPR-3c	Heavy equipment operations will not be conducted within the standard width of a watercourse or lake protection zone, except for maintenance of roads and drainage facilities or structures.	
	FPR-3d	Should operations extend into the winter period, as defined by the Forest Practice Rules (FPR), limitations on operations related to using saturated roads, stabilizing erodible soils and installing erosion control measures will be followed.	
	FPR-3e	Equipment maintenance will occur outside the watercourse protection zones.	
	FPR-3f	Operations will be limited, or halted in saturated conditions (e.g., where heavy equipment would become stuck in mud, create deep ruts, cause sediment runoff, etc.) As called by the Operations Chief and RPF.	

FPR-3g	Management measures will be installed to prevent overflow, erosion and sediment discharge to surface waterbodies, can include installation of brow logs, rock, and absorbent/adsorbent materials or drip pans to prevent petroleum leaks from entering the watercourse	
FPR-4	Vegetation Removal	ROW EX
FPR-4a	Vegetation Removal. Disturbance or removal of vegetation will be kept to the minimum necessary to complete project related activities (not including removal of dead or dying trees). When practicable, the native vegetation will be cut off at ground level instead of grubbed so it can potentially grow back and establish on its own.	
FPR-4b	Avoid / Remove Cleared Material from Stream. Trees will be felled away from waterbodies, including streams and wetlands. All trimmed or cleared material/vegetation will avoid falling into any nearby waterbody. If anything incidentally falls into a waterbody, it will be immediately removed by hand.	
FPR-4c	Sawdust and Bark. Materials from tree removal operations will be controlled using methods that prevent materials from falling, or running-off into waterbodies.	
FPR-4d	Treatment and Removal Deadlines. The contractor will treat and remove felled trees and slash from a site within 7 working days.	
FPR-4e	Full Slash and woody debris treatment may include any of the following:	
FPR-4e.i	chipping and spreading (only in areas where materials will not clog culverts or storm drains);	
FPR-4e.ii	piling (no burning);	
FPR-4e.iii	removing slash and woody debris from the site for treatment	
FPR-4f	No Burning. Slash and woody debris may not be burned. Any changes to this rule must be approved by the Incident Management Team.	
FPR-4g	Existing Disturbance. All heavy equipment, vehicles, tree cutting activities, landings, and other associated activities will attempt to utilize existing access roads, road shoulders, and disturbed, or designated work areas limited to the Scope of Work. Work areas will be limited to what is necessary for tree cutting and associated activities.	
FPR-5	Watercourse Buffers	ROW EX
FPR-5a	Location and Classification of All Watercourses. The Registered Professional Forester (RPF), or supervised designee will identify the classification of all water courses.	
FPR-5b	Flagging. The RPF or supervised designee will visit the site and flag the boundary of the conversion exemption timber operation area and flag any applicable WLPZs and equipment limitation zones. In-lieu practices for watercourse and lake protection zones (WLPZ) as specified under Article 6 of the Forest Practice Rules, exceptions to Rules, and alternative practices are not allowed (see FPR-5d).	
FPR-5c	Equipment Limitation Zone. A minimum 50-foot watercourse buffer will be implemented as an ELZ, for Class III and IV watercourses. The intent of the ELZ is to reduce or eliminate the likelihood of ground disturbance from heavy equipment that may result in ruts, erosion and direct sediment delivery to the watercourse. Heavy equipment, or vehicles, will limit operations within the ELZ, including use of equipment that stages outside of the ELZ, equipment that enters and exits the WLPZ in its own tracks, use of smaller/lighter (less impactful) equipment, use of hand equipment. If rutting or disturbance occurs from equipment within this zone, the operator will immediately restore the ground to its original contour, and install erosion and slope protection measures.	
FPR-5d	Equipment Exclusion Zone (EEZ). No heavy equipment will cross into the WLPZ, and must follow with 1104.1i (see FPR-1b). practices such may include hand-felling of trees that are then as a tree can be felled and drug or carried out of the zone by such practices as a cable, or grapple.	
FPR-5e	WLPZ Buffers (916.5, 936.5, 956.5 Procedure for Determining Watercourse and Lake Protection Zone (WLPZ), Forest Practice Rules 2019). No temporary crossings, or road building will occur within this EEZ under the ROW Exemption. The LTO will use FPR measures to delineate the WLPZ trees. Table 2 shows the way WLPZ's are measured with associated protective measures. Class I protection zones will include increased buffer widths where anadromous salmonid habitat exists or can be restored, and/or where waterbodies are 303(d) listed for temperature/sediment. Consultation with the Central Valley Water Board will be sought prior to operations. Any work that may occur within this zone will require BMP's to be used and practice of FPR-1b followed.	

Table 2. WLPZ Designation Measures

Waterbody	Distance
Perennial Streams (Class I) – Domestic supplies, springs, fish always, or seasonally present.	75 feet (<30% slope) 100 feet (30-50% slope) 150 feet (>50% slope)
Intermittent Streams, Wetlands, Lakes (Class II) – Fish always or seasonally present within 100 feet. Aquatic habitat (non-fish).	50 feet (<30% slope) 75 feet (30-50% slope) 100 feet (>50% slope)
Ephemeral Streams (Class III) – No aquatic habitat present. Capable of delivering sediment.	25 feet (<30% slope) 50 feet (30%+)
Man-Made Ditches (Class IV) – Domestic, agricultural, hydroelectric supply.	Same as Class III, or if present existing riparian vegetation, whichever is more conservative.

Central Valley Water
Quality Control Board

WB-1	Water Quality	
WB-1a	Saturated Conditions. Operations will be limited, or halted in saturated conditions. As called by the Operations Chief and RPF.	ROW EX
WB-1b	Work requiring coverage under a permit issued by the Central Valley Water Board (or other Agency) may not begin until such coverage is obtained.	PPS, PS
WB-1c	Tree Felling. No trees will be felled in a manner in which they might fall into a watercourse.	ROW EX
WB-1d	Broken Culverts. Culverts broken by the contractor during work in pre-processing and processing sites may require a permit (storm water or water quality certification) from the Central Valley Water Board. In such instances consultation with the Central Valley Water Board to determine permitting requirements will be initiated prior to work. Refer to FPR-2 for broken culverts in the Forest Lands Treatment Areas.	PPS, PS, EM EX
WB-1e	Septic. Septic systems broken by the contractor will be addressed expeditiously, and consultation with the appropriate resource agencies, such as the county Environmental Health Department, to fix it will occur. The contractor will submit a plan to remedy within 3 days of an incident. Communications with a property owner will occur immediately.	PPS, PS, EM EX
WB-1f	Temporary crossings. New and replacement temporary watercourse crossings will be removed before winter. Permanent watercourse crossing will accommodate the estimated 100-year flood flow, including debris and sediment loads.	ROW EX
WB-1g	Shade-producing canopy. Should be retained where waterbodies are 303(d) listed for temperature. Consultation with the Central Valley Water Board will be sought prior to operations.	ROW EX
WB-1h	Disturbance and creation of bare areas. Will be planned to avoid sediment discharge to waterbodies. At pre-processing and processing sites, the contractor will receive coverage under a storm water permit administered by the Central Valley Water Board may be required. Generally, coverage is required for soil disturbances of one acre or more, or when part of a larger plan of development.	ROW EX, PPS, PS
WB-1i	Water drafting locations. If deemed necessary, water drafting associated with surface waters will be treated with BMPs to prevent overflow from transporting sediment to the waterbody.	ROW EX
WB-1i.i	Water drafting locations will be treated with BMP's to prevent petroleum products from entering the waterbody. Intakes will be screened to prevent entrainment of aquatic species. Consultation with Federal, State and Local agencies will occur before such an activity.	ROW EX
WB-1j	Waste Discharge Requirements. General Conditions for the 2017 Order Waste Discharge Requirements for Categories 2A, Industrial Fire Salvage and Non-Industrial Fire Salvage with No Residences, and 2B, Non-Industrial Fire Salvage with Residences are specified in Exhibit 7A, pages 16 through 20. Although eligibility and enrollment conditions are different between the two categories, there are the following common conditions between them as noted below if certain prerequisites are determined to be applicable.	ROW EX, EM EX
WB-1k	SWPPP. At pre-processing and processing sites, if storm water permit coverage is required, the designated contractors' Qualified SWPPP Developer (QSD) will develop a Storm Water Pollution Prevention Plan that meets permit requirements. For soil disturbance at other project areas, sediment and erosion control Best Management Practices to minimize water related erosion will, at a minimum, include the following protective measures:	ROW EX, PPS, PS
WB-1k.i	Operating Equipment and Vehicle Leaks. Any equipment or vehicles driven and/or operated within, or adjacent to a WLPZ will be checked and maintained daily to prevent leaks of materials that could be deleterious to aquatic and terrestrial life or riparian habitat.	ROW EX
WB-1k.ii	Stationary Equipment Leaks. Stationary equipment such as motors, pumps, generators, and welders, located within or adjacent to the stream/lake will be positioned over drip pans. Stationary heavy equipment will have suitable containment to handle a catastrophic spill/leak. Crews will maintain spill containment kits on-site at all times during project operations and/or staging or fueling of equipment.	ROW EX
WB-1k.iii	Equipment Maintenance and Fueling. No equipment maintenance, fueling or storage will occur within or near any stream channel or lake margin where petroleum products or other pollutants from the equipment may enter these areas.	ROW EX
WB-1k.iv	No Dumping. No litter or construction debris will be deposited within a stream or lake, or where it may pass into a stream or lake. All debris and waste will be picked up and removed daily.	ROW EX
WB-1k.v	Sawdust. Sawdust will be controlled in such a way that it does not enter a watercourse.	ROW EX
WB-1k.vi	Hazardous Materials. Debris, soil, silt, bark, slash, sawdust, rubbish, creosote-treated wood, raw cement/concrete or washings thereof, asphalt, paint or other coating material, oil or other petroleum products, or any other substances which could be hazardous to aquatic life, wildlife, or riparian habitat resulting from the Project related activities will be prevented from contaminating the soil and/or entering any watercourse.	ROW EX
WB-1k.vii	Dust Control. Implement dust control practices, such as rocking temporary access road entrances and exits and covering temporary stockpiles when weather conditions require.	ROW EX
WB-1k.viii	Permanent erosion control. Incorporate permanent erosion control measures such as bio-filtration strips and swales to receive storm water discharges from the project work areas to the maximum extent practicable.	ROW EX

WB-1k.ix	Pesticides. No use of herbicides or pesticides will occur.	ROW EX
WB-1k.x	Should operations extend into the winter period, as defined by the Forest Practice Rules (FPR), limitations on operations related to using saturated roads, stabilizing erodible soils and installing erosion control measures will be followed.	ROW EX
WB-1k.xi	Stormwater drop inlet protections near work areas.	ROW EX
WB-1k.xii	Monitoring for project effectiveness and effectiveness of resource protection measures should be conducted. Including monitoring of areas with potential erosion.	ROW EX
WB-2	Watercourse Crossings	
WB-2a	CEQA. Watercourse Crossings do not fall under 14 CCR 11041.1 Right-of-Way Exemption, therefore causing the activity to require a separate Notice of Emergency THP Exemption. CEQA coverage, or an exemption under CEQA, is required for watercourse crossings at pre-processing and processing sites, which require coverage under CWA section 401.	EM EX, PPS, PS
WB-2b	Clean Water Act Compliance. If a new watercourse crossing must be installed, or existing watercourse crossing is in need of maintenance within a Water of the United States or Water of the State (within the ordinary high water mark [OHWM]) in a pre-processing or processing area, the Environmental Unit will consult with the US Army Corps of Engineers, and the Regional Water Quality Control Board for the necessity of Clean Water Act Section 404 and 401 permits, before work will occur. The contractor will provide a work plan to aid in the drafting of the permit.	EM EX, PPS, PS
WB-2c	Endangered Species Act Consultation. If a new watercourse crossing must be installed, or existing watercourse crossing is in need of maintenance, the crossing site will be inspected by a wildlife biologist for fish and wildlife species prior to entering the watercourse. If a California Endangered Species Act (CESA) or Federal Endangered Species Act (FESA) listed species is found within the crossing location, the site will be flagged and avoided until consultation with the Department of Fish and Wildlife occurs.	EM EX, PPS, PS
WB-2d	Cultural/Tribal Consultation. If a new watercourse crossing must be installed, or existing watercourse crossing is in need of maintenance, the crossing site will be inspected by an Secretary of the Interior (SOI) qualified Archaeologist and Tribal Monitor. Confirmation that the site complies with Section 106 of the National Historic Preservation Act (NHPA) must be confirmed before work will occur.	EM EX, PPS, PS
WB-2e	Winter Period. Installation of temporary crossings will attempt to be installed outside of the Winter Period, October 15-April 15.	ROW EX, EM EX, PPS, PS
WB-2f	Watercourse Crossings – New. Should new watercourse crossings be necessary, the following will apply:	EM EX, PPS, PS
WB-2f.i	Consultation with the Central Valley Water Board and DFW will be sought prior to construction	EM EX, PPS, PS
WB-2f.ii	Crossings should meet, or exceed the 100-year flood flow and associated debris standard in the FPR	EM EX, PPS, PS
WB-2g	Silt protection. Silt barriers, geotextile fabrics, and swamp mats will be utilized during installation.	EM EX, PPS, PS
WB-2h	Equipment in-water. If equipment must cross into a watercourse, equipment will be utilized that is the lightest to achieve the installation of the crossing. Tracks or wheels will be cleaned before they enter the watercourse. Equipment will not enter the water without express permission from US Army Corps of Engineers, the Central Valley Water Board, and the relevant Federal or State Department of Fish and Wildlife. Any in-water work may require coverage under a CWA section 401 Water Quality Certification from the Central Valley Water Board. This activity is not covered by CalFires' Utility ROW Exemption.	EM EX, PPS, PS
WB-2i	Do Not Impair Water Flow. The installation of bridges, culverts or other structures should be installed such that water flow is not impaired and upstream or downstream passage of fish and all aquatic life-forms is assured at all times. If structures and associated materials are not designed to withstand high seasonal flows, they should be removed before such flows occur.	EM EX, PPS, PS
WB-2j	Fill Materials. Materials and methods used for temporary crossings should cause minimal turbidity or siltation. Clean 2-6 inch pit run rock, screened river gravels, clean washed 2-inch plus rock or gravel, and/or logs in fill materials should be included. Bridge abutments below the high-water mark shall be rock or logs. When fill material is removed from the crossing, the channel shape and gradient should be returned to pre-project condition and stabilized to the extent feasible, and any adjacent bare soil should be stabilized by mulching or other effective method (see subsection WB-2h & WB-2i). Any fill or excavation in Waters of the US or Waters of the State may require coverage under a CWA section 401 Water Quality Certification issued by the Central Valley Water Board.	EM EX, PPS, PS
WB-2k	Recreate Channel Grade. During crossing removal, all fill material should be excavated in a manner that recreates the natural channel grade and orientation, with a channel bed that is as wide as or slightly wider than the original watercourse.	EM EX, PPS, PS
WB-2l	Stabilize Crossing Sites. All bare mineral soil exposed in conjunction with crossing construction, deconstruction, maintenance or repair, should be treated for erosion immediately upon completion of work on the crossing, and prior to the onset of precipitation capable of generating runoff. Erosion control will be used as specified to stabilize the approach and bank of the watercourse. If the site is seeded, planting and seeding with native species, or a sterile seed mix and mulching is acceptable.	ROW EX, EM EX, PPS, PS

WB-2m	Stabilize and Inspect Decommissioned and Abandoned Road Crossings. Decommissioned/abandoned roads and crossings, once used by Operations, should be stabilized and then inspected following the first storm event producing bankfull stage flows and again prior to filing the completion report. The inspection should verify the effectiveness of the stabilization measures in preventing sediment discharges to the watercourse and to ensure the measures are functioning to restore natural drainage and hillslope stability. If stabilization measures are found to be ineffective, further stabilization measures should be applied, unless reentering the site would cause greater damage than leaving the ineffective stabilization measures. Such inspection results should be reported to the Central Valley Water Board, and will likely be included as supplemental monitoring requirements under the Timberland General Order.	ROW EX, EM EX, PPS, PS
WB-2n	Access Prevention Barricades. Barricades should be constructed at all points of access to the decommissioned or abandoned road to effectively prevent use by any passenger vehicle or equipment.	ROW EX, EM EX, PPS, PS
WB-3	Sediment Control	
WB-3a	Best Management Practices (BMP's). Use of CASQA and/or Forest Practice BMP Standards will be met.	ROW EX, EM EX, PPS, PS
WB-3b	Disturbed Soils. Prior to any ground disturbing work at a project site, erosion control materials (fiber rolls and silt fence) will be stock-piled on site. All disturbed soils within the Project site will be stabilized to reduce erosion potential, both during and following construction. Planting and seeding with native species, or a sterile seed mix and mulching is acceptable. Where suitable vegetation cannot reasonably be expected to become established, non-erodible materials, such as coconut fiber matting, will be used for such stabilization. At pre-processing and processing sites, coverage under a storm water permit administered by the Central Valley Water Board may be required. Generally, coverage is required for soil disturbances of one acre or more, or when part of a larger plan of development.	ROW EX, EM EX, PPS, PS
WB-3c	Revegetation. If required, as a result of agency consultation, or as required by an applicable permit, disturbed areas will be revegetated with local native species suitable to the restoration. Such as the decommission of an access road leading to a temporary crossing. (See NMFS-9b)	ROW EX, EM EX, PPS, PS
WB-3d	Trenching / Excavation /Grading Spoils. As required by an applicable permit, castings or spoils from the trenching / excavation operations will be placed on the stream side of the trenching / excavation /Grading site.	ROW EX, EM EX, PPS, PS
WB-3e	Bank Stabilization. Bank stabilization will be constructed with suitable non-erodible materials that will withstand wash out. The bank stabilization material will extend above the normal high-water mark. Only clean material such as rock riprap that is free of trash, debris and deleterious material will be used as bank stabilization. Asphalt will not be considered an acceptable material. Generally, bank stabilization work will require a CWA section 401 permit from the Central Valley Water Board, as well as other applicable regulatory agencies.	ROW EX, EM EX, PPS, PS
WB-3f	Sediment and Erosion Control Measures. Biodegradable sediment and erosion control measures will be utilized throughout all phases of operation where sediment runoff from exposed slopes threatens to enter a river, stream, wetland, or lake. If there is a 30 percent chance of a rain event within 24 hours, sediment and erosion control will be inspected (before and after the event), and repaired, or upgraded to prevent any runoff. Measures will be maintained in good operating condition until the site is signed off by the Operations Chief. Maintenance includes, but is not limited to, removal of accumulated sediment and/or replacement of damaged silt fencing, compost socks, coir logs, coir rolls, and/or straw bale dikes. Modifications, repairs and improvements will be made to the sediment and erosion control measures whenever it is needed. If the sediment barrier fails to retain sediment, corrective measures will be employed, and an Environmental Specialist notified, immediately. Materials used in the sediment barriers will not pose an entanglement risk to fish or wildlife (e.g. plastic monofilament netting).	ROW EX, EM EX, PPS, PS
WB-3g	Silt Barriers. If work or vehicle crossings must occur within a wetted stream or lake area, precautions to minimize turbidity and siltation will be employed and may require the placement of geotextile fabrics, silt fencing, coir logs, coir rolls, straw bale dikes, or other siltation barriers so that silt and/or other deleterious materials are not allowed to pass to downstream reaches. Equipment will be placed on swamp mats, where the ground is softer. Materials used in the silt barrier will not pose an entanglement risk to fish or wildlife (no plastic monofilament netting). The contractor will obtain coverage under a storm water permit and/or a CWA section 401 Water Quality Certification from the Central Valley Water Board, refer to the specific permit requirements regarding sediment and erosion control.	ROW EX, EM EX, PPS, PS
WB-3h	Removal of Silt from Barriers. Silt collected around the silt barriers will be removed on an as needed basis to prevent silty/turbid water from flowing around the silt barriers during storm events. Silt barriers which trap sediment will be removed when temporary crossings have been taken out and after all flowing water is cleared of turbidity in a manner that will not introduce silt to the stream. The stream will then be restored to a clean and natural condition. For coverage under a storm water permit and/or a CWA section 401 Water Quality Certification from the Central Valley Water Board, refer to the specific permit requirements regarding sediment and erosion control.	ROW EX, EM EX, PPS, PS

	WB-3i	Mapping. The contractor will map out the placement of BMPs, to be kept in the Environmental Tree Removal Data Management System, to account for where they have been placed, what type, and how much material was used. BMPs should be located and removed if they are non-biodegradable. For coverage under a storm water permit and/or a CWA section 401 Water Quality Certification from the Central Valley Water Board, refer to the specific permit requirements regarding sediment and erosion control.	ROW EX, EM EX, PPS, PS
	WB-4	Pre-processing and processing sites.	
	WB-4a	In addition to any other required permit coverage or authorization, pre-processing and processing sites may require coverage under a general Industrial Stormwater Permit, and/or Waste Discharge Requirements issued by the Central Valley Water Board, depending on the type of operation, exposure of materials, and other factors. Pre-project consultation with the Central Valley Water Board is recommended.	PPS, PS
County	CO-1	Log Decks	PPS, PS
	CO-1a	Operations will comply, with all relevant Federal, State and County Code Ordinances, Chapter 53, Section 53-19. - Temporary log storage yards.	
	CO-1b	Log decks within the project area will meet Forest Practice Rules standards for building, maintenance, and BMP's.	
	CO-1c	Use of California Manual on Uniform Traffic Control Devices (MUTCD) and/or American Association of State Highway and Transportation Officials (AASHTO) standards will be met	
	CO-1d	Use of CASQA or Forest Practice BMP Standards will be met	
	CO-1e	A Storm Water Pollution Prevention Plan (SWPPP) will be developed by the contractor	
	CO-1f	AB-52 and EO B-10-11 Tribal Consultation will be conducted by CalRecycle, or their Consultant	
	CO-1g	Log decks will not be placed within habitat of Endangered or Threatened Species, or significantly impact historical, or tribal resources	
	CO-1h	The Planning Section will consult with the County on compliance with listed ordinances	
Cultural Resources	CR-1	Notice to Monitors. When tree removal is scheduled to begin at a given location, the Planning Section will provide Archaeological and Tribal Monitors notice in advance of crew mobilization onto a site. Archaeological and Tribal Monitors will maintain lists of parcels that require surveys and/or monitoring.	
	CR-2	Road Grading and Ground Disturbance. Prior to road grading, the Planning Section will give Archaeological and Tribal Liaisons notice to survey the site.	
	CR-3	Work Hold. No work will begin at locations of road grading, or other ground disturbing activities without the locations being first surveyed by archaeological and Tribal monitors. Archaeologists and Tribal Monitors will convey monitoring requirements based on survey/site inspection results prior to the proposed start of work. Operations will attempt to notify monitors before the start of such activities.	
	CR-4	Non-federally recognized Tribal Consultation will be conducted by CalRecycle's Tribal Liaison (as mandated under AB-52 and EO B-10-11)	
Wildlife	WL-1	Endangered Species Act. Location of areas needing special measures for protection of animals (or plants) as Threatened, Endangered, Proposed or species under the ESA of 1973 or CESA and Sensitive Species are shown on Figure 5.1-5.9 of the EPP, and discussed in this document. If protection measures prove inadequate, if other such areas are discovered, or if new species are listed on the Endangered Species List, Cal Recycle may either cancel or unilaterally modify this contract to provide additional protection regardless of when such facts become known. Discovery of such areas by either party will be promptly reported to the other party. Limited Operating Periods except when agreed otherwise will be –limited as described within this document and as describe in the Environmental Trigger Matrix (Exhibit 1).	
	WL-2	Biologist Qualification Check. Qualified Biologists will submit their credentials within 10 business days of beginning work to US Fish and Wildlife Service.	
	WL-3	Trash. All trash will be removed at the end of each working day.	
	WL-4	Non-sensitive Species. If any non-sensitive wildlife comes into the work site:	
	WL-4a	Stop work until animal leaves the site.	
	WL-4b	If an animal will not leave and is in danger from work or a danger to the crew, contact animal control 530-552-3888.	
	WL-4c	Do not remove animal unless unmitigatable circumstances arise (unable to reach animal control/biologists, environmental; or timing of response would cause harm to the species).	
	WL-5	Limiting Operating Periods (LOPs):	
	WL-5a	LOPs are designed to reduce potential harm/harassment to wildlife during critical seasons, primarily nesting and their offspring seasons, when animals are most vulnerable to activities (running equipment, timber harvest, and hauling, burning, operating chainsaws/brush cutters) that could result in failed nesting attempts.	
	WL-5b	If management objectives cannot be met by implementing the LOPs identified, a qualified wildlife biologist will be consulted to determine more specific areas and kinds of activities that may be pursued. The biologist may recommend removing LOPs, if sufficient information is provided by additional surveys or new information arises.	

WL-5c	If potential raptor nests, large stick nests, or signs of active denning are observed in or near trees that are designated for removal, the occurrence and location will be reported to a wildlife biologist to determine the need for further review. During marking of the timber sale, potential raptor nest trees will be identified and reported to the CDFW and/or USFWS Biologist(s).	
WL-5d	Implement BMPs to ensure water quality standards are met and riparian and upslope conditions are maintained or improved as appropriate. Effectiveness monitoring of all applicable BMPs will occur.	
WL-5e	If all other conditions and permits are met, environmental resource monitoring will be implemented to allow work outside of an exclusion zone.	
WL-5f	Follow all measures under FEMA-4407-DR-CA, Hazard Tree Removal Program Applicable Project BMPs, General Avoidance and Minimization Measures, and Species-Specific Conservation Measures (attached Exhibit 2 and 3).	

NOAA Marine Fisheries

NMFS-1	To reduce dust, all traffic associated with project activities will be restricted to a speed limit of 20 miles per hour when driving on unpaved roads.	DRAFT
NMFS-2	There will be no ground disturbance within an ELZ adjacent to waterways supporting anadromous fish (i.e., Little Chico Creek Watershed; Little Dry Creek Watershed; and Butte Creek Watershed, including Little Butte, Middle Butte, and Honey Run Creek sub-watersheds) within 48 hours before a rain event. Erosion control materials within ELZ work areas would be installed within 48 hours of any ground disturbance.	DRAFT
NMFS-3	All hazardous materials will be stored in properly designated containers within a storage area with an impermeable membrane between the ground and the hazardous materials. The storage area will be encircled by a berm to prevent the discharge of pollutants to groundwater or runoff into the habitats of listed species.	DRAFT
NMFS-4	All staging, equipment, and material storage areas, including temporary staging areas and locations where equipment and vehicles are parked overnight, will be placed outside of the flood zone of a watercourse, away from and outside riparian woodland and wetland habitat. When possible, staging and access areas will be situated in areas that are previously disturbed, such as developed areas, paved areas, parking lots, areas with bare ground or gravel, and areas clear of vegetation. Riparian trees and shrubs will not be removed for staging areas.	DRAFT
NMFS-5	For temporary access roads and water crossings within the 150-foot ELZs in watersheds supporting anadromous fish (i.e., Little Chico Creek Watershed; Little Dry Creek Watershed; and Butte Creek Watershed, including Little Butte, Middle Butte, and Honey Run Creek sub-watersheds), revegetation will occur to replace living woody vegetation removed for temporary access roads or water crossings. Areas that are disturbed by heavy equipment, but where the removal of living woody vegetation does not occur, will have erosion control measures put in place, but will not be replanted.	DRAFT
NMFS-5a	In areas that require revegetation, a contractor identified by CalRecycle will prepare and implement a revegetation plan. Because follow-up monitoring and corrective planting cannot occur, all trees larger than 6 inches diameter at breast height that are removed during Project implementation will be replaced at an 8:1 ratio. All other disturbed areas will be planted or hydroseeded at a rate sufficient to revegetate the site. When practicable, the native vegetation will be cut off at ground level instead of grubbed so it can potentially grow back and establish on its own, and disturbed areas should be planted in late fall after summer temperatures decrease or near the beginning of the first growing season after hazard tree removal.	DRAFT
NMFS-5ai	Additional revegetation requirements are specified as follows:	DRAFT
NMFS-5aii	Use a diverse assemblage of plant species native to the area, including trees, shrubs, and herbaceous species.	DRAFT
NMFS-5aiii	For long-term revegetation use only species native to the area that will achieve shade and erosion control objectives, including forb, grass, shrub, or tree species that are appropriate for the site.	DRAFT
NMFS-5aiv	Do not apply surface fertilizer within 50 feet of any wetland or water body.	DRAFT
NMFS-5av	Spot treatments of mulching or soil amendments (such as hydrogel), and/or a slow-release watering system (e.g., dri-water tubes or Cocoon systems, which are bio-degradable water reservoirs installed around saplings) should be used where needed to increase soil moisture retention and improve survival rates.	DRAFT
NMFS-5avi	Install fencing or other protection, as necessary, to protect plantings from livestock.	DRAFT
NMFS-5avii	Do not use invasive or non-native species for revegetation.	DRAFT
NMFS-6	Every hazard tree (as defined in Section 3.1.1) that is removed within the Large Woody Contribution Zone (LWCZ) (i.e., within 50 feet of the edge of channel of waterways supporting anadromous fish, such as Little Chico Creek Watershed; Little Dry Creek Watershed; and Butte Creek Watershed, including Little Butte, Middle Butte, and Honey Run Creek sub-watersheds), will be replaced at an 8:1 ratio. The exact location of the plantings will depend on site-specific conditions and will be in areas where survival rates are expected to be greater.	DRAFT
NMFS-6a	Additional tree replacement requirements are specified as follows:	DRAFT
NMFS-6ai	Use appropriate tree species native to the area and suited for the soil moisture conditions at the site.	DRAFT

NMFS-6aii	When possible, trees should be placed adjacent to waterways that support anadromous fish in areas where they will contribute to shade over anadromous waterways and may eventually fall into the creeks and become LWD.	DRAFT						
NMFS-6aiii	Do not apply surface fertilizer within 50 feet of any wetland or water body.	DRAFT						
NMFS-6aiv	Spot treatments of mulching or soil amendments (such as hydrogel), and/or slow-release watering systems (e.g., dri-water tubes or Cocoon systems, which are bio-degradable water reservoirs installed around saplings) will be used where needed to increase soil moisture retention and improve survival rates.	DRAFT						
NMFS-6av	Install fencing or other protection, as necessary, to protect plantings from livestock.	DRAFT						
NMFS-6avi	Do not use invasive or non-native tree species for hazard tree replacement.	DRAFT						
NMFS-7	Before entering wetlands or working within an ELZ, all heavy equipment, vehicles, and power tools will be power washed, allowed to fully dry, and inspected for fluid leaks. After cleaning, the equipment will be inspected to make certain no plants, soil, or other organic material are adhering to the surface. Cleaning will be repeated as often as necessary during operation to keep all equipment, vehicles, and power tools free of external fluids and grease, and to prevent a leak or spill from entering the water.	DRAFT						
NMFS-8	All contractors will follow guidelines in the California Invasive Plant Council's <i>Preventing the Spread of Invasive Plants: Best Management Practices for Land Managers</i> (Cal-IPC 2012) to prevent the spread of invasive plant species. Construction equipment will be clean of material that may harbor invasive plant seeds or invasive pests before entering the work area. This material includes dirt or plant seeds on construction equipment, tools, boots, and clothing.	DRAFT						
NMFS-9	With the exception of vegetation-clearing equipment, no vehicles or construction equipment will be operated in areas of tall, dry vegetation. CalRecycle (or a designated contractor) will develop and implement a fire prevention and suppression plan for all activities that have a risk of starting a wildfire.	DRAFT						
NMFS-10	All contractors will, to the maximum extent practicable, reduce the amount of disturbance at each site to the absolute minimum necessary to accomplish the project. Any topsoil removed by excavation, grading, trenching, or other means will be stockpiled, covered, and encircled with silt fencing to prevent loss or movement of the soil into listed species habitats. All topsoil will be replaced in a manner to recreate pre-disturbance conditions as closely as possible.	DRAFT						
NMFS-11	All construction personnel will participate in an environmental awareness training by the biological monitor before the start of hazard tree removal. The training will familiarize all construction personnel with the listed species that may occur onsite, their habitats, general provisions and protections afforded by the ESA and MSA, BMPs and AMMs to be implemented to protect these species and their habitat, and the project boundaries. This training will be provided within 3 days of the arrival of any new worker.	DRAFT						
Threatened, Endangered and Sensitive Species								
TES-1	Nesting Birds (Sensitive):							
TES-1a	A qualified Biologist will conduct surveys for the nests and habitat of migratory bird species, from February 1 through September 15.							
TES-1a.i	Biologists upon finding a nest, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.							
TES-1a.ii	The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.							
TES-1a.iii	Nests will be checked weekly (unless work is going to occur nearby, see d. below) to give an update of the nests progress.							
TES-1b	If an active nest is found, a buffer of avoidance will be designated with consultation from the Department of Fish and Wildlife.							
TES-1c	If an unoccupied nest is found, or in the process of being built within a work area, a biologist, or appointee designated by the biologist will remove the nest and scatter the material on the ground.							
TES-1d	A qualified biologist will monitor for nest activity (eggs, hatchlings, fledglings) daily before, during and after work activity near nests.							
TES-1e	If a nest needs to be relocated a Migratory Bird Special Purpose Permit (SPRE) will be sought for the relocation, or removal of the nest. A wildlife biologist, Environmental Specialist, RPF, upon conference with the Environmental Unit Leader, will safely remove the nest and take it to the nearest receptive wildlife rehabilitation center, if one cannot be found, the nest will be relocated nearby, out of the way of the project area and monitored to make sure the adults return to their nest.							
TES-2	Rare/Sensitive Plant Community:							
TES-2a	A qualified biologist/botanist will survey the areas with suitable habitat for rare plants, especially during a particular plants blooming period and map those areas for their avoidance.							
TES-2b	The biologist will attempt to work as close as possible to the wetted habitat these species live in, being careful not to disturb wetted soils.							
TES-2c	The biologist will flag the site, mark a GPS location, document species.							
TES-2d	Surveys for the following species will be conducted during their associated blooming period:							
	<table border="1"> <thead> <tr> <th>Species</th> <th>Status</th> <th>Blooming Period</th> </tr> </thead> <tbody> <tr> <td> </td> <td> </td> <td> </td> </tr> </tbody> </table>	Species	Status	Blooming Period				
Species	Status	Blooming Period						

Butte County Meadowfoam	Endangered	March-May
Greene's tuctoria	Endangered	May-July
Hairy orcutt grass	Endangered	May-September
Hoover's surge	Threatened	July-September

- TES-2e A limited operating period (LOP) will be established outside of a plant communities blooming period, and/or exclusion zone for ground disturbing activities will be flagged and monitored in areas where rare/endangered plant communities are suspected, known, or discovered.
- TES-2f Vehicles wheel wells will be washed before coming into the Burn Area.
- TES-2g A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
- TES-3 **California Red-legged Frog (CRLF), Sierra Nevada Yellow Legged Frog (SNYLF), Foothill Yellow-legged Frog (FYLF), Western Pond Turtle (WPT), and Hardhead Minnow (HHM):**
- TES-3a Follow all measures under FEMA-4407-DR-CA, Hazard Tree Removal Program
Applicable Project BMPs, General Avoidance and Minimization Measures, and Species-Specific Conservation Measures - CRLF (attached)
- TES-3a A qualified Biologist will conduct surveys (year round) for TES species of fish, amphibians and reptiles in or around water courses; including eggs, larvae, and adults, throughout their range.
- TES-3a.i The biologist will perform a Visual Encounter Survey, entailing standing in one area with binoculars looking for species basking on the bank, hiding amongst plants, rocks, or other refugia, or swimming in the water.
- TES-3a.ii The biologist will then walk a transect along the bank, looking in the water and bank for presence, movement, calls, or other signs of the target species.
- TES-3a.iii The biologist will walk in a parallel transects pattern for 500 feet, or between the work area and the watercourse looking for species hiding amongst plants, rocks, or other refugia, as well as for the presence of ground squirrel burrows.
- TES-3a.iv The biologist will flag the site, mark a GPS location, document species, and take note of any ground squirrel burrows, refugia, which may support dry weather habitat.
- TES-3b Exclusion area: If a species, or supporting dry season burrow is known, or found near a work site, the area will be marked or fenced off to exclude work from occurring within this area. A buffer of limited work will be established 500 feet around this exclusion area.
- TES-3c A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
- TES-3d Limited Operating Period (LOP): Limited, or no activity from October 1, or the first wetting rain (more than ¼ inch precipitation), until April 15th. From April 15 to October 1, if a weather system resulting in more than ¼ inch of precipitation occurs in project area, operations must be suspended within 50 feet of a lake or watercourse until a dry period of 72 hours occurs, unless the Department of Fish and Wildlife determines there will be no effect to amphibians.
- TES-3e Best Management Practices (BMPs) will be applied that re-distribute soil and debris to pre-treatment landscape contours to minimize sedimentation to creeks.
- TES-4 **Giant Garter Snake (GGS):**
- TES-4a A qualified Biologist will conduct surveys (year round) for GGS, including eggs and adults, throughout their range, especially from May 1-August 1.
- TES-4a.i The biologist will perform a Visual Encounter Survey, entailing standing in one area with binoculars looking for species basking on the bank, hiding amongst plants, rocks, or other refugia.
- TES-4a.ii The biologist will then walk a transect along the bank, looking in the water and bank for presence, movement, or other signs of the target species.
- TES-4a.iii The biologist will walk in a parallel transects pattern for 200 feet, or between the work area and the watercourse.
- TES-4a.iv The biologist will flag the site, mark a GPS location, document species, and take note of any animal burrows, refugia which may support dry weather habitat.
- TES-4b Confine construction activities within 200 feet of GGS aquatic habitat to the period from May 1- October 1.
- TES-4c A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
- TES-5 **Coastal Horned Lizard (CHL):**
- TES-5a A qualified Biologist will conduct surveys (year round) for GGS, including eggs and adults, throughout their range, especially from May 15-July 15.
- TES-5a.i The biologist will perform a Visual Encounter Survey, entailing standing in one area with binoculars looking for species hiding amongst plants, burrows, rocks, or other refugia.
- TES-5a.ii The biologist will then walk transects along the given parcels, looking for presence, movement, or other signs of the target species.
- TES-5a.iii The biologist will flag the site, mark a GPS location, document species, and take note of any animal burrows, refugia which may support habitat.
- TES-5b Exclusion area: If a species is known, or found near a work site, the area will be marked or fenced off to exclude work from occurring within this area.

TES-5c	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat. Especially before ground work occurs on a known site with potential for Coastal Horned Lizard.
TES-5d	Limited Operating Period (LOP): Limited activity from Late May to Early July during mating season.
TES-6	Chinook Salmon Spring Run ESU, Central Valley Steelhead, Green Sturgeon:
TES-6a	A qualified Biologist will conduct Visual Encounter Surveys for TES species of anadromous fish, from August 1 - October 31, walking along the bank of the target watercourse, looking for the given species in the water.
TES-6b	Exclusion area: Anadromous watercourses will be given a buffer of 150 feet, establishing a maximum WLPZ for Class I Streams.
TES-6c	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
TES-6d	Limited Operating Period (LOP): Limited, or no activity from August 1 until October 31.
TES-6e	Best Management Practices (BMPs) will be applied that re-distribute soil and debris to pre-treatment landscape contours to minimize sedimentation to creeks.
TES-6f	Dust will be controlled at all times near anadromous watercourses.
TES-7	Bald Eagle:
TES-7a	Nest Trees/Site: A qualified Biologist will conduct surveys within ¼ mile around work areas with supporting habitat, to determine where the eagle pair are nesting and which roost and perch trees they are utilizing. At a minimum, it is expected that roost/perch trees around Paradise and Concow Lake may be utilized from January 15-September 15 of each year.
TES-7a.i	Biologists upon finding a nest, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
TES-7a.ii	The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
TES-7a.iii	Nests will be checked weekly (unless work is going to occur nearby, see c. below) to give an update of the nests progress.
TES-7b	If nesting status is determined, the LOP would be implemented around the nest stand, or as determined by the USFWS. If any new occurrences of these species are detected during implementation of the project, the USFWS will be notified for further evaluation before continuing operation.
TES-7c	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
TES-8	Northern Spotted Owl:
TES-8a	Seasonal restrictions apply including road access from February 15 through August 15 within the designated activity centers.
TES-8b	A qualified Biologist will conduct surveys within ¼ miles of work areas supporting habitat prior to project implementation.
TES-8b.i	Biologists upon finding a nest or activity center, suspecting a nesting site or activity center, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
TES-8b.ii	The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
TES-8b.iii	Nests will be checked weekly (unless work is going to occur nearby, see f. below) to give an update of the nests progress.
TES-8c	If owls are located an LOP (March 1 through August 15) will be required for treatment units where activity centers (nests, pair, young) have been located within ¼ mile of the treatment unit.
TES-8d	If owls are located the LOP may be added or modified for this project by the district wildlife biologist. Stand prescriptions may be adjusted as well (an example might be to have no harvest around the nest tree, etc.).
TES-8e	A new Protected Activity Center (PAC) and Home Range Core Area (HRCA) will be created if a new territory is discovered.
TES-8f	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
TES-9	Northern Goshawk:
TES-9a	A qualified Biologist will conduct surveys within ¼ miles around work areas prior to project implementation from February 15 to September 15.
TES-9a.i	Biologists upon finding a nest, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
TES-9a.ii	The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
TES-9a.iii	Nests will be checked weekly (unless work is going to occur nearby, see c. below) to give an update of the nests progress.
TES-9b	If goshawks are located a LOP (March 1 through September 15) would be required. The LOP may be added or modified for this project by the USFWS.
TES-9c	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

TES-10	Burrowing Owl and Peregrine Falcon:
TES-10a	A qualified Biologist will conduct surveys within 500 feet of the work area, prior to project implementation from February 15 to September 15.
TES-10a.i	Biologists upon finding a nest or occupied ground squirrel burrow, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
TES-10a.ii	The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
TES-10a.iii	Nests will be checked weekly (unless work is going to occur nearby, see d. below) to give an update of the nests progress.
TES-10b	If birds are located an LOP (February 15 through September 15) would be required. The LOP may be added or modified for this project by the USFWS.
TES-10c	The area will be marked for avoidance within 500 feet.
TES-10d	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
TES-11	California Blackrail:
TES-11a	A qualified Biologist will conduct surveys within 500 feet of work areas, within wetland areas prior to project implementation from March 1-September 15.
TES-11a.i	Biologists upon finding a nest, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
TES-11a.ii	The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
TES-11a.iii	Nests will be checked weekly (unless work is going to occur nearby, see d. below) to give an update of the nests progress.
TES-11b	If goshawks are located a LOP (March 1 through September 15) would be required. The LOP may be added or modified for this project by the USFWS.
TES-11c	The area will be marked for avoidance within 500 feet.
TES-11d	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
TES-12	Tricolored Blackbird:
TES-12a	A qualified Biologist will conduct surveys within 500 feet of work areas, within wetland areas prior to project implementation from February 1-September 15.
TES-12a.i	Biologists upon finding a nest colony, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
TES-12a.ii	The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
TES-12a.iii	Nests will be checked weekly (unless work is going to occur nearby, see c. below) to give an update of the nests progress.
TES-12b	If tricolored blackbirds are located a LOP (February 1 through September 15) would be required around the nesting colony, until all nests are full-fledged. The LOP may be added or modified for this project by the USFWS.
TES-12c	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
TES-13	Pallid Bat and Western Red Bat:
TES-13a	A qualified Biologist will conduct surveys of roosting habitat within 500 feet of work areas, prior to project implementation, from May 15 – August 15, looking for trees, buildings, or rock outcroppings that may hold the species, looking for droppings, presence in a cavity, or listening for calls.
TES-13b	If a roost is found, project activities will be modified to avoid impacts to bat species or a LOP (no activity May 15 to August 15, or as otherwise determined) may be applied during the breeding season.
TES-13c	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
TES-14	Valley Elderberry Longhorn Beetle (VELB):
TES-14a	A qualified Biologist will conduct surveys of within 500 feet of work areas for presence of elderberry shrubs with at least one stem measuring one, or more inches in diameter. This area will be mapped for avoidance. Riparian elderberries will be especially monitored.
TES-14b	If an elderberry tree is found, an exclusion area will be designated and flagged for avoidance.
TES-14c	No elderberry trees will be taken during the course of operations.
TES-14d	A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
14e	USFWS Imposed AMMs
14ei	Revised VELB-1 Surveys and Mapping or Flagging (formerly Fencing). A qualified Biologist will conduct surveys within 50-meters (165-feet) of work areas for presence of elderberry shrubs with at least one stem measuring one, or more inches in diameter. Identified shrubs will be flagged and or mapped. The qualified Biologist will record the results of elderberry shrub surveys.

- 14eii Revised VELB-2 Avoidance Area. Project activities that may damage or kill an elderberry shrub (e.g., hazard tree removal, temporary access roads, etc.) will be avoided and minimized to the extent feasible. Contractors will select hazard tree removal method that avoids or reduces potential for effects of the identified shrub, (e.g., use of crane) and will attempt to fell the hazard tree at least 6 meters (20 feet) away from the drip-line of the shrub to the extent practicable. Similarly, other project activities, (e.g., temporary access roads) will also avoid or reduce potential effects on identified elderberry shrubs through route adjustments, equipment selection, and other planning or engineering means, to the extent practicable.
- 14eiii VELB-3 Worker Education.
- 14eiv Revised VELB-4 Biological Monitor. A SFWO-approved biologist will monitor activities conducted within 50 meters (165 feet) of suitable elderberry shrubs (stems measured at ground surface ≥ 1 -inch in diameter) have been identified to assure that all avoidance and minimization measures are implemented. Monitoring will be conducted before, during and after work activities occur in proximity to the elderberry shrubs, in coordination between the contractor and the SFWO-approved biologist.
- 14ev Revised VELB-5 Seasonal Avoidance. To the extent practicable, all activities that could occur within 50 meters (165 feet) of a suitable elderberry shrub (stems measured at ground surface ≥ 1 -inch in diameter) will be conducted between August and February, outside of the flight season of the valley elderberry longhorn beetle, which occurs from March to July, coinciding with the bloom period of the elderberry plant.
- 14evi Revised VELB-6 Elderberry Shrub Avoidance and Trimming (formerly Trimming). To the maximum extent practicable, no suitable elderberry shrubs will be taken during operations (Revised VELB-2, Avoidance; and Revised VELB-5 Seasonal Avoidance). However, if take of suitable elderberry shrubs is unavoidable, then certain project operations may require trimming elderberry shrubs. Trimming may remove or destroy VELB eggs or larvae and may reduce the health and vigor of the elderberry shrub. If trimming is necessary, then it will take place between November and February and to the extent practicable will avoid the removal of any suitable branches or stems that are ≥ 1 inch in diameter. Measures to address regular or large-scale maintenance (trimming) will be established in consultation with the SFWO.
- 14evii VELB-9 Erosion Control and Revegetation.
- 14eviiia Revised VELB-1: Surveys and Mapping or Flagging.
- TES-15 **Vernal Pools (Conservancy/ Vernal Pool Fairy/Tadpole Shrimp):**
- TES-15a A qualified Biologist will conduct surveys of all wetlands within 500 feet of work areas prior to project implementation, especially during the wet season, October 15-June 1.
- TES-15b If found, an Environmental Specialist, or designated contracted specialist will perform a wetland delineation to establish the boundaries of the wetland.
- TES-15c This boundary will have an exclusion fence established for avoidance and a WLPZ of 100 feet will be established.
- TES-15d The WLPZ will be in effect October 15 – June 1, or until the vernal pool dries.
- TES-15e An ELZ of 50 feet will be established and exclusion fencing maintained the rest of the year. No operations, or driving will occur through a vernal pool.
- TES-15f A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

Name	Type	Agency	Work Window (if unavoidable)	Notes	Guidance, or Restrictions
Emergency Notice	Permit	CalFire	Depending on permit. Bridges need to be out by October 15.	Work hold for access	To accompany a CWA 404 Permit from the Army Corps of Engineers and CV Water Board Timber Harvest General Permit.
Foothill Yellow-Legged Frog	Amphibian	CDFW	April 15-October 15	Survey and monitor	Flag for avoidance. Provide monitoring if habitat is present.
Steelhead or Central Valley Spring Run Chinook Salmon, ESU	Fish	USFWS/CDFW	In-water activities: April 15-October 15	Survey and monitor	Protect erosion and sediment within the WLPZ (150 feet). Dust control. In-water, active monitoring.
CA Red-Legged Frog Critical Habitat	Amphibian	USFWS	Near water: May 15-October 15 In water: July 15 - October 15	Work hold to consult if habitat is found.	Revised CLRF-3 Rain Event Limitations. From May 1 to October 15, if a weather system resulting in more than 1-inch of precipitation occurs in project area, activities that occur within 50 feet of <u>suitable</u> aquatic habitat will be suspended until a dry period of 72 hours occurs.
CA Red-Legged Frog Critical Habitat	Amphibian	USFWS	Near water: May 15-October 15 In water: July 15 - October 16	Survey and monitor	Revised CLRF-3 Rain Event Limitations. From May 1 to October 15, if a weather system resulting in more than 1-inch of precipitation occurs in project area, activities that occur within 50 feet of <u>suitable</u> aquatic habitat will be suspended until a dry period of 72 hours occurs.
Large Wood Contribution Zone	Riparian	NMFS	N/A	Survey and flag	50 feet zone along the banks of anadromous watercourses.
Northern Spotted Owl	Bird	USFWS	August 15-March 1	Survey and consult if found	Flag for avoidance. Provide monitoring if habitat is present. Consult with USWFS.
Bald Eagle	Bird	CDFW	September 15-February 15	Survey and consult if found	Flag for avoidance. Provide monitoring if habitat is present. Consult with USWFS.
Peregrine Falcon	Bird	CDFW	September 15-February 15	Survey and monitor	Flag for avoidance. Provide monitoring if habitat is present. Consult with USWFS.
Burrowing Owl	Bird	CDFW	September 15-February 15	Survey and monitor	Flag for avoidance. Provide monitoring if habitat is present. Consult with CDFW.

Slender Orcutt Grass	Plant	USFWS	September - May	Work hold to consult if habitat is found.	Flag for avoidance. Provide monitoring if habitat is present. Consult with USWFS.
Western Pond Turtle	Reptile	CDFW	April 15-October 15		Flag for avoidance. Provide monitoring if habitat is present. Consult with CDFW.
Sierra Newt	Amphibian	CDFW	April 15-October 15		Flag for avoidance. Provide monitoring if habitat is present. Consult with CDFW.
Nesting Birds 2019	Bird	USFWS/CDFW	September 15-February 15	Can seek permits for removal of nests.	Flag for avoidance. Provide monitoring if habitat is present. Consult with USWFS.

Parcels intersecting waterways	Watercourse	Water Boards	All year	Survey and if necessary monitor.	Survey and establish WLPZ. Ensure no species are present, if present Flag for avoidance. Provide monitoring if habitat is present. Consult with USWFS, CDFW. Monitor for discharges of erosion or sediment.
Temperature Total Maximum Daily Load Restrictions (North Fork Feather River)	Watercourse	Water Boards	All year	Maximum WLPZ for Class I (150 feet)	Monitor for discharges of erosion or sediment.
Animals (Non-sensitive)	Animal	Animal Control	All year	Contact animal control.	Do not approach animal. Allow the animal to pass through the worksite. If the animal refuses to move, call animal control.
Cultural Resource (FEMA)	Cultural Resource	SHPO	All year	Contact archaeological monitor.	Leave cultural artifact intact and call the archaeological monitor. If bones are found, call the tribal liaison, and coroner.
Tribal Resource (FEMA)	Tribal Resource	TIPO	All year	Contact Tribal Liaison	Leave cultural artifact intact and call the tribal monitor liaison. If bones are found, call the tribal liaison, and coroner.
Flood Plain	FEMA	Environmental Unit	All year	Contact Environmental Unit	All staging, equipment, and material storage areas, including temporary staging areas and locations where equipment and vehicles are parked overnight, will be placed outside of the flood zone of a watercourse, away from and outside riparian woodland and wetland habitat. When possible, staging and access areas will be situated in areas that are previously disturbed, such as developed areas, paved areas, parking lots, areas with bare ground or gravel, and areas clear of vegetation. Riparian trees and shrubs will not be removed for staging areas.

Appendix C-1

ESA Review Form for Projects Under FEMA's PBA with USFWS in California in the Sacramento FWO Jurisdiction (to be submitted to USFWS)

INSTRUCTIONS: This Endangered Species Act (ESA) Review Form is for proposed projects that may be funded under various FEMA grants programs in California and that would be covered under FEMA's Programmatic Biological Assessment (PBA) and the corresponding U.S. Fish and Wildlife Service (USFWS) Programmatic Biological Opinion (PBO) from the Sacramento Fish and Wildlife Office (FWO). This form must be filled out by a qualified Biologist¹ who is knowledgeable on the ESA, federally listed species² and their habitats, and Critical Habitat³. This form provides the information necessary for FEMA to make a determination of effects from the Subapplicant's proposed project for compliance with the ESA regarding federally listed species and their Critical Habitats. For subapplicant's proposed projects that meet the criteria for coverage under the PBA-PBO, FEMA would submit this completed form to the USFWS and request coverage under the PBA-PBO from the Sacramento FWO. There are six sections in this form (check the sections being submitted):

- Section A:** Information on the proposed project,
- Section B:** Determination of effects to federally listed species and/or Critical Habitat protected under the ESA,
- Section C:** ESA Review for Not Likely to Adversely Affect (NLAA) determinations for proposed projects under the applicable FEMA PBA-PBO, and
- Section D:** ESA Review for Likely to Adversely Affect (LAA) determinations for proposed projects under the applicable FEMA PBA-PBO.
- Section E:** For the Sacramento FWO to complete and sign.
- Section F:** For Subapplicant to complete and sign.

Please complete **Sections A and B**, and complete either **Section C or D** of the form, as needed. Use the highest level of the ESA determination to select whether to complete Section C or D of this form. If there is an LAA determination for at least one federally listed species and/or Critical Habitat, please complete Section D only and address the other species in that section as well. Attach photographs, relevant maps, preliminary engineering designs, and any additional

¹ A qualified Biologist consists of an environmental professional with at least a Bachelor's degree in Biology, Ecology, Natural Resources, Environmental Sciences, or similar, and has significant experience over multiple years working with federally listed species, their habitats, and Endangered Species Act implementation in the State of California.

² In this form, the term "federally listed species" includes species listed or proposed to be listed as threatened or endangered under Endangered Species Act.

³ In this form, the term "Critical Habitat" refers to designated Critical Habitat and proposed Critical Habitat for federally listed species protected under the Endangered Species Act.

information on the Subapplicant’s proposed project. After completing the applicable sections of this form, please fill out the Summary Table below:

Summary Table			
Summary of ESA Effects Determination on Federally Listed Species and Critical Habitat			
FEMA Grant # or Disaster # and Project Worksheet # and Site/LOP #	Species Name	ESA Effects Determination	Critical Habitat
FEMA DR-4407, State Hazard Tree Removal Program	California red- legged frog (<i>Rana draytonii</i>)	May affect, but is not likely to adversely affect	May affect, but is not likely to adversely affect critical habitat
	Valley elderberry longhorn beetle (<i>Desmocerus californicus dimorphus</i>)	May affect, and is likely to adversely affect	No effect

Note 1: If the Subapplicant’s proposed project is under another Federal agency’s jurisdiction (e.g., U.S. Forest Service, National Park Service, Bureau of Land Management, Bureau of Reclamation, etc.) or another Federal agency is functioning as the Lead Federal Agency (e.g., U.S. Army Corps of Engineers), then there no need to prepare this FEMA form.

Note 2: FEMA is not requesting concurrence from the USFWS for species with a No effect determination. Instead, FEMA is simply documenting its No Effect determinations for internal record-keeping.

Name of Qualified Biologist and Date of Preparation:

Joe Broberg, Tierra Goff, Lorena Solórzano-Vincent, and Justin Whitfield

April 17, 2020

Biologist’s Qualifications:

Professional Degree:

Joe Broberg’s Professional Degree: BA, Environmental Studies;
Tierra Goff’s Professional Degree: BS, Wildlife, Fish, and Conservation Biology, MS, Ecology and Conservation;
Lorena Solórzano-Vincent’s Professional Degree: BS Biology and MS in Conservation Biology; and
Justin Whitfield’s Professional Degree: BS, Biological Sciences

Years of experience working with federally listed species, their habitats, and Endangered Species Act implementation in the State of California:

Joe Broberg’s Professional Experience: 7 years;
Tierra Goff’s Professional Experience: 6 years;
Lorena Solórzano-Vincent’s Professional Experience: 20 years; and
Justin Whitfield’s Professional Experience: 16 years.

SECTION A. INFORMATION ON PROPOSED PROJECT (press F11 to advance to the next field)

A.1. Project Name:

State Hazard Tree Removal Program

A.2. FEMA Grant # or Disaster and Project Worksheet #s:

FEMA-DR-4407-CA, State Hazard Tree Removal Program

A.3. Name of Subapplicant (Agency Name)⁴:

California Office of Emergency Services (CalOES) and California Department of Resource Recycling and Recovery (CalRecycle)

A.4. Project Location (street address, latitude/longitude, or UTM and Datum/Zone):

Several Cities including Concow, Magalia, , and Paradise.
Unincorporated areas of Butte County.
Along many private and public (county) roads with in the Camp Fire burn area (see Figure 1)
(37.75°, -121.60°)

A.5. State/County/Municipality:

CA/Butte/Paradise, Magalia and Concow and unincorporated Butte County

A.6. Description of the Action Area⁵:

Please attach a map(s), aerial image, photographs, GIS data layers, and other information on the Action Area. Please include a description of the vegetation communities, aquatic habitats, slope, ambient noise levels, and any sensitive biological resources in the Action Area.

Butte County Camp Fire Hazard Tree Removal Action Area

The Action Area is primarily within the burned area of the 2018 Camp Fire, which burned 153,336 acres in Butte County and a small portion of Plumas County during November 2018 (**Figure 1**). The Camp Fire burn area extends from Highway 99 east to the border of Butte and Plumas Counties, and entirely includes the communities of Paradise, Magalia and Concow. The Action Area is composed of potential work areas along public and private roads within the burn area where hazard trees may be removed, and potential log deck facilities. The majority of

⁴ In the case of a Tribe, the term to be used is “Applicant”.

⁵ Action Area is defined as all areas to be affected directly or indirectly by the Federal action and not merely the immediate area involved in the action (50 CFR §402.02).

the Action Area is along roads within the town of Paradise, but also includes rural roads that extend downslope to Highway 99, into the Feather River Canyon, and onto portions of the Plumas National Forest.

Along roads, the Action Area is within public and private road right of ways (ROW), plus an additional tree impact zone located on private property. The ROW is generally 30-foot wide for private roads and 80-foot wide for public roads, and the tree impact zone is 260-foot wide on each side. The tree impact zone is calculated as being twice the height of the highest tree (130 feet) assessed in the burned area. The Action Area along roads is defined as a 600-foot-wide area (300 feet on either side of the road centerline) along public roads and a 550-foot wide area (275 feet on either side of the road centerline) along private roads. This is the maximum potential work area where hazard trees may be removed, however, much of this area may not contain hazard trees and may have minimal or no work in it. The Action Area therefore accounts for a larger area than the footprint in which work would occur.⁶

The Proposed Project also include includes nine potential log deck sites that are included in the Action Area (**Figure 2**). All but two of these are within the Camp Fire burn area.

The Action Area is comprised estimated to be a maximum of 34,790 acres⁶, including the work area long roads and log deck sites. Site photographs taken during a reconnaissance site visit on February 20, 2020 are provided in **Attachment A**.

Briefly describe the project footprint⁷ in a few sentences below:

The project footprint includes the potential log decks locations, and public and private roads, portions of the adjacent rights-of-way, and areas that contain hazard trees that would be removed. The operational footprint is estimated to be approximately 34,790 acres.⁶ Note that this footprint estimates the maximum footprint, but the actual footprint may be significantly less if private property owners do not submit Right-of-Entry Permits for the adjacent parcels. See the project description provided in **Attachment B.1** and the Tree Removal Operations Plan (TROP) provided in **Attachment B.2**.

Are any water bodies including rivers, streams, seasonal wetlands (i.e., vernal pools, ponds, wet meadows, etc.), estuaries, or coastal water bodies located within the Action Area?

YES NO

If Yes, will in-water work be needed for completion of the Subapplicant's proposed project?

YES NO

If No, how far is the water body from the limits of ground disturbance and/or vegetation removal?

Varies depending on the waterbody. See the Environmental Protection Plan and Environmental Compliance Plan (**Attachment B.3 and B.4**) which includes buffers around various types of waterbodies.

What is the name of the river, stream, estuary, or coastal water body? If the river/stream is a tributary, provide the name of the receiving water body. For seasonal/annual bodies of water, describe the time of year and the duration of time that water is typically present. Describe the flow of water (i.e., still, slow moving, swift, etc.) anticipated during the scheduled activities for the proposed project.

The Action Area contains numerous waterways, including ephemeral, intermittent, and perennial streams. Of these, the major waterways are Little Chico Creek, Butte Creek, Clear Creek, Dry Creek, and the Feather River (West Branch and North Fork). These streams are part of the Butte Creek and North Fork Feather HUC-8

⁶ This description is based on the (1) 2018 Camp Fire Incident (DR-4407) Tree Removal Operations Plan State Hazard Tree Removal Program, prepared by California Governor's Office of Emergency Services and CalRecycle, January 2020 – Version 3 and the (2) Environmental Protection Plan for Camp Fire DR-4407 Hazard Tree Removal Program, Butte County, California / Paradise, California, prepared by California Governor's Office of Emergency Services Camp Fire Tree Removal Operation Management Team, March 2, 2020. These documents are draft versions, and they are expected to be revised at a later date.

⁷ Project footprint corresponds to all the areas with structures affected by implementation of the Subapplicant's proposed project, including construction staging areas, spoils disposal sites, gravel or rock pits, access routes, any areas of ground disturbance, etc.

watersheds, which drain into the Sacramento River. Larger streams within the Action Area are anticipated to have slow moving to swift flows during the scheduled activities for the Proposed Project.

A.7. Proposed Project Schedule and Duration:

Please provide start and end dates (including month and year) of project implementation, number of work days, and number of work hours per day (e.g., 5 days of work for 10 hours per day).

Start Date April 2020 End Date January 2021

Number of work days: Approximately 240 days

Number of work hours per day: 8 to 12 hours per day

Will any work activities occur during nighttime? If so, please describe them. No

A.8. Description of Subapplicant's Proposed Project:

Describe the project activities in detail, including construction methods (i.e., equipment to be used, access routes, construction work areas, construction staging areas, spoils disposal sites, gravel or rock pits, etc). Include the Subapplicant's best management practices⁸ to be implemented, and post-construction activities, if applicable. (The details described here are as provided by the Subapplicant in their project description.) Attach project plans and layouts and post-project monitoring and reporting plans, if available.

Select the applicable project type(s):

Describe the access routes: Access would occur primarily along existing public and private roadways. In some instances, an overland access may need to be constructed. In these isolated instances, the overland access would be less than 600 feet long. See Project Description in **Attachment B.1** and the TROP in **Attachment B.2**).

Describe the construction staging and work areas: The Proposed Project includes several log decks where hazard trees would be processed. During hazard tree removal, construction equipment would be temporarily staged within existing roadways, and adjacent road ROW. Construction staging areas, would also occur within the various log deck sites. See **Figure 2**, and the Project Description in **Attachment B.1** and TROP in **Attachment B.2**

If the Subapplicant's proposed project includes vegetation removal and/or trimming, describe the vegetation type and the extent that would be removed and/or trimmed. Describe the planned revegetation efforts, which should be consistent with the measures described in the applicable PBA-PBO.

⁸ In this form, BMPs refer to standard measures proposed by the subapplicant as part of their proposed project. BMPs should not be confused with the Conservation Measures included in FEMA's PBA and the corresponding USFWS PBO.

The Proposed Project primarily consists of removal of hazard trees adjacent to public and private roads located in the 2018 Camp Fire burn area. This effort would include removal of up to 300,000 dead and dying trees along public and some private roads. Removal of other vegetation, such as shrubs, small trees, and herbaceous vegetation may be necessary to access and remove hazard trees, and to clear log deck sites. Disturbance or removal of other vegetation will be kept to the minimum necessary to complete project activities.

The applicants have provided an Environmental Protection Plan (EPP, **Attachment B.3**) and the Environmental Compliance Plan (ECP, **Attachment B.4**) which state that “If required, as a result of agency consultation, disturbed areas will be revegetated with local native species suitable to the restoration”. Planting and seeding of appropriate native plants are also included as erosion control methods for disturbed areas. Based on initial coordination with the National Marine Fisheries Service (NMFS), revegetation may apply to areas where it was necessary to remove a large amount of trees from within the Equipment Limitation Zones (ELZ) of an anadromous stream (pers comm Bell). Additional revegetation may be required through implementation of the identified specific-specific *Conservation Measures*.

SECTION B. DETERMINATION OF EFFECTS TO FEDERALLY LISTED SPECIES AND/OR CRITICAL HABITAT PROTECTED UNDER ESA

B.1. Does the Action Area for the Subapplicant's proposed project have the potential to support federally listed species and/or does it contain Critical Habitat including physical or biological features essential for the conservation of the species? Also, describe the methods and results of any listed species surveys and/or habitat assessments conducted.

Surveys/Habitat Assessment:

The potential for federally listed species to occur in the Action Area was evaluated based on a review of the existing data and the reconnaissance survey.

- U.S. Fish and Wildlife Service (USFWS) Information for Planning and Conservation (IPaC), Official Species List (USFWS 2020, **Attachment C**)
- California Natural Diversity Database (CNDDDB) of federally listed species occurrence records within and adjacent the Camp Fire Burn area (CDFW 2020; **Figure 3**)

In total, the background data review identified 8 wildlife species and 4 plant species that are federally listed as threatened or endangered, proposed to be listed as threatened or endangered, and/or have the potential to occur based on historic range and suitable habitat in the vicinity of the Action Areas (**Attachment D** [Federally Listed Species With Potential to Occur in the Action Area]). Additionally, the background data review identified the presence of critical habitat for the several listed species in the Camp Fire burn area (**Figure 4**).

AECOM biologists, working as FEMA’s consultants, conducted a reconnaissance survey of portions of the Action Areas on February 20, 2020. The reconnaissance survey included window surveys of several potential log deck locations, assessments of conditions in the Camp Fire Burn area and identification of the vegetation communities in the Action Areas and habitat assessment for federally listed species. In addition, an AECOM biologist conducted a site visit with FEMA, USFWS, and NMFS staff on February 6, 2020.

Species were eliminated from further consideration if the species’ range did not overlap the Action Area, or if the suitable habitats for the species were determined to be absent from the Action Area. For some species with potential to occur, an additional focused evaluation was conducted to determine if the species habitat and range would overlap the proposed activities. In some instances, species were eliminated from future consideration where the range of the species was limited, and the habitats present did not contain vegetation that would be removed by the Proposed Project. This detailed evaluation was assisted by aerial photograph review, USFWS published Recovery Plan, and 5-Year Reviews. AECOM and FEMA reviewed these determinations with USFWS on a call hosted on March 4, 2020. The results of these evaluations are summarized in **Attachment D** [Federally Listed Species with Potential to Occur in the Action Area].

NO

It has been determined that the Action Area occurs either:

- a) Outside the range of any federally listed species,
- b) Within the range of a federally listed species but outside of occupied or suitable habitat and outside Critical Habitat, or
- c) Within Critical Habitat designation but lacks the physical or biological features essential for the conservation of the species.

Go to B.2.

YES. List the federally listed species and Critical Habitat that is present or potentially present in the Action Area of the Subapplicant's proposed project (go to B.2)

Valley elderberry longhorn beetle

California red legged frog, and its designated critical habitat.

B.2. Could the Subapplicant's proposed project directly or indirectly affect federally listed species and/or Critical Habitat (i.e., the physical or biological features essential for the conservation of the species) in the Action Area?

NO

No Effect. FEMA has determined that implementation of the proposed project would not affect federally listed species and/or Critical Habitat. If a No Effect determination has been made for the proposed project, do not complete Section C (for NLAA determinations only), nor Section D (for LAA determinations only). No notification to FEMA is required.

No consultation with the USFWS is required under the ESA.

YES (go to B.3)

B.3. Can the Subapplicant incorporate the general *Avoidance and Minimization Measures* and the species-specific *Conservation Measures* listed in the applicable FEMA PBA-PBO into the proposed project to avoid or minimize effects on federally listed species (including avoiding take⁹ as defined under ESA) and/or their Critical Habitat to levels that are insignificant, discountable, or wholly beneficial?

YES

FEMA has determined that the proposed project May Affect, but is Not Likely to Adversely Affect (NLAA) federally listed species and/or their Critical Habitat. Direct and indirect effects would be insignificant, discountable or wholly beneficial. There are no adverse effects to species or their Critical Habitat. As such, take of individual(s) or destruction/adverse modification to Critical Habitat will not occur. Complete Section C of this form for NLAA determinations. FEMA will notify the USFWS by submitting the completed ESA Review Form for the proposed project and request that the proposed project be covered under the applicable FEMA PBA-PBO as an NLAA project.

NO

FEMA has determined that the proposed project is Likely to Adversely Affect (LAA) at least one federally listed species and/or their Critical Habitat. Adverse effects to at least one federally listed species or at least one physical or biological feature of Critical Habitat may occur to reach an LAA determination. Complete the relevant portions of Section D of this form for LAA determinations. FEMA will notify the USFWS by submitting the completed ESA Review Form for the proposed project which may request coverage under the Incidental Take Statement (ITS) already included in the USFWS PBO issued to FEMA, if applicable.

⁹ Take: Under the ESA "take" means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct [ESA §3(19)].

SECTION C. ESA REVIEW FOR NLAA DETERMINATIONS FOR PROPOSED PROJECTS UNDER THE APPLICABLE FEMA PBA-PBO

Section C is only required for NLAA determinations; Section C has been deleted as it does not apply to the Proposed Project.

SECTION D. ESA REVIEW FOR LAA DETERMINATIONS FOR PROPOSED PROJECTS UNDER THE APPLICABLE FEMA PBA-PBO

D.1. Briefly describe the species potential to occur onsite (including closest CNDDDB occurrences, suitable habitat, etc.) and the potential direct and indirect effects from implementation of the Subapplicant's proposed project in the Action Area. Refer to the applicable FEMA PBA-PBO for a description of potential effects, and describe additional effects as applicable.

Valley elderberry longhorn beetle (VELB): Based on the *Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle* (USFWS 2017), and conversation with the USFWS on March 4, 2020, VELB protected under the ESA are only expected to occur in areas with elevations below 500 feet. Areas below 500 feet elevation occur within the western third of the Action Area (**Figure 5**). Within the Action Area, there are two distinct areas below 500 feet that are likely to support elderberry shrubs, the sole host plant of the VELB. Areas where VELB may occur within the Action Area include habitats adjacent to Little Chico Creek and in the habitats adjacent to Butte Creek canyon.

During the reconnaissance site visit on February 20, 2020, mature blue elderberry (*Sambucus nigra* ssp. *caerulea*) shrubs were observed in riparian and upland areas in the Butte Creek canyon. Large patches were observed in the riparian area long Butte Creek, and singular shrubs were observed in upland areas. Although this area burned, some shrubs survived the fire and others were re-sprouting. Some of the observed elderberry shrubs had stems larger than one inch in diameter (the minimum size for VELB occupancy).

There are two CNDDDB occurrences in the vicinity of the Action Area. The closest occurrence of VELB in the Burn Area is along Pulga Road in the Feather River Canyon. This is a non-specific record dated from July 1998, detected from exit holes observed on an elderberry stem. The elevation of this record is 1,500 ft. Due to the higher elevation of this record, it is likely that these exit holes were from the California elderberry longhorn beetle (*Desmocerus californicus californicus*) which has exit holes that are indistinguishable from the federally listed VELB (USFWS 2014).

The other CNDDDB record is at the southeastern margin of the City of Chico, along a canal adjacent to Butte Creek. This record is approximately 0.8 miles from the closest part of the Action Area. It is dated from 1995 and at 225 ft. elevation.

Critical habitat has been designated for the species; however, it does not occur in or near the Action Area. The critical habitat units are located along the Sacramento River, far from the burn area. The Revised Recovery Plan includes the Action Area within the Sacramento Valley Management Unit (USFWS 2019).

Because there are portion of the Action Area located below 500 feet, elderberry shrubs are known to occur in Action Area, and there are nearby occurrences, there is high potential for VELB to occur in the portions of the Action Area along Butte Creek and Little Chico Creek.

California red-legged frog (CRLF): The entire Action Area is located within the historic range of the species and suitable habitats for the CRLF are present in the Action Area (**Figure 6**). Suitable habitat in the Action Area that could potentially support CRLF include lakes and ponds, intermittent and perennial streams and adjacent upland habitats. Since work activities would occur within and adjacent to existing roads, it is unlikely that the species would occur in the Action Area (pers comm Cobian).

There are two CNDDDB records of CRLF in the Burn Area near Poe Powerhouse Rd. in the Feather River Basin. One record is from Hughes Place Pond, and the other is from nearby spring-fed mill pond on Jack Creek. Both records were last surveyed in 2007. The nearest record is approximately 1.08 miles from the closest part of the Action Area.

However, a radio-tagging study conducted at that nearest population found that no significant forays into terrestrial areas were made by the tagged frogs and movements away from water features were 6 meters or less (Tatarian, Trish, and Greg, 2008). In a separate study, Barry and Fellers (2013) resurveyed historical CRLF sightings in Butte County and throughout the Sierra Nevada foothills. Detection rates during repeated surveys of extant historical and newly discovered occurrences indicate that the Sierra Nevada CRLF population likely remains widespread but difficult to detect (Barry and Fellers 2013). Only two previous USFWS consultations (one in Paradise and one north of Magalia) have occurred for the CRLF in the burn area; both determinations were may affect, but not likely to adversely affect (pers comm Cobian).

A critical habitat unit (BUT-1) for the CRLF is present in the central-eastern portion of the burn area. Much of the critical habitat designated does not occur in the Action Area; however, the segment of the Action Area along Poe Powerhouse Road is located in critical habitat for the species. A portion of the Action Area is in the Feather River Core Area, which includes the Bucks Lake, and Reservoir Drain Hydrologic Sub-Area, as identified in the species Recovery Plan. The core area is mapped along the Highway 70 corridor (USFWS 2002; **Figure 6**).

For these reasons, within the Action Area, the CRLF is expected to occur only within suitable aquatic habitats that provide perennial or intermittent water and would not be expected to occur far from these aquatic habitats. The species is most likely to be encountered in those areas identified as critical habitat and within the species recovery core areas, both of which have little overlap with the Action Area. Because surveys of the Action Area have not been conducted, the species has potential to occur in these areas.

a. Direct and Indirect Effects on Federally Listed Species (including the potential for take to occur)

VELB: Implementation of the Proposed Project would result in disturbance to habitats suitable for the VELB. These disturbances could occur removal of hazard trees that have been severely damaged by the declared disaster and would likely fall within the next 5 years, through the creation of temporary access roads, or through temporary water crossings. The removal of hazard trees would occur in close proximity to existing roads and would occur over a short duration. Temporary overland access roads may occur through suitable habitats, but water crossings would occur at existing locations and would not be expected to result in new alignments or changes in the developed footprint. There would be no hardscaping, or conversion of natural habitat to developed land use types. The removal of the hazard trees would change the habitat characteristics, but these changes would likely occur in the near future without implementation of the project. The establishment and operation of log decks are not expected to affect VELB because the sites are located in disturbed/developed habitats and do not provide suitable habitat for the species.

Most of the habitats in the Action Area have been significantly or severely modified by the Camp Fire, over time these areas have regenerated and provide habitat for VELB. Overtime, habitat conditions for VELB are expected to improve, as the Camp Fire also likely adversely affected species populations in the Action Area. Hazard tree removal and temporary access roads may result in minor alterations of the micro habitat characteristics associated with riparian and upland habitats for these species. Overall, such changes in habitat would be relatively small, and these changes in habitat characteristics would not be expected to alter the species' breeding, foraging, or dispersal; however, these effects would be difficult to measure. Over time, the conditions within the project footprint would improve for the listed species as the natural recruitment and regeneration of revegetation would provide better habitat conditions.

The presence of heavy equipment and personnel may result in a wide variety of effects on the VELB. These effects may be direct or indirect, and could lead to injury, harm, harassment, or mortality of the species. During tree felling and removal operations, the Proposed Project may damage or destroy elderberry shrubs, and therefore directly impact VELB. Heavy equipment would be used to access hazard trees for felling and removal; which could damage to suitable habitats, including elderberry shrubs, that may lead to take of the species. The Proposed Project could result in the individuals being

trampled, crushed or trapped if present in the project footprint. The physical presence of personnel and operation of equipment would increase noise, and visual disturbance, and would produce dust within the Action Area that could lead to changes in behavior or to habitat avoidance. Construction could also temporarily lead to increased dust, erosion, and sedimentation; result in potential spills of hazardous materials; or introduce invasive species or pathogens. Terrestrial movement may be temporary limited due to the presence of equipment, personnel, and adverse environmental conditions.

CRLF: Implementation of the Proposed Project would result in disturbance to habitats suitable for the CRLF. These disturbances would include establishment of temporary access roads, water crossings, and removal of hazard trees that have been severely damaged by the declared disaster and would likely fall within the next 5 years. The removal of hazard trees would occur in close proximity to existing roads and would occur over a short duration. Water crossings improvements would occur at existing crossings and would not result in significant changes in the habitat characteristics, and temporary overland access routes would be limited in size and would only be temporary. There would be no hardscaping, or conversion of natural habitat to developed land use types. The removal of the hazard trees would change the habitat characteristics, but these changes would likely occur in the near future without implementation of the project. The establishment and operation of log decks are not expected to effect CRLF because the sites are located in disturbed/developed habitats and do not provide suitable habitat for the species.

Most of the habitats in the Action Area have been significantly or severely modified by the Camp Fire. Overtime, habitat conditions for CRLF are expected to improve, as the Camp Fire likely adversely affected species populations in the burn area. Given the low potential for the species to occur, project activities, such as hazard tree removal, that may result in minor alterations of the micro habitat characteristics associated with terrestrial, riparian, and aquatic habitats for CRLF are not expected to result in harm or harassment of the species. Overall, such changes in habitat would be relatively small, and these effects on the CRLF would be considered insignificant and discountable. Over time, the conditions within the project footprint would improve for the listed species as the natural recruitment and regeneration of revegetation would provide better habitat conditions for the species.

No direct effects on California red-legged frog are anticipated as a result of project implementation. Direct encounters are not expected because limited activities would occur in or in close proximity to suitable aquatic habitats. In this region, the species does not disperse far from aquatic habitats, and hazard tree removal equipment would only be present for a short period of time. The Action Area does not overlap known occurrences and has little overlap with designated critical habitat and recovery plan core areas. Most actions in these areas would be conducted in upland habitats where the species is unlikely to occur.

Indirect effects on the CRLF habitat may occur as a result of the presence of hazard tree removal equipment and personnel. There is some potential for indirect effects associated with erosion of soils from the uplands to deposit within aquatic habitats or streambeds. This could lead to changes in aquatic habitat quality and or increased turbidity during the first rain events following construction. These types of effects would be difficult to measure and would occur to the habitat for the species, and not on the species. Other indirect effects may occur as a result of hazard tree removal equipment that could discharge contaminant through potential spills of hazardous materials and the introduction of invasive species and pathogens. However, hazard tree removal would be limited in areas close to aquatic habitats. Given the implementation of general AMMs and species-specific Conservation Measures into the Proposed Project, any potential direct and indirect effects would be reduced to insignificant and discountable levels.

- b. Direct and Indirect Effects on Critical Habitat (including effects on specific Physical and Biological Features¹⁰). If there are adverse effects, quantify the area (in acres, square feet, etc.) of Critical Habitat affected.**

VELB: Critical Habitat for this species does not occur in the Action Area. Therefore, the Proposed Project would have *no effect* on VELB Critical Habitat.

CRLF: Designated Critical Habitat Unit BUT-1 overlaps the Action Area along approximately one mile of Poe Powerhouse Road in the Feather River Basin. One perennial stream, Chino Creek, crosses Poe Powerhouse Road and is connected hydrologically with the extant CNDDDB records at Hughes Place Pond. Although it appears this stream is high gradient where it occurs in the Action Area and may not provide suitable aquatic breeding or non-breeding habitat, the Physical and Biological Features include aquatic, riparian, and dispersal habitat are assumed to occur where Critical Habitat overlaps the Action Area.

The proposed activities in this limited area would be limited to hazard tree removal and would not result in the conversion of the physical and biological features (aquatic, riparian and dispersal areas) to developed landscape. In addition, the only trees that would be removed would be those that are pose a hazard to the roadway in the next 5 years. As such, there would not be significant change in the Physical and Biological features as a result of the project activities. Therefore, the effects on the Physical and Biological Features associated the Proposed Project would insignificant and discountable.

D.2. Please list all the general *Avoidance and Minimization Measures* and the species-specific *Conservation Measures* that are applicable from the FEMA PBA-PBO , and indicate which will be implemented and why implementation of others is not necessary for the Subapplicant’s proposed project to avoid and minimize direct and indirect effects, and briefly note how they would reduce those effects within the Action Area on the following:

- a. Federally Listed Species**

See **Attachment E**. This attachment provides a summary of the Best Management Practices (BMPs) included in the Proposed Project and identifies the applicable general *Avoidance and Minimization Measures* and species-specific *Conservation Measures*. **Attachment E** also contains justification for those measures that not proposed for inclusion in this consultation.

- b. Critical Habitat**

The same measures identified to avoid and minimize effects on CRLF would also be implemented to reduce potential effects on Physical and Biological Features associated with the species Critical Habitat (see **Attachment E**).

Note: Please note that take (as defined under the ESA) of federally listed species and/or destruction/adverse modification to Critical Habitat may occur under an LAA determination.

D.3. Based on the information provided in Sections D.1 and D.2, is there potential for the Subapplicant’s proposed project to result in take of a federally listed species?

YES

FEMA has determined that the proposed project may result in take of at least one federally listed species, and FEMA is requesting coverage under the ITS previously issued from the USFWS to FEMA under the programmatic consultation for ESA Section 7 compliance to be complete. Complete Sections D.4 through D.10 of this form to make an LAA determination and request coverage under the existing ITS. FEMA will notify the USFWS by submitting the completed ESA Review Form for the proposed project.

¹⁰ Per 81 FR 7414, the physical or biological features refer to the features that are present that are essential to the conservation of the species and may require special management considerations or protection, which were formerly referred to as “Primary Constituent Elements.”

NO

Complete Sections D.7 through D.10 (skip Sections D.4 through D.6) of this form for LAA determinations. FEMA will notify the USFWS by submitting the completed ESA Review Form for the proposed project.

D.4. Briefly describe the mechanism(s) of take as it may occur from implementation of the Subapplicant's proposed project in the Action Area.

Mechanism(s) of Take

CRLF: Take of the CRLF is NOT anticipated to occur as a result of the Proposed Project.

VELB: Take, including, injury or mortality, harassment, or harm, of the VELB may occur through implementation of the Proposed Project. The Proposed Project has potential to take VELB that damage and/or destroy elderberry shrubs, or that occur in close proximity to elderberry shrubs during hazard tree removal activities.

VELB may be injured or killed during the Proposed Project as a result of direct encounters with construction equipment or personnel.

VELB may be harassed during implementation of the Proposed Project, causing behavioral changes that may expose them to predation, or cause changes in their behavior, or cause them to move from refugia habitat increasing the risk of injury or mortality. These effects may result from visual or acoustic disturbance from the presence of equipment or personnel.

VELB may be harmed during implementation of the Proposed Project primarily through loss and disturbance to habitat (i.e., elderberry shrubs and the adjacent habitat) that may impair essential behavior including breeding, feeding, and sheltering. Loss and disturbance to habitat as a result of the Proposed Project would occur to riparian, and upland habitats. Habitat disturbance may also occur as a result of exposure to hazardous material spills, exposure to or introduction of invasive species and pathogens; and erosion, turbidity and sedimentation.

D.5. Describe any additional –project-specific measures that would be implemented to reduce the magnitude of take.

The applicants EPP (**Attachment B.3**) and the ECP (**Attachment B.4**) include extensive measures that would be implemented to avoid and minimize harm to the environment, and are referred to as project BMPs. These measures include specific BMPs that would be implemented to avoid and minimize potential effects on listed species, including the VELB and CRLF. The applicable project BMPs, as well as the applicable general *Avoidance and Minimization Measures*, and the species-specific *Conservation Measures* identified in the USFWS-Sacramento PBO to FEMA are identified in **Attachment E**.

D.6. Provide an estimate of the magnitude of take for each federally listed species that may result from the Subapplicant's proposed project, including:

- Take estimate based on existing population status, if available, otherwise use the area of suitable habitat affected as a surrogate for the take estimate;
- References for any materials utilized to develop these estimates.

Take of the CRLF is not anticipated.

a. VELB – Estimated Take

The number of individuals that may be encountered within the Action Area is unknown. Based on the Sacramento Fish and Wildlife Service Programmatic Biological Opinion (PBO), the Proposed Project would ensure the avoidance of elderberry shrubs within the Action Area to reduce impacts to the host

plant and valley elderberry longhorn beetle. In accordance with the PBO, the Proposed Project would not result in take of more than five percent of habitat at a particular site that is 20 acres or greater; or take more than 5 percent of the entire range of the species.

b. References

n/a

D.7. Are there any cumulative effects¹¹ anticipated from implementation of the Subapplicant's proposed project, including construction activities? If so, please describe them.

Because of the significant damaged caused by the Camp Fire, there are many private, non-federalized activities that have occurred, and will continue to occur. These activities may occur in the Action Area or may be located adjacent to the Action Area, and would primarily occur in the existing city limits, and secondarily in the county limits. Most of the activities are associated with re-building (residential, commercial, and industrial) would likely occur in the same or similar pre-fire footprint. In some instances, the footprint of these re-building efforts would be larger, smaller, or may occur in a new area. In addition, activities associated with the removal of hazard trees from private property are also anticipated. In addition, the local road jurisdiction (County or City) would likely continue to implement regular road maintenance. Because these activities are anticipated to occur mostly in urban environment, or within previously disturbed footprints, these cumulative activities would not likely result in cumulative effects on the VELB or CRLF, or in the loss or degradation of their habitat.

For the CRLF, given the limited overlap of the Action Area with critical habitat, and insignificant and discountable effects on the Physical and Biological Features, these cumulative activities would not likely result in cumulative adverse effects on Designated Critical Habitat for the species.

D.8. Are there any interrelated¹² and/or interdependent¹³ actions associated with the Subapplicant's proposed project? If so, please describe them.

One interdependent action, associated with establishment of the crew housing, could occur as a result of implementation of the Proposed Project. To date, crew housing has not been identified, as it would be determined by the contractors responsible for implementation of the Proposed Project. If crew housing is necessary, FEMA would evaluate the potential site(s) to determine if there is potential for effects on listed species. If the site(s) are determined to affect different listed species, or would result in effects, or require modification of the AMMs that are not discussed in the ESA Review Form, then FEMA would coordinate with the USFWS and amend the consultation to include the interdependent actions.

D.9. Are there any other FEMA funded projects occurring within 1 mile of the Subapplicant's proposed project? If so, please list the disaster number (DR), Project Worksheet (PW), project name, and distance to this proposed project.

FEMA has already funded, and will continue to fund, through their Disaster, Mitigation, and Preparedness Programs activities to repair, restore, or replace disaster-damaged facilities, and to provide assistance with actions that will reduce or eliminate threats to public health and safety and reduce the risk of damage to public and private property during future disasters. FEMA actions would occur within the boundaries associated within declared disaster for the Camp Fire (DR-4407).

¹¹ Cumulative effects are those effects of future State or private activities, not involving Federal activities, that are reasonably certain to occur within the action area of the Federal action subject to consultation (50 CFR §402.02).

¹² Interrelated actions are actions that are part of a larger action and depend on the larger action for their justification (50 CFR §402.02).

¹³ Interdependent actions are actions having no independent utility apart from the proposed action (50 CFR §402.02).

D.10. Provide a summary of FEMA’s LAA Determination for Federally Listed Species and Critical Habitat from implementation of the Subapplicant’s proposed project. List all the federally listed species and/or Critical Habitat that could be directly or indirectly affected, and summarize those effects as they are presented in this Section. An ESA determination for each federally listed species and/or Critical Habitat is required.

Species: valley elderberry longhorn beetle (VELB)

Determination Rationale for Species: This project *may affect, and is likely to adversely affect* the VELB because there this species has potential to occur in portions of the Action Area below 500 feet. Project related activities including hazard tree access, felling, and removal operations may affect elderberry shrubs and VELB. These effects may be direct or indirect, and could lead to injury, harm, harassment, or mortality of the species. The Proposed Project could result in elderberry shrubs being damaged or destroyed, and individuals being trampled, crushed or trapped if present in the project footprint. The presence of personnel and operation of equipment may also result in indirect effects such as noise, visual disturbance, dust, as well as potential spills of hazardous materials and introduction of invasive species. The project BMPs, general Avoidance and Minimization Measures, and species-specific Conservation Measures will be implemented that would reduce adverse effects on VELB. The implementation of these measures would reduce the potential adverse effects; however, adverse effects, including take, of the VELB may occur.

Determination Rationale for Critical Habitat: The Proposed Project does not occur in designated Critical Habitat. The Proposed Project would have *no effect* on the Critical Habitat for the valley longhorn elderberry beetle.

Species: California red-legged frog (CRLF)

Determination Rationale for Species: This project *may affect, but is not likely to adversely affect* the CRLF because direct effects are not anticipated as a result of project implementation. Indirect effects on the CRLF habitat may occur as a result of the presence of hazard tree removal equipment and personnel, potential for erosion and sedimentation that could result in changes in habitat quality, or through the exposure to hazardous materials, or spread of invasive species or pathogens. Given the low potential for the species to occur in the Action Area, and implementation of project BMPs, general *Avoidance and Minimization Measures* and species-specific *Conservation Measures*, these potential effects would be reduced to insignificant and discountable levels.

Determination Rationale for Critical Habitat: This project *may affect, but is not likely to adversely affect* the Physical and Biological Features of the California red-legged frog Critical Habitat. The Proposed Project would have limited overlap with the Critical Habitat, and the would not result in development (hardscaping) or conversion of the Physical or Biological Features. In addition, project BMPs, general Avoidance and Minimization Measures, and species-species Conservation Measures will be implemented and would further reduce potential effects on the Physical and Biological Features. For these reasons, the effects of the Proposed Project on the Physical and Biological Features are expected to be insignificant and discountable.

SECTION E. FOR THE SACRAMENTO FWO TO COMPLETE AND SIGN

I concur with FEMA’s determination on federally listed species and critical habitat as described in this ESA Review Form, pursuant to Section 7 of the Endangered Species Act. The proposed projects are covered activities, and the effects to the listed species presented in this ESA Review Form have been analyzed in FEMA’s March 27, 2019, *Programmatic Formal Section 7 Consultation of Federal Emergency Management Agency’s Disaster, Mitigation, and Preparedness Program within the Sacramento Fish and Wildlife Office Jurisdiction in California* (08ESMF00-2018-F-3331-1) (programmatic biological opinion).

Take for listed species presented in Section D of this ESA Review Form are exempt under the March 27, 2019, programmatic biological opinion.

The proposed projects are appended to the March 27, 2019, programmatic biological opinion under Service File Number 08ESMF00-2018-F-3331-____. Therefore, no further action pursuant to the Act is necessary for the proposed projects unless new information reveals effects of the action that may affect listed species or critical habitat in a manner or to an extent not previously considered; the action is subsequently modified in a manner that causes an effect to the listed species or critical habitat that was not considered; or a new species is listed or critical habitat designated that may be affected by the identified action.

I do not concur with FEMA's determination for the following reason(s):

SECTION F. FOR SUBAPPLICANT TO COMPLETE AND SIGN

On behalf of

_____]

(Subapplicant agency name), I have read the requirements from FEMA's Programmatic Biological Opinion with the USFWS that are specific to the subject project and plan to implement them accordingly. I understand that failure to implement the required General Avoidance and Minimization Measures and Species-Specific Conservation Measures may jeopardize funding for the subject project. The

_____] (Subapplicant agency name) accepts

implementation of the required measures described in this ESA Review Form as a stipulation of funding for

_____]

_____] (project name, FEMA Grant # or Disaster and Project Worksheet #s).

Attachment B.1
Project Description

State Hazard Tree Removal Program
Camp Fire
FEMA-4407-DR-CA
Project Description¹

The 2018 Camp Fire was the deadliest and most destructive fire in California history, killing 85 individuals, destroying over 18,000 structures, and displacing thousands of residents. The Camp Fire burned over 153,000 acres in Butte County (County) and killed or significantly damaged hundreds of thousands of trees throughout the burn scar. On November 12, 2018, the President declared Presidential Disaster (DR-4407), making Federal assistance and funding administered by the U.S. Department of Homeland Security's Federal Emergency Management Agency (FEMA) available for response and recovery activities related to the Camp Fire.

FEMA proposes to provide funding through the California Governor's Office of Emergency Services (Cal OES or Recipient) to California Department of Resources Recycling and Recovery (CalRecycle) for the removal of hazard trees along approximately 515 miles of roadways in the area affected by the Camp Fire. Trees that threaten public and private thoroughfares or public improved property over the next five years would be removed by this program. Trees may also be removed on several private inholdings on federal lands (Bureau of Land Management (BLM) or United States Forest Service (USFS) lands) may be included as part of the program. FEMA would coordinate with the BLM or USFS prior to work on those parcels. CalRecycle has been mission-tasked to manage the tree removal program and estimates that approximately 300,000 fire-impacted trees would need to be removed. The project would also include the establishment of log processing sites.

1.1 PROJECT LOCATION

The Camp Fire burned nearly 240 square miles in and around the communities of Concow, Magalia, and Paradise in Butte County, California (Figure 1, Figure 2). The area was heavily treed and generally rural or rural suburban land uses. Many of the roads are narrow and some are unpaved. Major roads are Clark Road, Pentz Road, and Skyway Road, which run northeast from the Central Valley to Magalia and Paradise; Pearson Road, Elliott Road, Bille Road, and Wagstaff Road, which run west-east through the town of Paradise; State Route 70, which runs northeast from the Central Valley to the south of Concow; and Concow Road, which runs north-south through the community of Concow.

Hazard trees up to 300 feet perpendicular from a roadway centerline on both sides of public roadways and 275 feet perpendicular from the centerline on both sides of private roadways would be removed. Hazard trees would not be removed from federal lands, except for inholding parcels on BLM and USFS lands that have received right-of-entry. The potential maximum project footprint for tree removal is approximately 34,790 acres. The project area also includes multiple

¹ This Project Description is based on the (1) *2018 Camp Fire Incident (DR-4407) Tree Removal Operations Plan State Hazard Tree Removal Program*, prepared by California Governor's Office of Emergency Services and CalRecycle, January 2020 – Version 3 and the (2) *Environmental Protection Plan for Camp Fire DR-4407 Hazard Tree Removal Program, Butte County, California / Paradise, California*, prepared by California Governor's Office of Emergency Services Camp Fire Tree Removal Operation Management Team, March 2, 2020. These documents are draft versions, and they are expected to be revised at a later date.

log processing sites where trees would be staged following removal before being transported to licensed end-use facilities. Worker base camps where workers would live during project implementation could be established, though no locations, as this time, have been identified.

1.2 PROPOSED PROJECT

The project consists of the removal of fire damaged or structurally defective trees within the project footprint that may fall onto, or otherwise threaten, public and private thoroughfares or public improved property over the next five years in the portion of the County affected by the Camp Fire, as well as log processing sites and the potential establishment of base camps.

1.2.1 Hazard Tree Removal

Hazard trees that would be identified for removal occur along both County-maintained roads and private roads. Removed trees along County-maintained roads would be within the County-owned right-of-way (ROW) and adjacent private property parcels. Tree removal occurring outside of the public ROW and within private property parcels are subject to private property owner right-of-entry and approval. Private property parcels are also referred to as right-of-entry parcels. Tree removal along private roads would be entirely in right-of-entry parcels. FEMA would coordinate with the BLM or USFS prior to work on parcels that are right-of-entry parcels that are private inholdings inside the boundaries of BLM or USFS lands.

To be eligible for removal, trees must meet the following requirements:

- Trees must show damage from the Camp Fire.
- Trees must be greater than six inches in diameter at breast height (4.5 feet above ground).
- A Registered Professional Forester (RPF) or an ISA Certified Arborist (Certified Arborist) holding a Tree Risk Assessment Qualification (TRAQ) acting as the RPF's designee would conduct a Level 2 Basic Assessment and must conclude the tree is dead or likely to die within five years.
- The tree must be within the allowable distance from an eligible target (right of way or public improved property). Specifically, the distance between the tree and the eligible target can be at most twice the height of the trees (for example, a 100-foot tree could be no more than 200 feet from the target to be eligible).

Only individual fire damaged trees that meet FEMA Policy 9580.204 would be identified for removal by CalRecycle's contracted arborists. Not all trees within the proposed operational footprint would be removed. Each tree identified by the arborist would be plotted via global positioning system (GPS), photographed, marked with spray paint, and cataloged in an electronic database.

Hazard Tree Removal Program:

The tree removal program would follow a standard order of work to identify, fell, remove, process, and sustainably dispose of eligible trees, as outlined below.

Tree Assessment:

A Certified Arborist with a TRAQ certification overseen by an RPF would assess all potentially eligible trees. Trees that the Certified Arborist concludes are eligible would be marked with a distinctive paint and cataloged in an electronic database.

Tree Felling:

Felling is the process of cutting standing trees and may include the following activities: felling, limbing, topping, and bucking into individual products. Felling would be undertaken in accordance with federal and state Occupational Health and Safety Administration standards, which require that a separation of 200 feet between adjacent felling activities.

A Licensed Timber Operator (LTO) would fell the marked trees in accordance with logging industry best practices. The exact means and methods of felling trees would be at the discretion of the LTO and in accordance with the contract specifications including prescribed Best Management Practices (BMPs) and Avoidance and Minimization Measures (AMMs). Of the three types of harvesting systems (shortwood, tree-length, and full tree), only the first two are expected because of the degraded condition of the hazard trees. Therefore, the methods of felling to be used for the Program include:

- Hand-crews (e.g., “no bunching,” using qualified loggers/sawyers cutting trees with chain saws and other hand tools, working on gentle slopes, all sizes of trees);
- Feller-bunchers (e.g., a motorized vehicle that grabs each tree with a grappler, cuts at base, shreds branches resulting in a log that is ready for loading in a log deck);
- Masticators (e.g., rubber-tire only, reach from the road, focusing on steep slopes with a long-arm and use a grinder end, chip small trees from top to bottom);
- Grapple-saws (e.g., a remote-controlled knuckle crane with reach of up to 150 feet that may be stationary with use of freeboard legs. Cuts trees from the top-down and can directly load cut sections onto logging trucks); and
- Cable logging is a technique that may also be used, only as necessary, for tree extraction from steep slopes (allowed per California Code of Regulations, Title 8, Section 3270.1).

Stump and/or rootball removal is not an eligible action under the program; therefore, no stumps or rootballs would be removed as part of the tree removal operation.

New temporary, new improved or permanent roads, or temporary/permanent water course crossings may need to be developed to safely access the eligible trees.

Tree Removal:

The LTO would remove felled trees from the stump location and transport the trees either as whole logs to end-use facilities or to temporary log storage and processing sites. Removal would include use of heavy equipment to load trucks and move felled trees from the origin to a central landing or log deck along public roadways. Temporary staging of logs may occur on driveways or road shoulders as logs are stacked prior to loading on trucks. Slash (limbs under six inches in diameter) may be chipped and spread on disturbed soil onsite for erosion control.

Tree Processing:

LTOs would haul whole logs or process (chip) trees to temporary log storage and processing sites.

Sustainable Tree Disposal:

LTOs would dispose of at least 75 percent of felled trees (or tree material) at biomass energy facilities, and the remaining trees (or tree material) at other end-use facilities.

Best Management Practices and Avoidance and Minimization Measures:

The BMPs and AMMs would be employed for the Program. These measures are summarized in the Environmental Compliance Plan (Attachment B.4) and are considered conservative Program guidance standards for planning purposes. They may be updated and revised upon receipt of the 2020 CalRecycle Assessment and Monitoring surveys and/or would be superseded by state and federal resource agency environmental clearances.

Construction Equipment:

Construction equipment used for tree removal would include:

- Front-end wheel loaders;
- Feller-bunchers;
- Masticators;
- Rubber-tired backhoes;
- Skid steers;
- Rubber-tracked excavators;
- Dump trucks;
- Logging trucks;
- Bucket trucks;
- Chip vans;
- Cranes;
- Tub grinders; and
- Chainsaws.

“Light-on-the land” Harvesting Techniques:

Felling and removal would likely involve “light-on-the land” harvesting techniques. These techniques would include the following measures:

- Combine and integrate management activities to reduce traffic;
- Avoid unnecessary site re-entry;
- Operate on snow or when soils are frozen or dry;
- Avoid rutting within the site and hydrologic impacts from roads and skid trails;
- Divert water from roads, skid trails (if developed), and landings;
- Infrastructure (i.e. roads, skid trails [if developed], and landings) that would be constructed should be:
 - Minimized within the harvest site,
 - Shared between harvest sites,
 - Planned during stand establishment, and
 - Designated roads or skid trails (if developed) should be used.
- Operate equipment and machinery along the topographic contours, rather than up and down slopes;

- Store lubricants and fuels in appropriate (e.g., approved, labeled) containers that are located away from water; and
- Incorporate and administer appropriate environmental regulations in the Hazard Tree Removal Program.

1.2.2 Access Roads and Water Crossings

There may be need of developing temporary roads or waterbody crossings and creating new or improving permanent roads to provide access to hazard trees. New temporary, new/improved or permanent roads, or temporary/permanent water course crossings, may include the following:

Roads:

- Skid trails: including removal of vegetative brush from a location to provide access for tree removal equipment. This would be accomplished by cutting brush near the ground and moving it to the side for an access path for personnel and equipment. Skid trails would not be graded.
- Spur roads: Use of equipment to grade and grub the ground and the placement of a temporary gravel access. Aggregate base rock may be placed either on top of the existing ground surface, over a cleared pathway (above), or over geotextile filter fabric.
- Road improvements: The grading of road and drainage ditches, compaction, and use of rock to improve and harden an existing road, which has been deemed impassable, due to heavy rutting, road washout, or other issue. Road building standards would follow Forest Practice Law.

Crossings:

- Temporary bridges: A temporary bridge is used when either access is not available, or the existing access is not adequate. Size and length are specified by the span and the anticipated loading needed. Installation of temporary bridges would include grading of approaches and installation of temporary abutments (e.g., concrete blocks) to support the bridge over the span.
- Culverts: Culverts can be used for water crossings where the installation of a bridge is not feasible. Culverts are appropriately used for access across drainage ditches, intermittent streams, and small waterways. Work would include the placement of aggregate base rock and geotextile fabric to allow for the removal of the culvert after the need for access is complete.
- Low water crossings: Low water crossings may include the placement of metal plates and removal of sediment and vegetative debris at existing crossings.

Specific locations of temporary access roads or water crossings have not been identified.

1.2.3 Log Processing and Final Disposition

Once the trees are cut, the timber would be removed and transported by truck on established roads to log processing facilities, also known as log decks. Nine potential log deck, timber sorting, and processing sites have been identified (Table 1). These locations vary in terms of prior uses and previous ground disturbance. For those locations in undeveloped agricultural lands, ground disturbing work would be required, including grading and road establishment. For those locations

that have previously been used for log processing or other industrial uses, less ground disturbance would be required.

Other ground-disturbing activities at the log processing locations may include the installation of scaffolding towers that would be temporarily attached to the ground using narrow wire tie-downs. These locations would not be paved, and the towers would be temporary. Ground disturbance would also occur when trucks are driven or staged at the log decks.

Table 1
Potential Log Deck, Timber Sorting, and Processing Sites

Log Deck Number	Parcel Size / Usable area (acres)	Location	Uses	Current Setting
1	>120/>40	3100 Skyway Road, Paradise, CA 95969 (Tuscan Ridge)	Decking, chipping, loading, materials storage	Developed; accessible
2	>53/50	3000 South 7th Street, Oroville, CA 95965	Decking, chipping, loading, materials storage	Developed; accessible
3	20/20	14096 Lakeridge Circle, Magalia, CA (Werner, Inc. Tree Processing Site)	Decking, chipping, loading, materials storage	Developed; accessible
4	4/4	13665 Skyway, Magalia, CA 95954	Material storage	Developed; accessible
5	>10/10	West side of Lower Pentz Road across from Miocene Circle and Pentz Road; Paradise, CA 95965	TBD	Undeveloped; riparian habitat; lacks access
6	50/20	13186 Concow Road, Concow, CA 95965	Decking, chipping, loading, materials storage	Partially developed; accessible
7	>49/5	3825 Pentz Road Paradise, CA 95969	TBD	Undeveloped; riparian habitat; lacks access
8	59/35	Intersection of Skyway & Skyway Crossing, Paradise, CA 95969	Decking, chipping, loading, materials storage	Undeveloped
14*	~30/44	Daimler Rock Quarry, APN 041-120-115	Decking, chipping, loading, materials storage	Developed rock quarry

Notes:

TBD: to be determined

*Log Decks 9-13 have been eliminated

Processed logs would be transported via truck on established roads to end-use facilities in Butte, Lassen, Placer, Shasta, and Sierra counties. Seventy-five percent of the trees would be used for biomass, and the remaining 25 percent would be transported to alternative forest product manufacturing facilities (e.g., sawmills, landscape industry, wood products).

1.2.4 Base Camps

The proposed action may also include the establishment of base camps to house workers for the tree removal effort. This need has yet to be determined and no potential base camp locations have been identified.

Attachment B.2
DRAFT Tree Removal Operations Plan
(1/24/2020)

2018 Camp Fire Incident (DR-4407)
Tree Removal Operations Plan
State Hazard Tree Removal Program

Introduction

Thank you for your interest in the Camp Fire Tree Removal Operations Plan, which describes the State of California’s planned approach for combatting and resolving one of the most acute forest morality events in State history. The impact of the 2018 Camp Fire on the communities of Paradise and Butte County, the fire’s victims and survivors, and the natural environment within and around the burn scar cannot be overstated. This operations plan, which guides the State Hazard Tree Removal Program, describes one aspect of a significant local, State, and federal disaster recovery effort, which is expected to continue for several years and is among the largest the State has ever advanced. The State Hazard Tree Removal Program intends to confront the specific problem of dead and dying trees threatening thoroughfares and other public infrastructure by providing for their removal and sustainable reuse in a safe manner.

Scope of Work

Executive Summary

The 2018 Camp Fire was the deadliest and most destructive fire in California history, killing 85 individuals, destroying over 18,000 structures, and displacing thousands of residents. Additionally, the Camp Fire killed or significantly damaged several thousand trees throughout the burn scar, many of which may fall onto or otherwise threaten public and private thoroughfares or public improved property over the next five years. In response to the threat posed by these dead and dying trees, the California Governor's Office of Emergency Services (Cal OES) established a State Hazard Tree Removal Program (tree removal program) to identify, fell, remove, process, and sustainability dispose of these trees. Cal OES deployed an Incident Management Team (IMT) and mission tasked the California Department of Resource Recycling and Recovery (CalRecycle) to manage the tree removal program.

On November 13, 2018, the President declared the Camp Fire a major disaster and directed the Federal Emergency Management Agency (FEMA) to provide support for recovery efforts, including the removal of debris and hazardous trees through the Public Assistance program. The tree removal program is therefore based on FEMA Public Assistance program guidelines for debris removal on public and private property. To be eligible for removal, trees must meet the follow requirements:

- Trees must show damage from the Camp Fire.
- Trees must be greater than six inches in diameter at breast height (4.5 feet above ground).
- A Registered Professional Forester (RPF) or an ISA Certified Arborist holding a Tree Risk Assessment Qualification acting as the RPF's designee must conclude the tree is dead or likely to die within five years.
- The tree must be within the allowable distance from an eligible target (right of way or public improved property). Specifically, the distance between the tree and the eligible target can be at most twice the height of the trees (for example, a 100-foot tree could be no more than 200 feet from the target to be eligible).
- If the tree is located on private property, the property owner must have submitted a Right-of-Entry Permit to Butte County.

In order to understand the potential scope of the tree removal program, Cal OES mission tasked the California Department of Forestry and Fire Protection (CAL FIRE) to conduct a representative sample survey of 389 plots within the Camp Fire burn scar and estimate the number of trees that meet the criterion above. CAL FIRE's survey estimated that there are between 258,084 and 303,473 trees that could be eligible. The exact of number of trees to be removed by the tree removal program is highly contingent on the number of Right-of-Entry Permits submitted for private properties (in accordance with the fifth criterion listed above).

CAL FIRE also evaluated the height of potentially eligible trees to determine how wide of an operational footprint the tree removal program could have. The public road network is 255 miles long, and an additional 210 miles of private roads are also included in the tree removal program. This subtotal is 465 miles, that has been adjusted up to 515 miles. The tallest tree identified by CAL FIRE was 130 feet. Using the criteria identified in the fourth eligibility requirement above and a standard estimate for the public right of way width of 80 feet, the IMT established an operational footprint of 600 along all public roads (300 feet perpendicular from the centerline). Similarly, the IMT used the same tree height figure and a standard estimate for the width of private roads of 30 feet to establish an operational footprint of 550 feet along all private roads (225 feet perpendicular

from the centerline). Based on these calculations and accounting for duplicative overlapping, the IMT estimates the operational footprint to be approximately 34,790 acres. Note that this footprint estimates the maximum impact, but that impact may be significantly less in certain areas if private property owners do not submit Right-of-Entry Permits for the adjacent parcels. Attachment X, Operational Maps, illustrates this operational footprint.

The tree removal program will follow a standard order of work to identify, fell, remove, process, and sustainably dispose of eligible trees, as outlined below:

- 1. Tree Assessment:** An ISA Certified Arborist with a Tree Risk Assessment Qualification (TRAQ) overseen by a Registered Professional Forester will assess all potentially eligible trees. Trees that the arborist conclude are eligible will be marked with a distinctive paint and cataloged in an electronic database. As applicable and within the bounds of Public Assistance eligibility described above, the Registered Professional Forester and their designees will consider the slope of the ground between tree location and eligible target when determining if trees present a threat. A consulting firm hired by CalRecycle and overseen by the IMT will complete and manage these assessments. The assessment will also identify if a tree/parcel require additional assessment by the IMT's environmental unit. If the assessment team concludes an environmental review is warranted, biologists and other relevant experts will assess the tree, determine if it can be removed in compliance with applicable environmental laws and regulations, and prescribe the appropriate best management practices (BMPs) or avoidance and minimization measures (AMMs). Additionally, a Watercourse Lake Protection Zone (WLPZ) will be established and marked based on Forest Practice Rules, as described further in the Environmental Protection Plan. The IMT will also identify areas for environmental review based on existing datasets such as the California Natural Diversity Database and data collected during the structural debris removal operation previously conducted in the same general area.
- 2. Tree Felling:** A Licensed Timber Operator (LTO) hired by CalRecycle and overseen by the IMT will then fell the marked trees in accordance with logging industry best practices. The exact means and methods of felling trees will be at the discretion of the LTO and in accordance with the contract specifications including prescribed BMPs and AMMs. Methods will include manual felling through the use hand tools and hand-operated power tools, mechanical felling including the use of wheeled tractors, crawler-type tractors, or specially designed vehicles with attached implements designed to cut, crush/compact, or chop target vegetation, and the removal by crane. In some cases, the LTO may deploy temporary bridges or other means of crossing over streams and other bodies of water to safely access the eligible trees. In limited cases temporary access roads may also be established. LTOs will not remove stumps or any other vegetative material not connected to an eligible tree.
- 3. Tree Removal:** The LTO will then remove felled trees from the stump location and transport the trees either as whole logs to end use facilities or to temporary log storage and processing sites. Slash (limbs under 6" in diameter) may be chipped and spread on disturbed soil on site for erosion control. Removal will include use of heavy equipment to move felled trees from the origin.
- 4. Tree Processing:** LTOs will haul whole logs or process (chip) trees at temporary log storage and processing sites. The IMT will determine the locations for DMSs in cooperation with Butte County and applicable environmental partners based on zoning requirements, space availability, owner interest, and operational factors.. LTOs will lease and manage temporary log storage and processing sites based on production needs. The LTOs will employ appropriate BMPs and AMMs, including stormwater management practices. See Table XXX for a list of the pre-designated locations.
- 5. Sustainable Tree Disposal:** LTOs will dispose of at least 75% of felled trees (or tree material) at biomass energy facilities, and the remaining trees (or tree material) at other end use facilities.

Tree Removal Operations Plan

FOUO

State Hazard Tree Removal Program

The direction of material to biomass energy facilities is in accordance with the intent of Executive Order B-52-18, which recognizes the value of biomass energy to the State's sustainability goals. The IMT has evaluated and pre-approved these biomass energy and other end use facilities. LTOs will sign purchase agreements with biomass energy and other end use facilities from the approved list. The pre-designated list is shown in **Table XXX**.

After LTOs finish felling and removing trees from an area, an ISA Certified Arborist working under the designation of a Registered Professional Forester and a representative of the State Incident Management Team will determine if all work was completed satisfactorily and if any additional measures are needed, such as the application of erosion control material on disturbed soil areas. When the property is cleared of eligible hazardous trees and environmental commitments have been satisfied, the IMT will notify Butte County that the parcel is complete. The State Hazardous Tree Removal Program will conclude once all enrolled parcels (including the public right of way) and confirmed to be complete.

The following sections of this Tree Removal Operations Plan (TROP) describe the scope of work and operating environment in detail. This Operations Plan should be read in concert with the CalRecycle Tree Removal Management and Tree Removal contracts. Additionally, several key program documents, which describe specialized aspects of the program in greater detail, are attached to this Operations Plan. This Operations Plan was developed specifically and solely for the 2018 Camp Fire and should not be utilized for any other purpose beyond the 2018 Camp Fire State Hazard Tree Removal Program. This plan is reflective of the IMT's best understanding of the situation and objective, but should not be considered binding and some aspects may be inaccurate or irrelevant if the situation changes.

Stakeholders

The State Hazard Tree Removal Program is a State-led mission with collaboration from various other state, federal, and local agencies. Consultants and contractors also support several key aspects of the program.

Acronym	Agency	Role
Cal OES	California Governor's Office of Emergency Services	Lead state agency for all disaster recovery operations. Staff the incident management team (IMT) and provide strategic support from the Joint Field Office. Oversee Public Assistance eligibility as the grantee.
CalRecycle	California Department of Resources Recovery and Recycling	Lead state agency for all disaster debris removal. Staff the IMT. Manage all aspects of the Consultant and Tree Removal Contractor contracts including procurement.
FEMA	Federal Emergency Management Agency	Administer Public Assistance program. Provide technical monitoring to help ensure Public Assistance eligibility.
CMD	California Military Department	Provide military personnel (CA National Guard soldiers) to staff various field roles, including Division Supervisors and Group Supervisors. Provide other support as needed.

CAL FIRE	California Department of Forestry and Fire Protection	Lead state forestry agency. Staff support/advisory role on the IMT. Administer Forest Practices Act and assist with issuance of Timber Harvest Exemption.
Butte County	County of Butte	Lead local jurisdiction. Administer Right-of-Entry Permit (ROE) process.
TOP	Town of Paradise	Supporting local jurisdiction. Assist with administering the ROE process.
Caltrans	California Department of Transportation	Develop a traffic management assessment and assist in mitigating traffic impacts. Staff the IMT via mission task.
Cal EPA	California Environmental Protection Agency	TBD
CNRA	California Natural Resources Agency	TBD

Health and Safety

Safety of all personnel and the affected communities is the IMT’s highest priority. This section describes the Health and Safety Program. The Site Safety Plan, Attachment XXX, and Community Safety Plan, and Attachment XXX, provide greater detail on the IMT’s efforts to provide for the safety of all involved.

General Worker Safety

Employers performing tree removal are required to identify and evaluate the potential hazards, correct any unsafe or unhealthful conditions and provide training and instruction to employees per California Code of Regulations, Title 8, sections 6248 through 6402. Each work crew should be familiar with the [Logging and Sawmill Safety Orders](#) (8 CCR 6248-6402) or the [Tree Work, Maintenance or Removal Safety Orders](#) (8 CCR 3420-3428), depending on the specific task, and must perform a thorough inspection of the work zone to ensure conditions are safe from power lines, dangerous trees, and other hazards.

Potential hazards encountered during tree removal include, but are not limited to, the following:

Safety Hazards

- Driving hazards
- Electricity
- Equipment, such as chain saws and wood chippers
- Fall hazards
- Falling objects
- Flammable gases
- High angle slope work
- Insects and other wildlife
- Noise
- Sharp or flying objects
- Weather, including excessive heat and cold, lightning, rain, snow, and high winds

Health Hazards

- Heat and cold illness

Site personnel shall operate vehicles and equipment in a safe manner to ensure the safety of its employees and the public. Site personnel must pay special attention to operations around local roads and take the necessary precautions. Site personnel must note the number of power lines, structures and trees in or near the work zone, and underground utilities. For the safety of project personnel and the public, an exclusion zone will be set up around each site during removal activities.

It is critical each Task Force performs a daily safety meeting and a thorough pre-job walk. A designated truck spotter shall also be used for each load of tree material taken off site.

Health and Safety Plan

All personnel shall operate under a Site-Specific Health and Safety Plan (SSHP). CalRecycle's SSHP is included in Appendix XX. Each prime contractor and the environmental consultant shall submit an SSHP or site-specific Health and Safety Plan (HASP), developed by a safety professional, to the incident management team (IMT) for review. This plan will cover at a minimum the Cal/OSHA topics for [Tree Work Safety for Workers and Employers](#). This document can be found in Appendix XX.

Rope Access Work

Steep slopes may require the use of ropes and repel gear to assess and remove trees. If ropes are necessary for access, the Contractor will submit a Rope Access Plan per the California Code of Regulations, Title 8, Section 3270.1, [Use of Rope Access Equipment](#). The Contractor or Consultant shall establish, implement and maintain a written Code of Safe Practices for rope access work. The written plan shall include, but not be limited to the following elements:

- Methods of rope access and anchorage used by the employer.
- Employee selection criteria.
- Equipment selection and inspection criteria.
- Roles and responsibilities of rope access team members.
- Communication systems.
- Employee training program.
- Rescue and emergency protocol.
- Identification of any unique site hazards that may affect the safety of employees using rope access methods.
- Prevention of rolling debris.
- Structure and infrastructure protection.

This work plan, equipment, training, supplies, protection devices, and any other material deemed necessary by the IMT to implement this plan will be covered under a change order or time and material agreement.

Community Health and Safety

A Community Health and Safety Plan has been prepared by CalRecycle. All site activities will be conducted consistent with this community plan and with consideration to the surrounding community and all citizens affected by the Camp Incident. A copy of the Community Health and Safety Plan is included in *Appendix XX*.

Operational Area

The **Operational Area**¹ is defined as the zone where tree assessment and tree removal will occur alongside the road right of way, including a portion of adjacent property, up to a maximum of 600' from the road centerline. The Operational Area also includes the Temporary Log Storage and Processing Sites, which will be leased by the Licensed Timber Operators (LTOs) in order to sort, value, process and store logs and woody biomass.

The scope of work within the TROP is intended to narrow down the quantity of all trees to a subset of eligible, hazard trees that pose a threat to the safety of travelers on the road network within a linear Operations Area in order to ramp up and sustain large-scale tree removal operations in FY 2020/21. The Operational Area is generally described as the maximum extent of possible impact to the road network; in this regard, the TROP scope of work *does not* intend to remove all trees, along all roads. The Operational Area is intended to be wider than the road right of way in order to *reasonably assess* fire-damaged trees that threaten any part of the road right of way from within and outside of the roadside. Specifically, the TROP prioritizes the removal of trees that pose a threat to the operational use and maintenance of roads, as described below:

- I. **Public Roads** – Public roads are legally defined by recorded map, and include improved and unimproved land within a **public road right of way**.
 - a. Public roads within the Camp Fire burn area are owned and maintained by fee title or easement by the local government jurisdiction of Butte County, the Town of Paradise, or other public agency (such as the Paradise Irrigation District); public roads are intended for use as multi-modal transportation corridors for the mobility of people, goods and services. Public roads serve vehicles, pedestrians, bicycles and mass transit, service companies, such as mail and package delivery, waste-haulers, and emergency responders.
 - b. The *public road right of way* can be measured in length by use of a centerline. Perpendicular to the road centerline is right of way width, which varies between 20 -80'.
 - c. The public road right of way includes the pavement (“roadway”), and the improved or unimproved portion next to the pavement (“roadside”).
 - d. As the public road right of way is operated and maintained by the local jurisdiction, responsible charge of the pavement, sidewalks, bike paths, signage and striping, traffic signals, storm drain systems, and vegetation is generally delegated to the public works director or engineering services manager.

¹ Note that the majority of wildfire-damaged trees is outside of the Operational Area, and in undeveloped open space of Butte County, not considered eligible for removal under this effort.

- II. **Private Roads** – Private roads are legally defined by recorded easement, and include improved and unimproved land within a **private road right of way**.
 - a. Private roads within the Camp Fire burn area are owned and maintained as a road easement by private property owners, recorded and defined by title; or a Homeowner’s Association by Covenants, Conditions and Restrictions (CCRs).
 - b. The **private road right of way** can be measured in length by use of a centerline. Perpendicular to the road centerline is the right of way width.
 - c. The private road right of way includes the pavement (“roadway”).

In both scenarios, the Operational Area expands beyond the edge of the right-of-way (ROW) by 260’. This figure was determined based on (1) CAL FIRE’s assessment of trees in the area, which found an 130’ tree to be the tallest within the sample, and (2) the Public Assistance standard provided by FEMA, which concludes that a hazard tree’s impact zone is twice it’s height (130’ x 2 = 260’). For planning purposes, the widest ROW identified by Butte County, 80’, was used for all public roads, resulting in a 600’ wide operating area (300’ each side of centerline). For private roads, where a roadside distance is not generally defined, the 260’ impact zone was added to both sides of the expected road width of 30’, resulting in a 550 feet (225’ each side of centerline). Operating Map XXX illustrates this Operating Area. The calculations are shown graphically below.

Public Road Operational Area

Private Road Operational Area

Right-of-Entry Permit Process

Pursuant to Town of Paradise Urgency Ordinance 588 and Butte County Ordinance 4171, property owners must remove any tree that was fire damaged in the Camp Fire and is in the immediate danger of falling onto a public road and/or right-of-way or improved public property. Property owners may satisfy this requirement by removing trees themselves through the County-led Private Program or by submitting a Right-of-Entry Permit to join the State Hazard Tree Removal Program.

Right-of-Entry Permits (ROEs) allow the State and its contractors to enter private property to identify and remove hazard trees, among other activities. The ROE is included as Attachment XXX. ROEs are submitted to Butte County-managed ROE Centers, who collect, validate, and certify that ROEs are accurate. Butte County then submits the certified ROE to the State Incident Management Team. Timeframes for when ROEs may be accepted are set by the Town, County, and State Incident Management Team.

Methodology

The IMT will conduct all program operations in accordance with a uniform methodology for assessment, felling, removal, processing, and reuse. The methodology invokes a *reasonable assessment* of the Operational Area. The methodology employs registered and certified professionals who understand tree risk, including Registered Professional Foresters (RPF) and ISA-certified Arborists with Tree Risk Assessment Qualifications (TRAQ):

A reasonable assessment considers the following:

1. Natural conditions are subject to constant change.
2. Dead trees, limbs or branches should be expected to eventually fall due to the physics of gravity, decompose in place, or roll downhill possibly on or near the roadway or roadside.
3. Factors not included in the reasonable assessment are:
 - o the continuous decline of tree health beyond five years after catastrophic wildfire
 - o geotechnical shifts in natural gradients
 - o unstable embankment soils
 - o wet and dry annual weather variations
 - o unforeseen circumstances contribute to the potential for tree failure

Step 1: Field Assessment and Marking of Hazard Trees for Condition and Eligibility (Consultant)

- Consultant RPFs will manage work plans for their respective branches and deploy ISA Certified Arborists with a Tree Risk Assessment Qualification (TRAQ), and support team, to perform assessments on parcels within their branches.
- All trees within the Operational Area will be assessed. Assessments will be concluded when the assessment team confirms a tree is not eligible, or will capture all of the required data if the tree is eligible. See Attachment XXX for the survey to be used for data collection.
- Each Arborist will perform an **ISA Level 2 Tree Risk Assessment**. The results of this assessment, including the factors considered, should be captured in the Tree Risk Assessment form.
- The assessment team will capture specific data points for each tree evaluated/determined to be eligible:
 1. Assign a unique Tree ID# and begin cataloging tree characteristics in an electronic database
 2. Geolocate using GPS of each tree within the Operational Area
 3. Measure height
 4. Diameter at breast height (4.5') from ground plane
 5. Measure diameter
 6. Determine species
 7. Determine evidence of rapid decline and the probability of tree mortality within a five-year period
 8. Determine potential fall distance, using a projected spherical measurement around the base of the tree, with a radius of twice the natural height
- Eligible trees will be marked with paint in accordance with the tree marking protocol.
- If Arborist determines an environmental review is warranted, Arborist will contact biologists and other relevant experts to examine tree context to determine Best Management Practices (BMPs) or Avoidance and Mitigation Measures (AMMs) for logging operations
- This phase may also be referred to as *timber cruising*.

Step 2: Tree Felling (Licensed Timber Operator)

- A Licensed Timber Operator (LTO) operating in compliance with Forest Practice Law will conduct all tree felling operations.
- The LTO will receive work plan (via the Incident Action Plan and other dispatching tools) from the IMT to establish a daily work production plan for felling the marked trees in accordance with THP Exemption.
- LTOs will work with the Consultant and State Environmental Unit to identify any needed BMPs, AMMs, or other actions.
- The LTO will determine tree felling method, in coordination with the Contract requirements, including bid items and specifications. Prior to commencing felling, the LTO, Consultant Task Force Leader, and State Division Supervisor will walk the operating area and discuss the LTO's proposed approach for each tree (referred to as a pre-work walk).
- Methods of felling trees will include:
 1. Manual felling through the use hand tools and hand-operated power tools
 2. Mechanical felling including the use of wheeled tractors, crawler-type tractors, or specially designed vehicles with attached implements designed to cut, uproot, crush/compact, or chop target vegetation
 3. Use of crane
- In some cases, the LTO may need to deploy temporary bridges over streams and other bodies of water to safely access eligible trees.
- LTOs will not remove stumps or any other vegetative material not connected to a marked and eligible tree.

Step 3: Tree Removal from Original Site (LTO)

- LTOs may chip and spread slash, such as limbs, branches and tops less than 6" in diameter, and spread the wood chips on soils disturbed by logging operations, not to exceed a depth of 2", if needed for erosion control purposes.
- LTO will then remove felled trees from the original location and transport the trees either as whole logs directly to biomass facilities or other end use facilities, or to Temporary Log Storage and Processing Sites (processing sites) for additional sorting, valuation and processing.
- Removal of trees will include use of heavy equipment to move felled trees from the original location onto trucks, chipping slash, and the use of transport trucks and chip vans.
- All trucking and hauling costs related to tree felling, removal, processing and disposal/reuse are included in the Contractor's bid price at the time of bid award, no extra work or change order work is allowed for sorting, processing, trucking and hauling.

Step 4: Tree Sorting, Valuation and Processing (LTO)

- LTOs will secure leases to Temporary Log Storage and Processing Sites (processing sites) from property owners prior to use. LTOs will secure and manage the processing sites during all operational hours. LTOs will sort incoming whole logs by size, species, condition, value and/or end use agreements. See table below for a list of the approved Temporary Log Storage and Processing Site locations. Consultant Task Force Leaders will track all hauling trucks entering and exiting the facility and record the quantity of material in transit.
- A preliminary site review of approximately ten (10) Temporary Log Storage Sites was conducted in January 2020. Seven (7) sites were found to be suitable for use with minor grading, compaction, perimeter controls, erosion and sediment controls, fencing, security and on-site management. The Operations Chief will require the LTO/Contractor to submit a Temporary Log Storage and Processing Site Plan, which shall detail the lease terms, site uses, vehicular circulation, Fire Marshall inspection requirements, and appropriate environmental protection measures and permits, prior to mobilizing equipment onto the site.

See Table XXX for a list of all pre-designated processing sites.

Step 5: Sustainable Reuse at Biomass Plant or End-Use Facility (LTO)

- The redirection of hazard woody biomass to CPUC-authorized Biomass facilities is in accordance with the intent of Executive Order B-52-18 which recognizes the value of biomass energy to the State's sustainability goals. LTOs will make the final selection of biomass energy and other end use facilities from the Pre-Approved list.
- This TROP set targets for woody biomass delivery to CPUC authorized biomass facilities (at least 75% of monthly biomass) and End Use Facilities (remaining 25% of monthly biomass, or less).
- The State Hazard Tree Removal Program is a State program, and EO B-52-18 directs State agencies to dispose of excess forest biomass, including dead trees, to beneficial reuse projects such as biomass energy that would otherwise be left to decay in landfills or open burned.
- LTOs will haul, obtain weight tickets, track and report delivery of hazard trees to Operations Chief in volumetric loads. Daily summaries, monthly reports and quarterly reports of volumetric loads delivered to Pre-Approved facilities is required under the Contract.
- Finalize timber sales and fuel purchase agreements are to be finalized by the LTO. Timber taxes associated with commercialization will be paid to the relevant California tax authority by LTOs and are not reimbursable by the State Hazard Tree Removal Program.

See Table XXX for a list of all pre-designated end use facilities.

Operating Environment

The State Hazard Tree Removal Program operates within the wider context of a major disaster recovery mission, the natural environment, and the laws and regulations of the State of California to the extent they apply. This section describes the interface between the program and its operating environment.

Background

Acting Governor Newsom issued a State of Emergency Proclamation for Butte County on November 8, 2018. A Presidential Major Disaster Declaration followed on November 12, 2018, which included three wildfires that caused catastrophic damage to wildlands and communities in Butte County (Camp Fire), Los Angeles County (Hill Fire) and Ventura County (Woolsey Fire). The Governor's Office of Emergency Services (CalOES) serves as the lead state agency for Recovery Operations working under the authority of the Federal Emergency Management Agency (FEMA), and as directed by **FEMA-3409-EM-CA** and **FEMA-4407-DR-CA**. The Camp Fire led to the destruction of 13,983 single, multiple and mixed commercial residences, 528 commercial and 4,293 other buildings; over fifty thousand people were evacuated and 86 civilian fatalities are confirmed. The destruction in the wake of the Camp Fire created an enormous amount of structural debris, which was subsequently removed in the largest disaster debris removal mission in State history.

During the Camp Fire incident, the intensity of heat on drought-stressed trees fueled the wildfire, and in turn destroyed over one hundred and fifty years of native vegetation in the natural, forested landscape. What remains is ash and burned soils in the upper watershed, a fire-damaged ecosystem throughout the burn area, and several hundred-thousand dead and dying hazard trees

along roadways. The purpose and need of the State Hazard Tree Removal Program is to provide a systematic approach for the assessment, removal and sustainable reuse of *hazard trees* in the urban and non-urban forestlands along roadways in the Camp Fire burn perimeter.

Rights-of-Way

Right-of-Way is defined as “an easement; a privilege to pass over the land of another, whereby the holder of the easement acquires only a reasonable and usual enjoyment of the property, and the owner of the land retains the benefits and privileges of ownership consistent with the easement.”²

The local road system is typical of any County in California, with varying *road right of way* widths, consisting of both public and private roads. Roads permit motorized and non-motorized use, and are recorded and conveyed through fee title to the local government (public roads) or recorded as an easement across privately-owned land (private roads). A road right of way includes the road surface itself (pavement or alternative), other improvements (storm drain systems, curbs, sidewalks, and signage), and in most cases, natural vegetation providing scenic and environmental quality on the roadside.

Roadside Vegetation Management

The local, state and federal government own, maintain and operate roads and roadside vegetation.³ To a lesser degree, roads are also owned by private property owners, commercial property owners, utility companies, school districts, military bases, tribal nations, and non-government organizations. To the extent required by their existing responsibilities to protect road users, the US Department of Agriculture and the International Society of Arboriculture advise property owners to manage trees in the following ways, which also reduces the risk of unintentional injury as a result of tree failures:

1. Periodically inspect trees and vegetation during normal and post-emergency events
2. Take immediate action for unsafe conditions, such as notify local authorities and post warning signs, flagging or cones; and plan for corrective action
3. Assess and remove dead and dying, hazard trees that threaten roads and evacuation corridors, critical infrastructure and other existing structures

State and local governments employ field maintenance crews that are responsible for reviewing the road right of way, identifying hazards, and making conditions safer. One potential hazard is vegetation. Under normal conditions, trees close to the road can present a fixed object hazard. Maintenance activities also consider the height and health of roadside grasses, weeds, brush and tree limbs, which can obscure or limit a driver’s view, approaching vehicles, wildlife and pedestrians. In the post-fire condition, natural vegetation is under advanced functional stress, and trees impacted by wildfire can rapidly decline and become unstable.⁴ As a result of the Camp Fire incident, nearly 300,000 trees are estimated to be dead and dying along the road system (see CAL FIRE’s assessment of eligible hazard trees, dated October 2019).

Natural Environmental Conditions Affecting Tree Removal Operations

Tree Removal Operations Plan

State Hazard Tree Removal Program

FOUO

Post-Fire Tree Loss

The Camp Fire behavior was blizzard-like and intense, considered by most fire ecologists to be a stand-replacement wildfire, with small random pockets of trees untouched. Aerial photography indicated that the Town of Paradise lost 46% of its tree cover, and a majority of trees along roadways had < 40% or more of the crown length killed, likely to result in high probability of mortality in 1-5 years. Most of the trees along roadway are currently in a state of rapid decline, and more susceptible to failure, splitting or topping, with the potential to cause injury or damage to human life or road infrastructure.

A State of California Vegetative Debris Task Force, led by Cal OES, convened in March thru August 2019 to study the issue and develop solutions. The Task Force evaluated aerial photography, drone images and vegetation-related databases to estimate that tens of thousands of healthy stands of multi-age conifers and oaks had stopped growing and were likely to destabilize as a result of the wildfire. The work of this Task Force was later adopted into the State Hazard Tree Removal Program.

Tree Species Types

In December 2018, biologists and foresters on the State of California Camp Fire Watershed Emergency Response Team cataloged the pre-fire vegetation types and associated coverage within the burn area using the California Wildlife Habitat Relationship (CWHR) system, with fourteen (14) dominant types:

CWHR Type	Estimated Percentage	Combined
Sierran Mixed Conifer	5%	40%
Douglas-fir	5	
Montane Hardwood	5	
Valley Oak Woodland	5	
Montane Riparian	5	
Valley Foothill Riparian	5	
Montane Chaparral	5	
Urban	5	
Ponderosa Pine	10	60%
Montane Hardwood Conifer	10	
Blue Oak Woodland	10	
Blue Oak Foothill Pine	10	
Mixed Chaparral	10	
Annual Grassland	10	
Total	100%	

This diversity of vegetation types is characteristic of the Sierra Nevada Region in which the Camp Fire perimeter is located, due to variables such as elevation, slope, aspect, soil moisture and including past disturbance regimes from landslide and fire. The urban forest and native forests of Butte County included stands of Ponderosa Pine, Montane Hardwood Conifer, Blue Oak Woodland, Blue Oak Foothill Pine, Mixed Chaparral and Annual Grassland comprising approximately 60% of the representative vegetation types encountered and are relatively equally present. Sierran Mixed Conifer, Douglas-fir, Montane Hardwood, Valley Oak Woodland, Montane Riparian, Valley Foothill

Riparian, Montane Chaparral and Urban (grass lawns, ornamental trees) combined, represent the remaining 40% of the fire area.⁵

In early October 2019, the number of eligible hazard trees within the right of way of the public and private road system was estimated by CALFIRE staff to be as high as 303,473⁶. CALFIRE's assessment evaluated 1,547 fire-damaged trees on 389 randomized sample field plots, located 1.3 miles apart over approximately 475 miles of the public and private road system in Butte County and the Town of Paradise. This estimate counted and assessed individual hazard trees species, noting mixed conifers of Jeffrey Pine, Ponderosa Pine, Sugar Pine, White Fir, Douglas-fir, Incense Cedar, Gray Pine, Coast Redwood; and mixed oak woodlands of Black Oak, Interior Live Oak and Canyon Live Oak, in addition to California Bay Laurel.

Many species within the Camp Fire perimeter are representative of plants having fire tolerant or fire-dependent mechanisms. For example, seed that requires fire to sprout or oaks that re-sprout from the root collar. These species will likely re-sprout within a year, where present pre-fire, and begin to reclaim the landscape. Annual grasses for example are already noted to be sprouting in some areas where water was present in the soil. Other areas are noted within the fire perimeter however that experienced higher-severity heat and intense wind resulting in loss of some of the uppermost soil layer. Soils in the moderate to high burn severities were heated deeply enough to kill fine roots and likely destroyed many of the surface and some of the buried seed in these areas.

Topography, Rainfall and Climate Factors

Topography within the Camp Fire burn area ranges from gentle to very steep. Elevations range from about 200 feet above mean sea level along the western margin of the fire near CA State Highway 99 and the town of Durham to about 5,100 feet near Bear Ranch Ridge, east of CA State Highway 70 on the northeastern portion of the burn area.

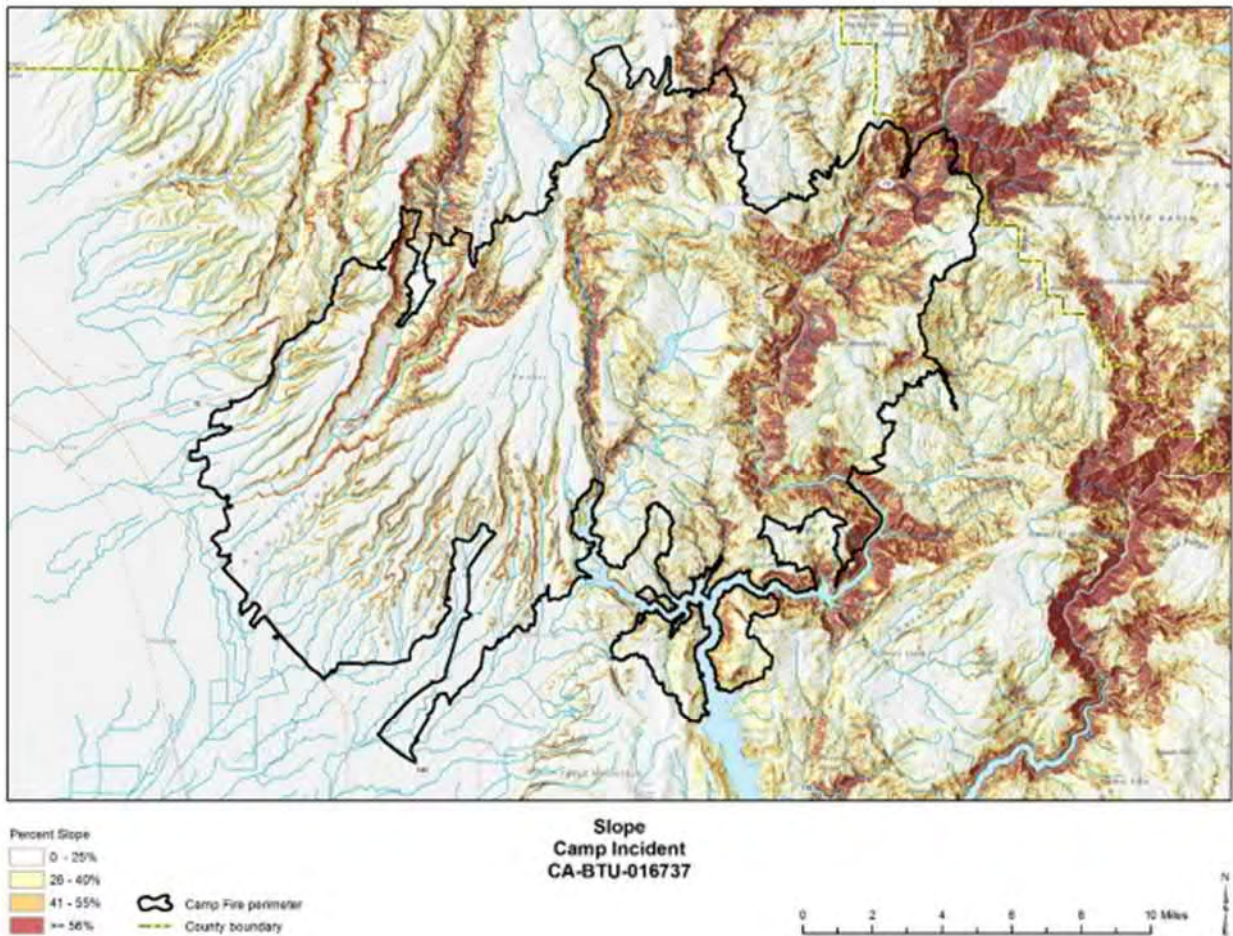

Slope

This slope maps shows the distribution of slope steepness classes in the burn area. The majority of the slopes within the burn area occupy broad, gentle- to moderate- sloping (0 to 40 percent) ridge tops that are flanked by steep to precipitous (>40 percent) slopes that descend to local creeks and rivers, including Little Chico Creek, Butte Creek and the Feather River. Logging operations on steep slopes adjacent to roads will be restricted by safe access from the existing road improvement; under no circumstances should temporary cut and fill slopes be constructed to widen the road or fill in natural or engineered drainage facilities. The burn area drains from northeast to southwest; the portion east of Paradise drains to the Feather River and Lake Oroville, and the western portion drains to Butte Creek, Little Chico Creek, and tributaries of Butte Valley (Dry Creek, and Clear Creek, and their tributaries).

Slope Map of the Camp Fire Burn Area

⁶ CAMP FIRE: The CAL FIRE Tree Inventory Sampling results as provided to CalOES October 18, 2019

Precipitation

Precipitation slows and stops logging operations as saturated soils increase safety risk. The Safety Plan provides the direction for allowable activities during precipitation events: fog, rain, sleet, ice and snow. Precipitation varies within the burn area primarily due to orographic effects. Average annual rainfall ranges from 25 inches per year in the lower elevations near the City of Chico to about 71 inches per year in the upper elevations east of the burn area. In the Town of Paradise, average annual rainfall is about 55 inches per year. The highest recorded annual precipitation in the town of Paradise is 100 inches in 1995 and the lowest recorded annual precipitation was 18.5 inches in 1976.⁷

The burn area has a typical Mediterranean climate with hot dry summers and cool wet winters. Precipitation occurs almost entirely as rain, with rare occurrences of snow in the lower elevations of the burn area and light annual winter snowfall accumulation in the high elevations. Only a small fraction of the burn area (0.2 percent) is within the rain-on-snow elevation range.⁸ Post-fire conditions are therefore not anticipated to result in significant rain-on-snow flooding effects.

Table XX below indicates expected available working days based on ???.

⁷ <https://wrcc.dri.edu/summary/Climsmnca.html>

Starting Working Month	Available Working Days	Number of Loss Work Days (Weather, etc.)
February-20	24	11
March-20	24	11
April-20	24	4
May-20	24	5
June-20	24	0
July-20	24	0
August-20	24	0
September-20	24	0
October-20	24	1
November-20	24	5

Reforestation and Conversion

Reforestation is not a part of the State Hazard Tree Removal Program, but is discussed here to inform the larger operating context. Post-fire damage to forest resources and natural ecosystems is extensive, and will slowly heal over the next five to ten years. Without proper inter-jurisdictional practices, conversion of the landscape in the fire-damaged watershed will be dominated by invasive weeds and species not typical to a planned reforestation effort and becomes a combustible fuel source. Conversion of the landscape is a concern to forest practitioners, who know that undertaking a 153,000 acre reforestation project requires an all-lands approach with agreement on common land management objectives and funding. A Camp Fire Reforestation Plan has not been developed, but may be a follow-up effort. The current focus has been on community recovery and infrastructure replacement, such as replacing permanent housing, utilities, and public services.

Environmental Protection

The State Hazard Tree Removal Program operates with a goal of environmental conservation, stewardship, and protection. Additionally, the program must comply with certain federal and state environmental laws and regulations. To accomplish these aims, the IMT took several actions:

- **Environmental Protection Plan:** The IMT, in collaboration with various stakeholders, developed an Environmental Protection Plan (EPP) to describe how it will protect the environment during operations and how it will meet applicable legal criteria. The EPP is Attachment XXX.
- **Environmental Unit:** The IMT established an Environmental Unit, staffed by environmental professionals from Cal OES and other state agencies and supported by monitors, biologists, scientists, and other experts from the Project Consultant.
- **Cultural Resources and Historic Preservation:** The IMT has also worked closely with FEMA Environmental and Historical Preservation (EHP) staff to ensure the IMT protects

cultural resources. Additionally, Attachment XXX, Tribal Monitoring Plan, identified how tribal resources will be engaged and protected.

Program Definitions

This section defines key terms used in this document, the attachments, or other program materials.

Arborist with TRAQ qualifications: Environmental science trained and degreed professionals, certified by the International Society of Arboriculture (ISA), or the America Society of Consulting Arborist (ASCA), with experience and training in assessing the health of hazard trees, who are also Tree Risk Assessment Qualified (TRAQ).

Consultant Agreement: The written agreement covering performance of the work and furnishing of labor, materials, tools, and equipment in providing the work. The Agreement shall include the RFP, Proposal, general and specific terms and conditions, Work Orders, and supplemental agreements which may be required to complete the work in a substantial and acceptable manner.

CalRecycle: The Department of Resources Recycling and Recovery in responsible charge as Contract Manager/Administrator of the Tree Removal Operations contracts with Contractors.

Chips: Synonyms = Wood Chips, Fuel Chips, Processed Biomass

Contract: A legally binding agreement between the state & another entity, public or private, for the provision of goods or services.

Contract Manager: A person designated by the responsible state agency or department to manage performance under a contract.

Contractor: A party contracting with the awarding agency.

Cut Trees: Synonyms = Whole Logs, Unprocessed Biomass

Final Site Tree Removal Reports: Summarizes the pre-tree removal and post-tree removal conditions, including; the initial and final assessments, a copy of site's ROE, a summary of the trees removed from the property, the type of erosion control best management practices conducted on the property (post-tree removal operation, if deemed necessary by the RPF) and an indication of any unique or unexpected circumstances that occurred during the tree removal operations. Each report shall include pictures from both pre- and post-tree removal operations.

Hazard Tree: (FEMA) A tree is considered a hazard tree if "its condition was caused by the disaster; it is an immediate threat to lives, public health and safety, or improved property; it has a diameter at 4.5 feet above ground level of six inches or greater; and one or more of the following criteria: it has more than 50% of its crown damaged or destroyed, or it is a split trunk, broken branches or exposed heartwood, or it is leaning at an angle greater than 30 degrees." *For additional details on the definition of Hazard Tree, also reference CalFire Tree Notes No. 33 for, "Survival of Fire-Injured Conifers in California", Owen, Cluck, Smith, (April, 2015).*

FAQs: For the purposes of Hazard Tree removal on Private Property, a Hazard Tree is a tree on private property that is so severely damaged by the Camp Fire that its structural integrity is

compromised and it poses an imminent danger of falling onto a public right-of-way or other public improved property. For these purposes, “imminent danger” means within five years.

Hazard Tree Assessment: Shall consist of evaluating all the trees, sitting on private properties and within 200 feet of rights-of-way on either side of all public roads’ centerlines. This Assessment will be conducted in the Town of Paradise and within Butte County along public roadways within the Camp fire burn scar footprint. The surveyors will assign a tree ID number, then evaluate, mark, map and tally each tree, as well as collect tree criteria to ensure eligibility and environmental compliance. Criteria collected will be the tree’s location according to the Butte County Tax Assessor’s Parcel Number (APN), height, **diameter, species, parcel owner name, address, and tree hazard notes.**

Incidental Material: Materials generated during the Program’s activities, including incidental foliage, slash, tree branches, or limbs, and chipped or mulched vegetative material

Immediate Threat: Per the PAPPG (as related to the Program), a hazard tree that has the potential to fall due to fire damage or structural defect within five years from the start of an incident (i.e., the Camp Fire, November 8, 2018) and strike a target of value.

Log Decks = Locations where trees are processed or whole logs are stacked prior to transport. Synonyms = Temporary Log Storage Locations, Lay Down Yards, Decking Locations.

Materials Receiving Facilities: Synonyms = End Use Facilities, Wood End Use Facilities.

Private Hazard Tree Removal Program: The Private Hazard Tree Removal Program is an alternative to the Government Hazard Tree Removal Program that allows the property owner the option to identify and remove Hazard Trees on their property at their own cost.

Project Manager: The Project Manager is the Contractor’s representative. All official correspondence, reports, submittals, billings, and other work performed under contract shall be reviewed and signed by the Project Manager prior to submittal to CalRecycle.

RPF: (Registered Professional Forester) An RPF is defined in the 2020 California Forest Practice Rules and pursuant to Article 3, Chapter 2, Division 1 of the Public Resources Code.

Scope of Work: The description of work required of a contractor by the awarding agency.

Slash: Tops and limbs of trees that are created from tree felling. Slash is typically located in a pile, as trees are trimmed for felling. Slash piles are either burned or chipped and spread on the site where the original tree was removed to prevent erosion and provide soil cover.

State: The State of California.

State Hazard Tree Removal Program: The State Hazard Tree Removal Program is a new, separate phase of Recovery that follows the Consolidated Debris Removal Program. This effort ensures the public road transportation corridors have a reduction in hazard trees to provide a safe environment for the traveling public during normal, day-to-day travel and emergency situations.

State Contract Law: The Public Contract Code and other applicable laws that form and constitute a part of the provisions of this Agreement to the same extent as if set forth herein in full.

Subcontractor: A person or entity which contracts with the Contractor to perform all or a portion of the work as specified in the Scope of Work.

Tree Removal Oversight: Includes, but not limited to, documenting the cutting and removal of RPF designated hazard trees, located on properties that are eligible for tree removal as determined by the IMT and private properties that could fall on public rights of way or public facilities, as determined by the RPF and addressed in the Timber Harvest Plan/Conversion Exemptions.

Timber Harvest Plan Exemptions (THP) – Defined in Chapter 4 (Forest Practices), Division 1.5 (Department of Forestry and Fire Protection), Title 14 (Natural Resources), California Code of Regulations (CCR).

Vegetative Debris: A term that originates in the FEMA Program Assistance Program and Policy Guide (PAPPG, 2018), and is defined as consisting of whole trees, tree stumps, tree branches, tree trunks, and other leafy material. Target of Value: Associated with potential of a hazard tree to pose an “Immediate Threat” to the public right-of-way (ROW) or public- improved property.

Attachments

The following attachments are part of the Tree Removal Operations Plan and address specific aspects of the program:

- Operational Maps: Top level maps of the Operational Area and other key figures. These maps should be viewed alongside live/current GIS products produced by the IMT Planning Section.
- State Site Safety and Health Plan: This plan provides safety standards for all State personnel (including California National Guard soldiers) assigned to the program.
- Community Safety Plan: This plan details how community safety will be protected during operations.
- Traffic Management Assessment: Prepared by Caltrans with input from all impacted local jurisdiction, this assessment guides how the IMT will conduct hauling/trucking.
- Environmental Protection Plan: This comprehensive document details how the IMT will protect the environment and comply with all relevant environmental laws.
- Tribal Monitoring Plan: This plan details how Tribal Monitors will be deployed and the scope of their monitoring.
- FEMA Technical Monitoring Plan: Prepared by FEMA with input from the IMT, this plan details how FEMA will conduct technical monitoring and how monitoring observations will be addressed/disputes resolved.
- FEMA/Cal OES Letters: Letters from the Federal Coordinating Officer (FCO) and State Coordinating Officer (SCO) define what actions will be eligible for Public Assistance funding.
- Right-of-Entry Permit: Property owners and the local jurisdiction must submit a Right-of-Entry Permit prior to program activities commencing. An unsigned example is included herein.
- Data Collection Surveys: State, Federal, and Consultant monitors will use these surveys to capture program data at each step/milestone.
- ISA Tree Risk Assessment, Level II: This criteria details how program Arborists will evaluate trees.

1.0 Introduction

This Environmental Protection Plan (EPP) was developed to supplement the Tree Removal Operations Plan (TROP) to address the hazards associated with removing wildfire-impacted trees in the Camp Fire Burn Scar Area (Project Area) in Butte County (County) on non-federal land. These documents were prepared to support the Hazard Tree Removal Program (Program) developed between the Federal Emergency Management Agency (FEMA) and the California Governor's Office of Emergency Services (Cal OES) to remove approximately 300,000 fire-impacted trees. The November 8, 2018 Camp Fire incident is a federal- and state-declared disaster, respectively, DR-4407 and the Governor's Executive Order (EO) B-17-18 (Exhibit 1) for which each emergency service organization has responsibility to ensure that delivery of disaster response and recovery activities are compliant with applicable federal and state environmental laws.

There are several terms for wildfire-impacted trees and are cited below with source information for reference:

- "Vegetative Debris" is a term that originates in the FEMA Public Assistance Program and Policy Guide (PAPPG, 2018), and is defined as consisting of whole trees, tree stumps, tree branches, tree trunks, and other leafy material.
- "Immediate Threat" per the PAPPG (as related to the Program) is a hazard tree that has the potential to fall due to fire damage or structural defect within five years from the start of an incident (i.e., the Camp Fire, November 8, 2018) and strike a target of value.
- "Target of Value" for the Program is associated with potential of a hazard tree to pose an "Immediate Threat" to the public right-of-way (ROW) or public-improved property.
- "Hazard Tree(s)" is a term that originates in the U.S. Forest Service (USFS) Pacific Southwest Region Field Guide for Hazard-Tree Identification and Mitigation on Developed Sites (USFS, 2014) and refers to "vegetative debris", tree or tree part that has some level of failure potential within striking distance of a permanent or transitory "Target of Value."

Cal OES is the lead emergency response agency and coordinates with FEMA to deliver disaster response and recovery support in the County. As necessary, Cal OES will engage support resources from the California Environmental Protection Agency (Cal EPA, e.g., Cal Recycle, State and Regional Water Boards, etc.) and the California Natural Resources Agency (CNRA, e.g., California Department of Fish and Wildlife (CDFW)) to fulfill its responsibilities in compliance with state laws. Similarly, FEMA may engage the support of the U.S. Army Corps of Engineers (USACE), National Marine Fisheries Service (NMFS), and U.S. Fish and Wildlife Service (USFWS) to support disaster recovery activities in compliance with federal regulations. This EPP is a basis for obtaining environmental clearances (e.g., waivers, permits, permit exemptions,

avoidance and minimization measures) and managing compliance requirements to enable Program implementation.

2.0 Environmental Protection Plan Objective

The purpose of this Environmental Protection Plan (EPP) is to summarize a process to promote compliance with applicable federal, state, and local environmental and cultural resources laws and regulations for the Program. Proposed operational guidelines are identified herein to ensure that the Program Statement of Work (Section 3.0, SOW – the Cal Recycle Assessment and Monitoring/ Tree Removal contractors’ accepted Scope of Work) addresses:

- Applicable federal, state, local environmental laws/regulations (Table 1),
- Operational support areas (i.e., Table 2, Potential Log Deck, Tree Sorting and Processing Sites) for which permits may be required from local agencies (e.g., Exhibit 2, Butte County Temporary Log Storage Yard Ordinance), and
- Program Best Management Practices (BMPs) and Avoidance and Minimization Measures (AMMs) contained in Exhibit 3, Proposed Environmental Compliance Plan (ECP) and ECP Exhibit 1, Environmental Trigger Matrix. Note that Exhibit 3 will be superseded by state and federal resource agency environmental clearances and/or guidance during the course of Program implementation.

In Section 4.0, Environmental Compliance Framework, there is a description of applicable federal, state and local regulations and description of how they may be integrated with the Governor’s EO B-57-18 that allows certain State statutes, rules, regulations and requirements to be suspended and substituted with “Waivers” issued by the Secretaries of Cal EPA and CNRA upon approval of an EPP. The Governor’s EO does not apply to applicable federal laws for which FEMA is the lead federal agency for presidentially declared disasters such as the Camp Fire DR-4407.

The approach to sorting out the necessary and applicable regulations is contained in Section 5.0, Environmental Protection Plan. The importance of determining the applicable federal, state and local environmental laws and regulations cannot be overstated. This is because non-compliance with applicable environmental laws and regulations may result in de-obligation of federal and state Public Assistance Grant funding.

In addition, this document contains a Training section (Section 6.0) for the staff and contractors comprising the Incident Command Structure (ICS) to learn their responsibilities to:

- Promote activities to be compliant with environmental regulations,
- Communicate within the chain of command, and

- Document Program implementation activities to comply with applicable environmental regulations and FEMA requirements.

3.0 Program Statement of Work

The Program SOW is contained in the Tree Removal Operations Plan (TROP) incorporated herein by reference. The number of Program-eligible trees addressed in the Hazard Tree Removal Program (HTRP) is contingent on the number of Rights-of-Entry (ROEs) received by the County for privately owned eligible required parcels located along public rights of way (ROW) and certain private roads. The required eligible parcels are within the following five Program Operational Area Branches (five branches) illustrated in Figure 1.0: Concow, East and West Paradise, Lower Butte Creek, and Magalia. Nine map quadrants representing the Project Area are depicted in Figure 1.1 in which relevant environmental Program data are contained and described in this document and include: Stirling City, Paradise West, Paradise East, Pulga, Chico, Hamlin Canyon, Cherokee, Berry Creek, and Shippee.

The Program Operational Areas along publicly- and privately- maintained ROWs, respectively, are up to 300 feet (Public) and 225 feet (Private) perpendicular from either side of the centerline. These areas on either side of an eligible ROW centerline will serve as buffer areas during the performance of tree removal activities. Hazardous trees are eligible if they are at the distance from within the ROW, as equal to two times the trees height. CalFire has identified the tallest tree in the burn area as 130 feet. This baseline takes into account, the road and edge of ROW from centerline being 40 feet (80 feet total) and all dead, or dying trees taken, within a maximum of 260 feet.

The maximum number of trees anticipated to become part of the Program is between 258,084 and 303,473 as established by an inventory completed by CAL FIRE in 2019. To date, approximately 20 percent, or 3,000, of about 13,500 eligible property owners have submitted ROEs in the Program [nos. need to be verified]. More ROEs are expected during the HTRP implementation and will be addressed at that time. The Program-eligible Required Parcels and Roads are in illustrated in Figures 2.1- 2.9 by Map Quadrant and Operational Area Branch. Please note that there are long stretches of eligible roads that have no required parcels adjacent to them. Surveying these areas in advance of the Program is necessary to determine presence or absence of a required hazard-tree abatement.

3.1. Environmental Work Scope

Although there was an environmental work scope for the 2019 Camp Fire Debris Removal Operation Program (DROP) Private Property Debris Removal (PPDR)

program), the HTRP SOW activities will require additional federal, state, and local environmental agency consultations and/or permits in advance of Program implementation. This is because the AMMs and/or BMPs need to be reviewed for applicability by either the federal and state resource agencies and tailored for the new SOW tasks identified below:

- Hazard Tree and Environmental Assessment and Monitoring,
- Hazard Tree Harvesting (e.g., felling, extraction and transfer to log deck),
- Hazard Tree Processing (e.g., de-barking and chipping),
- Hazard Tree Transportation to End Use Facilities, and
- Operation Team Basecamp Housing.

Prior to these activities occurring within or proximate to the five branches, the environmental compliance requirements will be identified to address the following potential impacts:

- Federal and/or State protected species' habitat or occurrences,
- Surface waters,
- Standing structures (existing residences and commercial buildings or those in construction),
- Infrastructure improvements (i.e., utilities),
- Local and/or regional transportation routes, and
- Historical, archaeological, and tribal cultural resources.

Figures 3.1-3.9 illustrate by Map Quadrant and Operational Area Branch the hazard trees to be removed within the Town of Paradise(Town) and unincorporated communities in the County within the five Operational Area Branches. The hazard trees include the 10,500 trees within the Town, and County trees that were inventoried initially as "Category 1 Trees" to be considered for the Program. In addition, 263 hazard trees that were inventoried as "Category 1 Trees" by the Paradise Irrigation District and the Town Recreation and Park District are illustrated as well. Note that the highest concentrations of hazard trees occur within incorporated and unincorporated communities.

3.1.1 Hazard Tree and Environmental Assessment and Monitoring Program

The baseline tree and environmental data will need to be updated or validated by the Cal Recycle Hazard Tree and Environmental Assessment and Monitoring Program, which will commence in March 2020. In addition, the physical environmental constraints such as topographic contours, wetlands and stream classes illustrated in Figures 4.1-4.9 will also need to be validated by Cal Recycle and its contractors prior to Program initiation. The Concow, East and West Paradise, Lower Butte and Magalia operational branches have stream crossings

that may require bridge and/or culvert upgrades prior to work commencing. The greatest number of stream crossings appear to be concentrated in the East and West Paradise Branches.

Based on the Cal Recycle Request for Proposal (RFP) dated November 15, 2019 the Assessment and Monitoring surveys of the program eligible trees will be conducted in advance of tree felling; and will take up to 9 months, or more, during which eligible owners will continue to submit ROEs, or the county posting a Notice to Abate and submitting the property into the Program. An additional two months for post-removal documentation may be needed, as noted below [this will need to be updated].

- Anticipated start: March 16, 2020,
- Anticipated completion date (Survey): continuous through the Program; individual ROE data are expected to be returned to the Cal OES and FEMA Environmental Team on a daily basis,
- Anticipated release of Information for Bid (IFB) for tree removal: March 16, 2020
- Anticipated start date (Tree Removal): April 30, 2020,
- Anticipated completion date (Tree Removal): 270 working days (January 30, 2020), and
- Post-removal documentation anticipated start date: January 30, 2020.

The anticipated start of Tree Removal is dependent on the Information for Bid (IFB) to be issued by Cal Recycle in March 2020, subsequent review of bids, and contractor selection in late March 2020. Ideally, the Assessment and Monitoring work will commence and live data will be integrated into the HTRP and EPP in advance of the IFB Scope of Work being released in March 2020. The Cal OES and FEMA Environmental Team will use the process below to categorize eligible properties until information from the Assessment and Monitoring task are submitted for review and evaluation. Because trees within the Town and County ROWs were inventoried in 2019, it is expected that those sets of trees will be among the first to be subject of the Assessment and Monitoring activities.

3.1.2 Eligible ROE Environmental Review Process

Figures 5.1-5.9 illustrate baseline environmental data for the Operational Branches from the California Natural Diversity Database (CNDDDB), Critical Habitat, and 2019 DROP observations. Please note from these figures that the eligible required parcels, almost without exception, are proximate to special status species and their habitats.

Without the data generated from the Assessment and Monitoring work to validate, or update the baseline data (to be provided by Cal Recycle), all eligible required parcels will be considered to need Environmental Assessment, or have work restricted. This will be in order to check if these areas are inhabited with state and/or federally listed species, habitats, watercourse, and tribal and/or archaeological resources. This assumption is because the Program area is in the process of recovering from the Camp Fire and the periods of late winter through summer are the most active for aquatic and terrestrial species. Therefore, until the baseline environmental data are validated with current surveys, the required parcels will be categorized in one of the following two Environmental Constraint Zones:

1. Yellow Zone, Properties that are suspected to be either habitat and/or inhabited by state and/or federally listed species and/or archeological or cultural resources.
2. Red Zone, Properties that are known to be either habitat and/or inhabited by state and/or federally listed species and/or archeological or cultural resources.

The application of the two Environmental Constraint Zones are illustrated in Figures 6.1-6.9 and summarized in Table 3.

The updated data from Cal Recycle Assessment and Monitoring activities will be the basis for the Cal OES and FEMA Environmental Team reclassifying ROE sites among the following three Environmental Constraint Zones (e.g., from red to yellow or to green zone) prior to the start of the hazard tree harvesting activities. It is assumed that the necessary local, state, and federal environmental clearances will be obtained in advance of the Program commencing.

However, the BMPs and AMMs as summarized in the ECP (Exhibit 3) are considered conservative Program guidance standards for planning purposes and may be updated and revised upon receipt of the 2020 Cal Recycle Assessment and Monitoring surveys and/or superseded by state and federal resource agency environmental clearances.

1. Green Zone, ROEs with minimal environmental constraints that will be confirmed by a CDFW/USFWS-qualified on-site environmental monitor, an archaeologist and/or tribal monitor that will report back to the Cal OES and FEMA Environmental Team for approval to proceed with tree harvest activities, in accordance with, respectively, local, state, and/or federal agency permits, waiver BMPs, or AMMs;
2. Yellow Zone, ROEs with moderate environmental constraints that will be confirmed by an CDFW/USFWS-qualified on-site environmental monitor, an archaeologist, and/or tribal monitor that will report back to the Cal OES and FEMA Environmental Team for approval to proceed with tree harvest

activities, in accordance with local, state, and/or federal agency, respectively, permits, waiver BMPs, or AMMs; and

3. Red Zone, ROEs for which work is restricted to protect seasonal species and habitat. Environmental conditions will be confirmed by a qualified on-site environmental monitor and/or tribal monitor that will report to the Cal OES and FEMA Environmental Team for approval to proceed with tree harvest activities, in accordance with local, state, and/or federal agency, respectively, permits, waiver BMPs, or AMMs.

DRAFT

3.1.2 Hazard Tree Harvesting

The process of timber harvesting is comprised five tasks:

1. Timber acquisition (e.g., moving and staging equipment to the tree),
2. Felling and tree preparation for extraction (e.g., delimiting, topping, and bucking),
3. Extracting the tree to a log deck, or landing (e.g., skidding or forwarding),
4. Processing (e.g., chipping or loading it onto a log truck), and
5. Transporting processed tree to an end use facility.

“Light-on-the land” harvesting techniques that are expected to be used to protect the Operational Area’s environmental characteristics:

- Combine and integrate management activities to reduce traffic;
- Avoid unnecessary site re-entry;
- Operate on snow or when soils are frozen or dry;
- Avoid rutting within the site and hydrologic impacts from roads and skid trails;
- Divert water from roads, skid trails (if developed), and landings;
- Infrastructure (roads, skid trails (if developed), and landings);
 - Minimize within the harvest site,
 - Share between harvest sites,
 - Use designated roads or skid trails (if developed);
- Operate equipment and machinery along the contours, rather than up and down slopes;
- Store lubricants and fuels in appropriate (e.g., approved, labeled) containers that are located away from water; and
- Incorporate and administer appropriate environmental regulations in the HTRP.

3.1.2.1. Timber Acquisition

Timber acquisition is the process of moving and staging equipment to the target tree(s) for removal. The Operational Area for Program-eligible publicly maintained and privately maintained ROWs, respectively, is 300 feet and 225 feet perpendicular from either side of the centerline [needs confirmation from the eligibility letter, HTRP or PA]. It is expected that moving and staging equipment will use the public and private ROWs for which encroachment permits will be obtained in accordance with Town and County requirements (Exhibits 4 and 5). Construction of temporary access roads may be necessary to acquire trees located either up- or down-slope from the Operational area as identified in the TROP. Options for accomplishing tree acquisition include driving, swinging equipment to the tree(s) and can include rubber or tracked tree-harvesting equipment.

Although construction of new temporary, new/improved permanent roads, or temporary/permanent water course crossings, are neither planned nor expected to

be needed to access the eligible hazardous trees, there may be need of developing temporary roads to access hazard trees on a limited basis on non-federal lands. Those areas will be identified in the Cal Recycle Assessment and Monitoring activities in advance of the Program. However, if new/improved roads, or temporary/permanent water course crossings, grading or other ground disturbing activities are needed to support timber acquisition activities, these will be performed in accordance with the ECP (Exhibit 3).

New temporary, new/improved or permanent roads, or temporary/permanent water course crossings, may include the following:

Roads

- Skid trails: including removal of vegetative brush from a location to provide access for tree removal equipment. This would be accomplished by moving brush to the side for an access path for personnel and equipment.
- Spur roads: Use of equipment to grade and grub the ground. Placement of a temporary gravel access. Placing aggregate base rock either on top of existing, over a cleared pathway (above), over geotextile filter fabric.
 - Access could be expanded and extended to provide access for temporary bridges. An increase is needed on the amount of materials and types to make these improvements.
- Road improvements: The grading of road and drainage ditches, compaction, and use of rock to improve and harden an existing road, which has been deemed impassable, due to heavy rutting, road washout, or other issue. Road building standards will follow Forest Practice Law.

Crossings

Temporary Bridges

A temporary bridge is used when either access is not available or the existing access is not adequate. Bridges are rented by the contractor and arrive on site for installation. Size and length are specified by the span and the anticipated loading needed. Approaches are needed for travel onto and off the bridge. Temporary abutments may be needed to support the bridge over the span. It can also be used as the termination point for the approach. A common example is a row of concrete blocks can be used to support the bridge, the block is also used as a barrier for the compacted approach to end.

Culverts

Culvert can be used for water crossings where the installation of a bridge is not feasible and the impact to fish and other aquatic is minimal. Culverts are appropriately used for access across drainage ditches, intermittent streams and small waterways. Most of the existing culverts encountered in this project will be existing in various states of use. Some will be in good condition with the ability to carry the intended flow while the capacity of others will be impacted by blockages from lack of maintenance.

Lastly, temporary culverts may be needed to allow for access. Placement and materials for temporary culverts will be supervised to ensure environmental conditions are understood and met by the contractors. An example of this would be a culvert needed to provide temporary vehicle access across a small waterway. The culvert would be placed and backfilled with cleaned washed rock, then a layer of geotextile filter fabric would be placed to separate the washed rock from the aggregate base. Additional aggregate base would be added and compacted to create a stable surface for equipment. The materials would be removed after the need for access is completed; or before a 100-year storm event.

Low Water Crossings

Low water crossings are a useful alternative when a bridge is uneconomical. These may have limited application during storm events. Some of the roads within the project area have existing low water crossings. These vary from a minimally approved ford crossing a stream to concrete aprons crossing the stream with the water flowing over. Vented fords use pipes (culverts) under the crossing to allow low flows to pass through. Boxed culverts are one of the best alternatives, allowing a natural stream bottom for channel function.

Low water crossing need maintenance to maintain function. Contractors may place metal plates over the concrete to better distribute the loading for equipment. Sediments and vegetative debris may also have to be cleared out. Build up occurs over time and can impact the functioning of the vents.

3.1.2.2 Hazard Tree Felling

Felling is the process of cutting standing trees and may include the following activities: felling, limbing, topping, and bucking into individual products. Felling will be undertaken in accordance with federal and state Occupational Health and Safety Administration (OSHA) standards, which require that a separation of 200 feet between adjacent felling activities.

Of the three types of harvesting systems, shortwood, tree-length, and full tree, only the first two are expected because of the degraded condition of the hazard trees. Therefore, the methods of felling to be used for the Program include:

- Hand-crews (e.g., "no bunching," using qualified loggers/sawyers, working

- on gentle slopes, all sizes of trees),
- Feller-bunchers (e.g., a motorized vehicle that grabs each tree with a grapppler, cuts at base, shreds branches resulting in a log that is ready for loading in a log deck),
 - Masticators (e.g., rubber-tire only, reach from the road, focusing on steep slopes with a long-arm and use a grinder end, chip small trees from top to bottom), and
 - Grapple-saws (e.g., a remote-controlled knuckle crane with reach of up to 150 feet that may be stationary with use of freeboard legs. Cuts trees from the top-down and can directly load cut sections onto logging trucks).

Cable logging is a technique that may also be used, only as necessary, for tree extraction from steep slopes. As noted in the TROP, Rope Access Work will be allowed per California Code of Regulations, Title 8, Section 3270.1.

Because there is potential for ground to be disturbed during the felling operations, especially with hand-crews and masticators, on-site monitoring for archaeological and cultural resources will be required, as specified in the ECP. Wood chips may remain in place upon advance written authorization to do so from CAL FIRE.

3.1.2.3 Tree Extraction

The method of tree extraction may require use of either:

- Boom-loading log truck (short logs), or
- Loader (e.g., skid steers, loaders with grapples, excavators with grapples).

The log trucks are expected to be 32 feet in length and will transport the felled trees to a central landing or log deck along public roadways as described in the Tree Removal Traffic Management Assessment.

It may be necessary to upgrade, or more likely protect existing bridges with plates, or other means to carry the weight of the felled timber to a central landing or log deck for which local, state, and federal permits may be required as noted in Table 1. In addition, because there is potential for there to be ground disturbance during the Tree Extraction, on-site monitoring for archaeological and cultural resources will be required, as specified in the ECP.

3.1.3 Hazard Tree Processing

The trees will be sorted for processing as either timber for forest products or biomass chips for off-site energy facilities. The timber will be transported using standard log trucks (e.g., with turkey racks).

The biomass chips will be produced at the log deck sites using either a horizontal or a vertical tub grinder in accordance with the required size and moisture specifications of one of the three energy end use facilities. The chips will be transported to the energy end use facilities using the following equipment:

- Ten-wheelers (chipped materials),
- End Dumps (chipped materials), and
- Roll-off boxes (chipped materials).

It is possible that due to the degraded condition of the trees that chipping the trees may need to occur on individual properties using chip vans (with either a walking bottom or end dump capacity) for which either the Town or County may require a conditional use permit for the temporary industrial land use.

3.1.3.1 Processing at Log Deck Sites

Table 2 summarizes the 13 potential log deck, timber sorting, and processing sites within the five HTRP operational branches; one is publicly owned and 12 are privately owned. All of the sites are illustrated in Figure 7.0.

Cal OES and FEMA evaluated potential sites 1 through 10 for environmental constraints on January 15, 2020. The initial Environmental Constraint Zone criteria were applied to these sites; the first eight sites were determined to be in the Yellow Zone, and facilities (Nos. 9 and 10) were determined to be Red Zone and eliminated from further consideration because they are within designated Critical Habitat for the federally listed vernal pool tadpole shrimp. The County Temporary Log Storage Yard Ordinance (Exhibit 2) explicitly prohibits development of such land for temporary log decks.

Potential site nos. 11 through 13 were added on February 20, 2020 for consideration for which the County has identified the Paradise Airport, no. 11, as unsuitable for potential log deck use. This is because the parcel has an "AIR zone" land use designation and the log deck usage is prohibited within this zone, as specified in the County's Zoning Ordinance (Chapter 24 of the Butte County Code). Site No. 12 has an unassessed surface water that may need to be evaluated for Waters of the U.S prior to development. Site No. 13 is adjacent to Site 12; both are designated as "Yellow Zone" properties that would need further environmental assessment to determine whether their development would be allowed in accordance with the County Temporary Log Storage Yard Ordinance. Site No. 14 was added February 28, 2020 as a possible site, in an active rock quarry, with an assessed Waters of the US determination, 404 permits, biological assessment, CEQA documentation, and a County Urgency determination for the Camp Fire as a lay down yard. In the area are vernal pools, including vernal pool tadpole shrimp critical habitat; and Little Dry Creek in the vicinity.

Table 2 – Potential Log Deck, Timber Sorting, and Processing Sites

Preliminary Rating and Public/Private	Parcel Size /Potential Usable area (acres)	Location	Uses (e.g., Decking, Chipping, Loading, Materials Storage)	Attributes
1 -Private	>120/>40	3100 Skyway Road, Paradise, CA 95969 (Tuscan Ridge) APN 040-520-100 APN 040-520-103	All	Developed, Previously reviewed by FEMA EHP, Accessible
2 - Private	>53/50	3000 South 7th Street, Oroville, CA 95965 APN 035-370-002	All	Developed, Accessible
3 - Private	20/20	14096 Lakeridge Circle, Magalia, CA (Werner, Inc. Tree Processing Site) APNs 066-320-001, 066-320-002, 066-320-003, 066-320-004, 066-320-005, 066-	All	Developed, Accessible

		340-001, 066-340-002, 066-340-003		
4 - Public	4/4	13665 Skyway, Magalia, CA 95954 APN 066-410-016	Material Storage	Developed, Accessible
5 - Private	>10/10	West side of lower Pentz Rd. site, across from Miocene and Pentz Rd. APN 041-030-093	TBD	Undeveloped, Riparian Habitat, Lacks Access
6 - Private	50/20	13186 Concow Road APN 058-360-099	All	Partially Developed, Accessible, Remote, Documented Cultural Resources
7 - Private	>49/5	3825 Pentz Rd., Paradise, CA 95969 APN 041-470-076	TBD	Undeveloped, Riparian Habitat, Lacks Access
8 - Private	59/35	Skyway & Skyway Crossing APN 017-090-097	All	Undeveloped, Unassessed Waters of the U.S.
9 - Private - Eliminated from consideration	303/294	2552 Clark Road, Paradise, CA 95969 APN 041-120-129	All	Critical Habitat - Vernal Pool
10 - Private - Eliminated from consideration	268/260	NE corner of Durham & Pentz Rds., at Clark Road, Paradise, CA 95969 APN 041-120-121	All	Critical Habitat - Vernal Pool
11- Private - Eliminated from consideration	20	4405 Airport Road, Off Clark Road	All	Developed Airport Runway
12 - Private	15.1	Falager Ct, Off Durham-Pentz Rd near Hwy 99	All	Undeveloped, Unassessed Waters of the U.S., close proximity to Designated Critical Habitat.
13 - Private	10.43	Falager Ct, Off Durham-Pentz Rd near Hwy 99 APN 040-130-036	All	Undeveloped, proximate to Unassessed Waters of the U.S., close proximity to Designated Critical Habitat.

14 - Private	~30/44	APN 041-120-115	All	Rock quarry with assessed Waters of the US determination, 404 permits, CEQA documentation, and County Urgency determination for the Camp Fire as a lay down yard. Vernal Pools and Little Dry Creek in vicinity.
--------------	--------	-----------------	-----	--

The potential log deck, timber sorting, and staging facilities may require local, state and federal agency consultations and environmental permits prior to being developed for the temporary uses, including processing, to support the Program as summarized in Table 1.

3.1.3.2 Biomass and Forest Product End Uses

As described in the Tree Removal Traffic Management Assessment, the biomass chips and timber will be transported to one of the following end use facilities for hazard tree disposition summarized in Table 4 and illustrated in Figure 8.0. These facilities are within 100 miles of the Operational Area. The hazard tree end uses are in alignment with sustainable reuse of high hazard zone wood waste, which is 75 percent to biomass, and approximately 25 percent to alternative forest product manufacturing facilities (e.g., sawmills, landscape industry, wood products).

Table 4 – End Use Facilities for Hazard Tree Disposition

Company	Location	End Use
Apex Lumber	4288 State Highway 70, Oroville, California, 95965	Forest Products
ARP Loyalton Cogen	100 Railroad Ave, Loyalton, California, 96118	Energy
Honey Lake Power / Greenleaf Power	732-025 Wendel Rd, Wendel, California, 96136	Energy
Old Durham Wood	1156 Oroville Chico Hwy, Durham, California, 95938	Forest Products
Sierra Pacific Industries	1440 Lincoln Blvd, Lincoln, California, 95648	Forest Products
Wheelabrator	20811 Industry Rd, Anderson, California, 96007	Energy

3.2 Private Properties on Federal Lands

Some of the properties with private entity inholdings, required to have hazardous tree removal, exist within, or intersect Federal lands, including the USFS and the Bureau of Land Management (BLM). With this finding, it may be necessary to consult with Federal partners from the US Forest Service and BLM. Figure 9 shows approximately 28 required parcel, which may be eligible for the program, including four properties that have submitted Right of Entry (ROE) forms as of February 28, 2020 for this mission. These ROE properties, reside along Pulga Road, and Camp Creek Road, within the Plumas National Forest.

3.3 Operation Team Basecamp Housing

The HTRP operation team is expected to be deployed to temporary accommodations within 100 miles of the Program area. Basecamp housing accommodations at Tuscan Ridge and Oroville Industrial Parks that were used by the DROP contractors may be used for the HTRP operations. [Need updates regarding the basecamp housing].

In the event that the referenced basecamp housing may be used, there may be local permitting requirements for temporary occupancy and/or modifications to existing facilities that may be required.

4.0 Environmental Compliance Framework

The project area is located in the Eastside Sacramento River Watershed whose prominent surface waters include Butte Creek, the West and North Forks of the Feather River, the latter forming the border of the Upper Feather River Watershed. Pine forests, or, timberlands dominate the higher elevations on eastern portion of the project area. These areas hosted Native American settlements and contain a complement of protected aquatic and terrestrial species.

The Program will entail removal of up to 300,000 hazard trees that pose an immediate threat to public health and property in the project area that are on public and/or private properties that could fall onto public rights of way or public structures. This work will be performed in compliance with applicable federal, state, and local environmental laws and regulations that are summarized below and presented in Table 1:

Federal

- Clean Water Act (CWA), e.g., Section 401, United States Environmental Protection Agency (USEPA)/State Water Resources Control Board (SWRCB) water quality certification; Sections 301 and 402, National Pollutant

Discharge Elimination System (NPDES)/Storm Water Pollution Prevention Plan (SWPPP); Section 404, fill and wetlands U.S. Army Corps of Engineers (USACE),

- Endangered Species Act (ESA, e.g., Section 7, USFWS, and the NMFS),
- Migratory Bird Treaty Act (USFWS),
- Bald and Golden Eagle Protection Act (USFWS and CDFW),
- National Historic Preservation Act (e.g., Section 106), FEMA, California State Historic Preservation Officer (SHPO), and federally recognized tribes,
- Resource Conservation and Recovery Act (RCRA, e.g., Subtitle D - Non-Hazardous Waste for Timber and BioMass disposal, USEPA), and
- National Environmental Policy Act (NEPA, FEMA).

State

- Clean Water Act (CWA, i.e., Porter-Cologne Act/ California Water Code § 13260; California Code of Regulations, Title 23, § 3855 et seq., water quality certification from the appropriate regional board or state board, SWRCB)
- California Endangered Species Act (California Fish and Game Code § 2050-2115.5),
- California Fish and Game Code (CFGF) Section 1600 (e.g., Lake and Streambed Alteration Agreement), CDFW),
- California Migratory Bird Protection Act (CFGF Section 3513, CDFW),
- California Clean Air Act (CCAA)
- California Native American, Historical, Cultural and Sacred Sites Act ('Sacred Sites Act', SHPO, and FEMA/Cal OES tribal Liaison),
- E.O. B 10-11 (California Native Tribal Consultation),
- AB-52, Gatto. Native Americans CEQA Consultation,
- Z'Berg-Nejedly Forest Practice Act (2019 California Forest Practice Rules (FPR), CAL FIRE),
- Native Plant Protection Act (CFGF Section 1900 et seq.)

Local

- California Planning and Zoning Laws (Planning Departments of Butte County and the Town of Paradise), and
- Butte County and Town of Paradise Emergency and Urgency Ordinances

Each government entity will exercise an Environmental Protection Approach for the Program that is described below:

4.1 Federal Process

FEMA will initiate and conduct an Environmental and Historical Preservation (EHP) review of a project when a federal Public Assistance grant is generated for the Program. Federal Laws and Regulations that may apply, in addition to State Laws and Regulations, include the following that are identified below by SOW activities:

- CWA Section 402, NPDES/SWPPP. Storm Water Pollution Plan(s) (SWPPPs) will be developed and followed during the Program as required for the operational areas and facilities. It is likely that either Cal Recycle or its contractors may be responsible for developing the SWPPPs for submittal to the State Water Resources Control Board (as a federally delegated agency for CWA Section 402) and complying with their terms and conditions.
- CWA Sections 404 and 401. Permit authorizations by the USACE and the Central Regional Water Quality Control Board (CVRWQCB) for the placement of fill material and temporary bridges below the Ordinary High Water Mark of any body of water or in wetlands. It is likely that Cal OES will be the lead and responsible for preparing the applications for permits associated with CWA Sections 404 and 401 in collaboration with FEMA.
- ESA Section 7. Consultation between FEMA (or possibly the with the USACE) with USFWS, and/or National Oceanographic and Atmospheric Administration (NOAA) NMFS will occur if FEMA determines that any component of the project may affect Federally Listed, Endangered, Threatened or Proposed Species (e.g., Anadromous Salmonids) or designated critical habitat.

For natural resource considerations, in 2019 FEMA Region IX has entered into a Programmatic Biological Opinion (PBO) with the USFWS (Sacramento Region, Exhibit 6a), and a separate PBO with NMFS (statewide, Exhibit 6b, need from FEMA) to enable consistent application of the ESA for disasters in California. Each PBO may assist to expedite the necessary consultations between federal resource agencies for protected federally listed species in the project area if FEMA, in coordination with USFWS and NMFS determines they are applicable to the Program.

In addition, FEMA has entered into a Programmatic Agreement (Agreement) with the State Historic Preservation Officer (SHPO) and Cal OES that governs FEMA's compliance with Section 106 of the National Historic Preservation Act (NHPA). FEMA is responsible for conducting consultations with federally recognized Native American Tribes and with the SHPO in accordance with the NHPA. The Agreement identifies the process FEMA follows to consider effects of projects on historic properties (i.e., historical, archaeological, and tribal cultural resources that are on or eligible for listing on the National Register of Historic Places) and identifies activities that may be exempt

from consultation. When the ROEs are received for the properties whose owners will become part of the Program, the necessity of developing an Archaeological Monitoring Program will be determined by FEMA in consultation with the SHPO and tribes. It is FEMA's responsibility to assess, avoid, minimize, and/or mitigate potential adverse effects to historic properties in the Program area in accordance with the NHPA.

4.2 State Process

Governor's Executive Orders

Unlike the federal process, in accordance with the Governor's Executive Order (EO) B-57-18:

"...the state statutes, rules, regulations and requirements may be suspended to the extent they apply to: removal, storage, transportation, and disposal of hazardous and non-hazardous solid waste and debris resulting from wildfires that are subject to the jurisdiction of agencies within the Cal EPA and the CNRA, and necessary restoration and rehabilitation of timberland, streams, rivers, and other waterways. Individuals that desire to conduct activities under such a suspension of statutes, rules, regulations, and requirements shall first request that the appropriate Agency Secretary, or his delegate, make a determination that the proposed activities are eligible to be conducted under the suspension."

Suspensions that are granted in accordance with a Governor's EO are referred to as "waivers." An EPP, or equivalent document, is generally required, prepared and submitted to either or both Cal EPA and CNRA Secretaries to obtain a waiver. The EPP addresses the potentially impacted resources and identifies BMPs that can be implemented to minimize potential impacts to natural resources associated with temporary emergency response and recovery construction work. Such waivers were granted for the Debris Removal Program by Cal EPA and CNRA Secretaries for the DROP (Exhibits 7 and 8) and are expected to be either extended or modified to support the HTRP implementation.

The principal differences in the DROP and HTRP are that the trees are habitat for protected avian species, many of which have been impacted by private property and USFS tree removal programs over the past year. In addition, the timing of the HTRP implementation will coincide with protected avian species nesting seasons for which there are limited operating periods between March and October of each year for which biological surveys and consultations with the state and federal resource agencies is expected. The purpose of the agency consultations is to refine or revise the existing waiver BMPs and AMMs and validate those that are contained in the ECP (Exhibit 3) are appropriate and can be authorized by the Agency Secretaries to support the HTRP implementation.

Emergency Rulemaking for Timber Harvest

Although the EO allows for a waiver process associated with many of the environmental permits required by the state, the lead agencies for the timber harvests on non-federal land are the California Department of Forestry and Fire Protection (CAL FIRE) and Board of Forestry (BOF) under the CNRA. CAL FIRE undertook a legislative effort to expedite the removal of hazard trees associated with the Camp Fire incident by initiating an Emergency Rulemaking to Facilitate Post-Fire Recovery Efforts within the County of Butte. This was adopted as a Post Fire Recovery Exemption for Timber Harvest (Title 14 of the California Code of Regulations, Division 1.5, Chapter 4, Subchapter 7, Article 2 § 1038.6) and expired and was replaced in November 2019 with Permanent Post-Fire Recovery Regulations for which a Timber Harvest Exemption may be used for the Program work.

Due to the large number of trees that will be subject to the HTRP, CAL FIRE has determined that the Timber Harvest Plan Exemption for ROW and Utility Projects (i.e., Exhibit 9) under Article 2 § 1104.1b would be better suited for the Program due to the number of trees along eligible public and private ROWs to be removed. This rulemaking exempts the Program from commercial Timber Harvest Plan permit requirements for which an Exemption Form will need to be completed for eligible required parcel ROEs within each of the five Operational Area branches, which are summarized in Table 5, Required Parcel Rights of Entry for Timber Harvest Plan Exemption.

There are limitations for trees to be taken without special provisions under the Section 1104.1 Harvesting Plan Conversion, specifically:

- Trees that existed before 1800 A.D.
- Sierra or Coastal Redwoods greater than sixty (60) inches in diameter at stump height.
- All other trees, greater than forty-eight (48) inches in diameter at stump height.

In addition, per the Vegetation Removal Best Management Practices noted in Exhibit 3, disturbance or removal of vegetation will be kept to the minimum necessary to complete project related activities. Slash and woody debris will be managed using the following treatments: burying, chipping and spreading/piling, and removal to end use facilities.

If any of the hazard trees to be removed are in the categories noted, special provisions will need to be developed with CAL FIRE in advance of the Program being initiated. In addition, as described in Section 4.4, neither of the cited exemptions apply to known sites of rare, candidate, threatened or endangered plants and animals, within the standard width of a Watercourse or Lake Protection Zone (WLPZ), or where the federal and state ESAs and CWAs are applicable.

Waste Discharge Requirements

The State Water Resources Control Board and the Regional Water Quality Control Boards (collectively water boards) administer and works jointly with CAL FIRE and the Board of Forestry (BOF) to ensure that timber harvest activities, such as the DR-4407 HTRP, are protective of state waters. General Order No. R5-2017-0061 on June 9, 2017 for Discharges Related to Timberland Management Activities for Non-Federal and Federal Lands (2017 Order, Exhibit 10 Part A).

The 2017 Order specifies that the CVRWQCB is responsible for coordinating with CAL FIRE and the California Board of Forestry (BOF) for timber harvest activities on non-federal lands, in accordance with the FPA and California Forest Practice Rules (FPR). The provisions of the 2017 Order for non-federal land state that the Discharger shall conduct timberland management activities in accordance with the CAL FIRE-approved Plan, CAL FIRE-accepted Exemption (EX) or Emergency (EM) Notice, or CDFW-executed Master Agreement for Timber Operations (MATO) or Lake or Streambed Alteration Agreement (LSAA), in the case of timberland management activities on non-federal timberlands. The MATO or LSAA for the DR-4407 may be substituted with a Waiver from the CNRA Secretary, in accordance with the EO, under the assumption that either BMPs and/or AMMs (i.e., Exhibit 3) that would be identified as conditions proposed in an EPP for timber harvest operations.

The CDFW is responsible for ensuring that the following provisions of the CFGC are addressed with the CVRWQCB, CAL FIRE, in accordance with the 2017 Order:

- Sections 1600 (LSAA); Section 2000 (e.g., taking is unlawful except as provided),
- 3503 (e.g., protection of bird nests and eggs and birds of prey), and
- Sections 5650 and 5652 (e.g., deposition of deleterious material into waters of the state).

Other provisions of the 2017 Order require that the discharger, or applicant, will incorporate management practices and or water quality protective measures in consultation between the CVRWQCB, CAL FIRE, and CDFW, in addition, comply with the Monitoring and Reporting Program specified in the 2017 Order. The first step in determining the appropriate BMPs is determining a project's Criteria and Condition Specifications by Category per Table 1, Summary of Timberland Management Activity Categories and Requirements that appears on page 13 of the 2017 Order (below):

Table 1. Summary of Timberland Management Activity Categories and Requirements¹

	Cat.	Plans/Projects Covered	NOI, operation notification, and monitoring requirements
Lead Agency CAL FIRE (non-federal)	1	<ul style="list-style-type: none"> 1038 EX Notices^{2,3} 1052.1-1052.5 EM Notices² (except fire salvage) 1104.1 Conversion Exemptions² 	<ul style="list-style-type: none"> Automatically enrolled Agency Monitoring
	2A	<ul style="list-style-type: none"> 1052.1 EM Notice² for fire salvage on: <ul style="list-style-type: none"> Industrial timberlands; or Non-industrial timberlands when no residence is within EM 	<ul style="list-style-type: none"> Automatically enrolled contingent on submittal of <i>NOI</i> and <i>Erosion Site Table</i> within 30 days of EM Notice acceptance by CAL FIRE <i>Post-Fire Management and Reforestation Plan</i> (if applicable) Annual Agency, Implementation, Forensic, and Effectiveness Monitoring and Summary of Operations Updates to <i>Erosion Site Table</i> and if applicable, <i>Post-Fire Management and Reforestation Plan</i>
	2B	<ul style="list-style-type: none"> 1052.1 EM Notice² for fire salvage when a non-industrial timberland owner's residence is within EM 	<ul style="list-style-type: none"> <i>NOI</i> prior to operations Agency and Effectiveness Monitoring
	3A	<ul style="list-style-type: none"> THPs, PTHPs, WFMPs, NTMPs, and other Plans⁴ 	<ul style="list-style-type: none"> <i>NOI</i> prior to operations Annual Agency, Implementation, Forensic, and Effectiveness Monitoring and Summary of Operations
	3B	<ul style="list-style-type: none"> 1051-1051.7 modified THPs²; or THPs, PTHPs, WFMPs, NTMPs, and other Plans that meet all the low threat criteria in Part III.D.2.a.ii. 	<ul style="list-style-type: none"> <i>NOI</i> prior to operations Agency and Effectiveness Monitoring
CDFW	4	<ul style="list-style-type: none"> Watercourse crossing work conducted under CDFW MATO or LSAA on timber production zoned land for replacement/reconstruction of existing watercourse crossings outside of a Plan or EM Notice 	<ul style="list-style-type: none"> Submit copy of CDFW notification 30 days prior to work commencing <i>NOI</i> 30 days prior to operations Implementation, Forensic, and Effectiveness Monitoring

¹This table only provides an abbreviated summary of the criteria, conditions, and monitoring for categories; refer to category specific rules/conditions and Attachments B and C for complete information.

²California Code of Regulations, title 14, section (as cited in table)

³Excludes the cutting and removal of timber and other solids wood forest products for: Christmas trees, structure protection (150 and 300 feet), and woody debris and slash removal (see Attachment A definition of "timber land management activities").

⁴THP – timber harvesting plan, PTHP – program timber harvesting plan, NTMP – non-industrial timbermanagement plan

The DR-4407 Hazard Tree Removal Program appears to be within the definitions of Categories 2A, Industrial Fire Salvage and Non-Industrial Fire Salvage with No Residences, and 2B, Non-Industrial Fire Salvage with Residences for which the conditions are expected to be those specified in Exhibit 10 Part B, pages 16 through 20. This requires that CAL FIRE provide an Emergency Notice (EM) to enable the Program to qualify for the WDRs and conditions specified in the 2017 Order. This may be a factor in determining the monitoring and restoration requirements, more importantly CDFW notifications for watercourse crossing and CAL FIRE notices where aquatic or wetland habitat for rare, threatened or endangered species may exist.

In addition, the Order Attachment D addresses the need to evaluate significant existing or potential erosion sites as part of the compliance activities for roads for which Equipment Limitation Zones (ELZs) may be identified. Generally, ELZs comprise a minimum 50-foot watercourse buffer zone on either side of a surface water body. The intent of the ELZ is to reduce or eliminate the likelihood of ground disturbance from

heavy equipment that may result in ruts, erosion and direct sediment delivery to the watercourse.

4.3 Local Process

Both the Town and the County are responsible for administering California Planning and Zoning Laws and have recently exercised their Emergency Ordinances to initiate local response and recovery activities. Recently each has enacted Urgency Ordinances to support (Exhibits 11 and 12) the upcoming state Program and activate the Private Tree Removal Program. The state and private tree removal programs are mandatory to facilitate the abatement of the immediate threat to public ROW and property of the wildfire-impacted trees in the project area.

4.4 Regulatory Process Integration

The overarching state and federal environmental laws, respectively, are the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA), and project proponents are generally employed to prepare environmental impact assessment documents in which a project's potential impacts and mitigation measures are identified. These analyses are developed in accordance with all applicable environmental laws and regulations, the results of which become a basis for an applicant to apply for discretionary permits from local, state, and federal agencies.

To expedite emergency response and recovery actions CEQA exemptions may be exercised by local or state agencies or NEPA exclusions may be exercised by federal agencies. However, in these circumstances other local, state and/or federal environmental regulations may still apply as described in the previous sections. When the SOW is defined, the environmental compliance framework will be refined so that the local, state and federal regulations that apply to timber harvest activities may be appropriately integrated to streamline the environmental permitting or permitting relief requirements for the DR-4407 recovery.

Hazard Tree Removal Permit Planning

An aspect of the proposed Program that will need to be addressed between all government entities is how the Timber Harvest Exemption(s) will apply in concert with the 2017 Order requirements that require the protection of "... sites of rare, candidate, threatened or endangered plants and animals if the sites will be disturbed or damaged." This is mirrored in 14 CCR § 895.1. Also, the 14 CCR § 1038.6(a)(3)(G-H) states that no timber operations may occur within a buffer zone of listed, or sensitive species which are defined by 14 CCR § 1038.6(a)(3)(I), which states: "No timber harvesting is permitted within the standard width of a WLPZ per 14 CCR § 916.4 [936.4,

956.4](b) (exceptions do apply see below) or within a WLPZ of a watershed identified as Anadromous Salmonids Planning watersheds (ASP) per 14 CCR § 916.9 [936.9, 956.9](s)."

It is expected that the results from the Cal Recycle Assessment and Monitoring program will identify current terrestrial and aquatic biological characteristics within the Operational Area branches. The data will be reported to the Environmental Team in real time. The assessment data will enable collaboration among the three government entities to determine the necessary resource agency permits and consultations, and refine the sequencing of the Program SOW implementation to reflect the environmental green, yellow and red zone criteria. Survey work would also include stream crossing inventories to determine the Class of potential stream crossings and map the WLPZ buffers as noted below and in the ECP, which includes protective measures that were outlined from the FPR:

Waterbody	Distance
Perennial Streams (Class I) – Domestic supplies, springs, fish always, or seasonally present.	75 feet (<30% slope) 100 feet (30-50% slope) 150 feet (>50% slope)
Intermittent Streams, Wetlands, Lakes (Class II) – Fish always or seasonally present within 100 feet. Aquatic habitat (non-fish).	50 feet (<30% slope) 75 feet (30-50% slope) 100 feet (>50% slope)
Ephemeral Streams (Class III) – No aquatic habitat present. Capable of delivering sediment.	25 feet (<30% slope) 50 feet (30%+)
Man-Made Ditches (Class IV) – Domestic, agricultural, hydroelectric supply.	Same as Class III, or, if present existing riparian vegetation, whichever is more conservative.

Biological monitors will be required to perform focused screening surveys to capture the seasonal variations for which release of environmental conditions to release ROEs for tree harvesting may be considered.

Log Deck and Timber Sorting Site Permit Planning

The environmental and permitting requirements for log deck and timber sorting sites will be addressed when the specific sites are identified by Cal Recycle and their selected tree removal contractor(s). This will include compliance with the NPDES SWPPP requirements in accordance with the state and federal Clean Water Acts. The Program facilities will be addressed by either the County or Town as a CEQA lead agency for discretionary permits, in addition to and the CVRWQCB for SWPPPs. Because the development of these sites are a connected action to a federally funded action coordination with FEMA will be necessary in

advance of site development for FEMA, as the lead federal agency, to comply with NEPA, Section 7 of the ESA, Section 106 of the NHPA, and applicable Executive Orders, and, to consult with Federally-recognized Native American Tribes.

Timber and Biomass End Use Disposition

The creation and transportation of non-hazardous waste from timber will need to be compliant with the cradle to grave provisions of RCRA and will be addressed when the SOW is provided. A Tree Removal Traffic Management Assessment is expected to be developed and include discussion of log deck and timber sorting sites.

Operation Team Basecamp Housing

Whether or not the Tuscan Ridge and Oroville Industrial Park base camps used during the DROP are available for Program contractor and staff use is unknown at this time. Status of the permits obtained as part of the DROP will need to be determined for applicability to the HTRP and the facilities' availability for the HTRP as well.

5.0 Environmental Protection Plan

This section addresses an approach to developing an environmental protection plan that builds on data developed during the DROP and the requirements of removing hazard trees that pose an immediate threat to public health or property.

Once a SOW is released by FEMA and Cal OES, the final environmental scope of work can be identified for Cal Recycle and its contractor for evaluation using the three-step process below:

- 1) Environmental Compliance Planning
 - a) Identify qualifying private and public property locations, contractor basecamp, and log processing sites,
 - b) Conduct environmental review of existing environmental data and identify data gaps, and
 - c) Obtain additional data, including via current biological surveys, and identify required local, state and federal permits, waivers, AMMs/BMPs, Tribal consultation/monitoring requirements by SOW/HTRP and a timeframe to obtain them.

To amplify item 1(b), it is envisioned that biological resource surveys would be performed to determine the presence or absence of resident and migratory protected species and surface water crossings that will need to

be addressed with regulatory agencies and in Program operation sequencing. When this information is available, appropriate permitting and consultation with the regulatory agencies AMMs, and BMPs will be determined along with necessary Program sequencing to accommodate the environmental conditions within the Burn Scar Area.

It is presumed that the locations with previously recorded historical, archaeological, or tribal cultural resources will require archaeological and/or tribal monitoring. If the data review indicates that portions of the Program footprint (including log decks, timber sorting sites, etc.) have not been previously surveyed (or have not been surveyed in the preceding 10 years) archaeological and tribal surveys may be necessary prior to Program activities in areas where ground disturbing activities are likely to occur. Final determinations on survey and monitoring protocols will be determined through consultation between FEMA, Native American Tribes and SHPO, as required under the NHPA Section 106.

- 2) Environmental Compliance Permitting (to occur when Program contract is activated with oversight of Cal OES/Cal Recycle/FEMA, as appropriate)
 - a) Conduct Pre-application interagency and tribal consultations
 - b) Prepare and submit environmental permits, waivers, AMMs/BMPs, and verify tribal consultation and monitoring requirements, and
 - c) Obtain permits, waivers, AMM/BMP documents and confirmation of tribal consultation requirements.

- 3) Environmental Compliance Plan (Exhibit 3) Implementation (to occur during Operations and updated as warranted):
 - a) Prepare and obtain environmental permits, waivers, AMMs/BMPs, tribal monitoring scope as needed for inclusion in the Environmental Compliance Plan.
 - b) Prepare and deliver Training Programs for Program staff and contractors.
 - c) Implement environmental permit terms and conditions, document and file with local, state and federal agencies:
 - records of environmental surveying results, and
 - changes in environmental site conditions (as necessary), occurrences of unexpected environmental conditions for which local, state, or federal agency coordination is necessary (per permit conditions).
 - d) Submit the names and qualifications of all biologists assigned to monitor tree removals to the USFWS for approval at least 10 calendar days prior to the date of the start of the proposed project.

6.0 Environmental Awareness Training

All HTRP personnel will attend a mandatory environmental education program delivered by the Cal OES and FEMA Environmental team. Such training is mandatory for Cal OES, FEMA, Cal Recycle staff and contractors prior to any tree cutting, tree clearing, vegetation clearing, or other field activities. Training may also be provided for tribal representatives, as determined by FEMA.

This training program will focus on the Chain of Command associated with the Environmental Compliance Program, proper use of BMPs and AMMs, and what to do if state and/or federally listed species may be present within an active operational area branch. At a minimum, the training will include a description of all pertinent laws, environmental concerns in the five branches, water quality, state and federally listed species of concern, their status and protection, and the possible penalties for non-compliance. Documentation of the training, including sign-in sheets, will be kept on file and available to the state and federal resource agencies on request.

The Cal OES and FEMA Environmental team will review the Cal Recycle Environmental Awareness Training for their contractors prior to it being delivered by their work force. It is recommended that the Cal Recycle Environmental Training be delivered by CDFW/USFWS-approved, biologist(s), Registered Professional Forester, and archaeologist(s), as appropriate.

**Best Management Practices and
Avoidance and Minimization Measures**

DRAFT

1.0 Introduction

This document is a living document, supplemental to the Hazard Tree Removal Program (HTRP) Environmental Protection Plan (EPP). Pertinent environmental regulations from which the Best Management Practices (BMPs) and Avoidance and Minimization Measures (AMMs) were derived are summarized in Table 1.

Exhibit 1 contains an Environmental Trigger Matrix that summarizes federal and state listed sensitive species with their respective limited operating period for use and reference by environmental monitors during HTRP implementation. If not superseded by federal resource agency consultations, and/or, waivers issued by the Secretaries of Cal EPA and CNRA, this document may be amended by the Cal OES and FEMA Environmental Team with concurrence from the HTRP Incident Management Team.

There are two procedures to ensure work crew compliance with the EPP Environmental Compliance Plan (ECP), the Stop Work Authority and Notice of Non-Compliance, as summarized below:

Stop Work Authority

Monitors (e.g., tribal monitors, qualified biologists, and environmental monitors, and Secretary of Interior qualified archaeologists) have the authority to stop work of a Task Force if any portion of this ECP, or, federal and state directives is violated. In such conditions, the Environmental Specialist will immediately call the Tree Removal Operations Center (TROC) Operations Chief, who will consult the Environmental Officer for concurrence on the notice to stop work.

Non-Compliance Warning

The Environmental Unit will determine, upon non-compliance of the ECP or EPP, whether an individual or Task Force will be issued a written warning. Once two warnings are accrued per Task Force, the crew will be referred to the TROC Operations Chief to determine the appropriate action (e.g., termination or reassignment) is appropriate.

Inspections

CAL FIRE will notify the appropriate Regional Board for the purposes of on-site consultation prior to project implementation, mid-way through the project, and within 7 days of the anticipated completion of the project and while equipment is still on-site to implement any necessary management measures.

The Regional Boards reserve the right to conduct additional inspections as conditions warrant and will report any necessary management measures to CAL FIRE in a timely manner to facilitate implementation.

2.0 Best Management Practices

Air Quality

1. State and Contractors will comply with all applicable Clean Air Act Laws and Permit Requirements.
2. Mitigate dust from project activities by including standard dust abatement requirements (e.g., water trucks and non-toxic tackifiers) in project contracts.

Roads

1. Operations will comply, with County Code Ordinances, Chapter 10, if creating any new access road off of a county road.
2. Roads - Existing
 - a. A stable operating surface will be maintained.
 - b. Operations will not occur in saturated conditions.
3. Roads - New
 - a. Should new road construction be necessary, the following will apply:
 - b. Consultation with the appropriate Regional Board and DFW will be sought prior to construction.
 - c. Construction will not exceed 600' in length per project.
 - d. The operational standards provided in the FPR for Forest Fire Prevention Exemption road construction (Title 14 CCR 1038.3)
4. Use of California Stormwater Quality Association (CASQA), or equivalent Forest Practice BMP Standards will be met.
5. Operations will consult with the County on compliance with listed ordinances

Equipment Restrictions

1. Tractor or heavy equipment operations will not be conducted under the following conditions:
 - a. Slopes steeper than 65 percent.
 - b. Slopes steeper than 50 percent where the erosion hazard rating is high or extreme.
 - c. Slopes over 50 percent which lead without flattening to sufficiently dissipate water flow and trap sediment before it reaches a Watercourse or lake.
 - d. When driving through a watercourse in which no established crossing occurs without BMP's.

2. Tractor roads will not be constructed on slopes greater than 40%.
3. Tractor or heavy equipment operations will not be conducted on known slides or unstable areas.
4. New road construction or reconstruction will not extend beyond 600 feet.
5. Heavy equipment operations will not be conducted within the standard width of a watercourse or lake protection zone, except for maintenance of roads and drainage facilities or structures.
6. Should operations extend into the winter period, as defined by the Forest Practice Rules (FPR), limitations on operations related to using saturated roads, stabilizing erodible soils and installing erosion control measures will be followed.
7. Equipment maintenance will occur outside the watercourse protection zones.

Log Decks

1. Operations will comply, with all relevant Federal, State and County Code Ordinances, Chapter 53, Section 53-19. - Temporary log storage yards.
 - a. Log decks within the project area will meet Forest Practice Rules
 - b. Use of California Manual on Uniform Traffic Control Devices (MUTCD) and/or American Association of State Highway and Transportation Officials (AASHTO) standards will be met
 - c. Use of CASQA or Forest Practice BMP Standards will be met
 - d. A Storm Water Pollution Prevention Plan (SWPPP) will be developed by the contractor
 - e. AB-52 and EO B-10-11 Tribal Consultation will be conducted by CalRecycle

Vegetation Removal

1. Vegetation Removal. Disturbance or removal of vegetation will be kept to the minimum necessary to complete project related activities (not including removal of dead or dying trees).
2. Avoid / Remove Cleared Material from Stream. Trees will be felled away from waterbodies, including streams and wetlands. All trimmed or cleared material/vegetation will avoid falling into any nearby waterbody. If anything incidentally falls into a waterbody, it will be removed by hand, or using an excavator with thumb for large material, and deposited where it cannot re-enter the waterbody. If an excavator will need to be used, the crew will call the Environmental Unit before proceeding.

3. Sawdust and Bark. Materials from tree removal operations will be controlled using dust control methods, to the extent necessary to prevent materials from falling, or running-off into waterbodies. At minimum the Equipment Exclusion Zone of 50 feet will be used as a measure to keep sawdust out of waterbodies.
4. Treatment and Removal Deadlines. Felled trees will be treated and removed from a site the same day of felling, but especially within the given deadlines (Table 1. below), and all materials completely removed within one year of the project (Full Treatment and Removal Deadlines from 1104.1 Conversion Exemptions, Forest Practice Rules 2020).

Table 1. Full Treatment and Removal Deadlines

Tree Type	Size	Complete Removal
Pine Slash and All Other Woody Debris	Any	March 1
Pine Woody Debris	Three inches and greater in diameter and longer than four feet	Seven days to remove from original site
All Other Slash	Greater than one inch in diameter and greater than two feet long	April 1

5. Full Slash and woody debris treatment may include any of the following:
 - a. chipping and spreading (only in areas they will not clog culverts or storm drains);
 - b. piling (no burning);
 - c. removing slash and woody debris from the site for treatment
6. Pine woody debris. All pine woody debris longer than four feet must limb woody debris and cutting Slash and woody debris into lengths of less than **four feet**, and leaving the pieces exposed to solar radiation to aid in rapid drying.
7. No Burning. Slash and woody debris may not be burned by open outdoor fires except under permit from the appropriate fire protection agency, if required, the local air pollution control district or air quality management district. The burning must occur on the property where the Slash and woody debris originated.
8. Firewood. Slash and woody debris, except for pine, which is cut up for firewood will be cut to lengths **24 inches or less** and set aside for drying by April 1 of the year following its creation. Pine Slash and woody debris which is cut up for

firewood will be cut to lengths 24 inches or less and set aside for drying within seven **(7) days** of its creation.

9. Existing Disturbance. All heavy equipment, vehicles, tree cutting activities, and other associated activities will attempt to utilize existing access roads, road shoulders, and disturbed, or designated work areas limited to the Scope of Work. Work areas will be limited to what is necessary for tree cutting and associated activities.

Water Quality

1. Saturated Conditions. Operations will not occur in saturated conditions.
2. Hold for Compliance and Permits. No work will occur until an appropriate California Water Code or Clean Water Act Permit is secured by the appropriate agency and time contingencies are met (E.g. If a permit required a 10 day holding period to begin work, work will occur on the specific start date).
3. Tree Felling. No trees will be felled in a manner in which they might fall into a watercourse.
4. Broken Culverts. Culverts broken by the operation will be addressed immediately, and consultation with the appropriate resource agencies to fix it will occur. Communications with a property owner will occur immediately, and not be made into a punch list item.
5. Temporary crossings. All temporary crossings (bridges, culverts, low water crossings), not built to address a 100-year storm event will be removed before winter, or any forecasted 100-year storm event.
6. Shade-producing canopy. Should be retained where waterbodies are 303(d) listed for temperature. Consultation with the appropriate Regional Board will be sought prior to operations.
7. Disturbance and creation of bare areas. Will be planned to avoid sediment discharge to waterbodies.
8. 303(d) listed water bodies. Project activities with potential to impact waterbodies that are 303(d) listed as impaired due to sediment will require consultation with the appropriate Regional Board prior to operations.
9. Water drafting locations. Associated with surface waters will be treated to prevent overflow from transporting sediment to the waterbody.
 - a. Water drafting locations will be treated to prevent petroleum products from entering the waterbody.
10. Waste Discharge Requirements. General Conditions for the 2017 Order Waste Discharge Requirements for Categories 2A, Industrial Fire Salvage and Non-Industrial Fire Salvage with No Residences, and 2B, Non-Industrial Fire Salvage with Residences are specified in Exhibit 7A, pages 16 through 20. Although eligibility and enrollment conditions are different between the two categories,

there are the following common conditions between them as noted below if certain prerequisites are determined to be applicable:

- a. The Discharger must meet the following conditions unless Central Valley Water Board staff has been consulted and agrees to alternative protection measures as warranted by site-specific conditions (see Part II.4.) and/or as requested by the Discharger when such protection is inconsistent with land management objectives:
 - i. A minimum Equipment Limitation Zone (ELZ) for any and all Class III and Class IV watercourses of at minimum 25 feet where side-slope steepness is less than 30%, and at a minimum 50 feet where side-slope steepness is 30% or greater.
 - ii. Culverts or other permanent in-stream structures at watercourse crossings in which water is flowing at the time of installation will be installed with their necessary protective structures (i.e. armoring, wing walls, diversion prevention measures) concurrently with fill placement. Additionally, installation will utilize methods to temporarily isolate or divert stream flows from the installation area while maintaining bypass flows or as specified in an executed MATO or LSAA from CDFW.
 - iii. Any and all riparian vegetation, other than commercial species, that is found along watercourses and lakes or that is found within or bordering wet meadows and other wet areas will be retained and protected to the extent feasible during timberland management activities.
 - iv. Significant sediment discharge within the plan area to the Central Valley Water Board upon discovery
- b. Monitoring and Reporting (from Attachment B Monitoring and Reporting Program for Order No. R5-2017-0061. The Environmental Consultant and Environmental Unit, upon the discretion of the Regional Water Quality Control Board will implement the following procedures for water quality monitoring.
 - i. Implementation Inspection – The inspection(s) will be conducted by the Discharger and is intended to assure that management measures are properly installed; at a minimum, the inspection(s) should focus on the following Project areas:
 - i. Culverts are clear of debris;
 - ii. Critical dips are installed and/or diversion potential is addressed at watercourse crossings;
 - iii. Fill slopes are adequately armored/stabilized;
 - iv. Road runoff is disconnected from watercourse crossings;
 - v. Sufficient drainage facilities installed on roads and skid trails;
 - vi. Appropriate watercourse protection zones implemented;
 - vii. Disturbed areas in the watercourse protection zones stabilized;
 - viii. Significant existing or potential erosion sites (SEPES) identified in the Project and/or as indicated in an Erosion Site Table
 - ix. Non-standard (in-lieu) practice areas;

1. Landings/skid trails/roads in watercourse protection zones drained/disconnected and/or stabilized;
- x. Road rocking near watercourses and crossings done to specifications in enrolled Project;
- xi. Temporary and tractor watercourse crossings disconnected and fills excavated to natural grade and orientation;
- xii. Drafting pads and approaches drained and stabilized;
- xiii. Artificial impoundment barriers removed/diversions turned off (if no winter operations);
- xiv. Timberland management activities that have the potential to affect unstable areas upslope of watercourses;
- xv. Photo-point monitoring locations (as determined by Central Valley Water Board staff during Project inspections and/or as self-determined by the Discharger to illustrate compliance).
- xvi. Pre-winter implementation inspections as appropriate before November 15.
- xvii. An annual report will be drafted no later than August 15 of each year.
- xviii. Additional monitoring requirements may include, but are not limited to:
 1. Water column sampling (typically for sediment);
 2. Physical stream condition assessment for:
 3. Gravel Embeddedness – Degree gravel is embedded with sand or finer sediments;
 4. Pool Sedimentation – Degree of sediment depositions in pools;
 5. Stream Channel Aggradation – Degree that stream channel has been raised by sedimentation;
 6. Streambank Cutting, Mass Wasting and Stream Downcutting;
 7. Stream-Side Vegetation;
 8. Streamflow data (current, historical, peak flows);
 9. Bioassessment.

Watercourse Crossings

1. Clean Water Act Compliance. If a new watercourse crossing must be installed, or existing watercourse crossing is in need of maintenance within a Water of the United States (within the ordinary high water mark [OHWM]), the Environmental Unit will consult with the US Army Corps of Engineers, and the Regional Water Quality Control Board for the necessity of Clean Water Act Section 404 and 401 permits, before work will occur.

2. Endangered Species Act Consultation. If a new watercourse crossing must be installed, or existing watercourse crossing is in need of maintenance, the crossing site will be inspected by a wildlife biologist for fish and wildlife species prior to entering the watercourse. If a California Endangered Species Act (CESA) or Federal Endangered Species Act (FESA) listed species is found within the crossing location, the site will be flagged and avoided until consultation with the Department of Fish and Wildlife occurs.
3. Cultural/Tribal Consultation. If a new watercourse crossing must be installed, or existing watercourse crossing is in need of maintenance, the crossing site will be inspected by an Secretary of the Interior (SOI) qualified Archaeologist and Tribal Monitor. Confirmation that the site complies with Section 106 of the National Historic Preservation Act (NHPA) must be confirmed before work will occur.
4. Wet Season. Installation of temporary crossings will attempt to be installed outside of the wet season, October 15-April 15.
5. Watercourse Crossings – New. Should new watercourse crossings be necessary, the following will apply:
 - a. Consultation with the appropriate Regional Board and DFW will be sought prior to construction
 - b. Crossings will meet the 100-year flood flow and associated debris standard in the FPR
 - c. Crossing installation will not occur during the winter period (as defined in the FPR).
6. Silt protection. Silt barriers, geotextile fabrics, and swamp mats will be utilized during installation.
7. Equipment in-water. If equipment must cross into watercourse, equipment will be utilized that is the lightest to achieve the installation of the crossing. Tracks or wheels will be cleaned before they enter the watercourse. Equipment will not enter the water without express permission from US Army Corps of Engineers and the relevant Federal or State Department of Fish and Wildlife.
8. Do Not Impair Water Flow. The installation of bridges, culverts or other structures should be installed such that water flow is not impaired and upstream or downstream passage of fish and all aquatic life-forms is assured at all times. If structures and associated materials are not designed to withstand high seasonal flows, they should be removed before such flows occur.
9. Fill Materials. Materials and methods used for temporary crossings should cause minimal turbidity or siltation. 2-6 inch pit run rock, screened river gravels, clean washed 2-inch plus rock or gravel, and/or logs in fill materials should be included. Bridge abutments below the high-water mark shall be rock or logs. When fill material is removed from the crossing, the channel shape and gradient should be returned to pre-project condition and stabilized to the extent feasible,

and any adjacent bare soil should be stabilized by mulching or other effective method (see subsection 9 &10).

10. Recreate Channel Grade. During crossing removal, all fill material should be excavated in a manner that recreates the natural channel grade and orientation, with a channel bed that is as wide as or slightly wider than the original watercourse.
11. Stabilize Crossing Sites. All bare mineral soil exposed in conjunction with crossing construction, deconstruction, maintenance or repair, should be treated for erosion immediately upon completion of work on the crossing, and prior to the onset of precipitation capable of generating runoff. Erosion control will be used as specified to stabilize the approach and bank of the watercourse. If the site is seeded, planting and seeding with native species, or a sterile seed mix and mulching is acceptable.
12. Stabilize and Inspect Decommissioned and Abandoned Road Crossings. Decommissioned/abandoned road crossings should be stabilized and then inspected following the first storm event producing bankfull stage flows and again prior to filing the completion report. The inspection should verify the effectiveness of the stabilization measures in preventing sediment discharges to the watercourse and to ensure the measures are functioning to restore natural drainage and hillslope stability. If stabilization measures are found to be ineffective, further stabilization measures should be applied, unless reentering the site would cause greater damage than leaving the ineffective stabilization measures. Such inspection results should be reported to the Central Valley Water Board, and will likely be included as supplemental monitoring requirements under the Timberland General Order.
13. Access Prevention Barricades. Barricades should be constructed at all points of access to the decommissioned or abandoned road to effectively prevent use by any passenger vehicle or equipment.

Watercourse Buffer

1. Location and Classification of All Watercourses. The Registered Professional Forester (RPF) will identify the classification of all water courses.
2. Flagging. The RPF or supervised designee will visit the site and flag the boundary of the conversion exemption timber operation and flag any applicable WLPZs and equipment limitation zones. Unless otherwise negotiated with CAL FIRE, no trees will be cut within this zone between the watercourse and the edge of the boundary.
3. Equipment Limitation Zone. A minimum 50-foot watercourse buffer will be implemented as an ELZ. The intent of the ELZ is to reduce or eliminate the likelihood of ground disturbance from heavy equipment that may result in ruts,

erosion and direct sediment delivery to the watercourse. Heavy equipment, or vehicles, will limit operations within the ELZ, including use of equipment that stages outside of the ELZ, use of smaller equipment, use of hand equipment. If rutting or disturbance occurs from equipment within this zone, the operator will immediately restore the ground to its original contour, and install slope protection.

4. WLPZ Buffers (916.5, 936.5, 956.5 Procedure for Determining Watercourse and Lake Protection Zone (WLPZ), Forest Practice Rules 2019). Work and road building within the following distances will have work avoided, or restricted with an Equipment Exclusion Zone (EEZ). If work is necessary, upon approval by the CalFire Director and the Central Valley Waterboard; disturbances within these buffers will be minimized, and stabilized with higher scrutiny. Table 2 shows the way WLPZ's are measured with associated protective measures. Table 3 shows the protective measures to follow, as addressed by the associated letters A-I. Class I protection zones will include increased buffer widths where anadromous salmonid habitat exists or can be restored, and/or where waterbodies are 303(d) listed for temperature/sediment. Consultation with the appropriate Regional Board will be sought prior to operations.

DRAFT

Table 2. WLPZ Designation Measures

Waterbody	Distance	Protective Measures¹
Perennial Streams (Class I) – Domestic supplies, springs, fish always, or seasonally present.	75 feet (<30% slope) 100 feet (30-50% slope) 150 feet (>50% slope)	BDG ADG (>50% slope)
Intermittent Streams, Wetlands, Lakes (Class II) – Fish always or seasonally present within 100 feet. Aquatic habitat (non-fish).	50 feet (<30% slope) 75 feet (30-50% slope) 100 feet (>50% slope)	BEI
Ephemeral Streams (Class III) – No aquatic habitat present. Capable of delivering sediment.	25 feet (<30% slope) 50 feet (30%+)	CFH
Man-Made Ditches (Class IV) – Domestic, agricultural, hydroelectric supply.	Same as Class III, or if present existing riparian vegetation, whichever is more conservative.	CFI

¹ See Table 2. Associated 916.4, 936.4, 956.4 Watercourse and Lake Protection [All Districts], Forest Practice Rule 2020.

Table 3. WLPZ Protective Measures

Protective Measure Letter Combination	Protective Measure
A	WLPZ shall be clearly identified on the ground by the Registered Professional Forester (RPF) who prepared the plan, or supervised designee, with paint, flagging, or other suitable means prior to the pre-harvest inspection. For nonindustrial timber management plans, sample identification of the WLPZ prior to the pre-harvest inspection may be allowed.
B	“WLPZ shall be clearly identified on the ground by an RPF or supervised designee, with paint, flagging, or other suitable means, prior to the start of Timber Operations. In watersheds with listed anadromous salmonids, on the ground identification of the WLPZ shall be completed prior to the pre-harvest inspection.
C	In site-specific cases, the RPF may provide in the plan, or the Director may require, that the WLPZ be clearly identified on the ground with flagging or by other suitable means prior to the start of Timber Operations.
D	To ensure retention of shade canopy filter strip properties of the WLPZ and the maintenance of a multi-storied stand for protection of values described in 14 CCR §§ 916.4(b), 936.4(b), 956.4(b), residual or harvest trees shall be marked, including a base mark below the cut-line within the WLPZ by the RPF, or supervised designee.
E	To ensure retention of shade canopy filter strip properties of the WLPZ and the maintenance of a multi-storied stand for protection of values described in 14 CCR §§ 916.4(b), 936.4(b), 956.4(b), residual or harvest trees shall be marked, including a base mark below the cut line, within the WLPZ by the RPF or supervised designee.
F	Residual or harvest tree marking within the WLPZ may be stipulated in the THP by the RPF or required by the Director in site-specific cases to ensure retention of filter strip properties or to maintain soil stability of the zone. The RPF shall state in the THP if marking was used in these zones.
G	To protect water temperature, filter strip properties, upslope stability, and fish and wildlife values, at least

	50% of the overstory and 50% of the understory canopy covering the ground and adjacent waters shall be left in a well distributed multi-storied stand composed of a diversity of species similar to that found before the start of operations. The residual overstory canopy shall be composed of at least 25% of the existing overstory conifers. Species composition may be adjusted consistent with the above standard to meet on-site conditions when agreed to in the THP by the RPF and the Director.
H	At least 50% of the understory vegetation present before Timber Operations shall be left living and well distributed within the WLPZ to maintain soil stability. This percentage may be adjusted to meet onsite conditions when agreed to in the THP by the RPF and the Director. Unless required by the Director, this shall not be construed to prohibit Broadcast Burning with a project type burning permit for Site Preparation.
I	To protect water temperature, filter strip properties, upslope stability, and fish and wildlife values, at least 50% of the total canopy covering the ground shall be left in a well distributed multi-storied stand configuration composed of a diversity of species similar to that found before the start of operations. The residual overstory canopy shall be composed of at least 25% of the existing overstory conifers. Due to variability in Class II Watercourses these percentages and species composition may be adjusted to meet onsite conditions when agreed to by the RPF and the Director in the THP.

Sediment Control

1. Best Management Practices (BMP's). Use of CASQA and/or Forest Practice BMP Standards will be met.
2. Disturbed Soils. Prior to any ground disturbing work at a project site, erosion control materials (fiber rolls and silt fence) will be stock-piled on site. All disturbed soils within the Project site will be stabilized to reduce erosion potential, both during and following construction. Planting and seeding with native species, or a sterile seed mix and mulching is acceptable. Where suitable vegetation cannot reasonably be expected to become established, non-erodible materials, such as coconut fiber matting, will be used for such stabilization.

3. Revegetation. If required, as a result of agency consultation, disturbed areas will be revegetated with local native species suitable to the restoration.
4. Trenching / Excavation /Grading Spoils. No castings or spoils from the trenching / excavation operations will be placed on the stream side of the trenching / excavation /Grading site.
5. Bank Stabilization. Bank stabilization will be constructed with suitable non-erodible materials that will withstand wash out. The bank stabilization material will extend above the normal high-water mark. Only clean material such as rock riprap that is free of trash, debris and deleterious material will be used as bank stabilization. Asphalt will not be considered an acceptable material.
6. Sediment and Erosion Control Measures. Sediment and erosion control measures will be utilized throughout all phases of operation where sediment runoff from exposed slopes threatens to enter a river, stream, wetland, or lake. If there is a chance of a rain event over 40 percent within 48 hours, sediment and erosion control will be inspected, repaired, or upgraded to prevent any runoff. Measures will be maintained in good operating condition until the site is signed off by the ICS. Maintenance includes, but is not limited to, removal of accumulated sediment and/or replacement of damaged silt fencing, compost socks, coir logs, coir rolls, and/or straw bale dikes. Modifications, repairs and improvements will be made to the sediment and erosion control measures whenever it is needed. If the sediment barrier fails to retain sediment, corrective measures will be employed, and an Environmental Specialist notified, immediately. Materials used in the sediment barriers will not pose an entanglement risk to fish or wildlife.
7. Silt Barriers. If work or vehicle crossings must occur within a wetted stream or lake area, precautions to minimize turbidity and siltation will be employed and may require the placement of geotextile fabrics, silt fencing, coir logs, coir rolls, straw bale dikes, or other siltation barriers so that silt and/or other deleterious materials are not allowed to pass to downstream reaches. Equipment will be placed on swamp mats, where the ground is softer. Materials used in the silt barrier will not pose an entanglement risk to fish or wildlife (no plastic netting).
8. Removal of Silt from Barriers. Silt collected around the silt barriers will be removed on an as needed basis to prevent silty/turbid water from flowing around the silt barriers during storm events. Silt barriers which trap sediment will be removed when temporary crossings have been taken out and after all flowing water is cleared of turbidity in a manner that will not introduce silt to the stream. The stream will then be restored to a clean and natural condition.

Pollution

1. Septic. Septic systems broken by the operation will be fixed or covered immediately, as to prevent overflow. Communications with a property owner will occur immediately, and not be made into a punch list item.

2. SWPPP. A Storm Water Pollution Prevention Plan and erosion control Best Management Practices will be developed and implemented to minimize water related erosion. At a minimum, protective measures will include:
- a. Operating Equipment and Vehicle Leaks. Any equipment or vehicles driven and/or operated within or adjacent to the stream/lake will be checked and maintained daily to prevent leaks of materials that could be deleterious to aquatic and terrestrial life or riparian habitat.
 - b. Stationary Equipment Leaks. Stationary equipment such as motors, pumps, generators, and welders, located within or adjacent to the stream/lake will be positioned over drip pans. Stationary heavy equipment will have suitable containment to handle a catastrophic spill/leak. Crews will maintain spill containment kits on-site at all times during project operations and/or staging or fueling of equipment.
 - c. Equipment Maintenance and Fueling. No equipment maintenance, fueling or storage will occur within or near any stream channel or lake margin where petroleum products or other pollutants from the equipment may enter these areas.
 - d. No Dumping. No litter or construction debris will be deposited within a stream or lake, or where it may pass into a stream or lake. All debris and waste will be picked up and removed daily.
 - e. Sawdust. Sawdust will be controlled in such a way that it does not enter a watercourse.
 - f. Hazardous Materials. Debris, soil, silt, bark, slash, sawdust, rubbish, creosote-treated wood, raw cement/concrete or washings thereof, asphalt, paint or other coating material, oil or other petroleum products, or any other substances which could be hazardous to aquatic life, wildlife, or riparian habitat resulting from the Project related activities will be prevented from contaminating the soil and/or entering any watercourse.
 - g. Dust Control. Implement dust control, when rocking temporary access road entrances and exits and covering temporary stockpiles when weather conditions require.
 - h. Permanent erosion control. Incorporate permanent erosion control measures such as bio-filtration strips and swales to receive storm water discharges from the project work areas to the maximum extent practicable.
 - i. Pesticides. No use of herbicides or pesticides will occur.
 - j. Should operations extend into the winter period, as defined by the Forest Practice Rules (FPR), limitations on operations related to using saturated roads, stabilizing erodible soils and installing erosion control measures will be followed.

3.0 Avoidance and Minimization Measures

Cultural Resources

1. Notice to Monitors. When tree removal is scheduled to begin at a given location, the Planning Section will provide FEMA Archaeological and Tribal Monitors with a minimum 48 hour notice in the event survey must be completed and to mobilize monitors. FEMA Archaeological and Tribal Monitors will maintain lists of parcels that require surveys and/or monitoring.
2. Road Grading and Ground Disturbance. Prior to new road grading, or other ground disturbance, the Planning Section will give FEMA Archaeological and Tribal Liaisons a 48-hour notice to survey the site.
3. Work Hold. No work will begin at locations of ground disturbing activities (i.e., road grading, etc.) without the locations surveyed by FEMA archaeological and Tribal monitors and a tribal and archaeological monitor on-site, if the location was identified by a FEMA archaeologist and Tribal Monitors as requiring monitoring. FEMA Archaeologists and Tribal Monitors will convey monitoring requirements based on survey/site inspection results prior to the proposed start of work.
4. AB-52 and EO B-10-11 Tribal Consultation will be conducted by CalRecycle.

Wildlife

1. Endangered Species Act. Location of areas needing special measures for protection of animals (or plants) as Threatened, Endangered, Proposed or species under the ESA of 1973 or CESA and Sensitive Species are shown on Figure 5.1-5.9 of the EPP, and discussed in this document. If protection measures prove inadequate, if other such areas are discovered, or if new species are listed on the Endangered Species List, Cal Recycle may either cancel or unilaterally modify this contract to provide additional protection regardless of when such facts become known. Discovery of such areas by either party will be promptly reported to the other party. Limited Operating Periods except when agreed otherwise will be –limited as described within this document and as describe in the Environmental Trigger Matrix (Exhibit 1).
2. Biologist Qualification Check. Qualified Biologists will submit their credentials within 10 business days to US Fish and Wildlife Service.
3. Trash. All trash will be removed at the end of each working day.
4. Non-sensitive Species. If any non-sensitive wildlife comes into the work site:
 - a. Stop work until animal leaves the site.
 - b. If an animal will not leave and is in danger from work or a danger to the crew, contact animal control 530-552-3888.
 - c. Do not remove animal unless unmitigatable circumstances arise (unable to reach animal control/biologists, environmental; or timing of response would cause harm to the species).

5. Limiting Operating Periods (LOPs):

- a. LOPs are designed to reduce potential harm/harassment to wildlife during critical seasons, primarily nesting and their offspring seasons, when animals are most vulnerable to activities (running equipment, timber harvest, and hauling, burning, operating chainsaws/brush cutters) that could result in failed nesting attempts.
- b. If management objectives cannot be met by implementing the LOPs identified, a qualified wildlife biologist will be consulted to determine more specific areas and kinds of activities that may be pursued. The biologist may recommend removing LOPs, if sufficient information is provided by additional surveys or new information arises.
- c. If potential raptor nests, large stick nests, or signs of active denning are observed in or near trees that are designated for removal, the occurrence and location will be reported to a wildlife biologist to determine the need for further review. During marking of the timber sale, potential raptor nest trees will be identified and reported to the CDFW and/or USFWS Biologist(s).
- d. Implement BMPs to ensure water quality standards are met and riparian and upslope conditions are maintained or improved as appropriate. Effectiveness monitoring of all applicable BMPs will occur.
- e. If all other conditions and permits are met, environmental resource monitoring will be implemented to allow work outside of an exclusion zone.

Threatened, Endangered and Sensitive Species

The following lists management requirements for Threatened, Endangered and Sensitive Species (TES):

1. Nesting Birds (Sensitive):

- a. A qualified Biologist will conduct surveys for the nests and habitat of migratory bird species, from February 1 through September 15.
 - i. Biologists upon finding a nest, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
 - ii. The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
 - iii. Nests will be checked weekly (unless work is going to occur nearby, see d. below) to give an update of the nests progress.
- b. If an active nest is found, a buffer of avoidance will be designated with consultation from the Department of Fish and Wildlife.
- c. If an unoccupied nest is found, or in the process of being built within a work area, a biologist, or appointee designated by the biologist will remove the nest and scatter the material on the ground.

- d. A qualified biologist will monitor for nest activity (eggs, hatchlings, fledglings) daily before, during and after work activity near nests.
- e. If a nest needs to be relocated a Migratory Bird Special Purpose Permit (SPRE) will be sought for the relocation, or removal of the nest. A wildlife biologist, Environmental Specialist, RPF, upon conference with the Environmental Unit Leader, will safely remove the nest and take it to the nearest receptive wildlife rehabilitation center, if one cannot be found, the nest will be relocated nearby, out of the way of the project area and monitored to make sure the adults return to their nest.

2. Rare/Sensitive Plant Community:

- a. A qualified biologist/botanist will survey the areas with suitable habitat for rare plants, especially during a particular plants blooming period and map those areas for their avoidance.
- b. The biologist will attempt to work as close as possible to the wetted habitat these species live in, being careful not to disturb wetted soils.
- c. The biologist will flag the site, mark a GPS location, document species.
- d. Surveys for the following species will be conducted during their associated blooming period:

Species	Status	Blooming Period
Butte County Meadowfoam	Endangered	March-May
Greene's tuctoria	Endangered	May-July
Hairy orcutt grass	Endangered	May-September
Hoover's spurge	Threatened	July-September

- e. A limited operating period (LOP) will be established outside of a plant communities blooming period, and/or exclusion zone for ground disturbing activities will be flagged and monitored in areas where rare/endangered plant communities are suspected, known, or discovered.
- f. Vehicles wheel wells will be washed before coming into the Burn Area.
- g. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

3. California Red-legged Frog (CRLF), Sierra Nevada Yellow Legged Frog (SNYLF), Foothill Yellow-legged Frog (FYLF), Western Pond Turtle (WPT), and Hardhead Minnow (HHM):

- a. A qualified Biologist will conduct surveys (year round) for TES species of fish, amphibians and reptiles in or around water courses; including eggs, larvae, and adults, throughout their range.

- i. The biologist will perform a Visual Encounter Survey, entailing standing in one area with binoculars looking for species basking on the bank, hiding amongst plants, rocks, or other refugia, or swimming in the water.
 - ii. The biologist will then walk a transect along the bank, looking in the water and bank for presence, movement, calls, or other signs of the target species.
 - iii. The biologist will walk in a zig-zag pattern for 500 feet, or between the work area and the watercourse looking for species hiding amongst plants, rocks, or other refugia, as well as for the presence of ground squirrel burrows.
 - iv. The biologist will flag the site, mark a GPS location, document species, and take note of any ground squirrel burrows, refugia, which may support dry weather habitat.
 - b. Exclusion area: If a species, or supporting dry season burrow is known, or found near a work site, the area will be marked or fenced off to exclude work from occurring within this area. A buffer of limited work will be established 500 feet around this exclusion area.
 - c. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
 - d. Limited Operating Period (LOP): Limited, or no activity from October 1, or the first wetting rain (more than $\frac{1}{4}$ inch precipitation), until April 15th. From April 15 to October 1, if a weather system resulting in more than $\frac{1}{4}$ inch of precipitation occurs in project area, operations must be suspended within 50 feet of a lake or watercourse until a dry period of 72 hours occurs, unless the Department of Fish and Wildlife determines there will be no effect to amphibians.
 - e. Best Management Practices (BMPs) will be applied that re-distribute soil and debris to pre-treatment landscape contours to minimize sedimentation to creeks.
4. Giant Garter Snake (GGS):
 - a. A qualified Biologist will conduct surveys (year round) for GGS, including eggs and adults, throughout their range, especially from May 1-August 1.
 - i. The biologist will perform a Visual Encounter Survey, entailing standing in one area with binoculars looking for species basking on the bank, hiding amongst plants, rocks, or other refugia.
 - ii. The biologist will then walk a transect along the bank, looking in the water and bank for presence, movement, or other signs of the target species.
 - iii. The biologist will walk in a zig-zag pattern for 200 feet, or between the work area and the watercourse.

- iv. The biologist will flag the site, mark a GPS location, document species, and take note of any animal burrows, refugia which may support dry weather habitat.
 - b. Confine construction activities within 200 feet of GGS aquatic habitat to the period from May 1- October 1.
 - c. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
5. Coastal Horned Lizard (CHL):
- a. A qualified Biologist will conduct surveys (year round) for GGS, including eggs and adults, throughout their range, especially from May 15-July 15.
 - i. The biologist will perform a Visual Encounter Survey, entailing standing in one area with binoculars looking for species hiding amongst plants, burrows, rocks, or other refugia.
 - ii. The biologist will then walk transects along the given parcels, looking for presence, movement, or other signs of the target species.
 - iii. The biologist will flag the site, mark a GPS location, document species, and take note of any animal burrows, refugia which may support habitat.
 - b. Exclusion area: If a species is known, or found near a work site, the area will be marked or fenced off to exclude work from occurring within this area.
 - c. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat. Especially before ground work occurs on a known site with potential for Coastal Horned Lizard.
 - d. Limited Operating Period (LOP): Limited activity from Late May to Early July during mating season.
6. Chinook Salmon Spring Run ESU, Central Valley Steelhead, Green Sturgeon:
- a. A qualified Biologist will conduct Visual Encounter Surveys for TES species of anadromous fish, from August 1 - October 31, walking along the bank of the target watercourse, looking for the given species in the water.
 - b. Exclusion area: Anadromous watercourses will be given a buffer of 150 feet, establishing a maximum WLPZ for Class I Streams.
 - c. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.
 - d. Limited Operating Period (LOP): Limited, or no activity from August 1 until October 31.
 - e. Best Management Practices (BMPs) will be applied that re-distribute soil and debris to pre-treatment landscape contours to minimize sedimentation to creeks.
 - f. Dust will be controlled at all times near anadromous watercourses.
7. Bald Eagle:

- a. Nest Trees/Site: A qualified Biologist will conduct surveys within ¼ mile around work areas with supporting habitat, to determine where the eagle pair are nesting and which roost and perch trees they are utilizing. At a minimum, it is expected that roost/perch trees around Paradise and Concow Lake may be utilized from January 15-September 15 of each year.
 - i. Biologists upon finding a nest, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
 - ii. The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
 - iii. Nests will be checked weekly (unless work is going to occur nearby, see c. below) to give an update of the nests progress.
- b. If nesting status is determined, the LOP would be implemented around the nest stand, or as determined by the USFWS. If any new occurrences of these species are detected during implementation of the project, the USFWS will be notified for further evaluation before continuing operation.
- c. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

8. Northern Spotted Owl:

- a. Seasonal restrictions apply including road access from February 15 through August 15 within the designated activity centers.
- b. A qualified Biologist will conduct surveys within ¼ miles of work areas supporting habitat prior to project implementation.
 - i. Biologists upon finding a nest or activity center, suspecting a nesting site or activity center, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
 - ii. The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
 - iii. Nests will be checked weekly (unless work is going to occur nearby, see f. below) to give an update of the nests progress.
- c. If owls are located an LOP (March 1 through August 15) will be required for treatment units where activity centers (nests, pair, young) have been located within ¼ mile of the treatment unit.
- d. If owls are located the LOP may be added or modified for this project by the district wildlife biologist. Stand prescriptions may be adjusted as well (an example might be to have no harvest around the nest tree, etc.).
- e. A new Protected Activity Center (PAC) and Home Range Core Area (HRCA) will be created if a new territory is discovered.
- f. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

9. Northern Goshawk:

- a. A qualified Biologist will conduct surveys within ¼ miles around work areas prior to project implementation from February 15 to September 15.
 - i. Biologists upon finding a nest, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
 - ii. The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
 - iii. Nests will be checked weekly (unless work is going to occur nearby, see c. below) to give an update of the nests progress.
- b. If goshawks are located a LOP (March 1 through September 15) would be required. The LOP may be added or modified for this project by the USFWS.
- c. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

10. Burrowing Owl and Peregrine Falcon:

- a. A qualified Biologist will conduct surveys within 500 feet of the work area, prior to project implementation from February 15 to September 15.
 - i. Biologists upon finding a nest or occupied ground squirrel burrow, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
 - ii. The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
 - iii. Nests will be checked weekly (unless work is going to occur nearby, see d. below) to give an update of the nests progress.
- b. If birds are located an LOP (February 15 through September 15) would be required. The LOP may be added or modified for this project by the USFWS.
- c. The area will be marked for avoidance within 500 feet.
- d. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

11. California Blackrail:

- a. A qualified Biologist will conduct surveys within 500 feet of work areas, within wetland areas prior to project implementation from March 1- September 15.
 - i. Biologists upon finding a nest, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
 - ii. The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.

- iii. Nests will be checked weekly (unless work is going to occur nearby, see d. below) to give an update of the nests progress.
- b. If goshawks are located a LOP (March 1 through September 15) would be required. The LOP may be added or modified for this project by the USFWS.
- c. The area will be marked for avoidance within 500 feet.
- d. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

12. Tricolored Blackbird:

- a. A qualified Biologist will conduct surveys within 500 feet of work areas, within wetland areas prior to project implementation from February 1-September 15.
 - i. Biologists upon finding a nest colony, suspecting a nesting site, or being informed of a nesting site, will observe the nest and surrounding area for nesting behavior for a total of 15 minutes.
 - ii. The biologist will flag the site, mark a GPS location, document species, and if verifiable, give a status of the nests progress.
 - iii. Nests will be checked weekly (unless work is going to occur nearby, see c. below) to give an update of the nests progress.
- b. If tricolored blackbirds are located a LOP (February 1 through September 15) would be required around the nesting colony, until all nests are full-fledged. The LOP may be added or modified for this project by the USFWS.
- c. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

13. Pallid Bat and Western Red Bat:

- a. A qualified Biologist will conduct surveys of roosting habitat within 500 feet of work areas, prior to project implementation, from May 15 – August 15, looking for trees, buildings, or rock outcroppings that may hold the species, looking for droppings, presence in a cavity, or listening for calls.
- b. If a roost is found, project activities will be modified to avoid impacts to bat species or a LOP (no activity May 15 to August 15, or as otherwise determined) may be applied during the breeding season.
- c. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

14. Valley Elderberry Longhorn Beetle:

- a. A qualified Biologist will conduct surveys of within 500 feet of work areas for presence of elderberry shrubs with at least one stem measuring one, or more inches in diameter. This area will be mapped for avoidance.

- b. If an elderberry tree is found, an exclusion area will be designated and flagged for avoidance.
- c. No elderberry trees will be taken during the course of operations.
- d. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

15. Vernal Pools (Conservancy/ Vernal Pool Fairy/Tadpole Shrimp):

- a. A qualified Biologist will conduct surveys of all wetlands within 500 feet of work areas prior to project implementation, especially during the wet season, October 15-June 1.
- b. If found, an Environmental Specialist, or designated contracted specialist will perform a wetland delineation to establish the boundaries of the wetland.
- c. This boundary will have an exclusion fence established for avoidance and a WLPZ of 100 feet will be established.
- d. The WLPZ will be in effect October 15 – June 1, or until the vernal pool dries.
- e. An ELZ of 50 feet will be established and exclusion fencing maintained the rest of the year. No operations, or driving will occur through a vernal pool.
- g. A qualified biologist will monitor for presence daily before, during and after work activity near suitable habitat.

DRAFT

EXHIBIT 1. Environmental Trigger Matrix

DRAFT

EXHIBIT 1. Environmental Trigger Matrix

Environmental Concern	Agency	Source	If found	Planning	Avoidance	Limited Operating Period	Search Proximity to Work Area
WLPZ Encroachment CCR 956.5, Title 14 (Forest Practice Rules)	CalFire/Water Boards	Assessment team	Determined by slope and stream class, GPS and flagged by RPF (designee)	Mapped and given designation for BMP's following Table 3 of the ECP.	Negotiations with CalFire Director. Use of ECP Table 3. Equipment limitation zone established, unless completely restricted.	Year round	See ECP Table 2.
Animals (Non-sensitive)	Animal Control	In-field observation	Stop work until animal leaves the site. If animal will not leave and is in danger from work/a danger to the crew, contact animal control 530-552-3888.	Log occurrence	Do not remove animal unless unmitigable circumstances arise.	Year round	None
Cultural Resource (FEMA)	FEMA/SHPO	FEMA Archaeologist	Report to IMT	FEMA Archaeologist 48-hours advance	Archaeologist monitoring and BMPs	Year round	FEMA Controlled
Tribal Resource (FEMA)	FEMA/TIPO	FEMA/Tribes	Report to IMT	FEMA/Tribes 48-hours advance	Tribal Monitor/BMPs	Year round	FEMA Controlled
Valley Elderberry Longhorn Beetle	CDFW/USFWS	CNDDDB/in-field observation	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	Avoid take of elderberry trees; flag for avoidance.	Year round	A qualified Biologist will survey the areas within 500 feet of the work area for suitable elderberry shrubs and map those elderberry shrubs for their avoidance before work occurs.
Pallid Bat/Western Bat	CDFW/USFWS	CNDDDB/in-field observation	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	Avoid take of inhabited tree cavities; working near roosts.	May 15 - August 15	A qualified Biologist will survey the areas with suitable roosting trees or other cavity for these bat species and map those areas for their avoidance.
Rare/Sensitive Plant Community	CDFW/USFWS	CNDDDB/in-field Observation	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	Avoidance especially during grow/bloom season; monitoring or proposed mitigation.	Blooming period of particular plant community	A qualified Biologist will survey within 500 feet of the work area for presence of rare plant species during their blooming period and map those areas for avoidance before work occurs.
Nesting Birds (Non-sensitive)	CDFW/USFWS	In-house/CNDDDB/in-field observation	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	Avoid nesting tree (LOP within proximity) within designated distance. Weekly monitoring until fledged. Wait for legality of take of nests (Waiver). If inactive nest observed, remove nest and scatter material.	Feb. 15- September 15, Egg to Fully Fledged.	A qualified Biologist will survey within 500 feet around the work area, during nesting season and map those areas for avoidance before work occurs. If unoccupied or nest building observed, remove nest and scatter material.
Bald Eagle	CDFW/USFWS	In-house /CNDDDB/in-field observation	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	Avoid within USFWS designated buffer. Weekly monitoring until fledged. Consult USFWS.	Feb. 15- September 15, Egg to Fully Fledged.	A qualified Biologist will survey within 1/4 miles around Concow and Paradise Lake near work areas for the nest pairs during their nesting season and map those areas for avoidance before work occurs.

EXHIBIT 1. Environmental Trigger Matrix

Spotted Owl	CDFW/USFWS	CNDDB/in-field observation/FEMA	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance (activity center/nests)	LOP within activity center and nests. Weekly monitoring until fledged. Consult USFWS.	March 1 - August 15. Egg to Fully Fledged.	A qualified Biologist will survey within 1/4 miles around nesting and activity center sites, near work areas during their nesting season and map those areas for avoidance before work occurs.
Northern Goshawk	CDFW/USFWS	CNDDB	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	LOP within activity center and nests. Weekly monitoring until fledged. Consult USFWS.	March 1 - September 15. Egg to Fully Fledged.	A qualified Biologist will survey within 1/4 miles around nesting and activity center sites, near work areas during their nesting season and map those areas for avoidance before work occurs.
Peregrine Falcon/Burrowing Owl	CDFW/USFWS	CNDDB	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	LOP around nests. Weekly monitoring until fledged. Consult USFWS. 500 feet of avoidance.	Feb. 1 - September 15. Egg to Fully Fledged.	A qualified Biologist will survey within 500 feet of the work area for nests and map those areas for avoidance before work occurs.
CA Blackrail	CDFW/USFWS	CNDDB	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	LOP around nests. Weekly monitoring until fledged. Consult USFWS. 500 feet of avoidance.	Feb. 1 - September 15. Egg to Fully Fledged.	A qualified Biologist will survey within 500 feet of the work area for nests in wetlands and map those areas for avoidance before work occurs.
Tricolored Blackbird	CDFW/USFWS	CNDDB	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	LOP around nesting colony. Weekly monitoring until fledged. Consult USFWS.	Feb. 1 - September 15. Egg to Fully Fledged.	A qualified Biologist will survey within 500 feet of the work area for wetlands and grain fields with nests and map those areas for avoidance before work occurs.
California Red-Legged Frog	CDFW/USFWS	In-house/CNDDB/in-field observation	Report to Environmental Specialist, GPS, Flag for avoidance	Mapped for avoidance	Avoid October 1-April 15; Suspend operations within proximity of water bodies outside of LOP 24 hours before and 72 hours after a rain event more than 1/4 inch. Perform surveys for presence. Completely avoid all areas with known presence and in-field observation until USFWS BO is secured by FEMA. Outside of LOP flag all ground squirrel burrows for avoidance from heavy equipment, or ground disturbance.	Avoid October 1-April 15; Suspend operations with 300 feet of water bodies outside of LOP 24 hours before and 72 hours after a rain event more than 1/4 inch.	A qualified Biologist will survey within 500 feet of the work area within 500 feet between waterbodies connected from Critical Habitat and work areas. Flag all ground squirrel burrows for avoidance from heavy equipment, or ground disturbance.

EXHIBIT 1. Environmental Trigger Matrix

<p>Foothill Yellow Legged Frog/ Hardhead Minnow/ Western Pond Turtle/Western Spadefoot Toad</p>	<p>CDFW/USFWS</p>	<p>In-house/CNDDDB/in-field observation</p>	<p>Report to Environmental Specialist, GPS, Flag for avoidance</p>	<p>Mapped for avoidance</p>	<p>Avoid October 1-April 15; Suspend operations with proximity of water bodies outside of LOP 24 hours before and 72 hours after a rain event more than 1/4 inch (Pending Waiver with Incidental Take). Perform surveys for presence daily within close proximity to active operations. Completely avoid all areas with known presence and in-field observation until CNRA Waiver is obtained. After avoidance season lower to 50 feet.</p>	<p>Avoid October 1-April 15; Suspend operations with 300 feet of water bodies outside of LOP 24 hours before and 72 hours after a rain event more than 1/4 inch.</p> <p>A qualified Biologist will survey within 500 feet of the work area for suitable habitat 500 feet between waterbodies connected from CNDDDB and work areas.</p>
<p>Coastal Horned Lizard</p>	<p>CDFW</p>	<p>CNDDDB/in-field observation</p>	<p>Report to Environmental Specialist, GPS, Flag for avoidance</p>	<p>Mapped for avoidance</p>	<p>Avoid early May - Early July.</p>	<p>A qualified Biologist will survey 500 feet in surrounding areas and check entire parcel with transects.</p>
<p>Giant garter snake (GGS)</p>	<p>USFWS</p>	<p>Range maps/field observations</p>	<p>Report to Environmental Specialist, GPS, Flag for avoidance</p>	<p>Giant garter snake habitat (only in lower south-west portion of the project area), Mapped for avoidance.</p>	<p>October 2- April 30</p>	<p>200 feet from aquatic resource with suitable habitat from the work area</p>
<p>Chinook Salmon /Steelhead</p>	<p>CDFW/NMFS</p>	<p>In-house/CNDDDB/in-field observation</p>	<p>Report to Environmental Specialist, GPS, Flag for avoidance</p>	<p>Mapped for avoidance</p>	<p>Avoid in-water activities August 1 - October 31; Suspend operations within 300 feet of water bodies outside of LOP 24 hours before and after a rain event more than 1/4 inch. Minimize dust. Completely avoid all areas with known presence and in-field observation until NMFS BO is secured by FEMA.</p>	<p>A qualified Biologist will survey adjacent parcels connected to anadromous streams within 500 feet.</p>

EXHIBIT 1. Environmental Trigger Matrix

Vernal Pools (Conservancy/ Vernal Pool Fairy/Tadpole Shrimp)	CDFW/USFWS	In-house/CNDDB/in-field observation	Report to Environmental Specialist, GPS, Flag for avoidance	Delineate wetland, perform aquatic assessment, and apply Equipment Limitation Zone	Avoid with an WLPZ of 100 feet, incorporate sediment control, and exclusion fencing October 15 - June 1 (until wetted area dries. Lift WLPZ and maintain a 50 foot ELZ and maintain exclusion fencing the rest of the year.	October 15 - June 1	A qualified Biologist will survey for vernal pools within 500 feet from resource and work areas.
Work below OHWM (bridge, crossings, etc)	USACE/NMFS/Water Boards	In-house/in-field observation	Report to Environmental Specialist, GPS, Flag for avoidance	Apply for CWA Section 404 and 401 Permit	Do not begin work without a permit.	Permits may take a two-week turn around once sent to USACE (legally have 45 days).	None

USFWS Information for Planning and Consultation (IPaC) Official Species List

United States Department of the Interior

FISH AND WILDLIFE SERVICE
Sacramento Fish And Wildlife Office
Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846
Phone: (916) 414-6600 Fax: (916) 414-6713

In Reply Refer To:

March 04, 2020

Consultation Code: 08ESMF00-2020-SLI-1246

Event Code: 08ESMF00-2020-E-03982

Project Name: FEMA-4407-DR-CA; Hazard Tree Removal

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, under the jurisdiction of the U.S. Fish and Wildlife Service (Service) that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the Service under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Please follow the link below to see if your proposed project has the potential to affect other species or their habitats under the jurisdiction of the National Marine Fisheries Service:

http://www.nwr.noaa.gov/protected_species/species_list/species_lists.html

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2) (c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF>

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (<http://www.fws.gov/windenergy/>) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm>; <http://www.towerkill.com>; and <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Project Summary

Consultation Code: 08ESMF00-2020-SLI-1246

Event Code: 08ESMF00-2020-E-03982

Project Name: FEMA-4407-DR-CA; Hazard Tree Removal

Project Type: Federal Grant / Loan Related

Project Description: Remove hazard trees from areas adjacent to roads within the Camp Fire burn area.

Project Location:

Approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/place/39.7458931134218N121.57322779282914W>

Counties: Butte, CA | Plumas, CA

Endangered Species Act Species

There is a total of 12 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

-
1. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Reptiles

NAME	STATUS
Giant Garter Snake <i>Thamnophis gigas</i> No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/4482	Threatened

Amphibians

NAME	STATUS
California Red-legged Frog <i>Rana draytonii</i> There is final critical habitat for this species. Your location overlaps the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/2891 Species survey guidelines: https://ecos.fws.gov/ipac/guideline/survey/population/205/office/11420.pdf	Threatened
Sierra Nevada Yellow-legged Frog <i>Rana sierrae</i> There is final critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/9529	Endangered

Fishes

NAME	STATUS
Delta Smelt <i>Hypomesus transpacificus</i> There is final critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/321	Threatened

Insects

NAME	STATUS
Valley Elderberry Longhorn Beetle <i>Desmocerus californicus dimorphus</i> There is final critical habitat for this species. Your location is outside the critical habitat. Attachment D

**Federally Listed Species with Potential To Occur
in the Action Area**

Table D-1. Federally Listed Species with Potential to Occur and the Potential to Affect in the Action Area.

Scientific Name	Common Name	Listing Status	Critical Habitat / Recovery Plan	General Habitat	Potential to Occur in Action Area	Potential to Affect
Amphibians						
Rana sierrae	Sierra Nevada yellow-legged frog	FE	No critical habitat for this species occurs in the Action Area	Typical habitat includes lakes, ponds, marshes, meadows, and streams at high elevations— typically ranging from about 4,500 to 12,000 feet but can occur as low as about 3,500 feet in the northern portions of their range. Sierra Nevada yellow-legged frogs are highly aquatic, and adults can be found sitting on rocks along the shoreline, where there is little or no vegetation. They are rarely found more than 3.3 feet from water.	Low Potential to Occur - A small portion of the Action Area occurs within the elevation range associated with the species (>3,500 feet) where this species may occur. The nearest CNDDDB record of this species is approximately 4 miles NE of the Action Area. At lower elevations, this species is found in rocky streambeds or wet meadows surrounded by coniferous forest. There is one such stream that crosses the Action Area near the unincorporated community of Kister. This area is not connected by appropriate habitats to nearby known populations, which likely have low numbers (Brown et al. 2014).	No Effect - Although this species has low potential to occur in the Action Area, there is only one location that is within the species elevation range that contains suitable aquatic habitat. This species is found in small numbers where it does occur, the Action Area is not within dispersal range of a known population, there are no known populations in Butte County, and the Action Area is not connected hydrologically to any known populations. Suitable habitats for the species are often treeless (lake, meadows), and the removal of hazard trees is not expected to affect the SNYLF.
Rana draytonii	California red-legged frog	FT	Critical habitat for this species occurs in the Action Area	Occurs in lowlands and foothills in deeper pools and streams, usually with emergent wetland vegetation. Extirpated from the Sacramento Valley floor. Requires 11-20 weeks of permanent water for larval development. Adults and sub-adults can aestivate in small mammal burrows and moist leaf litter.	<p>Potential to Occur - There are only two occurrences in Butte County, which are 1.1 miles NE of the Action Area in Plumas National Forest. These are the most northern occurrences of the species in the Sierra Nevada foothills. This is one of six known extant Sierra Foothill populations. The species has potential to occur in the Action Area near Poe Powerhouse Road. Unsurveyed suitable habitat for the species is present in the Action Area and may support the species</p> <p>Designated Critical Habitat for this species is adjacent to the Action Area in this location. There is potential aquatic and upland habitat that may support undiscovered populations of this species throughout the Action Area.</p>	May Affect, but is Not Likely to Adversely Affect - The proposed project includes vegetation removal, which may affect potential aquatic breeding, non-breeding and upland habitat for this species throughout the Action Area. Critical habitat overlaps a portion of the Action Area; physical and biological features (PBFs) maybe present and may be affected by removal of the hazard trees.
Reptiles						
Thamnophis gigas	Giant garter snake	FT	No critical habitat has been proposed or designated for this species.	Found primarily in marshes, sloughs, drainage canals, and irrigation ditches, especially around rice fields, and occasionally in slow-moving creeks, in the Northern Central Valley. Prefers locations with vegetation close to the water for	Low Potential to Occur – The majority of aquatic habitat within the Action Area resides in high-gradient, high-flow streams, which are unsuitable for GGS; but a limited amount of potentially suitable habitat may occur where streams begin to enter the valley floor near Highway 99. Butte Creek is the only stream	No Effect - Aquatic habitat is limited to a few small locations along Butte Creek and intermittent streams that cross under Highway 99. Overall, the Action Area is not expected to support GGS; intermittent streams in the vicinity of Highway 99 do not appear to contain hazard trees. Typical

ATTACHMENT D

Federally Listed Species with Potential to Occur in the Action Area

Scientific Name	Common Name	Listing Status	Critical Habitat / Recovery Plan	General Habitat	Potential to Occur in Action Area	Potential to Affect
				basking. Highly aquatic, and active during daylight, and at night in hot weather.	that contains perennial aquatic and adjacent wetland habitat that overlaps the Action Area; but these features are upstream of the GGS Predicted Range documented by CDFW (2019). Little Chico Creek is also a perennial stream, but it overlaps the Action Area higher up in the watershed and is not expected to provide suitable habitat. Several small intermittent streams pass through the Action Area under Highway 99 and may occasionally support aquatic habitat into the summer; but this part of the Action Area is primarily void of trees. The closest CNDDDB occurrences are over 5 miles southwest of the Action Area in the middle of rice field habitat, and per Eric Hansen (pers. comm.), GGS has also been detected using eDNA in Gold Run, which is approximately 4 miles southeast of the Action Area and located between Highway 99 and Highway 149.	habitats for the species contain little to no trees and flows in Butte Creek are too high to support the species; therefore, it is unlikely that the hazard tree removal would occur within the species habitat. Hazard riparian trees along Butte Creek would be removed but given the low potential for the species to occur, adverse effects are not anticipated.
Invertebrates						
Branchinecta conservatio	Conservancy fairy Shrimp	FE	No critical habitat for this species occurs in the Action Area	Inhabits large, clay-bottomed, cool-water vernal pools of the Central Valley with moderately turbid water. The pools generally last until June.	No potential to occur - The nearest CNDDDB record of this species is approximately 9 miles NW of the Action Area. This species has a limited number of known populations and has not been detected in vernal pool complexes closer to the Action Area. The Action Area does not contain suitable large, or long-duration vernal pool habitat for this species.	No Effect
Branchinecta lynchi	Vernal pool fairy shrimp	FT	Action Area overlaps with DCH for this species	Occurs in vernal pools or vernal pool-like habitats; the species does not occur in rivers, springs, or other permanent bodies of water. Occurs only in cool-water vernal pools of 50° F or cooler; typically, from 33 to 4,000 feet elevation.	Potential to Occur – Potential vernal pool habitat and other ephemeral features that may support this species are present in the western portion of the Action Area, at lower elevations along the Highway 99 corridor. Critical habitat for this species is located on the edge of the burn area, just east of Chico, and overlaps a small portion of the Action Area. The nearest CNDDDB record is approximately 3 miles south of the southwestern-most part of the Action Area, at a vernal pool complex located just north of the Highway 149/70 junction.	No Effect – There are no hazard trees adjacent to vernal pool habitat; therefore, the proposed project would have no potential to result in effects on the species or on the physical and biological features associated with designated critical habitat.

ATTACHMENT D

Federally Listed Species with Potential to Occur in the Action Area

Scientific Name	Common Name	Listing Status	Critical Habitat / Recovery Plan	General Habitat	Potential to Occur in Action Area	Potential to Affect
Desmocerus californicus dimorphus	Valley elderberry longhorn beetle	FT	No critical habitat for this species occurs in the Action Area	Found throughout the Central Valley and portions of the Sierra foothills in riparian habitat. Elderberry shrubs (Sambucus spp.) are the obligate larval host plants for the species. Species occurs in habitat below 500-feet in elevation.	Potential to Occur - Elderberry shrubs were observed within the Action Area along Honey Run Rd and Little Butte Creek during the reconnaissance site visit. One CNDDDB record exists in the northern portion of the burn area, along the Feather River on National Forest lands – however, it has since been determined that this occurrence is outside the species elevation range and reflects a different species (subspecies) of the beetle. Elderberry shrubs located below 500-feet, such as those along lower reaches of Butte Creek, and other riparian and mesic uplands sites in the species range within the Action Area may support the federally listed species.	May Affect, and is Likely to Adversely Affect - The proposed project includes removal of hazard trees below the species elevation range and within suitable habitats which may be near elderberry shrubs, the host plant of this species.
Lepidurus packardi	Vernal pool tadpole shrimp	FE	Action Area overlaps with DCH for this species	Occur in a wide variety of seasonal habitats, including vernal pools, clay flats, alkaline pools, ephemeral stock tanks, roadside ditches, and road ruts, throughout the Central Valley.	Potential to Occur - Potential vernal pool habitat and other ephemeral features that may support this species are present in lower elevations parts of the western portion of the burn area, just east of the Highway 99 corridor. There are several CNDDDB occurrence of this species from the gently sloping lands near Highway 99. Critical habitat for this species is present in the southern portion of the burn area, north of the Highway 99/149 junction, and just east of Chico.	No Effect - There are no hazard trees adjacent to vernal pool habitat; therefore, the proposed project would have no potential to result in effects on the species or on the physical and biological features associated with designated critical habitat.
Birds						
Coccyzus americanus	Yellow-billed cuckoo	FT	No critical habitat for this species occurs in the Action Area	Found in deciduous riparian woodlands, with dense cottonwood and willow, and sometimes tamarisk.	No Potential to Occur – The Action Area does not provide suitable riparian habitat for this species. There is one CNDDDB occurrence approximately 7 miles west of the Action Area.	No Effect
Vireo bellii pusillus	Least Bell's vireo	FE	No critical habitat for this species occurs in the Action Area	Nests and forages in thick deciduous riparian woodlands and scrub.	No Potential to Occur – The Action Area does not provide suitable riparian habitat for this species. There is one CNDDDB occurrence approximately 7 miles west of the Action Area.	No Effect
Fish						
Hypomesus transpacificus	Delta smelt	FT	No critical habitat for this species occurs	Restricted to the Sacramento-San Joaquin River Delta and upper Portions of the San Francisco estuary, including Suisun Marsh.	No Potential to Occur – The Action Area is outside of the species known range.	No Effect

ATTACHMENT D

Federally Listed Species with Potential to Occur in the Action Area

Scientific Name	Common Name	Listing Status	Critical Habitat / Recovery Plan	General Habitat	Potential to Occur in Action Area	Potential to Affect
in the Action Area						
Plants						
Chamaesyce hooveri	Hoover's spurge	FT	Action Area overlaps with DCH for this species	Vernal pools of the northeastern Sacramento Valley vernal pool region in Tehema and Butte Counties. Elevation range 80 to 820 feet.	Potential to Occur - Potential vernal pool habitat and other ephemeral features that may support this species are present at lower elevations in the western portion of the burn area. Critical habitat for this species is located on the edge of the burn area, along HWY 99, north of the intersection with Durham Dayton Highway, and overlaps a small portion of the Action Area. There is a CNDDDB occurrence approximately 0.2 miles from the Action Area, adjacent to Hwy 99.	No Effect - There are no hazard trees adjacent to vernal pool habitat; therefore, the proposed project would have no potential to affect the species or on the physical and biological features associated with designated critical habitat.
Limnanthes floccosa ssp. californica	Butte County Meadowfoam	FE	Action Area overlaps with DCH for this species.	Valley and foothill grassland (mesic), vernal pools, 150 to 3,050 feet elevation. Restricted to a narrow 25-mile strip along the eastern flank of the Sacramento Valley from central Butte County to the northern portion of the City of Chico.	Potential to Occur - Potential vernal pool habitat and other ephemeral features that may support this species are present at lower elevations in the western portion of the burn area. There are CNDDDB occurrences nearby, including along the eastern periphery of the City of Chico and just north of the Hwy 149/70 junction. The closest record is a non-specific record east of Chico between Skyway Rd and Deer Creek Hwy. This record is approximately 0.5 miles from the Action Area. The Action Area overlaps with a very small portion of DCH for this species along Little Chico Creek. However, this area is on the edge of this unit of DCH and does not appear to contain any hazard trees.	No Effect - There are no hazard trees adjacent to vernal pool habitat; therefore, the proposed project would have no potential to affect the species or on the physical and biological features associated with designated critical habitat.
Orcuttia pilosa	Hairy orcutt grass	FE	Action Area overlaps with DCH for this species	Vernal pools of the northeastern Sacramento Valley vernal pool region in Tehema and Butte Counties. Elevation range 150 to 656 feet.	Potential to Occur – The species is not expected to occur in the Action Area. The nearest CNDDDB record of this species is over 17 miles NW of the Action Area. This species is only known from several locations, none of which are near the Action Area. However, critical habitat for this species is located on the edge of the burn area, along HWY 99, north of the intersection with Durham Dayton Highway, and overlaps a small portion of the Action Area.	No Effect. The species is not expected to be present in the Action Area. There are no hazard trees adjacent to vernal pool habitat; therefore, the proposed project would have no potential to affect the species or on the physical and biological features associated with designated critical habitat.

ATTACHMENT D

Federally Listed Species with Potential to Occur in the Action Area

Scientific Name	Common Name	Listing Status	Critical Habitat / Recovery Plan	General Habitat	Potential to Occur in Action Area	Potential to Affect
Tuctoria greenei	Greene's tuctoria	FE	Action Area overlaps with DCH for this species	Occurs in and is dependent on vernal pool habitat, often in more shallow pools or at shallow margins of deeper pools. Known occurrences are documented around the northern and southern Central Valley and the Modoc Plateau. The blooming period extends from May through July.	Potential to Occur - Potential vernal pool habitat and other ephemeral features that may support this species are present at lower elevations in the western portion of the burn area. Critical habitat for this species is located on the edge of the burn area, along HWY 99, north of the intersection with Durham Dayton Highway, and overlaps a small portion of the Action Area. There are CNDDDB occurrences nearby, including along the Hwy 99 corridor and north of Chico. The closest record is adjacent to Hwy 99, less than 0.1 miles from the Action Area.	No Effect - There are no hazard trees adjacent to vernal pool habitat; therefore, the proposed project would have no potential to affect the species or on the physical and biological features associated with designated critical habitat.

Attachment E

Project Best Management Practices, General Avoidance and Minimization Measures, and Species-Specific Conservation Measures

FEMA-4407-DR-CA, Hazard Tree Removal Program

Applicable Project BMPs, General Avoidance and Minimization Measures, and Species-Specific Conservation Measures

CalOES and CalRecycle have identified measures that would be implemented to ensure that delivery of disaster response and recovery activities are compliant with applicable federal and state environmental laws. The measures are identified in the Environmental Protection Plan (EPP) and Environmental Compliance Plan (ECP) and were developed to supplement the Tree Removal Operations Plan (TROP) to address the hazards associated with removing wildfire-impacted trees in the Camp Fire Burn Scar Area on non-federal land. These measures are referred to in this document as project BMPs and have been incorporated into the federal action. In many instances these project BMPs provide the same, or similar coverage and requirements as the general Avoidance and Minimization Measures required under the USFWS Programmatic Biological Opinion (PBO) to FEMA.

The following PBO general Avoidance and Minimization Measures will be implemented:

- GEN AMM-1 Erosion and Sedimentation Prevention Measures (also see ECP project BMPs under Sediment Controls).
- GEN AMM-3 Dust Control Measures (also see ECP project BMPs under SWPPP).
- GEN AMM-4 Spill Control Planning (also see ECP project BMPs under SWPPP).
- GEN AMM-5 Spill Prevention and Pollution Control Measures (also see ECP project BMPs under SWPPP).
- GEN AMM-6 Equipment Inspection and Maintenance (also see ECP project BMPs under SWPPP).
- GEN AMM-7 Fueling Activities (also see ECP project BMPs under SWPPP).
- GEN AMM-8 Equipment Staging (also see ECP project BMPs under Equipment Restrictions, Vegetation Removal, Watercourse Buffer, etc.).
- GEN AMM-9 Materials Storage and Disposal (also see ECP project BMPs under SWPPP and Sediment Control).
- GEN AMM-10 Fire Prevention (also see ECP project BMPs under Vegetation Removal).
- GEN AMM-11 Waste Management (also see ECP project BMPs under SWPPP, and Wildlife).
- GEN AMM-13 Work Area Designation to Minimize Disturbance (also see ECP project BMPs under Watercourse Buffer)
- GEN AMM-14 Access Routes and Staging Areas (also see ECP project BMPs under Vegetation Removal, SWPPP, Watercourse Crossings, and Log Deck).
- GEN AMM-15 Environmental Awareness Training for Construction Personnel.
- GEN AMM-16 Biological Monitor (also see ECP project BMPs under Introduction, Stop Work Authority, and Threatened, Endangered and Sensitive Species)
- GEN AMM-18 Entrapment Prevention (also see ECP project BMPs under Stop Work Authority. Note that no vertically sided holes or trenches would be constructed as part of the Proposed Project).
- GEN AMM-19 Water Quality Protection (also see ECP project BMPs under Water Quality).
- GEN AMM-20 Revegetation of Stream Banks (also see ECP project BMPs under Water Quality, Watercourse Buffer, Sediment Control).
- GEN AMM-21 Restoration of Upland Areas to Pre-Project Conditions (also see ECP project BMPs under Sediment Control).

- GEN AMM-22 Invasive Aquatic Species (also see ECP project BMPs under Watercourse Crossings).
- GEN AMM-23 Work below Mean Higher High Water (also see ECP project BMPs under Watercourse Crossings and Watercourse Buffer).

The following general AMMs identified in the PBO are not applicable to the Proposed Project:

- GEN AMM-2 Bank Stabilization. Not applicable; no bank stabilization activities are anticipated as part of the Proposed Project.
- GEN AMM-12 Work Involving Boats and Barges Not applicable; the proposed project would not require the use of boats or barges.
- GEN AMM-17 Daily Work Hours. Not applicable; no nighttime work is anticipated. Work during weekends is expected; however, due to the show duration of activities within a given area is expected to be less than 14 days.
- GEN AMM-24 Avoidance of Submerged Vegetation. Not applicable; the Proposed Project would not remove submerged vegetation.
- GEN AMM-25 Minimization of Shading by Overwater Structures. Not applicable; the Proposed Project does not include permanent infrastructure over waters.
- GEN AMM-26 Water Diversion and Dewatering. Not applicable; no diversion or dewatering are anticipated as part of the Proposed Project.

The EPP (Attachment B.3) and ECP (Attachment B.4) also identify project BMPs that will be implemented to reduce effects on the VELB and CRLF. These measures have been incorporated into the proposed project and will be supplemented by the applicable specific-specific Conservation Measures required by the PBO. In some instances, these project BMPs overlap with and are consistent with the PBO species-species Conservation Measures. To aide in compliance effects, in some instances the PBO species-specific Conservation Measures have been revised to include relevant project BMPs, and in other instances, minor revisions to the text to provide project-specific guidance have been incorporated into the measures. These measures are identified with "Revised". Measures that have been unaltered are presented by title only.

Valley Elderberry Longhorn Beetle (VELB)

For following species-specific Conservation Measures for VELB will be implemented:

- Revised VELB-1 Surveys and Mapping or Flagging (formerly Fencing). A qualified Biologist will conduct surveys within 50 meters (165 feet) of work areas for presence of elderberry shrubs with at least one stem measuring one, or more inches in diameter. Identified shrubs will be flagged and or mapped. The qualified Biologist will record the results of elderberry shrub surveys.
- Revised VELB-2 Avoidance Area. Project activities that may damage or kill an elderberry shrub (e.g., hazard tree removal, temporary access roads, etc.) will be avoided and minimized to the extent feasible. Contractors will select the hazard tree removal method that avoids or reduces potential for effects of the identified shrub,(e.g., use of crane) and will attempt to fell the hazard tree at least 6 meters (20 feet) away from the drip-line of the shrub to the extent practicable. Similarly, other project activities, (e.g., temporary access roads) will also avoid or reduce

potential effects on identified elderberry shrubs through route adjustments, equipment selection, and other planning or engineering means, to the extent practicable.

- VELB-3 Worker Education.
- Revised VELB-4 Biological Monitor. A SFWO-approved biologist will monitor activities conducted within 50 meters (165 feet) of suitable elderberry shrubs (stems measured at ground surface ≥ 1 -inch in diameter) have been identified to assure that all avoidance and minimization measures are implemented. Monitoring will be conducted before, during and after work activities occur in proximity to the elderberry shrubs, in coordination between the contractor and the SFWO-approved biologist.
- Revised VELB-5 Seasonal Avoidance. To the extent practicable, all activities that could occur within 50 meters (165 feet) of a suitable elderberry shrub (stems measured at ground surface ≥ 1 -inch in diameter) will be conducted between August and February, outside of the flight season of the valley elderberry longhorn beetle, which occurs from March to July, coinciding with the bloom period of the elderberry plant.
- Revised VELB-6 Elderberry Shrub Avoidance and Trimming (formerly Trimming). To the maximum extent practicable, no suitable elderberry shrubs will be taken during operations (Revised VELB-2, Avoidance; and Revised VELB-5 Seasonal Avoidance). However, if take of suitable elderberry shrubs is unavoidable, then certain project operations may require trimming elderberry shrubs. Trimming may remove or destroy VELB eggs or larvae and may reduce the health and vigor of the elderberry shrub. If trimming is necessary, then it will take place between November and February and to the extent practicable will avoid the removal of any suitable branches or stems that are ≥ 1 inch in diameter. Measures to address regular or large-scale maintenance (trimming) will be established in consultation with the SFWO.
- VELB-9 Erosion Control and Revegetation.

The following species-specific Conservation Measures for VELB identified in the PBO are not applicable to the Proposed Project:

- VELB-7. Limitation on Chemical Use. Not applicable; herbicides are not proposed as part of the Proposed Project.
- VELB-8. Mowing. Not applicable, the Proposed Project does not include mechanical weed removal.
- VELB-10 Transplanting. Not applicable, the Proposed Project would not likely result in ground disturbance that would affect the root system of suitable elderberry
- VELB-11 Impacts to Individual Shrubs. Not applicable; the Proposed Project will have incidental take authorization for the species, and surveys for species will be conducted as part of Revised VELB-1: Surveys and Mapping or Flagging.
- VELB-12 Other Activities. Not applicable; the Proposed Project is not restoration, floodway maintenance, or other large-scale habitat modification activity.

California Red-Legged Frog (CRLF)

For following species-specific Conservation Measures for CRLF will be implemented:

- Revised CRLF-1 Biological Monitor. If activities occur in or within 100 feet of suitable aquatic habitat for the CRLF, then a SFWO-approved biologist(s) will be onsite during all hazard tree removal and/or ground-disturbance activities.
- Revised CRLF-2 Seasonal Avoidance. Activities within aquatic habitat are not anticipated. However, in the unlikely event that activities must occur within suitable frog aquatic habitat, these will be conducted during the dry season, typically between July 15 and October 15. Work within suitable aquatic habitat may begin prior to July 15 if the habitat has been dry for a minimum of 30 days prior to initiating work.

If activities would occur within 100 feet of suitable upland habitat (e.g., upland habitats adjacent to suitable aquatic habitats), those areas will be avoided during the wet season. Therefore, work activities in suitable upland habitat will be conducted between May 1st and October 15th, or the first wetting rain (more than 1-inch precipitation).
- Revised CLRF-3 Rain Event Limitations. From May 1 to October 15, if a weather system resulting in more than 1-inch of precipitation occurs in project area, activities that occur within 50 feet of suitable aquatic habitat will be suspended until a dry period of 72 hours occurs.

No project activities will occur within 100 feet of suitable aquatic habitat during rain events or within 24 hours following a rain event. Project activities within 100-feet of suitable aquatic habitat may continue 24 hours after the rain ceases, if no precipitation is forecasted within 24-hours. If rain exceeds 0.5 inches during a 24-hour period; work will cease within 50-feet of suitable aquatic habitat until no further rain is forecasted.
- Revised CRLF-4 Pre-construction Survey. If activities are proposed within 100-feet of the suitable aquatic habitat, then a SFWO-approved biologist will conduct a preconstruction survey not more than 24 hours prior, surveys for CRLF will be conducted in or around water courses; including eggs, larvae, and adults.
 - i. The SFWO-approved biologist will perform a Visual Encounter Survey, entailing standing in one area with binoculars looking for species feeding, breeding, sheltering, movement, or other essential behaviors, such as basking on the bank, hiding amongst plants, rocks, or other refugia, or swimming in the water. Micro-habitats such as small woody debris, refuse, and burrow entries will also be inspected.
 - ii. The SFWO-approved biologist will then walk a transect along the bank, looking in the water and bank for presence, movement, calls, or other signs of the target species.
 - iii. The SFWO-approved biologist will conduct pedestrian surveys looking for species hiding amongst plants, rocks, or other refugia, as well as for the presence of ground squirrel burrows.
 - iv. The SFWO-approved biologist will flag the site, mark a GPS location, document species, and take note of any ground squirrel burrows, refugia, which may support dry weather habitat.
- Revised CRLF-5 Clearance Surveys. The SFWO-approved biologist will conduct clearance surveys prior to the activities that occur within 100-feet of suitable aquatic habitat, and regularly throughout the duration of hazard tree removal or ground-disturbance activities.
- Revised CRLF-6 Environmentally Sensitive Area. If suitable aquatic or riparian habitat conditions are present near a work site, the area will be marked off to exclude work from occurring within this area to the extent practicable. A buffer of limited work will be established 100 feet around this exclusion area. If project activities must occur within the buffer, then a SFWO-approved biological monitor will be present during all project activities and crews will minimize disturbance and duration of activities within the buffer to the extent possible.

- CRLF-9 Encounters with Species
- Revised CRLF-11 Environmental Awareness Training. Prior to the start of hazard tree removal activities, a SFWO-approved biologist with experience in the ecology of the California red-legged frog as well as the identification of all its life stages will conduct a training program for all construction personnel including contractors and subcontractors. Interpretation for non-English speaking workers will be provided. All construction personnel will be provided a fact sheet conveying this information. The same instruction will be provided to any new workers before they are authorized to perform project work. The training will include, at a minimum:
 - a. habitat within the Action Area;
 - b. an explanation of the species status and protection under state and federal laws;
 - c. the avoidance and minimization measures to be implemented;
 - d. communication and work stoppage procedures in case a listed species is observed within the Action Area; and
 - e. an explanation of the importance and role of the SFWO-approved biological monitor(s).
- CRLF-12 Disease Prevention and Decontamination Procedures.
- Revised CRLF-14 Vegetation and Debris Removal (formerly Hand Clear Vegetation). Trees will be felled away from suitable aquatic habitat for California red-legged frog, to the extent practicable. All trimmed or cleared material/vegetation will avoid falling into any nearby suitable aquatic habitat and will be removed from the project footprint to prevent attracting animals to the project site. If tree debris incidentally falls into suitable aquatic habitat, then the SFWO-approved biologist will be notified. The SFWO-approved biologist will remain onsite to monitor debris removal activities until they are completed. Debris will be removed by hand if possible or if the SFWO-approved biologist determines potential effects on suitable habitat would be minimized, then debris removal may be assisted from by a crane, thumb of an excavator, or other heavy equipment operated from adjacent uplands, and deposited where it cannot re-enter the waterbody. If heavy equipment will need to be used to remove hazard trees or debris from within suitable aquatic or riparian habitat, the crew will call the Environmental Unit before proceeding.
- Revised CRLF-16 Accidental Spills, SWPPP, Erosion Control, and BMPs. Proposed revision of this PBO measures to utilize the project BMPs which are similar to the PBO measures, and provide project-specific coverage of accidental spills, SWPPP, Erosion Control and BMPs (see ECP), including: Best Management Practices (BMP's). Use of CASQA and/or Forest Practice BMP Standards will be met.

Sediment and Erosion Control Measures. Sediment and erosion control measures will be utilized throughout all phases of operation where sediment runoff from exposed slopes threatens to enter a river, stream, wetland, or lake. If there is a chance of a rain event over 40 percent within 48 hours, sediment and erosion control will be inspected, repaired, or upgraded to prevent any runoff. Measures will be maintained in good operating condition until the site is signed off by the ICS. Maintenance includes, but is not limited to, removal of accumulated sediment and/or replacement of damaged silt fencing, compost socks, coir logs, coir rolls, and/or straw bale dikes. Modifications, repairs and improvements will be made to the sediment and erosion control measures whenever it is needed. If the sediment barrier fails to retain sediment, corrective measures will be employed, and an Environmental Specialist notified, immediately. Materials used in the sediment barriers will not pose an entanglement risk to fish or wildlife.

SWPPP. A Storm Water Pollution Prevention Plan and erosion control Best Management Practices will be developed and implemented to minimize water related erosion. At a minimum, protective measures will include:

- a. Operating Equipment and Vehicle Leaks. Any equipment or vehicles driven and/or operated within or adjacent to the stream/lake will be checked and maintained daily to prevent leaks of materials that could be deleterious to aquatic and terrestrial life or riparian habitat.
 - b. Stationary Equipment Leaks. Stationary equipment such as motors, pumps, generators, and welders, located within or adjacent to the stream/lake will be positioned over drip pans. Stationary heavy equipment will have suitable containment to handle a catastrophic spill/leak. Crews will always maintain spill containment kits on-site during project operations and/or staging or fueling of equipment.
 - c. Equipment Maintenance and Fueling. No equipment maintenance, fueling or storage will occur within or near any stream channel or lake margin where petroleum products or other pollutants from the equipment may enter these areas.
 - d. No Dumping. No litter or construction debris will be deposited within a stream or lake, or where it may pass into a stream or lake. All debris and waste will be picked up and removed daily.
 - e. Sawdust. Sawdust will be controlled in such a way that it does not enter a watercourse.
 - f. Hazardous Materials. Debris, soil, silt, bark, slash, sawdust, rubbish, creosote-treated wood, raw cement/concrete or washings thereof, asphalt, paint or other coating material, oil or other petroleum products, or any other substances which could be hazardous to aquatic life, wildlife, or riparian habitat resulting from the Project related activities will be prevented from contaminating the soil and/or entering any watercourse.
 - g. Dust Control. Implement dust control, when rocking temporary access road entrances and exits and covering temporary stockpiles when weather conditions require.
 - h. Permanent erosion control. Incorporate permanent erosion control measures such as bio-filtration strips and swales to receive storm water discharges from the project work areas to the maximum extent practicable.
 - i. Pesticides. No use of herbicides or pesticides will occur.
 - j. Should operations extend into the winter period, as defined by the Forest Practice Rules (FPR), limitations on operations related to using saturated roads, stabilizing erodible soils and installing erosion control measures will be followed.
- Revised CRLF-18 Suitable Erosion Control Materials. Where erosion control materials are placed within 100-feet of suitable aquatic habitat, and in order to prevent California red-legged frogs from becoming entangled, trapped, or injured, erosion control materials that use plastic or synthetic monofilament netting will not be used. This includes products that use photodegradable or biodegradable synthetic netting, which can take several months to decompose. Acceptable materials include natural fibers such as jute, coconut, twine or other similar fibers. Following site restoration, erosion control materials, such as straw wattles, will not block movement of the California red-legged frog.
 - CRLF-21 Invasive Non-Native Plant Species Prevention.
 - Revised CRLF-24 Restore Contours of Temporarily Disturbed Areas. If disturbance occurs within 100-feet of CRLF aquatic habitat, then Best Management Practices (BMPs) will be applied that re-distribute soil and debris to pre-treatment landscape contour. Habitat contours will be returned to their original configuration to minimize sedimentation to creeks.

- Revised CRLF-25 Use of Native Plants for Revegetation. If there is removal of any suitable riparian and/or wetland vegetation needed to support project activities (i.e., temporary access or waterbody crossings), then disturbed areas will be revegetated with local native species suitable to the restoration. Plants used in revegetation will consist of native riparian and/or wetland, vegetation suitable for the area. Locally collected plant materials will be used to the extent practicable.
- Revised CRLF-26 Practices to Prevent Pathogen Contamination in Revegetation and Restoration. In areas where Use of Native Plants for Revegetation is implemented, CalOES and CalRecycle will refer to the following restoration design considerations and practices to help prevent pathogen contamination in revegetation and restoration as published by the Working Group for Phytophthora in Native Habitats in order to address the risk of introduction and spread of Phytophthora and other plant pathogens in site plantings:
 - a. Design restoration with lower initial plant density. Planting large quantities of nursery plants increases the likelihood that some of those plants may be infested with Phytophthora or other plant pathogens. The greater the number of plants installed the higher the risk for pathogen introduction. The closer the plants are to one another the higher the likelihood of pathogen spread.
 - b. To the extent possible, use direct seeding of native plant seeds or cuttings instead of container stock. Planting locally-collected seeds or cuttings rather than installing container stock can minimize the risk of introducing pathogens to a site.
 - c. Ensure the use of clean nursery stock. To prevent and manage the introduction and spread of Phytophthora and other plant pathogens during revegetation and restoration activities, it is essential that projects use clean nursery stock grown with comprehensive best management practices.
 - d. Prevent contamination in site preparation, installation, and maintenance. Implementing best management practices to prevent pathogen introduction and spread is also critical during all other phases of revegetation and restoration to reduce contamination risk. For detailed guidance on how to prevent and manage Phytophthora during various aspects of restoration, including nursery plant production, see The Phytophthora in Native Habitats Work Group "Restoration Guidance" at www.calphytos.org.
 - e. Reduce the potential for pathogen spread and introduction due to movement or use of non-sanitized vehicles, tools, footwear or inadvertent use of contaminated materials (e.g. soil erosion protection wattles and mulch, or non-sanitized materials recycled from other projects such as rebar, fencing materials, etc.). Fundamental principles include:
 - i. Minimize project footprint and soil disturbance. Keep the number of vehicle pass-throughs and other disturbances during site activities to the least necessary. Avoid visits when conditions are wet, and areas are muddy. Park vehicles in designated staging areas.
 - ii. Follow sanitation practices. Phytophthora and many other pathogens move when contaminated soil is transferred on vehicle tires, footwear, on contaminated tools or infested plant materials. Follow sanitation best management practices: tools, boots, and vehicles will be visibly free of soil before and after use.
 - iii. Promote prevention through education. Ensure that onsite personnel are aware of the risk of inadvertent pathogen introductions and understand how to prevent pathogen introduction and spread. A pre-project meeting that provides appropriate BMP training to all workers and oversight managers who will be onsite during the project will help avoid confusion and

delays in the field and will ensure in advance that everyone understands the project goals related to pathogen prevention.

The following species-specific Conservation Measures for CRLF identified in the PBO are not applicable to the Proposed Project:

- CRLF-7 Wildlife Exclusion Fencing. Not applicable; the duration of work activities would be very short, and given the scale of the proposed project, implementation of this measure would not be possible. See Revised CRLF-6: Environmental Sensitive Area for the proposed justification for exception to installation of the wildlife exclusion fencing.
- CRLF-8 Entrapment Prevention. Not applicable; no steep-walled holes or trenches would be constructed as part of the Proposed Project.
- CRLF-10 Species Observations and Handling Protocol. Not applicable because no take of CRLF is anticipated from the work activities on the proposed project.
- CRLF-13 Pump Screens. Not applicable; neither dewatering or the use of pump screens are anticipated components of the Proposed Project.
- CRLF-15: Wildlife Passage for Road Improvement. Not applicable; permanent road improvements are not anticipated as part of the proposed project.
- CRLF-17 Site Restrictions. Not applicable; most of the project activities would occur on paved roads and all equipment would be abide by local speed limit required on unpaved roads. There is no night-time work proposed nor would there be a need for artificial lighting. Where activities occur in proximity to suitable habitat for CRLF, boundaries would be marked by the SFWO-approved biological in accordance with CRLF-6: Environmentally Sensitive Areas.
- CRLF-19 Limitation on Insecticide/Herbicide Use. Not applicable; the Proposed Project does not include the use of insecticide or herbicide.
- CRLF-20 Limitation on Rodenticide Use. Not applicable; the Proposed Project does not include the use of rodenticide.
- CRLF-22 Removal of Diversion and Barriers to Flow. Not applicable; the Proposed Project would not require diversion or barriers to flows, or alteration or deposition of material in stream beds.
- CRLF-23 Removal of Non-Native Species. Not applicable; the Proposed Project would generally not occur in aquatic environments and would not convert seasonal aquatic habitat or create perennial water bodies.

Camp Fire Hazard Tree Removal Program

DRAFT Avoidance and Minimization Measures for Anadromous Fish

Note: these measures are from the draft Programmatic ESA Consultation for NMFS, as of 04/17/2020. These DRAFT AMMs are currently under NMFS review, these AMMs will be finalized once NMFS issues a concurrence letter for the project.

AMM Number	Measure Type	Avoidance and Minimization Measure
1	Dust Control	To reduce dust, all traffic associated with project activities will be restricted to a speed limit of 20 miles per hour when driving on unpaved roads.
2	Erosion/ Sedimentation	There will be no ground disturbance within an ELZ adjacent to waterways supporting anadromous fish (i.e., Little Chico Creek Watershed; Little Dry Creek Watershed; and Butte Creek Watershed, including Little Butte, Middle Butte, and Honey Run Creek sub-watersheds) within 48 hours before a rain event. Erosion control materials within ELZ work areas would be installed within 48 hours of any ground disturbance.
3	Spill Prevention	All hazardous materials will be stored in properly designated containers within a storage area with an impermeable membrane between the ground and the hazardous materials. The storage area will be encircled by a berm to prevent the discharge of pollutants to groundwater or runoff into the habitats of listed species.
4	Staging	All staging, equipment, and material storage areas, including temporary staging areas and locations where equipment and vehicles are parked overnight, will be placed outside of the flood zone of a watercourse, away from and outside riparian woodland and wetland habitat. When possible, staging and access areas will be situated in areas that are previously disturbed, such as developed areas, paved areas, parking lots, areas with bare ground or gravel, and areas clear of vegetation. Riparian trees and shrubs will not be removed for staging areas.
5	Riparian Revegetation of Temporary Access Roads and Water Crossings	<p>For temporary access roads and water crossings within the 150-foot ELZs in watersheds supporting anadromous fish (i.e., Little Chico Creek Watershed; Little Dry Creek Watershed; and Butte Creek Watershed, including Little Butte, Middle Butte, and Honey Run Creek sub-watersheds), revegetation will occur to replace living woody vegetation removed for temporary access roads or water crossings. Areas that are disturbed by heavy equipment, but where the removal of living woody vegetation does not occur, will have erosion control measures put in place, but will not be replanted.</p> <p>In areas that require revegetation, a contractor identified by CalRecycle will prepare and implement a revegetation plan. Because follow-up monitoring and corrective planting cannot occur, all trees larger than 6 inches diameter at breast height that are removed during Project implementation will be replaced at an 8:1 ratio. All other disturbed areas will be planted or hydroseeded at a rate sufficient to revegetate the site. When practicable, the native vegetation will be cut off at ground level instead of grubbed so it can potentially grow back and establish on its own, and disturbed areas should be planted in late fall after summer temperatures decrease or near the beginning of the first growing season after hazard tree removal.</p>

AMM Number	Measure Type	Avoidance and Minimization Measure
		<p>Additional revegetation requirements are specified as follows:</p> <ul style="list-style-type: none"> a) Use a diverse assemblage of plant species native to the area, including trees, shrubs, and herbaceous species. b) For long-term revegetation use only species native to the area that will achieve shade and erosion control objectives, including forb, grass, shrub, or tree species that are appropriate for the site. c) Do not apply surface fertilizer within 50 feet of any wetland or water body. d) Spot treatments of mulching or soil amendments (such as hydrogel), and/or a slow-release watering system (e.g., dri-water tubes or Cocoon systems, which are bio-degradable water reservoirs installed around saplings) should be used where needed to increase soil moisture retention and improve survival rates. e) Install fencing or other protection, as necessary, to protect plantings from livestock. f) Do not use invasive or non-native species for revegetation.
6	Hazard Tree Replacement Within LWCZs	<p>Every hazard tree (as defined in Section 3.1.1) that is removed within the LWCZ (i.e., within 50 feet of the edge of channel of waterways supporting anadromous fish, such as Little Chico Creek Watershed; Little Dry Creek Watershed; and Butte Creek Watershed, including Little Butte, Middle Butte, and Honey Run Creek sub-watersheds), will be replaced at an 8:1 ratio. The exact location of the plantings will depend on site-specific conditions and will be in areas where survival rates are expected to be greater.</p> <p>Additional tree replacement requirements are specified as follows:</p> <ul style="list-style-type: none"> a) Use appropriate tree species native to the area and suited for the soil moisture conditions at the site. b) When possible, trees should be placed adjacent to waterways that support anadromous fish in areas where they will contribute to shade over anadromous waterways and may eventually fall into the creeks and become LWD. c) Do not apply surface fertilizer within 50 feet of any wetland or water body. d) Spot treatments of mulching or soil amendments (such as hydrogel), and/or slow-release watering systems (e.g., dri-water tubes or Cocoon systems, which are bio-degradable water reservoirs installed around saplings) will be used where needed to increase soil moisture retention and improve survival rates. e) Install fencing or other protection, as necessary, to protect plantings from livestock. f) Do not use invasive or non-native tree species for hazard tree replacement.
7	Equipment Maintenance and Cleaning	<p>Before entering wetlands or working within an ELZ, all heavy equipment, vehicles, and power tools will be power washed, allowed to fully dry, and inspected for fluid leaks. After cleaning, the equipment will be inspected to make certain no plants, soil, or other organic material are adhering to the surface. Cleaning will be repeated as often as necessary during operation to keep all equipment, vehicles, and power tools free of external fluids and grease, and to prevent a leak or spill from entering the water.</p>

AMM Number	Measure Type	Avoidance and Minimization Measure
8	Invasive Species Prevention	All contractors will follow guidelines in the California Invasive Plant Council's <i>Preventing the Spread of Invasive Plants: Best Management Practices for Land Managers</i> (Cal-IPC 2012) to prevent the spread of invasive plant species. Construction equipment will be clean of material that may harbor invasive plant seeds or invasive pests before entering the work area. This material includes dirt or plant seeds on construction equipment, tools, boots, and clothing.
9	Fire Prevention	With the exception of vegetation-clearing equipment, no vehicles or construction equipment will be operated in areas of tall, dry vegetation. CalRecycle (or a designated contractor) will develop and implement a fire prevention and suppression plan for all activities that have a risk of starting a wildfire.
10	Topsoil Salvage	All contractors will, to the maximum extent practicable, reduce the amount of disturbance at each site to the absolute minimum necessary to accomplish the project. Any topsoil removed by excavation, grading, trenching, or other means will be stockpiled, covered, and encircled with silt fencing to prevent loss or movement of the soil into listed species habitats. All topsoil will be replaced in a manner to recreate pre-disturbance conditions as closely as possible.
11	Environmental Awareness Training	All construction personnel will participate in an environmental awareness training by the biological monitor before the start of hazard tree removal. The training will familiarize all construction personnel with the listed species that may occur onsite, their habitats, general provisions and protections afforded by the ESA and MSA, BMPs and AMMs to be implemented to protect these species and their habitat, and the project boundaries. This training will be provided within 3 days of the arrival of any new worker.

Notes:

AMM: Avoidance and Minimization Measure

BMP: Best Management Practice

CalRecycle: California Department of Resources Recycling and Recovery

ELZ: Equipment Limitation Zone

ESA: Federal Endangered Species Act

LWCZ: Large Wood Contribution Zone

LWD: large woody debris

MSA: Magnuson-Stevens Fishery Conservation and Management Act

Approved by: _____ Date: _____ Inspection Contact No.: _____

ENCROACHMENT PERMIT GENERAL CONDITIONS

1. IT IS UNDERSTOOD AND AGREED THAT THE TOWN HAS PRIOR RIGHT TO THE USE OF ITS RIGHT-OF-WAY. IT IS FURTHER UNDERSTOOD AND AGREED BY THE PERMITTEE THAT THE DOING OF ANY WORK UNDER THIS PERMIT SHALL CONSTITUTE AN ACCEPTANCE OF ALL THE PROVISIONS CONTAINED HEREIN AND FAILURE ON THE PERMITTEE'S PART TO COMPLY WITH ALL PROVISIONS WILL BE CAUSE FOR REVOCATION OF THIS PERMIT. EXCEPT AS OTHERWISE PROVIDED FOR PUBLIC AGENCIES AND FRANCHISE HOLDERS, THE PERMIT IS REVOCABLE AT ANY TIME. THIS PERMIT IS TO BE ON THE JOB AT ALL TIMES WHILE THE WORK IS BEING DONE.
2. ALL WORK SHALL BE DONE SUBJECT TO THE SUPERVISION OF AND TO THE SATISFACTION OF THE PUBLIC WORKS DEPARTMENT OF THE TOWN. THE PERMITTEE SHALL, AT ALL TIMES DURING THE PROGRESS OF THE WORK, KEEP THE TOWN ROADWAY IN AS NEAT AND CLEAN A CONDITION AS IS POSSIBLE AND UPON COMPLETION OF THE WORK GRANTED HEREIN, SHALL LEAVE THE TOWN ROADWAY IN A THOROUGHLY NEAT, CLEAN AND USABLE CONDITION.
3. THE PERMITTEE AGREES BY THE ACCEPTANCE OF THIS PERMIT TO PROPERLY MAINTAIN ANY ENCROACHMENT PLACED BY THE PERMITTEE ON ANY PART OF THE TOWN ROADWAY AND TO IMMEDIATELY REPAIR ANY INJURY TO ANY PORTION OF THE ROADWAY WHICH OCCURS AS A RESULT OF THE ENCROACHMENT, UNTIL SUCH TIME AS THE PERMITTEE MAY BE RELIEVED OF THE RESPONSIBILITY OF SUCH ENCROACHMENT BY THE TOWN DEPARTMENT OF PUBLIC WORKS.
4. IT IS FURTHER AGREED BY THE PERMITTEE THAT WHENEVER CONSTRUCTION, RECONSTRUCTION, OR MAINTENANCE WORK UPON THE HIGHWAY MAY REQUIRE, THE INSTALLATION PROVIDED FOR HEREIN SHALL, UPON REQUEST OF THE TOWN DEPARTMENT OF PUBLIC WORKS, BE IMMEDIATELY REMOVED BY AND AT THE SOLE EXPENSE OF THE PERMITTEE.
5. NO MATERIAL USED FOR FILL OR BACKFILL IN THE CONSTRUCTION OF THE ENCROACHMENT SHALL BE BORROWED OR TAKEN FROM WITHIN THE TOWN RIGHT-OF-WAY.
6. WHERE APPLICABLE, PERMITTEE SHALL SUBMIT PROPOSED TRAFFIC CONTROL PLAN. ALL TRAFFIC CONTROL METHODS SHALL BE CALIFORNIA MUTCD PART 6 COMPLIANT. AT LEAST ONE ELEVEN FOOT (11') LANE OF ANY PUBLIC ROAD, UNDER THE JURISDICTION OF THE TOWN OF PARADISE, AND OTHER PUBLIC ROADS JUNCTIONING OR INTERSECTING THEREWITH, SHALL BE KEPT OPEN FOR TRAVEL BY THE GENERAL PUBLIC AT ALL TIMES. NO PUBLIC ROAD UNDER THE JURISDICTION OF THE TOWN SHALL BE CLOSED TO TRAVEL BY THE GENERAL PUBLIC WITHOUT SPECIAL PERMISSION, IN WRITING, OF THE TOWN ENGINEER.
7. THE PERMITTEE, BY THE ACCEPTANCE OF THIS PERMIT, SHALL ASSUME FULL RESPONSIBILITY FOR ALL LIABILITY FOR PERSONAL INJURY OR DAMAGE TO PROPERTY WHICH MAY ARISE OUT OF THE WORK HEREIN PERMITTED OR WHICH MAY ARISE OUT OF THE FAILURE ON THE PART OF THE PERMITTEE TO DO THE WORK PROVIDED FOR UNDER THIS PERMIT. IN THE EVENT ANY CLAIM OF SUCH LIABILITY IS MADE AGAINST THE TOWN OR ANY DEPARTMENT, OFFICIAL, OR EMPLOYEE THEREOF, THE PERMITTEE SHALL DEFEND, INDEMNIFY, AND HOLD THEM AND EACH OF THEM HARMLESS FOR SUCH A CLAIM.
8. TRENCH BACKFILL AND PAVEMENT RESTORATION SHALL COMPLY WITH STANDARD DETAIL TB1 AND DETAIL TB2, WHERE APPLICABLE. ALL EXCAVATIONS SHALL BE BACKFILLED AND COMPACTED IMMEDIATELY AFTER WORK THEREIN HAS BEEN COMPLETED. TRENCHES SHALL NOT BE LEFT OPEN FARTHER THAN 300 FEET IN ADVANCE OF THE PIPE LAYING OPERATIONS UNLESS OTHERWISE PERMITTED BY THE ENGINEER. UNLESS OTHERWISE PERMITTED UNDER THE SPECIAL CONDITIONS, BACKFILL SHALL BE PLACED AND MECHANICALLY COMPACTED IN SUCH A MANNER THAT THE RELATIVE COMPACTION THROUGHOUT THE ENTIRE FILL WITHIN THE TOWN ROAD RIGHT-OF-WAY SHALL CONFORM TO THE PERCENTAGE OF COMPACTION AS STATED ON TOWN STANDARD DETAILS. PERMITTEE SHALL NOTIFY THE TOWN INSPECTOR 24 HOURS BEFORE BACKFILLING AND / OR PAVING.
 - a. ALL INSTALLATIONS, PARALLEL WITH ROADWAY, SHALL BE PLACED AS CLOSE TO THE RIGHT-OF-WAY AS POSSIBLE.
 - b. ALL PAVEMENTS, CURBS, GUTTERS, SIDEWALKS, BORROW DITCHES, PIPES, HEADWALLS, ROAD SIGNS, TREES, SHRUBBERY AND / OR OTHER PERMANENT ROAD FACILITIES IMPAIRED BY OR AS A RESULT OF, CONSTRUCTION OPERATIONS AT THE CONSTRUCTION SITE(S), OR AT OTHER LOCATION(S) OCCUPIED BY MATERIALS AND / OR EQUIPMENT SHALL BE RESTORED IMMEDIATELY UPON BACKFILLING OF THE EXCAVATION TO THE ORIGINAL GRADES AND CROSS SECTIONS, AND TO A CONDITION AS GOOD AS, OR BETTER THAN, EXISTING PRIOR TO CONSTRUCTION.
 - c. ALL SURFACING MATERIALS OF ROADWAYS AND DRIVEWAY APPROACHES CUT OR DAMAGED BY OR AS A RESULT OF CONSTRUCTION OPERATIONS SHALL BE REPLACED WITHIN ONE WEEK FOLLOWING THE BACKFILLING OF EXCAVATION, WEATHER PERMITTING, WITH COMPACTED LAYERS OF SURFACING MATERIALS AT LEAST AS THICK AS THE EXISTING, AND NO LESS THAN TWO INCHES (2") OF HOT MIX ASPHALT OVER EIGHT INCHES (8") OF AGGREGATE BASE, ACCORDING TO CURRENT CALIFORNIA STATE SPECIFICATIONS.
9. WHENEVER NECESSARY TO SECURE PERMISSION FROM ABUTTING PROPERTY OWNERS, SUCH AUTHORITY MUST BE SECURED BY THE PERMITTEE PRIOR TO STARTING WORK.
10. THE FUTURE SAFETY AND CONVENIENCE OF THE TRAVELING PUBLIC SHALL BE GIVEN EVERY CONSIDERATION IN THE LOCATION AND TYPE OF CONSTRUCTION. PERMITTEE SHALL CAUSE TO BE PLACED, ERECTED AND MAINTAINED ALL WARNING SIGNALS, LIGHTS, BARRICADES, SIGNS, AND OTHER DEVICES OR MEASURES ESSENTIAL TO SAFEGUARD TRAVEL BY THE GENERAL PUBLIC OVER AND AT THE SITE OF WORK AUTHORIZED HEREIN.
11. IF THE CONSTRUCTION WORK COVERED BY THIS PERMIT IS TO BE DONE BY A PRIVATE CONTRACTOR HIRED BY THE APPLICANT, APPLICANT SHALL NOTIFY CONTRACTOR AS TO THE SPECIAL CONDITIONS AND REQUIREMENTS CONTAINED HEREIN.
12. PERMITTEE AGREES THAT IF THE ROADWAY AND / OR ADJACENT AREA IS NOT LEFT IN AN ACCEPTABLE MANNER TO THE TOWN ENGINEER, AND IF SUCH NOTICED DEFICIENCIES ARE NOT CORRECTED WITHIN THIRTY (30) DAYS OF WRITTEN NOTICE THEREOF, PERMITTEE AGREES TO PAY THE TOWN OF PARADISE FOR ANY AND ALL COSTS NECESSARY TO CORRECT SAID DEFICIENCIES.

Article VI(C). - Encroachment Permits

10-86 - Application.

Application for County highway encroachment permit shall be made upon forms supplied by the Director of Public Works and shall include the following information:

- a. Name and address of the applicant, the owner or other person responsible for the proposed encroachment and the contractor or other person actually making the proposed encroachments;
- b. Nature of the encroachment;
- c. County highway affected;
- d. Time and duration of proposed encroachment;
- e. Site plans showing relation of encroachment to County highway;
- f. Supporting documents when required by the encroachment standards provided in this chapter for the type of encroachment proposed;
- g. Any other information required by the Director of Public Works;
- h. Proof of Liability Insurance in the amount specified by the County Risk Manager, naming Butte County as an additional insured. Proof of Liability Insurance is not required if the applicant is any special district (as defined by Government Code Section 16271 (d)) providing public utility services or any person doing business as a public utility subject to the jurisdiction of the Public Utilities Commission of the State;
- i. Signature of the applicant;
- j. Date application is filed with the County Director of Public Works.

(Ord. No. 3907, § 1, 3-1-2005)

10-87 - Fees.

The fee amount for encroachment permits, plan checking and inspection fees is set forth in the Butte County Master Fee Schedule.

- a. No encroachment permit shall be issued until the permit fee set forth in the Butte County Master Fee Schedule has been paid.
- b. Public Utility Companies:
 1. In addition to the encroachment permit fee set forth in the Butte County Master Fee Schedule, the permittee may be required to pay the actual County costs of providing inspection for and other work related to tree removal and the placement of underground facilities, including, but not limited to, water lines, sewers, telephone lines, power lines, gas lines, electrical transmission lines, communication lines, pipelines and cables that are placed within the right-of-way limits of the County roads. The cost of inspection and other related work shall be chargeable to the owner of the utility.
 2. When actual costs for inspection and other related work, including County costs to remove wood or other debris remaining after tree removal, are required to be paid, the permittee shall deposit a minimum of three hundred dollars (\$300.00) with the Director of Public Works against which the County's actual cost will be charged.
 3. Upon completion of the work, if the County's cost is less than the amount of the deposit, the County shall either refund any amount remaining from the deposit after the County's cost has been deducted or apply the amount remaining to a future permit. If the County's

cost exceeds the amount of the deposit, the permittee shall pay an additional amount to fully compensate the County for its cost.

4. Public Agencies, special districts (as defined by Government Code Section 16271 (d)) providing public utility services, or any person doing business as a public utility subject to the jurisdiction of the Public Utilities Commission of the State, may upon request and at the discretion of the Director of Public Works be invoiced (billed) for the above referenced fees and charges.
- c. If any portion of an encroachment has been made prior to issuance of a valid encroachment permit, the permit fee shall be two (2) times that established by the Butte County Master Fee Schedule, except as provided in Section 10-91.
- d. No notice of an appeal to the Board of Supervisors pursued under Section 10-94 of this chapter shall be accepted until an appeal fee in the amount set forth in the Butte County Master Fee Schedule has been paid to the Clerk of the Board.
- e. All such fees paid to the Director of Public Works shall be paid into the County Road fund. A receipt shall be given for each fee paid. The receipts shall be made in triplicate upon consecutively press numbered forms supplied by the County Auditor and a copy of each receipt issued or voided shall be delivered to the County Auditor at the time the funds represented thereby are deposited in the County treasury. No alterations or erasures shall be permitted and when an error is made, the receipt shall be voided by printing "void" across its face, and a new receipt issued. The other copies of the receipts shall remain attached to their binding and kept in the County Director of Public Works Department, subject to inspection at any time by the County Auditor.

(Ord. No. 3907, § 1, 3-1-2005; Ord. No. 4048, § 1, 8-14-12)

10-88 - Deposit.

The Director of Public Works may require a cash deposit or bond to guarantee completion of construction anticipated in an encroachment permit application.

- a. A cash deposit or bond will not be required of any public agency or public utility having lawful authority to occupy the highways unless the applicant has failed to comply, as determined by the Director of Public Works, with the provisions of this chapter or with the provisions of any previous permit issued by the Director of Public Works.
- b. If a driveway encroachment is not able to be completed, as required for a certificate of occupancy, due to seasonal adverse weather or soil condition, the Director of Public Works may accept a cash deposit or other security in a form approved by the County Counsels office of one thousand dollars (\$1,000.00) as a guarantee that the encroachment shall be completed within a period not to exceed six (6) months from the deposit of the bond. If the encroachment is not completed within the time limit, the County may let a contract to complete that portion of the work required within the County road right-of-way. Any funds remaining after deducting an amount sufficient to cover actual County costs and the payment to the contractor, if applicable, will be refunded to permittee.

(Ord. No. 3907, § 1, 3-1-2005; Ord. No. 4048, § 2, 8-14-12)

10-89 - Issuance.

After receipt of an application, accompanied by the required documents, payment of the required fees, and posting of any required deposit, the Director of Public Works may issue an encroachment permit therefore upon standard forms prepared by the Director of Public Works, provided all of the requirements of this chapter have been met.

(Ord. No. 3907, § 1, 3-1-2005)

10-90 - Conditions of issuance.

Every permit issued by the Director of Public Works shall be subject to the following conditions, which shall be specified in the permit:

- a. The encroachment permit may be revoked at time by the Director of Public Works for health and safety reasons.
- b. The encroachment permit is subject to all of the requirements and provisions of the County road encroachment ordinance and any past and future amendments thereof and any special conditions placed on the permit.

(Ord. No. 3907, § 1, 3-1-2005)

10-91 - Permit exceptions.

In the case of an emergency by a public utility requiring an immediate encroachment and/or excavation upon a County right-of-way when the Department is not open, the person making the emergency encroachment and/or excavation shall make application for a permit on the next business day following the encroachment and/or excavation whether the work has been completed or not.

(Ord. No. 3907, § 1, 3-1-2005)

10-92 - Annual permit for public utilities.

Any special district (as defined by Government Code Section 16271 (d)) providing public utility services, or any person doing business as a public utility subject to the jurisdiction of the Public Utilities Commission of the State, may obtain a permit from the Director, valid for one (1) year from the date of issuance, permitting the following:

- a. Trim, brace, or perform such other acts with respect to trees, except removal, growing upon the public highways within the unincorporated areas of the County, or which grow upon private property, to the extent that such trees encroach upon the public highways, as may be necessary to maintain the safe operation of its business.
- b. Conduct emergency repairs;
- c. Install an individual service line outside of pavement;
- d. Patch paving asphalt concrete pavement, as may be necessary to comply with the safety regulations of the Commission and as may be necessary to maintain the safe operation of its business.
- e. Annual permits shall not be issued for any activity which disturbs the surface or subsurface of any county highway, except solely to patch paving asphalt concrete pavement; nor for excavation, tree removal, root cutting, tree destruction, nor for any activity other than planting, pruning, or bracing trees, or patching paving asphalt concrete pavement. Activities other than planting, pruning, or bracing trees, or patching paving asphalt concrete pavement shall be permitted only pursuant to site specific permits which authorize a specific project or operation.
- f. The Director of the Department of Public Works may revoke any such annual permit if the permittee fails to comply with the provisions of this chapter, and/or Streets and Highways Code, Division 2, Chapter 5.5, Article 2, and/or the terms and conditions of any permit. When any such permit is revoked, such person is entitled to a permit only on furnishing a bond as provided in

Streets and Highways Code Section 1467, or its successor, unless the revocation is reversed by the Board of Supervisors or a court of law.

(Ord. No. 3907, § 1, 3-1-2005; Ord. No. 4048, § 3, 8-14-12)

10-93 - Refusal or revocation.

Any application for an encroachment permit may be denied, and any encroachment permit issued may be revoked, by written order of the Director of Public Works, effective immediately, a copy of which shall be mailed to the permittee at the address specified in the permit, upon any one (1) or more of the following grounds:

- a. Violation of any of the provisions of this chapter;
- b. Misrepresentation of any material fact in the application;
- c. Violation of any of the terms or conditions of the permit;
- d. Failure to comply with the provisions of this chapter and/or Streets and Highways Code, Division 2, Chapter 5.5, Article 2 and/or the terms and conditions of any permit.
- e. When any such permit is revoked, such person is entitled to a permit only on furnishing a bond as provided in Streets and Highways Code Section 1467, or its successor, unless the revocation is reversed by the board of supervisors or a court of law.

(Ord. No. 3907, § 1, 3-1-2005)

10-94 - Appeal.

The action of the Director of Public Works in:

- a. Refusing to issue an encroachment permit;
- b. Failing to act upon an application for an encroachment permit within thirty (30) days after it is filed and has been deemed complete by the Director of Public Works;
- c. Imposing unreasonable terms or conditions on the permit; or
- d. Revoking an encroachment permit; may be appealed to the board of supervisors by filing a notice of appeal and submitting payment of an appeal fee in the amount set forth in the Butte County Master Fee Schedule with the Clerk of the Board within ten (10) days following the action appealed from. The notice shall state one (1) or more of the grounds for appeal set forth in this section relied on by the appellant. Within thirty (30) days following receipt of the notice, the Clerk shall schedule the appeal to be heard by the Board of Supervisors and shall notify the appellant and the Director of Public Works of the date and time of the hearing on the appeal. At the time fixed for the hearing, the Board of Supervisors will take such action on the permit as the Board finds just, and may continue the hearing on the appeal from time to time by order entered in its minutes specifying the date and time of the continued hearing.

(Ord. No. 3907, § 1, 3-1-2005; Ord. No. 4048, § 4, 8-14-12)

FISH AND WILDLIFE SERVICE
Sacramento Fish and Wildlife Office
2800 Cottage Way, Suite W-2605
Sacramento, California 95825-1846

MAR 27 2019

Mr. Alessandro Amaglio
Regional Environmental Officer, Region IX
Federal Emergency Management Agency
1111 Broadway, Suite 1200
Oakland, California 94607

Subject: Programmatic Formal Section 7 Consultation on Federal Emergency Management Agency's Disaster, Mitigation, and Preparedness Programs within the Sacramento Fish and Wildlife Office's Jurisdiction, California

Dear Mr. Amaglio:

This letter is in response to the Federal Emergency Management Agency's (FEMA) request to initiate formal section 7 consultation under the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 et seq.) (Act), and provides the U.S. Fish and Wildlife Service's (Service) programmatic biological opinion on FEMA's Disaster, Mitigation, and Preparedness Programs (proposed project) in California as described in FEMA's June 20, 2018 *Programmatic Biological Assessment for Disaster, Mitigation, and Preparedness Programs in California* (programmatic biological assessment). We received your June 20, 2018, letter requesting initiation of consultation in our Sacramento Fish and Wildlife Office (SFWO) on June 20, 2018. On September 14, 2018, we received a letter from FEMA changing effects determinations for 20 species. At issue are the effects of FEMA's proposed action on 35 federally-listed species and their designated or proposed critical habitats which the Sacramento Fish and Wildlife Office has lead responsibility and seven federally-listed species and their critical habitat which occur within the jurisdiction of the Sacramento Fish and Wildlife Office but for which other Service field offices have lead responsibility. FEMA requested formal consultation based on your determination that the proposed project may affect, and is likely to adversely affect the following 17 federally-listed species and their designated critical habitat, and may affect, but not likely to adversely affect the following 25 federally-listed species and their designated critical habitat.

Sacramento Fish and Wildlife Office Species

Likeley to Adversely Affect

California red-legged frog (*Rana draytonii*) (Threatened) and critical habitat

California tiger salamander (*Ambystoma californiense*)

- Central California DPS (Threatened) and critical habitat
- Sonoma DPS (Endangered) and critical habitat

Giant garter snake (Threatened) (*Thamnophis gigas*)

Alameda whipsnake (*Masticophis lateralis euryxanthus*) (Threatened) and critical habitat

Valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*) (Threatened) and critical habitat

California freshwater shrimp (*Syncaris pacifica*) (Endangered)
 Bay checkerspot butterfly (*Euphydryas editha bayensis*) (Threatened) and critical habitat
 Callippe silverspot butterfly (*Speyeria callippe callippe*) (Endangered)
 Myrtle's silverspot butterfly (*Speyeria zerene myrtleae*) (Endangered)
 Vernal pool fairy shrimp (*Branchinecta lynchi*) (Threatened) and critical habitat
 Vernal pool tadpole shrimp (*Lepidurus packardii*) (Endangered) and critical habitat
 Conservancy fairy shrimp (*Branchinecta conservatio*) (Endangered) and critical habitat
 Longhorn fairy shrimp (*Branchinecta longiantenna*) (Endangered) and critical habitat
 Sacramento Orcutt grass (*Orcuttia viscida*) (Endangered) and critical habitat

Not Likely to Adversely Affect

Mission blue butterfly (*Icaricia icarioides missionensis* [= *Plebejus icarioides missionensis*]) (Endangered)
 San Bruno elfin butterfly (*Callophrys mossii bayensis*) (Endangered)
 Burke's goldfields (*Lasthenia burkei*) (Endangered)
 Butte County meadowfoam (*Limnanthes floccosa* ssp. *californica*) (Endangered) and critical habitat
 Calistoga allocarya (*Plagiobothrys strictus*) (Endangered)
 Colusa grass (*Neostapfia colusana*) (Threatened) and critical habitat
 Contra Costa goldfields (*Lasthenia conjugens*) (Endangered) and its critical habitat
 Few-flowered navarretia (*Navarretia leucocephala* ssp. *pauciflora* [= *N. pauciflora*]) (Endangered)
 Fleshy owl's-clover (*Castilleja campestris* ssp. *succulenta*) (Threatened) and critical habitat
 Greene's tuctoria (*Tuctoria greenei*) (Endangered) and critical habitat
 Hairy Orcutt grass (*Orcuttia pilosa*) (Endangered) and critical habitat
 Hoover's spurge (*Chamaesyce hooveri* [= *Euphorbia hooveri*]) (Threatened) and critical habitat
 Lake County stonecrop (*Parvisedum leiocarpum* [= *Sedella leiocarpa*]) (Endangered)
 Loch Lomond coyote thistle (*Eryngium constancei*) (Endangered)
 Many-flowered navarretia (*Navarretia leucocephala* ssp. *plieantha*) (Endangered)
 San Joaquin Orcutt grass (*Orcuttia inaequalis*) (Threatened) and critical habitat
 Sebastopol meadowfoam (*Limnanthes vinculans*) (Endangered)
 Slender Orcutt grass (*Orcuttia tenuis*) (Threatened) and critical habitat
 Solano grass (*Tuctoria mucronata*) (Endangered) and critical habitat
 Sonoma sunshine (*Blenno.sperma bakeri*) (Endangered)

Carlsbad Fish and Wildlife Office Species

Likely to Adversely Affect

Least bell's vireo (*Vireo bellii pusillus*) (Endangered)

May Affect, Not Likely to Adversely Affect

California least tern (*Sterna antillarum browni*) (Endangered)
 Southwestern willow flycatcher (*Empidonax traillii eximius*) (Endangered) and critical habitat

Ventura Fish and Wildlife Office Species

Likely to Adversely Affect

Tidewater goby (*Eucyclogobius newberryi*) (Endangered) and critical habitat

Arcata Fish and Wildlife Office Species

May Affect, Not Likely to Adversely Affect

Western snowy plover (*Charadrius nivosus* ssp. *nivosus*) (Threatened) and critical habitat

Marbled murrelet (*Brachyramphus marmoratus*) (Threatened) and critical habitat

Yreka Fish and Wildlife Office Species

May Affect, Not Likely to Adversely Affect

Northern spotted owl (*Strix occidentalis caurina*) (Threatened) and critical habitat

Based on our review of the information provided in FEMA's June 20, 2018, programmatic biological assessment, the Service concurs that the proposed project may affect, but is not likely to adversely affect the 25 federally-listed species listed above and their respective critical habitat. The general avoidance and minimization measures and species-specific conservation measures will help ensure that adverse effects to the species from proposed project activities are likely to be insignificant. If any activity proposed by a FEMA Subapplicant (entity that has applied to receive a FEMA grant administered by the state or federally-recognized tribe) demonstrates the potential to adversely affect any of these 25 species or their critical habitat, that project will not be covered by this programmatic biological opinion and FEMA will submit that project for formal consultation.

The remainder of this document provides our programmatic biological opinion on the effects of the proposed action on the remaining 17 species.

This programmatic biological opinion is based on information provided in the following: (1) FEMA's *Programmatic Biological Assessment for Disaster, Mitigation, and Preparedness Programs in California*, dated June 20, 2018; (2) FEMA's September 14, 2018 letter changing effects determinations for 20 species; (3) conversations and emails between the Service (C. Martin and J. Knight) and FEMA staff or their contracted agents, (S. Amaglio, L. Solorzano-Vincent.); (4) conversations between FEMA and other Service biologists from the Ventura, and Arcata Fish and Wildlife Offices; and (4) information contained in Service files.

A complete administrative record of this consultation is on file at the Sacramento Fish and Wildlife Office (Service File No. 08ESMF00-2018-F-3331).

Consultation History

March 2017 – January 2018	Weekly coordination calls between the Sacramento Fish and Wildlife Office, other Service field offices, and FEMA.
March 2017 – May 2018	Correspondence exchange and meetings between the Sacramento Fish and Wildlife Office, other Service field offices, and FEMA.
January 11, 2018	Received the Draft Programmatic Biological Assessment from FEMA.
April 17, 2018	Received additional supplemental information for the Draft Biological Assessment.
May 2, 2018	Provided final comments on the Draft Programmatic Biological Assessment.
June 20, 2018	Received a Programmatic Biological Assessment from FEMA.

September 14, 2018

Received a letter from FEMA changing the effects determinations for 20 species from Likely to Adversely Affect to Adversely Affect.

PROGRAMMATIC BIOLOGICAL OPINION

Scope of the Consultation

This document is a programmatic biological opinion for FEMA's disaster, mitigation, and preparedness program (proposed action) within the Sacramento Fish and Wildlife Office's Jurisdiction in California. This is designed to facilitate FEMA's compliance with the Act for projects of a similar nature that occur as a result of Presidentially-declared disasters, and that are likely to adversely affect 17 federally-listed species and their respective designated or proposed critical habitats within the Sacramento Fish and Wildlife Office's jurisdiction. It is intended to provide Section 7(a)(2) compliance to FEMA for the proposed projects from applicants and sub-grantees (Subapplicants) requesting funding under FEMA's disaster, mitigation, and preparedness program in California. It does not cover emergency consultations or FEMA's implementation of the National Flood Insurance Program.

This programmatic biological opinion will cover a period of five years from the signature date of this document, with the potential for extension if warranted. When the 5-year period has expired or incidental take coverage under this programmatic biological opinion is met, FEMA may reinstate a consultation to extend or amend the coverage provided in this programmatic biological opinion.

This programmatic biological opinion only applies to FEMA Subapplicants' proposed projects for which FEMA is the Lead Federal Agency for compliance under the Act. When FEMA and the U.S. Army Corps of Engineers (USACE) are both involved with a Subapplicant's proposed project, the process described in the 2015 Memorandum of Understanding (MOU) (executed in 2015, updated in 2018, and subsequent annual updates) among FEMA, USACE, Service, and NMFS will be followed to determine whether FEMA or the USACE is the lead federal agency for compliance with the Act.

Procedure to Cover Individual Projects Under this Programmatic Biological Opinion

To determine a Subapplicant's proposed project eligibility for coverage under this programmatic biological opinion, FEMA will determine whether a Subapplicant's proposed project meets the suitability criteria established under FEMA's programmatic biological assessment. If the proposed project meets the suitability criteria, FEMA will conduct a project-specific effects analysis and provide a summary of the potential direct and indirect effects associated with the covered project by submitting a completed ESA Review Form to the Service (Appendix C, programmatic biological assessment). If the covered project may result in adverse effects to species, the ESA Review Form will include:

- A brief description of the potential effects and mechanisms of take;
- A description of the general avoidance and minimization measures, the species-specific Conservation Measures, and any additional measures developed specifically for the project that the Subapplicant will implement; and
- A quantification of the incidental take anticipated.

FEMA will submit the completed ESA Review Form to the Service and request concurrence that the project is applicable for coverage under the programmatic biological opinion. The Service will

notify FEMA by electronic mail whether the Service does or does not concur with the proposed project's coverage under the programmatic biological opinion.

Description of the Proposed Programmatic Actions

Under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S. Code [U.S.C.] §§ 5121–5206), as amended, FEMA is authorized to provide grant funding to state and local governments, federally-recognized tribe and individuals (referred to as Subapplicants) who are adversely affected or potentially affected by human-caused or natural disasters. FEMA provides such grants to assist Subapplicants in repairing, restoring, or replacing disaster-damaged facilities, and to provide assistance with actions that will reduce or eliminate threats to public health and safety and reduce the risk of damage to public and private property during future disasters. FEMA has determined through experience with other disasters that the majority of the typically recurring actions proposed for funding can be grouped by type of action or location. Some of these projects may directly or indirectly affect federally-listed species and their designated or proposed critical habitats. FEMA's programmatic biological assessment contains a comprehensive description of all potential actions. These are summarized below.

Non-Emergency Debris Removal

For purposes of this document, debris removal performed in non-emergency situations includes:

- Removing rock, silt, sediment, or woody debris that floodwaters have deposited in harbors and ports, stream channels, bridge and culvert openings, canals, sedimentation basins, sewage treatment ponds, ditches, and other facilities in such a manner as to disrupt normal flows, navigation, recreation, or municipal services;
- Removing woody debris and other vegetation following events that damage or destroy trees;
- Removing rock and earth from landslides caused by events such as earthquakes or heavy rains; and
- Removing rubble after earthquakes.

All removed debris will be disposed of at approved and licensed disposal sites, in compliance with existing laws and regulations. Any hazardous materials or other contaminants will be removed and disposed of in an appropriate manner. If possible, woody debris and construction materials will be recycled.

Constructing, Modifying or Relocating Facilities

FEMA is authorized to provide funds for constructing, modifying, or relocating facilities. Relevant actions include:

- Upgrading or otherwise modifying facilities;
- Providing temporary facilities;
- Acquiring and demolishing existing facilities;
- Repairing, realigning, or otherwise modifying roads, trails, utilities, and rail lines;
- Constructing new facilities or relocating existing facilities;
- Relocating the function of an existing facility; and
- Developing demonstration projects.

During construction, avoidance and minimization measures are typically used and incorporated as part of the action. These typical measures are described later in this document.

Upgrading or Otherwise Modifying Facilities

FEMA may provide funds to implement changes required by current building codes and standards, or otherwise modify existing structures. Often, these changes make the structure more resistant to damage in future events. Typical activities include:

- Making structures more fire-resistant (e.g., by replacing roofs and doors with fire-resistant materials);
- Installing bracing, shear panels, shear walls, anchors, or other features so that structures are better able to withstand seismic events or high wind or snow loads;
- Modifying structures to reduce the risk of damage during floods by elevating structures above the expected flood level or by flood proofing; and
- Modifying structures to meet another need of a Subapplicant, such as through an improved project or an alternate project under the Public Assistance Program.

Providing Temporary Facilities

FEMA may provide temporary housing facilities when a disaster renders homes uninhabitable for long periods. Such facilities typically consist of manufactured housing. Typical activities may involve:

- Developing the pads for dwellings;
- Constructing ancillary facilities, such as roads, streets, and parking lots;
- Installing utilities, such as potable water lines, sewer hookups, electricity (including street lighting), and telephones lines; and
- Installing manufactured homes.

FEMA may provide temporary facilities if other housing options are not feasible. Appropriate sites will not be located in a floodplain and do not contain wetlands or critical habitat, affect historic properties or archaeological sites, or contain hazardous materials. Installation of housing units and utilities will be accomplished in accordance with current codes and standards. After temporary housing is no longer needed at the disaster site, FEMA will remove the temporary housing units and associated ancillary facilities, and restore the land to its original use. All removed materials will be stored for future use or disposed of in accordance with applicable laws and regulations.

Another method that FEMA uses to provide temporary housing involves modifying existing facilities to serve as temporary housing. These facilities may consist of existing residential property or the adaptive reuse of non-residential facilities. Specific activities range from conducting repairs and minor upgrades to complete reconstruction of a building's interior. This action may involve acquisition or leasing of facilities. Modifying existing facilities for temporary housing may be conducted by FEMA directly or by providing funding to a Subapplicant.

FEMA also may provide funding for temporary relocation of essential public services, in the event that the structures housing these services are damaged, destroyed, or otherwise rendered inaccessible by a disaster. Funds also may be provided for upgrades necessary to meet current codes and standards, and for the installation or modification of appurtenances, such as utilities, that are necessary to operate facilities.

Acquiring and Demolishing Existing Facilities

FEMA may provide funds for the acquisition and demolition of existing facilities, particularly if they are located in high-hazard areas and are subject to repetitive loss. Typically, these facilities are at a high risk because of: (1) damage from flooding; (2) erosion of stream banks, beaches, slopes, or bluffs; (3) landslides; or (4) wildfire. These facilities may consist of private properties, such as houses and commercial buildings, or publicly owned facilities, such as utilities, roads, and bridges.

Existing facilities will be either removed or demolished. All demolition materials will be disposed of at approved and licensed disposal sites, in compliance with applicable laws and regulations. Any hazardous materials or other contaminants will be removed and disposed of in an appropriate manner. Construction debris and household materials may be recycled if recycling facilities exist. Once structures are removed, lots will be graded to conform to the local topography, and disturbed areas will be revegetated with species approved for the local area.

Repairing, Realigning or Otherwise Modifying Roads, Trails, Utilities and Rail Lines

Roads, trails, utilities (water, sewer, natural gas, power/electrical systems infrastructure), and rail lines are typically damaged when floods or heavy rains cause erosion, subsidence, or landslides. Earthquakes may cause similar damage. Repairs are accomplished by replacing earthen material lost during the disaster and replacing the damaged surface, utility line, or, in the case of rail lines, ballast, and track. Stabilizing the replacement fill using rock, grout, timber walls, or steel sheet piling may be necessary. Hazard mitigation measures may be performed to prevent or limit future damage. For example, a pipe may be installed to convey drainage beneath a road, thus preventing future washouts, or a utility line may be encased in concrete in an area vulnerable to erosion.

If the area of damage is unstable, does not allow for repair, or is subject to repetitive loss, a facility may be realigned so that the area of damage is avoided. Property acquisition or a change in easement may be necessary.

Facilities may also be modified as part of improved projects or alternate projects under the Public Assistance Program to meet additional needs of the Subapplicant.

Constructing New Facilities or Relocating Existing Facilities

If a facility is located in a floodplain or other hazardous area, is subject to repetitive damage, or has been damaged in such a way that restoration in the current location is not practical or cost-effective, FEMA may fund the construction of a new facility or the physical relocation of the existing facility. FEMA defines hazardous areas as those areas susceptible to some type of natural hazard, such as flooding, seismic activity, coastal inundation, or mudslide. Examples of this action include construction of roads, trails, utilities and utility lines, and rail lines in a different area from the existing facility; construction and relocation of buildings; construction of safe rooms; and construction of drainage improvements.

In both new facility construction and physical relocation, FEMA may fund the cost of land acquisition and the construction of appurtenant features, such as access roads and utilities. For properties in the hazard area, FEMA acquires damaged properties, demolishes existing structures (except in cases of physical relocation), and places deed restrictions that limit future uses to open space in perpetuity. However, FEMA does not acquire land directly nor does it become a land owning agency as a result of this process.

Relocating the Function of an Existing Facility

FEMA may fund relocating the function of a facility to an existing facility that has adequate capacity to handle the additional load with minor modifications, if necessary. For structures, the occupants and materials are relocated to alternative structures, traffic may use alternate routes, and utility services are provided by alternative methods. This action will not entail any major physical construction or addition to the existing facility and, if any work is required, it will consist only of minor modifications. For properties in the hazard area, FEMA may acquire damaged properties, demolish existing structures, and place deed restrictions to limit future uses to open space in perpetuity.

Developing Demonstration Projects

Demonstration projects focus on public education and are designed to highlight procedures the public can use to reduce property damage during flood, earthquake, wildfire, wind, and rainstorm disasters. Demonstration projects may involve the development of a model facility to demonstrate how hazard mitigation technologies can be used to reduce potential damage during a disaster. Flood demonstration projects may involve items such as elevating a structure or waterproofing windows and doors that are below the base flood elevation. A fire demonstration project may include vegetation management around a facility and replacing roofs, doors, and windows with fire-resistant materials. Wind and earthquake demonstration projects may include changes to the structural design of buildings to allow them to withstand higher wind velocity or more movement during an earthquake.

Actions Involving Watercourses and Coastal Features

Many FEMA funded activities pertain to inland water sources, such as streams, rivers, lakes, and coastal features such as harbors and beaches. Inland water sources may be perennial or dry during the summer months. During construction, avoidance and minimization measures typically will be used and incorporated as part of the action. Work in a stream channel often includes temporary diversion of the channel using sandbags or a cofferdam constructed of fill. Heavy equipment typically is operated from an adjacent road, bank, or other feature; however, in some cases, operating equipment in a channel area once flow has been diverted may be necessary. A pipe or a temporary secondary channel may be used to convey the diverted water.

If the action involves channel modifications, changes to the capacity of bridges and culverts, or the installation of attenuation structures, conducting hydraulic/hydrologic analyses to evaluate the changes of upstream and downstream flow rates and determine whether additional action components need to be added to address any changes in hydraulics and hydrology outside the project area may be necessary.

Relevant categories of activities include the following:

- Repairing, stabilizing, or armoring embankments;
- Creating, widening, clearing, or dredging a waterway;
- Constructing or modifying a water crossing;
- Constructing or modifying a water detention, retention, storage, or conveyance facility;
- Constructing or modifying other flood control structures; and
- Constructing or modifying a coastal feature.

Repairing, Stabilizing or Armoring Embankments

Repairing, stabilizing, or armoring embankments involves the repair of earthen or rock embankments damaged by floodwaters. Examples are natural stream banks; road, trail, and rail line embankments; embankments for irrigation and navigation canals; and levees used for flood control and reclamation. In addition to repair of damaged features, FEMA may fund measures designed to prevent damage in future flood events.

In addition to replacing fill material, embankments may be stabilized or armored through:

- Placing of rock riprap;
- Hardening with concrete or soil cement;
- Installing retaining walls, gabions, or geotextile fabrics; and/or
- Using bioengineering techniques, such as planting vegetation, placing root wads, or placing willow bundles.

A combination of these techniques may be employed. For example, rock and geotextiles, when used with root wads and willow bundles, may provide mitigation from erosion while enhancing the natural values of a stream corridor.

Creating, Widening, Clearing or Dredging a Waterway

Creating, widening, clearing, or dredging a waterway may be used to reduce the flood hazard to adjacent lands, facilities, or populated areas. New channels may be constructed to convey excess flows around flood-prone areas during flood events. Drainage swales, earthen channels, concrete channels, or subsurface concrete pipes also may be used as a means of conveyance. A new channel may be constructed in a dry environment and connected to a stream after completion. This channel may have an inlet weir higher than the elevation of the normal flow so that the normal flows remain in the natural channel. The outlet may be armored with concrete or rock riprap to prevent excessive erosion of the existing channel.

Existing channels may be widened to allow a channel to convey a larger volume of water. Conveyance may also be increased by replacing earthen banks or channel bottoms with concrete. To the extent possible, construction will be conducted from the top of the bank, but many activities may require construction equipment to work in the stream channel. In perennially flowing streams, work in a stream channel generally will be restricted to the low-flow period, and the flow will be diverted around the construction area. A pipe or a temporary secondary channel will be used to convey the diverted water.

As an alternative to constructing a bypass or modifying an existing channel, the existing channel may be cleared of vegetation or sediment to increase conveyance. This action often will be used in developed areas where modifications are not feasible, as well as in areas where years of inadequate maintenance have allowed trees and brush to grow within the channel or sediment and debris to accumulate in the channel or around culverts and bridges. Vegetation may be removed through mechanical means, by hand, or by application of herbicides. Vegetation may be removed not only from the channel but also from the banks and high-water areas, thus reducing the risk that floating debris could be trapped by trees or heavy brush. Sediment and debris may be removed by dredging, through use of heavy equipment, or by hand. All removed debris will be disposed of at approved and licensed disposal sites, in compliance with applicable laws and regulations. Woody debris and vegetation can be recycled if recycling facilities exist.

Constructing or Modifying Water Crossings

FEMA may fund the repair or replacement of damaged water crossings, the enlargement of openings to allow greater conveyance and reduce the risk that debris may be trapped during floods, or the installation of bank protection or other means to reduce the risk of erosion. Crossings may be relocated or improved to avoid high-hazard areas, repetitive damage, or areas where reconstruction is not cost-effective or feasible.

Culverts may consist of corrugated metal pipes, reinforced concrete pipes, or reinforced concrete box culverts. The capacity of a culvert crossing may be increased to reduce the risk of flooding to the surrounding area, or the culvert may be modified to prevent overtopping or erosion of the crossing. Typical measures include:

- Increasing the size of a culvert or adding culvert barrels;
- Replacing or changing the type of culvert;
- Changing the location or alignment of a culvert; and
- Adding features, such as a headwall, discharge apron, or riprap to reduce the risk of erosion or damage to a culvert or the crossing.

Similarly, bridges may be modified to increase capacity to reduce the risk of flooding or to reduce the risk of damage to the crossing. Typical activities include:

- Widening existing openings or constructing new openings;
- Reconfiguring bracing to reduce the risk that debris will be trapped;
- Installing protective features, such as concrete abutments or riprap, to reduce the risk of damage due to erosion and scour; and
- Replacing a multi-span structure with a clear-span structure.

A bridge may be installed to replace a culvert to increase the flow capacity of a crossing. Low-water crossings may be installed or improved as an alternative to repairing or replacing a culvert or bridge. Constructing or upgrading a low-water crossing typically involves hardening the banks and bottom of a water body. A temporary diversion may be necessary during construction activities.

Constructing and Water Detention, Retention, Storage or Conveyance Facility

Constructing a water detention, retention, storage, or conveyance facility may include the construction, enlargement, or restoration of detention basins, retention basins, sediment ponds, reservoirs, or conveyance facilities, such as irrigation ditches or flumes, to reduce flood flows or to provide a water source for fighting fires in an area of high fire hazard. The creation and/or enlargement of water storage reservoirs is most frequently associated with flood disasters and to a lesser extent, fire disasters.

Detention basins, retention basins, sediment ponds, and reservoirs will be constructed to temporarily store floodwater to reduce downstream peak flows. The stored water will be released at a slower rate so that the existing drainage-ways can convey water without contributing to downstream flooding. All areas disturbed during the construction of these features will be revegetated with native plant species. This action also will include the repair or restoration of water retention or conveyance structures. All sediment removed from these features will be disposed of in a manner consistent with Federal, State, and local laws and regulations.

In rural areas, firefighting may be constrained by the lack of water readily accessible to firefighters. In response to this need, proposed activities also may include the creation of retention facilities in locations that firefighters can readily access, either as a direct source of water or as a source of water to fill water supply trucks. All areas disturbed during the construction of a retention facility will be revegetated with native plant species.

Constructing Other Flood-Control Structures

A flood-control structure is a facility designed to prevent floodwaters from entering a flood-prone area. Typical examples are levees (also referred to as dikes) and floodwalls. Activities include:

- Repairing damaged facilities, usually during emergency situations;
- Installing embankment protection;
- Raising the height of existing facilities to prevent overtopping in future floods;
- Constructing new facilities to protect flood-prone areas from damage during future floods; and
- Modifying or installing interior drainage systems to reduce the risk of damage behind levees and floodwalls during heavy rains or flooding events on tributary streams.

Levees will be repaired or constructed using compacted fill and, in some cases, riprap protection. Bare earth will be seeded with grasses to prevent erosion. Typically, a gravel road will be installed on the levee's crest to allow for maintenance. Floodwalls, typically built in urban areas, will be constructed using reinforced concrete or grouted, reinforced concrete block. Excavation will be necessary to install footings. Levees and floodwalls both will have interior drainage systems that may include pumps for removing accumulated water.

Constructing a Coastal Feature

Constructing a coastal feature may involve the repair, replacement, or construction of facilities in coastal environments, such as estuaries, inlets, harbors, and beaches. These facilities include:

- Recreational facilities, such as piers and boat ramps;
- Facilities for maritime use, such as docks and slips;
- Shoreline protection devices, such as seawalls, groins, jetties, and revetments; and
- Coastal flood-control structures, such as levees.

Construction activities are expected to occur in water and involve driving piles, placing rock or soil, or dredging sand, mud, or other sediment.

Wildfire Risk Reduction

Vegetation management is intended to reduce the risk of loss and damage due to wildfire and, as described above under "Actions Involving Watercourses and Coastal Features", increase the ability of channels to convey flows, thus reducing the risk of flood damage. Vegetation management for wildfire risk reduction may be accomplished using mechanical means, hand-clearing, application of herbicides, or grazing. Some activities may include a combination of these methods. During implementation, avoidance and minimization measures will be used and incorporated as part of the action.

Relevant categories of activities are:

- Mechanical or hand clearing of vegetation;
- Herbicidal treatments; and
- Biological control.

Mechanical or Hand Clearing of Vegetation

Mechanical or hand clearing of vegetation will be used for the selective removal of vegetation so that a certain proportion of vegetation is left in place. This is done to reduce the amount of vegetative fuels in an area where mechanical removal of vegetation is impractical or the remaining vegetation needs to be protected. Per FEMA's Wildfire Mitigation Policy vegetation may be removed to create defensible space around buildings and structures, and to protect life and property beyond defensible space perimeters but proximate to (less than 2 miles from) at-risk structures. The creation and maintenance of firebreaks, access roads, and staging areas are not eligible for FEMA funding.

In mechanical removal, heavy equipment will be used to uproot, crush, pulverize, or cut the trees and brush being removed. Hand removal will involve the use of chainsaws, axes, and hoes to cut and uproot vegetation. Depending on the location of the vegetation removal project and State and local regulations, vegetation downed as a result of mechanical or hand removal will be piled and burned onsite, chipped and spread onsite, or loaded and hauled away from the site. After the removal of the targeted vegetation, cleared areas may be revegetated with native, fire-resistant species. Vegetation hauled offsite can be recycled but must be disposed of in accordance with appropriate requirements.

Herbicidal Treatments

Activities generally associated with herbicidal treatment include the removal of targeted exotic invasive species within specific areas and the prevention of growth and re-sprouting of undesirable vegetation once an area has been cleared of excessive vegetation by mechanical removal and/or hand removal. Only U.S. Environmental Protection Agency-approved herbicides will be used to control the growth of undesired vegetation in a manner consistent with labeling instructions and applicable Federal and State regulations. After treatment, some areas may be revegetated with native vegetation that is fire resistant.

Biological Control

In biological control, cattle, horses, goats, sheep, or other livestock are allowed to graze on grasses and other vegetation as a means of control. Any area proposed for grazing will be fenced. The type of animals, timing, duration, and stocking rate will be selected based on the targets of the vegetation management plan (i.e., the quantity and quality of residue to remain).

Proposed General Avoidance and Minimization Measures and Species-Specific Conservation Measures

General Avoidance and Minimization Measures

The general avoidance and minimization measures described in this section will be implemented, as appropriate, to reduce the identified potential adverse effects from a Subapplicant's proposed

project. The Subapplicant will be responsible for implementation of the avoidance and minimization measures that FEMA identifies as necessary for the proposed project.

GEN AMM-1 Erosion and Sedimentation Prevention Measures: The Subapplicant will prepare an Erosion Control Plan, as needed. The Erosion Control Plan will detail the erosion and sedimentation prevention measures required. As part of this plan, the Subapplicant will ensure that sediment-control devices are installed and maintained correctly. For example, sediment will be removed from engineering controls once the sediment has reached one-third of the exposed height of the control. The devices will be inspected frequently (i.e., daily or weekly, as necessary) to ensure that they are functioning properly; controls will be immediately repaired or replaced or additional controls will be installed as necessary. Sediment that is captured in these controls may be disposed of onsite in an appropriate, safe, approved area or offsite at an approved disposal site.

Areas of soil disturbance, including temporarily disturbed areas, will be seeded with a regionally appropriate erosion control seed mixture. On soil slopes with an angle greater than 30 percent, erosion control blankets will be installed or a suitable and approved binding agent will be applied. Runoff will be diverted away from steep or denuded slopes.

Where habitat for covered species is identified within, or adjacent to, the project footprint, all disturbed soils at the site will undergo erosion control treatment before the rainy season starts and after construction is terminated. Treatment may include temporary seeding and sterile straw mulch.

GEN AMM-2 Bank Stabilization: If bank stabilization activities are necessary, then such stabilization will be constructed to minimize erosion potential, and will contain design elements suitable for supporting riparian vegetation, if feasible.

GEN AMM-3 Dust Control Measures: To reduce dust, all traffic associated with the Subapplicant's construction activities will be restricted to a speed limit of 15 miles per hour when traveling off of highways or county roads.

Stockpiles of material that are susceptible to wind-blown dispersal will be covered with plastic sheeting or other suitable material to prevent movement of the material.

During construction, water or other binding materials will be applied to disturbed ground that may become windborne. If binding agents are used, all manufacturers' recommendations for use will be followed.

GEN AMM-4 Spill Control Planning: The Subapplicant will prepare a Spill Prevention and Pollution Control Plan to address the storage of hazardous materials and emergency cleanup of any hazardous material and will be available onsite, if applicable. The plan will incorporate hazardous waste, storm water, and other emergency planning requirements.

GEN AMM-5 Spill Prevention and Pollution Control Measures: The Subapplicant will exercise every reasonable precaution to protect covered species and their habitats from pollution due to fuels, oils, lubricants, construction by-products, and pollutants such as construction chemicals, fresh cement, saw-water, or other harmful materials. Water containing mud, silt, concrete, or other by-products or pollutants from construction activities will be treated by filtration, retention in a settling pond, or similar measures. Fresh cement or concrete will not be allowed to enter the flowing water of streams and curing concrete will not come into direct contact with waters supporting covered

species. Construction pollutants will be collected and transported to an authorized disposal area, as appropriate, per all Federal, State, and local laws and regulations.

To reduce bottom substrate disturbance and excessive turbidity, removal of existing piles by cutting at the substrate surface or reverse pile driving with a sand collar at the base to minimize resuspension of any toxic substances is preferable; hydraulic jetting will not be used.

No petroleum product chemicals, silt, fine soils, or any substance or material deleterious to covered species will be allowed to pass into or be placed where it can pass into a stream channel. There will be no side-casting of material into any waterway.

All concrete or other similar rubble will be free of trash and reinforcement steel. No petroleum-based products (e.g., asphalt) will be used as a stabilizing material.

The Subapplicant will store all hazardous materials in properly designated containers in a storage area with an impermeable membrane between the ground and the hazardous materials. The storage area will be encircled by a berm to prevent the discharge of pollutants to ground water or runoff into the habitats of covered species. A plan for the emergency cleanup of any hazardous material will be available onsite, and adequate materials for spill cleanup will be maintained onsite.

GEN AMM-6 Equipment Inspection and Maintenance: Well-maintained equipment will be used to perform the work and, except in the case of a failure or breakdown, equipment maintenance will be performed offsite. Equipment will be inspected daily by the operator for leaks or spills. If leaks or spills are encountered, the source of the leak will be identified, leaked material will be cleaned up, and the cleaning materials will be collected and properly disposed. Fueling of land- and marine-based equipment will be conducted in accordance with procedures to be developed in the Spill Prevention and Pollution Control Plan.

Vehicles and equipment that are used during the course of a project will be fueled and serviced in a “safe” area (i.e., outside of sensitive habitats) in a manner that will not affect covered species or their habitats. Spills, leaks, and other problems of a similar nature will be resolved immediately to prevent unnecessary effects on covered species and their habitats. A plan for the emergency cleanup of any spills of fuel or other material will be available onsite, and adequate materials for spill cleanup will be maintained onsite.

GEN AMM-7 Fueling Activities: Avoidance and minimization measures will be applied to protect covered species and their habitats from pollution due to fuels, oils, lubricants, and other harmful materials. Vehicles and equipment that are used during project implementation will be fueled and serviced in a manner that will not affect covered species or their habitats. Machinery and equipment used during work will be serviced, fueled, and maintained on uplands to prevent contamination to surface waters. Fueling equipment and vehicles will be kept more than 200 feet away from waters of the United States. Exceptions to this distance requirement may be allowed for large cranes, pile drivers, and drill rigs if they cannot be easily moved.

GEN AMM-8 Equipment Staging: No staging of construction materials, equipment, tools, buildings, trailers, or restroom facilities will occur in a floodplain during flood season at the proposed project location, even if staging is only temporary.

GEN AMM-9 Materials Storage and Disposal: Stockpiled soils will be adequately covered to prevent sedimentation from runoff and wind. All hazardous materials will be stored in upland areas

in storage trailers and/or shipping containers designed to provide adequate containment. Short-term laydown of hazardous materials for immediate use will be permitted provided the same containment precautions are taken as described for hazardous materials storage. All construction materials, wastes, debris, sediment, rubbish, trash, and fencing will be removed from the site once project construction is complete and transported to an authorized disposal area, as appropriate, in compliance with applicable Federal, State, and local laws and regulations. No disposal of construction materials or debris will occur in a floodplain. No storage of construction materials or debris will occur in a floodplain during flood season.

GEN AMM-10 Fire Prevention: With the exception of vegetation-clearing equipment, no vehicles or construction equipment will be operated in areas of tall, dry vegetation.

The Subapplicant will develop and implement a fire prevention and suppression plan for all maintenance and repair activities that require welding or otherwise have a risk of starting a wildfire.

GEN AMM-11 Waste Management: The work area will be kept free of loose trash, including small pieces of residual construction material, such as metal cuttings, broken glass, and hardware.

All food waste will be removed from the site on a daily basis.

All construction material, wastes, debris, sediment, rubbish, vegetation, trash, and fencing will be removed from the site once the project is completed and will be transported to an authorized disposal area, as appropriate, per all Federal, State, and local laws and regulations.

GEN AMM-12 Work Involving Boats and Barges: For projects that involve in-water work for which boats and/or temporary floating work platforms are necessary, buoys will be installed so moored vessels will not beach on the shoreline, anchor lines will not drag, and moored vessels and buoys are not located within 25 feet of vegetated shallow waters. Temporary floating work platforms will not anchor or ground in fish spawning areas in freshwater or in eelgrass, kelp, or macro algae. To reduce the likelihood of introducing aquatic invasive species, vessels will use the State's Marine Invasive Species Program. Drip pans and other spill control measures will be used so that oil or fuel from barge-mounted equipment is properly contained.

GEN AMM-13 Work Area Designation to Minimize Disturbance: The Subapplicant will reduce, to the maximum extent practicable, the amount of disturbance at a site to the absolute minimum necessary to accomplish the project. Wherever possible, existing vegetation will be salvaged from the project area and stored for replanting after earthmoving activities are completed. Topsoil will be removed, stockpiled, covered, and encircled with silt fencing to prevent loss or movement of the soil into covered species habitats. All topsoil will be replaced in a manner to recreate pre-disturbance conditions as closely as possible.

Project planning must consider not only the effects of the action itself, but also all ancillary activities associated with the actions, such as equipment staging and refueling areas, topsoil or spoils stockpiling areas, material storage areas, disposal sites, routes of ingress and egress to the project site, and all other related activities necessary to complete the project.

GEN AMM-14 Access Routes and Staging Areas: When working on stream banks or floodplains, disturbance to existing grades and vegetation will be limited to the actual site of the project and necessary access routes. Placement of all roads, staging areas, and other facilities will avoid and limit disturbance to sensitive habitats (e.g., stream banks, stream channel, and riparian

habitat) as much as possible. When possible, existing ingress or egress points will be used and/or work will be performed from the top of the stream banks. After completion of the work, the contours of the streambed, vegetation, and stream flows will be returned to their pre-construction condition or better.

All staging and material storage areas, including the locations where equipment and vehicles are parked overnight, will be placed outside of the flood zone of a watercourse, above areas of tidal inundation, away from riparian habitat or wetland habitat, and away from any other sensitive habitats. When possible, staging and access areas will be situated in areas that are previously disturbed, such as developed areas, paved areas, parking lots, areas with bare ground or gravel, and areas clear of vegetation.

GEN AMM-15 Environmental Awareness Training for Construction Personnel: All construction personnel will be given environmental awareness training by the project's environmental inspector or biological monitor before the start of construction. The training will familiarize all construction personnel with the covered species that may occur onsite, their habitats, general provisions and protections afforded by the Act, measures to be implemented to protect these species, and the project boundaries. This training will be provided within three days of the arrival of any new worker.

As part of the environmental awareness training, construction personnel will be notified that no dogs or any other pets under control of construction personnel will be allowed in the construction area, and that no firearms will be permitted in the construction area, unless carried by authorized security personnel or law enforcement.

GEN AMM-16 Biological Monitor: If a project involves activities that may result in take of a covered species, as defined by the Act, a Service-approved biologist will be present onsite for all construction activities that occur within 100 feet of habitat for those species. If a Service-approved biologist is needed, the Subapplicant will submit the biologist's qualifications to the Service for approval 30 days prior to project construction. The Service-approved biologist will ensure that all applicable avoidance and minimization measures in the programmatic biological opinion are implemented during project construction. The Service-approved biologist will also ensure that all vehicles entering the site are free of debris that may harbor organisms that could be introduced to the site, such as vegetation or mud from other aquatic areas. The Service-approved biologist will also ensure that turbidity, sedimentation, and the release of materials such as dust or construction runoff are controlled, and that spill control measures are enacted properly.

The Service-approved biologist will oversee construction activities to ensure that no covered species and/or their habitats are adversely affected. The Service-approved biologist will have the authority to stop any work activities that may result in potential adverse effects to covered species and/or their habitats.

Approval requests from the Subapplicants for Service-approved biologists shall include, at a minimum:

- a. Relevant education;
- b. Relevant training concerning the listed species for which approval is requested, including species identification, survey techniques, handling individuals of different age classes, and handling of different life stages by a permitted biologist or recognized species expert authorized by the Service for such activities;

- c. A summary of field experience conducting requested activities (to include project/research information);
- d. A summary of biological opinions under which they were authorized to work with the requested species and at what level (such as construction monitoring versus handling), this will also include the names and qualification of persons under which the work was supervised as well as the amount of work experience on the actual project;
- e. A list of Federal Recovery Permits [10(a)1(A)] held or under which they are authorized to work with the species requested (to include the permit number, authorized activities and name of permit holder); and
- f. Any relevant professional references with contact information.

GEN AMM-17 Daily Work Hours: Construction activities that may affect suitable habitat for covered species will be limited to daylight hours during weekdays, leaving a nighttime and weekend period for the species. Work will be allowed on weekends if the proposed construction is 14 days or less in length.

GEN AMM-18 Entrapment Prevention: To prevent entrapment of covered species, all vertically sided holes or trenches will be covered at the end of the workday, or have escape ramps built into the walls of the excavation. If pipes are stored onsite or in associated staging areas, they will be capped when not in use.

Construction materials that have the potential to entangle or entrap wildlife will be properly contained so that wildlife cannot interact with the materials.

If a covered species is identified onsite, crews will immediately stop work within 50 feet of the individual, and inform the construction supervisor and the Service-approved biologist. Work will not continue within 50 feet of the individual until it has traveled off the project site of its own volition. For covered species, please refer to the species-specific Conservation Measures section of the programmatic biological opinion.

GEN AMM-19 Water Quality Protection: Contractors will exercise every reasonable precaution to protect covered species and their critical habitats from construction byproducts and pollutants, such as construction chemicals, fresh cement, saw-water, or other deleterious materials. Fresh cement or uncured concrete will not be allowed to come into contact with any waterway. Construction waste will be collected and transported to an authorized upland disposal area, as appropriate, and per Federal, State, and local laws and regulations.

The Subapplicant will follow the best management practices described in *The Use of Treated Wood Products in Aquatic Environments* guidelines (NOAA Fisheries 2009). Although this guidance focuses on the effects of the contaminants on Pacific salmonids protected under the Act, this guidance may still apply for general water quality protection and other federally-protected species. This guidance will be used in conjunction with site-specific evaluations of other potential impacts. Riprap will be clean and durable, free from dirt, sand, clay, and rock fines and will be installed to withstand the 100-year flood event. If applicable, appropriate measures will be taken to minimize disturbance to potentially contaminated sediments.

GEN AMM-20 Revegetation of Stream Banks: For projects that require revegetation of stream and riverbanks as a result of riparian vegetation removal during construction activities, the Subapplicant will implement revegetation techniques. Where such revegetation is needed, the Subapplicant will prepare and implement a revegetation plan that includes information regarding

monitoring for success. Revegetation plantings will be replaced at a 3:1 ratio with an 80 percent planting survival within 5 years of the plantings.

GEN AMM-21 Restoration of Upland Areas to Pre-Project Conditions: For projects that require restoration of upland areas to pre-project conditions as a result of ground disturbance during construction activities, the Subapplicant will use native plants to the maximum extent practicable. Similarly, when hydroseeding, only native seed mix will be used.

GEN AMM-22 Invasive Aquatic Species: The Subapplicant will follow the guidelines in the California Department of Fish and Wildlife's (CDFW's) *California Aquatic Invasive Species Management Plan* to prevent the spread of invasive aquatic plant and animal species (CDFW 2008).

Construction equipment will be clean of debris or material that may harbor seeds or invasive pests before entering the work area. This debris or material includes dirt on construction equipment, tools, boots, pieces of vegetation, and water in the bilge of boats. All aquatic sampling equipment will be sterilized using appropriate guidelines before its use in aquatic habitats.

GEN AMM-23 Work below Mean Higher High Water: In freshwater, estuarine, and marine areas that support covered species, disturbance to habitat below mean higher high water will be limited to the maximum extent possible.

GEN AMM-24 Avoidance of Submerged Vegetation: The removal of submerged vegetation (such as eelgrass and kelp estuarine or marine areas, or submerged aquatic vegetation in freshwater areas) will be avoided to the maximum extent possible.

GEN AMM-25 Minimization of Shading by Overwater Structures: To reduce shading effects, new and replacement structures placed over freshwater, estuarine, and marine waters (such as bridges, piers, floating docks, and gangways) will incorporate design elements (such as metal grating or glass paver blocks) that allow light transmission when feasible.

GEN AMM-26 Water Diversion and Dewatering: In-channel work and channel diversion of live flow during project construction will be conducted in a manner to reduce impacts to covered species. Dewatering will be used to create a dry work area and will be conducted in a manner that minimizes turbidity into nearby waters. Water diversion and dewatering will include the following measures:

- a. Heavy equipment will avoid flowing water other than temporary crossing or diverting activities.
- b. If covered species may be present in the areas to be dewatered, relocation will be conducted by a Service-approved biologist in accordance with applicable Service species-specific Conservation Measures. Because this measure involves take of a species, it is only applicable to covered species for which an Incidental Take Statement is provided.
- c. Water pumped or removed from dewatered areas will be treated before its release so that it does not contribute to turbidity in nearby waters.
- d. Temporary culverts to convey live flow during construction activities will be placed at stream grade and be of an adequate size as to not increase stream velocity.
- e. Silt fences or mechanisms to avoid sediment input to the flowing channel will be erected adjacent to flowing water if sediment input to the stream may occur.

Species-Specific Conservation Measures

In cases where the species-specific Conservation Measures are duplicative of the General Avoidance and Minimization Measures, the most comprehensive measure (i.e., the measure providing the most restriction) will apply.

California Red-Legged Frog California Tiger Salamander, Central California DPS, California Tiger Salamander, Sonoma DPS

To reduce potential effects to the California red-legged frog and Sonoma and Central California tiger salamander Distinct Population Segments (DPSs) (California tiger salamander), the following measures to avoid and minimize adverse effects to the California red-legged frog and California tiger salamander and their critical habitat will be incorporated into the proposed project. These measures will be communicated to the contractor through the use of special provisions included in the contract bid solicitation package.

CRLF-CTS-1 Biological Monitor: A SFWO-approved biologist(s) will be onsite during all activities that may result in take of California red-legged frogs or California tiger salamanders.

CRLF-CTS-2 Seasonal Avoidance: Project activities will be scheduled to minimize adverse effects to the California red-legged frog and California tiger salamander and their habitat. Disturbance to upland habitat will be confined to the dry season, generally May 1 through October 15 (or the first measurable fall rain of 1" or greater) because that is the time period when California red-legged frogs and California tiger salamanders are less likely to be moving through upland areas. However, if unavoidable, conduct grading and other disturbance in pools and ponds only when they are dry, typically between July 15 and October 15. Work within a pool or wetland may begin prior to July 15 if the pool or wetland has been dry for a minimum of 30 days prior to initiating work.

CRLF-CTS-3 Rain Event Limitations: To the maximum extent practicable, no construction activities will occur during rain events or within 24 hours following a rain event. Prior to construction activities resuming, a SFWO-approved biologist will inspect the Action Area and all equipment/materials for the presence of California red-legged frogs and California tiger salamanders. Construction may continue 24 hours after the rain ceases if no precipitation is forecasted within 24-hours. If rain exceeds 0.5 inches during a 24-hour period, work will cease until no further rain is forecasted. The Service may approve modifications to this timing on a case-by-case basis.

CRLF-CTS-4 Pre-construction Survey: No more than 24 hours prior to the date of initial ground disturbance and vegetation clearing, a SFWO-approved biologist with experience in the identification of all life stages of the California red-legged frog and California tiger salamander and designated critical habitat will conduct a pre-construction survey at the project site. The survey will consist of walking the project limits and within the project site to determine possible presence of the species. The SFWO-approved biologist will investigate all areas that could be used by California red-legged frogs and California tiger salamanders for feeding, breeding, sheltering, movement, and other essential behaviors, such as small woody debris, refuse, burrows entries, etc.

CRLF-CTS-5 Daily Clearance Surveys: The SFWO-approved biologist will conduct clearance surveys at the beginning of each day and regularly throughout the workday when construction activities are occurring that may result in take of California red-legged frogs and California tiger salamanders.

CRLF-CTS-6 Environmentally Sensitive Areas: Prior to the start of construction, Environmentally Sensitive Areas (ESAs) – defined as areas containing sensitive habitats adjacent to or within construction work areas for which physical disturbance is not allowed – will be clearly delineated using high visibility orange fencing. The ESA fencing will remain in place throughout the duration of the proposed action, while construction activities are ongoing, and will be regularly inspected and fully maintained at all times. The final project plans will depict all locations where ESA fencing will be installed and will provide installation specifications. The bid solicitation package special provisions will clearly describe acceptable fencing material and prohibited construction-related activities including vehicle operation, material and equipment storage, access roads and other surface-disturbing activities within ESAs. With prior approval from the Service, a hybrid ESA/WEF fencing material that is both hi-visibility and impermeable to wildlife movement may be used in place of paired ESA fencing and WEF fencing. Also with prior approval from the Service, an exception to the foregoing fencing measures may apply on a case-by-case basis during the following situations: (1) at work sites where the duration of work activities is very short (e.g., 3 days or less), the work activities occur during the dry season, and the installation of ESA fencing will result in more ground disturbance than from project activities; or (2) at work sites where the substrate (i.e., rock, shale, etc.) or topography (i.e., slopes > 30 degrees) inhibit the safe and proper installation of fencing materials. In these cases, biological monitoring will occur during all project activities at that site.

CRLF-CTS-7 Wildlife Exclusion Fencing: Prior to the start of construction, Wildlife Exclusion Fencing (WEF) will be installed at the edge of the project footprint in all areas where California red-legged frogs and California tiger salamanders could enter the construction area. The onsite Project Manager and the SFWO-approved biologist will determine location of the fencing prior to the start of staging or surface disturbing activities.

- a. Exclusion fencing will be at least 3 feet high and the lower 6 inches of the fence will be buried in the ground to prevent animals from crawling under. The remaining 2.5 feet will be left above ground to serve as a barrier for animals moving on the ground surface.
- b. Such fencing will be inspected and maintained daily by the SFWO-approved biologist until completion of the project and removed only when all construction equipment is removed from the site.
- c. The WEF specifications will be included in the final project plans and in the bid solicitation package (special provisions) and will include the WEF specifications including installation and maintenance criteria.
- d. The WEF will remain in place throughout the duration of the project and will be regularly inspected and fully maintained. Repairs to the WEF will be made within 24 hours of discovery.
- e. Upon project completion the WEF will be completely removed, the area cleared of debris and trash, and returned to natural conditions.
- f. With prior approval from the Service, an exception to the foregoing fencing measures may apply on a case-by-case basis during the following situations: 1) at work sites where the duration of work activities are very short (e.g., 3 days or less), the work activities occur during the dry season, and the installation of exclusion fencing will result in more ground disturbance than from project activities; or (2) at work sites where the substrate (i.e., rock, shale, etc.) or topography (i.e., slopes > 30 degrees) inhibit the safe and proper installation of fencing materials. In these cases, species monitoring will occur during all project activities at that site. Modifications to this fencing measure may be made on a case-by-case basis with approval from the Service.

- g. With prior approval from the Service, a hybrid ESA/WEF fencing material that is both hi-visibility and impermeable to wildlife movement may be used in place of paired ESA fencing and WEF fencing.

CRLF-CTS-8 Entrapment Prevention: To prevent inadvertent entrapment of animals during construction, all excavated, steep-walled holes or trenches more than 6 inches deep will be covered with plywood or similar materials at the close of each working day or provided with one or more escape ramps constructed of earth fill or wooden planks. The SFWO-approved biologist will inspect all holes and trenches at the beginning of each workday and before such holes or trenches are filled. All replacement pipes, culverts, or similar structures stored in the Action Area overnight will be inspected before they are subsequently moved, capped, and/or buried. If at any time a California red-legged frog or California tiger salamander is discovered, the onsite Project Manager and SFWO-approved biologist will be notified immediately and the SFWO-approved biologist will implement the species observation and handling protocol. If handling is necessary, work will be suspended until the appropriate level of coordination is complete.

CRLF-CTS-9 Encounters with Species: Each encounter with a California red-legged frog or California tiger salamander will be treated on a case-by-case basis. If any life stage of the California red-legged frog or California tiger salamander is found and these individuals may be killed or injured by work activities, the following will apply:

- a. If California red-legged frogs or California tiger salamanders are detected in the Action Area, work activities within 50 feet of the individual that may result in the harm, injury, or death to the animal will cease immediately and the onsite Project Manager and SFWO-approved biologist will be notified. Based on the professional judgment of the SFWO-approved biologist, if project activities can be conducted without harming or injuring the California red-legged frog and California tiger salamander, it may be left at the location of discovery and monitored by the SFWO-approved biologist. All project personnel will be notified of the finding and at no time will work occur within 50 feet of a California red-legged frog and California tiger salamander without a SFWO-approved biologist present.
- b. To the maximum extent possible, contact with the individual frog or salamander will be avoided and it will be allowed to move out of the hazardous situation of its own volition. This procedure applies to situations where a California red-legged frog and California tiger salamander is encountered while it is moving to another location. It does not apply to animals that are uncovered or otherwise exposed or in areas where there is not sufficient adjacent habitat to support the species if the individual moves away from the hazardous location.

CRLF-CTS-10 Species Observations and Handling Protocol: If a California red-legged frog or California tiger salamander does not leave the work area, the SFWO-approved biologist will implement the species observation and handling protocol outlined below. Only SFWO-approved biologists will participate in activities associated with the capture, handling, relocation, and monitoring of California red-legged frogs and California tiger salamanders.

- a. Prior to handling and relocation, the SFWO-approved biologist will take precautions to prevent introduction of amphibian diseases in accordance with the Interim Guidance on Site Assessment and Field Surveys for Determining Presence or a Negative Finding of the California Tiger Salamander (Service 2003c). Disinfecting equipment and clothing is especially important when biologists are coming to the Action Area to handle amphibians after working in other aquatic habitats. California red-legged frogs and the Sonoma and

- Central California tiger salamanders will also be handled and assessed according to the Restraint and Handling of Live Amphibians (USGS National Wildlife Health Center 2001).
- b. California red-legged frogs and California tiger salamanders will be captured by hand, dip net, or other SFWO-approved methodology, transported and relocated to nearby suitable habitat outside of the work area and released as soon as practicable the same day of capture. Individuals will be relocated no greater than 300 feet outside of the project site to areas with an active rodent burrow or burrow system (unless otherwise approved by the Service and with written landowner permission). Holding/transporting containers and dip nets will be thoroughly cleaned, disinfected, and rinsed with freshwater prior to use within the Action Area. The Service will be notified within 24 hours of all capture, handling, and relocation efforts.
 - c. If an injured California red-legged frog or California tiger salamander is encountered and the SFWO-approved biologist determines the injury is minor or healing and the salamander is likely to survive, the salamander will be released immediately, consistent with measure 12.b above. The California red-legged frogs and the Sonoma and Central California tiger salamander will be monitored until it is determined that it is not imperiled by predators or other dangers.
 - d. If the SFWO-approved biologist determines that a California red-legged frog or California tiger salamander has major or serious injuries as a result of project-related activities the SFWO-approved biologist, or designee, will immediately take it to a SFWO-approved facility. If taken into captivity the individual will remain in captivity and not be released into the wild unless it has been kept in quarantine and the release is authorized by the Service. The Subapplicant will bear any costs associated with the care or treatment of such injured California red-legged frogs or California tiger salamanders. The circumstances of the injury, the procedure followed and the final disposition of the injured animal will be documented in a written incident report to the Service as described below.
 - e. Notification to the Service of an injured or dead California red-legged frog or California tiger salamander in the Action Area will be made and reported whether or not its condition resulted from project-related activities. In addition, the SFWO-approved biologist will follow up with the Service in writing within 2 calendar days of the finding. Written notification to the Service will include the following information: the species, number of animals taken or injured, sex (if known), date, time, location of the incident or of the finding of a dead or injured animal, how the individual was taken, photographs of the specific animal, the names of the persons who observe the take and/or found the animal, and any other pertinent information. Dead specimens will be preserved, as appropriate, and will be bagged and labeled (i.e. species type; who found or reported the incident; when the report was made; when and where the incident occurred; and if possible, the cause of death). Specimens will be held in a secure location until instructions are received from the Service regarding the disposition of the specimen.

CRLF-CTS-11 Environmental Awareness Training: Prior to the start of construction, a SFWO-approved biologist with experience in the ecology of the California red-legged frog and California tiger salamander as well as the identification of all its life stages will conduct a training program for all construction personnel including contractors and subcontractors. Interpretation for non-English speaking workers will be provided. All construction personnel will be provided a fact sheet conveying this information. The same instruction will be provided to any new workers before they are authorized to perform project work. The training will include, at a minimum:

- a. habitat within the Action Area;
- b. an explanation of the species status and protection under state and federal laws;

- c. the avoidance and minimization measures to be implemented to reduce take of this species;
- d. communication and work stoppage procedures in case a listed species is observed within the Action Area; and
- e. an explanation of the importance of the Environmentally Sensitive Areas (ESAs) and Wildlife Exclusion Fencing (WEF).

CRLF-CTS-12 Disease Prevention and Decontamination Procedures: To ensure that diseases are not conveyed between work sites by the SFWO-approved biologist, the fieldwork code of practice developed by the Declining Amphibian Populations Task Force will be followed at all times. A copy of the code of practice is enclosed.

CRLF-CTS-13 Pump Screens: If a water body is to be temporarily dewatered by pumping, intakes will be completely screened with wire mesh not larger than 5 millimeters and the intake will be placed within a perforated bucket or other method to attenuate suction to prevent California red-legged frogs and California tiger salamanders from entering the pump system. Pumped water will be managed in a manner that does not degrade water quality and upon completion be released back into the water body, or at an appropriate location in a manner that does not cause erosion. No re-watering of the water body is necessary if sufficient surface or subsurface flow exists to fill it within a few days, or if work is completed during the time of year the water body will have dried naturally. To avoid effects to eggs and larvae, work within seasonal ponds will be conducted when the pond has been dry naturally for at least 30 days

CRLF-CTS-14 Hand Clear Vegetation: Hand clear vegetation in areas where California red-legged frogs and California tiger salamanders are suspected to occur. All cleared vegetation will be removed from the project footprint to prevent attracting animals to the project site. A SFWO-approved biologist will be present during all vegetation clearing and grubbing activities. Prior to vegetation removal, the SFWO-approved biologist will thoroughly survey the area for California red-legged frogs and California tiger salamanders. Once the SFWO-approved biologist has thoroughly surveyed the area, clearing and grubbing may continue without further restrictions on equipment; however, the SFWO-approved biologist will remain onsite to monitor for California red-legged frogs and California tiger salamanders until all clearing and grubbing activities are complete.

CRLF-CTS-15 Wildlife Passage for Road Improvement: When constructing a road improvement, wherever possible, enhance or establish wildlife passage for the California red-legged frog and California tiger salamander across roads, highways, or other anthropogenic barriers. This includes upland culverts, tunnels, and other crossings designed specifically for wildlife movement, as well as making accommodations in curbs, median barriers, and other impediments to terrestrial wildlife movement at locations most likely beneficial to the California red-legged frog and California tiger salamander.

CRLF-CTS-16 Accidental Spills, SWPPP, Erosion Control, and BMPs: Prior to the onset of work, a plan will be in place for prompt and effective response to any accidental spills. All workers will be informed of the importance of preventing spills and of the appropriate measures to implement if a spill occurs. Storm-water pollution prevention plans and erosion control BMPs will be developed and implemented to minimize any wind- or water-related erosion. These provisions will be included in construction contracts for measures to protect sensitive areas and prevent and minimize storm-water and non-storm-water discharges. Protective measures will include, at a minimum:

- a. No discharge of pollutants from vehicle and equipment cleaning is allowed into any storm drains or watercourses.
- b. Vehicle and equipment fueling and maintenance operations must be at least 50 feet away from aquatic or riparian habitat and not in a location where a spill may drain directly toward aquatic habitat, except at established commercial gas stations or at an established vehicle maintenance facility. The monitor will implement the spill response plan to ensure contamination of aquatic or riparian habitat does not occur during such operations.
- c. Concrete wastes will be collected in washouts and water from curing operations is to be collected and disposed of properly. Neither will be allowed into watercourses.
- d. Spill containment kits will be maintained onsite at all times during construction operations and/or staging or fueling of equipment.
- e. Dust control will be implemented, and may include the use of water trucks and non-toxic tackifiers (binding agents) to control dust in excavation and fill areas, rocking temporary access road entrances and exits, and covering of temporary stockpiles when weather conditions require.
- f. Graded areas will be protected from erosion using a combination of silt fences, fiber rolls, etc. along toes of slopes or along edges of designated staging areas, and erosion control netting (such as jute or coir) as appropriate on sloped areas. No erosion control materials that use plastic or synthetic monofilament netting will be used.
- g. Permanent erosion control measures such as bio-filtration strips and swales to receive storm water discharges from paved roads or other impervious surfaces will be incorporated to the maximum extent practicable.
- h. All grindings and asphaltic-concrete waste will be stored within previously disturbed areas absent of habitat and at a minimum of 50 feet from any aquatic habitat, culvert, or drainage feature.

CRLF-CTS-17 Site Restrictions: The following site restrictions will be implemented to avoid or minimize effects on the listed species and its habitat:

- a. A speed limit of 15 miles per hour (mph) in the project footprint in unpaved areas will be enforced to reduce dust and excessive soil disturbance.
- b. Construction and ground disturbance will occur only during daytime hours, and will cease no less than 30 minutes before sunset and may not begin again earlier than 30 minutes after sunrise.
- c. Except when necessary for driver or pedestrian safety, to the maximum extent practicable, artificial lighting at a project site will be prohibited during the hours of darkness.
- d. Routes and boundaries of roadwork will be clearly marked prior to initiating construction or grading.
- e. To the maximum extent practicable, any borrow material will be certified to be non-toxic and weed free.
- f. All food and food-related trash items will be enclosed in sealed trash containers and properly disposed of offsite.
- g. No pets will be allowed anywhere in the Action Area during construction.

CRLF-CTS-18 Suitable Erosion Control Materials: To prevent California red-legged frogs and California tiger salamanders from becoming entangled, trapped, or injured, erosion control materials that use plastic or synthetic monofilament netting will not be used within the Action Area. This includes products that use photodegradable or biodegradable synthetic netting, which can take several months to decompose. Acceptable materials include natural fibers such as jute, coconut,

twine or other similar fibers. Following site restoration, erosion control materials, such as straw wattles, will not block movement of the California red-legged frog and California tiger salamander.

CRLF-CTS-19 Limitation on Insecticide/Herbicide Use: Insecticides or herbicides will not be applied at the project site during construction where there is the potential for these chemical agents to enter creeks, streams, waterbodies, or uplands that contain habitat for the California red-legged frog and California tiger salamander.

CRLF-CTS-20 Limitation on Rodenticide Use: No rodenticides will be used at the project site during construction or long-term operational maintenance in areas that support suitable upland habitat for the California red-legged frog and California tiger salamander.

CRLF-CTS-21 Invasive Non-Native Plant Species Prevention: The SFWO-approved biologist will ensure that the spread or introduction of invasive non-native plant species, via introduction by arriving vehicles, equipment, imported gravel, and other materials, will be avoided to the maximum extent possible. When practicable, invasive non-native plants in the Action Area will be removed and properly disposed of in a manner that will not promote their spread. Areas subject to invasive non-native weed removal or disturbance will be replanted with appropriate mix of fast-growing native species. Invasive non-native plant species include those identified in the California Invasive Plant Council's (Cal-IPC) Inventory Database, accessible at: www.cal-ipc.org/ip/inventory/index.php.

CRLF-CTS-22 Removal of Diversion and Barriers to Flow: Upon completion of construction activities, any diversions or barriers to flow will be removed in a manner that will allow flow to resume with the least disturbance to the substrate. Alteration of creek beds will be minimized to the maximum extent possible; any imported material will be removed from stream beds upon completion of the project.

CRLF-CTS-23 Removal of Non-Native Species: A SFWO-approved individual will permanently remove, from within the Action Area, any individuals of non-native species, such as bullfrogs, crayfish, and centrarchid fishes, to the maximum extent possible. The Subapplicant is responsible for ensuring that these activities are in compliance with the California Fish and Game Code. No conversion of seasonal breeding aquatic habitat to perennial aquatic breeding habitat is allowed under this programmatic biological opinion. Creating new perennial water bodies in the vicinity of California red-legged frog or California tiger salamander populations where the ponds could be colonized by predators will also be avoided. Larval mosquito abatement efforts will be avoided in occupied breeding habitat for the species.

CRLF-CTS-24 Restore Contours of Temporarily Disturbed Areas: Habitat contours will be returned to their original configuration at the end of project activities in all areas that have been temporarily disturbed by activities associated with the project, unless the Subapplicant and the Service determine that it is not feasible or modification of original contours will benefit the California red-legged frog and California tiger salamander.

CRLF-CTS-25 Use of Native Plants for Revegetation: Plants used in revegetation will consist of native riparian, wetland, and upland vegetation suitable for the area. Locally collected plant materials will be used to the extent practicable. This measure will be implemented in all areas disturbed by activities associated with the project, unless the Subapplicant and the Service determine that it is not feasible or practical.

CRLF-CTS-26 Practices to Prevent Pathogen Contamination in Revegetation and

Restoration: The Subapplicant will refer to the following restoration design considerations and practices to help prevent pathogen contamination in revegetation and restoration as published by the Working Group for *Phytophthora* in Native Habitats in order to address the risk of introduction and spread of *Phytophthora* and other plant pathogens in site plantings:

- a. Design restoration with lower initial plant density. Planting large quantities of nursery plants increases the likelihood that some of those plants may be infested with *Phytophthora* or other plant pathogens. The greater the number of plants installed the higher the risk for pathogen introduction. The closer the plants are to one another the higher the likelihood of pathogen spread.
- b. To the extent possible, use direct seeding of native plant seeds or cuttings instead of container stock. Planting locally-collected seeds or cuttings rather than installing container stock can minimize the risk of introducing pathogens to a site.
- c. Ensure the use of clean nursery stock. To prevent and manage the introduction and spread of *Phytophthora* and other plant pathogens during revegetation and restoration activities, it is essential that projects use clean nursery stock grown with comprehensive best management practices.
- d. Prevent contamination in site preparation, installation, and maintenance. Implementing best management practices to prevent pathogen introduction and spread is also critical during all other phases of revegetation and restoration to reduce contamination risk. For detailed guidance on how to prevent and manage *Phytophthora* during various aspects of restoration, including nursery plant production, see The Phytophthora in Native Habitats Work Group “Restoration Guidance” at www.calphytos.org.
- e. Reduce the potential for pathogen spread and introduction due to movement or use of non-sanitized vehicles, tools, footwear or inadvertent use of contaminated materials (e.g. soil erosion protection wattles and mulch, or non-sanitized materials recycled from other projects such as rebar, fencing materials, etc.). Fundamental principles include:
 - i. Minimize project footprint and soil disturbance. Keep the number of vehicle pass-throughs and other disturbances during site activities to the least necessary. Avoid visits when conditions are wet, and areas are muddy. Park vehicles in designated staging areas.
 - ii. Follow sanitation practices. *Phytophthora* and many other pathogens move when contaminated soil is transferred on vehicle tires, footwear, on contaminated tools or infested plant materials. Follow sanitation best management practices: tools, boots, and vehicles will be visibly free of soil before and after use.
 - iii. Promote prevention through education. Ensure that onsite personnel are aware of the risk of inadvertent pathogen introductions and understand how to prevent pathogen introduction and spread. A pre-project meeting that provides appropriate BMP training to all workers and oversight managers who will be onsite during the project will help avoid confusion and delays in the field and will ensure in advance that everyone understands the project goals related to pathogen prevention.

Giant Garter Snake Conservation Measures

GG-1 Seasonal Avoidance: To the extent practicable, confine construction activity within 200 feet of giant garter snake habitat to the period between May 1 and October 1. This is the active period for giant garter snake and direct mortality is lessened because snakes are expected to actively move and avoid danger.

GGG-2 Site Restrictions: Work activities will be restricted to existing roads and trails to the maximum extent possible. When existing roads and trails cannot be followed, and disturbance is giant garter snake habitat, vegetation will be removed by hand to prevent mortality associated with mowers and other landscaping equipment. Project-related vehicles will observe a 15-mph speed limit within construction areas and access roads (except on County road and state and federal highways). This is particularly important during the time period when the snake may be sunning or moving along roadways.

GGG-3 Clearance Surveys: Within 24 hours prior to the commencement of construction activities, the Action Area will be surveyed for giant garter snakes by a SFWO-approved biologist. The biologist will provide the Service with a written report (e-mail is acceptable) that adequately documents the pre-construction survey results within 24-hours of commencement of construction activities. The Action Area will be re-inspected by the SFWO-approved biologist whenever a lapse in construction activity of 2 weeks or greater has occurred. If a giant garter snake is encountered during surveys, cease activities until the SFWO-approved biologist has determined that the snake will not be harmed or the snake leaves the work area on its own.

GGG-4 Dewatering: Aquatic habitat for the snake will be dewatered, and then remain dry and absent of aquatic prey for 15 days prior to the initiation of construction activities. If complete dewatering is not possible, the Service will be contacted to determine what additional measures may be necessary to minimize effects to the snake.

GGG-5 Fencing: Prior to October 1st and after aquatic habitat has been dewatered, high visibility fencing will be erected along the edge of construction areas bordering suitable giant garter snake habitat to identify and protect these areas from encroachment of personnel and equipment. These areas will be avoided by all construction personnel. The fencing will be inspected by the Subapplicant before the start of each work day and maintained by the Subapplicant until completion of the project. Fencing will be established in the uplands immediately adjacent to aquatic snake habitat and extending up to 200 feet from construction activities. Snake exclusionary fencing will be buried at least six inches below the ground to prevent snakes from attempting to burrow or move under the fence. To prevent giant garter snake from becoming entangled, trapped, or injured, erosion control materials that use plastic or synthetic monofilament netting will not be used in the Action Area. Acceptable materials include natural fibers such as jute, coconut, twine or other similar fibers.

GGG-6 Contacting the Service: If construction activities in giant garter snake habitat are necessary between October 2 and April 30, the Service's SFWO will be contacted to determine whether additional measures are necessary to avoid and minimize take. Recommended measures will be implemented.

GGG-7 Biological Monitor: A SFWO-approved biologist will inspect and monitor all construction-related activities within the Action Area to attempt to minimize take of the snake or the destruction of its habitat. If snakes are encountered during construction activities, the biologist will notify the SFWO immediately to determine the appropriate procedures. A report will be submitted, including date(s), location(s), habitat description, and any corrective measures taken to protect the snake, within one (1) business day.

GGG-8 Reporting: The SFWO-approved biologist will be required to report any take of listed species to the SFWO immediately by a written letter addressed to the appropriate Service office within one (1) working day of the incident.

Alameda Whipsnake Conservation Measures

The Subapplicant will implement the following measures in Alameda whipsnake supporting habitat:

AWS-1 Environmental Awareness Training: Prior to construction, a SFWO-approved biologist with experience in the ecology and identification of the Alameda whipsnake will conduct an education program for all construction personnel, including contractors and subcontractors. Interpretation will be provided for non-English speaking workers. The same instruction will be provided to any new workers at the site before they are authorized to perform project work. Fact sheets conveying this information and color photographs of the species will be prepared for distribution to the above-mentioned people and anyone else who may enter the Action Area. The program will include, at a minimum:

- a. a brief description of the species and their habitat needs;
- b. any reports of occurrences in the Action Area;
- c. an explanation of the species' status and protection under the Act;
- d. communication and work stoppage procedures in case an individual is observed within the Action Area; and
- e. a list of avoidance and **minimization** measures being taken to reduce effects to the species during construction and implementation.

AWS-2 Site Restrictions: The following site restrictions will be implemented to avoid or **minimize** effects on the Alameda whipsnake and its habitat:

- a. A speed limit of 15 miles per hour (mph) in the project footprint in unpaved areas will be enforced to reduce dust and excessive soil disturbance.
- b. Construction and ground disturbance will occur only during daytime hours, and will cease no less than 30 minutes before sunset and may not begin again earlier than 30 minutes after sunrise.
- c. Routes and boundaries of roadwork will be clearly marked prior to initiating construction or grading.
- d. To the maximum extent practicable, any borrow material will be certified to be non-toxic and weed free.
- e. All food and food-related trash items will be enclosed in sealed trash containers and properly disposed of offsite.
- f. No pets will be allowed anywhere in the Action Area during construction.

AWS-3 Biological Monitor: The SFWO-approved biologist will be onsite during initial ground-disturbing activities, and thereafter as needed to fulfill the role of the approved biologist as specified in project permits. The SFWO-approved biologist will keep copies of applicable permits in their possession when onsite. Through the Resident Engineer, Project Manager or their designee, the SFWO-approved biologist will have the authority to communicate either verbally, by telephone, e-mail or hardcopy with all project personnel to ensure that take of listed species is **minimized** and permit requirements are fully implemented. Through the Resident Engineer, Project Manager or their designee, the SFWO-approved biologist will have the authority to temporarily stop project activities to **minimize** take of listed species or if they determine that any permit requirements are not fully implemented. If the SFWO-approved biologist exercises this authority, the SFWO will be notified by telephone and e-mail within 24 hours.

AWS-4 Habitat Avoidance: During project implementation, avoid the following habitats for this species:

- a. To the extent possible, all rock outcroppings will be avoided.
- b. Ground disturbance and vegetation clearing in scrub/chaparral habitat will be avoided to the maximum extent possible. Where disturbance cannot be avoided in this habitat type, work will be limited to the fall season of September to November in order to allow the young of the year time to become sufficiently capable of escaping such activities.

AWS-5 Seasonal Avoidance: Construction activities will occur between June 15 - October 31, when Alameda whipsnakes are more active, capable of escaping, and less likely to be impacted.

AWS-6 Use Hand Operated Equipment: Work activities will be restricted to existing roads and trails to the maximum extent possible. When existing roads and trails cannot be followed, shrub vegetation will be removed by equipment operated by hand to prevent mortality associated with mowers or other large mechanical equipment. A SFWO-approved biologist experienced in identifying Alameda whipsnake will be present during vegetation removal.

AWS-7 Pre-construction Surveys: Pre-construction surveys for the Alameda whipsnake will be conducted by the SFWO-approved biologist no more than 20 calendar days prior to any initial ground disturbance within Alameda whipsnake habitat. These surveys will consist of walking the project limits and, if possible, any accessible adjacent areas within at least 50 feet of the project limits. The SFWO-approved biologist will investigate potential cover sites when it is feasible and safe to do so. This includes thorough investigation of mammal burrows, rocky outcrops, appropriately sized soil cracks, tree cavities, and debris.

AWS-8 Clearance Surveys: No more than 24 hours prior to the date of initial ground disturbance and vegetation clearing, a SFWO-approved biologist with experience in the identification of the Alameda whipsnake will conduct clearance surveys and monitoring within 50 feet of the project site. The SFWO-approved biologist will investigate all areas that could be used by Alameda whipsnakes for sheltering, movement, and other essential behaviors. This includes an adequate examination of rock outcroppings and mammal burrows. Safety permitting, the SFWO-approved biologist will investigate areas of disturbed soil for signs of the listed species within 30 minutes following the initial disturbance of that given area. The SFWO-approved biologist will conduct clearance surveys at the beginning of each day and regularly throughout the workday when construction activities are occurring that may result in take of Alameda whipsnake.

AWS-9 Entrapment Prevention: To prevent inadvertent entrapment of Alameda whipsnakes during construction excavated holes or trenches more than one foot deep with walls steeper than 30 degrees will be covered at the close of each working day by plywood or similar materials. Alternatively, an additional 4-foot high vertical barrier, independent of exclusionary fences, will be used to further prevent the inadvertent entrapment of listed species. If it is not feasible to cover an excavation or provide an additional 4-foot high vertical barrier, independent of exclusionary fences, one or more escape ramps constructed of earth fill or wooden planks will be installed. Before such holes or trenches are filled, they will be thoroughly inspected for trapped animals. If at any time a trapped Alameda whipsnake is discovered, the onsite biologist will immediately place escape ramps or other appropriate structures to allow the animal to escape or the Service will be contacted by telephone for guidance. The SFWO will be notified of the incident by telephone and e-mail within 24 hours.

AWS-10 Wildlife Exclusion Fencing: Prior to the start of construction in individual construction areas, wildlife exclusion fencing will be installed along the project footprint in all areas where the Alameda whipsnake could enter the active site. The location and extent of wildlife exclusion fencing will be presented to the SFWO for approval prior to project initiation. The Subapplicant will include the exclusion fencing specifications on the final project plans. The Subapplicant will include the exclusion fencing specifications, including installation and maintenance criteria, in the bid solicitation package special provisions. The fencing will remain in place throughout the duration of the construction activities within the individual work areas and will be regularly inspected and fully maintained. Repairs to the fence will be made within 24 hours of discovery. Upon completion of activities within the given area, the fence will be completely removed; the area cleaned of debris and trash, and returned to natural conditions.

AWS-11 Fencing: Prior to ground disturbance, active areas within the project footprint will be delineated with temporary, high-visibility fencing to prevent the encroachment of construction personnel and equipment outside the described project footprint. The fencing will be removed after all construction equipment is removed from those segments of the project.

AWS-12 Using Cover Boards: The SFWO-approved biologist will place cover boards in strategic locations throughout the project footprint during the pre-construction surveys. During construction, these cover boards will be checked on a daily basis for the Alameda whipsnake when the SFWO-approved biologist is onsite.

AWS-13 Reporting: The SFWO will be notified within one (1) working day if an Alameda whipsnake is discovered within the Action Area. The Resident Engineer or Project Manager will immediately contact the SFWO-approved biologist in the event that an Alameda whipsnake is observed within a construction zone. The Resident Engineer will suspend construction activities within a 50-foot radius of the animal until the animal leaves the site voluntarily or as a last option, the animal is captured and relocated according to SFWO-approved protocol.

AWS-14 Suitable Erosion Control Materials: Plastic monofilament netting (erosion control matting) or similar material will be prohibited from use on the project because the Alameda whipsnake may become entangled or trapped in it. Acceptable substitutes include coconut coir matting or tackified hydroseeding compounds.

AWS-15 Limitation on Rodenticide Use: No rodenticides will be used at the project site during construction in areas that support suitable habitat for the Alameda whipsnake

AWS-16 Encounters with Species: Each Alameda whipsnake encounter will be treated on a case-by-case basis in coordination with the SFWO but general guidance is as follows: (1) leave the non-injured animal if it is not in danger; or, (2) move the animal to a nearby location if it is in danger. These options are further described as follows:

- a. When an Alameda whipsnake is encountered in the Action Area the first priority is to stop all activities in the surrounding area that have the potential to result in the harm, injury, or death of the individual. The monitor then needs to assess the situation in order to select the course of action that will minimize adverse effects to the individual. Contact the SFWO once the site is secure. Contact the SFWO again prior to the start of construction to confirm the animal's status.
- b. The first priority is to avoid contact with the animal and allow it to move out of the project footprint and hazardous situation on its own to a safe location. The animal will not be

picked up and moved because it is not moving fast enough or it is inconvenient for the construction schedule. This guidance only applies to situations where an animal is encountered while moving under conditions that make their upland travel feasible. This does not apply to animals that are uncovered or otherwise exposed or in areas where there is not sufficient adjacent habitat to support the life history of the Alameda whipsnake if they move outside the construction footprint.

- c. Avoidance is the preferred option if the animal is not moving or is within some sort of burrow or other refugia. In this case, the area will be well marked for avoidance by construction and a SFWO-approved biological monitor will be assigned to the area when work is taking place nearby.
- d. The animal will be captured and moved when it is the only option to prevent its death or injury.
- e. If appropriate habitat is located immediately adjacent to the capture location then the preferred option is short distance relocation to that habitat. This must be coordinated with the SFWO, but the general guidance is the snake will not be moved outside of the area where it could have traveled on its own. Captured snakes will be released in appropriate cover as close to their capture location as possible for their continued safety. Under no circumstances will an animal be relocated to another property without the owner's written permission. It is the Subapplicant's responsibility to arrange for that permission.
- f. The release must be coordinated with the SFWO and will depend on where the individual was found and the opportunities for nearby release. In most situations the release location is likely to be into the mouth of a small burrow or other suitable refugia.
- g. Only SFWO-approved biologists for the project can capture Alameda whipsnakes.

Valley Elderberry Longhorn Beetle Conservation Measures

In general terms, the *May 2017 Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle* (VELB) will be followed. Below is a summary of some of the key measures to implement on Subapplicant's proposed projects that may affect VELB. If elderberry shrubs occur on or within 50 meters (165 feet) of the Action Area, adverse effects to VELB may occur as a result of project implementation. If the project may affect VELB or its habitat, appropriate avoidance and minimization measures are recommended. Not all measures may be appropriate for every project, and Subapplicants will implement the measures that are identified in the ESA Review Form for a specific project. FEMA will submit to the SFWO the completed ESA Review Form for projects that are covered under this programmatic biological opinion, outlining the applicable measures to protect VELB. This text is intended to provide language that may be used by the Subapplicants to describe avoidance and minimization measures for their proposed project.

VELB-1 Fencing: All areas to be avoided during construction activities will be fenced and/or flagged as close to construction limits as feasible.

VELB-2 Avoidance Area: Activities that may damage or kill an elderberry shrub (e.g., trenching, paving, etc.) may need an avoidance area of at least 6 meters (20 feet) from the drip-line, depending on the type of activity.

VELB-3 Worker Education: A SFWO-approved biologist will provide training for all contractors, work crews, and any onsite personnel on the status of the VELB, its host plant and habitat, the need to avoid damaging the elderberry shrubs, and the possible penalties for non-compliance.

VELB-4 Biological Monitor: A SFWO-approved biologist will monitor the work area at project-appropriate intervals to assure that all avoidance and **minimization** measures are implemented. The amount and duration of monitoring will depend on the project specifics and the contractor will discuss it with the SFWO-approved biologist.

VELB-5 Seasonal Avoidance: As much as feasible, all activities that could occur within 50 meters (165 feet) of an elderberry shrub will be conducted between August and February, outside of the flight season of the VELB, which occurs from March to July, coinciding with the bloom period of the elderberry plant.

VELB-6 Trimming: Trimming may remove or destroy VELB eggs or larvae and may reduce the health and vigor of the elderberry shrub. In order to avoid and **minimize** adverse effects to VELB when **trimming**, **trimming** will occur between November and February and will avoid the removal of any branches or stems that are ≥ 1 inch in diameter. Measures to address regular or large-scale maintenance (trimming) will be established in consultation with the SFWO.

VELB-7 Limitations on Chemical Use: Herbicides will not be used within the drip-line of the shrub. Insecticides will not be used within 30 meters (98 feet) of an elderberry shrub. All chemicals will be applied using a backpack sprayer or similar direct application method.

VELB-8 Mowing: Mechanical weed removal within the drip-line of the shrub will be limited to the season when adults are not active (August - February) and will avoid damaging the elderberry.

VELB-9 Erosion Control and Revegetation: Erosion control will be implemented and the affected area will be revegetated with appropriate native plants.

VELB-10 Transplanting: In order to protect VELB larvae to the greatest extent possible, we recommend that all elderberry shrubs with stems greater than 1 inch in diameter be transplanted under the following conditions:

- a. If the elderberry shrub cannot be avoided.
- b. If indirect effects will result in the death of stems or the entire shrub.

Removal of entire elderberry plants without disturbance to the surrounding habitat is uncommon, but may occur on certain projects. The removal may either include the roots or just the removal of the aboveground portion of the plant. The SFWO encourages project applicants to attempt to remove the **entire** root ball and transplant the shrub, if possible. In order to **minimize** the fragmentation of VELB habitat, the SFWO encourages applicants to relocate elderberry shrubs as close as possible to their original location. Elderberry shrubs may be relocated adjacent to the project footprint if: 1) the planting location is suitable for elderberry growth and reproduction; and 2) the project proponent is able to protect the shrub and ensure that the shrub becomes reestablished. If these criteria cannot be met, the shrub may be transplanted to an appropriate SFWO-approved mitigation site. Any elderberry shrub that is unlikely to survive transplanting because of poor condition or location, or a shrub that will be extremely difficult to move because of access problems, may not be appropriate for transplanting. The following transplanting guidelines may be used by agencies/applicants in developing their VELB conservation measures:

Monitor. A SFWO-approved biologist will be onsite for the duration of transplanting activities to assure compliance with avoidance and **minimization** measures and other conservation measures.

Exit Holes. Exit-hole surveys will be completed immediately before transplanting. The number of exit holes found, GPS location of the plant to be relocated, and the GPS location of where the plant is transplanted will be reported to the Service and to the California Natural Diversity Database (CNDDDB).

Timing. Elderberry shrubs will be transplanted when the shrubs are dormant (November through the first two weeks in February) and after they have lost their leaves. Transplanting during the non-growing season will reduce shock to the shrub and increase transplantation success.

Transplanting Procedure. Transplanting will follow the most current version of the ANSI A300 (Part 6) guidelines for transplanting (<http://www.tcia.org/>).

Trimming Procedure. Trimming will occur between November and February and will minimize the removal of branches or stems that exceed 1 inch in diameter.

VELB-11 Impacts to Individual Shrubs: In certain instances, impacts to elderberry shrubs, but not the surrounding habitat may occur. This could take the form of trimming or complete removal of the plant. Trimming elderberry shrubs may result in injury or death of eggs, larva, or adults depending on the timing and extent of the trimming. Since the larva feed on the elderberry pith while they are developing, any trimming that may affect the health of the plant and cause the loss of stems may kill any larva in those stems. No adverse impacts to the VELB will occur if trimming does not remove stems/branches that are ≥ 1 inch in diameter and is conducted between November and February. Trimming that occurs outside of this window or removes branches ≥ 1 inch in diameter may result in adverse effects to VELB. In order to assess the risk of take from trimming activities, we recommend the following be evaluated:

- a. Conduct an exit hole survey on the plant.
- b. Evaluate the surrounding habitat (riparian vs. non-riparian).
- c. Evaluate the potential suitability of the plant to provide VELB habitat.
 - i. Riparian plants are much more likely to be occupied or colonized by VELB.
 - ii. Plants in non-riparian locations will be evaluated using the criteria in Figure 2.

VELB-12 Other Activities: The SFWO's Framework for VELB may not be applicable for restoration, floodway maintenance, and other large scale habitat modification activities. These activities and the potential effects to VELB and its habitat will be considered on a project-by-project basis and discussed with the SFWO. The SFWO recommends that project proponents consider the effects to the species on a landscape level and ultimately seek to protect, preserve, and restore the continuity of VELB habitat. These and similar activities that may adversely impact the VELB and its habitat at landscape scales will consider avoidance and minimization strategies that are appropriate for the specific project. Some possible conservation measures to consider for these large-scale projects include:

- a. Transplanting all affected elderberries to a similar onsite location.
- b. Maintaining patches of appropriate habitat in areas where large-scale removal of elderberry shrubs will occur.
- c. Scale trimming, removal, and other activities that allow VELB to persist within the area.

California Freshwater Shrimp Conservation Measures

CAFS-1 Biological Monitor: A SFWO-approved biologist will conduct surveys of suitable habitat within the Action Area for presence of the California freshwater shrimp in the work area 24 hours prior to any vegetative clearing work, dewatering, or ground disturbing activities.

CAFS-2 Species Observations and Handling Protocol: If California freshwater shrimp are present in the Action Area the following procedures will be used:

- a. Prior to any California freshwater shrimp handle/capture activities, the SFWO will be contacted to identify relocations sites and options appropriate for the species in the location of the project activity.
- b. California freshwater shrimp will be captured by hand-held nets [e.g., heavy-duty aquatic dip nets (12" D-frame net) or small minnow dip nets] and relocated out of the work area in the net or placed in buckets containing stream water and then moved directly to the nearest suitable habitat in the same branch of the creek. Suitable habitat will be identified prior to capturing California freshwater shrimp to minimize holding time. Suitable habitat is defined as creek sections that will remain wet over the summer and where banks are structurally diverse with undercut banks, exposed fine root systems, overhanging woody debris, or overhanging vegetation. No California freshwater shrimp will be placed in buckets containing other aquatic species.
- c. Once the SFWO-approved biologist has determined that all shrimp have been effectively relocated, barrier seines or exclusion fencing no greater than 5 mm will be installed to prevent shrimp from moving back in, as appropriate.
- d. Only SFWO-approved biologists will participate in the capture, handling, and monitoring of California freshwater shrimp. The SFWO-approved biologist will report the number of captures, releases, injuries, and mortalities to the Service within 30 days of project completion. If take exceeds the levels anticipated in this programmatic biological opinion, work will stop immediately and the SFWO will be notified within one working day.

CAFS-3 Seasonal Avoidance: No work during wet weather or where saturated ground conditions exist; if a 60% chance of a one half inch of rain or more within a 24-hour period is forecasted, then operations will cease until 24 hours after rain has ceased.

CAFS-4 Habitat Protection: Habitat for this species will be protected, as follows:

- a. No large woody debris (LWD) will be removed in active (wetted) channels. Trees may be removed for access routes for construction equipment. If trees need to be removed from other portions of the project site, willows over 3 inches in diameter at breast height will not be removed and there will be no reduction in canopy cover provided by hardwoods or conifers.
- b. Disturbance and removal of aquatic vegetation will be minimized to the extent practicable. Downed trees, stumps and other basking sites and refuges within these aquatic habitats will remain undisturbed as much as possible.

CAFS-5 Revegetation: The stream bank will be planted with species which will enhance the year-round habitat value of the stream edge by providing adequate shelter, stability, complexity and food production potential for California freshwater shrimp. The revegetation will include plantings such as widely spaced trees, willow sprigs, and sedges near the water's edge, plantings of herbaceous plant species to fill in gaps and therefore augment existing habitat.

CAFS-6 Site Restrictions: New access routes requiring tree removal and grading will be limited to no more than two. Access routes will not be along the top of the stream bank but relatively perpendicular (45 to 90 degrees is acceptable) to the bank.

CAFS-7 Site Access: Where available, access to the work area will use existing ingress or egress points, or work will be performed from the top of the stream banks.

CAFS-8 Erosion Control: Any disturbed ground must receive appropriate erosion control treatment (mulching, seeding, planting, etc.) prior to the end of the construction season, prior to ceasing operations due to forecasted wet weather, and within seven days of project completion. Operations will use all feasible techniques to prevent any sediment from entering a drainage system.

CAFS-9 Suitable Erosion Control Materials: Erosion control materials will not include plastic mono-filament netting or similar materials in which animals might become entangled.

CAFS-10 Cleanup After Construction: Work pads, falsework, and other construction items will be removed from the 100 year floodplain by the end of the construction window.

CAFS-11 Construction Design: Prior to removal of an existing structure, a debris catching platform will be constructed under the structure.

CAFS-12 Waste Management: Trash will be properly contained, removed from the work areas, and disposed of regularly. Following construction, all trash and construction debris will be removed from the Project footprint.

CAFS-13 Fueling Restrictions: Fueling and maintenance of vehicles and equipment will occur at least 50 feet from any riparian or aquatic habitat. Prior to the start of construction a plan will be prepared to ensure a prompt and effective response to any accidental spills. All workers will be informed of the importance of preventing spills and of the appropriate measures to take if a spill occurs.

Multiple Butterfly Species Conservation Measures

Butterfly Species	Bloom/Flight Season	Host Plants
Bay Checkerspot Butterfly	February - early May	California plantain (<i>Plantago erecta</i>), purple owl's clover (<i>Castilleja densiflora</i>) and exserted paintbrush (<i>C. exserta</i>)
Callipe Silverspot Butterfly	mid-May - late July	Johnny jump-up (<i>Viola pedunculata</i>)
Mission Blue Butterfly	Late March - early July	Three lupine species (<i>Lupinus albifrons</i> , <i>L. formosus</i> ; and <i>L. varicolor</i>)
Myrtle's silverspot butterfly	mid-June - early October	western dog violet (<i>Viola adunca</i>)
San Bruno elfin	Late February - mid-April	Stone crop (<i>Sedum spathulifolium</i>)

LEP-1 Pre-construction Surveys: The Subapplicant will implement the following measure depending on the time of year for project construction:

- a. During the non-flight season, pre-construction surveys for caterpillars and the larval host plants will be conducted during the typical bloom season. A SFWO-approved biologist, able to identify the larval host plants and caterpillars of the listed butterfly species, will conduct up to three surveys prior to the start of construction to determine the use of the site by the listed butterflies.

- b. During the flight season, pre-construction surveys for butterflies and the larval host plants will be conducted. A SFWO-approved biologist, able to identify the butterflies and their host plants, will conduct up to three surveys prior to the start of construction to determine the use of the site by the listed butterflies. If flight surveys are not possible, then the butterfly species associated with the larval host plant will be assumed present.

LEP-2 Biological Monitor: During the adult flight season of listed butterfly species, a SFWO-approved biologist will be present when construction activities occur in or within 100 feet of suitable habitat (dispersal habitat as well as areas containing the larval host plant and adult food plants). If one or more adult listed butterflies are observed in the work area, work activities will temporarily cease unless the SFWO-approved biologist determines that work activities will not directly affect the individual(s).

LEP-3 Fencing: Any larval food plants found within 300 feet of the project footprint will be clearly marked and will be avoided to the maximum extent practicable. Orange fencing/flagging will be placed along the edge of the work area near any larval food plants to prevent workers and vehicles from entering this area. Fencing/flagging will be installed prior to any ground disturbing or vegetation removal activities. A SFWO-approved biologist will supervise the installation of flagging or fencing around stands of known listed butterfly host/food plants. The fencing/flagging will be placed the maximum distance from the plants possible (up to 100 feet), while still allowing work to occur in the adjacent area. The location of the flagging/fencing will be field-adjusted by the SFWO-approved biologist as necessary. The temporary fencing/flagging will be furnished, constructed, maintained, and later removed and specified in the construction bid documents. Temporary fencing/flagging will be at least 4-foot-high and constructed of high visibility material (e.g., orange, commercial-quality woven polypropylene or similar material). No construction activities will be permitted within the fenced/flagged area. Warning signs indicating the sensitivity of the area will be attached to the fencing/flagging.

LEP-4 Monitoring Log: Each day the SFWO-approved biologist will monitor for listed butterflies, inspect the fencing/flagging and immediately notify the resident engineer (or their designated contact) to address any necessary fencing/flagging repairs. A biological monitoring log of construction site conditions and observations will be maintained and kept on file.

LEP-5 Dust Control: The SFWO-approved biologist will ensure that dust is controlled during construction by periodically watering down construction areas within 100 feet of listed butterfly habitat as necessary. Watering down the construction area will prevent dirt from becoming air borne and accumulating on larval host plants and adult food source plants for listed butterflies.

Conservation Measures for Vernal Pool Fairy Shrimp, Conservancy Fairy Shrimp, Longhorn Fairy Shrimp, Vernal Pool Tadpole Shrimp

To avoid and minimize adverse effects to the vernal pool branchiopods, the measures listed below will be implemented in the project footprint where suitable listed branchiopod habitat (e.g., vernal pools, seasonal wetlands) occurs and the species have potential to occur.

VPBR-1 Pre-construction Surveys: If possible, prior to construction activities, the SFWO-approved biologist will conduct pre-construction, reconnaissance surveys in seasonally inundated habitats (seasonal wetland, non-inundated wetlands) within the project footprint. The SFWO-approved biologist will conduct general aquatic surveys at a suitable interval after the first significant storm event of the rainy season (October 15 to June 1), prior to construction activities. The surveys

will include a habitat assessment of the hydrological, biological, and ecological conditions of each seasonal wetland and open waters. The habitat assessment will provide information regarding the quality and suitability of seasonal wetlands for the vernal pool branchiopods covered under this programmatic biological opinion (vernal pool fairy shrimp, Conservancy fairy shrimp, longhorn fairy shrimp, and vernal pool tadpole shrimp). If any vernal pool branchiopods are found during the surveys, the SFWO-approved biologist will submit a report to the SFWO within 1 month of completing the field work. The report will provide results of all surveys, a summary of all the data collected, and the habitat assessment. If surveys are not possible, then listed vernal pool branchiopod species presence will be assumed on all suitable habitat within the Action Area.

VPBR-2 Biological Monitor: A SFWO-approved biologist will monitor all construction activities within 250 feet of suitable habitat for listed vernal pool branchiopods to ensure that no unnecessary take or destruction of habitat occurs.

VPBR-3 Exclusion Areas: Non-disturbance exclusion zones will be established, maintained, and monitored by a SFWO-approved biological monitor to ensure that take of vernal pool branchiopods or destruction of their habitat does not occur outside of the project footprint, in areas where suitable habitat (e.g., vernal pools, seasonal wetlands) occurs and the species have potential to occur. A buffer of at least 250 feet from any vernal pool, vernal pool grassland, or seasonal wetland will be established for the following:

- a. Staging areas of all equipment for storage, fueling, and maintenance with hazardous material absorbent pads available in the event of a spill; and
- b. Mixing of pesticides, herbicides, or other potentially toxic chemicals.

VPBR-4 Seasonal Avoidance: Work within 250 feet of suitable listed vernal pool branchiopod habitat (e.g., vernal pools, seasonal wetlands) will be performed between June 1 and October 15 under dry site conditions to the maximum extent possible to minimize adverse impacts to aquatic habitats.

VPBR-5 Work Restrictions During Dry Season: A SFWO-approved biologist will flag or monitor all operations and maintenance work during the *dry season* (generally June 1 to October 15) within 250 feet of a vernal pool, vernal pool grassland, or seasonal wetland. The following buffers will be enforced:

- a. hand-held herbicide application is prohibited within the pool or at the edge of the pool;
- b. power spray herbicide application is prohibited within 100 feet of the edge of the pool;
- c. broadcast herbicide application is prohibited within 150 feet of the edge of the pool; and
- d. ground-disturbing activities are prohibited within 25 feet of the edge of the pool.

VPBR-6 Work Restrictions During Wet Season: If any construction activities remain and must occur during the October 15 - June 1 *wet period*, exclusion fencing and erosion control materials will be placed around the vernal pools and other seasonal wetlands as determined by the SFWO-approved biologist to reduce sedimentation into vernal pool habitat. The fencing will provide a buffer between construction activities and the vernal pools and other seasonal wetlands. The SFWO-approved biologist will erect and maintain the exclusion fencing.

VPBR-7 Erosion Control: Any vernal pool, vernal pool grassland, or seasonal wetland will be protected from siltation and contaminant runoff by use of erosion control. Erosion-control measures will be placed between the outer edge of the buffer and the activity area.

VPBR-8 Suitable Erosion Control Materials: Erosion-control materials will be of a tightly woven natural fiber netting or similar material that will not entrap reptiles and amphibians (e.g., coconut coir matting). No micro-filament netting will be used. All fiber rolls and hay bales used for erosion control will be certified as free of noxious weed seed.

VPBR-9 Dust Control: Dust control measures will be implemented to prevent the transport of soil from exposed surfaces to vernal pool, swale, and rock pool habitat. Sprinkling with water will not be done in excess to minimize the potential for non-storm water discharge.

VPBR-10 Monitoring During Wet Season: A SFWO-approved biologist will flag or monitor all operations and maintenance work during the *wet season* (generally October 1 to June 1) within 150 feet of a vernal pool, vernal pool grassland, or seasonal wetland. The following buffers will be enforced:

- a. Hand-held herbicide application is prohibited within 25 feet of the edge of the pool;
- b. Power spray herbicide application is prohibited within 100 feet of the edge of the pool;
- c. Broadcast herbicide application is prohibited within 150 feet of the edge of the pool;
- d. Manual clearing of vegetation is prohibited at the pool or beyond the edge of the pool;
- e. Mechanical clearing of vegetation is prohibited within 100 feet of the edge of the pool; and
- f. Ground-disturbing activities are prohibited within 50 feet of the edge of the pool.

VPBR-11 Vehicle Maintenance: Vehicles will be inspected daily for fluid leaks before leaving a staging area.

VPBR-12 Site Restrictions: Routine maintenance activities within 250 feet of vernal pool and swale habitat will be avoided to the maximum extent possible.

VPBR-13 Use of Native Plants for Revegetation: When revegetating upland areas to pre-project condition, native plants will be used to the maximum extent practicable.

VPBR-14 Invasive Plant Species Prevention: To minimize the introduction of invasive plant species, construction vehicles will be cleaned prior to any work within 150 feet of vernal pool branchiopod habitat.

Conservation Measures for Vernal Pool Listed Plants

These measures apply to the following 19 listed vernal pool plant species: Burke's goldfields (*Lasthenia burkei*), Butte County meadowfoam (*Limnanthes floccosa ssp. californica*), Calistoga allocarya (*Plagiobothrys strictus*), Colusa grass (*Neostapfia colusana*), Contra Costa goldfields (*Lasthenia conjugens*), few-flowered navarretia (*Navarretia leucocephala ssp. pauciflora [=N. pauciflora]*), fleshy owl's-clover (*Castilleja campestris ssp. succulenta*), Greene's tuctoria (*Tuctoria greenei*), hairy Orcutt grass (*Orcuttia pilosa*), Hoover's spurge (*Chamaesyce hooveri [=Euphorbia hooveri]*), Lake County stonecrop (*Parvisedum leiocarpum [=Sedella leiocarpa]*), Loch Lomond coyote thistle (*Eryngium constancei*), many-flowered navarretia (*Navarretia leucocephala ssp. plieantha*), Sacramento Orcutt grass (*Orcuttia viscida*), San Joaquin Orcutt grass (*Orcuttia inaequalis*), Sebastopol meadowfoam (*Limnanthes vinculans*), Slender Orcutt grass (*Orcuttia tenuis*), Solano grass (*Tuctoria mucronata*), and Sonoma sunshine (*Blennosperma bakeri*).

To avoid and minimize adverse effects to the vernal pool plants, the measures listed below will be implemented in the project footprint where suitable vernal pool habitat (e.g., vernal pools, seasonal wetlands) occurs and the species have potential to occur.

VP PLANT-1 Pre-construction Surveys: If possible, prior to construction activities, the SFWO-approved biologist will conduct protocol-level bloom-season plant surveys in seasonally inundated habitats (seasonal wetland, non-inundated wetlands) within the project footprint. If any listed vernal pool plant species are found during the surveys, the SFWO-approved biologist will submit a report to the SFWO within 1 month of completing the field work. The report will provide results of all surveys, a summary of all the data collected, and the habitat assessment. Information regarding the location of listed plant populations will be provided to CDFW's California Natural Diversity Database (CNNDDB) according to their reporting protocols. If surveys are not possible, then listed vernal pool species presence will be assumed on all suitable habitats within the Action Area.

VP PLANT-2 Flagging: Flagging or other field markers identifying the plants, or in the event protocol-level surveys were not conducted – the suitable habitat, will be placed prior to each work event and removed after that work event is completed for all phases of the proposed project.

VP PLANT-3 Biological Monitor: A SFWO-approved biologist will monitor all construction activities within 250 feet of suitable habitat for listed vernal pool plants to ensure that no unnecessary loss or destruction of habitat occurs.

VP PLANT-4 Exclusion Areas: A SFWO-approved biologist will delineate a 50-foot avoidance buffer around all federally-listed plants or their suitable habitat. The non-disturbance exclusion zones will be established, maintained and monitored by a SFWO-approved biological monitor to ensure that loss of listed vernal pool plants or destruction of their habitat does not occur outside of the project footprint where suitable habitat (e.g., vernal pools, seasonal wetlands) occurs and the species have potential to occur. In addition, a buffer of at least 250 feet from any vernal pool, vernal pool grassland, or seasonal wetland will be established for the following:

- a. Staging areas of all equipment for storage, fueling, and maintenance with hazardous material absorbent pads available in the event of a spill; and
- b. Mixing of pesticides, herbicides, or other toxic chemicals.

VP PLANT-5 Seasonal Avoidance: Work within 250 feet of suitable listed vernal pool plant habitat (e.g., vernal pools, seasonal wetlands) will be performed between June 1 and October 15 under dry site conditions to the maximum extent possible to minimize adverse impacts to aquatic habitats.

VP PLANT-6 Work Restrictions During Dry Season: A SFWO-approved biologist will flag or monitor all operations and maintenance work during the *dry season* (generally June 1 to October 15) within 250 feet of a vernal pool, vernal pool grassland, or seasonal wetland. The following buffers will be enforced:

- a. Hand-held herbicide application is prohibited within the pool or at the edge of the pool;
- b. Power spray herbicide application is prohibited within 100 feet of the edge of the pool;
- c. Broadcast herbicide application is prohibited within 150 feet of the edge of the pool; and
- d. Ground-disturbing activities are prohibited within 25 feet of the edge of the pool.

VP PLANT-7 Work Restrictions During Wet Season: If any construction activities remain and must occur during the October 15 - June 1 *wet period*, exclusion fencing and erosion control materials will be placed around the vernal pools and other seasonal wetlands as determined by the SFWO-approved biologist to reduce sedimentation into vernal pool habitat. The fencing will provide a

buffer between construction activities and the vernal pools and other seasonal wetlands. The SFWO-approved biologist will erect and maintain the exclusion fencing.

VP PLANT-8 Erosion Control: Any vernal pool, vernal pool grassland, or seasonal wetland will be protected from siltation and contaminant runoff by use of erosion control. Erosion-control measures will be placed between the outer edge of the buffer and the activity area.

VP PLANT-9 Suitable Erosion Control Materials: Erosion-control materials will be of a tightly woven natural fiber netting or similar material that will not entrap reptiles and amphibians (e.g., coconut coir matting). No micro-filament netting will be used. All fiber rolls and hay bales used for erosion control will be certified as free of noxious weed seed.

VP PLANT-10 Dust Control: Dust control measures will be implemented to prevent the transport of soil from exposed surfaces to vernal pool, swale, and rock pool habitat. Sprinkling with water will not be done in excess to minimize the potential for non-storm water discharge.

VP PLANT-11 Monitoring During Wet Season: A SFWO-approved biologist will flag or monitor all operations and maintenance work during the *wet season* (generally October 1 to June 1) within 150 feet of a vernal pool, vernal pool grassland, or seasonal wetland. The following buffers will be enforced:

- a. Hand-held herbicide application is prohibited within 25 feet of the edge of the pool;
- b. Power spray herbicide application is prohibited within 100 feet of the edge of the pool;
- c. Broadcast herbicide application is prohibited within 150 feet of the edge of the pool;
- d. Manual clearing of vegetation is prohibited at the pool or beyond the edge;
- e. Mechanical clearing of vegetation is prohibited within 100 feet of the edge of the pool; and
- f. Ground-disturbing activities are prohibited within 50 feet of the edge of the pool.

VP PLANT-12 Vehicle Maintenance: Vehicles will be inspected daily for fluid leaks before leaving a staging area.

VP PLANT-13 Site Restrictions: Routine maintenance activities within 250 feet of vernal pool and swale habitat will be avoided to the maximum extent possible.

VP PLANT-14 Use of Native Plants for Revegetation: When revegetating upland areas to pre-project condition, native plants will be used to the maximum extent practicable.

VP PLANT-15 Invasive Plant Species Prevention: To minimize the introduction of invasive plant species, construction vehicles will be cleaned prior to entering any vernal pool habitat.

Tidewater Goby Conservation Measures

TIGO-1 Installation of In-water Nets: Prior to initiation of dewatering or sediment removal work, a Service-approved biologist will install 1/8 inch block nets outside the impact areas and across the stream a minimum of 20 feet above and below the locations proposed for excavation. If widely separated sites are involved, more than one set of block nets will be placed to protect the work area. The nets will be installed on the first day of work and monitored thereafter for the duration of the work.

TIGO-2 Environmental Awareness Training: Prior to initiation of dewatering or sediment removal work, hold an environmental awareness training to inform maintenance and management personnel about tidewater gobies, including tidewater goby protected status, proximity to the project site, avoidance/minimization measures to be implemented during the particular project, and the implications of violating the Act and FEMA funding conditions.

TIGO-3 Capture and Relocation: Once the block nets are secured, a Service-approved biologist(s) will remove all tidewater gobies found between the block nets using a 1/8 inch seine and dip nets, and relocate tidewater gobies to suitable habitat downstream of the Action Area. If excavation of a given extent of a basin cannot be completed in one day, a new set or successive sets of block nets will be deployed each day, and subsequent surveys and capture/relocation performed accordingly. Fish released from one day's work will not be released into areas projected to be excavated on successive days.

TIGO-4 Flagging: Clearly flag the limits of construction areas to avoid or minimize impacts to adjacent riparian and upland habitat. Flagging will be no more than 50 feet apart and will be clearly visible to construction workers on the ground and to operators on heavy equipment.

TIGO-5 Erosion Control: Implement erosion and sedimentation control measures (e.g., silt fences, straw bales or wattles) in all areas where disturbed substrate may potentially wash into waters via rainfall or runoff, particularly around stockpiled material and at the downstream end of each project reach. Such measures will remain in place and be inspected periodically until the project is complete and exposed soils are stabilized. Diversion structures, sediment traps/basins and associated equipment (e.g., pumps, lines) will be maintained in optimal working condition for the entire duration of the preparation and construction periods.

TIGO-6 Biological Monitor: A Service-approved biological monitor will remain onsite and search for tidewater gobies and assess turbidity levels within the work areas during all dewatering activities, and will capture and relocate tidewater gobies to suitable habitat as necessary.

TIGO-7 Reporting: Provide a written summary of work performed (including biological survey and monitoring results), best management practices implemented (i.e., use of biological monitor, flagging of work areas, erosion and sedimentation controls) and supporting photographs of each stage. Furthermore, the documentation describing listed species surveys and re-location efforts (if appropriate) will include name of biologist(s), location and description of area surveyed, time and date of survey, all survey methods used, a list and tally of all sensitive animal species observed during the survey, a description of the instructions/recommendations given to the applicant during the project, and a detailed discussion of capture and relocation efforts (if appropriate).

TIGO-8 Hydrology and Topography Protection: Project activities will avoid creation of berms and dykes, steepening of channel slopes, placement of rock slope protection, and other actions that could result in alteration of hydrology, changes to water surface elevation levels, increased flooding, changes to flow velocities, and increased scour within tidewater goby designated critical habitat. However, the in-kind replacement of existing or damaged rock slope protection may occur.

TIGO-9 Limits on Habitat Disturbance: Project activities will not result in permanent loss of tidewater goby designated critical habitat unless the impacts to habitat are determined to be insignificant via project-level consultation (i.e., small permanent impacts that will have a negligible effect on habitat quality for tidewater goby).

Southwestern Willow Flycatcher

SWWF-1 Habitat Assessment: A habitat assessment will be conducted by a Service-approved biologist to determine whether suitable habitat (including foraging, nesting, and dispersal) for the flycatcher occurs in the action area. If suitable habitat for this species is identified in the Action Area and the proposed project may affect suitable habitat that is not known to be occupied by the flycatcher, the Service will be contacted regarding the need for surveys according to Service protocol and those surveys will be conducted, as appropriate. Otherwise, if the Service agrees based on other biological data or reasoning, the species will be determined present in areas with suitable habitat.

SWWF-2 Habitat Buffer: If project activities are conducted during the breeding season (i.e., May 1-September 1), a 500-foot disturbance-free buffer will be established and demarcated by fencing or flagging around occupied habitat. This buffer may be adjusted provided noise levels do not exceed 60 dBA at the edge of the nest site. If the noise meets or exceeds the 60 dBA threshold, or if the biologist determines that the construction activities are disturbing nesting activities, the biologist will have the authority to halt the construction and will devise methods to reduce the noise and/or disturbance in the vicinity.

SWWF-3 No Permanent or Temporary Loss of Habitat: No permanent or temporary loss of flycatcher occupied or designated critical habitat will occur (within or outside of the breeding season).

Least Bell's Vireo Conservation Measures

LBV-1 Habitat Assessment: A habitat assessment will be conducted by a biologist to determine whether suitable habitat (including foraging, nesting, and dispersal) for the least Bell's vireo occurs in the Action Area. If suitable habitat for this species is identified in the Action Area and the proposed project may affect suitable habitat that is not known to be occupied by the least Bell's vireo, the Service will be contacted regarding the need for surveys according to Service protocol and those surveys will be conducted, as appropriate. With Service concurrence, FEMA may also forgo surveys by making a determination that suitable habitat is occupied for the purposes of section 7 consultation.

LBV-2 Seasonal Avoidance: To minimize direct effects to nesting least Bell's vireos, all clearing of vegetation within occupied habitat will occur outside the breeding season (i.e., March 15-September 15) to the maximum extent practicable. If the breeding season cannot be avoided, a Service-approved biologist will conduct preconstruction nesting bird surveys, at least 48 hours before and no more than 1 week prior to vegetation removal. If no active nests are found to occur within 300 feet of the Action Area, project activities may proceed.

LBV-3 Work Restrictions Near Active Nests: If an active nest is detected during the survey, either work will be suspended until the young have fledged/beginning of the non-breeding season OR the following will apply:

- a. An exclusionary buffer will be established around the nest. The buffer distance will be determined by the Service-approved biologist considering several factors: presence of natural buffers (vegetation/topography), nest height, location of foraging territory, nature of the proposed activities, and baseline levels of noise and human activity. The buffer may range from 50 feet to over 300 feet in width. AND
- b. A biologist will monitor the nest during construction for signs of adverse effects including

distress/disturbance (unless “take” is authorized). If adverse effects are detected then the Service-approved biologist will have the authority to stop all construction activating in the vicinity of the nest and will coordinate with the Service to determine whether additional conservation measures will avoid or minimize effects on the nesting birds. Construction may resume only with approval from the Service. AND

- c. If construction must occur within the buffer and exclusion zones or otherwise may cause adverse effects on the least Bell’s vireo, then take may be authorized and disturbance may occur (as covered under this programmatic biological opinion). Unanticipated adverse effects on the least Bell’s vireo will require reinitiation of consultation.

LBV-4 Habitat Avoidance: Staging and temporary construction areas will be located outside of suitable habitat and will utilize existing roads and developed areas to the extent possible. All mature riparian vegetation (e.g., willows and cottonwoods), that are greater than 30 feet in height, will be avoided to the maximum extent possible. If mature riparian vegetation cannot be avoided, it will be either transplanted elsewhere within or near the Action Area or placed horizontally or diagonally outside the project footprint under the direction of a Service-approved biologist.

LBV-5 Habitat Restoration Plan: Prior to construction, prepare a Restoration Plan will be prepared that describes the efforts to restore all the areas of suitable habitat for the least Bell’s vireo that were temporarily impacted. The Restoration Plan will be reviewed and approved by the Service.

LBV-6 Limits on Habitat Disturbance: For any specific project, temporary impacts on occupied or designated critical habitat by the least Bell’s vireo will be limited to a maximum of 1 acre. Temporary impacts from all the projects covered under this programmatic consultation will also be limited to a maximum of 20 acres of least Bell’s vireo occupied or designated critical habitat. In addition, impacts will be limited to 10 territories.

LBV-7 No Permanent Loss of Habitat: No permanent loss of occupied or designated critical habitat for the least Bell’s vireo will occur unless the impact to habitat are determined to be insignificant via project-level consultation (i.e., small permanent impacts that will have negligible effect on habitat quality for the least Bell’s vireo).

California Least Tern Conservation Measures

CLT-1 Seasonal Avoidance: To avoid the nesting season of the California least tern, project activity in occupied habitat will be allowed from September 30-March 31. Occupied habitat for this species is well documented online. If project activities occur during the nesting season, they will occur at least 800 feet away from California least tern occupied habitat, and noise within occupied habitat will be monitored to ensure that it does not exceed 60 dBA hourly.

CLT-2 Biological Monitor: A Service-approved biologist will monitor all construction activities within occupied habitat to ensure that no take of the species or destruction of occupied habitat occurs. The Service-approved biologist will have stop work authority if adverse effects of nesting California least terns are observed.

CLT-3 Use of Handheld Tools: Non-breeding season project activity in occupied habitat will be limited to the use of handheld tools, including handheld motorized implements such as chain saws and power augers. Tools will be washed prior to use in these habitats to reduce the spread of non-native and invasive plant species and their seeds. No heavy equipment will be allowed within suitable nesting habitats. If handheld motorized tools are used, operators will employ best management

practices to avoid and minimize soil and water contamination from fuel and lubricants. Measures include: a) use spill-resistant fuel and lubricant containers; b) use a portable containment pad for re-fueling in the field; c) immediately report petroleum spills to the landowner, or land management agency, and notify appropriate local authorities for advice and action on containment and cleanup of spills; and d) clearly mark the location and/or boundaries of the spill site to enable rapid remedial action.

CLT-4 Habitat Protection: No soil stabilization materials or offsite materials (e.g., decomposed granite, soil, rocks, etc.) will be added to the surface within occupied habitat. No excavation or grading will be allowed within occupied habitat either.

CLT-5 Flagging: When necessary to minimize the area affected by the project, work site boundaries will be marked with flagging or other visible materials, which will be removed at the conclusion of the project.

CLT-6 Avoid Placement of Predator Perches: Workers will avoid temporary or permanent placement of structures (e.g., posts, railings, tall equipment, or fence lines) that could provide elevated perches for predatory birds near or within occupied habitat.

CLT-7 Access Restrictions: Access to work sites in occupied habitat will be by foot travel only. Motorized vehicles, including all-terrain vehicles, will not be used in occupied habitat.

CLT-8 Restoration of Work Areas: At the conclusion of the project, areas temporarily affected by project activity will be restored to their pre-project condition (for example, footpaths will be raked to their original ground contour and native vegetation will be reestablished, if necessary).

CLT-9 Waste Management: Trash, food, food containers, and food waste will be secured at all times by individual workers, or placed in animal-proof trash containers placed at the work site. The contents of trash containers will be transferred from the work site at the end of each day.

Marbled Murrelet Conservation Measures

MAMU-1 Work Restrictions in Occupied Habitat: If marbled murrelet surveys (using the 2003 Service survey protocol; Evans Mack *et al.* 2003) determine that the Action Area is occupied or if FEMA or the Service presumes marbled murrelet occupancy without conducting surveys, the project Subapplicant will adhere to the following Conservation Measures. Surveyors are required to meet or exceed all training recommendations in Evans Mack *et al.* (2003), and be registered as qualified surveyors on a current Service 10(a)(1)(A) Recovery Permit.

- a. Vegetation Removal or Alteration of Known or Potential Nest Trees:
 - i. No potential marbled murrelet nest trees will be removed during nesting season (24 March to 15 September). Potential habitat defined as: (1) mature (with or without an old-growth component) and old-growth coniferous forests; and (2) younger coniferous forests that have platforms (relatively flat, at least 4-inch diameter and at least 33 feet above the base of the live crown of a coniferous tree). Platform presence is more important than tree size.
 - ii. Avoid removing or damaging known or potential nest trees, unless they are a confirmed safety hazard. For sites that have not been surveyed according to 2003 survey protocol, potential habitat is defined as (1) mature (with or without an old-

- growth component) and old growth coniferous forests; **and** (2) younger coniferous forest that have platforms.
- iii. Avoid removing or damaging trees with potential nesting platforms. A platform is a relatively flat surface at least 4-inch diameter and 33-feet high in the live crown of a coniferous tree. Platforms can be created by a wide bare branch, moss or lichen covering a branch, mistletoe, witches brooms, or other deformities, or structures such as squirrel nests.
 - iv. Project activities will not remove the function of suitable nesting habitat.
 - While habitat elements may be removed, such as individual large trees if they are a confirmed safety hazard, from nesting habitat, the treatment must not be so extensive as to remove the overall function of the nesting habitat, and will be conducted outside of the nesting season.
 - v. Non-suitable nest trees or limb trimming or pruning, brush trimming or removal, and hazard tree felling within suitable habitat may occur outside of the nesting season, 16 September to 23 March.

b. Auditory, Visual, or Other Disturbance:

- i. Construction equipment must be in good working order, with emphasis on hydraulic and noise abatement systems. Hydraulic leakage and damaged mufflers (or spark arresters) must be promptly addressed and remedied to the degree practicable.
- ii. No proposed activity generating sound levels 20 or more decibels above ambient sound levels or with maximum sound levels (ambient sound levels plus activity-generated sound levels) above 90 decibels (excluding vehicle back-up alarms) may occur within suitable marbled murrelet nesting habitat during the majority of the murrelet nesting season (*i.e.*, 24 March to 05 August)(Service 2006f).
- iii. Between August 06 (date when most marbled murrelets have fledged in coastal northern California) and September 15 (end of marbled murrelet nesting season) of any year, project activities, with adjacent suitable nesting habitat, that will generate sound levels ≥ 10 dB above ambient sound levels will observe a daily work window beginning 2 hours post-sunrise and ending 2 hours pre-sunset. However, prep work that does not generate sound levels above ambient sound levels, including street sweeping and manual removal of pavement markers, can occur during all hours. The need for this daily work window depends on the distance between suitable nesting habitat and the above-ambient sound generating activity following the Service guidelines (Service 2006f). For example, if above-ambient sound levels generated by proposed activities will become attenuated back down to ambient sound levels prior to reaching suitable nesting habitat, the daily work window will not be necessary.
- iv. No human activities will occur within visual line-of-sight of 40 m (131 feet) or less from a known nest or suitable nest tree during the nesting season (24 March to 15 September) (Service 2006f).

MAMU-2 Work Restrictions in Unoccupied Habitat: If recent protocol surveys determine that all suitable marbled murrelet nesting habitat within the Action Area is considered unoccupied, the auditory, visual, and other disturbance measures listed above do not apply for habitat determined to be unoccupied.

MAMU-3 Work Restrictions in Marbled Murrelet Critical Habitat: Ensure that there are no “adverse effects” to designated critical habitat for marbled murrelet within the Action Area. However, the Service has no specific quantitative thresholds, above which there will likely be an

adverse effect to critical habitat. If a Subapplicant's proposed project encounters this situation, contact the Service to determine whether proposed habitat removal within designated critical habitat constitutes an adverse effect. Generally, the removal of a few small trees in unoccupied habitat will not result in "adverse effect" on designated critical habitat.

When working in designated critical habitat for marbled murrelet, all measures described in MAMU-1 Occupied Habitat, or MAMU-2 Unoccupied Habitat for reducing impacts in suitable habitat will also be implemented. This will help reduce effects, and may result in some instances in effects that are insignificant and discountable.

Western Snowy Plover Conservation Measures

The following avoidance and **minimization** measures apply to Action Areas within suitable snowy plover nesting habitat and designated critical habitat regardless of whether snowy plovers have been detected during Service-approved protocol surveys.

WSP-1 Seasonal Avoidance: Project construction activities in suitable nesting habitat will occur during the species non-breeding season: the period beginning October 1 and continuing through February 28 of the following year or through February 29 in a leap year.

WSP-2 Use of Handheld Tools Only: Project construction activities in suitable nesting habitat will be limited to the use of handheld tools, including handheld motorized implements such as chain saws and power augers. No heavy equipment will be allowed within suitable nesting habitat.

WSP-3 Guidelines for Handheld Tools: If handheld motorized implements are used, operators will employ best management practices to avoid and **minimize** soil and water contamination from fuel and lubricants. Measures include:

- a. Use spill-resistant fuel and lubricant containers;
- b. Consider the use of a portable containment pad for re-fueling in the field;
- c. Immediately report petroleum spills to the landowner, or land management agency, and notify appropriate local authorities for advice and action on containment and cleanup of spills; and
- d. Clearly mark the location and/or boundaries of the spill site to enable rapid remedial action.

WSP-4 Biological Monitor: If project construction activities occur in adjacent to, but not within suitable nesting habitat, then project activities will be conducted during the species non-breeding season, if possible. If non-breeding season construction is not possible, then the Subapplicant will employ a Service-approved biologist to conduct weekly western snowy plover surveys. If western snowy plovers are observed, the Service-approved biologist will notify the Service within 1 day of the observation and will monitor all construction activities conducted adjacent to western snowy plovers suitable nesting habitat. The qualified biologist will have the right and responsibility to stop work if adverse effects of nesting western snowy plovers are observed.

WSP-5 Flagging: When necessary to **minimize** the area affected by the project, the Subapplicant or their contractors will mark the work site boundaries with flagging or other visible materials, and remove those markers at the conclusion of the project.

WSP-6 Avoid Placement of Predator Perches: Workers will avoid temporary or permanent placement of structures (e.g., posts, railings, tall equipment, or fence lines) that could provide elevated perches for predatory birds.

WSP-7 Access Restrictions: Access to work sites will be by foot travel only. Motorized vehicles, including all-terrain vehicles, are not permitted on work sites located within suitable nesting habitat.

WSP-8 Site Restrictions: Vehicles used for transport of personnel will be restricted to existing parking lots or roadside parking areas.

WSP-9 Restore Contours of Temporarily Disturbed Areas: At the conclusion of the project, areas temporarily impacted by project activity will be restored to their pre-project condition (for example, footpaths are to be raked to their original ground contour and cut vegetation is to be removed or piled for future disposal).

WSP-10 Waste Management: Trash, food, food containers, and food waste will be secured at all times by individual workers, or placed in animal-proof trash containers placed at the work site. The contents of trash containers will be transferred from the work site at the end of each day.

WSP-11 Prohibition of Pets Onsite: Pets will be prohibited from all work sites.

Northern Spotted Owl Conservation Measures

The following Conservation Measures are required for Subapplicant's proposed projects and their interrelated and interdependent activities that may affect the northern spotted owl (NSO). These measures are designed to reduce direct and indirect disturbance to individual NSOs, and habitat effects, to an insignificant and discountable level.

NSO-1 Contact the Service for NSO Data Records: If the Subapplicant's proposed project is located within suitable nesting, roosting or foraging habitat (NRF) for the NSO, and may directly or indirectly affect the NSO or its habitat, contact the Service to obtain contact information for local Forest Service, County, or other biologists who can provide NSO survey, Activity Center and habitat suitability data for the Action Area. An Activity Center represents the 'best of detections' such as a nest tree, an area used by roosting pairs or territorial singles, or an area of concentrated nighttime detections. This step will provide baseline information for the Action Area, and will help determine if and where surveys will be done, or if recent surveys have been completed.

NSO-2 Protocol Level Surveys: If NSO surveys have not been done, or are not current per the 2012 NSO Survey Protocol guidance (depending on activity), and surveys are planned, conduct them according to the 2012 NSO Survey Protocol and follow the seasonal restrictions described below for 'Surveyed Landscape'. If surveys are not planned or feasible, assume occupancy based on the presence of suitable NRF habitat; adhere to the guidance and seasonal restrictions described below for operating in an 'Un-surveyed Landscape'.

- a. As an option to the full 6-visit protocol surveys described in the 2012 NSO Survey Protocol, three surveys can be conducted in the year of action implementation. If no NSOs are detected within 0.25 mile of the proposed activities, activities may proceed that year without seasonal restrictions.

NSO-3 Work Restrictions in Previously Surveyed Landscape: If surveys are completed or are current for the Action Area (based on surveys conducted by the applicant/project proponent, or other data provided from other agencies):

- a. Do not conduct activities that result in loud or continuous noise above ambient levels within 0.25 mile (or 1,320 feet) of a nest site between February 1 and July 9.
 - This includes activities that generate sound levels 20 or more decibels above ambient sound levels or activities that generate maximum sound levels above 90 decibels, excluding vehicle back-up alarms. Maximum sound levels are the combined ambient and activity-generated sound levels.
- b. Do not conduct any suitable habitat modification or smoke-generating activities within 0.25 mile (or 1,320 feet) of a nest site between February 1 and September 15.
 - Suitable habitat includes NSO NRF habitat. Modification includes cutting and removal of large trees, down logs or snags. Tree or limb trimming or pruning, brush trimming or removal, and hazard tree felling may occur as long as the noise levels described above are not exceeded during the critical breeding period of February 1-July 9.

NSO-4 Work Restrictions in Previously Un-surveyed Landscape: If surveys have not been completed and cannot be done, assume occupancy in the Action Area/portion of it based on the presence of suitable NRF habitat:

- a. Do not conduct activities that result in loud and continuous noise above ambient levels within 0.25 mile (or 1,320 feet) of un-surveyed suitable NRF habitat between February 1 and July 9.
 - This includes activities that generate sound levels 20 or more decibels above ambient sound levels or activities that generate maximum sound levels above 90 decibels, excluding vehicle back-up alarms. Maximum sound levels are the combined ambient and activity-generated sound levels.
- b. Do not conduct any suitable habitat modification or smoke-generating activities within 0.25 mile (or 1,320 feet) of un-surveyed suitable NRF habitat between February 1 and September 15.
 - Suitable habitat includes NSO NRF habitat. Modification includes cutting and removal of large trees, down logs or snags. Tree or limb ~~trimming~~ or pruning, brush ~~trimming~~ or removal, and hazard tree felling may occur as long as the noise levels described above are not exceeded during the critical breeding period of February 1-July 9.

NSO-5 Noise Abatement: Equipment must be in good working order with standard noise abatement devices attached.

NSO-6 Habitat Avoidance: Within all suitable NRF habitat:

- a. Avoid removing or damaging known nest trees and associated screen trees, unless they are a confirmed safety hazard per the guidance documents from the implementing agency or another agency with jurisdiction in the Action Area.
- b. Avoid removing or damaging trees or snags with potential nesting platforms and associated screen trees. These include trees with large flattened tops, large broken topped trees, trees with decadence such as large cavities, mistletoe broom structures, cat faces, or large limbs; or large snags with these similar characteristics.

- c. Avoid removing large (20" diameter at breast height or larger) snags, unless they are a confirmed safety hazard per the implementing agency's guidance documents.

NSO-7 Avoid Reducing Habitat Quality: Project activities will not downgrade or remove the function of suitable nesting/roosting habitat to the degree that the habitat does not function in the capacity that existed pre-treatment:

- a. While habitat elements may be removed, such as individual large trees or snags if they are a confirmed safety hazard, from nesting/roosting habitat, the treatment must not be so extensive as to downgrade or remove the overall function of the habitat.
- b. If the Subapplicant's proposed project removes or downgrade nesting/roosting habitat function, this programmatic biological opinion is not applicable and a separate consultation with the Service is warranted.

NSO-8 Avoid Foraging Habitat: Within suitable foraging habitat in NSO core areas (0.5 mile radius, or 500-acre area, around an Activity Center) and within suitable foraging habitat in NSO home ranges (1.3 mile radius, including core, or 3,398-acre area around an Activity Center):

- a. Avoid downgrading or removing suitable foraging habitat function.
- b. While habitat elements may be removed, such as individual trees, shrubs, down logs and snags, from foraging habitat, the treatment must not be so extensive as to downgrade or remove the overall function of the habitat in an NSO core or home range below the recommended habitat levels for supporting survival, reproduction and occupancy (USDI-FWS 2009). This level is a combination of 400 acres of suitable NRF habitat in the core. For the home range, the level is 40 percent suitable NRF (approximately 1,336 acres).
- c. If the Subapplicant's proposed project removes or downgrades suitable foraging habitat function in a core and home range to below the recommended levels, this programmatic biological opinion is not applicable and a separate consultation with the Service is warranted.

NSO-9 Work Restrictions in NSO Critical Habitat: When working in designated critical habitat, adhere to all measures described in NSO-6, NSO-7, and NSO-8 for reducing impacts in suitable nesting/roosting and foraging habitat. This will assure that effects to Physical and Biological Features (PBFs) of PBF-2 (nesting/roosting) and PBF-3 (foraging) are insignificant and discountable. Adhering to these Conservation Measures (NSO-6, NSO-7, and NSO-8 above) will also assure that effects to PBF-1 and PBF-4 are insignificant and discountable, given the larger scale at which effects to these critical habitat PBFs are to be considered under the 2012 Revised Critical Habitat final rule (77 FR 71876). PBF-1 refers to forest types that may be in early, mid, or late seral stages and that support the NSO across its geographical range. PBF-4 refers to habitat that supports the transience and colonization phases of dispersal.

Action Area

The action area is defined in 50 CFR § 402.02, as "all areas to be affected directly or indirectly by the federal action and not merely the immediate area involved in the action." For the proposed project, the Action Area encompasses the entire jurisdiction of the Sacramento Fish and Wildlife Office, which encompasses all or parts of 40 counties.

(https://www.fws.gov/sacramento/GIS_resources/Maps/Images/sacramento_jurisdiction.jpg)

Analytical Framework for the Jeopardy Determinations

Section 7(a)(2) of the Endangered Species Act requires that Federal agencies ensure that any action they authorize, fund, or carry out is not likely to jeopardize the continued existence of listed species. “Jeopardize the continued existence of” means to engage in an action that reasonably would be expected, directly or indirectly, to reduce appreciably the likelihood of both the survival and recovery of a listed species in the wild by reducing the reproduction, numbers, or distribution of that species (50 CFR § 402.02).

The jeopardy analysis in this programmatic biological opinion considers the effects of the proposed federal action, and any cumulative effects, on the range wide survival and recovery of the listed species. It relies on four components: (1) the Status of the Species, which describes the range-wide condition of the species, the factors responsible for that condition, and its survival and recovery needs; (2) the Environmental Baseline, which analyzes the condition of the species in the action area, the factors responsible for that condition, and the relationship of the action area to the survival and recovery of the species; (3) the Effects of the Action, which determines the direct and indirect impacts of the proposed federal action and the effects of any interrelated or interdependent activities on the species; and (4) the Cumulative Effects, which evaluates the effects of future, non-federal activities in the action area on the species.

In accordance with the implementing regulations for Section 7 and Service policy, the jeopardy determination is made in the following manner: the effects of the proposed federal action are evaluated in the context of the aggregate effects of all factors that have contributed to the current status of 42 species. Additionally, for non-Federal activities in the action area, we will evaluate those actions likely to affect the species in the future, to determine if implementation of the proposed action is likely to cause an appreciable reduction in the likelihood of both its survival and recovery in the wild.

The following analysis places an emphasis on using the range-wide survival and recovery needs of these species, and the role of the action area in providing for those needs as the context for evaluating the significance of the effects of the proposed programmatic Federal action, taken together with cumulative effects, for purposes of making the jeopardy determination.

Analytical Framework Adverse Modification

Section 7(a)(2) of the Act requires that federal agencies insure that any action they authorize, fund, or carry out is not likely to destroy or adversely modify designated critical habitat. A final rule revising the regulatory definition of “destruction or adverse modification” (DAM) was published on February 11, 2016 (81 FR 7214). The final rule became effective on March 14, 2016. The revised definition states:

“Destruction or adverse modification means a direct or indirect alteration that appreciably diminishes the value of critical habitat for the conservation of a listed species. Such alterations may include, but are not limited to, those that alter the physical or biological features essential to the conservation of a species or that preclude or significantly delay development of such features.”

The DAM analysis in this biological opinion relies on four components: (1) the Status of Critical Habitat, which describes the range-wide condition of the critical habitat in terms of the key components (i.e., essential habitat features, primary constituent elements, or physical and biological

features) that provide for the conservation of the listed species, the factors responsible for that condition, and the intended value of the critical habitat overall for the conservation/recovery of the listed species; (2) the Environmental Baseline, which analyzes the condition of the critical habitat in the action area, the factors responsible for that condition, and the value of the critical habitat in the action area for the conservation/recovery of the listed species; (3) the Effects of the Action, which determines the direct and indirect impacts of the proposed federal action and the effects of any interrelated and interdependent activities on the key components of critical habitat that provide for the conservation of the listed species, and how those impacts are likely to influence the conservation value of the affected critical habitat; and (4) Cumulative Effects, which evaluate the effects of future non-federal activities that are reasonably certain to occur in the action area on the key components of critical habitat that provide for the conservation of the listed species and how those impacts are likely to influence the conservation value of the affected critical habitat.

For purposes of making the DAM determination, the Service evaluates if the effects of the proposed federal action, taken together with cumulative effects, are likely to impair or preclude the capacity of critical habitat in the action area to serve its intended conservation function to an extent that appreciably diminishes the range wide value of critical habitat for the conservation of the listed species. The key to making that finding is understanding the value (i.e., the role) of the critical habitat in the action area for the conservation/recovery of the listed species based on the *Environmental Baseline* analysis.

Environmental Baseline and Status of the Species

Depending on the intensity of a disaster, it is possible for habitat areas directly impacted by disasters to be completely destroyed and landscapes to be severely altered. Additionally, during response and recovery efforts, areas outside of or undisturbed by a disaster may be affected due to the construction of new facilities, the relocation of existing facilities (e.g., schools or hospitals), or relocating the function of existing facilities. Therefore, the environmental baseline for the Action Area cannot be defined at this time.

California Red-Legged Frog

Listing Status

The California red-legged frog was listed as a threatened species on May 23, 1996 (Service 1996). Critical habitat was designated for this species on April 13, 2006 (Service 2006), with revisions to the critical habitat designation published on March 17, 2010 (Service 2010). At that time, the Service recognized the taxonomic change from *Rana aurora draytonii* to *Rana draytonii* (Shaffer et al. 2010). A recovery plan was published for the California red-legged frog on September 12, 2002 (Service 2002).

Description

The California red-legged frog is the largest native frog in the western United States (Wright and Wright 1949), ranging from 1.5 to 5.1 inches in length (Stebbins 2003). The abdomen and hind legs of adults are largely red, while the back is characterized by small black flecks and larger irregular dark blotches with indistinct outlines on a brown, gray, olive, or reddish background color. Dorsal spots usually have light centers (Stebbins 2003); dorsolateral folds are prominent on the back. The California red-legged frog is sexually dimorphic; the females are larger than the males (Dodd 2013a, b). California red-legged frog tadpoles range from 0.6 inch to 3.1 inches in length and the

background color of the body is dark brown and yellow with darker spots (Storer 1925).

Current Status and Distribution

The historical range of the California red-legged frog extended from central Mendocino County and western Tehama County south in the California Coast Range to northern Baja California, Mexico, and in the Sierra Nevada/Cascade Ranges from Shasta County south to Madera County (Jennings and Hayes 1994). The species historically occurred from sea level to elevations of about 5,200 feet in 46 counties; however, currently the taxon is extant in 238 streams or drainages within only 22 counties, representing a loss of 70 percent of its former range (Service 2002). Isolated populations persist in several Sierra Nevada foothill locales and in Riverside County (Barry and Fellers 2013; Backlin et al. 2017; CDFW 2017; Gordon, R. and J. Bennett, pers. comm., 2017). The species is no longer considered extant in California's Central Valley due to significant declines caused by habitat modifications and exotic species (Fisher and Shaffer 1996). Currently, the California red-legged frog is widespread in the San Francisco Bay nine-county area (CDFW 2017). They are still locally abundant within the California coastal counties from Mendocino County to Los Angeles County and presumed extirpated in Orange and San Diego counties (CDFW 2017; Yang, D. and J. Martin, pers. comm., 2017; Gordon, R. and J. Bennett, pers. comm., 2017). Baja California represents the southernmost edge of the species' current range (Peralta-García et al. 2016).

Barry and Fellers (2013) conducted a comprehensive study to determine the current range of the California red-legged frog in the Sierra Nevada, concluding that it differs little from its historical range; however, the current Sierra Nevada populations appear to be small and tend to fluctuate. Since 1991, eleven California red-legged frog populations have been discovered or confirmed, including eight probable breeding populations (Barry and Fellers 2013; Mabe, J., pers. comm., 2017). Microsatellite and mitochondrial DNA analysis by Richmond et al. (2014) confirmed the Sierra Nevada populations of the California red-legged frog are genetically distinct from each other, as well as from other populations throughout the range of this species. The research concluded that the Sierra Nevada populations are persisting at low levels of genetic diversity and no contemporary gene flow across populations exist. On a larger geographic scale, range contraction has left a substantial gap between Sierra Nevada and Coast Range populations, similar to the gap separating the Southern California and Baja California populations (Richmond et al. 2014).

Habitat and Life History

Habitat: The California red-legged frog generally breeds in still or slow-moving water associated with emergent vegetation, such as cattails, tules (hardstem bulrush), or overhanging willows (Storer 1925; Fellers 2005). Aquatic breeding habitat predominantly includes permanent water sources such as streams, marshes, and natural and manmade ponds in valley bottoms and foothills (Jennings and Hayes 1994; Bulger et al. 2003; Stebbins 2003). Since the 1850's, manmade ponds may actually supplement stream pool breeding habit and can be capable of supporting large populations of this species. Breeding sites may hold water only seasonally, but sufficient water must persist at the beginning of the breeding season and into late summer or early fall for tadpoles to successfully complete metamorphosis. Breeding habitat does not include deep lacustrine water habitat (e.g., deep lakes and reservoirs 50 acres or larger in size) (Service 2010). Within the coastal lagoon habitats, salinity is a significant factor on embryonic mortality or abnormalities (Jennings and Hayes 1990). Jennings and Hayes (1990) conducted laboratory studies and field observations concluding salinity levels above 4.5 parts per thousand detrimentally affected the California red-legged frog embryos. Aquatic breeding habitat does not need to be available every year, but it must be available at least once within the frog's lifespan for breeding to occur (Service 2010).

Non-breeding aquatic habitat consists of shallow (non-lacustrine) freshwater features not suitable as breeding habitat, such as seasonal streams, small seeps, springs, and ponds that dry too quickly to support breeding. Non-breeding aquatic and riparian habitat is essential for providing the space, food, and cover necessary to sustain the California red-legged frog. Riparian habitat consists of vegetation growing nearby, but not typically in, a body of water on which it depends, and usually extends from the bank of a pond or stream to the margins of the associated floodplain (Service 2010). Adult California red-legged frogs may avoid coastal habitat with salinity levels greater than 6.5 parts per thousand (Jennings and Hayes 1990).

Cover and refugia are important habitat characteristic preferences for the species (Halstead and Kleeman 2017). Refugia may include vegetation, organic debris, animal burrows, boulders, rocks, logjams, industrial debris, or any other object that provides cover. Agricultural features such as watering troughs, spring boxes, abandoned sheds, or haystacks may also be utilized by the species. Incised stream channels with portions narrower and depths greater than 18 inches may also provide important summer sheltering habitat. During periods of high water flow, California red-legged frogs are rarely observed; individuals may seek refuge from high flows in pockets or small mammal burrows beneath banks stabilized by shrubby riparian growth (Jennings and Hayes 1994). Accessibility to cover habitat is essential for the survival of California red-legged frogs within a watershed and can be a factor limiting frog population numbers and survival.

Breeding: The California red-legged frog typically breeds between November and April; however, breeding may occur later in the Sierra Nevada Range (Barry 2002). Females deposit their egg masses on emergent vegetation, floating on or near the surface of the water. The California red-legged frog is often a prolific breeder, laying eggs during or shortly after large rainfall events in late winter and early spring. Egg masses containing 300-4,000 eggs hatch after six to fourteen days (Storer 1925; Jennings and Hayes 1994; Fellers 2005). Historically, the California red-legged frog in the Sierra Nevada likely bred within stream pools, which tend to be small with limited forage, constraining the size and number of populations (Barry and Fellers 2013).

California red-legged frog tadpoles undergo metamorphosis three to seven months following hatching. Most males reach sexual maturity in two years, while it takes approximately three years for females (Jennings and Hayes 1985; Fellers 2005). Under favorable conditions, California red-legged frogs may live eight to ten years (Jennings et al. 1992). Of the various life stages, tadpoles likely experience the highest mortality rates; only one percent of each egg mass completes metamorphosis (Jennings et al. 1992).

Diet: The California red-legged frog has a variable diet that changes with each of its life history stages. The feeding habits of the early stages are likely similar to other ranids, whose tadpoles feed on algae, diatoms, and detritus by grazing on the surface of rocks and vegetation (Fellers 2005). Hayes and Tennant (1985) found invertebrates to be the most common food items of adult California red-legged frogs collected in southern California; however, they speculated that this was opportunistic and varied based on prey availability. Vertebrates, such as Pacific tree frogs (*Hyla regilla*) and California mice (*Peromyscus californicus*), represented over half of the prey mass eaten by larger frogs, although invertebrates were the most numerous food items. Feeding typically occurs along the shoreline and on the surface of the water; juveniles appear to forage during both daytime and nighttime, whereas adults appear to feed at night (Hayes and Tennant 1985).

Movement: California red-legged frogs do not have a distinct breeding migration (Fellers 2005), rather they may move seasonally from non-breeding pools or refugia to breeding pools. Some individuals

remain at breeding sites year-round while others disperse to neighboring water features or moist upland sites when breeding is complete and/or when breeding pools dry (Service 2002; Bulger et al. 2003; Fellers and Kleeman 2007; Tatarian and Tatarian 2008; Tatarian 2008). Studies in the several San Francisco Bay counties showed movements are typically along riparian corridors (Fellers and Kleeman 2007; Tatarian 2008). Although, some individuals, especially on rainy nights and in more mesic areas, travel without apparent regard to topography, vegetation type, or riparian corridors, and can move directly from one site to another through normally inhospitable habitats such as heavily grazed pastures or oak-grassland savannas (Bulger et al 2003).

California red-legged frogs show high site fidelity (Tatarian and Tatarian 2008) and typically do not move significant distances from breeding sites (Bulger et al. 2003; Fellers and Kleeman 2007; Tatarian and Tatarian 2008; Tatarian 2008). When traveling between aquatic sites, California red-legged frogs typically travel less than 0.31 miles (Fellers and Kleeman 2007; Tatarian and Tatarian 2008), although they have been documented to move more than two miles in Santa Cruz County (Bulger et al. 2003). Various studies have found that the frogs typically do not make terrestrial forays further than 200 feet from aquatic habitat (Bulger et al. 2003; Fellers and Kleeman 2007; Tatarian and Tatarian 2008; Tatarian 2008). Upland movements are typically associated with precipitation events and usually last for one to four days (Tatarian 2008).

Threats

Factors associated with declining populations of the California red-legged frog throughout its range include degradation and loss of habitat through agriculture, urbanization, mining, overgrazing, recreation, timber harvesting, non-native species, impoundments, water diversions, erosion and siltation altering upland and aquatic habitat, degraded water quality, use of pesticides, and introduced predators (Service 2002, 2010). Urbanization often leaves isolated habitat fragments and creates barriers to frog dispersal.

Non-native species pose a major threat to the recovery of California red-legged frogs. Several researchers have noted the decline and eventual local disappearance of California and northern red-legged frogs in systems supporting bullfrogs (Jennings and Hayes 1990; Twedt 1993), red swamp crayfish, signal crayfish, and several species of warm water fish including sunfish, goldfish, common carp, and mosquitofish (Moyle 1976; Barry 1992; Hunt 1993; Fisher and Shaffer 1996). The decline of the California red-legged frog due to these non-native species has been attributed to predation, competition, and reproduction interference (Twedt 1993; Bury and Whelan 1984; Storer 1933; Emlen 1977; Kruse and Francis 1977; Jennings and Hays 1990; Jennings 1993).

Chytridiomycosis, an infectious disease caused by the chytrid fungus, *Batrachochytrium dendrobatidis* (*Bd*), has been found to adversely affect amphibians globally (Davidson et al. 2003; Lips et al. 2006). While *Bd* prevalence in wild amphibian populations in California is unknown (Fellers et al. 2011), chytrid is expected to be widespread throughout much of the California red-legged frog's range. The chytrid fungus has been documented within the California red-legged frog populations at Point Reyes National Seashore, two properties in Santa Clara County, Yosemite National Park, Hughes Pond, Sailor Flat, Big Gun Diggings, and Spivey Pond (Padgett-Flohr and Hopkins 2010; Tatarian and Tatarian 2010; Fellers et al. 2011; Barry and Fellers 2013). However, no chytrid-related mortality has been reported in these populations, suggesting that California red-legged frogs are less vulnerable to the pathogenic effects of chytrid infection than other amphibian species (Tatarian and Tatarian 2010; Barry and Fellers 2013; Fellers et al. 2017). While chytrid infection may not directly lead to mortality in California red-legged frogs, Padgett-Flohr (2008) states that this infection may reduce overall fitness and could lead to long-term effects. Therefore, it is difficult to estimate the

full extent and risk of chytridiomycosis to the California red-legged frog populations.

Recovery Plan

The Recovery Plan for the California red-legged frog identifies eight recovery units (Service 2002). Based on various regional areas of the species' range, the establishment of these recovery units are essential to its survival and recovery. The goal of the recovery plan is to protect the long-term viability of all extant populations within each recovery unit. Within each recovery unit, delineated core areas, designed to protect metapopulations, represent contiguous areas of moderate to high California red-legged frog densities. The management strategy identified within this Recovery Plan will allow for the recolonization of habitats within and adjacent to core areas naturally subjected to periodic localized extinctions, thus assuring the long-term survival and recovery of California red-legged frogs.

Critical Habitat

The Service designated critical habitat for the California red-legged frog on March 13, 2001 (Service 2001a) and a revised designation to the critical habitat was published on April 13, 2006 (Service 2006b) and again on March 17, 2010 (Service 2010). At this time, the Service recognized the taxonomic change from *Rana aurora draytonii* to *Rana draytonii* (Shaffer *et al.* 2010). The rule identifies approximately 1,636,609 acres within 48 critical habitat units in Alameda, Butte, Calaveras, Contra Costa, El Dorado, Kern, Kings, Los Angeles, Marin, Mendocino, Merced, Monterey, Napa, Nevada, Placer, San Benito, San Joaquin, San Luis Obispo, San Mateo, Santa Barbara, Santa Cruz, Solano, Sonoma, Stanislaus, Ventura, and Yuba Counties, California.

The physical and biological features (PBFs) defined for the California red-legged frog were derived from its biological needs. The area designated as revised critical habitat provides aquatic habitat for breeding and non-breeding activities and upland habitat for shelter, foraging, predator avoidance, and dispersal across its range. The PBFs and, therefore, the resulting physical and biological features essential for the conservation of the species were determined from studies of California red-legged frog ecology. Based on the above needs and our current knowledge of the life history, biology, and ecology of the species, and the habitat requirements for sustaining the essential life-history functions of the species, the Service determined that the PBFs essential to the conservation of the California red-legged frog are:

PBF 1 Aquatic Breeding: Habitat Standing bodies of fresh water (with salinities less than 7.0 parts per thousand), including: natural and manmade (e.g., stock) ponds, slow-moving streams or pools within streams, and other ephemeral or permanent water bodies that typically become inundated during winter rains and hold water for a minimum of 20 weeks in all but the driest of years;

PBF 2 Non-Breeding Aquatic Habitat: Freshwater and wetted riparian habitats, as described above, that may not hold water long enough for the subspecies to hatch and complete its aquatic life cycle but that do provide for shelter, foraging, predator avoidance, and aquatic dispersal for juvenile and adult California red-legged frogs. Other wetland habitats considered to meet these elements include, but are not limited to: plunge pools within intermittent creeks; seeps; quiet water refugia during high water flows; and springs of sufficient flow to withstand the summer dry period.

PBF 3 Upland Habitat: Upland areas adjacent to or surrounding breeding and non-breeding aquatic and riparian habitat up to a distance of one mile in most cases and comprised of various vegetation series such as grasslands, woodlands, wetland, or riparian plant species that provide the frog shelter, forage, and predator avoidance. Upland features are also essential in that they are needed to maintain the hydrologic, geographic, topographic, ecological, and edaphic features that support and surround the wetland or riparian habitat. These upland features contribute to the filling and drying of the wetland or riparian habitat and are responsible for maintaining suitable periods of pool inundation for larval frogs and their food sources, and provide breeding, non-breeding, feeding, and sheltering habitat for juvenile and adult frogs (e.g., shelter, shade, moisture, cooler temperatures, a prey base, foraging opportunities, and areas for predator avoidance). Upland habitat should include structural features such as boulders, rocks and organic debris (e.g., downed trees, logs), as well as small mammal burrows and moist leaf litter; and

PBF 4: Dispersal Habitat: Accessible upland or riparian dispersal habitat within designated units and between occupied locations within a minimum of 1 mile of each other that allow for movement between such sites. Dispersal habitat includes various natural habitats and altered habitats such as agricultural fields, which do not contain barriers (e.g., heavily traveled road without bridges or culverts) to dispersal. Dispersal habitat does not include moderate- to high-density urban or industrial developments with large expanses of asphalt or concrete, nor does it include large reservoirs over 50 acres in size, or other areas that do not contain those features identified in PBFs 1, 2, or 3 as essential to the conservation of the subspecies.

With the revised designation of critical habitat, the Service intends to conserve the geographic areas containing the physical and biological features that are essential to the conservation of the species, through the identification of the appropriate quantity and spatial arrangement of the PBFs sufficient to support the life-history functions of the species.

Based on the documented presence of this species in the Action Area, and the biology and ecology of this species, the Service has determined that the California red-legged frog is likely to be present in the Action Area and use this area for breeding, sheltering, foraging, and dispersal.

California Tiger Salamander Central Distinct Population Segment

The central California tiger salamander occurs or has the potential to occur within the Action Area in Alameda, Amador, Calaveras, Contra Costa, Fresno, Kern, Kings, Madera, Mariposa, Merced, Monterey, Sacramento, San Benito, San Mateo, San Joaquin, San Luis Obispo, Santa Clara, Santa Cruz, Stanislaus, Solano, Tulare, Tuolumne, and Yolo Counties (Service 2017b). The CNDDDB (2018) lists 1,177 occurrences throughout its range. The central California tiger salamander occurs at sites on the Central Valley floor near sea level, up to a maximum elevation of roughly 3,940 feet (1,200 meters) in the Coast Ranges and 1,640 feet (500 meters) in the Sierra Nevada foothills Shaffer et al. 2013). Central California tiger salamanders are adapted to breeding in natural vernal pools and ponds; however, they now frequently use livestock ponds and other modified ephemeral and permanent ponds (Service 2014a). Upland habitats surrounding known central California tiger salamander breeding pools are usually dominated by grassland, oak savanna, or oak woodland (CNDDDB 2015). The species requires upland habitat that is occupied by small burrowing mammals such as California ground squirrel (*Otospermophilus beecheyi*) and Botta's pocket gopher (*Thomomys bottae*) that create underground burrow systems used by the salamanders throughout the year (Shaffer et al. 1993; Seymour and Westphal 1994; Loredó et al. 1996; Pittman 2005). Large tracts of upland habitat, preferably with multiple breeding ponds, are necessary for the Central California tiger salamander to persist.

Multiple factors have contributed to population declines of the central California tiger salamander, including habitat loss and fragmentation due to agriculture and urbanization; predation from and competition with invasive species; hybridization with non-native barred tiger salamanders (*Ambystoma tigrinum*) (sometimes referred to as *Ambystoma tigrinum mavortium*) (Fitzpatrick and Shaffer 2004; Riley *et al.* 2003); mortality from road crossings; contaminants; and small mammal burrow control efforts (Service 2004, 2014a). Other threats include disease, predation, interspecific competition, exposure to contaminants, and rodent and mosquito control (Service 2004, 2014a).

The Recovery Plan for the Central California tiger salamander (Service 2017a) identifies four recovery units: Central Valley, Southern San Joaquin Valley, Bay Area and Central Coast Range. The Action Area includes all recovery units and occurrences. While there have been continued losses of central California tiger salamander habitat, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Recovery Plan for the Central California Distinct Population Segment of the California Tiger Salamander (*Ambystoma californiense*) (Service 2017a).

Critical Habitat

The Service designated critical habitat for the Central California tiger salamander on September 22, 2005 (Service 2005b). The rule identifies approximately 199,109 acres within 32 critical habitat units in Alameda, Amador, Calaveras, Contra Costa, Fresno, Kern, Kings, Madera, Mariposa, Merced, Monterey, Sacramento, San Benito, San Joaquin, San Luis Obispo, Santa Clara, Solano, Stanislaus, Tulare, and Yolo Counties, California.

The PBFs defined for the Central California tiger salamander were derived from its biological needs. The area designated as revised critical habitat provides aquatic habitat for breeding and non-breeding activities and upland habitat for shelter, foraging, predator avoidance, and dispersal across its range. The PBFs and, therefore, the resulting physical and biological features essential for the conservation of the species were determined from studies of California tiger salamander ecology. Based on the above needs and our current knowledge of the life history, biology, and ecology of the species, and the habitat requirements for sustaining the essential life-history functions of the species, the Service determined that the PBFs essential to the conservation of the Central California tiger salamander are:

PBF 1 Aquatic Breeding Habitat: Standing bodies of fresh water (including natural and manmade (e.g., stock) ponds, vernal pools, and other ephemeral or permanent water bodies which typically support inundation during winter rains and hold water for a minimum of 12 weeks in a year of average rainfall;

PBF 2 Upland Habitat Upland: habitats adjacent and accessible to and from breeding ponds that contain small mammal burrows or other underground habitat that Central California tiger salamanders depend upon for food, shelter, and protection from the elements and predation; and

PBF 3 Dispersal Habitat: Accessible upland dispersal habitat between occupied locations that allow for movement between such sites.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the central California tiger salamander occurs within the Action Area.

California Tiger Salamander Sonoma Distinct Population Segment

The Sonoma California tiger salamander occurs or has the potential to occur within the Action Area, in Sonoma County. The CNDDDB (2018) lists 81 currently known occurrences within Sonoma County. The Sonoma County California tiger salamander inhabits vernal pools and seasonal ponds, associated grassland, and oak savannah plant communities below 200 feet (60 meters) (Service 2003a). They also use modified ephemeral or permanent ponds and manmade features such as constructed ponds or livestock ponds (Service 2016). Sonoma County California tiger salamanders spend the majority of their lives underground in small mammal burrows in uplands, while ephemeral ponds play a critical role because they are necessary for breeding. As with the Central California tiger salamander, large tracts of upland habitat, preferably with multiple breeding ponds, are necessary for the Sonoma tiger salamander to persist (Service 2016).

The primary threats the Sonoma County California tiger salamander are the modification and destruction of suitable habitat due to urbanization, agricultural conversion, and competition with non-native plants. In addition to habitat loss, the fragmented condition of remaining Sonoma County California tiger salamander habitat restricts migration between aquatic breeding sites and upland non-breeding habitat, along with dispersal among aquatic breeding sites (Cook *et al.* 2005). Since 1991, these threats have continued to such an extent that many populations appear to have been extirpated or severely reduced in numbers.

The Recovery Plan for the Santa Rosa Plains (Service 2016) identifies three core areas for the Sonoma County California tiger salamander (Wright-Kelly Core Area, Llano Crescent-Stony Point Core Area, and West Cotati Core Area) and four bounded management areas (the Alton Lane, Horn-Hunter, Americano-Stemple, and East Cotati Management Areas). The Action Area includes all occurrences and core areas. While there have been continued losses of Central California tiger salamander habitat, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the range-wide status of this plant species, please refer to the Recovery Plan for the Santa Rosa Plains (Service 2016).

Critical Habitat

The Service designated critical habitat for the Sonoma California tiger salamander on December 14, 2005 (Service 2005c) and a revised designation to the critical habitat was published on August 31, 2011 (Service 2011a). The rule identifies approximately 47,383 acres within one critical habitat unit in Sonoma County, California.

Based on the above needs and our current knowledge of the life history, biology, and ecology of the species, and the habitat requirements for sustaining the essential life-history functions of the species, the Service determined that the following PBFs are essential to the conservation of the Sonoma County California tiger salamander:

PBF 1 Aquatic Breeding Habitat: standing bodies of fresh water (including natural and manmade (e.g., stock) ponds, vernal pools and other ephemeral or permanent water bodies that typically support inundation during winter/early spring and hold water for a minimum of 12

consecutive weeks in a year of average rainfall);

PBF 2 Upland Habitat: upland habitats adjacent and accessible to and from breeding ponds that contain small mammal burrows or other underground refugia that Sonoma County California tiger salamanders depend upon for food, shelter, and protection from the elements and predation; and

PBF 3 Dispersal Habitat: accessible upland dispersal habitat between occupied locations that allow for movement between such sites.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the Sonoma California tiger salamander occurs within the Action Area.

Giant Garter Snake

The giant garter snake occurs or has the potential to occur within the Action Area in Sacramento and San Joaquin Valleys. The giant garter snake is endemic to the wetlands of the Sacramento and San Joaquin Valleys of California. The CNDDB (2018) lists 366 occurrences of the species in Amador, Butte, Colusa, Contra Costa, Fresno, Glenn, Kern, Madera, Merced, Sacramento, San Joaquin, Solano, Sutter, Yolo, and Yuba Counties. The giant garter snake now inhabits the remaining high-quality fragmented wetlands that include marshes, ponds, small lakes, low-gradient streams with silt substrates, and managed waterways (Service 2017a). Giant garter snakes typically occur in or adjacent to aquatic habitats possessing protective emergent vegetative cover that allow for foraging. Upland areas are also an important habitat component; the giant garter snake spends half of the year, roughly November through April, hibernating in uplands. The snake also is known to spend more than half the time in terrestrial environments during the active period during summer (Halstead et al. 2015b). While in such terrestrial habitats in summer, the snake is often underground, especially during extreme temperatures. Animal burrows are considered an important component of upland refugia, although other elements such as brush piles and even riprap may be used (e.g., Wylie and Amarello 2008). Although snakes can venture as much as 500 feet or more from the water edge, the overwhelming majority of both the summer and winter upland captures are within the first 10 meters from the water edge.

Threats to giant garter snake include habitat loss from urbanization, the subsequent fragmentation and population isolation, flood channel maintenance, agricultural practices (e.g., rice fallowing due to drought conditions, habitat disturbance and loss from irrigation and drainage ditch maintenance), climate change, water transfers, and invasive species. Habitat fragmentation restricts dispersal and isolates giant garter snake populations, increasing the likelihood of inbreeding, decreasing fitness, and reducing genetic diversity. These factors have ultimately resulted in the snake's extirpation from the southern one-third of its range in former wetlands associated with the historical Buena Vista, Tulare, and Kern lakebeds. In addition to habitat loss, the remaining Central Valley populations of the giant garter snake are subject to the cumulative effects of a number of other existing and potential threats, including roads and vehicular traffic, climate change, and predation by non-native species.

The Recovery Plan (Service 2017a) for the giant garter snake identifies nine recovery units that correspond directly to the nine geographically and genetically distinct populations: Butte Basin, Colusa Basin, Sutter Basin, American Basin, Yolo Basin, Delta Basin, Cosumnes-Mokelumne Basin, San Joaquin Basin, and Tulare Basin. The Action Area includes all recovery units and occurrences.

While there have been continued losses of giant garter snake habitat throughout the various recovery units, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Recovery Plan for the Giant Garter Snake (*Thamnophis gigas*) (Service 2017a).

Critical Habitat

Critical habitat has not been designated for the giant garter snake.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the giant garter snake occurs within the Action Area.

Alameda Whipsnake

The Alameda whipsnake occurs or has the potential to occur within the Action Area in Alameda, Contra Costa, western San Joaquin, northern Santa Clara, and northwestern Stanislaus Counties. The CNDDDB (2018) lists 164 occurrences for Alameda whipsnake, the majority of which are in the Mount Diablo State Park and Los Vaqueros Watershed specifically, and on various East Bay Regional Park land. The current distribution is five populations within a fragmented regional metapopulation (Service 2002b). General habitat types of Alameda whipsnake include chaparral and coastal scrub, and associated native vegetation and rock land up to 500 feet (150 meters) from chaparral and coastal scrub (Service 2011e). While the Alameda whipsnake uses all slope aspects and brush community canopy closures, Swaim (1994) found areas of concentrated use on southwest-, south-, southeast-, east-, or northeast-facing slopes at both the Tilden Regional Park and the Moller Ranch.

Habitat loss and fragmentation are the primary threats to the Alameda whipsnake. Habitat loss and fragmentation from urban development, associated impacts due to increased population densities and associated highway and road construction likely has prevented or severely reduced movement of individuals between areas of suitable habitat, and exacerbated impacts of other threats. Urban development has also reduced the total amount of suitable habitat available for the Alameda whipsnake. Other current threats to the habitat of the Alameda whipsnake are incompatible grazing practices; spread of nonnative plants; increased predation from native and nonnative predators associated with urbanization; unauthorized collection; and alteration of suitable habitat from fire suppression, which creates closed-canopy habitat and increases fire severity.

The Draft Recovery Plan for the Alameda whipsnake (Service 2002b) identifies seven Recovery Units: Unit 1 (Tilden-Briones), Unit 2 (Oakland-Las Trampas), Unit 3 (Hayward-Pleasanton Ridge), Unit 4 (Mount Diablo-Black Hills), Unit 5 (Sunol-Cedar Mountain), Unit 6 (Caldecott Tunnel Corridor) and Unit 7 (Niles Canyon/Sunol Corridor). The Action Area includes all recovery units and occurrences. While there have been continued losses of Alameda whipsnake habitat throughout the various recovery units, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Alameda Whipsnake (*Masticophis lateralis euryxanthus*) 5-year Review: Summary and Evaluation (Service 2011e). No change in the species' listing status was recommended in this species' 5-year review.

Critical Habitat

On October 2, 2006, the Service published the final rule determining critical habitat for the Alameda whipsnake in the Federal Register (Service 2006c). The rule designates approximately 154,834 acres within six critical habitat units in Alameda, Contra Costa, Santa Clara, and San Joaquin counties, California.

Based on our current knowledge of the life history, biology, and ecology of the Alameda whipsnake and the requirements of the habitat necessary to sustain the essential life history functions of the subspecies, the Service has determined that the PBFs for the Alameda whipsnake are:

PBF 1: Scrub/shrub communities with a mosaic of open and closed canopy. Scrub/shrub vegetation dominated by low-to medium-stature woody shrubs with a mosaic of open and closed canopy as characterized by the chamise, chamise-eastwood manzanita, chaparral whitethorn, and interior live oak shrub vegetation series (as identified in the Manual of California Vegetation (Sawyer and Keeler-Wolf 1995), A Guide to Wildlife Habitats of California (Mayer and Laudenslayer 1988), and California Wildlife Habitat Relationship System (CDFG 1998)), occurring at elevations from sea level to approximately 3,850 feet. Such scrub/ shrub vegetation within these series forms a pattern of open and closed canopy used by the Alameda whipsnake for shelter from predators; temperature regulation because it provides sunny and shady locations; prey-viewing opportunities; and nesting habitat and substrate. These features contribute to support a prey base consisting of western fence lizards and other prey species such as skinks, frogs, snakes, and buds;

PBF 2: Woodland or annual grassland plant communities contiguous to lands that contain PBF 1. Woodland or annual grassland vegetation series comprised of one or more of the following: blue oak, coast live oak, California bay, California buckeye, and California annual grassland vegetation series (as identified in the Manual of California Vegetation (Sawyer and Keeler-Wolf 1995), A Guide to Wildlife Habitats of California ((Mayer and Laudenslayer 1988), and California Wildlife Habitat Relationship System (CDFG 1998)) are PBF 2. This mosaic of vegetation is essential to the conservation of the Alameda whipsnake because it supports a prey base, consisting of western fence lizards and other prey species such as skinks, frogs, snakes, and buds. This provides opportunities for foraging by allowing snakes to come in contact with and visualize, track, and capture prey (especially western fence lizards along with other prey such as skinks, frogs, buds); short and long distance dispersal within, between, or to adjacent areas containing essential features (i.e., PBF 1 or PBF 3); and contact with other Alameda whipsnakes for mating and reproduction; and

PBF 3: Lands containing rock outcrops, talus, and small mammal burrows within or adjacent to PBF 1 and or PBF 2. These areas are essential to the conservation of the Alameda whipsnake because they are used for retreats (shelter), hibernacula, foraging and dispersal, and provide additional prey population support functions. Refer to the final designation of critical habitat for additional information.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the Alameda whipsnake occurs within the Action Area.

Least Bell's Vireo

The least Bell's vireo occurs or has the potential to occur within the Action Area in Sacramento, San Joaquin, Santa Clara, Tulare, Kern, Inyo, Yolo and Stanislaus Counties. The CNDDDB (2018) lists 483 occurrences for the species. Least Bell's vireos are obligate riparian breeders, inhabiting structurally diverse woodlands along watercourses. They occur in a diversity of riparian habitat types including cottonwood-willow woodlands/forests, oaks woodlands, and mule fat scrub. (Service 1998d).

Threats to the least Bell's vireo include riparian habitat loss from agricultural, urban, and commercial developments, flood control and river channelization projects, livestock grazing and other activities, which have severely restricted the species' range and fragmented remaining habitat. Because of widespread riparian habitat losses, remaining breeding birds are segregated into small, disjunct and widely dispersed remnant populations, making them more vulnerable to extirpation than larger populations are (Franzreb 1989). When local habitats are lost and no nearby habitat is available for dispersal until damaged riparian habitat regenerates, vireos may be forced into habitats less suitable to their nesting and foraging requirements. This could result in increased mortality, reduced reproductive success, and declining population numbers (Franzreb 1989). Vireos also suffer from limited reproductive success as the result of nest parasitism by the brown-headed cowbird (*Molothrus ater*), which combined with habitat loss has resulted in a decline in the overall vireo population to about 300 breeding pairs.

The Draft Recovery Plan for the least Bell's vireo (Service 1998d) does not identify Recovery Units. However, it identifies population/metapopulation units needed for recovery. These include the San Joaquin Valley and the Sacramento Valley. The Action Area includes all occurrences and units. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Least Bell's Vireo (*Vireo bellii pusillus*) 5-year Review: Summary and Evaluation (Service 2006d). No change in the species' listing status was recommended in this species' 5-year review.

Critical Habitat

The Service designated critical habitat for the least Bell's vireo on February 2, 1994 (Service 1994). This rule identifies 38,000 acres within 10 critical habitat units in Los Angeles, Riverside, San Bernardino, San Diego, Santa Barbara, and Ventura Counties, California. No units are within the Action Area for the Sacramento Fish and Wildlife Office.

The PBFs of critical habitat for the least Bell's vireo are the riverine and floodplain habitats (particularly willow-dominated riparian woodland with dense understory vegetation maintained, in part, in a non-climax stage by periodic floods or other agents) and adjacent coastal sage scrub, chaparral, or other upland plant communities. Vireos meet their survival and reproductive needs (food, cover, nest sites, and nestling and fledgling protection) within the riparian zone in most areas. In some areas they also forage in adjacent upland habitats.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the least Bell's vireo occurs within the Action Area.

Tidewater Goby

The tidewater goby (*Encyclogobius newberryi*), occurs within the Action Area in Sonoma, Marin, Alameda, Contra Costa, San Francisco and San Mateo Counties. The CNDDDB (2018) lists 127

occurrences. The geographic range of the tidewater goby is limited to the coast of California (Eschmeyer *et al.* 1983, p. 262; Swift *et al.* 1989, p. 12) where it inhabits discrete locations of brackish water along the California coast. Tidewater goby localities closely correspond to major stream drainages (Swift *et al.* 1989; Habel and Armstrong 1977) where they generally select habitat in the upper estuary, usually within the fresh-saltwater interface. Tidewater gobies range upstream a short distance into fresh water, and downstream into water of up to about 75 percent sea water (28 parts per thousand). The species is typically found in salinities of less than 12 parts per thousand (Swift *et al.* 1989). These conditions occur in two relatively distinct situations: 1) the upper edge of tidal bays, such as Tomales, Bolinas, and San Francisco Bays near the entrance of freshwater tributaries and 2) the coastal lagoons formed at the mouths of coastal rivers, streams, or seasonally wet canyons.

Threats to the tidewater goby include loss of wetland and associated habitat due to development along the coast. These include wetland draining and filling for industrial and residential development; dredging to develop navigation channels, harbors, and marinas; hydrologic changes such as water diversion and related changes in salinity, groundwater overdrafting, channelization, and sand bar breaching (Service 2005d).

The Recovery Plan for the Tidewater Goby (Service 2005d) identifies one Recovery Unit, the Greater Bay Unit, within the Sacramento Fish and Wildlife Office jurisdiction. The Action Area includes all occurrences and this recovery unit. For the most recent comprehensive assessment of the species' range-wide status, please refer to the 12 month Finding and Proposed Rule to Reclassify the Tidewater Goby from Endangered to Threatened (Service 2014a).

Critical Habitat

The Service designated critical habitat for the tidewater goby on November 20, 2000 (Service 2000), and a revised designation to the critical habitat was published on January 31, 2008 (Service 2008a) and again on February 6, 2013 (Service 2013b). This rule identifies 12,156 acres of within 44 critical habitat units in Del Norte, Humboldt, Mendocino, Sonoma, Marin, San Mateo, Santa Cruz, Monterey, San Luis Obispo, Santa Barbara, Ventura, Los Angeles, Orange, and San Diego Counties, California. There is approximately 1,728 acres of designated critical habitat for the tidewater goby within the jurisdictional boundary of the Sacramento Fish and Wildlife Office.

Based on our current knowledge of the physical or biological features and habitat characteristics required to sustain the species' life-history processes, we determine that the physical and biological features (PBFs) specific to the tidewater goby are:

PBF-1: Persistent, shallow (in the range of approximately 0.3 to 6.6 feet (0.1 to 2 meters)), still-to-slow-moving lagoons, estuaries, and coastal streams with salinity up to 12 parts per thousand, which provide adequate space for normal behavior and individual an population growth that contain one or more of the following:

- a. Substrates (e.g., sand, silt, mud) suitable for the construction of burrows for reproduction;
- b. Submerged and emergent aquatic vegetation, such as *Potamogeton pectinatus*, *Ruppia maritima*, *Typha latifolia*, and *Scirpus* spp., that provides protection from predators and high flow events; or
- c. Presence of a sandbar(s) across the mouth of a lagoon or estuary during the late spring, summer, and fall that closes or partially closes the lagoon or estuary, thereby providing relatively stable water levels and salinity.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the tidewater goby occurs within the Action Area.

Valley Elderberry Longhorn Beetle

The valley elderberry longhorn beetle (VELB) (*Desmocerus californicus dimorphus*), occurs within the California Central Valley. The CNDDDB (2018) lists 271 occurrences for this species. The species' range extends from approximately Shasta County south to Fresno County, including the valley floor and lower foothills. The majority of VELB are documented below 500 feet (152 meters) in elevation. VELB habitat includes both riparian and non-riparian areas where elderberry shrubs are present. They occur only in association with its host plant, elderberry (*Sambucus* spp.).

The primary threat to VELB and its elderberry shrub host plant are the significant loss, degradation or modification of riparian and other natural habitats. The species is estimated to occupy only 16 to 21 percent of its historical range. The result is a rare, patchy distribution within the limited and fragmented riparian areas within the California Central Valley. Riparian habitat loss is associated with agriculture conversion, levee construction and maintenance and stream channelization, and the impacts associated with urbanization. Impacts to elderberry shrubs associated maintenance activities include pruning of elderberry shrub branches along levees, roadways, trails, and other areas to control visual obstructions, or for aesthetic reasons. Invasive nonnative plants may affect the species through competition for space and resources with its host plant (Service 2014c).

The recovery plan for VELB does not identify recovery units. However, the Action Area includes all known occurrences and habitat for the species. While there have been continued losses of VELB habitat throughout its range, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the range-wide status of the beetle, please refer to the Withdrawal of the Proposed Rule to Remove the Valley Elderberry Longhorn Beetle from the Federal List of Endangered and Threatened Wildlife (Service 2014c).

Critical Habitat

On August 8, 1980, the final rule determining critical habitat for the valley elderberry longhorn beetle was published in the Federal Register on August 8, 1980 (Service 1980). Within the Action Area, the rule designates approximately 515 acres within two critical habitat units in Sacramento County, California. These designated areas of critical habitat are the American River Parkway Zone, an area along the lower American River at Goethe and Ancil Hoffman Parks, and the Sacramento Zone, an area located approximately one-half-mile from the American River downstream from the American River Parkway Zone. These critical habitat areas support large numbers of mature elderberry shrubs with extensive evidence of beetle use.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the VELB occurs within the Action Area.

California Freshwater Shrimp

The California freshwater shrimp occurs or has the potential to occur within the Action Area in Marin, Napa, and Sonoma Counties. The CNDDDB (2018) lists 20 occurrences for the California freshwater shrimp. At the time of the most recent 5-year review, California freshwater shrimp were

found in 23 streams: Atascadero Creek, Big Austin Creek, Blucher Creek, Bud Creek, Cheda Creek, East Austin Creek, Ebabias Creek, Fallon Creek, Franz Creek, Garnett Creek, Green Valley Creek, Huichica Creek and an unnamed tributary to Huichica Creek, Jonive Creek, Keys Creek, Lagunitas Creek, Napa River, Olema Creek, Redwood Creek, Salmon Creek, Sonoma Creek, Stemple Creek, Walker Creek, and Yulupa Creek (Service 2011c). CNDDDB identifies one additional stream as having California freshwater shrimp: Hudspeth Creek. The California freshwater shrimp is found in low elevation (less than 116 meters, 380 feet), low gradient (generally less than 1 percent) perennial freshwater streams or intermittent streams with perennial pools where banks are structurally diverse with undercut banks, exposed roots, overhanging woody debris, or overhanging vegetation (Service 1998b).

Threats to the California freshwater shrimp and its habitat include agricultural activities, residential development, water pollution, water diversions, recreation activities (summer dams), chemicals, and channelization. Additional threats include gravel mining, water development, urban runoff, flood control, and bank protection (Service 2011c).

The Recovery Plan for the California Freshwater Shrimp (Service 1998b) does not have recovery units *per se*; however, it does identify four watersheds with known populations that require a watershed plan for down listing. These watersheds are the tributary streams in the lower Russian River drainage, coastal streams flowing directly into the Pacific Ocean, streams draining into Tomales Bay, and streams flowing into San Pablo Bay. The Action Area includes all occurrences. While there have been continued losses of California freshwater shrimp habitat throughout its range, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the range-wide status, please refer to the California freshwater shrimp (*Syncaris pacifica*) 5-Year Review: Summary and Evaluation (Service 2011c). No change in the species' listing status was recommended in this species' 5-year review.

Critical Habitat

Critical habitat has not been designated for the California freshwater shrimp.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the California freshwater shrimp occurs within the Action Area.

Bay Checkerspot Butterfly

The Bay checkerspot butterfly occurs or has the potential to occur within the Action Area in Santa Clara and San Mateo Counties. The CNDDDB (2018) lists 19 occurrences for the Bay checkerspot butterfly. Currently, the species is largely restricted to grasslands with host plants on serpentine-like soils in Santa Clara and San Mateo Counties. It also occurs in non-serpentine annual grassland occupied by its host plants on San Bruno Mountain in San Mateo County, where it was extirpated until recently reintroduced to serpentine grasslands in Edgewood Park and non-serpentine annual grasslands at San Bruno Mountain. The primary larval host plant for the butterfly is a small, annual, native plantain (*Plantago erecta*) (Service 1998c). The butterfly also frequently requires the presence of a secondary host plant, either purple owl's-clover (*Castilleja densiflora*) or exserted paintbrush (*Castilleja exserta*) (Singer 1972, p. 76; Murphy and Ehrlich 1980, p. 316; Weiss 1999, p. 1478) since owl's clover and the paintbrush remain edible longer than the plantain.

The primary threats to the Bay checkerspot butterfly are habitat degradation and loss caused by non-native plants displacing or reducing native food plants, and urban and suburban development (Service 1998c). Habitat loss has reduced the number and size of extant Bay checkerspot butterfly populations. Smaller populations are more vulnerable to extinction. Loss of serpentine of habitats or reduction of these habitats to non-viable sizes has increased the distance between populations and making genetic exchange and recolonization more difficult (Service 1998c). Invasion of non-native species into native grasslands is also a major cause of decline, choking out native food and host plant species. Trampling associated with increased human activity also threatens eggs, larvae and adult butterflies. Hikers, bicyclists, and off-road vehicles can crush larvae. These activities may also harm food plants, indirectly decreasing larval survival. Other noted threats include illegal collection, inappropriate grazing practices, pesticide use and road kill.

The Recovery Plan for Serpentine Soil Species of the San Francisco Bay Area (Service 1998c), which includes the Bay checkerspot butterfly, identifies five core areas: one on the San Francisco peninsula in San Mateo County (Edgewood County Park) and four in Santa Clara County (Coyote Ridge in Santa Clara County), as well as a number of satellite populations. The Action Area includes all occurrences and recovery areas. While there have been continued losses of Bay checkerspot butterfly habitat throughout the various recovery units, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the range-wide status, please refer to the Bay Checkerspot Butterfly (*Euphydryas editha bayensis*) 5-Year Review: Summary and Evaluation (Service 2009a). No change in the species' listing status was recommended in this species' 5-year review.

Critical Habitat

The Service designated critical habitat for the Bay checkerspot butterfly on February 29, 2001 (Service 2001b) and a revised designation to the critical habitat was published on August 26, 2008 (Service 2008b). The rule identifies 18,293 acres within 13 critical habitat units in San Mateo and Santa Clara Counties, California. All of these acres and units are within the Sacramento Fish and Wildlife Office Action Area.

Within these units that are considered to be essential for the conservation and recovery of the Bay checkerspot butterfly, the Service has determined the following physical and biological features:

PBF 1: The presence of annual or perennial grasslands with little to no overstory that provide north-south and east-west slopes with a tilt of more than 7 degrees for larval host plant survival during periods of atypical weather (for example, drought). Common grassland species include wild oats (*Avena fatua*), soft chess (*Bromus hordeaceus*), California oatgrass (*Danthonia californica*), Italian ryegrass (*Lolium multiflorum*), purple needlegrass (*Nassella pulchra*), and Idaho fescue (*Festuca idahoensis*); less abundant in these grasslands are annual and perennial forbs such as filaree (*Erodium botrys*), true clovers (*Trifolium* spp.), and dwarf plantain (*Plantago erecta*). These species, with the exception of the dwarf plantain, are not required by the Bay checkerspot butterfly, but merely are provided here as an example of species commonly found in California grasslands;

PBF 2: The presence of the primary larval host plant, dwarf plantain (*Plantago erecta*), and at least one of the secondary host plants, purple owl's-clover (*Castilleja densiflora*) or exerted paintbrush (*Castilleja exserta*), are required for reproduction, feeding, and larval development;

PBF 3: The presence of adult nectar sources for feeding. Common nectar sources include desert parsley (*Lomatium* spp.), California goldfields (*Lasthenia californica*), tidy-tips (*Layia platyglossa*), sea

muilla (*Muilla maritima*), scytheleaf onion (*Allium falcifolium*), flase babystars (*Linanthus androsaceus*), and intermediate fiddleneck (*Amsinckia intermedia*);

PBF 4: Soils derived from serpentinite ultramafic rock (Montara, Climara, Henneke, Hentine, and Obispo soil series) or similar soils (Inks, Candlestick, Los Gatos, Fagan, and Barnabe soil series) that provide areas with fewer aggressive, nonnative plant species for larval host plant and adult nectar plant survival and reproduction; and

PBF 5: The presence of stable holes and cracks in the soil, and surface rock outcrops that provide shelter for the larval stage of the Bay checkerspot butterfly during summer diapause.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the Bay checkerspot butterfly occurs within the Action Area.

Callippe Silverspot Butterfly

The callippe silverspot butterfly occurs or has the potential to occur within the Action Area in San Mateo, Solano, Sonoma and Alameda Counties. The CNDDDB (2018) lists 12 occurrences for the callippe silverspot butterfly. The species currently is known from isolated populations occurring in grasslands with its host plant in northern San Mateo County (San Bruno Mountain.), Solano County (Cordelia Hills), Sonoma County (Sears Point), Alameda County (hills near Pleasanton, watershed east of Calaveras Reservoir) (Terry, J, pers. comm., 2018). The habitat for the callippe silverspot butterfly is native grasslands and associated habitats in the San Francisco Bay area (Service 1997). These grasslands are associated with deep soils that have established grass cover and contain the larval host plant *Viola pedunculata* (Service 2009b).

The primary threats to the callippe silverspot butterfly include habitat loss and fragmentation resulting from urbanization throughout the greater San Francisco Bay area. As habitat has been lost and fragmented, the small populations have become increasingly isolated, eventually affecting dispersal and genetic exchange between populations (Service 1997). Invasion of non-native plants and shrubs is another significant threat to the callippe silverspot butterfly. Non-native species have displaced grassland habitats; invasive grasses and herbs displace callippe silverspot butterfly host plants and food plants, or make them difficult to access. Trampling by increased human activity also threatens this species. Hikers, bicyclists, and off-road vehicles can kill larvae. These activities may also harm food plant, indirectly decreasing larval survival (Service 2009b).

There is no recovery plan for this species. The Action Area includes all occurrences. While there have been continued losses of callippe silverspot butterfly habitat throughout its range, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the range-wide status, please refer to the Callippe Silverspot Butterfly (*Speyeria callippe callippe*) 5-Year Review: Summary and Evaluation (Service 2009b). No change in the species' listing status was recommended in this species' 5-year review.

Critical Habitat

No critical habitat has been designated for the callippe silverspot butterfly.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the callippe silverspot butterfly occurs within the Action Area.

Myrtle's Silverspot Butterfly

The Myrtle's silverspot butterfly occurs or has the potential to occur within the Action Area in Marin and Sonoma Counties. The CNDDB (2018) lists 17 occurrences for the Myrtle's silverspot butterfly. The species currently is known to occur up to 3 miles inland in Marin and Sonoma Counties: from Point Reyes in Marin County and north to the mouth of Russian River in Jenner in Sonoma County (Terry, J., pers. comm. 2018). The Myrtle's silverspot butterfly occurs in association with coastal dunes, coastal scrub and coastal prairies that are protected from winds (Launer *et al.* 1992). One of the critical factors in the distribution of the Myrtle's silverspot butterfly is the presence of its host plant, the western dog violet (*Viola adunca*) (Service 2009c).

Development is the primary threat to the Myrtle's silverspot butterfly, and development of the remaining habitat for this species will remain a threat until sufficient habitat for the species is acquired and protected. Increased human activity is also threat; foot traffic, cyclists and off-road vehicles pose hazards to the larval stages of the butterfly by inadvertently trampling their host plant (Service 1992).

The Recovery Plan for the Myrtle's silverspot butterfly does not identify recovery units; however, it does state that for downlisting, habitat in northwestern Marin and southwestern Sonoma counties must be protected in perpetuity (Service 1998a). The Action Area includes these key recovery areas and all occurrences. While there have been continued losses of Myrtle's silverspot butterfly habitat throughout its range, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the range-wide status, please refer to the Myrtle's Silverspot Butterfly (*Speyeria zerene myrtleae*) 5-Year Review: Summary and Evaluation (Service 2009c). No change in the species' listing status was recommended in this species' 5-year review.

Critical Habitat

Critical habitat has not been designated for the Myrtle's silverspot butterfly.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that the Myrtle's silverspot butterfly occurs within the Action Area.

Vernal Pool Branchiopods

In California, primary vernal pool habitat forms a discontinuous ring around the margins of the California Central Valley. The majority of pools occur on the older alluvial terraces along the eastern margin of the valley, but vernal pool habitat also occurs on high terraces on the eastern sides of the inner Coast Ranges and an additional band through the valley center. Vernal pool complexes are typified by a range of aquatic habitats, although some locales have more pools of one type (e.g., small, shallow, and short-lived, or playa-type pools, etc.) than other areas (Holland 1998a). Several counties (Glenn, Colusa, and Yolo) have little potential habitat for the branchiopods because they lack substantial areas of hardpan soils and have little flat land that is not in agriculture. Tehama, Yuba, Solano, and Madera counties contain the highest-density areas of vernal pools, while

Sacramento, Merced, and Fresno counties have many areas with high-density pools. Of the 20 Central Valley counties, Yuba, Placer, Sacramento, and Madera counties have the highest average densities (Holland 1978). These areas of high-density habitat likely are especially important to the population dynamics of vernal pool branchiopods such as the vernal pool fairy. Up to 85 percent of vernal pools may lack large vernal pool branchiopods (Helm 1998). Holland (1998) estimated that extant vernal pool landscapes throughout the Central Valley had fallen below 1,000,000 acres, or roughly one quarter of the valley's estimated original vernal pool habitat.

In California's Central Coast Ranges, vernal pool habitats are more thinly distributed than in the Central Valley, with only 42,488 acres of vernal pool habitat occurring out of a total of 9,574,099 acres in the region (Holland 2003). Habitat patches are smaller and more isolated; however, loss of vernal pool habitat in this area also appears to be accelerating. Holland (2003) recorded a 2-3 percent annual loss rate between 1994 and 2000, and almost a 12 percent loss between 2000 and 2001, with the loss often due to agricultural conversion (to hay or vineyards).

Vernal Pool Fairy Shrimp

The vernal pool fairy shrimp occurs or has the potential to occur within the Action Area where its vernal pool habitat occurs. The CNDDDB (2018) lists 766 occurrences for the vernal pool fairy shrimp. In California, the range of the species extends from disjunct locations in Riverside County and the Coast Ranges, north through Central Valley grasslands to Tehama County (Service 2007a). The vernal pool fairy shrimp is endemic to California where it exists only in ephemeral freshwater habitats, including alkaline pools, clay flats, vernal lakes, vernal pools, vernal swales, and other seasonal wetlands in California (Helm 1998).

The Recovery Plan for Vernal Pool Ecosystems of California and Southern Oregon (Service 2005a) identifies 45 core recovery areas in 13 vernal pool regions for the vernal pool fairy shrimp: Carrizo Region (4 core areas), Central Coast Region (2 core areas), Klamath Mountain Region (3 core areas), Lake-Napa Region (1 core area), Livermore Region (1 core area), Northeast Sacramento (4 core areas), Northwest Sacramento (3 core areas), San Joaquin Region (2 core areas), Santa Barbara Region (2 core areas), Solano-Colusa Region (3 core areas), Southeast Sacramento (4 core areas), Southern Sierra Foothills (6 core areas), and Western Riverside Region (3 core areas). The vernal pool fairy shrimp is presumed to occur in at least one pool in each of these core areas (Service 2005a). The Action Area includes all of these 45 core areas and all occurrences. While there have been continued losses of vernal pool fairy shrimp habitat throughout the various recovery units, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Vernal Pool Fairy Shrimp (*Branchinecta lynchi*) 5-Year Review: Summary and Evaluation (Service 2007a). No change in the species' listing status was recommended in this species' 5-year review.

Vernal Pool Tadpole Shrimp

The vernal pool tadpole shrimp occurs or has the potential to occur within the Action Area within its patchy distribution across the California Central Valley, from Shasta County southward to northwestern Tulare County, with isolated occurrences in Alameda and Contra Costa Counties. The CNDDDB (2018) lists 324 occurrences for the vernal pool tadpole shrimp. The vernal pool tadpole shrimp occurs only in ephemeral freshwater habitats, including alkaline pools, clay flats, vernal lakes, vernal pools, vernal swales, and other seasonal wetlands in California (Helm 1998).

The Recovery Plan for Vernal Pool Ecosystems of California and Southern Oregon (Service 2005d) identifies 24 core recovery areas found within seven vernal pool regions for this species: Central Coast Region (1 core area), Northeast Sacramento Region (5 core areas), Northwest Sacramento Region (2 core areas), San Joaquin Region (2 core areas), Solano-Colusa Region (5 core areas), Southeast Sacramento Region (4 core areas) and Southern Sierra Foothills Region (5 core areas). The Action Area includes all of these 24 core areas. While there have been continued losses of vernal pool tadpole shrimp habitat throughout the various recovery units, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Vernal Pool Tadpole Shrimp (*Lepidurus packardii*) 5-Year Review: Summary and Evaluation (Service 2007b). No change in the species' listing status was recommended in this species' 5-year review.

Conservancy Fairy Shrimp

The conservancy fairy shrimp occurs or has the potential to occur within the Action Area in Butte, Glenn, Tehama, Merced, Placer, Solano, Stanislaus, Yolo Counties, and one disjunct population on the Central Coast of Ventura County (Service 2012b). The CNDDDB (2018) lists 43 occurrences for the conservancy fairy shrimp. The majority of sites inhabited by this species are relatively large and turbid vernal pools called playa pools (Helm 1998, Eriksen and Belk 1999, Vollmar 2002, Service 2005a). Playa pools typically remain inundated much longer than most vernal pools, often well into the summer, even though they normally have maximum depths comparable to vernal pools (Vollmar 2002).

The Recovery Plan for Vernal Pool Ecosystems of California and Southern Oregon (Service 2005e) identifies eight core recovery areas found within five vernal pool regions for the conservancy fairy shrimp: Vina Plains (Northeast Sacramento Region), Caswell and Grasslands Ecological Area (San Joaquin Region), Ventura County (Santa Barbara Region), Jepson Prairie, Sacramento National Wildlife Refuge and Collinsville (Solano-Colusa Region), and Madera (Southern Sierra Foothills Region). The Action Area includes all occurrences and core recovery areas. While there have been continued losses of conservancy fairy shrimp habitat throughout the various recovery units, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Conservancy Fairy Shrimp (*Branchinecta conservatio*) 5-year Review: Summary and Evaluation (Service 2012b). No change in the species' listing status was recommended in this species' 5-year review.

Longhorn Fairy Shrimp

The longhorn fairy shrimp occurs or has the potential to occur within the Action Area in Alameda, Contra Costa, Fresno, Merced and San Luis Obispo Counties (Service 2012a). The CNDDDB (2018) lists 20 occurrences for this species. The longhorn fairy shrimp is known only from a few localities, and these sites contain very different types of vernal pool habitats. Longhorn fairy shrimp in the Livermore Vernal Pool Region in Contra Costa and Alameda Counties live in small, clear, sandstone outcrop vernal pools that are sometimes no larger than 3.3 feet (1 m) in diameter, have a pH near neutral, and very low alkalinity and conductivity. Water temperatures in these vernal pools have been measured between 50 and 64 degrees Fahrenheit (Helm 1998). In the San Joaquin and Carrizo Vernal Pool Regions, the longhorn fairy shrimp occur in clear to turbid, grassland pools that may be as large as 203.4 feet (61.7 m) in diameter. Water temperatures in these grassland vernal pools are also warmer, between 50 to 82 degrees Fahrenheit (Helm 1998, Eriksen and Belk 1999).

The Recovery Plan for Vernal Pool Ecosystems of California and Southern Oregon (Service 2005e) identifies five core recovery areas found within three vernal pool regions for the longhorn fairy shrimp: North Carrizo Plain and South Carrizo Plain (Carrizo Region), Altamont Hills (Livermore Region), and Grasslands Ecological Area (San Joaquin Region). The Action Area includes all occurrences and core areas. While there have been continued losses of longhorn fairy shrimp habitat throughout the various recovery units, to date no project has proposed a level of effects for which the Service has issued a biological opinion of jeopardy for the species. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Longhorn Fairy Shrimp (*Branchinecta longiantenna*) 5-year Review: Summary and Evaluation (Service 2012a). No change in the species' listing status was recommended in this species' 5-year review.

Threats to Vernal Pool Branchiopods

Habitat loss and fragmentation is the greatest threat to the survival and recovery of vernal pool species. Habitat loss and fragmentation generally is a result of urbanization, agricultural conversion, and mining. Habitat loss occurs in the form of habitat alteration and degradation resulting from changes to natural hydrology; invasive species; incompatible grazing regimes, including insufficient grazing for prolonged periods; infrastructure projects such as roads, water storage and conveyance and utilities; recreational activities such as off-highway vehicles and hiking; erosion; and contamination. This habitat loss and fragmentation contributes to the isolation, fragmentation and functionality of vernal pool habitats. Direct loss of habitat generally represents irreversible damage to vernal pools; it disrupts the physical processes conducive to functional vernal pool ecosystems. The more severe the alteration and destruction, the more difficult it is to recover such areas in the future due to disruption of soil formations, hydrology, seed banks, and other components of a functional vernal pool ecosystem.

Critical Habitat

The Service designated critical habitat collectively for four vernal pool branchiopods and 11 vernal pool plants in 34 counties in California and one county in southern Oregon on August 6, 2003 (Service 2003b) and a revised designation of critical habitat of approximately 858,846 acres was published on August 11, 2005 (Service 2005a).

The PBFs of critical habitat for the four vernal pool branchiopods are the habitat components that provide:

PBF 1: Topographic features characterized by mounds and swales and depressions within a matrix of surrounding uplands that result in complexes of continuously, or intermittently, flowing surface water in the swales connecting the pools, and providing for dispersal and promoting hydroperiods of adequate length in the pools;

PBF 2: Depressional features including isolated vernal pools with underlying restrictive soil layers that become inundated during winter rains and that continuously hold water for a minimum of:

- 18 days for vernal pool fairy shrimp;
- 23 days for longhorn fairy shrimp;
- 19 days for conservancy fairy shrimp;
- 41 days for vernal pool tadpole shrimp;

in all but the driest years. Thereby providing adequate water for incubation, maturation, and reproduction. As these features are inundated on a seasonal basis, they do not promote the

development of obligate wetland vegetation habitats typical of permanently flooded emergent wetlands;

PBF 3: Sources of food, expected to be detritus occurring in the pools, contributed by overland flow from the pools' watershed, or the results of biological processes within the pools themselves, such as single-celled bacteria, algae, and dead organic matter, to provide for feeding; and

PBF 4: Structure within the pools consisting of organic and inorganic materials, such as living and dead plants from plant species adapted to seasonally inundated environments, rocks, and other inorganic debris that may be washed, blown, or otherwise transported into the pools, that provide shelter.

On February 10, 2006, the Service published a final rule providing species-specific unit descriptions and maps identifying the critical habitat for each individual species. The rule identified the following units and acres within the Action Area for these four vernal pool branchiopods species.

- 597,821 acres within 32 critical habitat units for the vernal pool fairy shrimp in Jackson County, Oregon, and Alameda, Amador, Contra Costa, Fresno, Kings, Mariposa, Monterey, Napa, Placer, San Benito, San Joaquin, San Luis Obispo, Santa Barbara, Shasta, Stanislaus, Tehama, Tulare, Ventura, and Yuba counties, California.
- 13,557 acres within three critical habitat units for the longhorn fairy shrimp in Alameda, Contra Costa, Merced, and San Luis Obispo counties, California.
- 161,786 acres within six critical habitat units for the conservancy fairy shrimp in Butte, Colusa, Mariposa, Merced, Solano, Stanislaus, Tehama, and Ventura Counties, California.
- 228,785 acres within 16 critical habitat units for the vernal pool tadpole shrimp in Alameda, Amador, Butte, Colusa, Fresno, Kings, Madera, Mariposa, Merced, Sacramento, Shasta, Solano, Stanislaus, Tehama, Tulare, Yolo, and Yuba Counties, California.

Based on the documented presence of these four vernal pool branchiopod species in the Action Area, and the biology and ecology of these species, the Service has determined that vernal pool fairy shrimp, vernal pool tadpole shrimp, conservancy fairy shrimp and longhorn fairy shrimp occur within the Action Area.

Sacramento Orcutt Grass

The Sacramento Orcutt grass occurs or has the potential to occur within the Action Area in Sacramento County. The CNDDDB (2018) lists 12 occurrences for the species. Sacramento Orcutt grass is an annual grass that occurs in vernal pools on high terrace sites in a narrow zone of remnant depositional stream terraces at the base of the Sierra Nevada foothills (Stone *et al.* 1988).

The Recovery Plan for Vernal Pool Ecosystems of California and Southern Oregon (Service 2005e), which includes the Sacramento Orcutt grass, identifies three core areas for the species' recovery: Cosumnes/Rancho Seco, Mather and Phoenix Field and Park, all within the Southeast Sacramento vernal pool region. The Action Area includes all occurrences and core areas. While there have been continued losses of Sacramento Orcutt grass habitat throughout the various recovery units, to date no project has proposed a level of effects for which the Service has issued a biological opinion of

jeopardy for the species. For the most recent comprehensive assessment of the species' range-wide status, please refer to the Sacramento Orcutt Grass (*Orcuttia viscida*) 5-Year Review: Summary and Evaluation (Service 2008c). No change in the species' listing status was recommended in this species' 5-year review.

Critical Habitat

The Service designated critical habitat collectively for four vernal pool branchiopods and 11 vernal pool plants in 34 counties in California and one county in southern Oregon on August 6, 2003 (Service 2003b) and a revised designation of critical habitat of approximately 858,846 acres was published on August 11, 2005 (Service 2005a).

The PBFs of critical habitat for the Sacramento Orcutt grass are habitat components that provide:

PBF 1: Topographic features characterized by isolated mound and intermound complex within a matrix of surrounding uplands that result in continuously, or intermittently, flowing surface water in the depressional features including swales connecting the pools and providing for dispersal and promoting hydroperiods of adequate length in the pools;

PBF 2: Depressional features including isolated vernal pools with underlying restrictive soil layers that become inundated during winter rains and that continuously hold water or whose soils are saturated for a period long enough to promote germination, flowering, and seed production of predominantly annual native wetland species typically exclude both native and nonnative upland plant species in all but the driest years. As these features are inundated on a seasonal basis, they do not promote the development of obligate wetland vegetation habitats typical of permanently flooded emergent wetlands.

On February 10, 2006, the Service (2006a) published a final rule providing species-specific unit descriptions and maps identifying the critical habitat for each individual species. The rule designated 33,273 acres for the Sacramento Orcutt grass within three critical habitat units in Amador and Sacramento Counties.

Threats

Habitat loss and fragmentation is the largest threat to the survival and recovery of the vernal pool species. Habitat loss and fragmentation generally is a result of urbanization, agricultural conversion, and mining. Habitat loss also occurs in the form of habitat alteration and degradation resulting from changes to natural hydrology; invasive species; incompatible grazing regimes, including insufficient grazing for prolonged periods; infrastructure projects such as roads, water storage and conveyance and utilities; recreational activities such as off-highway vehicles and hiking; erosion; and contamination. This habitat loss and fragmentation contributes to the isolation, fragmentation and functionality of vernal pool habitats. Direct loss of habitat generally represents irreversible damage to vernal pools; it disrupts the physical processes conducive to functional vernal pool ecosystems. The more severe the alteration and destruction, the more difficult it is to recover such areas in the future due to disruption of soil formations, hydrology, seed banks, and other components of a functional vernal pool ecosystem. An additional threat to vernal pool plants is the decline of essential pollinators due to habitat fragmentation and the loss of the upland habitat that supports pollinator species. Habitat loss and degradation interferes with reproduction and dispersal of pollinators. It is likely that many of these pollinators require the uplands surrounding vernal pools for completion of their life cycle. For insect pollinated plants, the reduction of available habitat for

pollinators could decrease pollinator populations, which could reduce reproductive success of the plants.

Based on occurrence records, the presence of suitable habitat, and the biology and ecology of the species, the Service has determined that Sacramento Orcutt grass occurs within the Action Area.

Effects of the Proposed Action

The federally-listed species addressed in this programmatic consultation may be directly or indirectly harmed (e.g., killed or injured) as a result of implementing FEMA-funded projects. The effects to listed species addressed in this programmatic biological opinion are project-specific and widely variable. The likelihood that a proposed project will adversely affect covered species or their critical habitats depends on a variety of factors, including, but not limited to, the conditions present in the individual project action area, the probability of species occurrence, timing of the activity, and the quality and quantity of the habitat within the project footprint and its vicinity. For proposed projects covered under the programmatic biological opinion, we anticipate that implementation of general avoidance and minimization measures and species-specific conservation measures, as proposed, will reduce adverse effects, in some instances to levels that are insignificant, discountable, or wholly beneficial.

Activities that are likely to cause direct or indirect harm to covered species and their habitats include grading and earthmoving; road construction; excavation; maneuvering vehicles and heavy equipment on and off roads; discharge of contaminants into soil and water; production of noise, vibration, and dust; vegetation management; prescribed or accidental fire; placement and removal of cofferdams and other temporary water diversions in creeks and rivers; discharge of fill and sediments in water; and placement of riprap and water control structures. Some animal species may occur in close proximity to disaster-affected areas to be indirectly affected by project activities that extend beyond the damaged features themselves, which may include access routes, staging areas, borrow sites, and downstream effects in watercourses. Indirect effects from the covered activities can affect a species ability to breed, feed, disperse, and find shelter. Such indirect effects include the removal of cover and/or habitat, which in turn make the species more vulnerable to predation as they need to travel further to find suitable areas to breed, feed and/or find shelter. Disturbing or displacing species or host plants can reduce the likelihood of breeding, feeding, or finding shelter. Invasive non-native species may be introduced which can result in increased interspecific competition and displacement, and introductions of pathogens can lead to decreased fitness of species and make them more vulnerable to diseases.

Projects funded by FEMA under the Disaster, Mitigation, and Preparedness Programs are limited to repair and replacement of existing facilities and natural areas, rather than newer or expanded construction. Also, many of the projects are in previously disturbed areas. Many of the effects of the proposed projects funded by FEMA will be temporary and localized; conditions are expected to return to baseline levels or become better over time periods ranging from minutes (noise) to a few years (recovery of vegetation). Other actions, while seemingly minor when implemented by themselves, may have cumulative, long-term effects over time. For example, the repair of multiple erosion sites along an earthen canal or creek with riprap will have long-term, cumulative effects both upstream and downstream of each individual project site by hardening the embankment, thereby having an effect on the system's water velocity, transport volume, and other parameters, which may include water quality.

Effects to all covered Species

The following effects are applicable to both aquatic and terrestrial covered species.

Loss and Disturbance of Habitat

All of the covered species may be directly or indirectly affected by temporary disturbance to, or permanent loss of, suitable habitats as a result of proposed projects. Examples of activities that may temporarily or permanently disturb or remove aquatic or terrestrial habitats can be found in the Description of the Proposed Programmatic Actions section of this programmatic biological opinion.

Temporary and permanent habitat disturbances can adversely affect covered species by reducing the availability of key habitat components, which species need for breeding, feeding, sheltering, and dispersing. Habitat loss and disturbance may reduce prey availability and foraging habitat, remove or damage host-plant species, reduce or remove shade cover, or cause incremental degradation or temperature increases to in-water habitats. Additionally, loss of habitat can cause an increase in both interspecific and intraspecific competition leading to displacement, which ultimately decrease an individual's fitness through reduced survival and reproductive success due to physical and physiological constraints. Construction-related habitat disturbances may cause mortality or non-lethal harm such as injury to surviving individuals by being crushed by equipment, maintenance materials, or worker foot traffic.

Although permanent loss or alteration of habitat may occur as part of a Subapplicant's proposed project, this will occur infrequently, and most project footprints are small (many less than one acre), which will affect only small areas. For projects such as fuel reduction, erosion, and sedimentation control, these adverse effects may occur in the short term, but may ultimately result in beneficial effects to plants, wildlife, and covered species.

Implementation of the proposed conservation measures will avoid or reduce the extent and severity of adverse effects. For example, requirements to conduct work outside of the sensitive periods, for breeding, nesting, migration and dispersal periods for covered species, will reduce the effects of such activities which include human disturbance and vibration and noise of construction equipment. Restoring areas to pre-project conditions will enable species to move back into areas after project completion. Providing environmental awareness training to workers and having biological monitors onsite during all construction activities will reduce or eliminate encounters with individual species. Also, clearly delineating work areas and avoidance areas using appropriate construction fencing, seasonal limitations for breeding areas, and appropriate buffers around, for instance, vernal pools. For listed butterflies, appropriate buffers around host plants and hilltop breeding areas as well as seasonal limitations for breeding areas will also reduce or eliminate direct effects. This is also the case with species that use small mammal burrows as refugia, such as California tiger salamanders and California red-legged frogs. The *Conservation Measures* section of this opinion provides a full description of these general and species-specific measures.

Riparian Habitat Removal or Degradation

Listed species inhabiting riparian and aquatic habitats, including California red-legged frog, giant garter snake, California freshwater shrimp, valley elderberry longhorn beetle, and least Bell's vireo, may be directly or indirectly affected by riparian habitat removal and/or degradation by activities such as the following.

- Vegetation management
- Debris removal
- Repairing, realigning, or otherwise modifying roads, trails, utilities, and rail lines
- Repairing, replacing or installing culverts
- Repairing, stabilizing, or armoring embankments
- Creating, widening, clearing, or dredging a waterway
- Constructing or modifying a water crossing
- Constructing or modifying other flood control structures

Habitat fragmentation occurs when areas of connected habitat are disjoined by the removal or reduction of habitat. Therefore, the removal or reduction of riparian habitat has the consequence of fragmenting riparian habitats which have the added consequences of isolation and edge effects. Isolation effects can negatively impact a species ability to find suitable mates thereby reducing its reproductive success. If populations are isolated for long periods of time, this can lead to inbreeding depressions which can make the population more vulnerable to stochastic events. Edge effects generally have a negative impact on both the biotic and abiotic environments. Edge effect negatively impact species through increased risk through the introduction of invasive competitors or pathogens and an increased risk of predation. Effects to the abiotic environment can also negatively impact species by increasing water and ambient temperatures leading to physiological changes that could make the habitat unsuitable for species at all life stages.

California red-legged frog and California tiger salamander riparian habitat can become isolated and fragmented due to the proposed covered activities. The fragmentation and isolation of a subpopulation can lead to a decline in dispersal between subpopulations, jeopardizing the metapopulation. The isolated populations are then vulnerable to local extinction due to stochastic environmental and human-induced events. In addition to fragmentation, the removal of riparian cover can also have negative effects on reproductive success of both the California red-legged frog and the California tiger salamander by allowing more solar radiation to heat pools and slow moving streams. Since the California red-legged frog and the California tiger salamander egg masses can tolerate a maximum water temperature of 70 °F and 66 °F, respectively, incremental increases to water temperatures will reduce reproductive success of both species.

The valley elderberry longhorn beetle occurs throughout the Central Valley in metapopulations and is dependent on a contiguous riparian habitat making it susceptible to habitat fragmentation. The valley elderberry longhorn beetle has a limited dispersal ability adding to their vulnerability of fragmented habitats limiting their opportunity to successfully colonize unoccupied habitat. As a consequence, isolated subpopulations are more vulnerable to stochastic events that can reduce or eliminate isolated populations. Loss of elderberry shrubs associated with riparian habitat will reduce available habitat for the valley elderberry longhorn beetle and may result in take if occupied shrubs are damaged or removed (Service 2017c).

The long-term or permanent removal of riparian vegetation may reduce in-stream habitat quality, riparian habitat complexity, and erosion and sedimentation in cleared riparian areas. Adverse effects may occur to California freshwater shrimp, which depend on complex riparian habitat that includes fine root systems, root wads and overhanging vegetation and woody debris. Loss of riparian vegetation adversely affects the ability of shrimp to disperse and affects turbidity and water temperatures in the creeks and streams.

For the least Bell's vireo, the permanent removal of riparian vegetation could result in reduced quality, quantity, and complexity of habitat within and adjacent to project areas, which can reduce

the suitability of least Bell's vireo nesting areas. Across the landscape, tree and understory removal within suitable foraging, dispersal, roosting, or nesting habitat could indirectly affect least Bell's vireo if tree species composition, structural diversity, or habitat density is significantly or permanently altered. Actions that remove or degrade the quality of riparian habitats may adversely affect their reproductive success by increasing their vulnerability of predation to cowbird parasitism and predation by scrub-jays, hawks, raccoons, and coyotes.

Implementing the conservation measure requiring revegetation of stream and riverbanks with native species when proposed projects remove riparian vegetation during construction activities will minimize these effects to covered species. Removed vegetation will be replaced with in-kind species at a 3:1 ratio with an 80 percent planting survival five years after planting. Conservation measures to clearly delineate and minimize the project footprint will minimize adverse effects to riparian habitats and associated covered species. Requiring Service-approved biological monitors will minimize direct injury and harm to listed species by identifying their presence and allowing them to move out of harm's way. The Conservation Measures section of this programmatic biological opinion provides a full description of these general and species-specific measures.

Hazardous Materials Spills

Spills of hazardous materials may directly or indirectly affect all of the covered species. Chemical contamination of soil or water sources could occur from equipment leaks (e.g., diesel fuel, oil, hydraulic fluids, and antifreeze), refueling spills, or an accidental spill during project implementation. Accidental spills of hazardous materials can degrade water quality or upland habitat to a degree where species are adversely affected or killed by chemicals interfering with physiological pathways. For example, some hazardous chemicals have been shown to mimic estrogen in vertebrates, which has been hypothesized as a leading mechanism in amphibian decline (Jennings 1996).

The implementation of proposed conservation measures will significantly reduce these hazards. Subapplicants will prepare a Spill Prevention and Pollution Control Plan to minimize the risk of spilled hazardous materials and other construction debris from entering soils and waterways. Equipment will be inspected daily for fuel leaks, any fuel leaks discovered will be cleaned up immediately, wet cement and uncured concrete will not be allowed to enter waterways, stockpiled soils will be covered to prevent erosion, and all staging and hazardous material storage areas will be placed in upland areas that are paved, graveled, or otherwise non-erodible and away from water bodies or sensitive habitat. For proposed projects involving work over water, measures will be taken to ensure that construction debris is contained and does not fall into the water. Implementing these measures will minimize the effects of project-related disturbance on covered species and their habitat. The Conservation Measures section of this programmatic biological opinion provides a full description of these general and species-specific measures.

Invasive Species and Pathogens

The introduction of pathogens, invasive plant and animal species could adversely affect any of the covered species. California red-legged frogs and California tiger salamanders are particularly vulnerable to introduced pathogens. Invasive species and pathogens are often introduced to uninvaded sites through construction soil and debris transported on construction equipment. Invasive species and pathogens also may be transferred via construction materials or on the clothing or boots of those working at the site. During in-water work, invasive species and pathogens may be introduced to a water body through ballast or bilge water discharge if vessels are inadequately cleaned prior to transfer between invaded and uninvaded sites. Pathogens may be introduced

through nursery plants used in revegetation and restoration.

Although not all non-native species have negative effects on the covered species, those that outcompete covered species are considered undesirable for their continued persistence. Therefore, introductions of invasive species can increase interspecific competition between listed species and non-native, invasive species. Invasive mosquitofish that are commonly stocked to help combat mosquito larvae have been shown to prefer fairy shrimp species over mosquito larvae (Leyse et al., 2004). Therefore, the introduction of mosquitofish into vernal pool complexes could lead to increased predation of vernal pool fairy shrimp, conservancy fairy shrimp, and longhorn fairy shrimp.

Invasive species can directly injure or kill covered species, or indirectly harm covered species by reducing prey abundance or detrimentally affect aquatic and riparian vegetation. Invasive plant species may also out-compete and crowd out covered plant species, as well as the host plants for listed butterflies.

Chytrid fungi are diverse, abundant, and widespread in aquatic ecosystems. They are known to infect a diverse assemblage of hosts across the tree of life. Although evidence is lacking for their effects on California red-legged frogs and California tiger salamander, some observations have indicated that both species tend to shed their skin at a much higher rate when infected in laboratory settings, which requires the use of additional energy (Service 2016 & 2017b). This allocation of resources to fend off chytrid infection could lead to decreased fitness if infected in the wild. The accidental introduction of chytrid fungi into an area could have significant adverse effects to the California red-legged frog and California tiger salamander. The introduction of non-native species into an ecosystem has the added possibility of introducing novel pathogens that could negatively affect species.

Implementing the proposed conservation measures will significantly reduce the introduction or spread of invasive species and pathogens. Subapplicants will properly clean construction equipment, clothing, waders and boots prior to moving between work sites, particularly if the prior work site is known or suspected to contain invasive species or pathogens. Subapplicants will take all precautions to prevent the introduction of amphibian disease pathogens if California red-legged frogs or California tiger salamanders must be handled or relocated. All persons entering the action area to handle amphibians after working in other aquatic habitats will disinfect all equipment and clothing. The Subapplicants will follow the guidelines in the California Department of Fish and Wildlife's (CDFW's) California Aquatic Invasive Species Management Plan to prevent the spread of invasive aquatic plant and animal species (CDFW 2008). The Conservation Measures section of this programmatic biological opinion provides a full description of these general and species-specific measures.

Beneficial Effects

Beneficial effects include relocating facilities away from sensitive habitats, restoring native vegetation, removing invasive species, improving water quality and hydrology, and vegetation management. Stabilizing eroding banks, reducing sedimentation and turbidity, and replacing or removing structures that form partial or complete barriers with structures that enhance movement corridors or habitat connectivity also provide long-term beneficial effects for covered species. Existing structures may be modified or replaced in ways that provide shade and cover, reduce refugia for predators, replace hardened shorelines with living shoreline structures, improve hydrologic function of stream channels, or increase porosity of previously impervious surfaces. For

example, replacing an undersized, hanging culvert with an open bottom culvert may improve wildlife passage and allow better movement of substrate through the culvert. Wildfire risk-reduction activities may provide a beneficial effect to covered species by reducing the risk of large-scale catastrophic wildfires. Although the above mentioned scenarios can provide beneficial effects to covered species, it is important to note that these benefits can take months or years to be fully realized.

Effects to Aquatic Species

The following effects are primarily applicable to covered aquatic species, which include California red-legged frog, California tiger salamander, giant garter snake, California freshwater shrimp, tidewater goby and vernal pool species.

Erosion, Turbidity and Sedimentation

Increased erosion, turbidity, and sedimentation may affect aquatic species, particularly California red-legged frog and California tiger salamander eggs and larvae, California freshwater shrimp and vernal pool species. Effects include reduced visibility of prey or forage items, respiratory stress, temperature changes, and in severe cases, suffocation and damage to gills, lungs, or other organs. Heavy equipment use during in-water work activities such as installing temporary diversions or dewatering, may cause increased sedimentation. Construction-generated dust may be deposited into nearby waters and vegetation, and terrestrial or riparian vegetation removal and fuel reduction activities may increase erosion and sedimentation during storm runoff events. These activities can lead to the smothering of eggs thereby interfering with the species ability to complete its life cycle.

California freshwater shrimp may be adversely affected by in-stream work that causes high levels of siltation downstream. Although shrimp are usually able to survive in poor water quality conditions, excessive siltation could alter the quality of the habitat to the extent that use by individuals of the species is precluded. Siltation also could fill pools used by shrimp during summer low flows, reducing the extent or quality of shrimp habitat near the project area. Likewise, California red-legged frog and California tiger salamander eggs may be smothered by excessive silt and larvae may have difficulty locating food in turbid waters.

For most covered projects, implementing the proposed conservation measures and best management practices will likely reduce adverse effects to covered species, their prey, and their habitats within vernal pools and other aquatic habitat. These measures include restricting work during seasonal work windows, restricting the entry of heavy equipment into waterbodies, and establishing upland staging areas for equipment and materials. Installing silt fences, sediment curtains, and hay bales will reduce effects from erosion, turbidity, and sedimentation; the dewatering of work areas will minimize the amount and duration of suspended sediment. The Conservation Measures section of this programmatic biological opinion provides a full description of these general and species-specific measures.

Underwater Noise, Vibration and Sound Pressure

Pile driving, in-water drilling, cutting, or excavation can have short-term adverse effects on covered aquatic species such as the tidewater goby, California red-legged frog, and giant garter snake, by increasing in-water noise and vibration. For example, pile driving in or adjacent to water causes high-intensity sound, which acts as a pressure wave that can cause barotrauma to tidewater gobies. California red-legged frogs, California tiger salamanders and giant garter snakes may be more

susceptible to injury and mortality from predation, desiccation and vehicular or foot traffic when project related noise and disturbance causes them to move away from sheltered habitat areas within a construction area.

Implementing the proposed conservation measures will minimize the effects of noise, vibration, and sound pressure. These include the use of work windows to avoid times that species such as the giant garter snake and California red-legged frog are most active, and using biological monitors to determine if animals are in the work area prior to ground disturbing activities. The Conservation Measures section of this programmatic biological opinion provides a full description of these general and species-specific measures.

Streambed, Bank and Shoreline Modification

Any replacement of natural or armored banks that provide refugia for California red-legged frogs or giant garter snakes with banks that provide no such refugia (e.g., concrete crib walls or sacked concrete) will result in permanent habitat and permanent adverse effects to the hydrology and habitat quality of the stream or estuary. These activities will result in the removal of emergent and riparian vegetation along banks or in the channel or wetland, resulting, for example, in the loss of cover needed for giant garter snake basking, foraging, or shelter. Removal of burrows along streambanks that giant garter snakes and California red-legged frogs could use as refugia may result in increased mortality due to predation. Work in streams that causes unusually high levels of siltation downstream can also adversely affect California freshwater shrimp.

Implementing the proposed conservation measures will minimize adverse effects to species and habitats caused by these project activities. These measures include avoiding placement of roads, staging areas, and other facilities adjacent to aquatic ecosystems as much as possible, and returning contours of the aquatic substrate environments, vegetation, and flows to pre-construction conditions or better after the completion of work. Implementing best management practices for erosion control and reducing the area to be disturbed to the minimum necessary should decrease the amount of sediment that is washed downstream as a result of project activities. Designing projects to minimize the creation of new impervious surfaces and using bioengineering and living shorelines techniques may also avoid or minimize adverse effects, where applicable. The Conservation Measures section of this programmatic biological opinion provides a full description of these general and species-specific measures.

Permanent Loss or Alteration of Vernal Pool Habitat

Vernal pool habitats support several covered species including four vernal pool branchiopods, California tiger salamanders and Sacramento Orcutt grass. Vernal pool habitats occupy areas with specific soil, geology and microtopography, making them highly susceptible to degradation from ground-disturbing activities. Many vernal pool areas contain hardpan soils that, if disturbed, will no longer hold water appropriately. Vernal pools also rely on runoff from surrounding areas during winter rains to refill. Regrading these areas may affect the flow of water and alter the amount of water entering the vernal pool. These activities, as well as effects from erosion, dust, and construction activities may temporarily or permanently alter vernal pool habitat, making such areas less suitable for the covered species occupying the habitat.

Vernal pool species are especially vulnerable to alterations in the existing hydrology of vernal pool habitats, because the timing, water depth, and inundation period determines which vernal-pool plants and branchiopods are able to reproduce and persist in a given vernal pool. For example,

indirect alterations to the hydrology of vernal pool habitats can result in too little soil moisture for the germination of plant seeds or hatching of vernal pool branchiopod eggs. Indirect alterations to the hydrology of vernal pool habitats may also cause vernal pools to dry too fast, or cause vernal pool water temperatures to increase too soon for a vernal pool species to complete its lifecycle and reproduce.

This programmatic biological opinion does not cover proposed projects that involve placement of fill material in, or excavation of, any vernal pools (wet or dry) as this will require a separate section 7 consultation. However, grading, excavation and filling outside of a vernal pools may have indirect effects on vernal swales and vernal complexes by altering the natural hydrology either upstream or downstream. This can cause unseasonal drying or flooding that can negatively affect species that occupy vernal pool habitats, which can lead to species unable to complete their life cycle. Upland habitat and swales around a vernal pool and within a vernal pool complex are essential to the hydrological and biological integrity of the vernal pool and complex. Typically, if any portion of a vernal pool is affected, then the entire vernal pool is considered affected. Where the reach of these indirect effects cannot be determined definitively, the Service considers most activities in areas within 250 feet of a vernal pool to be indirectly affected.

In addition to the proposed general conservation measures, implementing the proposed species-specific conservation measures will minimize adverse effects. These proposed conservation measures include pre-construction surveys, construction monitoring by a Service-approved biologist, establishing construction work windows and activity buffers, and identifying and flagging sensitive areas. Mortality-related effects will be minimized by requiring work within 250 feet of vernal pool habitat be avoided to the maximum extent possible and, if it does occur, to happen only in the dry season and to have no permanent adverse effects to hydrology of the pools or the pool complex. The Conservation Measures section of this programmatic biological opinion provides a full description of these general and species-specific measures.

Effects from Dewatering, and Capture and Relocation of Aquatic Species

Proposed projects may involve dewatering and capture and relocation in waters occupied by covered species. Projects involving in-water work may require dewatering to properly install structures. In general, gravity conveyance via cofferdams and pipe systems is preferred when diversion of live-stream flows is necessary. However, in some cases pumps may be needed. If a pump is used, Subapplicants will screen the pump using an appropriate screen size for the target species to prevent entrainment, refer to species-specific conservation measures for appropriate screen sizes.

Dewatering, capture, and relocation of a covered species may reduce the magnitude of take and other effects when conducting in-water work. In such cases, implementing the proposed conservation measures will minimize the short-term adverse effects of such actions. Screening pump intakes as proposed in the species-specific conservation measures will reduce the probability that California red-legged frog tadpoles get caught in the inflow. Intakes will be completely screened with wire mesh no larger than indicated in the species-specific conservation measures and the intake will be placed within a perforated bucket or other method to attenuate suction to prevent species from entering the pump system. Temporary dewatering structures will be left in place for the minimum amount of time necessary for construction to allow covered aquatic species to return to the habitat.

Capture and relocation may cause mortality of a small number of individuals. Although the mortality rate associated with capture and relocation is typically low, relocated individuals are subject to stress and injury or death from the handling associated with relocation.

Temporary dewatering of creeks, ponds, or wetlands may harm or kill giant garter snake adults or young if they are not able to move on their own into nearby suitable habitat. Giant garter snakes that leave a construction area may move away from shelter and be more susceptible to injury and mortality from predation and vehicular or foot traffic. Displaced snakes may experience increased competition from animals in adjacent areas. Temporary dewatering of creeks, ponds, or wetlands may harm or kill California red-legged frog adults, larvae and eggs if they are not translocated to suitable habitat. Tadpoles may be injured or killed if entrained by pump or water diversion intakes. Chytrid fungi may be spread to California red-legged frogs and California tiger salamanders during capture and relocation if done without proper handling techniques and practices. Dewatering may strand, kill or injure California freshwater shrimp. They are small, inconspicuous and can take cover in areas that are difficult for a biologist to fully inspect. Shrimp may also be entrained by water pump systems and be injured or die. Injury and mortality may also occur to California freshwater shrimp during capture and relocation due to their fragile and delicate nature.

The short-term adverse effects of relocation will be minimized by implementing the proposed conservation measures. Only Service-approved biologists, using the most recent Service guidelines for relocation methods, will conduct capture and relocation. The Service-approved biologist will take precautions to prevent the introduction of amphibian diseases such as chytrid fungus in accordance with the Interim Guidance on Site Assessment and Field Surveys for Determining Presence or a Negative Finding of the California Tiger Salamander (Service 2003c). Disinfecting equipment and clothing is especially important when biologists are coming to the Action Area to handle amphibians after working in other aquatic habitats. California red-legged frogs and the California tiger salamanders will also be handled and assessed according to the Restraint and Handling of Live Amphibians (USGS National Wildlife Health Center 2001). The Conservation Measures section of this programmatic biological opinion provides a full description of these general and species-specific measures.

Effects to Terrestrial Species

The following effects are primarily applicable to covered terrestrial species, which includes California red-legged frog, California tiger salamander, giant garter snake, Alameda whipsnake, Bay checkerspot butterfly, callippe silverspot butterfly, Myrtle's silverspot butterfly, and least Bell's vireo. These effects are also applicable to terrestrial habitats utilized by covered amphibians.

Habitat Disturbances, Noise, and Vibration

Noise and vibration associated with construction work may adversely affect many of the covered species. The movement and operation of heavy equipment during Subapplicants' proposed project activities, such as vibratory pile driving, impact pile driving, drilling, cutting, or excavation can have indirect effects on covered species by increasing ambient noise and vibration. Noise and vibration may affect covered species' breeding, foraging, and dispersal behavior. Noise and vibration from project activities may adversely affect covered birds, resulting in nest abandonment, fleeing, and temporary cessation of feeding or courtship behaviors. Additionally, this could impact future population sizes and connectivity of metapopulations. However, in many cases, these effects will be temporary in nature and likely limited to the construction period.

Work activities, including noise and vibration, may cause all terrestrial species to leave the work area. This disturbance may increase the likelihood for covered species vulnerability to predation or desiccation. Alameda whipsnakes and giant garter snakes may be harmed as a result of noise and

vibration associated with construction work; individuals displaced from protective cover are subject to predation and accidental death or injury from vehicular or foot traffic as they move across the landscape to avoid the area. Displaced snakes also may experience increased competition from animals in adjacent areas. Nesting birds, such as the least Bell's vireo may be flushed from nesting areas, abandoning nests and young in response to significant noise disturbance. Eggs and young are more vulnerable to predation when adults are flushed from nests. Construction-related noise can also adversely affect covered butterfly species, by startling them away from a safe area thus making them more vulnerable to collisions with vehicles and equipment and predation by other species.

Projects that require lighting could result in direct and indirect effects on the covered species. Direct effects to covered bird species will be primarily associated with changes in behavior. Lights may cause disruption, such as disorientation, in local, seasonal, or long-distance dispersal or migration events. These effects may be temporary or permanent, and may alter breeding or foraging behaviors, or affect the ability of species to find or return to breeding territories. Lighting structures provide raptor roosting sites which can lead to indirect effects to the giant garter snake by making them more vulnerable to predation when dispersing or basking.

The potential for disturbance and displacement of California red-legged frogs, California tiger salamanders and other covered species will be minimized by implementing Conservation Measures that require onsite biological monitoring, worker education programs, and successful capture and relocation of individuals. The likelihood of disturbance and displacement will be further reduced by avoidance, when feasible, of California red-legged frog and central California tiger salamander aquatic and upland habitat, as proposed. Conservation measures that minimize the area disturbed by project-related activities will reduce the potential for fleeing and abandonment as a result of the action, as will the requirement to work outside of the nesting season.

Barriers to Migration and Movement

Barriers to migration and movement may be temporary (during construction) or permanent and could result in partial or localized blockage of covered species migration or movement. Effects to covered species migration or movement could differ depending on the covered species, timing, and size of the project and the nature of the activity. Such barriers could result from activities such as the conversion of land to unsuitable habitat; the loss of suitable habitat associated with vegetation management; or the repair, replacement, or construction of new highways, walls, or other infrastructure. The California tiger salamander is dependent on barrier-free landscapes for successful migration and dispersal. Therefore, these types of new barriers will reduce connectivity of the metapopulation, isolating subpopulations making them more vulnerable to stochastic events and less likely to be recolonized if extirpated.

Most proposed projects are either associated with existing infrastructure, expected to be small in scale, and/or localized; therefore, these effects are not expected to significantly change the baseline conditions present in the Action Areas. Instead, the effects of barriers to covered species migration and movement may be incrementally altered. In some instances, these alterations may improve the existing conditions and, in others, may decrease the ability for species to freely move between habitats. In general, partial or complete barriers may directly affect a species' breeding, foraging, and dispersal behaviors. Barriers may restrict movement, alter or restrict access to key habitats, or result in entrainment, injury, or mortality. Barriers may adversely affect species' dispersal behaviors, which are important to continue genetic mixing in a population. Loss or impairment of this function may result in population isolation or in population sinks or extirpation.

Implementation of proposed conservation measures will reduce the footprint associated with the work area, access road and staging areas within certain habitats, and areas commonly used as wildlife movement corridors.

Trampling, Crushing or Entrapment

Activities involving vegetation clearing, earth moving, pipeline installation, and other construction may adversely affect covered species through trampling, crushing or entrapment within natural and artificial structures. Natural structures may include mammal burrows, rubble piles, rock outcrops and root wads. Artificial structures include trenches, pipes, and construction equipment.

Direct effects associated with entrapment include injury and mortality. Excavation, movement or depositing of materials above natural structures may entrap covered species resulting in harm, injury, or mortality. Covered species such as California red-legged frogs, California tiger salamanders or Alameda whipsnakes may fall into an excavated trench and subsequently be buried or physically removed. These same covered species may occupy a pipe or construction equipment and be subject to take through direct handling and removal by construction personnel or biologist, movement of construction equipment or materials, and burial of construction material or pipe. Some of the effects associated entrapment may be temporary, such as physical handling and movement or falling into a trench, while other effects such as burial or movement of construction equipment and material may be permanent and lethal.

Direct effects on all covered species as a result of a proposed project includes injury or mortality from being crushed by equipment, maintenance materials, or worker foot traffic. Equipment, vehicles, and personnel working in open, upland grassland habitats may injure, or kill all life stages of covered butterfly species. Chrysalides, larvae, adults, and their larval host plants may be crushed or buried, and adults may be injured or killed by collisions with construction equipment. Species that take refuge in burrows such as California red-legged frog and California tiger salamander, and rocks and crevices such as the Alameda whipsnake, are highly vulnerable to crushing in their refugia or when they leave their refugia in response to disturbance.

These effects will be reduced by the proposed conservation measures, including **minimizing** and clearly demarcating the boundaries of activity areas, pre-construction surveys, and the presence of a Service-approved biologist during construction activities who will have the authority to halt work activities until the animal leaves the area on its own. Construction-related disturbance to butterfly host plants and breeding adults will be avoided and **minimized** through pre-construction surveys, biological monitors, and appropriate buffers around host plants and hilltop breeding areas as well as implementing seasonal limitations for work in breeding areas. Adverse effects to Alameda whipsnake will be **minimized** by avoiding rock outcroppings and scrub habitats, limiting the timing of activities to the summer and early fall to avoid disturbance to breeding and young, and removing vegetation by hand in areas with shrub vegetation.

Inadvertent entrapment will be avoided by covering all excavated, steep-walled trenches and holes greater than 6 inches at the end of each workday, or providing escape ramps. Relocating listed species out of harm's way, as proposed, may further **minimize** injury or mortality. The potential for uninformed workers to disturb, injure, or kill covered species will be greatly reduced by proposed education of workers as to the presence and protected status of species and the measures that will be implemented to protect it during work activities.

Critical Habitat

As described above, the Action Area encompasses the entire SFWO's jurisdiction and all critical habitat units within the SFWO's jurisdiction for the California red-legged frog, California tiger salamander (Central and Sonoma DPSs), Alameda whipsnake, tidewater goby, valley elderberry longhorn beetle, Bay checkerspot butterfly, vernal pool fairy shrimp, vernal pool tadpole fairy shrimp, conservancy fairy shrimp, longhorn fairy shrimp, and Sacramento Orcutt grass. The Service anticipates that projects funded by FEMA could negatively affect some of the critical habitat units and PBFs for these species within the Action Area.

California Red-Legged Frog

The Service anticipates that the activities associated with the proposed action could negatively affect PBF 1 (aquatic breeding habitat), PBF 2 (non-breeding aquatic habitat), PBF 3 (upland habitat), and PBF 4 (dispersal habitat) of the California red-legged frog critical habitat within the Action Area. However, these activities will likely result in minor effects to habitat as most projects will restore the area to pre-disaster conditions. The Action Area contains aquatic breeding and non-breeding habitat (PBFs 1 and 2) in the form of ponds, creeks, and streams. This habitat could be affected by construction activities through erosion from project activities such as culvert replacement, though following conservation measures will minimize these effects. However, constructing flood control structures such as levees could channelize the applicable waterway permanently affecting the PBFs making them less suitable for the California red-legged frog. Some permanent activities are proposed such as constructing new facilities or relocating existing facilities outside of disaster prone areas. These activities will permanently affect upland and dispersal habitat (PBFs 3 and 4) by installing structures on high quality habitat which will remove upland areas for the California red-legged frog to hide and will create barriers to movement to and from aquatic areas. However, the footprint of the project will confine these effects to a small area. When implemented with both the general and species-specific conservation measures, these proposed activities will not prevent critical habitat from providing essential conservation values for the California red-legged frog.

California Tiger Salamander (Central California and Sonoma DPSs)

The Service anticipates that the activities associated with the proposed action could negatively affect PBF 1 (aquatic breeding habitat), PBF 2 (upland habitat), and PBF 3 (dispersal habitat) of the California tiger salamander critical habitat within the Action Area. However, these activities will likely result in minor effects to habitat as most projects will restore the area to pre-disaster conditions. Activities with a larger effect are those that will construct new facilities such as developing demonstration projects. These projects have the potential to fill aquatic breeding habitat (PBF 1), excavate and fill burrow systems (PBF 2), and construct barriers that prevent movement to and from breeding sites (PBF 3). When implemented with both the general and species-specific conservation measures, these activities will not prevent critical habitat from providing essential conservation values for the California tiger salamander.

Alameda Whipsnake

The Service anticipates that the activities associated with the proposed action could negatively affect PBF 1 (scrub/shrub community), PBF 2 (woodland/grassland community), and PBF 3 (rock outcrops) of the Alameda whipsnake critical habitat within the Action Area. However, these activities will likely result in minor effects to habitat as most projects will restore the area to pre-disaster conditions. Activities such as realigning roads around disaster areas could affect all three PBFs by permanently removing them and creating a paved road. As most of the activities are water related, the number of projects affecting Alameda whipsnake critical habitat will be small. When

implemented with both the general and species-specific conservation measures, these activities will not prevent critical habitat from providing essential conservation values for the Alameda whipsnake.

Tidewater Goby

The Service anticipates that the activities associated with the proposed action could negatively affect PBF 1a (substrate), PBF 1b (aquatic vegetation), PBF 1c (sandbars) of the tidewater goby critical habitat within the Action Area. However, these activities will likely result in minor effects to habitat as most projects will restore the area to pre-disaster conditions. As the specific PBFs are flexible depending on the water level, repairing coastal features such as coastal flood-control structures could affect the PBFs by shrinking the amount of available habitat that fall within the PBFs should the repair extend outside of the original footprint. When implemented with both the general and species-specific conservation measures, these activities will not prevent critical habitat from providing essential conservation values for the tidewater goby.

Valley Elderberry Longhorn Beetle

The designated critical habitat for the valley elderberry longhorn beetle is limited to a small geographical area along the American River in Sacramento County, and the adverse effects from activities on critical habitat will be minimal. Activities associated with the proposed action could negatively affect critical habitat of the valley elderberry longhorn beetle within the Action Area. Given the location and size of the valley elderberry longhorn beetle critical habitat, the Service does not anticipate effects to critical habitat by Subapplicants. However, if activities occur in critical habitat they will only result in minor effects to habitat, and these activities, when implemented with both the general and species-specific conservation measures, will not prevent critical habitat from providing essential conservation values for the valley elderberry longhorn beetle.

Bay Checkerspot Butterfly

The Service anticipates that the activities associated with the proposed action could negatively affect PBF 1 (grass land community), PBF 2 (host plant), PBF 3 (nectar source), PBF 4 (soil type), and PBF 5 (shelter) of the Bay checkerspot butterfly critical habitat within the Action Area. However, these activities will likely only result in minor effects to habitat as most projects will restore the area to pre-disaster conditions. The repair of roads that run through critical habitat after a disaster could pose a risk to all PBFs. Depending on the timing of repairs, PBF 5 could be most affected during the summer months of the Bay checkerspot butterfly summer diapause. However, the projects footprint will confine these effects to a small area. When implemented with both the general and species-specific conservation measures, these activities will not prevent critical habitat from providing essential conservation values for the Bay checkerspot butterfly.

Vernal Pool Branchiopods

The Service anticipates that the activities associated with the proposed action could negatively affect PBF 1 (topographic features), PBF 2 (depressional features), PBF 3 (food sources), and PBF 4 (shelter) of the vernal pool branchiopods critical habitat within the Action Area. However, these activities will likely only result in minor effects to habitat as most projects will restore the area to pre-disaster conditions. Activities associated with the proposed action could negatively impact all four PBFs if activities are located adjacent to vernal pool branchiopod critical habitat. The habitat could be affected by construction activities that divert extra water to or from the vernal pool critical habitat. Altering the topography of adjacent sites could negatively impact PBF 2 by altering the frequency and duration of filling. Additionally, this change could affect prey species (PBF 3) and vernal pool plants that provide shelter (PBF 4). However, project footprints will confine these effects to a small area. When implemented with both the general and species-specific conservation measures, these activities will not prevent critical habitat from providing essential conservation

values for the vernal pool branchiopods.

Sacramento Orcutt Grass

The Service anticipates that the activities associated with the proposed action could negatively affect PBF 1 (topographic features) and PBF 2 (depressional features) of the Sacramento Orcutt grass critical habitat within the Action Area. However, these activities will likely only result in minor effects to habitat as most projects will restore the area to pre-disaster conditions. Similar to affect to vernal pool branchiopod critical habitat. Sacramento Orcutt grass will be affected by project activities adjacent to critical habitat, which will affect both PBF 1 and PBF 2. However, project footprints will confine these effects to a small area. When implemented with both the general and species-specific conservation measures, these activities will not prevent critical habitat from providing essential conservation values for the Sacramento Orcutt grass.

Most of the covered activities will only result in minor effects limited to small areas. These activities are not likely to diminish the quality of PBFs in a unit for any of the covered species critical habitat. While disturbance within critical habitat may prevent some covered species from using portions of the critical habitat for essential life function whether temporarily or permanently, they will still be able to complete their essential ecological and biological functions in the remaining areas of critical habitat. Therefore, all critical habitat units will retain their PBFs and the PBFs within each critical habitat unit for each covered species will still remain functional. Consequently, the designated critical habitat for all covered species will still be able to perform its intended functions and conservation role.

In conclusion, the Service determines that the majority of activities associated with any proposed projects will result in only minor effects to PBFs, and with implementation of the conservation measures, will not prevent critical habitat from providing essential conservation values. The restoration of native vegetation, removing invasive species, improving water quality and hydrology, stabilizing eroding banks, reducing sedimentation, replacing structures that form partial or complete barriers to movement, and vegetation management to reduce wildfire risk will have negligible or beneficial effects to critical habitat. This determination is further based on the fact that projects funded by FEMA primarily will occur in previously disturbed areas, and the project footprint of most individual projects will be small in size and impact. The Service anticipates that habitat loss and degradation at individual project sites will be minimal and implementation of conservation measures will further minimize effects.

Cumulative Effects

Cumulative effects include the effects of future state, tribal, local, or private actions that are reasonably certain to occur in the Action Area considered in this programmatic biological opinion. Future federal actions that are unrelated to the proposed action are not considered in this section because they require separate consultation pursuant to section 7 of the Act. The following actions may affect the species covered in this programmatic biological opinion by directly or indirectly harming individuals or by adversely affecting designated or proposed critical habitats.

An undetermined number of future land use conversions and routine land management practices frequently are not reviewed for environmental compliance under the federal permitting process. These activities may alter the habitat or increase incidental take of federally-listed species and are cumulative to the proposed programmatic actions. However, due to the large area covered under this programmatic biological opinion, the Service is unable to provide specific information to determine cumulative effects.

Conclusion

After reviewing the current status of the 16 animal and one plant species covered by this programmatic biological opinion, the species' status and environmental baseline for the Action Area, the effects of the proposed action, and the cumulative effects, it is the Service's biological opinion that FEMA's Disaster, Mitigation, and Preparedness Program in California, as proposed, is not likely to jeopardize the continued existence of the following species:

- California red-legged frog (*Rana draytonii*)
- California tiger salamander (*Ambystoma californiense*)
 - Central California DPS
 - Sonoma DPS
- Giant garter snake (*Thamnophis gigas*)
- Alameda whipsnake (*Masticophis lateralis euryxanthus*)
- Least bell's vireo (*Vireo bellii pusillus*)
- Tidewater goby (*Eucyclogobius newberryi*)
- Valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*)
- California freshwater shrimp (*Syncaris pacifica*)
- Bay checkerspot butterfly (*Euphydryas editha bayensis*)
- Callippe silverspot butterfly (*Speyeria callippe callippe*)
- Myrtle's silverspot butterfly (*Speyeria zerene myrtleae*)
- Vernal pool fairy shrimp (*Branchinecta lynchi*)
- Vernal pool tadpole shrimp (*Lepidurus packardii*)
- Conservancy fairy shrimp (*Branchinecta conservatio*)
- Longhorn fairy shrimp (*Branchinecta longiantenna*)
- Sacramento Orcutt grass (*Orcuttia viscida*)

The Service reached this conclusion because the project-related effects to the species, when added to the environmental baseline and analyzed in consideration of all potential cumulative effects, will not rise to the level of precluding recovery or reducing the likelihood of survival of the species based on the following: (1) FEMA, in coordination with the Service, has proposed an extensive suite of general and species-specific conservation measures to be implemented for each project that are directed towards the protection of the habitat and, therefore, the long-term protection of individual species; (2) most individual project areas will have small footprints (less than one acre), therefore, not all populations or habitats will be affected by the proposed actions; and (3) FEMA will initiate individual section 7 consultations on all actions involving species and projects that do not specifically qualify for coverage under this programmatic biological opinion, as described in the programmatic biological assessment.

Critical habitat is designated for 13 species covered by this programmatic biological opinion. After reviewing the current status of designated critical habitat for these species, the environmental baseline for the Action Area, the effects of the proposed action and the cumulative effects, it is the Service's biological opinion that FEMA's Disaster, Mitigation, and Preparedness Program in California, as proposed, is not likely to destroy or adversely modify designated critical habitat for the following species:

- California red-legged frog (*Rana draytonii*)
- California tiger salamander (*Ambystoma californiense*)
 - Central California DPS

- Sonoma DPS
 - Alameda whipsnake (*Masticophis lateralis euryxanthus*)
 - Least bell's vireo (*Vireo bellii pusillus*)
 - Tidewater goby (*Eucyclogobius newberryi*)
 - Valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*)
 - Bay checkerspot butterfly (*Euphydryas editha bayensis*)
 - Vernal pool fairy shrimp (*Branchinecta lynchi*)
 - Vernal pool tadpole shrimp (*Lepidurus packardii*)
 - Conservancy fairy shrimp (*Branchinecta conservatio*)
 - Longhorn fairy shrimp (*Branchinecta longiantenna*)
 - Sacramento Orcutt grass (*Orcuttia viscida*)

The Service reached this conclusion because the project-related effects to the designated critical habitat for these 13 species, when added to the environmental baseline and analyzed in consideration of all potential cumulative effects, will not rise to the level of precluding the function of the critical habitat to serve its intended conservation role for the species based on the following: (1) FEMA, in coordination with the Service, has proposed an extensive suite of general and species-specific conservation measures that will be implemented for each project; (2) the majority of the effects of the projects are temporary and not persistent; (3) most of the projects restore structures such as roads, bridges, or other pre-existing facilities that are not in themselves physical and biological features essential to species' conservation; and (4) the effects to critical habitat for these 13 species are small and discrete, relative to the entire area designated, and are not expected to appreciably diminish the value of the critical habitat or prevent it from sustaining its role in the conservation of these species.

INCIDENTAL TAKE STATEMENT

Section 9 of the Act and federal regulation pursuant to section 4(d) of the Act prohibit the take of endangered and threatened species, respectively, without special exemption. Take is defined as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect, or to attempt to engage in any such conduct. Harass is defined by Service regulations at 50 CFR 17.3 as an intentional or negligent act or omission which creates the likelihood of injury to wildlife by annoying it to such an extent as to significantly disrupt normal behavior patterns which include, but are not limited to, breeding, feeding, or sheltering. Harm is defined by the same regulations as an act which actually kills or injures wildlife. Harm is further defined to include significant habitat modification or degradation that results in death or injury to listed species by significantly impairing essential behavior patterns, including breeding, feeding, or sheltering. Incidental take is defined as take that is incidental to, and not the purpose of, the carrying out of an otherwise lawful activity. Under the terms of section 7(b)(4) and section 7(o)(2), taking that is incidental to and not intended as part of the agency action is not considered to be prohibited taking under the Act provided that such taking is in compliance with the terms and conditions of this Incidental Take Statement.

The measures described below are non-discretionary, and must be undertaken by FEMA so that they become binding conditions of any grant or permit issued to the applicant, as appropriate, for the exemption in section 7(o)(2) to apply. FEMA has a continuing duty to regulate the activity covered by this incidental take statement. If FEMA (1) fails to assume and implement the terms and conditions or (2) fails to require the applicant to adhere to the terms and conditions of the incidental take statement through enforceable terms that are added to the permit or grant document, the protective coverage of section 7(o)(2) may lapse. In order to monitor the impact of incidental take, FEMA must report the progress of the action and its impact on the species to the Service as

specified in the incidental take statement [50 CFR §402.14(i)(3)].

Sections 7(b)(4) and 7(o)(2) of the Act generally do not apply to listed plant species. However, limited protection of listed plants from take is provided to the extent that the Act prohibits the removal and reduction to possession of federally-listed endangered plants or the malicious damage of such plants on areas under federal jurisdiction, or the destruction of endangered plants on non-federal areas in violation of State law or regulation or in the course of any violation of a State criminal trespass law.

Amount or Extent of Take

The Service is providing mechanisms to quantify when we consider take of the 16 covered animal species to be exceeded as a result of implementing the proposed project. We will use the following detections of injured or dead individuals per project site, total per year and total for the 5-year duration of this programmatic biological opinion. The detection of injured or dead individuals may indicate that species' utilization of habitat within the Action Area has changed over the lifetime of the project. By setting these thresholds, we have set an incidental take limit that is measureable, irrefutable and indicates that the species are being affected at a level where avoidance and minimization measures and project implementation need to be evaluated and possibly modified.

California Red-legged Frog

The Service is authorizing take incidental to the proposed action as the injury or fatality of no more than three juvenile or adult California red-legged frogs per site per year, no more than 30 juveniles or adult California red-legged frogs total for all sites per year, and no more than 150 juvenile or adult California red-legged frogs for the 5-year duration of this programmatic biological opinion.

Accordingly, the Service concludes that the incidental take (injury or fatality) of California red-legged frogs will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. death or injury of more than three juvenile or adult California red-legged frogs per site per year;
2. death or injury of more than 30 juveniles or adults total for all sites per year; or
3. death or injury of more than 150 juveniles or adults, as detected during the 5-year duration of the programmatic biological opinion by the FEMA Subapplicants, biological monitors, or other personnel.

Central California Tiger Salamander

The Service is authorizing take incidental to the proposed action as the injury or fatality of no more than three juvenile or adult central California tiger salamanders per site per year, no more than 30 juvenile or adult central California tiger salamanders total for all sites per year, and no more than 150 juvenile or adult central California tiger salamanders for the 5-year duration of this programmatic biological opinion.

Accordingly, the Service concludes that the incidental take (injury or fatality) of central California tiger salamanders will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. death or injury of more than three juvenile or adult central California tiger salamanders per site per year;
2. death or injury of more than 30 juvenile or adult central California tiger salamanders total for all sites per year; or
3. death or injury of more than 150 juvenile or adult central California tiger salamanders during the 5-year duration of the programmatic biological opinion, as detected by the FEMA Subapplicants, biological monitors, or other personnel.

Sonoma California Tiger Salamander

The Service is authorizing take incidental to the proposed action as the injury or fatality of no more than one juvenile or adult Sonoma California tiger salamander per site per year, no more than 15 juvenile or adult Sonoma California tiger salamanders total for all sites per year, and no more than 75 juvenile or adult Sonoma California tiger salamanders for the 5-year duration of this programmatic biological opinion.

Accordingly, the Service concludes that the incidental take (injury or fatality) of Sonoma California tiger salamanders will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. death or injury of more than one juvenile or adult Sonoma California tiger salamander per site per year;
2. death or injury of more than 15 juveniles or adult Sonoma California tiger salamanders total for all sites per year; or
3. death or injury of more than 75 juvenile or adult Sonoma California tiger salamanders during the 5-year duration of the programmatic biological opinion, as detected by the FEMA Subapplicants, biological monitors, or other personnel.

Giant Garter Snake

The Service is authorizing take incidental to the proposed action as the injury or fatality of no more than three juvenile or adult giant garter snakes per site per year, no more than 30 juvenile or adult giant garter snakes total for all sites per year, and no more than 150 juvenile or adult giant garter snakes for the 5-year duration of this programmatic biological opinion.

Accordingly, the Service concludes that the incidental take (injury or fatality) of giant garter snakes will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. death or injury of more than three juvenile or adult giant garter snake per site per year;
2. death or injury of more than 15 juvenile or adult giant garter snakes total for all sites per year; or
3. death or injury of more than 75 juvenile or adult giant garter snakes during the 5-year duration of the programmatic biological opinion, as detected by the FEMA Subapplicants, biological monitors, or other personnel.

Least Bell's Vireo

The Service anticipates that incidental take of the least Bell's vireo associated with FEMA's proposed action will be difficult to detect or quantify because the species will be difficult, if not impossible, to detect at any given project site. Providing a meaningful number for incidental take is difficult because a surveyor can only count what they see. Least Bell's vireo are small, secretive, and occur in habitats that make detection difficult, thereby making them nearly impossible to locate during pre-activity survey efforts. Under such conditions, finding a dead or injured individual vireo is unlikely within a project activity area, or mortality may be masked by seasonal fluctuations in numbers and migration. In addition, in most cases there have been no prior formal surveys in areas where projects are likely to occur. There is a risk of harm, injury and mortality as a result of the proposed activities and the permanent and temporary loss or degradation of suitable habitat; however, proper implementation of general and species-specific conservation measures should be effective in preventing incidental take due to harm, injury, or mortality. If a single individual is killed or injured, there is no means of equating one dead or injured animal (assuming one was found) to a number of dead or injured animals not observed.

Since we cannot estimate the number of individual least Bell's vireo that will be incidentally taken for the reasons listed above, the Service is providing a mechanism (acres) to quantify when we will consider take to be exceeded as a result of the proposed project. Since we expect take to result from the proposed project's effects to habitat, the quantification of habitat becomes a direct surrogate for the species that will be taken. Therefore, the Service anticipates that all least Bell's vireo inhabiting individual project footprints within the Action Area will be subject to incidental take in the form of non-lethal harm in terms of habitat only. No other forms of take are authorized. The Service anticipates and is authorizing the take of not more than one acre of actual habitat at any given project site that is less than 20 acres or no more than five percent of habitat at a particular site that is 20 acres or greater. This five percent at a particular site cannot represent more than five percent of the entire range of a covered species, for the five-year term of the programmatic biological opinion.

Accordingly, the Service concludes that the incidental take of least Bell's vireo will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. more than 1 acre of actual habitat at any given project site that is less than 20 acres is taken;
2. more than 5 percent of habitat at a particular site that is 20 acres or greater is taken; or
3. if this 5 percent at a particular site represents more than 5 percent of the entire range of a covered species is taken, for the 5-year term of the programmatic biological opinion.

Valley Elderberry Longhorn Beetle

The Service anticipates incidental take of the valley elderberry longhorn beetle will be difficult to detect or quantify. The cryptic nature of this species and their relatively small body size make finding a dead specimen unlikely. The species' occurrences within its habitat make them difficult to detect. Due to the difficulty in quantifying the number of dead or injured individual beetles that will be taken as a result of the proposed action, the Service is quantifying take incidental to the proposed action as the number of elderberry shrubs with stems one inch or greater in diameter at ground level (VELB habitat) that may become unsuitable for valley elderberry long horn beetles due to direct and indirect effects as a result of the proposed project. Therefore, the Service anticipates that all valley elderberry longhorn beetles inhabiting elderberry shrubs containing stems 1-inch or greater in diameter at ground level within

individual project action areas will be harmed or killed as a result of the proposed action. The Service is not further quantifying take (injury or fatality) of actual individual beetles or their larvae incidental to the proposed action.

Since we cannot estimate the number of individual valley elderberry longhorn beetles that will be incidentally taken for the reasons listed above, the Service is providing a mechanism (acres) to quantify when we will consider take to be exceeded as a result of the proposed project. Since we expect take to result from the proposed project's effects to habitat, the quantification of habitat becomes a direct surrogate for the species that will be taken. Therefore, the Service anticipates that all valley elderberry longhorn beetles inhabiting individual project footprints within the Action Area will be subject to incidental take in the form of non-lethal harm and harassment. The Service anticipates and is authorizing the take of not more than one acre of actual habitat at any given project site that is less than 20 acres or no more than five percent of habitat at a particular site that is 20 acres or greater. This five percent at a particular site cannot represent more than five percent of the entire range of a covered species, for the five-year term of the programmatic biological opinion.

Accordingly, the Service concludes that the incidental take of valley elderberry longhorn beetle will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. more than 1 acre of actual habitat at any given project site that is less than 20 acres is taken;
2. more than 5 percent of habitat at a particular site that is 20 acres or greater is taken; or
3. if this 5 percent at a particular site represents more than 5 percent of the entire range of a covered species is taken, for the 5-year term of the programmatic biological opinion.

California Freshwater Shrimp

The Service is authorizing take incidental to the proposed action as the injury or fatality of no more than two individual California freshwater shrimp if less than 20 are captured or no more than 5 percent of total individuals captured if more than 20 shrimp are captured per year, for the 5-year duration of this programmatic biological opinion.

Accordingly, the Service concludes that the incidental take (injury or fatality) of California freshwater shrimp will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. death or injury of more than two individual California freshwater shrimp per site if less than 20 are captured; or
2. death or injury of more than 5 percent of total individuals captured per site if more than 20 shrimp are captured per year, for the 5-year duration of the programmatic, as detected by the FEMA Subapplicants, biological monitors, or other personnel.

Tidewater Goby

The Service anticipates that take of the tidewater goby may occur as a result of the proposed projects in and around tidewater goby habitat, but it will be difficult to detect due to the species population dynamics, life history, and ecology. The exact number of individuals taken will be difficult to quantify because tidewater goby population sizes fluctuate greatly seasonally and year-to-year and the number of occupied localities and locations varies with seasonal and stochastic events. The Service is authorizing take incidental to the proposed action in the form of capture and

relocation and take incidental to the proposed project actions in the form of death or injury of up to five percent of individuals captured and relocated per site per year, 10 percent of the estimated population as a result of project activities per site per year, and up to five percent of the estimated populations as a result of all projects per year and for the 5-year duration of the programmatic biological opinion.

Accordingly, the Service concludes that the incidental take (injury or fatality) of the tidewater goby will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. death or injury of up to 5 percent captured and relocated individuals per site per year;
2. death or injury of up to 10 percent of the estimated population as a result of project activities per site per year; and
3. death or injury of up to 5 percent of the estimated populations as a result of all projects per year and for the 5-year duration of the programmatic biological opinion.

Bay Checkerspot Butterfly, Myrtle's Blue Butterfly, Callippe Silverspot Butterfly

The Service anticipates that incidental take of the Bay checkerspot butterfly, Myrtle's silverspot butterfly and Callippe silverspot butterfly (three butterfly species) will be difficult to detect because most take will likely occur to larvae and chrysalis pupae that are on host plants, lying on the ground or underneath a plant. The finding of a damaged or crushed individual larva or chrysalis is unlikely because of its relatively small size. Adults may be killed by mechanized equipment while flying through the project area; loss of individuals of these three butterfly species also may be difficult to quantify due to their small size. However, while small, these adults are more likely to be detected than larvae or chrysalises. The Service anticipates and is authorizing a maximum of two adults of each of these three butterfly species per site per year and no more than 30 adults of each of these three butterfly species total for all sites for the 5-year duration of this programmatic biological opinion.

Accordingly, the Service concludes that the incidental take (injury or fatality) of the Bay checkerspot butterfly, Myrtle's silverspot butterfly and Callippe silverspot butterfly will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. Death or injury of more than two individual adults of each of these three butterfly species per site per year or
2. Death or injury of more than 30 individual adults of each of these three butterfly species, for the 5-year duration of this programmatic biological opinion, as detected by the FEMA Subapplicants, biological monitors, or other personnel.

Alameda Whipsnake

The Service anticipates and is authorizing take incidental to the proposed action as the injury or fatality of no more than one juvenile or adult Alameda whipsnake per year and no more than five juvenile or adult Alameda whipsnakes during the 5-year duration of this programmatic biological opinion.

Accordingly, the Service concludes that the incidental take of Alameda whipsnake will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. more than five dead or injured juvenile or adult individual Alameda whipsnakes total for all sites per year; or
2. more than 25 dead or injured juvenile or adult individual Alameda whipsnakes total for all sites during the 5-year duration of the programmatic biological opinion, as detected by the FEMA Subapplicants, biological monitors, or other personnel.

Vernal Pool Branchiopods

It is not meaningful to provide numbers for incidental take of individual conservancy fairy shrimp, vernal pool fairy shrimp, vernal pool tadpole shrimp, and longhorn fairy shrimp (collectively, vernal pool branchiopods) associated with this action because a surveyor only can count what they can see and there is much that they cannot see under the water and within the soil. Even in locations actually occupied by the species, it is possible for surveyors to miss adults, juveniles and eggs, particularly given the opportunistic and precipitation-driven life history of these species and the large size of the Action Area. All of these factors result in even the most experienced vernal pool branchiopod biologist being unable to show that any estimated take occurred or did not occur at the site. If a single individual vernal pool branchiopod has been killed or injured, there is no means of equating one dead or injured branchiopod (assuming one was found) to a number of dead or injured branchiopods not observed. Furthermore, the likelihood of detecting an injured or dead vernal pool branchiopod is extremely low due to their very small size and cryptic life history. Therefore, the Service is not quantifying take incidental to the proposed action as the injury or fatality in terms of individual animals. Incidental take for this species is provided only in terms of habitat, as described above.

Since we cannot estimate the number of individual vernal pool branchiopods that will be incidentally taken for the reasons listed above, the Service is providing a mechanism (acres) to quantify when we will consider take to be exceeded as a result of the proposed project. Since we expect take to result from the proposed project's effects to habitat, the quantification of habitat becomes a direct surrogate for the species that will be taken. Therefore, the Service anticipates that all vernal pool branchiopods inhabiting individual project footprints within the Action Area will be subject to incidental take in the form of non-lethal harm and harassment. The Service anticipates and is authorizing the take of not more than 1 acre of actual habitat at any given project site that is less than 20 acres or no more than five percent of habitat at a particular site that is 20 acres or greater. This five percent at a particular site cannot represent more than five percent of the entire range of a covered species, for the five-year term of the programmatic biological opinion.

Accordingly, the Service concludes that the incidental take of vernal pool branchiopods will be considered exceeded if one or more of the following conditions are met. Under these circumstances, as provided in 50 CFR §402.16, reinitiation of formal consultation will be required.

1. more than 1 acre of actual habitat at any given project site that is less than 20 acres is taken;
2. more than 5 percent of habitat at a particular site that is 20 acres or greater is taken; or
3. if this 5 percent at a particular site represents more than 5 percent of the entire range of a covered species is taken, for the 5-year term of the programmatic biological opinion.

Upon implementation of the following reasonable and prudent measures, incidental take of these 17 animal species associated with FEMA's Disaster, Mitigation, and Preparedness Program in California, will become exempt from the prohibitions described in section 9 of the Act. No other forms of take are exempted under this programmatic biological opinion.

Effect of the Take

In the accompanying biological opinion, the Service determined that this level of anticipated take is not likely to result in jeopardy to the species covered by this programmatic biological opinion, or destruction or adverse modification of critical habitat.

Reasonable and Prudent Measures

The Service has determined the following reasonable and prudent measure is necessary and appropriate to **minimize** incidental take of these 16 species:

1. FEMA and their Subapplicants shall fully implement and adhere to all general avoidance and **minimization** measures and species-specific conservation measures, as described in the programmatic biological assessment and restated here in the Description of the Proposed Programmatic Actions section of this programmatic biological opinion. Further, this reasonable and prudent measure shall be supplemented by the terms and conditions below.

Terms and Conditions

In order to be exempt from the prohibitions of section 9 of the Act, the FEMA must ensure compliance with the following terms and conditions, which implement the reasonable and prudent measure described above. These terms and conditions are nondiscretionary.

1. FEMA shall require that all personnel and Subapplicants associated with this project are made aware of the general avoidance and **minimization** measures and species-specific conservation measures and their responsibility to implement them fully.
2. FEMA shall submit an annual report to the Service by March 15 summarizing all projects completed during the previous calendar year. These annual reports shall include a tabular summary of those projects and for each project:
 - a) Subapplicant and project name;
 - b) Project location with map or GIS shape file;
 - c) Covered species impacted;
 - d) Estimated acres of covered species' habitat affected (acres, linear feet, etc.), as stated in the ESA Review Form;
 - e) Any other pertinent information that allows the Service to evaluate the causes and extent of habitat effects and any incidental taking that may have occurred that was not authorized in the Incidental Take Statement of this programmatic biological opinion.
 - f) The annual report will also include a summary of acres of habitat taken and individuals injured or killed from all previous years.
 - g) FEMA shall require that the Subapplicant to provide a copy of the project report to the Service and FEMA with the following project-specific details on its respective projects within 45 days of project construction completion:

- i. Date the project was initiated and completed;
 - ii. Number of observed instances of injury or mortality of any covered species;
 - iii. Number of observations of live, uninjured individuals of any covered species;
 - iv. Pertinent information concerning the success of the project in meeting the conservation measures; and
 - v. An explanation of failure to meet such measures, if any.
3. FEMA Region IX shall attend an annual coordination meeting with the Service by May 15 each year to discuss the annual monitoring report and any adaptive management measures needed to minimize impacts.
4. FEMA or its Subapplicants shall immediately contact the Service's SFWO at (916) 414-6631 to report direct encounters between listed species and project workers and their equipment whereby incidental take in the form of harm, injury, or death occurs. If the encounter occurs after normal working hours, FEMA or its Subapplicants shall contact the SFWO at the earliest possible opportunity the next working day. When injured or killed individuals of the listed species are found, FEMA or its Subapplicants shall follow the steps outlined in the Salvage and Disposition of Individuals section below.
5. For those components of the action that will require the capture and relocation of any listed species, FEMA or its Subapplicant shall immediately SFWO at (916) 414-6631 to report the action. If capture and relocation need to occur after normal working hours, FEMA or its Subapplicant shall contact the SFWO at the earliest possible opportunity the next working day.
6. FEMA or its Subapplicants shall immediately contact the Service's SFWO at (916) 414-6631 to report any unauthorized take of federally-listed species occurs onsite, or if more than one (1) acre of habitat is adversely affected at a particular site as a result of implementation of the FEMA-funded action.

Salvage and Disposition of Individuals

Injured listed species must be cared for by a licensed veterinarian or other qualified person(s), such as the Service-approved biologist. Dead individuals must be sealed in a resealable plastic bag containing a paper with the date and time when the animal was found, the location where it was found and the name of the person who found it, and the bag containing the specimen frozen in a freezer located in a secure site, until the Service provides instructions regarding the disposition of the dead specimen. The Service contact persons are Kellie Berry or Gerry Cobian at the SFWO at (916) 414-6631.

CONSERVATION RECOMMENDATIONS

Section 7(a)(1) of the Act directs federal agencies to utilize their authorities to further the purposes of the Act by carrying out conservation programs for the benefit of endangered and threatened species. Conservation recommendations are discretionary agency activities to minimize or avoid adverse effects of a proposed action on listed species or critical habitat, to help implement recovery plans, or to develop information. The Service recommends the following action:

1. Sightings of any listed and sensitive species encountered during FEMA-funded activities should be reported to the California Natural Diversity DataBase (CNDDB), California

Department of Fish and Wildlife.

In order for the Service to be kept informed of actions minimizing or avoiding adverse effects or benefiting listed species or their habitats, the Service requests notification of the implementation of any conservation recommendations.

REINITIATION—CLOSING STATEMENT

This concludes formal consultation on FEMA's Disaster, Mitigation, and Preparedness Programs in California. As provided in 50 CFR §402.16, reinitiation of formal consultation is required and shall be requested by the federal agency or by the Service where discretionary federal agency involvement or control over the action has been retained or is authorized by law and:

- (a) If the amount or extent of taking specified in the incidental take statement is exceeded;
- (b) If new information reveals effects of the action that may affect listed species or critical habitat in a manner or to an extent not previously considered;
- (c) If the identified action is subsequently modified in a manner that causes an effect to the listed species or critical habitat that was not considered in the biological opinion; or
- (d) If a new species is listed or critical habitat designated that may be affected by the identified action.

If you have any questions regarding this biological opinion, please contact Kellie Berry, Sacramento Valley Division Chief (kellie_berry@fws.gov) or Gerry Cobian, Fish and Wildlife Biologist (gerald_cobian@fws.gov) at the letterhead address or telephone (916) 414-6631.

Sincerely,

Jennifer M. Norris, Ph.D.
Field Supervisor

ec:

MEMORANDUM

To: Jared Blumenfeld
Secretary
California Environmental Protection Agency

Date: May 23, 2019

From: 
Scott Smithline, Director
DEPARTMENT OF RESOURCES RECYCLING AND RECOVERY

Subject: EMERGENCY WAIVERS IN SUPPORT OF THE SITE CLEANUP PROGRAMS FOR THE WILD FIRE DEBRIS REMOVAL PROJECTS IN BUTTE COUNTY

The Department of Resources Recycling and Recovery (CalRecycle) has been mission tasked by the Governor's Office of Emergency Services (Cal OES) to lead the response to the devastating Camp Fire in Butte County. As part of that effort, CalRecycle is seeking, pursuant to Governor's Executive Order B-57-18, at the request of the Central Valley Water Quality Control Board (Central Valley Water Board), and in coordination with CalOES, a waiver of certain Central Valley Water Board requirements.

BACKGROUND: During November of 2018, the Camp Fire affected large areas of Butte County, destroyed over 12,000 structures, and unfortunately resulted in casualties. On November 14, 2018, the Governor issued Executive Order B-57-18, thereby suspending a variety of environmental protection statutes as they relate to the wildfire recovery effort. The Executive Order authorizes the Secretaries of the California Environmental Protection Agency and the California Natural Resources Agency to authorize activities to occur under the suspension of laws under the jurisdictions of their respective agencies when such authorization would serve the purpose of accelerating cleanup and recovery while protecting public health and the environment. The waivers requested in this memo allow the debris removal operation to expeditiously remove wildfire-generated structural debris and ash from parcels potentially under the jurisdiction of the Central Valley Water Board thereby minimizing public and environmental exposure to potentially toxic debris and ash. A separate request for items related to the Resources Agency requirements is being submitted as well.

BMP PROVISIONS

The attached document (Environmental Protection Plan; Supplement to the Debris Removal Operations Plan for the Camp Debris Removal Incident) outlines a number of best management practices (BMPs) to be considered during debris removal operations in areas where waivers are applicable. The implementation of these BMPs allows the debris removal operations to continue without delay while preserving the intent of the waived laws and protecting the environment. The Environmental Protection Plan and BMPs are subject to revision by the Incident Commander for the Camp Fire Debris Removal Incident and may be adjusted to address operational needs, following consultation with Central Valley Water Board staff. This document contains waivers related to both Agencies' rules. The specific waivers for your consideration are noted below.

WAIVER REQUEST

Waivers are requested from the following laws which are potentially applicable to parcels included in the debris removal operation within the Central Valley Water Board's jurisdiction:

- Clean Water Act Section 401; California Water Code (CWC) § 13160; California Code of Regulations, title 23, § 3855 et seq.; requires an applicant for a federal license or permit to conduct any activity which may result in any discharge to navigable waters to obtain a water quality certification from the appropriate regional board or state board.
- California Water Code (CWC) § 13260: requires that any person discharging waste, or proposing to discharge waste, within any region that could affect the quality of waters of the state shall file with the appropriate regional board a report of the discharge.

These waivers are necessary to suspend applicable procedural and substantive requirements, including notice and fee provisions that would otherwise delay debris removal operations. The Central Valley Water Board cannot itself waive these provisions.

Approved by:

Jared Blumenfeld, Secretary
California Environmental Protection Agency

MEMORANDUM

To: Wade Crowfoot
Secretary
California Natural Resources Agency

Date: May 24, 2019

From:

Scott Smithline, Director

DEPARTMENT OF RESOURCES RECYCLING AND RECOVERY

Subject: EMERGENCY WAIVERS IN SUPPORT OF THE SITE CLEANUP PROGRAMS FOR THE WILD FIRE DEBRIS REMOVAL PROJECTS IN BUTTE COUNTY

The Department of Resources Recycling and Recovery (CalRecycle) has been mission tasked by the Governor's Office of Emergency Services (Cal OES) to lead the response to the devastating Camp Fire in Butte County. As part of that effort, CalRecycle is seeking, pursuant to Governor's Executive Order B-57-18, at the request of the Department of Fish and Wildlife (DFW), and in coordination with CalOES, a waiver of certain DFW requirements.

BACKGROUND: During November of 2018, the Camp Fire affected large areas of Butte County, destroyed over 12,000 structures, and unfortunately resulted in casualties. On November 14, 2018, the Governor issued Executive Order B-57-18, thereby suspending a variety of environmental protection statutes as they relate to the wildfire recovery effort. The Executive Order authorizes the Secretaries of the California Environmental Protection Agency and the California Natural Resources Agency to authorize activities to occur under the suspension of laws under the jurisdictions of their respective agencies when such authorization would serve the purpose of accelerating cleanup and recovery while protecting public health and the environment. The waivers requested in this memo allow the debris removal operation to expeditiously remove wildfire-generated structural debris and ash from parcels potentially under the jurisdiction of DFW thereby minimizing public and environmental exposure to potentially toxic debris and ash. A separate request for items related to the California Environmental Protection Agency requirements is being submitted as well.

BMP PROVISIONS

The attached document (Environmental Protection Plan; Supplement to the Debris Removal Operations Plan for the Camp Debris Removal Incident) outlines a number of best management practices (BMPs) to be considered during debris removal operations in areas where waivers are applicable. The implementation of these BMPs allows the debris removal operations to continue without delay while preserving the intent of the waived laws and protecting the environment. The Environmental Protection Plan and BMPs are subject to revision by the Incident Commander for the Camp Fire Debris Removal Incident and may be adjusted to address operational needs, following consultation with DFW staff. This document contains waivers related to both Agencies' rules. The specific waivers for your consideration are noted below.

WAIVER REQUEST

Waivers are requested from the following laws which are potentially applicable to parcels included in the debris removal operation within DFW's jurisdiction:

- California Fish and Game Code (FGC) § 86 where "Take" shall be avoided. Take is defined as to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill.
- FGC § 1600 (*et sec*); Lake or Streambed Alteration Agreement, notification of significant alteration to stream channel, bank, or bed.
- FGC § 2000; taking is unlawful except as provided.
- FGC § 3503 and § 3503.5; Protection for bird nests and eggs and birds of prey.
- FGC § 5650 and § 5652; Deposition of deleterious material into waters of the state.
- FGC § 5901; Fish passage.
- FGC § 5937; Sufficient water for fish.
- FGC § 5948; Obstruction of stream.
- California Endangered Species Act (CESA); FGC § 2050-2115.5; prohibition of the Take of any species of wildlife designated as Endangered, Threatened, or candidates for listing.

These waivers are necessary to suspend applicable procedural and substantive requirements, including notice and fee provisions that would otherwise delay debris removal operations. DFW cannot itself waive these provisions.

Wade Crowfoot, Secretary
California Natural Resources Agency

POST-FIRE RECOVERY EXEMPTION
 STATE OF CALIFORNIA, DEPARTMENT OF FORESTRY AND FIRE
 PROTECTION
 NOTICE OF TIMBER OPERATIONS THAT ARE EXEMPT
 FROM TIMBER HARVESTING PLAN REQUIREMENTS RM-73
 (1038(g) (01/2020))

EX. # _____

Date of Receipt _____

Date Validated by CAL FIRE _____

Date Expires _____

VALID FOR ONE YEAR FROM DATE RECEIPT BY CAL FIRE.

Timber Operations pursuant to the notice of exemption may not commence for five (5) working days from the date of the Directors receipt of the notice unless this delay is waived by the director. If the Director does not act within five (5) days working days of receipt of the notice of exemption, Timber Operations may commence. 14 CCR § 1038.1(c)(13)

The Director of the Department of Forestry and Fire Protection (CAL FIRE) is hereby notified of timber operations under the requirements of 14 CCR § 1038(g), for the harvesting of dead or dying trees of any size within 300 feet from any point of an Approved and Legally permitted structure or an Approved and Legally permitted structure damaged or destroyed by wildfire. Provisions of these notice of exemption supersede the provisions of any other notices of exemption that are submitted in the same Harvest Area.

Timber operations conducted pursuant to 14 CCR 1038(g) is permitted if: (Please check which applies)

- Timber Operations are consistent with, and within the geographic scope of, an existing valid and effective gubernatorial proclamation of a state of emergency or executive order. **If the proposed Timber Operations are consistent with, and within the geographic scope of such a proclamation or order, the timberland owner shall submit a copy of the valid and effective gubernatorial proclamation of a state of emergency or executive order with the notice of exemption** described within 14 CCR § 1038.1; **OR**
- Timber Operations are necessary to remove trees which are dead or Dying Trees as a result of a wildfire which occurred no more than three (3) years prior to the submission of a notice of exemption as described within 14 CCR § 1038.1, but such Timber Operations are not consistent with, or within the geographic scope of, an existing valid and effective gubernatorial proclamation of a state of emergency or executive order. In such an instance, **the timberland owner shall submit, to the Director, certification by an RPF that all trees proposed for harvest are dead or Dying Trees as a result of such a wildfire. This certification shall be included with the submitted notice of exemption** as described within 14 CCR § 1038.1.

NOTE: Submitting this Exemption will require specific information to be provided at the time of submittal, see the bolded statements above and provide with the exemption upon submittal.

1. LICENSED TIMBER OPERATOR(S): Name: _____ Lic #: _____ Date: _____

Address _____

City _____ State _____ Zip _____ Phone _____

EMAIL: (optional) _____

2 TIMBERLAND OWNER(S) OF RECORD: Name: _____

Address _____

EMAIL: (optional) _____

I certify, under penalty of perjury, that I have read and understand the information on this form and that I am the Timberland Owner of record.

Signature: _____ Date: _____

3. TIMBER OWNER(S) OF RECORD: Name _____

Address _____

City _____ State _____ Zip _____ Phone _____

EMAIL: (optional) _____

TIMBER TAX NOTICE: The TIMBER OWNER is responsible for payment of a yield tax.

For timber yield tax information or for assistance with these questions call 1-800-400-7115, or write: Timber Tax Section, MIC: 60, California Department of Tax and Fee Administration, P.O. Box 942879, Sacramento, CA 94279-0060; or see the CDTFA Web Page on the Internet <http://www.cdtfa.ca.gov>.

TIMBER TAX INFORMATION: Some small or low value harvests may be exempt from the timber yield tax (Revenue and Taxation Code sec. 38116)

Timber Owners may be considered exempt if the value of the harvesting operations does not exceed \$3,000 dollars within a quarter, according to CDTFA Harvest Value Schedules, Rule 1024.

IF THE TIMBER OWNER BELIEVES HARVESTING MAY BE EXEMPT (see timber tax exemption language above for low value harvests) PLEASE CHECK BELOW:

FINAL DETERMINATION of tax exempt status will be made by the Timber Tax Section of the California Department of Tax and Fees Administration. If you think you are exempt based on the directions above please complete the below information so the Timber Tax Section can make the final determination.

IF YOU WOULD LIKE CDTFA TIMBER TAX SECTION TO CONSIDER A TAX EXEMPTION BASED ON PROJECTED HARVEST PLEASE COMPLETE THE INFORMATION BELOW.

A. Circle the option that most closely estimates the total volume for this harvest, in thousands of board feet (mbf - Net Scribner short log):

Under 8 mbf 8-15 mbf 16-25 mbf Over 25 mbf

B. Estimate what percentage of timber will be removed during this harvest: (percentages provided should equal 100%)

	%		%		%		%
Redwood	_____	Ponderosa/Sugar Pine	_____	Douglas-Fir	_____	Fir	_____
Cedar	_____	Port-Ordford Cedar	_____	Other Conifer	_____	Other Hardwoods	_____

C. Fuelwood over 150 cords? Yes No D. Christmas trees over 3,000 lineal feet? Yes No

4. 14 CCR § 1038.1(c)(15) - Is it anticipated that a tree existing before 1800 A.D. greater than 60 inches' diameter at stump height for Sierra or Coastal Redwoods or 48 inches in diameter at stump height for all other tree species will be harvested? (required) YES NO

NOTE: If "YES" please refer to 14 CCR § 1038.1(c)(15) and have an RPF prepare an explanation and justification described in 14 CCR § 1038.1(c)(15)(A)(B)(1-3) to be included at Submission.

5. 14 CCR § 1038.1(c)(12) NO timber harvesting is permitted within the standard width of a Watercourse or Lake Protection Zone (WLPZ) per 14 CCR § 916.4 [936.4, 956.4](b) (exceptions do apply see below) or within a WLPZ of a watershed identified as Anadromous Salmonids Planning watersheds (ASP) per 14 CCR § 916.9 [936.9, 956.9](s), unless the harvesting in an ASP WLPZ is recommended in writing by CDFW to address specifically identified forest conditions, 14 CCR § 916.9(s)(6) (optional)

Two exceptions permitted in WLPZs outside of an ASP watershed:

(Please indicate below if trees meeting the exception identified below are anticipated to be harvested. (If not, then leave blank)

- SANITATION-SALVAGE harvesting per 14 CCR § 913.3 [933.3, 953.3] or
- for the removal of DEAD or DYING trees per 14 CCR § 916.4 [936.4, 956.4](b)

Exception in WLPZ of ASP Watersheds

- Will harvesting occur within a WLPZ of an ASP watershed based on written recommendation from CDFW? Yes No

If YES then provide a copy of the written recommendation from CDFW identifying the specific reason for the recommended harvesting.

NOTE: Trees to be harvested shall be marked by an RPF or a supervised designee of the RPF PRIOR TO TIMBER OPERATIONS.

6. 14 CCR § 1038.1(c)(3)(A-C) No Timber Operations on any site that satisfies the criteria listed in 14 CCR § 895.1 for a Significant Archaeological or Historical Site (information on some of these sites may be available from the Information Centers of the California Historical Resources Information System within the Department of Parks and Recreation), except under the following conditions:

Have significant archaeological sites been identified within the project area? (required) Yes No

- Will operations occur within these identified archaeological sites? Yes No

If YES Sites must be preserved in place by capping or covering with a layer of soil. Please include a written concurrence from the Department's Archaeologist at the time of submission.

7. TENTATIVE COMMENCEMENT DATE OF TIMBER OPERATIONS:

(required) _____ 14 CCR § 1038.1(a)(5)

Before beginning Timber Operations, the Timber Operator, RPF or person responsible for submittal of the notice of exemption shall notify CAL FIRE of the actual commencement date of operations. The notification, by telephone, mail, or email, shall be directed to the appropriate CAL FIRE Unit Headquarters, Forest Practice Inspector or other designated personnel. If the notification is provided by mail, Timber Operations may not commence until three (3) days after the postmark date of notification. 14 CCR § 1038.1(c)(14)

8. 14 CCR 1038.2 - The submitted notice of exemption shall indicate if more than one Yarding system is to be used and identify the systems.

CHECK EACH Yarding method to be utilized: **If more than one type of method is selected these methods must be identified on the accompanying maps.** (required)

- Tractor, including end/long lining
- Rubber tired skidder, Forwarder
- Feller buncher
- Shovel yarding
- Cable, ground lead
- Cable, High lead
- Cable, Skyline
- Helicopter
- Other

9. 14 CCR § 1038.1(a)(4) - Designate the legal land description of the location of the timber operation. 14 CCR § 1038.2 attach a USGS 7.5-minute quadrangle map or equivalent map showing the location of:

- Boundaries of the Harvest Area. 14 CCR § 1038.2(a)

Additional maps, which may be topographic or planimetric, may be used to provide additional information, to show details, and improve map clarity. It will be helpful to describe the access route to the timber operation so that it can be easily located, and/or include an assessor's parcel map for small areas. (required)

Base Meridian	Township	Range	Section	County	Acreage (estimated)	Assessors Parcel # (optional)

The following are limitations or requirements for timber operations conducted under this Notice of Exemption for the harvesting of dead or dying trees of any size within 300 feet from any point of an Approved and Legally permitted structure damaged or destroyed by wildfire

1. This notice must be submitted to and received by CAL FIRE at the appropriate office listed below prior to the commencement of timber operations
 - **Coastal Special Treatment areas** and **Marin County** the Director shall have ten calendar days from date of receipt to accept or reject the notice of timber operations.
2. Timber operations may not commence until five days after the date of receipt of this notice by the appropriate CAL FIRE office listed below. If CAL FIRE does not act within five days of receipt of the notice Timber Operations may commence. 14 CCR § 1038.1(c)(13)
3. A copy of the accepted exemption must be onsite during timber operations, except in the case where the Director has failed to act within the five working-day review period. 14 CCR § 1038.1(c)(13)(A)
 - **Coastal Special Treatment areas** the Director shall have ten calendar days from date of receipt to accept or reject the notice of timber operations.
4. 14 CCR § 1038.1 places certain limits on the harvesting of trees under this exemption. These limits need to be examined to assure compliance.
5. 14 CCR § 1038 Timber operations conducted under this notice shall comply with all operational provisions of the Forest Practice Act and District Forest Practice Rules applicable to "Timber Harvesting Plan," "THP," and "plan." Timber operations must conform to applicable city or county general plans, city or county implementing ordinances, and city or county zoning ordinances within which the exemption is located. The requirements to submit a completion and stocking report do not normally apply. 14 CCR § 1038(g)(3).
6. In-lieu practices within WLPZs as specified under Article 6 of these rules, exception to the rules, and alternative practices are not allowed 14 CCR § 1038.
7. Only trees within three-hundred (300) feet from any point of an Approved and Legally Permitted Structure or an Approved and Legally Permitted Structure that was damaged or destroyed by wildfire may be harvested. 14 CCR § 1038(g)
8. All slash and woody debris greater than one (1) inch but less than eight (8) inches in diameter within one-hundred-fifty (150) feet of an Approved and Legally Permitted Structure or an Approved and Legally Permitted Structure that was damaged or destroyed by wildfire shall be removed, chipped or piled and

burned. 14 CCR § 1038(g)(4)

9. All slash created between one-hundred-fifty (150) feet and three-hundred (300) feet of an Approved and Legally Permitted Structure or an Approved and Legally Permitted Structure that was damaged or destroyed by wildfire shall be treated by Lopping For Fire Hazard Reduction, removed, chipped or piled and burned with forty-five (45) days from the start of Timber Operations; except for the burning of piles, which shall be accomplished not later than April 1 of the year following their creation; or for piles created on or after September 1, not later than April 1 of the second year following creation. 14 CCR § 1038(g)(5)
10. No helicopter yarding shall be allowed 14 CCR § 1038.1(b)(3)
11. No Tractor or heavy equipment operations on slopes greater than 50%. 14 CCR § 1038.1(c)(5)
12. No construction of new tractor roads on slopes greater than 40%. 14 CCR § 1038.1(c)(5)
13. No Tractor or heavy equipment operations on known Unstable Areas. 14 CCR § 1038.1(c)(7)
14. No new road construction or reconstruction, as defined by 14 CCR § 895.1. 14 CCR § 1038.1(c)(8)
15. No heavy equipment operations within the standard width of a WLPZ, as defined in 14 CCR § 916.4[936.4, 956.4](b). Except for maintenance of roads and Drainage Facilities or structures. 14 CCR § 1038.1(c)(9)
16. All timber operations conducted in the Lake Tahoe Region must have a valid Tahoe Basin Tree Removal Permit, as defined by TRPA, or shall be conducted under a valid TRPA memorandum of understanding, when such a permit is required by TRPA, 14 CCR § 1038.1(b)(1)
17. There are special requirements for timber operations conducted in Coastal Commission Special Treatment Areas and in counties with special rules adopted by the Board of Forestry and Fire Protection. These rules should be reviewed prior to submitting this notice to CAL FIRE. 14 CCR § 1038.1(c)(6)
18. 14 CCR § 1038.1(c)(12) **No timber harvesting within the standard width of a watercourse or lake protection zone (WLPZ)**, as defined in 14 CCR § 916.4 [936.4, 956.4](b), except sanitation-salvage harvesting, as identified in 14 CCR § 913.3 [933.3,953.3], where immediately after completion of operations, the area shall meet the stocking standards of 14 CCR § 912.7 [932.7,952.7](b)(2), or, except the removal of dead or Dying trees where consistent with 14 CCR § 916.4 [936.4,956.4] (b). **Trees to be harvested within a WLPZ shall be marked by, or under the supervision of, an RPF prior to Timber Operations.**
19. **ASP watersheds** – No timber operations are allowed in a WLPZ, or within any ELZ or EEZ designated for watercourse or lake protection, under exemption notices except **(1)** Hauling on existing roads **(2)** Road maintenance **(3)** Operations conducted for public safety **(4)** Construction or reconstruction of approved watercourse crossings **(5)** Temporary crossings of dry Class III watercourses that do not require notification under Fish and Game Code §1600 et seq. **(6) Harvesting recommended in writing by CDFW to address specifically identified forest conditions.**
20. Operations conducted under a notice of exemption are NOT permitted in known sites of rare, threatened or endangered plants and animals if the sites will be disturbed or damaged. NO timber operations may occur within a buffer zone of a listed, or Sensitive Species defined by 14 CCR § 895.1. 14 CCR § 1038.1(c)(10)&(11)
21. If any activities related to timber operations, as defined by PRC 4527, are to include any of the following activities in any river, stream or lake, including episodic and perennial waterways, a notification to the California Department Fish and Wildlife is required pursuant to Fish and Game Code §1602: 1) A substantial alteration of the bed, bank, or channel; 2) A substantial diversion (i.e. water drafting) or obstruction of the natural flow; or 3) Use of material from or deposit of material into the watercourse. Information on the Lake and Streambed Alteration Program, as well as notification forms, may be found at the following link: <https://www.wildlife.ca.gov/conservation/lisa>
22. The requirements to submit a completion and stocking report do not normally apply. **However, Completion and Stocking reports are required for areas when operations occur within COASTAL SPECIAL TREATMENT AREAS.** The landowner shall submit to CAL FIRE a RM-71 Completion and Stocking report. Per PRC 4585 and PRC 4587.
23. This Notice of Exemption is valid for one year from the date of receipt by CAL FIRE.

24. A Timber Operator with a valid state license must be designated upon submission of this notice.

The following suggestions may help ensure your compliance with the Forest Practice Rules:

1. Timber Owners, Timberland owners and Timber Operators should obtain and review copies of the Forest Practice Rules pertaining to the Notice of Exemptions. Copies may be obtained from BARCLAYS LAW PUBLISHERS, P.O. BOX 3066, SO. SAN FRANCISCO, CA. 94080. or from CAL FIRE, Forest Practice Section, P.O. BOX 944246, Sacramento, CA 94244-2460; or from CAL FIRE’s Web Page on the Internet at <http://www.fire.ca.gov>.
2. Contact the CAL FIRE office listed below for questions regarding the use of this notice.

FILE THIS NOTICE WITH THE CAL FIRE OFFICE BELOW FOR THE COUNTY IN WHICH THE OPERATION WILL OCCUR:

TIMBER TAX NOTICE: The TIMBER OWNER is responsible for payment of a yield tax.

For timber yield tax information or for assistance with these questions call 1-800-400-7115, or write: Timber Tax Section, MIC: 60, California Department of Tax and Fee Administration, P.O. Box 942879, Sacramento, CA 94279-0060; or see the CDTFA Web Page on the Internet <http://www.cdtfa.ca.gov>.

TIMBER TAX INFORMATION: Some small or low value harvests may be exempt from the timber yield tax (Revenue and Taxation Code sec. 38116)

Timber Owners may be considered exempt if the value of the harvesting operations does not exceed \$3,000 dollars within a quarter, according to CDTFA Harvest Value Schedules, Rule 1024.

IF THE TIMBER OWNER BELIEVES HARVESTING MAY BE EXEMPT (see timber tax exemption language above for low value harvests) PLEASE CHECK BELOW:

FINAL DETERMINATION of tax exempt status will be made by the Timber Tax Section of the California Department of Tax and Fees Administration. If you think you are exempt based on the directions above please complete the below information so the Timber Tax Section can make the final determination.

IF YOU WOULD LIKE CDTFA TIMBER TAX SECTION TO CONSIDER A TAX EXEMPTION BASED ON PROJECTED HARVEST PLEASE COMPLETE THE INFORMATION BELOW.

A. Circle the option that most closely estimates the total volume for this harvest, in thousands of board feet (mbf - Net Scribner short log):

Under 8 mbf 8-15 mbf 16-25 mbf Over 25 mbf

B. Estimate what percentage of timber will be removed during this harvest: (percentages provided should equal 100%)

	%		%		%		%
Redwood	_____	Ponderosa/Sugar Pine	_____	Douglas-Fir	_____	Fir	_____
Cedar	_____	Port-Orford Cedar	_____	Other Conifer	_____	Other Hardwoods	_____

C. Fuelwood over 150 cords? Yes No D. Christmas trees over 3,000 lineal feet? Yes No

5. 14 CCR § 1104.1 (i) - Is it anticipated that a tree existing before 1800 A.D. greater than 60 inches' diameter at stump height for Sierra or Coastal Redwoods or 48 inches in diameter at stump height for all other tree species will be harvested? YES NO (required)

NOTE: If yes please refer to 14 CCR § 1104.1(i) and have an RPF prepare an explanation and justification described in 14 CCR § 1104.1(i) to be included at Submission

6. Designate the legal land description of the location of the timber operation. Attach a USGS 7.5-minute quadrangle or equivalent map showing the location of timber operations, it would be helpful to describe the access route to the timber operation so that it can be easily located, and/or include an assessor's parcel map for small areas. (required)

Base Meridian	Township	Range	Section	County	Acreage (estimated)	Assessors Parcel # (optional)

The following are limitations or requirements for timber operations conducted under a Utility Right-of-Way Exemption: (Notice, Notice of Conversion Exemption, Conversion Exemption):

1. Public Resources Code (PRC) Section 4628 and California Code of Regulations (CCR) Title 14 Section 1104.1(b) exempt public agencies from the requirement to file an application for timberland conversion (TLC) or a timber harvesting plan (THP) when they construct or maintain rights of way on their own property or that of another public agency. This exemption extends to easements over lands owned in fee by private parties. This exemption is not available for rights of way granted from one private landowner to another.
2. If the harvested trees are sold, bartered or traded for commercial purposes a timber operation has occurred per PRC Section 4527, and a notice of exemption is required to be filed by the timber owner. This is true if the timber is owned by the public agency, sold or given by the agency to another party, or the timber is owned by a private landowner subject to a public agency easement. A licensed timber operator is required in order to remove the harvested trees from the property. If the harvested trees are not sold, bartered or traded for commercial purposes, a notice of exemption is not required. The timber owner is responsible to pay all yield taxes for timber harvested. Timber yield tax information can be obtained from the State Board of Equalization, P.O. Box 94979, Sacramento, California 94279-0001.
3. 14 CCR § 1104.1(c) exempts public and private utilities from the TLC and the THP requirements for construction and maintenance of gas, water, sewer, oil, electric and communications rights of way. 14 CCR § 1104.1(d), (e), (f), and (g) contain specifications of allowable right of way widths and supplemental clearances. If the harvest is a timber operation per PRC § 4527, a notice of exemption is required to be filed by the timber owner. A licensed timber operator is required in order to remove the harvested trees from the property. If the harvested trees are not sold, bartered or traded for commercial purposes, a notice of exemption is not required. The timber owner is responsible to pay all yield taxes for timber harvested.
4. 14 CCR § 1104.1 requires that all timber operations conducted according to exemptions granted under this section abide by all operating regulations pertaining to a timber harvesting plan. There are special requirements for timber operations conducted in Coastal Commission Special Treatment Areas, the Tahoe Regional Planning Agency area, and in counties with special rules adopted by the Board of Forestry and Fire Protection. These rules should be reviewed prior to submitting this notice to CAL FIRE.
5. Timber operations shall comply with all other applicable provisions of the Forest Practice Act and regulations, county general plans, zoning ordinances, and any implementing ordinances; copies of the state rules and regulations may be found on CAL FIRE's Web Page on the Internet at <http://www.fire.ca.gov>.
6. All timber operations shall be complete within one year from the date of acceptance by CAL FIRE.
7. **In-lieu practices for watercourse and lake protection zones as specified under Article 6 of these rules, exceptions to the rules, and alternative practices are not allowed. 14 CCR § 1104.1(h)**
8. No timber operations shall be conducted until CAL FIRE's notice of acceptance is received and a valid copy of this notice and CAL FIRE's acceptance shall be kept on site during timber operations.
9. Operations conducted under a notice of exemption are NOT permitted in known sites of rare, candidate, threatened or endangered plants and animals if the sites will be disturbed or damaged. NO timber operations may occur within a buffer zone of a listed, or sensitive species defined by 14 CCR § 895.1
10. If any activities related to timber operations, as defined by PRC 4527, are to include any of the following activities in any river, stream or lake, including episodic and perennial waterways, a notification to the California Department Fish and Wildlife is required pursuant to Fish and Game Code §1602: 1) A substantial alteration of the bed, bank, or channel; 2) A substantial diversion (i.e. water drafting) or obstruction of the natural flow; or 3) Use of material from or deposit of material into the watercourse. Information on the Lake and Streambed Alteration Program, as well as notification forms, may be found at the following link: <https://www.wildlife.ca.gov/conservation/lsa>.
11. No Timber Operations are allowed on significant historical or archeological sites.

The following suggestions may help ensure your compliance with the Forest Practice Rules:

1. Timber Owners, Timberland owners and Timber Operators should obtain and review copies of the Forest Practice Rules pertaining to the Notice of Emergency. Copies may be obtained from BARCLAYS LAW PUBLISHERS, P.O. Box 2006, San Francisco, CA 94126, CAL FIRE, Forest Practice, P.O. Box 944246, Sacramento, CA 94244-2460; or CAL FIRE's Web Page at <http://www.fire.ca.gov>.
2. Contact the CAL FIRE office listed below for questions regarding the use of this notice.

FILE THIS NOTICE WITH THE CAL FIRE OFFICE BELOW FOR THE COUNTY IN WHICH THE OPERATION WILL OCCUR:

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL VALLEY REGION**

ORDER R5-2017-0061

**WASTE DISCHARGE REQUIREMENTS GENERAL ORDER
FOR
DISCHARGES RELATED TO TIMBERLAND MANAGEMENT ACTIVITIES
FOR NON-FEDERAL AND FEDERAL LANDS**

The California Regional Water Quality Control Board, Central Valley Region (hereafter, Central Valley Water Board) finds that:

SCOPE OF COVERAGE OF THIS GENERAL ORDER

1. This Order serves as general waste discharge requirements (WDRs) for waste discharges related to timberland management activities on both non-federal and federal lands (managed by the U.S. Forest Service) that could affect waters of the state.
2. Under this Order, “timberland management activities” means commercial activities relating to forest management and timberland conversions, including, but not limited to: cutting or removal of timber and other solid wood forest products; construction, reconstruction and maintenance of roads, fuel breaks, firebreaks, watercourse crossings, landings, skid trails, or beds for the falling of trees; fire hazard abatement and fuel reduction activities; pesticide applications; site preparation that involves disturbance of soil or burning of vegetation following timberland management activities; but excluding preparatory treemarking, surveying or roadflagging.¹
3. Waste specifically regulated under this Order includes: earthen materials, including soil, silt, sand, clay, rock; organic materials, such as slash, sawdust, or bark; and pesticides that enter or threaten to enter into waters of the state from timberland management activities.
4. Under this Order, the term “Discharger” includes the timberland owner or timber owner, anyone working on behalf of the timberland/timber owner in the conduct of timberland management activities for non-federal lands, the U.S. Forest Service, private timber operators operating on federal lands, and anyone working on behalf of the U.S. Forest Service or a timber operator in the conduct of timberland management activities on federal lands. Although all of the aforementioned persons or entities legally are “Dischargers” for the purposes of this Order, only one Notice of Intent (NOI) shall be submitted for each Project enrollment.
5. Attachment A (Definitions), Attachment B (Monitoring and Reporting Program), Attachment C (Post-Fire Management and Reforestation Plan), and Attachment D (Information Sheet) are hereby incorporated into and made a part of this Order by this reference.

REASONS FOR ISSUING GENERAL ORDER

6. There are approximately 16 million acres of federal and non-federal forested lands located within the Central Valley Region. The water quality impacts from timberland management activities on these forested lands falls within the jurisdiction of the Central Valley Water Board.
7. The adoption of individual WDRs for all timberland management activities in the Central Valley

¹Definitions for “Pesticide”, “Plan”, and “Project”, as well as other definitions, can be found in Attachment A.

Region is not feasible due to the large number of timber harvesting documents received annually for review, the short mandated timeline for the approval of non-federal timberland management activities, and the time needed to adopt individual WDRs. General WDRs on a watershed-by-watershed basis would also take a significant amount of time given the large number of watersheds and sub-watersheds in the Region, and therefore is not feasible. The Central Valley Water Board currently regulates timberland management activities under the Conditional Waiver of Waste Discharge Requirements for Discharges Related to Timber Harvesting Activities (Waiver), Order No. R5-2014-0144, which expires on March 31, 2018. Without the current Waiver or the adoption of this Order, many timberland management activities would not be subject to any regulation under the California Water Code (Water Code) as required by the Policy for Implementation and Enforcement of the Nonpoint Source Pollution Control Program (Nonpoint Source Policy) (see Finding 12 below).

8. On October 8, 2013, amendments to Public Resources Code Article 7.7 (commencing with Section 4597) went into effect and established a new type of timber harvesting permit: the Working Forest Management Plan (WFMP). This new permit will allow non-federal, non-industrial landowners of 15,000 acres or less to harvest timber via a non-expiring permit. The amendments also required the California Board of Forestry (BOF) to develop and implement the process for the WFMP by January 2016; process concerns raised by stakeholders have delayed the implementation of the WFMP, which is now anticipated to occur by January 2018.
9. This Order addresses the anticipated implementation of the WFMP by the BOF; the upcoming Waiver expiration; the need for additional information related to post-fire salvage operations; the creation of a low threat category for Plans; the creation of a new category for non-federal watercourse crossing work outside of a Project; the need to revise and clarify the monitoring and reporting program; and the overall need to improve and streamline the existing Waiver. Individual WDRs would not provide identifiable benefits over this Order because this Order contains essentially the same conditions that would be included in individual WDRs, such as the requirements that implement water quality control plans, and this Order is enforceable to the same extent as individual WDRs.
10. As of the effective date of this Order, the Central Valley Water Board will no longer accept new enrollments under the Timber Waiver (Order No. R5-2014-0114). Projects with existing enrollments under the Timber Waiver may continue to operate under the Timber Waiver until its expiration date, March 31, 2018. Projects that will operate past March 31, 2018, must obtain coverage under this Order prior to that date.

REGULATORY CONSIDERATIONS

11. Pursuant to the Porter-Cologne Water Quality Control Act (Division 7 of the Water Code), the Central Valley Water Board has legal authority to regulate waste discharges that could affect the quality of waters of the state.
12. Federal law requires the states to develop and implement plans to address nonpoint source pollution. (33 U.S.C. §1329.) Pursuant to this federal mandate, the State Water Resources Control Board (State Water Board) adopted its Nonpoint Source Policy in 2004. The Nonpoint Source Policy requires the State Water Board and Regional Water Quality Control Boards (Regional Water Boards) to regulate nonpoint source pollution by using either (1) Waste Discharge

Requirements (Water Code section 13260); (2) a Waiver of Waste Discharge Requirements (Water Code section 13269); or (3) a Basin Plan Prohibition (Water Code section 13243).

13. Water Code section 13260, subdivision (a) requires that any person discharging waste or proposing to discharge waste within any region that could affect the quality of waters of the state, other than into a community sewer system, shall file with the appropriate Regional Water Board a Report of Waste Discharge (ROWD) containing such information and data as the Regional Water Board may require.
14. Water Code section 13263 requires the Central Valley Water Board to prescribe WDRs, or waive WDRs, for proposed, existing, or material changes in discharges of waste that could affect water quality. The board may prescribe WDRs even if no ROWD under Water Code section 13260 has been filed. The WDRs must implement applicable water quality control plans and the Water Code. The Central Valley Water Board may prescribe general WDRs for a category of discharges if all the following criteria apply to the discharges in that category:
 - a. The discharges are produced by the same or similar operations.
 - b. The discharges involve the same or similar types of waste.
 - c. The discharges require the same or similar treatment standards.
 - d. The discharges are more appropriately regulated under general requirements than individual requirements.

The rationales for developing general waste discharge requirements for timberland management activities in the Central Valley Region include: (a) discharges are produced by similar operations (timberland management activities); (b) waste discharges under this Order involve similar types of wastes (typically earthen materials such as soil and rock, organic materials such as slash and bark, and pesticides); (c) water quality management practices are similar for timberland management activities; and (d) due to the large number of timberland management activities that take place in the Central Valley region, timberland management activities are more appropriately regulated under general rather than individual WDRs.

15. The Central Valley Water Board's *Water Quality Control Plan for the Sacramento River Basin and the San Joaquin River Basin, Fourth Edition, revised April 2016* and the *Water Quality Control Plan for the Tulare Lake Basin, Second Edition, revised January 2015* (hereinafter Basin Plans) designate beneficial uses, establish water quality objectives, contain programs of implementation needed to achieve water quality objectives, and reference plans and policies adopted by the State Water Board.
16. Whether an individual discharge of waste from timberland management activities may affect the quality of the waters of the state depends on a variety of site-specific factors, including, but not limited to:
 - a) Distribution and Sensitivity of the Beneficial Uses of Water
 - Presence of domestic water supplies
 - Presence of aquatic species (including listed species)
 - Close proximity of operations to other critical beneficial uses or sensitive receptors
 - b) Current Water Quality Conditions
 - Existing Total Maximum Daily Loads or 303(d) listings
 - Documented non-compliance with Basin Plan standards
 - Known or suspected watershed impacts
 - c) Physical Setting

- Unstable geologic setting / steep slopes
 - Erodible soils
 - Existing landslides or active erosion sites
 - Roads or watercourse crossings in poor condition
 - Harsh climates and/or intense precipitation regimes
 - Post-fire landscape
- d) Type and Scope of Proposed Activities
- Intensity of silvicultural prescriptions and/or yarding methods
 - Intensity of site preparation and/or road construction/reconstruction
 - Winter operations and/or “non-standard” or “in-lieu” practices

17. This Order implements the Basin Plans by requiring the implementation of management practices to prevent exceedances of applicable water quality objectives (both numeric and narrative) and requiring the prevention of nuisance. The Order requires implementation of a monitoring and reporting program to determine effects of waste discharges on water quality and the effectiveness of management practices designed to comply with applicable water quality objectives as defined in the Basin Plans.
18. Water Code section 13242 mandates that Regional Water Boards include in their Basin Plans a plan of implementation describing how the board will regulate discharges of waste to waters of the state in a manner that will achieve water quality objectives. Water Code section 13243 provides further that “[a] regional board, in a water quality control plan or in waste discharge requirements, may specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted.” Water Code section 13263 also requires a Regional Water Board to prescribe requirements in WDRs that will implement the Basin Plan, including achievement of applicable water quality objectives. The conditions of this Order, including but not limited to Eligibility Criteria, Prohibitions, and requirements pertaining to Significant Existing or Potential Erosion Sites (SEPEs), implement these and other applicable statutory mandates.

REGULATORY HISTORY AND COORDINATION WITH OTHER AGENCIES

19. Non-Federal Lands

The California Department of Forestry and Fire Protection (CAL FIRE) and the Board of Forestry (BOF)

Timberland management activities on non-federal lands in California are regulated in accordance with the Z'berg-Nejedly Forest Practice Act (FPA) (Public Resources Code § 4511 et seq.) and the California Forest Practice Rules (FPR) (California Code of Regulations, title 14, § 895 et seq.). The BOF is responsible for promulgation of the FPR in accordance with the FPA while CAL FIRE is the state agency responsible for overseeing implementation and enforcement of the FPR for timber harvest activities on non-federal lands. Non-federal landowners proposing to harvest timber for commercial purposes are required to have an approved Plan, prepared by a Registered Professional Forester (RPF), prior to starting timberland management activities. Pursuant to the FPR, the applicable Regional Water Board, California Department of Fish and Wildlife, California Geological Survey, and other responsible and local agencies participate in the review of Plans and provide recommendations to the CAL FIRE Director as part of an interdisciplinary “Review Team.” As a member of the Review Team, Regional Water Board staff review proposed Plans and is provided the opportunity to participate in pre-harvest inspections (inspections conducted prior to Plan approval). CAL FIRE’s Plan approval process is the functional equivalent to the California

Environmental Quality Act Environmental Impact Report process (Public Resources Code § 21080.5; see also California Code of Regulations, title 14, § 896).

Section 208 of the federal Clean Water Act (33 U.S.C. § 1288) requires states to identify areas with “substantial water quality problems” and to designate a Water Quality Management Agency (WQMA) to develop an area-wide plan for addressing water pollution. In 1988, the State Water Board (a) conditionally certified the “Water Quality Management Plan for Timber Operations on Nonfederal Lands” which included those FPR selected as best management practices and the process by which those rules are administered; (b) designated CAL FIRE and the BOF as joint Water Quality Management Agencies; and (c) executed a Management Agency Agreement (MAA) with CAL FIRE and BOF for the purpose of implementing the certified plan and WQMA designations.

The MAA required U.S. Environmental Protection Agency (U.S. EPA) approval of the State Water Board’s certification of the FPR and administering processes for regulation of timberland management activities on non-federal lands in California. That approval had not occurred by the time State Board adopted the 2004 Nonpoint Source Policy. Thus, U.S. EPA approval of the State Board’s certification of the FPR would not negate the legal requirement for Regional Boards to address nonpoint source pollution using one or more of the three regulatory options provided under the Nonpoint Source Policy (see Finding 12).

AB 1492

Assembly Bill 1492 was enacted in 2012 with the intent to promote and encourage sustainable forest practices; ensure continued sustainable funding for the state’s forest practice program to protect the state’s forest resources; and replace the piecemeal funding structure with a single funding source. To that end, AB 1492 established the Timber Regulation and Forest Restoration Fund for the purposes of achieving those goals as well as supporting forest, fisheries and wildlife habitat and water quality restoration. Further, the bill extended the potential life span of timber harvest plans filed through the CAL FIRE Review Team process on state or private lands (after 2012) from a maximum of 5 years to a maximum of 7.

The bill language also requires increases in inspections from the Review Team agencies; promotes transparency via creation of performance measures; requires identification and implementation of efficiencies in the regulation of timber harvesting between state agencies; and identifies an intent to modify the current regulatory programs to incorporate and provide incentives for best practices, and develop standards or strategies, where appropriate, to protect natural resources, including the development of plans that address road management and riparian function on an ownershipwide, watershedwide, or districtwide scale.

Finally, the bill requires an annual report to the legislature, prepared by the Secretary of the Natural Resources Agency in conjunction with the Secretary for Natural Resource Protection.

Lead responsibility for implementing the bill has been assigned to the Natural Resource Agency. Members of the Review Team agencies, including Central Valley Water Board staff, participate in AB 1492 Leadership Team meetings as well as the multiple sub-groups developed to implement the legislature’s vision. Further information can be found on the Natural Resources Agency website: <http://resources.ca.gov/forestry>

The California Department of Fish and Wildlife (CDFW)

Pursuant to Fish and Game Code sections 1600-1616, CDFW regulates any activity on non-federal lands that does one or more of the following: 1) substantially diverts or obstructs the natural flow of any river, stream or lake; 2) substantially changes or uses any material from the bed, channel, or bank of, any river, stream, or lake; or 3) deposits or disposes of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake. CDFW may issue a Master Agreement for Timber Operations (MATO) or individual Lake or Streambed Alteration Agreements (LSAAs) to Dischargers that propose watercourse crossing work that meet one or more of these three criteria.

Watercourse crossing work conducted outside of a CAL FIRE-approved Plan or accepted Emergency (EM) Notice, but under the purview of CDFW, was not provided coverage under the Waiver; preventing Dischargers from proactively reconstructing or upgrading existing crossings on their timberlands that were not actively under a Plan. This Order creates a new enrollment category for work on existing watercourse crossings on timber production zoned land outside of a Plan or EM Notice by tiering off CDFW-executed MATOs and LSAAs.

20. Federal Lands – U.S. Forest Service

In 1981, pursuant to section 208 of the federal Clean Water Act, the State Water Board (a) certified a plan entitled “Water Quality Management for National Forest System Lands in California” that was developed and submitted by the U.S. Department of Agriculture, U.S. Forest Service; (b) designated the U.S. Forest Service as the WQMA for specified activities on National Forest System lands in California that may result in nonpoint source discharges, including timber management, vegetative manipulation, fuels management, road construction and watershed management; and (c) executed a MAA with the U.S. Forest Service for the purpose of implementing the certified plan and WQMA designation.

The U.S. EPA approved the State Water Board’s certification of the U.S. Forest Service water quality management plan, and the management practices therein as “best management practices” (BMPs).

The 1981 MAA between the State Water Board and the U.S. Forest Service contemplates that the Water Boards will waive issuance of waste discharge requirements for U.S. Forest Service timber harvest activities that may result in nonpoint source discharges, provided that the U.S. Forest Service designs and implements its projects to fully comply with state water quality standards. However, the Central Valley Water Board’s experience and monitoring have demonstrated that relying solely on the MAA framework to regulate nonpoint source activities on lands managed by the U.S. Forest Service does not result in compliance with water quality standards, and thus does not comport with the State Water Board’s Nonpoint Source Policy (see Finding 12).

21. Chronology of Timber Waiver of Waste Discharge Requirements

On 30 January 2003, in response to legislative amendments to Water Code section 13269, the Central Valley Water Board adopted Resolution No. R5-2003-0005, which included a conditional “Waiver of Waste Discharge Requirements for Discharges Related to Timber Harvest Activities” (Waiver) as Attachment A.

On 28 April 2005, the Central Valley Water Board adopted Resolution No. R5-2005-0052, which (1) renewed the Waiver for a term of 5 years; (2) revised Attachment A; and (3) added Attachment B, “Monitoring and Reporting Conditions” and Attachment C, “Implementation, Forensic and Effectiveness Monitoring and Reporting Program”.

On 18 March 2010, the Central Valley Water Board adopted Order R5-2010-0022, which renewed the Waiver and Attachments A, B, and C for 5 years.

On 4 December 2014, the Central Valley Water Board adopted Order No. R5-2014-0144, which renewed the Waiver and Attachments A, B, and C for an additional 3 years; the Waiver expires on March 31, 2018.

MONITORING AND REPORTING PROGRAM

22. Water Code section 13267(b)(1) provides:

In conducting an investigation specified in subdivision (a), the regional board may require that any person who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge waste within its region, or any citizen or domiciliary, or political agency or entity of this state who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge, waste outside of its region that could affect the quality of waters within its region shall furnish, under penalty of perjury, technical or monitoring program reports which the regional board requires. The burden, including costs, of these reports shall bear a reasonable relationship to the need for the report and the benefits to be obtained from the reports. In requiring those reports, the regional board shall provide the person with a written explanation with regard to the need for the reports, and shall identify the evidence that supports requiring that person to provide the reports. (2) When requested by the person furnishing a report, the portions of a report that might disclose trade secrets or secret processes may not be made available for inspection by the public but shall be made available to governmental agencies for use in making studies. However, these portions of a report shall be available for use by the state or any state agency in judicial review or enforcement proceedings involving the person furnishing the report.

23. Technical reports are necessary to evaluate Discharger compliance with the terms and conditions of this Order and to ensure that applicable water quality objectives are in fact being met. Consistent with Water Code section 13267, this Order requires the implementation of a monitoring and reporting program (MRP) that is designed to determine the effects of a Discharger's nonpoint source activity on water quality, to verify the effectiveness of management practices designed to comply with applicable water quality objectives, to verify the adequacy and effectiveness of the Order's conditions, and to evaluate Discharger compliance with the terms and conditions of the Order. Additional information regarding the justification for monitoring and technical reports under this Order is included in the Information Sheet.

CALIFORNIA ENVIRONMENTAL QUALITY ACT

24. The Central Valley Water Board, acting as the lead agency for this project under the California Environmental Quality Act (CEQA)(Public Resources Code, section 21000 et seq.), conducted an Initial Study in 2002 in accordance with California Code of Regulations, title 14, section 15063. The Central Valley water Board adopted a negative declaration pursuant to CEQA on 30 January 2003 when it issued a Waiver of Waste Discharge Requirements Order No. R5-2003-0005.

25. This action to create a General Order does not require preparation of a subsequent or supplemental environmental document pursuant to the California Code of Regulations, title 14, sections 15162 or 15163. There is no evidence to indicate that substantial changes are proposed for the project, that substantial changes have occurred with respect to the circumstances of the project, or that there is new information of substantial importance with respect to the project, as described in section 15162, subdivision (a). Therefore, the environmental impacts from issuance of this Order have already been adequately assessed in accordance with CEQA (title 14, section 15061(b)(3)).

ANTIDegradation

26. State Water Board Resolution 68-16 ("Statement of Policy with Respect to Maintenance of High Quality Waters in California") requires the Central Valley Water Board to regulate discharges of waste to waters of the state to achieve the highest water quality consistent with maximum benefit to the people of the state. It further requires that the Discharger meet waste discharge requirements which will result in the best practicable treatment or control of the discharge necessary to assure that pollution or nuisance will not occur and that the highest water quality consistent with maximum benefit to the people of the state will be maintained. This Order is consistent with Resolution 68-16 because it requires compliance with applicable water quality control plans, prohibits the creation of pollution or nuisance, and sets forth conditions that require Dischargers to implement additional management practices (beyond those required in the FPR and U.S. Forest Service BMP guidance manuals) to assure protection of beneficial uses of waters of the state and maintain the highest water quality consistent with maximum benefit to the people of the state.
27. This Order is in the public interest and is protective of water quality as described below:
- a) Timberland management activities in California are primarily regulated by other agencies, including CAL FIRE and the U.S. Forest Service. The Central Valley Water Board does not approve timberland management activities, but it does have authority to require compliance with the Water Code.
 - b) Without this Order, timberland management activities would continue under authority of those other agencies, but such activities may not be subject to appropriate conditions protective of water quality.
 - c) Without this Order, the Central Valley Water Board could regulate a smaller percentage of timberland management activities in the Region individually, but once enrolled in this Order, timberland management activities are subject to enforceable conditions.
 - d) This Order contains conditions that require compliance with the Basin Plans, including applicable water quality objectives and prohibitions.
 - e) This Order contains conditions requiring compliance with a MRP that will assist in the protection of water quality through assessment and verification of the adequacy and effectiveness of Order conditions and management practices.
 - f) Compliance with the conditions of this Order will ensure enrolled Projects are protective of water quality.
 - g) This Order does not approve of or authorize a condition of pollution or nuisance.
 - h) This Order's conditions are subject to enforcement pursuant to Water Code section 13350.
 - i) Given available Central Valley Water Board staff resources, this Order is an effective mechanism to regulate a large number of potential discharges and allows staff to maximize field presence.
 - j) This Order allows staff to continue to participate in the review of proposed timberland management Projects, providing staff the opportunity to require implementation of

protective measures beyond those required by CAL FIRE and the U.S. Forest Service for the most critical timber operations.

- k) This Order allows for inclusion of staff recommendations developed during review of Projects.
- l) This Order allows for watercourse crossing reconstruction on existing crossings on timber production zoned land outside of a Plan or EM Notice that might otherwise go uncorrected for years.
- m) The inclusion of a MRP allows for timely application of management practices to protect waters of the state once failures resulting in discharges or potential failures that may result in discharges have been identified.

GENERAL FINDINGS

- 28. Any person seeking coverage under this Order shall file the applicable eligibility document(s) with the Central Valley Water Board as described herein. Where this Order requires the submittal of a NOI, the Discharger shall complete and submit the NOI form available at: http://www.waterboards.ca.gov/centralvalley/water_issues/forest_activities/index.shtml Dischargers shall file any additional eligibility documents required by the Executive Officer.
- 29. An annual fee for enrollment under this Order is not required pursuant to Assembly Bill 1492, codified as Public Resources Code section 4629.6(c), which states that no currently authorized or required fees shall be charged by the Regional Water Boards for activities or costs associated with the review of Projects or permits necessary to conduct timberland management activities.
- 30. This Order does not apply to discharges requiring a National Pollutant Discharge Elimination System (NPDES) permit under the Clean Water Act, including silvicultural point sources as defined in 40 CFR 122.27.
- 31. This Order does not authorize any act that results in the taking of threatened or endangered species or any act that is now prohibited, or becomes prohibited in the future, under either the California Endangered Species Act (Fish and Game Code §§ 2050 to 2097) or the Federal Endangered Species Act (16 U.S.C.A. §§ 1531 to 1544). If a “take” will result from any action authorized under this Order, the Discharger shall obtain appropriate take authorization prior to construction or operation of the Project. The Discharger shall be responsible for meeting all requirements of the applicable Endangered Species Acts.
- 32. Section 106.3 of the Water Code establishes the policy of the State of California that every human being has the right to safe, clean, affordable, and accessible water adequate for human consumption, cooking, and sanitary purposes. This Order promotes that policy by requiring Dischargers to implement best management practices designed to achieve applicable water quality objectives developed to protect municipal and domestic water supplies.

PUBLIC NOTICE & BOARD MEETING

- 33. The Central Valley Water Board has notified interested agencies and persons of its intent to issue this Order for discharges of waste from timberland management activities on non-federal and federal lands, and has provided them an opportunity to participate in public workshops and to submit written comments.
- 34. The Central Valley Water Board conducted a public hearing on 9 June 2017, and all comments,

testimony, and evidence pertaining to this Order were heard and considered.

35. This Order is effective upon adoption by the Central Valley Water Board on 9 June 2017 and remains in effect unless rescinded or revised by the Central Valley Water Board.

IT IS HEREBY ORDERED that all Dischargers meeting the criteria and conditions for coverage under this Order shall comply with the following:

I. Prohibitions

1. The Discharger shall not create a condition of pollution, contamination, or nuisance, as defined by Water Code section 13050.
2. The Discharger shall not contribute to an exceedance of any applicable water quality objectives (whether numeric or narrative) or of any applicable state or federal water quality criteria.
3. The discharge of any waste not specifically regulated by this Order is prohibited unless (a) the Discharger complies with Water Code section 13260(a) and the Central Valley Water Board either issues WDRs pursuant to Water Code section 13263 or an individual waiver pursuant to Water Code section 13269; or (b) the discharge does not create or threaten a condition of pollution or nuisance and the timeframes in Water Code section 13264(a) have lapsed.
4. The Discharger shall not cause any point source discharge of waste to a water of the United States unless such discharge is in compliance with a duly-approved NDPES permit.

II. Provisions

1. Dischargers covered under this Order shall comply with the terms and conditions contained in this Order.
2. The Discharger shall conduct timberland management activities in accordance with (a) the CAL FIRE-approved Plan, CAL FIRE-accepted Exemption (EX) or EM Notice, or CDFW-executed MATO or LSAA, in the case of timberland management activities on non-federal timberlands; or (b) in accordance with the final environmental document/decision document prepared pursuant to the National Environmental Policy Act (NEPA) and valid third party contracts, in the case of timberland management activities on federal lands managed by the U.S. Forest Service.
3. The Discharger shall allow Central Valley Water Board staff reasonable access onto property where activities covered by this Order occur whenever requested by Central Valley Water Board staff for the purpose of performing inspections and conducting monitoring, including; sample collection, measuring, and photographing/taping to determine compliance with Order conditions. Such inspections and monitoring shall be conducted consistent with Water Code section 13267(c), Public Resources Code section 4604(b)(1), and other applicable law.
4. The Discharger shall incorporate management practices and/or water quality protective measures resulting from Central Valley Water Board staff participation in CAL FIRE's Review Team process, the Federal review process, the CDFW review process, and/or

during Project enrollment that arise from changed conditions/new information into the Project document(s) and/or NOI addendum. The Discharger may propose alternative management practices if it can demonstrate to the satisfaction of the Executive Officer that the proposed alternatives will meet water quality requirements. Alternative management practices proposed by a Discharger must comply with the Prohibitions in this Order. Until such alternative management practices receive written approval from the Executive Officer, the Discharger shall adhere to those management practices provided by Regional Water Board staff.

5. The Discharger shall maintain a copy of this Order at its primary place of business. The Discharger's designee/agents shall be provided a copy and be familiar with the contents and requirements of this Order.
6. Dischargers shall comply with the attached Monitoring and Reporting Program, Order No. R5-2017-0061, and future revisions thereto or with an individual monitoring and reporting program as specified by the Central Valley Water Board or the Executive Officer.
7. The Discharger shall comply with all applicable requirements and prohibitions of the applicable Basin Plan, including any amendments adopted by the Central Valley Water Board and approved by the State Water Board, and with all applicable policies adopted by the State Water Board.
8. The Executive Officer may require the Discharger to submit additional technical reports pursuant to Water Code section 13267.
9. Pursuant to Water Code section 13263, this Order shall not create a vested right to discharge waste to waters of the state, and all such discharges of waste shall be considered a privilege. Accordingly, the regulatory coverage provided by this Order: (a) may be modified or terminated at any time, either in its entirety or as to any individual Dischargers; (b) does not permit an illegal activity; (c) does not preclude the need for permits which may be required by federal, local, or other governmental agencies; and (d) does not preclude the Central Valley Water Board from administering enforcement remedies (including civil liability) pursuant to the Water Code.

III. Criteria and Condition Specifications by Category

Table 1 summarizes the enrollment categories and corresponding requirements under this Order. The Central Valley Water Board may determine that a Discharger's otherwise eligible Project does not qualify for enrollment under the requested category, requires enrollment in a different category, or that the Project does not qualify for enrollment under the Order at all. If the Central Valley Water Board makes such a determination, it will provide prompt notice to the Discharger that enrollment in a different category is required or that enrollment under the Order is denied.

Eligibility under Category 1, 2A, or 2B assumes Discharger compliance with applicable criteria/conditions under California Code of Regulations, title 14, section 1038 (for Notices of Exemption) or title 14, section 1052 et seq. (for Emergency Notices). During a declared State of Emergency, an Executive Order may authorize CAL FIRE to suspend some or all of these criteria. In the event of such a suspension, the Central Valley Water Board hereby retains for itself the discretion to require the Discharger to meet otherwise applicable criteria under title 14, section

Order No. R5-2017-0061
Waste Discharge Requirements General Order for
Discharges Related to Timberland Management Activities on Non-Federal and Federal Lands

1038 and/or section 1052 et seq. – whether suspended by CAL FIRE or not – for eligibility under Category 1, 2A, or 2B. The Central Valley Water Board will provide prompt notice to affected Dischargers that it intends to exercise this discretion, if applicable.

Table 1. Summary of Timberland Management Activity Categories and Requirements¹

¹This table only provides an abbreviated summary of the criteria, conditions, and monitoring for categories; refer to category specific criteria/conditions and Attachments B and C for complete information.

²California Code of Regulations, title 14, section (as cited in table)

³Excludes the cutting and removal of timber and other solids wood forest products for: Christmas trees, structure protection (150 and 300 feet), and woody debris and slash removal (see Attachment A definition of “timber land management activities”).

⁴THP – timber harvesting plan, PTHP – program timber harvesting plan, NTMP – non-industrial timber management plan

A. Certification of Notice of Non-Applicability on Federal and Non-Federal Lands

Enrolment under this Order is not required for Projects that (1) do not contain watercourses or wet meadows and other wet areas within or directly adjacent to the Project area AND (2) do not pose a threat to water quality or the beneficial uses of waters of the state (appurtenant roads to be considered in evaluation). **No later than ten days prior** to the startup of operations, Project proponents must submit a *Certification of Notice of Non-Applicability* signed by a duly authorized agent to the Central Valley Water Board certifying that the Project meets the criteria above.

B. Category 1: Low Threat Exemption and Emergency Notices on Non-Federal Lands

1. Eligibility Criteria: Activities that may proceed under Category 1 are those:

- a) Conducted under a CAL FIRE-accepted Exemption pursuant to California Code of Regulations, title 14, section 1038 (excludes the cutting and removal of timber and other solid wood forest products for Christmas trees, structure protection (150 and 300 feet), and woody debris and slash removal), including but not limited to:
 - i. Harvesting dead, dying or diseased trees;
 - ii. Substantially damaged timberland unmerchantable as sawlog;
 - iii. Forest fire prevention;
 - iv. Drought mortality.

-OR-

- b) Conducted under a CAL FIRE accepted Emergency Notice pursuant to the conditions listed in California Code of Regulations, title 14, sections 1052-1052.5 (**substantially damaged timberlands from fire (fire salvage) excluded – see Categories 2A and 2B**), including, but not limited to:
 - i. Harvesting dead or dying (fire salvage excluded);
 - ii. Fuel hazard reduction;
 - iii. Sudden Oak Death disease.

-OR-

- c) Conducted under a CAL FIRE-accepted Conversion Exemption pursuant to California Code of Regulations, title 14, section 1104.1, including but not limited to:
 - i. Less than 3 acres for the purpose of fuels reduction and/or construction activities;
 - ii. Public agency, public and private utility right-of-way.

2. Enrollment: Projects meeting the eligibility criteria listed above for Category 1 are *automatically* enrolled under the Order and must comply with the conditions listed below.

3. Conditions:

- a) The Discharger shall submit a copy of the CAL FIRE-accepted Exemption or Emergency Notice if requested by the Central Valley Water Board.
- b) For Conversion Exemptions that will be for the purpose of residential or commercial development, the Discharger must obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit), State Water Board Order No. 2009-0009-DWQ prior to construction activities that disturb one or

more acres or activities that disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres.

- c) For Exemption Notices (typically less than 3 acre conversions), for cannabis cultivation, the Discharger may need to obtain coverage under the General Permit for Discharges of Waste Associated with Medicinal Cannabis Cultivation Activities, Order No. R5-2015-0113 or any applicable Order that the State Water Board may adopt in the future to regulate cannabis cultivation.
- d) The Discharger shall comply with all conditions specified in Attachment B, Monitoring and Reporting Program, Order No. R5-2017-0061, including notifying the Central Valley Water Board whenever: (1) Agency Monitoring detects a violation of the California Forest Practice Rules that relate to water quality protection measures; or (2) management measures fail and result in a discharge, or the potential to discharge, waste to waters of the state.

C. Categories 2A and 2B: Emergency Notices Related to Fire Salvage on Non-Federal Lands

Category 2A (Industrial Fire Salvage and Non-Industrial Fire Salvage With No Residence)

1. Eligibility Criteria: Activities that may proceed under Category 2A are those conducted under a CAL FIRE-accepted Emergency Notice pursuant to the conditions listed in California Code of Regulations, title 14, section 1052.1 for:
 - a) Fire Salvage, for **industrial** timberlands.

-OR-

 - b) Fire salvage, for **non-industrial** timberlands when a **residence is not within the Emergency area**.
2. Enrollment: Projects meeting the eligibility criteria listed above for Category 2A are *automatically* enrolled under the Order when the Discharger submits a copy of the Emergency Notice accepted by CAL FIRE to the Central Valley Water Board.
3. Conditions: Dischargers conducting timberland management activities that meet the eligibility criteria for Category 2A listed above must comply with all of the following conditions, as applicable:
 - a) The Central Valley Water Board must receive a **complete NOI for Category 2A and Erosion Site Table** (see Table 1 in Category 2A NOI) **within 30 days of Emergency Notice acceptance by CAL FIRE**, signed by the timberland/timber owner, certifying that the activities meet the criteria and conditions for enrollment in Order Category 2A. The Discharger shall provide timely amendments of the *Erosion Site Table* throughout Emergency Notice enrollment to the Central Valley Water Board when conditions or management objectives have changed.
 - b) **IF pesticides will be applied following the fire**, THEN the Discharger shall **EITHER**:
 - i. **Submit a Post-Fire Management and Reforestation Plan** (PFP; see Attachment C) **to the Central Valley Water Board for approval prior to application of pesticides** within the post-fire management and reforestation plan area. The PFP shall include measures that will provide equal to or better protection than the conditions under Part III.C.3.b.ii below. **The Executive Officer's written approval of the PFP is required**

before implementation of the PFP can satisfy the requirements of this Part III.C.3.b.; approval or denial of the PFP shall be provided within 30 days of PFP submittal.

-OR-

- ii. Meet **ALL** of the following conditions:
1. The Discharger shall **comply with the following pesticide no-spray buffers** (unless more stringent buffers are dictated by application labels/guidance, statute, or regulation):
 - a. For Class I and II watercourses, the applicable WLPZ widths specified in the California Code of Regulations, title 14, section 936.5;
 - b. For Class III and IV watercourses, a minimum of 25 feet where sideslope steepness is less than 30%, and a minimum of 50 feet where sideslope steepness is 30% or greater.
 2. Where management activities are planned on a burned area with **slopes greater than 30%, a minimum of 50% average effective groundcover** (see Attachment C for guidance) **is required to be documented prior to pesticide application**. Documentation shall be provided to the Central Valley Water Board in the pesticide notification **30 days prior to application**.
 3. The Discharger shall **notify** the Central Valley Water Board **in writing at least 30 days prior to any proposed application of pesticides**. The notification does *not* need to include information on hack and squirt or individual stump applications. The written notification shall include the pesticide product(s) to be applied, the proposed date(s) of application, the method(s) of application, the area(s) of application (CAL FIRE Notice number and Township/Range/Section), a description of measures that will be employed to assure compliance with the applicable Basin Plan, and documentation of 50% or greater effective groundcover (as applicable). Subsequent changes to the proposal must be submitted in writing no less than 48 hours prior to pesticide application.
- c) The Discharger shall meet the following conditions unless Central Valley Water Board staff has been consulted and agrees to alternative protection measures as warranted by site-specific conditions (see Part II.4.) and/or as requested by the Discharger when such protection is inconsistent with land management objectives:
- i. A minimum Equipment Limitation Zone for any and all Class III and Class IV watercourses of at minimum 25 feet where sideslope steepness is less than 30%, and at a minimum 50 feet where sideslope steepness is 30% or greater.
 - ii. Culverts or other permanent in-stream structures at watercourse crossings in which water is flowing at the time of installation shall be installed with their necessary protective structures (i.e. armoring, wing walls, diversion prevention measures) concurrently with fill placement. Additionally, installation shall utilize methods to temporarily isolate or divert stream flows from the installation area while maintaining bypass flows or as specified in an executed MATO or LSAA from CDFW.

Order No. R5-2017-0061
Waste Discharge Requirements General Order for
Discharges Related to Timberland Management Activities on Non-Federal and Federal Lands

- iii. Any and all riparian vegetation, other than commercial species, that is found along watercourses and lakes or that is found within or bordering wet meadows and other wet areas shall be retained and protected to the extent feasible during timberland management activities.
- d) *IF*:
 - i. Activities are undertaken pursuant to a CAL FIRE Notice on which Central Valley Water Board staff has not consulted; *AND*
 - ii. In the CAL FIRE Notice or *NOI* the Discharger proposes *EITHER*
 - 1. Timberland management activities on soils with extreme erosion hazard rating (post-fire), known landslides, and/or unstable areas *that have the potential to impact water quality, OR*
 - 2. Any watercourse crossing that involves the placement of more than 500 cubic yards or 25 vertical feet of fill material,

THEN additional field review must be conducted or directed by a licensed civil engineer or licensed geologist prior to the startup of operations to determine if activities conducted under the CAL FIRE Notice could cause or exacerbate the potential for soil erosion or mass soil movement. The CAL FIRE Notice or *NOI* addendum must incorporate all recommendations made by said licensed engineer or geologist for the specific site conditions listed above.
- e) The Discharger shall submit copies of any CDFW **notification(s)** for watercourse crossing work within the burn area associated with a MATO or LSAA **within 30 days of filing the notification with CDFW.**
- f) For a CAL FIRE Notice where aquatic or wetland habitat for rare, threatened or endangered species is identified and where timberland management activities may impact such habitat, additional field review shall be conducted prior to the startup of operations by a scientist, with a bachelor's or advanced degree in biological sciences and experience in aquatic systems, and/or a qualified professional trained in biological assessments to determine if the Notice could adversely affect such species or their habitat. The CAL FIRE Notice or *NOI* addendum must incorporate all project modifications and mitigation measures recommended by the scientist/professional to avoid impacts to rare, threatened, or endangered species.
- g) If mine tailings and/or associated waste rock will be disturbed or used as construction materials as part of timberland management activities, the Discharger shall contact Central Valley Water Board staff to discuss proper characterization of the materials to ensure prior to such disturbance or use there will be no adverse impacts to water quality and beneficial uses.
- h) The Discharger shall comply with all the conditions specified in Attachment B, Monitoring and Reporting Program, Order No. R5-2017-0061. Category 2A will be subject to agency, implementation, forensic, and effectiveness monitoring; an annual operations summary; and updates to the *Erosion Site Table* and PFP (as applicable).
- i) The Discharger shall seek termination of coverage under the Order in accordance with Part V.A., Termination of Coverage.

Category 2B (Non-Industrial Fire Salvage with Residence)

4. Eligibility Criteria: To be eligible for enrollment under Category 2B, activities must be:
 - a) Conducted under a CAL FIRE-accepted Emergency Notice pursuant to the conditions listed in California Code of Regulations, title 14, section 1052.1 for **fire salvage**, when a **non-industrial** timberland owner's **residence is within the Emergency area**.
5. Enrollment: Projects that meet the Category 2B eligibility criteria shall enroll under this Order by submitting the following **prior to operations commencing**: (1) a copy of the CAL FIRE-accepted Notice, and (2) a single *NOI for Categories 2B, 3A, and 3B*, signed by the timberland/timber owner, certifying that the activities meet the criteria and conditions for enrollment in Order Category 2B. **Central Valley Water Board staff will review and respond to the NOI within 15 days of receipt; activities may commence in compliance with this Order once the Central Valley Water Board has issued a Notice of Applicability (NOA) to the Discharger indicating that the NOI is complete.**
6. Conditions: Dischargers conducting timberland management activities under Category 2B must comply with the following conditions, as applicable:
 - a) The Discharger must meet the following conditions unless Central Valley Water Board staff has been consulted and agrees to alternative protection measures as warranted by site-specific conditions (see Part II.4.) and/or as requested by the Discharger when such protection is inconsistent with land management objectives:
 - i. A minimum Equipment Limitation Zone for any and all Class III and Class IV watercourses of at minimum 25 feet where sideslope steepness is less than 30%, and at a minimum 50 feet where sideslope steepness is 30% or greater.
 - ii. Culverts or other permanent in-stream structures at watercourse crossings in which water is flowing at the time of installation shall be installed with their necessary protective structures (i.e. armoring, wing walls, diversion prevention measures) concurrently with fill placement. Additionally, installation shall utilize methods to temporarily isolate or divert stream flows from the installation area while maintaining bypass flows or as specified in an executed MATO or LSAA from CDFW.
 - iii. Any and all riparian vegetation, other than commercial species, that is found along watercourses and lakes or that is found within or bordering wet meadows and other wet areas shall be retained and protected to the extent feasible during timberland management activities.
 - b) *IF*:
 - i. Activities are undertaken pursuant to a CAL FIRE Notice on which Central Valley Water Board staff has not consulted; *AND*
 - ii. The CAL FIRE Notice proposes *EITHER*
 1. Timberland management activities on soils with extreme erosion hazard rating (post-fire), known landslides, and/or unstable areas *that have the potential to impact water quality*, *OR*
 2. Any watercourse crossing that involves the placement of more than 500 cubic yards or 25 vertical feet of fill material,

THEN additional field review must be conducted or directed by a licensed civil engineer or registered geologist prior to the startup of operations to determine if the CAL FIRE Notice could cause or exacerbate the potential for soil erosion or mass soil movement. The CAL FIRE Notice or NOI addendum must incorporate all recommendations made by said licensed engineer or geologist for the specific site conditions listed above.

- c) The Discharger shall submit copies of any CDFW **notification(s)** for watercourse crossing work within the burn area associated with a MATO or LSAA **within 30 days of filing the notification with CDFW.**
- d) For a CAL FIRE Notice where aquatic or wetland habitat for rare, threatened or endangered species is identified and where timberland management activities may impact such habitat, additional field review shall be conducted prior to the startup of operations by a scientist, with a bachelor's or advanced degree in biological sciences and experience in aquatic systems, and/or a qualified professional trained in biological assessments to determine if the Notice could adversely affect such species or their habitat. The CAL FIRE Notice or NOI addendum must incorporate all project modifications and mitigation measures recommended by the scientist/professional to avoid impacts to rare, threatened, or endangered species.
- e) The Discharger shall **notify** the Central Valley Water Board in writing at least **15 days prior to any proposed application of pesticides**; the notification does *not* need to include information on hack and squirt or individual stump applications. The written notification shall include the pesticide product(s) to be applied, the proposed date(s) of application, the method(s) of application, the area(s) of application (Notice number and Township/Range/Section), and a description of measures that will be employed to assure compliance with the applicable Basin Plan. Subsequent changes to the proposal must be submitted in writing no less than 48 hours prior to pesticide application.
- f) If mine tailings and/or associated waste rock will be disturbed or used as construction materials as part of timberland management activities, the Discharger shall contact Central Valley Water Board staff to discuss proper characterization of the materials to ensure prior to such disturbance or use there will be no adverse impacts to water quality and beneficial uses.
- g) The Discharger shall comply with all the conditions specified in Attachment B, Monitoring and Reporting Program, Order No. R5-2017-0061. Category 2B will be subject to agency and effectiveness monitoring.
- h) The Discharger shall seek termination of coverage under the Order in accordance with Part V.A., Termination of Coverage.

D. Categories 3A and 3B: Plans that Receive Discretionary Approval from CAL FIRE on Non-Federal Lands

Category 3A (Plans With a Higher Threat to Water Quality)

1. Eligibility Criteria: To be enrolled under Category 3A, activities must meet the following criteria:
 - a) The covered activities are timberland management activities on non-federal lands that receive discretionary approval from CAL FIRE, including but not limited to:
 - i. Timber harvesting plans;
 - ii. Program timber harvesting plans;
 - iii. Working forest management plans;
 - iv. Non-industrial timber management plans;
 - v. Other Plans.
 - b) The approved Plan documents or *NOI* addendum include additional management practices and/or water quality protective measures (beyond the requirements of the current Forest Practice Rules) identified during the CAL FIRE Review Team process and/or during Project enrollment (i.e. changed conditions/new information)(see Part II.4.).

Category 3B (Plans With a Lower Threat to Water Quality)

2. Eligibility Criteria: To be enrolled under Category 3B, activities must meet the following criteria:
 - a) The covered activities are timberland management activities on non-federal lands that receive discretionary approval from CAL FIRE, including but not limited to:
 - i. Modified timber harvesting plans pursuant to California Code of Regulations, title 14, sections 1051-1051.7;
 - OR-
 - ii. Timber harvesting plans, program timber harvesting plans, working forest management plans, non-industrial timber management plans, and other Plans that comply with all of the following criteria:
 - 1) No timberland management activities (i.e. watercourse crossing, road, and/or landing reconstruction/construction/abandonment) within the standard width of a WLPZ or ELZ (as defined in CCR, title 14, section 936.5), wet meadows and other wet areas, *except* for: 1) the use and maintenance (not reconstruction) of *existing* stable roads and associated watercourse crossings in good working condition that *will not result in a significant sediment discharge*, and 2) the installation and use of *dry* Class III watercourse tractor crossings;
 - 2) No significant existing or potential erosion sites;
 - 3) No ground-based equipment on high or extreme Erosion Hazard Rating (EHR) that may result in a significant sediment discharge;
 - 4) No timberland management activities conducted in-lieu of the standard WLPZ practices contained in the Forest Practice Rules.
 - b) The approved Plan documents or *NOI* addendum include additional management practices and/or water quality protective measures (beyond the requirements of the current Forest

Practice Rules) identified during the CAL FIRE Review Team process and/or during Project enrollment (i.e. as a result of changed conditions/new information) (see Part II.4.).

3. **Enrollment:** Dischargers conducting activities that meet the criteria of Category 3A or 3B shall enroll under this Order as follows:
 - a) The Discharger shall submit a copy of the CAL FIRE approved Plan if requested by Central Valley Water Board staff. The Plan must incorporate additional or modified management practices and/or water quality protective measures resulting from the CAL FIRE Review Team process.
 - b) The Discharger shall submit a single completed *NOI for Categories 2B, 3A, and 3B* **prior to operations commencing**, signed by the timberland/timber owner, certifying that the activities meet the criteria and conditions contained in either Order Category 3A or 3B. **Central Valley Water Board staff will review and respond to the NOI within 15 days of receipt; activities may commence once the Central Valley Water Board has issued a NOA to the Discharger indicating that their NOI is complete.**
4. **Conditions:** Dischargers conducting timberland management activities under Category 3A or 3B must comply with the following conditions, as applicable:
 - a) For CAL FIRE-approved **NTMPs** that do not incorporate the FPR “Road Rules” (Cal. Code Regs., tit. 14, art. 12) which became effective January 2015, the Discharger must submit an inventory of significant existing or potential erosion sites, as detailed in California Code of Regulations, Title 14, section 923.1(e), to the Central Valley Water Board **at least 15 days prior to commencement of timberland management activities**. The erosion inventory shall: (1) be prepared by a RPF; (2) encompass the NTO area and appurtenant roads at a minimum; and (3) include an implementation schedule for treatment of erosion sites.
 - b) *IF:*
 - i. Activities are undertaken pursuant to a Plan on which Central Valley Water Board staff has not consulted; *AND*
 - ii. In the Plan the Discharger proposes *EITHER*
 1. Timberland management activities on soils with extreme erosion hazard rating, known landslides, and/or unstable areas *that have the potential to impact water quality, OR*
 2. Any watercourse crossing that involves the placement of more than 500 cubic yards or 25 vertical feet of fill material,

THEN additional field review must be conducted or directed by a licensed civil engineer or registered geologist prior to the startup of operations to determine if activities conducted under the Plan could cause or exacerbate the potential for soil erosion or mass soil movement. The Plan or NOI addendum must incorporate all recommendations made by said licensed engineer or geologist for the specific site conditions listed above.
 - c) Culverts or other permanent in-stream structures at watercourse crossings in which water is flowing at the time of installation shall be installed with their necessary protective structures (e.g. armoring, wing walls, diversion prevention measures) concurrently with fill placement. Additionally, installation shall utilize methods to temporarily isolate or divert stream flows

from the installation area while maintaining bypass flows or as specified in an executed MATO or LSAA from CDFW.

- d) For Plans that will be for the purpose of cannabis cultivation, the Discharger may need to obtain coverage under the General Permit for Discharges of Waste Associated with Medicinal Cannabis Cultivation Activities, Order No. R5-2015-0113 or any applicable Order that the State Water Board may adopt in the future to regulate cannabis cultivation.
- e) If mine tailings and/or associated waste rock will be disturbed or used as construction materials as part of timberland management activities, the Discharger shall contact Central Valley Water Board staff to discuss proper characterization of the materials to ensure prior to such disturbance or use there will be no adverse impacts to water quality and beneficial uses.
- f) The Discharger shall comply with all the conditions specified in Attachment B, Monitoring and Reporting Program, Order No. R5-2017-0061.
- g) The Discharger shall **notify** the Central Valley Water Board in writing at least **15 days prior to any proposed application of pesticides**; the notification does *not* need to include information on hack and squirt or individual stump applications. The written notification shall include the pesticide product(s) to be applied, the proposed date(s) of application, the method(s) of application, the area(s) of application (Plan number and Township/Range/Section), and a description of measures that will be employed to assure compliance with the applicable Basin Plan. Subsequent changes to the proposal must be submitted in writing no less than 48 hours prior to pesticide application.
- h) The Discharger shall seek termination of coverage under the Order in accordance with Part V.A., Termination of Coverage.

For **non-expiring Plans** (such as NTMPs and WFMPs), the Discharger has the following enrollment/termination options: (1) enroll and terminate with each entry (NTO/Notice), or (2) remain continuously enrolled for the duration of the Plan with an additional requirement to certify in the annual report when discharges associated with timberland management activities for each NTO/Notice area have ceased prior to cessation of monitoring for that entry (see Attachment B, Part V.B.).

E. Category 4: Watercourse Crossing Work Conducted under a MATO or LSAA Outside of a Plan / Emergency Notice on Non-Federal Lands

1. Eligibility Criteria: To be enrolled under Category 4, activities must meet the following criteria:
 - a) The activities are conducted under a CDFW-executed MATO or LSAA on timber production zoned land pursuant to the conditions listed in Fish and Game Code sections 1600-1616 for replacement/reconstruction of *existing* watercourse crossings outside of a CAL FIRE accepted EM Notice or approved Plan.
 - b) A *NOI* is submitted on a project-by-project basis (i.e. no long-term enrollment of a MATO).
 - c) The CDFW notification/sub-notification or *NOI* incorporates any water quality protective measures identified during review of the project (see Part II.4.).
2. Enrollment: Dischargers conducting timberland management activities under Category 4 shall enroll under this Order by complying with the following:
 - a) Submit a copy of the CDFW notification to Central Valley Water Board staff concurrent with submittal to CDFW; at a minimum, **the notification must be submitted at least 30 days prior to work commencing**. The scope of the notification shall encompass all information required by the applicable MATO or CDFW Form FG2023 for an individual LSAA. The Discharger shall notify the Central Valley Water Board if CDFW declares the notification incomplete or requests additional information.
 - b) Submit a *NOI for Category 4 at least 30 days prior to operations commencing* signed by the timberland/timber owner certifying that the activities meet the criteria and conditions required in Category 4. Activities may commence once the Central Valley Water Board has issued a NOA to the Discharger indicating that their *NOI* is complete
3. Conditions: Dischargers conducting timberland management activities enrolled under Category 4 shall comply with the following conditions:
 - a) Comply with all water quality management practices identified in the CDFW-executed MATO or LSAA and shall provide any amendments/project changes to the Central Valley Water Board for review in a timely manner. The Discharger shall submit a copy of the LSAA and appropriate CEQA documentation to the Central Valley Water Board. A MATO shall only be submitted when requested.
 - b) Notify Central Valley Water Board staff of any scheduled site visit with CDFW staff; Central Valley Water Board staff retains the discretion to require a site visit in accordance with Part II.3.
 - c) The Discharger shall comply with all the requirements specified in Attachment B, Monitoring and Reporting Program, Order No. R5-2017-0061. Category 4 will be subject to Implementation, Forensic, and Effectiveness Monitoring.
 - d) The Discharger shall seek termination of coverage under the Order in accordance with Part V.A., Termination of Coverage.

F. Categories 5A and 5B: Timberland Management Activities on Federal Lands Managed by the U.S. Forest Service

Category 5A (Post-Fire Activities)

1. Eligibility Criteria: To be enrolled under Category 5A, activities must meet the following criteria:
 - a) Post-fire timberland management activities (e.g. fire salvage and post-fire hazard tree removal for commercial purposes) that have the potential to impact water quality, excluding emergency work conducted during or immediately (within 60 days) after the fire, on federal lands where the U.S. Forest Service has conducted the required or appropriate level of multi-disciplinary review of the timber harvesting proposal and has specified best management practices and additional control measures as needed, in order to assure compliance with the applicable Basin Plan.
 - b) The U.S. Forest Service has provided Project description documents to the Central Valley Water Board and allowed time for adequate review and comment. These documents include: 1) the NEPA scoping document; and 2) the NEPA draft environmental analysis, which will include site specific information that identifies Significant Existing or Potential Erosion Sites (SEPES) and priority road improvement locations, as well as, proposed treatments and schedule for those sites to improve or protect water quality. Supplemental project documents may also be provided that contain design specifications, management practices, and/or water quality protection measures. Any additional management practices and/or water quality protective measures identified by Central Valley Water Board staff during the scoping period and/or enrollment under this Order will have been discussed with U.S. Forest Service personnel and incorporated into an addendum to the *NOI* (see Part II.4.), including a timeline and checklist for completion. The project will remain enrolled until all identified management practices and/or water quality protective measures have been completed.
 - c) The U.S. Forest Service has conducted a cumulative watershed effects (CWEs) analysis, where required or appropriate, and included specific measures needed to reduce the potential for CWEs in order to assure compliance with the applicable Basin Plan.
2. Enrollment: Projects meeting the Category 5A eligibility criteria are *automatically* enrolled under this Order when the U.S. Forest Service submits copies of final project specific decision/NEPA documents that contain information documenting compliance with the eligibility criteria in Part III.F.1.

The U.S. Forest Service shall include all specific on-the-ground prescriptions designed to adhere to the BMPs described in *National Best Management Practices for Water Quality Management on National Forest System Lands, Volume 1: National Core BMP Technical Guide*, and all additional management practices and/or water quality protective measures identified by Central Valley Water Board staff (See Part II.4.) within contracts, permits, agreements, and other instruments used to direct the activities of contractors, permittees, U.S. Forest Service personnel, volunteers, and any other third party.

3. Conditions: Dischargers conducting timberland management activities enrolled under Category 5A must comply with the following conditions, as applicable:
 - a) The U.S. Forest Service shall submit **a complete *NOI for Category 5A and Erosion Site Table*** (see Table 1 in Category 5A NOI) **within 30 days of startup of operations**, signed by

a duly authorized representative, certifying that the activities meet the criteria and conditions for enrollment in Order Category 5A. The U.S. Forest Service shall provide timely amendments of the *Erosion Site Table* to the Central Valley Water Board throughout Project enrollment when conditions or management objectives have changed.

- b) For Projects that were included in a Burned Area Emergency Response (BAER) evaluation, the U.S. Forest Service may submit the BAER report in-lieu of the *Erosion Site Table*, if the report includes all the required information (including implementation schedule) and the Discharger intends to implement the BAER recommendations that have a nexus with water quality protection. If the BAER report is incomplete, and does not contain all of the information required in the *Erosion Site Table*, the U.S. Forest Service may submit an addendum to the BAER report with missing or incomplete information.
- c) **IF pesticides will be applied following the fire**, THEN the Discharger shall **EITHER**:
- i. **Submit a Post-Fire Management and Reforestation Plan (PFP; see Attachment C) to the Central Valley Water Board for approval prior to application of pesticides** within the post-fire management and reforestation plan area. The PFP shall include measures that will provide equal to or better protection than the conditions under Part III.F.3.c.ii below. The Executive Officer's written approval of the PFP is required before implementation of the PFP can satisfy the requirements of this Part III.F.3.c.; **approval or denial of the PFP shall be provided within 30 days of PFP submittal.**

-OR-

- ii. Meet **ALL** the following conditions:
1. The Discharger must **comply with the following pesticide no-spray buffers** (unless more stringent buffers are dictated by application labels/guidance, statute, or regulation):
- a. Perennial or intermittent watercourses which have: (1) surface domestic water use from and/or within 100 feet downstream of operations area and/or (2) fish always or seasonally present onsite, includes habitat to sustain fish migration and spawning, shall utilize the appropriate **Class I WLPZ width(s)** specified in the California Code of Regulations, title 14, section 936.5.
- b. Perennial or intermittent watercourses which have: (1) fish always or seasonally present off-site within 1000 feet downstream (excludes intermittent or ephemeral watercourses with no aquatic life that are tributary to watercourses described under (a) above) and/or (2) aquatic habitat for nonfish aquatic species (aquatic insects and/or other physical habitat indicators such as riparian and aquatic vegetation, watercourse debris, and potential for small pool formation), shall utilize the appropriate **Class II WLPZ width(s)** specified in the California Code of Regulations, title 14, section 936.5.
- c. Ephemeral or intermittent watercourses with no aquatic life present, watercourse shows evidence of being capable of sediment transport to watercourses described under (a) and (b) above, shall utilize a minimum of **25 feet** where sideslope steepness is **less than 30%**, and a minimum of **50 feet** where sideslope steepness is **30% or greater**.

2. Where management activities are planned on a burned area with **slopes greater than 30%, a minimum of 50% average effective groundcover** (see Attachment C for guidance) **is required to be documented prior to pesticide application**. Documentation shall be provided to the Central Valley Water Board in the pesticide notification **30 days prior to application**.
 3. The Discharger shall adhere to the resource protection measures in the Chemical Use Management Activities as designated in the National Best Management Practices for Water Quality Management on National Forest System Lands (USDA April 2012).
 4. The Discharger shall **notify** the Central Valley Water Board **in writing at least 30 days prior to any proposed application of pesticides**; the notification does *not* need to include information on hack and squirt or individual stump applications. The written notification shall include the pesticide product(s) to be applied, the proposed date(s) of application, the method(s) of application, the area(s) of application (Township/Range/Section), a description of measures that will be employed to assure compliance with the applicable Basin Plan, and documentation of 50% or greater effective groundcover (as applicable). Subsequent changes to the proposal must be submitted in writing no less than 48 hours prior to pesticide application.
- d) For approved Projects that require enrollment under the Order, the Discharger shall **notify the Central Valley Water Board each year at least 15 days prior to start of operations**.
 - e) The U.S. Forest Service shall comply with all conditions specified in Attachment B, Monitoring and Reporting Program, Order No. R5-2017-0061. Category 5A will be subject to Implementation, Forensic, and Effectiveness Monitoring; an Annual Summary of Operations; and amendments/updates to the *Erosion Site Table* and PFP (as applicable).
 - f) The U.S. Forest Service shall seek termination of coverage under the Order in accordance with Part V.A., Termination of Coverage.

Category 5B (All timberland management activities except post-fire activities)

4. Eligibility Criteria: To be enrolled under Category 5B, activities must meet the following criteria:
- a) Timberland management activities (see definition of “timberland management activities” as it relates to activities that are commercial in nature) on federal lands where the U.S. Forest Service has conducted a multi-disciplinary review of the timber harvesting proposal and has specified best management practices and additional control measures as needed in order to assure compliance with the applicable Basin Plan. Timberland management activities may include, but are not limited to:
 - i. Timber harvesting sales;
 - ii. Vegetation management and fuels reduction projects;
 - iii. Forest stand improvement and hazard tree removal (excluding hazard tree removal projects that do not pose a threat to water quality (i.e. isolated tree removal in campgrounds, etc.));
 - iv. Pesticide applications associated with Part III.F.4.a.i.,ii.,iii. above.
 - b) The U.S. Forest Service has provided Project description documents to the Central Valley Water Board and allowed time for adequate review and comment. These documents include: 1) the NEPA scoping document; and 2) the NEPA draft environmental analysis, which will include site specific information that identifies SEPES and priority road improvement locations, as well as, proposed treatments and schedule for those sites to improve or protect water quality. Supplemental project documents may also be provided that contain design specifications, management practices, and/or water quality protection measures. Any additional management practices and/or water quality protective measures identified by Central Valley Water Board staff during the scoping period and/or enrollment under this Order will have been discussed with U.S. Forest Service personnel and incorporated into an addendum to the NOI (see Part II.4.), including a timeline and checklist for completion. The project will remain enrolled until all identified management practices and/or water quality protective measures have been completed.
 - c) The U.S. Forest Service has conducted a CWE analysis, where required or appropriate, and included specific measures needed to reduce the potential for CWEs in order to assure compliance with the applicable Basin Plan.
5. Enrollment: To enroll under Category 5B, the U.S. Forest Service shall comply with the following:
- a) Submit to the Central Valley Water Board copies of final decision documents that contain information documenting compliance with the eligibility criteria above. A copy of applicable final NEPA documents shall be submitted upon written request by Central Valley Water Board staff.
 - b) Submit a *NOI for Category 5B at least 15 days prior to operations commencing*, signed by a duly authorized representative, certifying that the activities meet the criteria and conditions for Order Category 5B. Activities may commence once the Central Valley Water Board has issued a NOA to the Discharger indicating that the NOI is complete.
 - c) Submit all specific on-the-ground prescriptions designed to adhere to the U.S. Forest Service BMPs as described in *National Best Management Practices for Water Quality Management on National Forest System Lands, Volume 1: National Core BMP Technical Guide*, and all additional management practices and/or water quality protective measures

identified by Central Valley Water Board staff (See Part II.4.) within contracts, permits, agreements, and other instruments used to direct the activities of contractors, permittees, U.S. Forest Service personnel, volunteers, and any other third party.

6. Conditions: Dischargers conducting timberland management activities enrolled under Category 5B shall comply with the following conditions, as applicable:
- a) For approved Projects that require enrollment under the Order, the Discharger shall **notify the Central Valley Water Board each year at least 15 days prior to start of operations.**
 - b) The Discharger shall **notify the Central Valley Water Board, in writing, at least 15 days prior to any proposed application of pesticides**; the notification does *not* need to include information on hack and squirt or individual stump applications. The written notification shall include the pesticide product(s) to be applied, the proposed date(s) of application, the method(s) of application, project name, area(s) of application (include map), and a description of measures that will be employed to assure compliance with the applicable Basin Plan. Subsequent changes to the proposal must be submitted in writing no less than 48 hours prior to pesticide application.
 - c) The U.S. Forest Service shall comply with all conditions specified in Attachment B, Monitoring and Reporting Program, Order No. R5-2017-0061.

Category 5B will be subject to one National Core BMP monitoring protocol as dictated by Project activities. In addition, one additional National Core BMP monitoring protocol will be required when the Discharger's cumulative watershed effects analysis indicates that the project, combined with other U.S. Forest Service projects conducted in the watershed over the past 10 years, may cause any watershed or sub-watershed to exceed a threshold of concern as determined by various models (i.e., Equivalent Roaded Acres (ERA), Surface Erosion (USLE), Mass Wasting (GEO), etc.). Dischargers have the option to conduct the standard Implementation, Forensic, and Effectiveness monitoring at the Project level in lieu of the National Core BMP monitoring protocols.
 - d) The U.S. Forest Service shall seek termination of coverage under the Order in accordance with Part V.A., Termination of Coverage.

IV. Notice of Intent

To apply for coverage under this Order, the Discharger must submit a timely and complete category-specific Notice of Intent for approval by the Executive Officer as follows:

<i>Category</i>	<i>Non-federal</i>	<i>Federal</i>	<i>Required Forms</i>
No threat	X	X	<i>Notice of Non-Applicability (NONA)</i>
1	X		None ¹
2A	X		<i>NOI for Category 2A and Erosion Site Table²</i>
2B, 3A, or 3B	X		<i>NOI for Categories 2B, 3A, and 3B</i>
4	X		<i>NOI for Category 4</i>
5A		X	<i>NOI for Category 5A and Erosion Site Table³</i>
5B		X	<i>NOI for Category 5B</i>

¹Automatically enrolled; submission of a NOI is not required.

²Automatically enrolled contingent on submittal of a complete NOI and Erosion Site Table within 30 days of CALFIRE acceptance of EM Notice.

³Automatically enrolled contingent on submittal of a complete NOI and Erosion Site Table within 30 days of startup of operations.

Timberland management activities may commence for Categories 2B, 3A, 3B, 4, and 5B once Central Valley Water Board staff has reviewed the NOI for completeness/accuracy and has issued a Notice of Applicability (NOA). Categories 2A and 5A are automatically enrolled but require timely submittal of a complete *NOI* and *Erosion Site Table* as a condition of this Order.

V. Termination of Coverage

A. Initiated by Discharger

The following criteria must be satisfied before termination of Order coverage will be considered by the Executive Officer:

- Timberland management activities are completed;
- All Category specific eligibility criteria/conditions were met;
- All elements of required monitoring and reporting have been completed;
- Soil disturbed by timberland management activities has stabilized;
- Pesticide applications have ceased and are not proposed in the foreseeable future;
- All feasible management measures and mitigations identified in the required Erosion Site Table (Category 2A/5A) and/or Post-Fire Management Plan (as applicable) have been completed and discharges have ceased.

In signing the Notice of Termination (NOT), the Discharger or U.S. Forest Service representative shall certify that: (1) the enrolled Project was conducted in conformance with the approved Plan, accepted CAL FIRE Notice, approved MATO/LSAA, or U.S. Forest Service Project requirements, as well as all applicable eligibility criteria/conditions and other applicable Provisions of this Order; and (2) discharges resulting from timberland management activities (including those associated

with pesticide applications) were in compliance and will continue to comply with all requirements of the applicable Basin Plan.

The NOT shall be reviewed for compliance with the above criteria. A field inspection may be conducted to verify compliance with all applicable requirements under this Order. The Central Valley Water Board shall notify the Discharger **within 90 days** following receipt of a NOT of approval or denial.

Non-federal Projects - The Discharger may terminate coverage under this Order by submitting to the Central Valley Water Board a signed Notice of Termination (NOT) and a CAL FIRE-approved final completion RM-71 form (if available and applicable).

Federal Projects - The Discharger may terminate coverage under this Order by submitting to the Central Valley Water Board a NOT signed by the Forest Supervisor or District Ranger.

B. Initiated by Executive Officer

The Executive Officer may terminate the applicability of this Order for a Project if any of the following determinations are made:

1. The proposed timberland management activities do not comply with the eligibility criteria for this Order.
2. The timberland management activities are not in compliance with the applicable conditions of this Order.
3. The proposed timberland management activities are reasonably likely to cause or contribute to a violation of an applicable Basin Plan or policy. In making this determination, the Executive Officer will consider the recommendations of Central Valley Water Board staff that participated in the review of the proposed timberland management activities, if any.
4. A timberland management activity has varied in whole or in any part from the approved Project, unless these changes result in better protection of water quality.

Upon receipt of notice of termination of applicability of the Order initiated by the Executive Officer, the Discharger shall immediately cease all timberland management activities that may result in discharges to waters of the state, other than activities necessary to control erosion. Before a Discharger may recommence timberland management activities that may result in discharges of waste to waters of the state, the Discharger must follow the applicable procedure either for enrolling under this Order or for obtaining individual waste discharge requirements pursuant to Water Code section 13260. Pursuant to Water Code section 13264, such activities may not recommence unless and until the Discharger receives a NOA under this Order or individual waste discharge requirements are adopted by the Central Valley Water Board.

VI. Petitions

Any person aggrieved by this action of the Central Valley Water Board may petition the State Water Board to review the action in accordance with Water Code section 13320 and California Code of Regulations, title 23, section 2050 and following. The State Water Board must receive the petition by 5:00 p.m., 30 days after the date of this Order, except that if the thirtieth day following the date of this Order falls on a Saturday, Sunday, or State holiday, the petition must be received by the State Water Board by 5:00 p.m. on the next business day. Copies of the law and regulations applicable to filing petitions may be found on the Internet at:

http://www.waterboards.ca.gov/public_notices/petitions/water_quality

or will be provided upon request.

I, PAMELA C. CREEDON, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Central Valley Region, on 9 June 2017.

Original signed by

PAMELA C. CREEDON, Executive Officer

ATTACHMENT A
DEFINITIONS
FOR
ORDER NO. R5-2017-0061

1. "Timberland management activities" means commercial activities relating to forest management and timberland conversions, including, but not limited to: cutting or removal of timber and other solid wood forest products; construction, reconstruction and maintenance of roads, fuel breaks, firebreaks, watercourse crossings, landings, skid trails, or beds for the falling of trees; fire hazard abatement and fuel reduction activities; pesticide applications; site preparation that involves disturbance of soil or burning of vegetation following timberland management activities; but excluding preparatory treemarking, surveying or roadflagging. This definition excludes the cutting and removal of timber and other solid wood forest products for Christmas trees, structure protection (150 and 300 feet), and woody debris and slash removal associated with CCR, title 14, section 1038 exemptions.
2. "Discharger" means the timberland owner or timber owner and anyone working on behalf of the timberland/timber owner in the conduct of timberland management activities for non-federal lands, and the U.S. Forest Service, private timber operators operating on federal lands, and anyone working on behalf of the U.S. Forest Service or a timber operator in the conduct of timberland management activities on federal lands.
3. "Effective Groundcover" any combination of slash (lopped and in close contact with the ground), mulch (large wood chips, wood shreds, wood strand blends, straw, bark, or surface rock fragments larger than $\frac{3}{4}$ inch), plants, and plant litter. Large wood chips should be a minimum of 2 inches in length and at least four (4) times longer than they are wide.
4. "Monitoring" refers to all types of monitoring undertaken in connection with determining water quality conditions and factors that may affect water quality conditions, including but not limited to, implementation, effectiveness, forensic, and Order compliance monitoring undertaken in connection with timberland management activities.
5. "Plan" means any Timber Harvesting Plan (THP), Program Timber Harvesting Plan (PTHP), Nonindustrial Timber Management Plan (NTMP), Working Forest Management Plan (WFMP), Modified Timber Harvesting Plan, Notice of Timber Operations, Working Forest Harvest Notice, or other discretionary permit issued by CAL FIRE to harvest timber, including all substantial deviations thereto that propose a change in timberland management activities that may increase the discharge or otherwise pose the potential for increased impacts to water quality. (For example, substantial deviations that propose to add, expand, or extend winter operations shall be considered a "Plan" for purposes of this Order. Minor deviations that do not propose any material change in how or where timberland management activities will be conducted, such as a change in timber operator, a time extension from CAL FIRE, etc., shall not be considered a "Plan" for purposes of this Order.)
6. "Pesticide" means (1) any substance, or mixture of substances which is intended to be used for defoliating plants, regulating plant growth, or for preventing, destroying, repelling, or mitigating any pest, which may infest or be detrimental to vegetation, man, animals, or households, or be present in any agricultural or nonagricultural environment whatsoever, or (2) any spray adjuvant, or (3) any breakdown products of these material that threaten beneficial uses. This definition excludes aquatic pesticide discharges covered under Order No. 2013-0002-DWQ.
7. "Project" means any CAL FIRE Plan (as defined in #5 above), CAL FIRE Emergency/Exemption Notice, or existing watercourse crossing reconstruction not covered under a Plan or Emergency Notice but conducted pursuant to a CDFW-executed MATO or LSAA on timber production zoned

non-federal lands, and any timberland management activities (i.e. timber sales, fire salvage, fuel hazard reduction, forest stand improvement and hazard tree removal) on federal lands.

8. “Significant Existing or Potential Erosion Site (SEPES)” means a location where soil erosion is currently, or there are visible physical conditions to indicate soil erosion may be in the future, discharged to watercourses or lakes in quantities that violate a water quality objective (narrative or numeric), prohibition, Total Maximum Daily Load implementation plan, policy, or other requirement contained in a water quality control plan adopted by the Regional Board and approved by the State Water Board, or a location where soil erosion may result in significant individual or cumulative adverse impacts to the beneficial uses of water.
9. “Watercourse protection zone” means any Watercourse and Lake Protection Zone, Equipment Limitation Zone, and Equipment Exclusion Zone for the protection of waters of the state as defined in California Code of Regulations, title 14, section 895.1 of the California Forest Practice Rules; it also means any Riparian Reserve or Riparian Conservation Area for federal Projects.
10. All other terms shall have the same definitions as defined in California Code of Regulations, title 14, section 895.1 of the California Forest Practice Rules and the Porter-Cologne Water Quality Control Act, unless specified otherwise. A few definitions from the 2017 FPR that are used throughout the Order are cited below for ease of reference:

“Equipment Exclusion Zone” (EEZ) means the area, as explained in the THP, where heavy equipment associated with timber operations is totally excluded for the protection of water quality, the beneficial uses of water, and/or other forest resources.

“Equipment Limitation Zone” (ELZ) means the area, as explained in the THP, where heavy equipment associated with timber operations is limited for the protection of water quality, the beneficial uses of water, and/or other forest resources.

“Erosion Hazard Rating” (EHR) means the rating derived from the procedure specified in 14 CCR § 912.5 [932.5, 952.5] designed to evaluate the susceptibility of the soil within a given location to erosion.

“Hydrologic Disconnection” means the removal of direct routes of drainage or overland flow of road runoff to a watercourse or lake.

“Saturated Soil Conditions” means that soil and/or surface material pore spaces are filled with water to such an extent that runoff is likely to occur. Indicators of saturated soil conditions may include, but are not limited to: (1) areas of ponded water, (2) pumping of fines from the soil or road surfacing material during timber operations, (3) loss of bearing strength resulting in the deflection of soil or road surfaces under a load, such as the creation of wheel ruts, (4) spinning or churning of wheels or tracks that produces a wet slurry, or (5) inadequate traction without blading wet soil or surfacing materials.

“Significant Sediment Discharge” means soil erosion that is currently, or, as determined based upon visible physical conditions, may be in the future, discharged to watercourses or lakes in quantities that violate Water Quality Requirements or result in significant individual or cumulative adverse impacts to the beneficial uses of water. One indicator of a Significant Sediment Discharge is a visible increase in turbidity to receiving Class I, II, III, or IV waters.

“Water Quality Requirements” means a water quality objective (narrative or numeric), prohibition, TMDL implementation plan, policy, or other requirement contained in a water quality control plan adopted by the Regional Board and approved by the State Water Board.

Attachment A – Definitions
Order No. R5-2017-0061
Waste Discharge Requirements General Order for
Discharges Related to Timberland Management Activities on Non-federal and Federal Lands

“Watercourse and Lake Protection Zone” (WLPZ) means a strip of land, along both sides of a watercourse or around the circumference of a lake or spring, where additional practices may be required for protection of the quality and beneficial uses of water, fish and riparian wildlife habitat, other forest resources and for controlling erosion.

**ATTACHMENT D
INFORMATION SHEET IN SUPPORT OF**

**GENERAL ORDER OF WASTE DISCHARGE REQUIREMENTS FOR TIMBERLAND
MANAGEMENT ACTIVITIES ON NON-FEDERAL AND FEDERAL LANDS
IN THE CENTRAL VALLEY REGION
FOR
ORDER NO. R5-2017-0061**

This Information Sheet sets forth the background, rationale and references used in the development of certain requirements for Waste Discharge Requirements related to Timberland Management Activities on Non-Federal and Federal Lands, Order No. R5-2017-0061 (hereinafter "Order") within the Central Valley Region. Specifically, the information included herein elaborates on findings in the General Order related to water quality impacts and timberland management activities in the post-fire environment, an evaluation of Significant Existing or Potential Erosion Sites (SEPES), and monitoring and reporting costs associated with Order compliance. The content of this Information Sheet includes: the best available scientific research and information in the area of fire ecology, erosion, forest hydrology and water quality impacts from pesticide¹ use in the post-fire environment; field observations by Central Valley Regional Water Quality Control Board (Central Valley Water Board) staff; clarification on the evaluation of SEPES; and a summary of the existing rules and policies that are currently in place in California that regulate post-fire salvage logging and subsequent post-fire management activities.

WATER QUALITY IMPACTS AND TIMBER HARVEST OPERATIONS IN THE POST-FIRE ENVIRONMENT

In the western United States historic forest management and fire suppression, in conjunction with a changing climate, have led to uncharacteristically large, severe wildfires (Flannigan et al. 2000, Littell et al. 2009, Westerling et al. 2006, Westerling and Bryant 2008). As a result of this general decline in active fuels management on both federal and non-federal lands, exacerbated by nearly a century of intense fire suppression, increased frequency and intensity of stand-replacing fire is occurring throughout the western United States. The remaining forests of central and northern California that have not recently burned at high severity have high fuel loads and are experiencing extended periods of above average seasonal temperatures. These factors are leading to both extended fire seasons as a result of drier fuel conditions, and increased incident of extreme fire behavior with stand-replacing wildfires. Climatology models and information gathered by leading fire ecologists predict that the future wildfire regime in California will result in increased spatial size, distribution, and occurrence of severe wildfires (Fried et al. 2004, Miller et al. 2009, Westerling and Bryant 2008, Westerling et al. 2011).

Fire is a natural disturbance that directly influences California ecosystems and ecological processes, plant species, animals, and entire watershed ecosystems in California that have evolved to be both tolerant and dependent on fire as a landscape scale physical disturbance. However, as fire regimes in California shift, so has the intensity of the physical disturbance caused by wildfire. Increases in wildfire frequency, magnitude, and severity due to climate change within the western United States may lead to detrimental sediment-related water quality issues within

¹ For the purposes of this Information Sheet and Order (Attachment A) "pesticide" means (1) any substance, or mixture of substances which is intended to be used for defoliating plants, regulating plant growth, or for preventing, destroying, repelling, or mitigating any pest, which may infest or be detrimental to vegetation, man, animals, or households, or be present in any agricultural or nonagricultural environment whatsoever, or (2) any spray adjuvant, or (3) any breakdown products of these material that threaten beneficial uses. This definition excludes aquatic pesticide discharges covered under Order No. 2013-0002-DWQ.

burned mountainous watersheds (Gould et al. 2016). There must be recognition that post-fire land use activities have the potential to exacerbate fire effects, and land owners, land managers, and resource agencies have a responsibility to understand what those potential impacts are and where there is opportunity to minimize those impacts through both adaptive management and strategic regulatory measures.

Water Quality Impacts Following Fire

Following severe wildfire in forested landscapes, increased soil water repellency and other changes to soil properties can reduce infiltration rates and increase the rate and frequency of runoff (Martin and Moody 2001, Robichaud 2000, Robichaud et al. 2016). Additionally, the loss of ground cover following severe wildfires is a dominant factor for increased soil erosion rates (Benavides-Solorio and MacDonald 2001, Delwiche 2009, Larsen et al. 2009, Robichaud et al. 2016). Increased soil erosion rates and sediment delivery to downstream channel networks can pose a significant threat to aquatic resources and beneficial uses, particularly after extensive high severity wildfires (Helvey 1980, Moody et al. 2013, Bladon et al. 2014, Chappel 2014).

Soil erosion at its most basic form involves the detachment, breakdown, transport, and deposition of sediment, which in the context of post-wildfire effects, is dependent on multiple factors, including: fire severity, watershed area, topography, geology, vegetation, and precipitation intensity. The greatest erosion events typically occur before vegetation regrowth and recovery and often coincide with episodic, short-duration, high intensity rain storms immediately after severe wildfire (Moody and Martin 2001). Accelerated erosion, potential hydrophobic soils, reduced water infiltration rates, overland runoff, and mass soil hillslope failures can also produce catastrophic debris flows in some environments (Doerr et al. 2009) which pose a direct threat to water quality, beneficial uses, and human health and safety (Cannon et al. 2010). Accelerated soil loss also affects site class and future tree growth.

On uncompacted, unburned hillslopes and areas with intact overstory canopy and ground cover, overland flow usually occurs only during very intense and short duration storm events. In high severity post-fire environments, where soil properties have been altered and effective ground cover is not present, significantly higher rates of runoff can be expected (e.g., Wagenbrenner et al. 2017). Compared to lower severity fires, high severity fires consume a higher proportion of the vegetation, forest litter, and other organic matter that provide effective ground cover. Reduced ground cover exposes more of the soil to precipitation and often increases erosion by several orders of magnitude. In studies conducted in the Sierra Nevada, rates of post-fire surface erosion have been reported to be 2-239 times greater than pre-burn rates (Ahlgren and Ahlgren 1960). The amount of erosion and sedimentation depends on severity of the fire and post fire storm events (number and intensity), especially the first two winters. The progressive decline in post-fire sediment yields over time is largely controlled by the regeneration of surface cover, primarily vegetation (MacDonald and Larsen 2009, Benavides-Solorio et al. 2001, Larsen et al. 2009). With the return of vegetative growth and stabilization of easily mobilized soil material, hillslope erosion rates generally attenuate with time after the wildfire and return to background rates within 2-3 years (Heede et al. 1988, Wohlgemuth et al. 1998) under natural conditions.

Only limited post-fire sediment monitoring has been undertaken in the Sierra Nevada and Cascade Ranges. Usually erosion and sediment data are not collected following a wildfire. Data collected to date show widely varying impacts, with very high hillslope erosion rates usually requiring one or more major hydrologic event the first two winters. In general, post-wildfire erosion is highly variable

and difficult to predict. The risk of elevated sediment yields generally is greatest the first few years after the fire until vegetation is reestablished (Wagenbrenner 2017).

As an extreme example of post fire erosion, the 2012 Bagley Fire (46,011 acres) in Shasta County produced an estimated total hillslope erosion of 5.23 million tons (114 tons per acre) during the first year post-fire. Two intense storms occurred a few months after the fire, with estimated return intervals of 25-50 years. Soil loss was estimated at 0.2 to 2.2 inches on virtually all hillslopes (USFS 2014). Measured sediment delivered to Squaw Creek during the first year post-fire resulted in sustained turbidity and significantly higher water temperatures, exceeding 70 degrees Fahrenheit; a temperature that can be lethal to cold water fish. Sediment produced during the first year post-fire and during subsequent years continue to be transported downstream to Lake Shasta, leading to reduced storage capacity and increased nutrient loads.

Other post-fire monitoring efforts in interior California have documented lower sediment yields at the plot or small catchment scales. These include the 2012 Ponderosa Fire - 15.5 t/ac (James 2014); 1999 Pendola Fire - 5 t/ac (MacDonald et al. 2004); 2007 Angora Fire - 0.01 t/ac (Wade and Kocker 2012), 1987 Stanislaus Complex - 20-50 t/ac (J. Frazier and A. Janicki, Stanislaus National Forest, pers. communication, cited in the California Fire Plan, BOF 1995); 1987 Hayfork District - Shasta Trinity National Forest Complex Fires - 10-40 cubic yds/ac (Miles et al. 1989); and the 2001 Star Fire - 1.2 t/ac, second winter (Chase 2004).

Following wildfire, sediment discharge can lead to changes in turbidity, temperature and stream chemistry. These changes may degrade water quality (i.e., taste, odor, color) and impair drinking-water treatment processes, along with negatively impacting aquatic life. Increases in sediment and turbidity can affect aquatic ecosystems by clogging streambed interstitial voids with fine sediments, reducing stream depth, increasing channel instability, altering stream temperatures, impairing fish feeding, and destabilizing stream channels (Goode et al. 2012). The growth and survival of aquatic plants, invertebrates, and fish are negatively affected by increases in sediment and turbidity (Wagner et al. 2014).

Wildfires such as the 2012 Bagley Fire can liberate accumulated metals, such as arsenic, aluminum, cadmium, iron, lead, and mercury. These metals have a strong affinity for ash and fine sediment, which are subsequently discharged to stream systems via elevated runoff and erosion (Bladon et al. 2014). Mercury's potential to bioaccumulate and biomagnify can result in health problems for consumers of fish. There are several streams, lakes, and reservoirs—including Lake Shasta—in the Central Valley Water Board region that are currently listed as 303(d) impaired by various metals, including mercury. Many of these waterbodies are located in watersheds subject to increased risk of large, severe wildfires.

Nutrients such as nitrogen and phosphorous are often mobilized by fire, which results in increased loading to streams (Bixby et al. 2015). In addition, significant increases in specific conductance and turbidity, along with corresponding decreases in dissolved oxygen are documented (Sherson et al. 2015). Nutrients can contribute to and exacerbate Cyanobacteria (blue-green algae) blooms, such as those experienced during the summer of 2015 throughout much of the Central Valley Water Board region, including Lake Shasta.

Timber Harvesting Policies and Regulations in California

Non-Federal Lands

Timber harvesting on non-federal lands in California is regulated by the Board of Forestry and Fire Protection (BOF) in accordance with the Forest Practice Act (FPA) through implementation of the California Forest Practice Rules (FPRs); a set of regulations that lay out administrative procedures and prescriptive best management practices to protect natural resources. Pursuant to the FPA and through the FPRs, the California Department for Forestry and Fire Protection (CAL FIRE), acting as the lead agency, the applicable Regional Water Board, California Department of Fish and Wildlife (CDFW), and California Geological Survey are responsible agencies for the review of timber harvesting plans (THPs) (Cal. Code of Regs., tit. 14, § 896). As a member of this interdisciplinary Review Team for green tree THPs, the Central Valley Water Board staff reviews proposed THPs, and has the opportunity to participate in pre-harvest inspections, and may provide input and recommendations on water quality-specific components to ensure water quality protection prior to CAL FIRE approval.

This multi-disciplinary review process for green tree THPs is considered to be functionally equivalent to the Environmental Impact Report (EIR) process under California Environmental Quality Act (CEQA) (see Cal. Code of Regs., tit. 14, § 896). The average THP consists of more than 120 pages of information related to the site, current conditions, proposed operations, cumulative impacts assessment, operational considerations, and proposed mitigations to address potential impacts to a variety of natural resources supported by forestlands.

Following wildfire, many large industrial forest landowners engage in salvage logging, whereby burned, damaged, and commercially valuable timber is removed through conventional timber harvesting techniques. Generally, the value of the commercial timber burned in a fire degrades within 1-2 years post-fire, resulting in harvesting operations that focus on removing burned timber quickly to recover as much economic value as possible. The FPA and FPRs allow for the rapid removal of trees from areas damaged by fires where such removal meets the definition of an emergency:

...those conditions that will cause appreciable financial loss to the timber owner that may be minimized by immediate harvesting of timber” (Pub. Res. Code § 4592; see also Cal. Code of Regs., tit.14, § 895.1).

The Emergency Notice process requires minimal documentation (generally approximately 3 pages including a map) and does not provide opportunity for the interdisciplinary Review Team to address potential impacts to resources from post-fire salvage operations. As a non-discretionary action taken by CAL FIRE, timber operations associated with Emergency Notices can commence five working days after submittal without first preparing a THP, and are not subject to the interdisciplinary Review Team process or public review/comment. In fact, due to the accelerated timeline for Emergency Notices, it is generally only after a timber/timberland owner has submitted the Emergency Notice to CAL FIRE and then submitted an application for coverage under the Central Valley Water Board’s current Waiver of Waste Discharge Requirements (Order No. R5-2014-0144) that staff becomes aware post-fire salvage operations have commenced and receive limited information about the location and timing of those operations.

Non-federal timber/timberland owners are required to retain a Registered Professional Forester (RPF) to prepare and submit an Emergency Notice. Timber operations conducted pursuant to a CAL FIRE-accepted Emergency Notice must comply with the rules and regulations of the BOF and

specifically with all operational provisions of the FPRs applicable to plans. The timber/timberland owner has one year to complete timber harvesting under the Emergency Notice from the date of CAL FIRE receipt, unless a discretionary THP is subsequently approved allowing for continued operations in the area.

There are also other differences between an Emergency Notice for post-fire salvage and a typical “green tree” THP. While there are no upper (or lower) limits for the total acreage allowed under a THP, individual even aged harvest unit size in a “green tree” THP is limited to 20 acres for tractor logging and 30 acres for cable/aerial logging with additional controls on the filing of contiguous harvesting plans. Post-fire salvage operations have no upper or lower limits for the total acreage harvested, as long as all operations can be concluded within the one-year time period. Therefore, harvest units under an Emergency Notice can be as large as the timber/timberland owner can operationally accommodate, effectively resulting in the potential for clear-cutting of multiple contiguous square miles (thousands of acres). In burned landscapes, large salvage logged units that exceed hundreds of acres in size can exacerbate runoff and erosion rates through removal of standing dead timber and timber that is damaged by the fire. Increased erosion and runoff can occur due to road and skid trail construction and use, and possible reduction in overstory canopy and removal of biomass that if left unharvested would provide ground cover (i.e., needle cast, tree limbs, and eventually snags and whole trees) to dissipate rainfall energy and concentrated flow along the hillslopes. Often, however, salvage logging increases short-term ground cover due to the logging slash and tree tops left on site (Poff 1989).

Another fundamental difference between an Emergency Notice for post-fire salvage and a typical “green tree” THP applies to the Watercourse and Lake Protection Zone (WLPZ)—also known as riparian buffer zones. WLPZ requirements apply to both standard green tree THPs as well as Emergency Notice operations; however, trees within the WLPZ that have fallen, or are damaged, dead, or dying can be removed under an Emergency Notice, regardless of the standard tree retention or restocking requirements of the FPRs for green tree THPs. This can result in the complete removal of all large timber from within these streamside zones during salvage logging operations, unless the watershed requires additional protection measures for anadromous salmonids.

In 2009, after the 2008 June lightning fire siege that occurred across the state, a proposal to extend Emergency Notices from 120 to 365 days was proposed by the timber industry to the BOF. The proposal included modification of California Code of Regulations, title 14, section 1052(e) language that:

...intended to lengthen the effective period of an Emergency Notice such that preparation and approval of a succeeding THP may be assured prior to expiration of an Emergency Notice.

At the time, Central Valley Regional Water Board staff argued that if the BOF’s intent was to ensure harvesting operations in the post-fire environment would be started under an Emergency Notice and then analyzed with the THP Review Team process, then the rule language would need to clearly require a THP be submitted prior to the expiration of the applicable Emergency Notice.

In response to questions about possible significant adverse environmental effects, the BOF found that:

...[this] proposed regulation would not result in significant adverse environmental effects. The existing Forest Practice Rules for Emergency Notices and Timber Harvesting Plans already provide for comprehensive assessment and mitigation of potential adverse effects. This proposed regulation does not alter these existing provisions.

Additional response was provided by Central Valley Water Board staff:

While Regional Water Board staff agrees that the FPRs provide for assessment and mitigation of potential adverse effects through the THP process, the information required in a THP is significantly more complex than that required by the Emergency Notice. It is inaccurate to state that the FPRs provide for a comprehensive assessment and mitigation of potential adverse effects through the Emergency Notice process. While there is a list of operational limitations that must be complied with for Emergency Notices in the FPRs, there are numerous concerns that are not addressed. And in fact, an argument could be made that allowing operations on lands that have been burned (and thus been made more sensitive than those normally reviewed under the THP process) through a non-discretionary process is not an environmentally responsible or defensible position.

If a burned area has unmaintained legacy roads and [watercourse] crossings that are undersized, the Emergency Notice allows for those roads to be used and does not require assessment and mitigation of any erosion problems from those roads and crossings. [Central Valley] Water Board staff acknowledges that there may not be a simple answer for the problem this rule is trying to address, but a simple extension of the time limits is only addressing a small portion of the problem.

The FPRs provide minimum operational standards, and those requirements are frequently supplemented with additional mitigations to address potential impacts to the resources through the interdisciplinary review team process [for THPs]. Due to the nature of the Emergency Notice process those same minimum operational standards [additional mitigations] provided in the FPRs are not applied. If Emergency Notices are allowed to proceed for 365 days, the likelihood of a succeeding THP ever being submitted and those additional environmental mitigation measures being developed declines dramatically.

There must be acknowledgement that fire is a natural process by which waters of the state (as well as other resources) are impacted, but it is critical to accept that it is our responsibility to ensure that the impacts from the fire are not further aggravated by anthropogenic activities.

Since the lightning fire siege that occurred throughout the state in 2008, Central Valley Water Board Forest Activities Program staff has focused more effort on these post-fire salvage operations and have not observed THPs being prepared to continue salvage operations subsequent to the first year of harvesting conducted under Emergency Notices (on non-federal lands). Instead, staff has observed multiple Emergency Notices being submitted for 1-3 years after the fire.

Over the last several years CAL FIRE has processed, on average, approximately 175 Emergency Notices covering roughly 45,000 acres annually. This number is heavily dependent on annual fire season activity, but it provides a general idea of the recent scope of the issue.

During this time, Central Valley Water Board staff has observed extensive soil erosion and sediment discharge to receiving waters extending for several years following many large wildfire

events. These large fires include: the Bagley, Bully, Ponderosa, King, Chips, Moonlight, Valley, and Rim Fires. Post-fire salvage operations following these fires has resulted in direct impacts to water quality through accelerated erosion and sediment delivery from skid trails, roads, landings, and episodic events such as landslides and debris flows. Many of these sources of sediment discharge are largely attributed to and associated with post-fire salvage operations. Direct in-stream measurements of turbidity that exceeded Basin Plan objectives have been documented downstream of several fires (e.g., Ponderosa, Bagley, and Bully Fires). There are data to suggest that changes in turbidity in streams draining the 2012 Ponderosa Fire were caused by the fire, salvage harvesting, and associated road use (Lewis 2014). In addition, dozens of herbicide (pesticide) detections have been recorded in the post-fire environment that will be discussed in later sections of this document.

There is recognition among Central Valley Water Board staff that identifying cause and effect between post-fire salvage operations and water quality impacts is challenging. Non-point source water quality pollution can be complex and evaluating sediment discharge from post-fire salvage operations against natural or background delivery rates to watercourses is no different. However, the Central Valley Water Board has a responsibility and mandate under the Clean Water Act, California Water Code, Basin Plan, and Non-Point Source policy to identify potential non-point source discharges to waters of the state and address those discharges through prohibitions; or Waste Discharge Requirements (WDRs); conditional waivers of WDRs; or until a determination has been made that the threat of discharge and impact to water quality no longer exists.

Federal Lands

As the largest public land management agency in the Central Valley Region's forested zones, the U.S. Forest Service (USFS) experiences large catastrophic wildland fires, predominantly along the west slope of the Sierra Nevada and southern Cascade Ranges on National Forest System lands (NFS).

Immediately following a fire on federal lands, there is a rapid assessment by a Burned Area Emergency Resource (BAER) team staffed by specially trained professionals for fires greater than 300 acres, generally including hydrologists, soil scientists, engineers, biologists, vegetation specialists, archeologists, GIS specialists, and others, who rapidly evaluate the burned area and prescribe emergency stabilization treatments for Forest Service lands. The BAER program is designed to address these emergency situations through its key goals of protecting values at risk (VARs), including life, property, and critical natural and cultural resources. Water quality and aquatic habitat are not specifically included in the list of VARs evaluated through the BAER process. In most cases, only a small portion of the burned area is treated based on the outcome of the BAER process, due to the high cost of effective treatments (e.g., mulching; hydro-mulching). Some of the information that is gathered during these assessments, however, can be utilized for development of future project proposals and in support of environmental documents for those projects.

The percent of federal lands salvage logged is much lower than that which occurs on private industrial timberland in California. Post-fire salvage logging on federal lands seldom occurs in the first year of the fire due to the time involved in preparing environmental documents in conformance with the National Environmental Policy Act (NEPA). Depending on the scope of proposed actions and the level of impact on the environment, the USFS may choose to prepare a Categorical Exclusion (CE), Environmental Assessment (EA), or Environmental Impact Statement (EIS). In general, the USFS will only utilize a CE for very small proposed post-fire salvage operations or roadside hazard tree removal through areas that have experienced wildfire. The preparation of this

document and final decision can be relatively fast and a final decision can be made within a few months. The scope of an EA is generally broader and incorporates multiple resource objectives (e.g., reduce public safety hazard along NFS roads, recover economic value of fire-killed trees, reduce fuel loading, implement reforestation, and manage road infrastructure). These documents take longer to develop utilizing a multi-disciplinary team of specialists, and there is a much more involved public scoping process which can often lead to delays and litigation. The most robust NEPA document is the EIS. These documents can be very broad in scope and include evaluation of a multitude of resource objectives and goals. Preparation of these documents can be lengthy and if post-fire salvage operations are a component of the proposed actions, it is often unlikely that the decision approving the NEPA document will be prepared before the fire-killed commercial species of trees have lost all economic value.

There is a growing trend within the federal agency to prepare larger environmental documents (i.e., EA and EIS) in an effort to conduct multi-phased and longer term watershed-scale projects with multiple resource goals and objectives. There are many reasons why the USFS pursues this type of approach to their land management; however, a consequence of this approach is that post-fire salvage projects can take much longer to receive approval, and as a result, the trees quickly lose economic value before they can be harvested. This can lead to the timber sale/salvage component of these projects being removed from the project or Timber Sales are not purchased by private contractors and the trees are left unharvested. Either way, standing dead and dying trees are often left behind on the landscape. Reforestation efforts are greatly compromised, leading to reduced long term carbon storage in California forestlands (CARB 2017). Despite broad agreement on reforesting lands burned, lack of funding and staff have made reforestation very difficult.

The Central Valley Water Board's review process for post-fire salvage projects on federal lands is significantly different compared to non-federal projects. Following a wildfire on NFS lands, Central Valley Water Board staff review the Schedule of Proposed Actions (SOPA) list for each National Forest to see what projects and associated environmental documents will be proposed. Staff review and respond to the proposed action during the regular public scoping period. Once a USFS decision has been made on the NEPA document, the USFS submits a NOI for the proposed project, and Central Valley Water Board staff review the submitted project documents, enrolling the project under the appropriate permit category. Staff often conducts inspections of the post-fire salvage operations and provides recommendations for additional erosion mitigations where necessary to protect water quality. However, unlike the THP process for non-federal lands, it is sometimes difficult to incorporate substantial recommendations (e.g., new or reconstructed watercourse crossings or significant modification to road shape and drainage) without modifying the original environmental documents (i.e., CE, EA, or EIS). These documents are often written in very general, non-prescriptive terms that make evaluations for potential water quality impacts prior to commencement of project activities challenging. The lack of site specificity in the project documents provided by the USFS has been an on-going issue for Central Valley Water Board staff, not only for post-fire salvage projects, but for all non-point source projects enrolled under Water Board permits.

Post-Fire Timber Harvest

Numerous studies have been conducted on post-fire erosion response to logging (Ice and Beschta 1999). Some studies indicate that there are potential benefits to logging after wildfire—increasing ground cover through logging slash, removing sources of high intensity water droplets from standing dead trees, reduction of fuel loading and risk of high intensity fires, and by breaking up

hydrophobic soil layers (Poff 1989, James 2014). The application of these ground-based treatments, however, are often limited to slopes that are less than 35 percent where erosion rates are generally lower due to lower erosive energy and runoff velocity. Conversely, there is documentation from other studies reporting that salvage logging increases the risk of sedimentation and that specific best management practices are needed to mitigate the hydrologic impacts of post-fire logging (Beschta et al. 1995, Peterson et al. 2009, Wagenbrenner et al. 2015, Wagenbrenner et al. 2016b, Lewis 2014).

At the small catchment scale, impacts of salvage logging on sediment yields are variable. One recent study has shown a net decrease in sediment yields after salvage logging and subsequent herbicide (pesticide) applications (James 2014), two studies have shown no detectable change in sediment yields because of salvage logging (Wagenbrenner et al. 2015)—Hayman and Kraft Springs Fires; Olsen, 2016), and one study has documented an increase in sediment yields because of salvage logging (Wagenbrenner et al. 2015—Red Eagle Fire) (Wagenbrenner 2017).

Non-Federal Lands

Large non-federal industrial landowners generally remove all the trees within an Emergency Notice harvest unit, including those only partially burned or scorched. This can result in post-fire harvest units which have no size limitations and are almost completely devoid of trees. Based on the fact that burned areas produce additional stormwater runoff and sediment, both the existing road network and any new logging road construction should be designed, utilized for heavy equipment and log hauling, and maintained to minimize delivery of sediment to streams. Post-fire logging generally requires the installation and use of numerous skid trails, used when heavy equipment transports the cut logs within the logging unit to a landing, where the tree is then processed and loaded onto log trucks for transport to the mill. As with new logging road construction, post-fire skid trails present a heightened potential for erosion and sediment transport. With the urgency to remove burned trees and maximize the economic value of the rapidly degrading wood product, there are usually compressed timelines within which to evaluate, design, and implement logging operations, including road construction, before the first winter period following the fire. Central Valley Water Board staff has observed that standard coefficients and input values (e.g., runoff coefficients, time of concentration calculations, headwater/depth ratios for culverts, etc.) used in technical guidance documents for design of stream crossing structures (as noted in Cafferata et al. 2004) may be inadequate in the post-fire environment.

Federal Lands

Unlike non-federal landowners, USFS salvage operations remove only a fraction of the burned trees and generally leave most partially burned and scorched trees for wildlife values and possible recovery. This limited and selective harvesting, by its very nature, may provide immediate ground cover in the form of needle cast, as well as dead trees, green trees (foliage), and some logging slash.

Riparian buffers mandated by various USFS BMPs, regulations and policies, are wider than those required of non-federal landowners in the FPRs, providing extra protection for aquatic resources and water quality.

Post-Fire Pesticide Use

Non-Federal Lands

While post-fire salvage operations conducted under an Emergency Notice are not required to restock (i.e., replant conifers), most non-federal industrial timberland owners in California choose to

reforest their lands. Replanting conifers is frequently accompanied by pesticide applications to ensure seedling survival and establish conifer plantations as quickly as possible (DiTornaso et al. 1997, Webster and Fredrickson 2005, Zhang et al. 2008). In some cases, pre-emergent pesticides are applied in the late fall or early spring immediately after the fire to prevent competing vegetation from germinating. In other cases, post-emergent pesticides are used to kill newly sprouting vegetation before and/or after planting new conifers. There are two common methods in which pesticides are applied within the forested landscape to facilitate regeneration of conifer seedlings: spot applications, where an applicator uses a hand-sprayer to apply pesticides in a small circle around an individual conifer seedling; and aerial applications, where pesticides are sprayed from an aircraft over larger areas. In many cases, especially with the size and extent of recent spatially extensive wildfires, applications of pesticides by non-federal landowners are accomplished via aerial spraying (e.g., helicopters).

Pre-emergents [pesticides] are very effective at preventing new ground cover establishment for several years in the post-fire landscape, which reduces competition for nutrients, light, and water, increasing the success rate of conifer seedling survival (Webster and Fredrickson 2005). From a reforestation perspective, the use of pre-emergents [pesticides] achieves the objective of reducing competition between recently established commercial tree species seedlings and non-desirable species such as hardwoods, brush, and grasses. This practice, however, can come at a cost by delaying natural recovery of the burned landscape and the establishment of effective ground cover to reduce surface erosion (DiTornaso et al. 1997).

Very little information is available regarding the impacts of post-fire management on runoff and erosion (Wagenbrenner 2017). Most post fire research has focused attention on the physical effects of ground-based salvage logging on runoff and erosion, while little attention has focused on post-logging vegetation management. It is currently unknown whether post-fire vegetation management using pesticide treatments has a larger effect on post-fire hydrogeomorphic processes than salvage logging due to alterations in post-fire recovery processes (i.e., revegetation and associated ground cover increases). Clearly there are trade-offs associated with limited pesticide application (e.g., poorer seedling survival, slower establishment of tree cover).

Numerous studies have shown that the percent of ground cover is the primary and dominant control of erosion and sediment yield in the post-fire environment (Benavides-Solorio and Macdonald 2001, Benavides-Solorio et al. 2005, Goldman et al. 1986, Larsen et al. 2009, Lavee et al. 1995, Robichaud et al. 2010, Wagenbrenner et al. 2015, Slesak et al. 2015, Delwiche 2009).

Federal Lands

The USFS typically utilizes pesticides on a very limited basis in post-fire environments. In most cases where pesticides are used on NFS lands, spot spraying is used to control invasive weeds and to help re-establish conifers. Unlike non-federal industrial landowners, these limited applications generally occur a year or more after the fire when vegetative recovery and ground cover has been significantly re-established, thereby, providing the cover necessary to reduce erosion and limit offsite movement of sediment.

For the pesticides commonly used by the USFS in its management activities, Human Health and Ecological Risk Assessments (HERAs) are prepared. In these documents, the process of risk assessment is used to quantitatively evaluate the probability that pesticide use might pose harm to humans or other species in the environment. When evaluating risks from the use of pesticides proposed in a NEPA planning document, the USFS has determined that reliance on the U.S. Environmental Protection Agency's (U.S. EPA) pesticide registration process as the sole

demonstration of safety is insufficient. The USFS and Bureau of Land Management (BLM) were involved in court cases in the early 1980's that specifically addressed this question (principally *Save Our Ecosystems v. Clark*, 747 F.2d 1240, 1248 (9th Circuit, 1984) and *Southern Oregon Citizens v. Clark*, 720 F. 2d 1475, 1480 (9th Cir. 1983)). These court decisions and others affirmed that although the USFS can use U.S. EPA toxicology data, it is still required to do an independent assessment of the safety of pesticides rather than relying on the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) registration alone. The Courts have also found that FIFRA does not require the same examination of impacts that the USFS is required to undertake under NEPA. Further, USFS assessments consider data collected from both published scientific literature and data submitted to U.S. EPA to support FIFRA product registration, whereas U.S. EPA utilizes the latter data only. The U.S. EPA also considers many forestry pesticides uses to be minor. Thus, the project-specific application rates, spectrum of target and non-target organisms, and specialized exposure scenarios evaluated by the USFS are frequently not evaluated by U.S. EPA in its generalized registration assessments.

Post-Fire Pesticide Application and Regulations

Post-fire applications of pesticides follow the same pesticide labeling rules as used in 'green tree' forestry pesticide applications (as shown on the individual pesticide label), regardless of the severity of the fire and the amount of vegetation cover removed by the fire or the risk of erosion.

All pesticide label requirements, including those related to aquatic buffers are initially approved by the U.S. EPA based on evaluation of pesticide registrant submitted data used to support proposed label uses. In order for pesticide products to be used in California, the Department of Pesticide Regulation (DPR) reviews all U.S. EPA pesticide label components. State specific modifications to address necessary additional restrictions may be incorporated in coordination with registrant and EPA. Each pesticide label has general use instructions with specific state requirements. A Pest Control Advisor (PCA) is a trained, licensed individual that provides site specific pesticide recommendations. Most commonly used forestry pesticides have no aquatic buffers listed on the label, as indicated in Table 1 below.

Table 1 – Pesticide aquatic buffer widths as provided in current labels*

Active Ingredient	Formulation Name	Aquatic Buffer (feet)	Label Toxicity Warnings	Additional Labeling
Aminopyralid	Milestone	0		
Clopyralid	Transline	0

	Weedone LV4	0	<i>This pesticide is toxic to fish.</i>	<i>The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.</i>

** This table provides a summary of current label requirements and is subject to change. The most up to date requirements for individual pesticides are listed on the label and should take precedent.*

*** Vegetated buffer: Note that in many wildfires with high burn severity there is no vegetation remaining to provide an aquatic buffer.*

**** 2,4-D is a Restricted Material: Restricted Materials are designated by DPR, based on hazards to public health, applicators, farm workers, domestic animals, honeybees, the environment, wildlife, or crops other than those being treated.*

Pesticide Application Monitoring (DPR/County Ag)

For non-restricted materials, licensed pesticide applicators are required to report pesticide use to the respective county agricultural commissioner (CAC) within seven days of the completion of the application. Restricted material pesticides (e.g., 2,4-D and strychnine) have to report to the CAC 24 hours in advance of application. Restricted Materials are designated by DPR, based on hazards to public health, applicators, farm workers, domestic animals, honeybees, the environment, wildlife, or crops other than those being treated. There is no evidence that any monitoring of forestry pesticide applications is conducted by CAC staff (Central Valley Water Board staff personal communication with CAC staff and RPFs, May 2016).

Post-Fire Pesticide Detections

Following the 2012 Ponderosa Fire in the Battle Creek watershed located in Shasta and Tehama counties, salvage operations were conducted throughout the watershed on non-federal lands. During 2013 and early 2014, approximately 12,000 pounds of Hexazinone (Active Ingredient – A.I.) 1395 pounds of Imazapyr, 115 pounds of Triclopyr, and 30 pounds of 2,4-D were applied in the Battle Creek watershed, most of it associated with post-fire conifer plantation establishment. Through a contract agreement with the Central Valley Water Board, a water sampling and analysis pilot study was conducted by the California Department of Fish and Wildlife (CDFW) between November 2013 and March 2014. Hexazinone, 2, 4-D, Triclopyr, and Imazapyr were detected. Hexazinone was detected in all 26 samples. The primary purpose of the pilot study was to test the utility of the Continuous Low Level Aquatic Monitoring (CLAM) collection devices for detecting pesticides downstream of forestry operations. This study did not quantify concentrations of specific chemicals; however, pesticide chemicals were present and detectable. While detections were indicated, significant issues with regard to the equipment reliability of the CLAM sampling devices, testing protocols, and verification standards indicate that further study is needed. Until further study can be conducted, the General Order establishes specific requirements in Parts III.C.3.b.ii. and III.F.3.c.ii. to provide reasonable protection measures to address potential threat to water quality from pesticides in forestry application.

Post-Fire Mitigations for Protecting Water Quality

The previous sections have summarized the naturally occurring and anthropogenic sources of accelerated erosion and sediment delivery that can occur following a major wildfire, including: the mechanics of increased runoff rates, hydrophobicity, surface soil erosion, and the inability of burned landscapes to buffer increased erosion. In unmanaged landscapes where no salvage logging operations will occur, these processes will occur naturally and play a vital role in ecosystem dynamics and landscape scale erosional processes. In managed landscapes where salvage logging will occur, BMPs and mitigations are needed to reduce management-related sediment sources to watercourses within the burned area. The most widely used and most cost-effective management measures and BMPs used to mitigate erosion and sediment delivery are erosion barrier treatments, mulch treatments, chemical soil surface treatments, and natural reestablishment of vegetative cover.

Erosion barrier treatments are designed to slow runoff, and trap and store eroded sediment. Common post-fire hillslope erosion barriers include contour-felled logs, straw wattles, contour trenches or ‘contour ripping’ (hand or machine dug), and straw bales (Napper 2006). Erosion barriers, and contour-felled logs in particular, may reduce runoff and sediment yields for low intensity rain events, but they are unlikely to have a significant effect for high intensity rain events and can concentrate flow, creating erosion if implemented incorrectly (Robichaud et al. 2010). Contour ripping has been used by some landowners and land managers as cost-effective erosion mitigation in post-fire environments (James 2014). Contour ripping can be implemented generally on slopes 35% or less, where erosion is lower than on steeper slopes, and is not restricted by natural barriers, such as rocky terrain. The contours created by this practice must be deep enough to penetrate the hydrophobic layer created by high intensity fire and be constructed “on-contour”, perpendicular to slope, to reduce flow pathways and concentration of runoff that could result in rilling and gullyng. A study conducted by a large industrial landowner in the Ponderosa Fire footprint indicates that contour ripping reduces post-fire surface erosion (James 2014).

Mulch treatments can be an effective post-fire mitigation for reducing surface erosion and involves the spread of material over the exposed soil surface to protect it from rain drop impact, overland flow, and erosion. Mulching is a quick way to immediately increase ground cover in areas that are at high risk of erosion and can be an effective post-fire mitigation. Mulches include wet mulches, such as hydromulches, which are mixed with water and sprayed over the soil surface. Dry mulches include straw, wood chips, wood shreds, and wood strands. Large wood chippers and masticators have proven to be very effective at generating wood chips and wood shreds using on-site fuels and logging slash. A limiting factor with dry mulches is that they are generally applied only on slopes from 20 to 60 percent, or where chippers can broadcast chipped materials on to the hillslope. "Straw bombing" or heli-mulching is another technique that has been utilized most frequently on federal post-fire landscapes by dropping cut hay bales from helicopters. This method can be effective, however, the operational cost of helicopters to "bomb" the hillside is often cost prohibitive (usually over \$1500 per acre), and can result in less than two percent of the landscape being successfully treated.

Tackifiers—also known as soil binding agents—are another form of erosion treatment that is applied directly to the soil surface, forming a thin web of polymer designed to hold soil particles together. The soil binder polyacrylamide (PAM), a soil particle flocculant, is designed to connect small particles, thus increasing their size and mass. PAM is the only soil binder that has been used as a post-fire hillslope stabilization treatment. Post-fire treatment effectiveness studies that include PAM have generally been inconclusive or have shown no treatment effect.

For landscape-scale fires, many of the mitigations mentioned above are costly, with varying degrees of effectiveness (Robichaud et al. 2010, Wagenbrenner et al. 2006). The natural re-establishment of ground cover has shown to be the most feasible and cost-effective method to reduce erosion and sediment production (MacDonald and Larsen 2009, Benavides-Solorio et al. 2001). For many non-federal industrial timberland owners, however, allowing burned forestlands to regenerate naturally is not a viable economic option for maximizing commercial tree species production. For these landowners, herbicide (pesticide) use has been proven to be an effective measure for delaying the re-establishment of natural vegetative cover and increasing the rate of survival for replanted conifer seedlings. As discussed in previous sections of this document, the application of pesticides in the post-fire environment can have both a direct and indirect effect on rates of soil erosion, and the potential discharge of residual chemicals directly into surface waters.

Ground cover and riparian buffers can reduce pesticide discharge into streams by providing dissipation, filtration, chemical sequestration, and chemical degradation/biodegradation (Wenger 1999, Larson et al. 1997). Ground cover has been shown through numerous studies to be effective at reducing erosion and sediment transport. Research consistently indicates that 50% ground cover functions as the threshold where erosion and sediment production is significantly reduced (Benavides-Solorio et al. 2005, Foltz and Wagenbrenner 2010, Golman et al. 1986, Harrison et al. 2016, MacDonald and Robichaud 2008, Prats et al. 2012, Robichaud et al. 2012, Wagenbrenner et al. 2006, Yanosek et al. 2006).

Riparian buffers are shown to protect water quality, habitat, and biota in *non-burned* landscapes (Sweeney and Newbold 2014, Wenger 1999, U. S. Army Corps of Engineers 1991). Unburned or stream buffers burned with low severity are critical to protect water quality and other beneficial uses in post-fire environments because of the increased sediment production due to runoff after wildfires. Appropriate sized stream buffers (generally ≥ 30 meters or 100 feet) have been shown to mitigate stream impacts from *green tree* logging activities, while small buffers (≤ 10 meters) do not significantly protect a stream from logging impacts (Davies and Nelson 1994). Areas with high

resource value—such as wetlands and fish bearing streams—benefit from buffers that are a minimum of 15 meters, or approximately 50 feet (Castelle et al. 1994). Studies on herbicide fate and transport show that average buffer widths of 38 m and 50 m, in restored and managed riparian forests respectively, reduced herbicide concentrations to at or below detection limits (Lowrance et al. 1997, Vellidis et al. 2002). A review of pesticide buffers found that cases of high pesticide concentrations only occurred when no buffer was used and that generally, bufferstrips of 15 m or larger are effective in minimizing pesticide contamination in streams (Neary et al. 1993).

This General Order requires the implementation of buffers based upon the information provided above. While slightly larger than research indicates necessary, required buffers are the same as those required in the FPRs to address large variations in soil, topography, resource sensitivity, etc. This General Order also allows the discharger to propose an optional plan (Attachment C) should they wish to test out emerging or alternate methods, technology, or pesticide use within the buffer(s) or on the slopes above.

Development of effective post-fire mitigations and BMPs to reduce impacts from erosion and sediment delivery to streams is an area of research and development that is being explored by many leading fire scientists, soil scientists, watershed scientists, foresters, and many state and federal resource agencies throughout the western U.S., including California. In an effort to provide more site-specific research into the effects of post-fire salvage logging in California, and to support an adaptive management framework where new science and research is used to support or promulgate existing and new rules and regulations, the Central Valley Water Board is funding a study through the AB 1492 Timber Regulation and Forest Restoration Fund (TRFRF) on Boggs Mountain Demonstration Forest (BMDSF), managed by CAL FIRE. BMDSF burned in 2015 during the Valley Fire and has provided a valuable opportunity to explore the effects of post-fire management on water quality by assessing the responses of runoff and sediment to logging and reforestation activities, and to demonstrate effective logging BMPs to landowners and land managers that are well suited for post-fire landscapes to mitigate potential water quality impacts. The project has three primary purposes: (1) to quantify the effects of post-fire salvage logging and common post-salvage site preparation techniques including mechanical and herbicide (pesticide)-assisted reforestation on soil properties controlling runoff, hillslope erosion rates, and vegetative recovery; (2) to understand processes occurring at small-catchment scales so that small-plot results can be extrapolated to sizes of specific interest to land managers and watershed stakeholders; and (3) to develop and demonstrate alternative BMPs used to reduce runoff and erosion from post-fire salvage logging. This study is currently underway and is expected to be completed by 2019. Initial study results are presented in Wagenbrenner et al. (2016a) and Olsen (2016).

Evaluation of Significant Existing or Potential Erosion Sites (SEPES)

The BOF, through a lengthy stakeholder process, developed and adopted a section in the FPRs referred to as the Road Rules, 2013, Rule Package. This rule package was intended to clarify, streamline and organize all of the FPRs where roads were included. The development process resulted in some additions as well, including the new definition of “Significant Existing or Potential Erosion Site (SEPES)” (Cal. Code of Regs., title 14, § 895.1) based upon a need to address such sites for water quality protection. The FPRs now include the following definition:

“Significant Existing or Potential Erosion Site means a location where soil is currently, or there are visible physical conditions to indicate soil erosion may be in the future, discharged

to watercourses or lakes in quantities that violate Water Quality Requirements or result in significant individual or cumulative adverse impacts to the beneficial uses of water.”

The Road Rules, 2013, Rule Package became effective on January 1, 2015. Central Valley Water Board staff has been reviewing and commenting on the application of this definition for the past two years through the THP process and noting inconsistent interpretations. In Attachment A of the Order, an expanded definition has been provided that embeds the definition of Water Quality Requirements (also provided California Code of Regulations, title 14, section 895.1):

“Significant Existing or Potential Erosion Sites (SEPES)” means a location where soil erosion is currently, or there are visible physical conditions to indicate soil erosion may be in the future, discharged to watercourses or lakes in quantities that violate a water quality objective (narrative or numeric), prohibition, Total Maximum Daily Load (TMDL) implementation plan, policy, or other requirement contained in a water quality control plan adopted by the Central Valley Water Board and approved by the State Water Central Valley Water Board, or a location where soil erosion may result in significant individual or cumulative adverse impacts to the beneficial uses of water” (emphasis added).

The intent in combining the two definitions in Attachment A of the Order is to emphasize that level of significance relative to existing and potential erosion sites is ultimately determined by, and is the responsibility of the Central Valley Water Board, who have a legal mandate and the authority to determine the significance of any discharge to waters of the state, and to ensure permitted discharges are in conformance with the appropriate Basin Plan, permit, policy, or other requirement (see Finding 18 of the Order).

Indicators of SEPES on the Existing Road Network

As noted in California Code of Regulations, title 14, Technical Rule Addendum No. 5: Guidance on Hydrologic Disconnection, Road Drainage, Minimization of Diversion Potential, and High Risk Crossings (1st Edition), section B, indicators of SEPES with the existing road drainage systems include:

- *Evidence of direct sediment entry into a watercourse or a flood prone area from road surfaces or drainage structures and facilities (e.g., ponded sediment, sediment deposits, delivery of turbid runoff from drainage structures during rainfall events).*
- *Ditch scour or downcutting resulting from excessively long undrained ditches with infrequent ditch drain (relief) culverts or other outlet structures or facilities. This condition can also result from design inadequacies (e.g., spacing not altered for steep ditch gradient), inadequate erosion prevention practices (e.g., lack of armoring), or ditches located in areas of erodible soils.*
- *Gullies or other evidence of erosion on road surfaces or below the outlets of road drainage facilities or structures, including ditch drain (relief) culverts, with transport or a high likelihood of transport to a watercourse.*

Additionally, if a road and/or ditch runoff is hydrologically connected to a watercourse, the following factors elevate the risk of sediment delivery to a watercourse:

- *Existing or high potential for cutbank sloughing or erosion into inside ditches.*
- *Native-surfaced road exhibiting erosion.*
- *Native-surfaced road composed of erodible soil types (e.g., granitic soils).*

- *Rilled, gullied, or rutted road approaches to crossings.*
- *Existing ditch drain (relief) culverts or other road drainage structures with significant plugging from sediment and/or small woody debris.*
- *Existing ditch drain (relief) culverts or other road drainage structures with decreased capacity due to damage or impairment (e.g., crushed or bent inlets, flattened dips due to road grading).*
- *Decreased structural integrity of ditch drain (relief) culverts, waterbreaks, or other road drainage structures (e.g., excessive culvert corrosion, breached waterbreaks, or rutted road segments).*

Under the FPRs, a standard 'green tree' THP must include an analysis of all SEPES and a schedule for addressing such sites within the project area as a part of the CEQA EIR equivalent process. However, post-fire salvage operations conducted under an Emergency Notice are exempt from the requirement to disclose and address SEPES. Previous sections of this Information Sheet have described the concerns that Central Valley Water Board staff have with salvage logging operations conducted under an Emergency Notice, and to address these concerns, the Order contains requirements for SEPES disclosure as a condition for enrollment of post-fire salvage operations.

SEPES in the Post-Fire Environment

For post-fire salvage areas (Category 2A and 5A), and areas not salvage logged but proposed for reforestation with pesticide applications, the Discharger shall evaluate SEPES considering the factors listed below that elevate the risk of sediment delivery to watercourses. The intent of this expanded SEPES evaluation is to identify existing or the potential for upslope erosional features (e.g., landslides, debris flows, significant gully networks, channel initiation and other mass wasting features) within the burned/logged area that have the potential to significantly influence the downslope road network. Documentation of hillslope level SEPES is only required where there is, or there is the potential for, an interaction of that feature with the below road network that will result in significant erosion and sediment delivery to a watercourse.

- Increased runoff and associated sediment/debris in high/moderate burn severity areas originating at mid to upper, convergent slope within the fire salvage area; or in areas outside the salvage area that contribute increased runoff to watercourse crossings and drainage structures within the fire salvage area or to appurtenant roads.
- Rilling and gullying along existing or proposed skid trails and water bars within the fire salvage area that have potential for sediment delivery to a watercourse;
- Existing watercourse crossings, particularly those with a structure (i.e. culvert, bridge), that are now undersized and at an elevated risk of failure due to any of the bulleted items listed above.

How Information is Used in the General Order

This Information Sheet sets forth the background and rationale used in the development of certain requirements in Order No. R5-2017-0061. Many of these requirements are new and represent significant changes between Order No. R5-2014-0144 (Timber "Waiver") and Order R5-2017-0061, specifically creation of Category 2A and Category 5A for post-fire salvage operations on non-federal and federal lands, respectively. The following requirements and the rationale for these requirements will be summarized in this section: 50% Effective Ground Cover and Minimum

Watercourse Pesticide Buffers (Parts III.C.3.b.ii. and III.F.3.c.ii. of the General Order); Table 1. Erosion Site Table for Significant Existing or Potential Erosion Sites (SEPES) and New Watercourse Crossings (Category 2A and 5A NOI); and the Post-Fire Management and Reforestation Plan (Attachment C).

50% Effective Ground Cover

Based on thorough research and review of dozens of peer reviewed studies, technical guidance documents, and handbooks on post-fire effects, and the mechanisms that are driving both increased rates of erosion and sediment delivery on managed and un-managed post-fire landscapes, the rationale for selecting 50% effective ground cover as a requirement for Category 2A and 5A in the Order (see Parts III.C.3.b.ii. and III.F.3.c.ii.) is based four primary factors:

- The dominant factor for controlling soil erosion rates post-fire is ground cover;
- Fifty-percent effective ground cover is the value most often referred to the reviewed literature (e.g., U.S. Forest Service 2012, Benavides-Solorio et al. 2001, 2005, Berg and Azuma 2010, Doerr et al. 2009, Goldman et al. 1986, Harrison et al. 2016, Hyde et al. 2007, 2014, and 2015, Johansen et al. 2001, Stubblefield et al. 2016);
- Fifty-percent effective ground cover is a value that is most easily assessed and verified from visual estimations; and
- Ground cover is shown to be the most feasible and cost-effective method to reduce erosion and sediment production.

Watercourse Pesticide Buffers

The rationale behind the requirement for standard watercourse riparian buffers (see Parts III.C.3.b.ii. and III.F.3.c.ii. of the Order) in Category 2A and 5A in the Order is based on four primary factors:

- Extensive literature review indicates that ground cover and aquatic buffers can reduce pesticide discharge into streams by providing dissipation, filtration, chemical sequestration, chemical degradation/biodegradation (Brosofske et al. 1997, Reeves et al. 2006, Davies and Nelson 1994, Sweeney and Newbold 2014, Richardson et al. 2012, Wenger 1999, ACOE 1991, MacDonald 2011, Lindenmayer and Noss 2006, Minshall 2003);
- Studies on herbicide fate and transport show that average buffer widths of 38 m and 50 m, in restored and managed riparian forests respectively, reduced herbicide concentrations to at or below detection limits (Lowrance et al. 1997, Vellidis et al. 2002).
- A review of pesticide buffers found that cases of high pesticide concentrations only occurred when no buffer was used and that generally, bufferstrips of 15 m or larger are effective in minimizing pesticide contamination in streams (Neary et al. 1993).
- Buffers widths for pesticide applied in the post-fire landscape are limited or non-existent (see Table 1);
- Post-fire pesticide sampling by CDFW in 2014 indicates that label instructions and applications were ineffective at preventing discharge of specific chemicals (Hexazinone, 2, 4-D, Triclopyr, and Imazapyr) to surface waters; and
- The buffer requirements that are in the Order (see Parts III.C.3.b.ii. and III.F.3.c.ii.) are existing buffer widths for WLPZs as specified in California Code of Regulations, title 14, section 936.5 for 'green tree' timber harvesting activities, have been proven to be effective at reducing transport of waste to surface waters, and are widths that are familiar to RPFs. For federal projects, these same buffer widths are specified around perennial, intermittent, and ephemeral streams.

Erosion Site Table for Significant Existing or Potential Erosion Sites (SEPES) and New Watercourse Crossings

The rationale behind the requirement to disclose road and crossing-related SEPES within project areas enrolling in Category 2A and 5A NOI is based on five primary factors:

- Decades of research in post-fire hydrologic response and erosional processes indicate that roads and associated watercourse crossings are particularly susceptible to accelerated rates of erosion due to increased runoff rates and transport of associated sediment and debris;
- SEPES and new/reconstructed watercourse crossings in the post-fire environment necessitate additional evaluation and review, as normal input values for calculating stream flow to determine the appropriate size and capacity of stream crossing structures (e.g., culverts) may need modification (Cafferata et al. 2017);
- Emergency Notices pursuant to California Code of Regulations, title 14, §§ 1052.1 et seq., for fire salvage do not provide adequate information to properly assess whether a project has SEPES and whether those sites will be mitigated to a level that is less than significant (for enrollment in Category 2A);
- Following wildfires on federal lands, values at risk assessed through BAER teams do not directly consider or prioritize water quality and aquatic habitat for immediate resource protection; and
- Requirement of an Erosion Site Table for Category 2A and 5A allows for better treatment prioritization and implementation tracking.

Post-fire Management and Reforestation Plan (PFP)

The rationale behind the Order requirement for Category 2A and 5A to provide a PFP (Attachment C) in-lieu of complying with the watercourse buffers and ground cover standards, is based on four primary factors:

- A PFP provides the Discharger flexibility in applying specific management practices across the fire salvage area that consider all aspects of the timing of the fire salvage, site-preparation, and other activities associated with reforestation; provides for site specificity in terms of topography, soils, climate, hydrology, and soil burn severity; and consider all sources of potential negative water quality impacts from those activities (i.e., sediment and pesticide applications);
- Allows the Discharger the option to address multiple Emergency Notice areas (non-federal), and fire salvage areas (federal projects), under one comprehensive post-fire plan;
- Provides the Discharger the option and flexibility in applying post-fire management practices and mitigations other than those identified in Parts III.C.3.b.ii. and III.F.3.c.ii. of the Order, including experimental practices; and
- Ensures an appropriate monitoring plan will be developed for a PFP.

COST OF MONITORING FOR NON-FEDERAL PROJECTS

Water Code section 13267(b)(1) states that “the burden, including costs, of these [required monitoring and] reports shall bear a reasonable relationship to the need for the report and the benefits to be obtained from the reports.” Based upon information provided by timber industry representatives, staff estimates an annual cost of required visual monitoring and reporting, depending on project type and enrollment category, to range from \$100 to \$2,800 per enrolled project once operations have been initiated. Table 2 provides an estimate for a ‘green-tree’ THP on non-federal lands with a maximum operational lifespan of 7 years enrolled under Category 3A and for a post-fire salvage Emergency Notice project with a maximum operational lifespan of 1 year enrolled in Category 2A. Projects can remain enrolled in the General Order beyond the maximum operational lifespan if risks to water quality are identified and additional management measures, monitoring and reporting are necessary to protect the beneficial uses.

Table 2. Example Monitoring Cost Estimate for 7 Year THP and 1 Year Post-Fire Salvage Emergency Notice (EM).

MRP Activity	THP (3A) Cost Range	EM (2A) Cost Range
Inspection Plan Development (1 time cost per project)	\$200-\$500	\$200-\$500
Erosion Site Inventory Table	NA	\$500-\$700
Implementation Monitoring**	\$500-\$700	\$500-\$700
Forensic Monitoring**	\$500-\$700	\$500-\$700
Effectiveness Monitoring	\$500-\$700	\$500-\$700
Reporting (annual and NOV)	\$100-\$200	\$100-\$200
1 st Year Cost Estimate*	\$1,800-\$2,800	\$2,300-\$3,500
Total Cost Estimate for 7 years of enrollment	\$11,200-\$16,100	NA
Total Cost Estimate for 2 years of enrollment	NA	\$4,200-\$6,000

* Mileage not included, extreme variability in distance to monitored sites exists.

** Implementation and forensic monitoring required by the FPRs for THPs.

The visual monitoring required for ‘green tree’ projects (THPs) on non-federal lands has, since 2005 under the Timber Waiver, included two rounds of forensic monitoring during the winter period once operations have commenced. Eleven years of enrolled project monitoring has resulted in staff proposing to reduce this type of monitoring from twice per winter to once per winter under the General Order, comprising a modest annual cost savings to the timber/timberland owner of these projects.

It must also be noted that implementation monitoring is a requirement of the FPRs, as is forensic monitoring. The FPRs specify that the Regional Water Board’s monitoring and reporting requirements may be used in the evaluation of the road rule requirements. California Code of Regulations, title 14, section 943.7(k)(2) under Maintenance and Monitoring of Logging Roads and Landings specifies: “*Inspections conducted pursuant to California Regional Water Quality Control Board requirements may be used to satisfy the inspection requirement of this section.*” While the FPRs require visual implementation inspections prior to the winter period, and inspections during the winter period (essentially “forensic” monitoring), no formal reporting is required. So, even should the Central Valley Water Board determine that no additional monitoring or reporting will be required of projects enrolled in the Order, implementation and forensic inspections are still required by the FPRs (even for projects eligible to file an Notice of Non-Applicability under the General Order), though no reporting occurs. Thus, requiring development of an inspection plan,

Information Sheet
Order No. R5-2017-0061
Waste Discharge Requirements General Order for
Discharges Related to Timberland Management Activities on Non-Federal and Federal Lands

effectiveness monitoring, Notice of Violation (NOV) reporting and annual reporting are additional costs to non-federal Dischargers not required by the Forest Practice Rules.

The Central Valley Water Board concludes that the cost of monitoring and reporting required by the General Order represent a reasonable cost of conducting permitted operations that pose a threat to water quality. Benefits inherent in the proposed monitoring and reporting are many and include: increased awareness on the part of the landowner/land manager of sensitive water quality resources; potential impacts and effectiveness of management measures; increased potential for identifying threats before they impact water quality and the beneficial uses; increased data available to aid in future risk analyses; lessons learned regarding specific threats and effective mitigations that can be presented to the BOF for consideration in developing rule revisions or used in the furtherance of best management practice development.

TOWN OF PARADISE
ORDINANCE NO. 588

AN URGENCY ORDINANCE OF THE TOWN COUNCIL OF THE TOWN OF PARADISE
REPEALING ORDINANCE NO. 587 AND ADOPTING A NEW ORDINANCE
ESTABLISHING THE REQUIREMENTS OF A
MANDATORY HAZARD TREE REMOVAL PROGRAM

The Town Council of the Town of Paradise, State of California,
does **ORDAIN AS FOLLOWS:**

Section 1. Ordinance No. 587 is repealed.

Section 2. The Town Council of the Town of Paradise, State of California does ordain as follows: Emergency Findings. This Urgency Ordinance is adopted pursuant to California Government Code Section 36934 and shall take effect immediately upon its approval by at least a four-fifths vote of the Town Council. The Council finds that this Ordinance is necessary for the immediate preservation of the public peace, health and safety, based upon the following facts:

- A. Conditions of extreme peril to the safety of persons and property within the Town were caused by the Camp Fire, commencing on the 8th day of November, 2018, at which time the Town Council was not in session.
- B. California Government Code Section 8630 et seq. empowers the Town Director of Emergency Services (Director) to proclaim the existence of a local emergency when the Town is affected or likely to be affected by a public calamity, subject to

1 ratification by the Town Council at the earliest practicable
2 time.

3 C. On November 8, 2018, the Director (Town Manager) proclaimed the
4 existence of a local emergency within the Town of Paradise due
5 to the Camp Fire.

6 D. On November 8, 2018, the Acting Governor of the State of
7 California proclaimed a State of Emergency for Butte County
8 pursuant to the California Emergency Services Act, commencing
9 with Section 8550 of the Government Code, and on November 14,
10 2018, the Governor issued Executive Order B-57-18 concerning the
11 Camp Fire.

12 E. On November 9, 2018, the Camp Fire was still burning through the
13 Town and despite firefighters' best efforts, the wildfire was
14 not contained. Evacuation orders were in place and numerous
15 severe public health and safety hazards were present in the Camp
16 Fire area, including many blocked roads from fallen power lines,
17 burned trees and vehicles, numerous burned vehicles were left
18 throughout the Camp Fire area due to survivors fleeing their
19 vehicles in efforts to survive the wildfire, no available
20 utilities, no available public services and the presence of
21 human remains and animal carcasses. At the time, the County
22 estimated that 2,000 structures had burned in the Camp Fire.

23 F. On November 9, 2018, Dr. Andrew Miller, Butte County's Local
24 Health Officer, issued a Declaration of Health Emergency
25 pursuant to California Health and Safety Code section 101080.

1 Dr. Miller's declaration stated that the local health emergency
2 was a consequence of the debris resulting from the Camp Fire
3 that contains hazardous material in the ash of the burned
4 qualifying structures. The purpose of the Declaration was to
5 address the immediate threat to the public health and the
6 imminent and proximate threat of the introduction of contagious,
7 infectious or communicable disease, chemical agents, non-
8 communicable biologic agents, toxins and/or radioactive agents
9 present at the time in the Camp Fire area. The threats included
10 (1) the enormous amount of fire debris present in the Camp Fire
11 area, including ash and debris containing hazardous materials
12 and probable radioactive materials present in ash and debris
13 from qualifying structures, (2) the threat of infectious or
14 communicable disease and/or non-communicable biologic agents due
15 to animal carcasses, radioactive waste and perishable foods, (3)
16 the potential contamination or destruction of the residential
17 and commercial water supply in the Camp Fire area and (4) the
18 potential pollution of the drinking water downstream from the
19 Camp Fire area if weather conditions caused the spread of the
20 hazardous materials in the ash and debris of burned qualifying
21 structures.

22 G. On November 12, 2018, the President of the United States declared
23 the existence of a major disaster in the State of California,
24 providing assistance from many federal agencies, including the
25 Federal Emergency Management Agency (FEMA).

1 H. On November 13, 2018, the Town Council adopted Resolution No.
2 18-42 ratifying the Director's proclamation of the existence of
3 a local emergency in the Town. The resolution also requested
4 that the State of California waive regulations that may hinder
5 response and recovery efforts, as well as make available
6 assistance under the California Disaster Assistance Act or any
7 other state funding, and that the Federal Government expedite
8 access to federal resources and any other appropriate federal
9 disaster relief program.

10 I. On November 21, 2018, the status of the Camp Fire area was as
11 follows: firefighters had contained the Camp Fire; the Sheriff
12 had lifted some evacuation orders; work crews had removed fallen
13 power lines, burned vehicles and trees blocking the roads;
14 utilities including electric power, gas and non-potable water
15 had become available; no local businesses were open to serve the
16 public; and no public services were available. Further,
17 preliminary actions had been taken to mitigate the risk from
18 animal carcasses, radioactive waste and perishable foods in the
19 Camp Fire area, however, concerns regarding the threats
20 remained. The public health hazards present in the Camp Fire
21 area included (1) the public health hazards from the enormous
22 amount of fire debris, (2) the public health hazard from the
23 hazardous materials and probable radioactive materials present
24 in the ash and debris from destroyed qualifying structures, (3)
25 the threat of infectious or communicable disease and/or non-

1 communicable biologic agent due to the presence of animal
2 carcasses, perishable foods and radioactive waste and (4) the
3 potential pollution of the drinking water downstream from the
4 Camp Fire area if weather conditions caused the spread of the
5 hazardous materials in the ash and debris of burned qualifying
6 structures. At the time, the County of Butte estimated that the
7 Camp Fire had destroyed 18,000 structures.

8 J. On November 21, 2018, Dr. Miller issued a Hazard Advisory
9 strongly suggesting residents should not reside on property with
10 qualifying structures damaged or destroyed by the Camp Fire
11 until the property had been cleared of hazardous waste, ash and
12 debris and certified clean by the Department of Public Health,
13 Environmental Health Division. When the evacuation orders were
14 lifted, the Department of Public Health provided residents who
15 chose to visit their property to collect valuables with re-entry
16 packets to improve their safety during the visit. The re-entry
17 packets included personal protective equipment and information
18 on the dangerous conditions and toxic materials present in the
19 Camp Fire area. The re-entry packets were intended to improve
20 public safety from the public health hazards encountered during
21 the visit, but was not intended to encourage long-term
22 habitation. The purpose of the Hazard Advisory was to address
23 the public health hazards present at the time in the Camp Fire
24 area, including (1) the enormous amount of fire debris present
25 in the Camp Fire area, (2) the hazardous materials and probable

1 radioactive materials present in ash and debris from qualifying
2 structures, (3) the lessened but still present threat of
3 infectious or communicable disease and/or non-communicable
4 biologic agents due to animal carcasses, radioactive waste and
5 perishable foods, (4) the potential contamination or destruction
6 of the residential and commercial water supply in the Camp Fire
7 area and (5) the potential pollution of the drinking water
8 downstream from the Camp Fire area if weather conditions caused
9 the spread of the hazardous materials in the ash and debris of
10 burned qualifying structures.

11 K. The Camp Fire to date has consumed 153,336 acres and has led to
12 the destruction of 13,696 residences, damage to 462 residences,
13 the destruction of 276 multiple family residences, the
14 destruction of 528 commercial buildings, damage to 102
15 commercial buildings, the destruction of 4,293 other minor
16 structures, and resulted in the evacuation of over 50,000
17 people. As a result, the Camp Fire has created an enormous number
18 of dead or dying trees.

19 L. The Town is located in a Very High Fire Hazard Severity Zone as
20 shown on the California Department of Forestry and Fire
21 Protection's Fire and Resource Assessment Program map dated
22 November 7, 2007.

23 M. The Town generally has a climate conducive to wildfires and is
24 prone to periodic dry summers and wind events. Hazard trees pose
25 a significant danger to the health, safety and welfare of the

1 public by fueling and propelling wildfires, thereby increasing
2 the potential for a severe fire and endangering lives, property
3 and the environment. Increasingly dry summers and severe wind
4 events further exacerbate the fire danger and have the potential
5 to result in catastrophic fire losses to life, property and the
6 environment.

7 N. Additionally, the Camp Fire created a fuel type conversion
8 whereby the Ponderosa Pine and mixed conifer forests have now
9 been converted to predominantly open land with grass and brush
10 regrowth. The understory grass and brush can precipitate the
11 start and spread of fire with hundreds of thousands of dead
12 trees still standing, many of which are within the urban
13 interface, to further add to the fire threat and intensity.
14 Dead trees that fall on the forest floor over time further
15 complicate the fire environment by adding large down, dead fuel
16 that will add to surface fire intensity and make control efforts
17 difficult.

18 O. Dead and dying trees pose a life hazard to firefighters, first
19 responders and the general public if exposed to fire or high
20 wind storm events. Standing trees that are dead or dying and
21 are adjacent to roads have an increased risk of falling onto the
22 roads during a wildfire disaster or high wind storm event as
23 compared to healthy trees. This endangers primary and secondary
24 evacuation routes in the Camp Fire area, which could lead to
25 increased loss of life during a future fire.

1 P. Of paramount importance to the Town Council and the residents
2 of the Town is the protection of lives and property from the
3 threat of fire, including proper maintenance of evacuation
4 routes and the safety of fire and law enforcement personnel
5 during wildfires.

6 Q. Dead and dying trees suffer an increased risk of pest
7 infestation, such as bark beetles. When dead or dying trees are
8 infested with pests, this also exposes the healthy trees in
9 close proximity. The healthy trees are then endangered by the
10 pests, which potentially creates more fuel for future fires,
11 which increases the future fire risks in the Camp Fire area.

12 R. The Town estimates 99,000 trees must be removed from
13 approximately 7,000 private parcels adjacent to the Town's
14 rights-of-way for Town-maintained roads.

15 S. 100 percent of businesses in the burn area were shut down after
16 the Camp Fire. Approximately 150 out of the 1,200 businesses
17 reopened 6 months later. This number does not include all home-
18 based businesses that were displaced as a result of the
19 residential structure burning in the Camp Fire. The survival
20 of new and existing businesses depends primarily on the
21 restoration of the purchasing power in the community. The loss
22 of 10,000 homes in the Camp Fire area and the subsequent
23 displacement of the residents severely reduces the customers for
24 businesses that sell goods and services locally and the
25 workforce available for businesses that produce goods and

1 services for export out of the Town. The severe reduction in
2 population dramatically reduces the ability for businesses to
3 recover, including the ability to remain a viable business
4 interest in the community.

5 T. State law provides property tax relief to homeowners impacted
6 by a natural disaster by reducing their assessed value. This
7 process provides for the removal of the value of the damaged
8 structure effective as of the date of the disaster. The fiscal
9 year 2019-20 roll will reflect 12 months of reduced value as
10 well as additional reductions to land value which could not be
11 adjusted mid-year. Over 50 percent of property tax revenues
12 support schools while the remaining taxes provide revenue to
13 local jurisdictions and special districts to provide critical
14 local services. The Town receives about 20% of total property
15 tax revenues. The State of California has committed to
16 backfilling property taxes for three years to account for the
17 substantial reduction in revenue to these agencies. The only
18 way for this critical revenue source to recover is for homes and
19 structures to be rebuilt and property values, and therefore
20 property taxes, to increase. Property tax is the primary
21 discretionary revenue source for the Town.

22 U. The health of the communities and local economies largely
23 depends upon repopulation; repopulation largely depends upon the
24 mindset of the public and their sense of security moving back
25 to their land. For example, if evacuation routes continue to

1 suffer from falling trees, residents will not have confidence
2 in their ability to evacuate safely during a future fire, and
3 will choose not to rebuild in the Camp Fire area. Without that
4 sense of security, people are moving elsewhere - which
5 negatively impacts the economy recovery of the region - both the
6 commercial economy and the property tax base for the Town.

7 V. The Town has received information from a certified arborist and
8 tree health expert company that has assessed trees rooted in the
9 public rights-of-way for tree mortality risk rating. The
10 arborists have generated a report and forms memorializing the
11 tree mortality data at the time of field reconnaissance and
12 inventory efforts on May 1, 2019 through August 31, 2019. One
13 of the purposes of the field reconnaissance effort was to
14 identify, inventory, and assess the risk of trees rooted in the
15 public rights-of-way within the Town that:

- 16 • Were damaged by the Camp Fire;
- 17 • Have a diameter of six inches or greater measured 4.5 feet
18 above ground level;
- 19 • Pose an immediate threat to life, public health and safety,
20 as a result of threatening public rights-of-way;
- 21 • Meet one or more of the following criteria:
 - 22 1. Have a split trunk;
 - 23 2. Have a broken canopy; or
 - 24 3. Is leaning at an angle greater than 30 degrees;
 - 25

1 and

- 2 • Is determined, under the professional opinion of the
3 arborist, that the tree is a hazard consistent with
4 criteria set forth in ANSI A300 (Part 9) known as the Tree
5 Risk Assessment Standard.

6 W. For those trees which met the defined criteria, the arborists
7 employed the ISA's Tree Risk Assessment methods to assess a tree's
8 risk ratings, which was based on the health of the tree and the
9 tree's relation to public rights-of-way.

10 X. Field reconnaissance and inventory efforts have found
11 approximately 4,700 trees which met the defined criteria.

12 Y. The arborists have recommended removal of all hazard trees which
13 meet the defined criteria and are rooted along the Town's rights-
14 of-way.

15 Z. It is the opinion of the Town Fire Chief that the unprecedented
16 level of hazard trees presents the following risks to life, public
17 health and safety: (1) the risks of injury and/or death to Town
18 residents who use Town-maintained roads due to falling trees; and
19 (2) the increased threat of catastrophic wildfire to the Camp Fire
20 area and surrounding area.

21 AA. A purpose of this Ordinance is to establish a Hazard Tree
22 abatement program that protects the lives and property of the
23 public living in and traveling through the Town, and the
24 environment.

1 BB. The Town Council finds that Hazard Trees pose a danger to the
2 health, safety and welfare of the residents in the vicinity of
3 any real property located throughout the Town for the reasons
4 set forth above. Therefore, all Hazard Trees located on real
5 property within the Town are deemed a public nuisance and pose
6 a hazard to the safety of the landowners, residents in the
7 vicinity, users of roads and to the public generally.

8 CC. It is imperative that the Town implement immediate and
9 aggressive measures to identify and fell the trees that are dead
10 and dying as a result of the Camp Fire to immediately eliminate
11 or reduce the risks to life, public health and safety,
12 infrastructure, forest health and the community at large.

13 DD. The Town Council has the authority to take action to protect
14 health, safety and welfare of the residents of the Town pursuant
15 to its police powers granted by Article XI, Section 7 of the
16 California Constitution.

17 EE. Hazard Trees as defined in Section 2.3 of this Ordinance include
18 trees that:

19 (1) are rooted on private property; and

20 (2) threaten roads and/or rights-of-way of Town-maintained roads
21 in the Town; and

22 (3) may cause physical injury or damage to persons or property
23 creates a serious public health and safety crisis and therefore
24 constitutes a public nuisance.
25

1 FF. It is essential that this Ordinance become immediately effective
2 (1) to mitigate the harm that could be caused to the public
3 health and safety and to the environment from the failure to
4 remove Hazard Trees and to facilitate the orderly response to
5 the Camp Fire disaster; and (2) to allow the fastest possible
6 transition of homeless and displaced residents to repopulate the
7 Camp Fire area.

8 Section 3. MANDATORY GOVERNMENT HAZARD TREE REMOVAL PROGRAM,

9 is hereby added to read as follows:

10 **Section 3.1. Government Hazard Tree Removal Program.**

11 Any tree that was fire damaged in the Camp Fire and that is in
12 immediate danger of falling onto a public road and/or right-of-way
13 or improved public property is a hazardous tree that must be removed
14 to eliminate the immediate threat to the public at large. This
15 Ordinance establishes a Hazard Tree removal program that is mandatory
16 and sets forth the manner in which hazardous trees will be identified
17 and removed.

18
19 **Section 3.2. Effective Period.**

20 Hazard Tree removal program shall take effect immediately upon
21 adoption of this Ordinance and shall remain in effect until the
22 removal of Hazard Trees has been completed.

23 **Section 3.3 Definitions.**

24 "Town Council." The term "Town Council" shall be defined as the Town
25 Council of the Town of Paradise.

1 "Enforcement Officer." The term "Enforcement Officer" shall be
2 defined as the Town Manager of the Town or his/her designee(s). Such
3 designee(s) may be a Town employee(s) or third-party provider(s).

4 "Town." The term "Town" shall be defined as the Town of Paradise.

5 "Government Hazard Tree Removal Program." The term "Government Hazard
6 Tree Removal Program" shall be defined as the Hazard Tree Removal
7 Program operated by the California Office of Emergency Services
8 (CalOES) for the Camp Fire area in conjunction with Butte County, the
9 Town of Paradise, and other state and federal agencies.

10 "Government Hazard Tree Removal Program Right of Entry Permit." The
11 term "Government Hazard Tree Removal Program Right of Entry Permit"
12 shall be defined as the permit for providing Hazard Tree removal on
13 private property approved by CalOES for use in the cleanup after the
14 Camp Fire.

15 "Hazard Tree." The term "Hazard Tree" shall be defined as:

16 A wildfire-damaged tree that in the professional opinion of an
17 arborist and/or forester:

18 A. has been so severely damaged by the Camp Fire that its
19 structural integrity is compromised; and

20 B. poses an imminent danger of falling onto a public right-of-way
21 or other public improved property. For purposes of this
22 Ordinance, "imminent danger" means the threat of additional
23 damage or destruction from an event which can reasonably be
24 expected to occur within five years.

25

1 A map reflecting Town-maintained roads in the Town is attached hereto
2 as Exhibit A.

3 "Inspection Access Form." The term "Inspection Access Form" shall
4 be defined as the permit for providing access to the Enforcement
5 Officer to inspect private property of owners opting to use the
6 Private Hazard Tree Removal Program approved by the Town for use in
7 the cleanup after the Camp Fire.

8 "Private Hazard Tree Removal Program." The term "Private Hazard Tree
9 Removal Program" shall be defined as an alternative to the Government
10 Hazard Tree Removal Program, which provides the property owner with
11 the option of identifying and removing Hazard Tree(s) on their
12 property at their own cost.

13 **Section 3.4. Government Hazard Tree Removal Program.**

14 A. The Government Hazard Tree Removal Program will remove all Hazard
15 Trees at no out-of-pocket cost to the property owner. If a property
16 owner does not participate in the Government Hazard Tree Removal
17 Program, and there are Hazard Trees on their property, the owners
18 are required to remove such trees at their own cost.

19 B. To participate in the Government Hazard Tree Removal Program,
20 property owners must complete and submit a Government Hazard Tree
21 Removal Program Right of Entry Permit. The Government Hazard Tree
22 Removal Program Right of Entry Permit shall function as the sole
23 permit and authorization for participation in the Government Hazard
24 Tree Removal Program. Notwithstanding any contrary provision in
25 Paradise Municipal Code, no Town approvals or permits for Hazard

1 Tree removal are required for properties participating in the
2 Government Hazard Tree Removal Program, other than the Government
3 Hazard Tree Removal Program Right of Entry Permit.

4 C. If property owners whose property contains Hazard Trees do not
5 participate in the Government Hazard Tree Removal Program (at no
6 out-of-pocket cost to owner) or the Private Hazard Tree Removal
7 Program (all costs paid by owner), the Town Council will enforce
8 this Ordinance and charge the owners with any administrative and
9 abatement costs related to such enforcement as described below.

10 D. In implementing this program, property owners who have applied for
11 building permits shall be given priority in the Government Hazard
12 Tree Removal Program.

13 **Section 3.5. Public nuisance; violations.**

14 Maintaining a Hazard Tree is prohibited and constitutes a public
15 nuisance subject to this Ordinance. A violation of any provision of
16 this Ordinance shall be deemed to be a public nuisance and subject
17 to any enforcement process available at law.

18 **Section 3.6. Purpose.**

19 It is the intent of the Town Council that this Ordinance may apply
20 to the abatement of Hazard Trees threatening the roads and/or rights-
21 of-way of Town-maintained roads or publicly improved property within
22 the Town.

23 **Section 3.7. Private Hazard Tree Removal Program.**

24 A. As an alternative to the Government Hazard Tree Removal Program,
25 the Private Hazard Tree Removal Program provides the property owner

1 with the option of identifying and removing Hazard Tree(s) on their
2 property at their own cost. To participate in the Private Hazard
3 Tree Removal Program, property owners shall submit an Inspection
4 Access Form for their property to the Butte County Right of Entry
5 (ROE) Center. Following the property owner's identification and
6 removal of Hazard Trees, the Private Hazard Tree Removal Program
7 shall require the Enforcement Officer to make a visual confirmation
8 of the removal of the Hazard Trees on the subject property. This
9 visual inspection of compliance with the Private Hazard Tree
10 Removal Program shall be sufficient for meeting the requirements
11 of this Section. Whether the Hazard Tree removal is adequate shall
12 be in the sole discretion of the Enforcement Officer.

13 B. Notwithstanding anything herein to the contrary, in the Private
14 Tree Program, owners may choose to temporarily retain and process
15 felled Hazard Trees which were standing on their property. This
16 temporary retention and utilization by the owner shall be permitted
17 only to the extent felled Hazard Trees and incidental foliage,
18 slash, tree branches or limbs and chipped or mulched vegetation do
19 not constitute a fire hazard as prohibited by applicable law,
20 including but not limited to California Public Resources Code
21 section 4291 et seq., Title 19 of the California Code of
22 Regulations and Chapter 15.09 of the Paradise Municipal Code. Such
23 requirements include but are not limited to the following:

24 (1) In storing such Hazard Trees prior to utilization, an owner
25 shall be required to:

1 (a) maintain a setback of no less than 100 feet from any
2 inhabited building or structure;

3 (b) maintain a setback of no less than 30 feet from any
4 uninhabited building or structure; and

5 (c) maintain a setback around the parcel's property lines of
6 no less than 30 feet wide.

7 (2) If an owner utilizes felled Hazard Trees for wood chips, the
8 owner shall be required to spread the wood chips to a depth of no
9 greater than 3 inches while maintaining a setback of no less than
10 5 feet from any building or structure.

11 (3) If owner utilizes felled Hazard Trees for firewood, the
12 owner shall be required to cut and neatly stack firewood that is
13 ready for use in standard size wood stove or fireplace while
14 maintaining a setback of no less than 10 feet from any building or
15 structure.

16 If any temporary retention and utilization of Hazard Trees
17 constitutes a fire hazard, it is a public nuisance and may be
18 abated using any available legal remedy. If the owner chooses to
19 temporarily retain and process the felled Hazard Trees, the owner
20 is required to utilize such Hazard Trees prior to the Enforcing
21 Officer's visit to the property to confirm compliance with the
22 Private Tree Program.

23 For the purposes of this section, any temporary retention and
24 utilization of felled Hazard Trees by the property owner is not a
25 Temporary Log Storage Yard (AKA: Log Deck) as described in Chapter

1 15.09 of the Paradise Municipal Code. Owners may not receive felled
2 trees from other properties.

3 C. The County and the Town shall utilize the state and federal
4 standards and cleanup goals of the Government Hazard Tree Removal
5 Program as the standards for the Private Hazard Tree Removal
6 Program, including but not limited to the criteria for determining
7 whether a tree is a Hazard Tree. Under the supervision of the
8 Enforcement Officer, the Town may administratively update these
9 standards as necessary to address ongoing changes in the
10 administration of the Government Hazard Tree Removal Program and
11 the need to efficiently remove Hazard Trees from the community.

12 **Section 3.8. Town Development Permits.**

13 No application for a Town Development permit with Hazard Trees shall
14 be considered complete until the applicant has entered into a
15 Government Hazard Tree Removal Program or a Private Hazard Tree
16 Removal Program. This section shall not apply to permits relating to
17 power, sewer or other utilities for temporary dwellings.

18 **Section 3.9. Deadlines and Enforcement.**

19 A. Properties that contain Hazard Trees and that have neither an
20 approved Government Hazard Tree Removal Program Right of Entry
21 Permit nor an approved Inspection Access Form for the Private
22 Hazard Tree Removal Program by the deadline set by the Town
23 Council, are declared a public nuisance and health hazard and
24 such properties may be abated pursuant to this Ordinance.

1 B. The Town Council may set a deadline for the completion of Hazard
2 Tree removal by resolution. Properties that have Hazard Trees
3 after that deadline are declared a public nuisance and health
4 hazard and such properties may be abated pursuant to this
5 Ordinance.

6 The Town Council's intent is to facilitate orderly remediation
7 of a large-scale disaster. Nothing in these deadlines shall
8 limit the authority of the Town to abate hazards more quickly
9 where required by exigent circumstances.

10 **Section 3.10. Enforcement.**

11 A. Whenever the Enforcement Officer determines that a public
12 nuisance (as specified in this Ordinance) exists, he or she may
13 use any legal remedies available under California law and this
14 Ordinance to address and abate the public nuisance, including
15 but not limited to the abatement procedures set forth in Section
16 2.11 of this Ordinance.

17 B. The Town may, in its sole discretion, abate a violation of this
18 Ordinance by the prosecution of a civil action, including an
19 action for injunctive relief, without first going through the
20 administrative procedures set forth herein. The remedy of
21 injunctive relief may take the form of a court order,
22 enforceable through civil contempt proceedings, prohibiting the
23 maintenance of a violation of this Ordinance, or requiring
24 compliance with other terms.
25

1 C. If a public nuisance is found to be present on the property in
2 violation of this Ordinance, (1) The Town may also abate a
3 violation of this Ordinance through the abatement process
4 established by this Ordinance or by Government Code Sections
5 38773 and 38773.5; (2) the Enforcement Officer shall pursue
6 payment for Abatement and Administrative Costs from the owner
7 and the owner of the property shall be responsible for paying
8 all of the Town's Abatement Costs and Administrative Costs.

9 **Section 3.11. Abatement procedures.**

10 A. Whenever the Enforcement Officer determines that a public
11 nuisance (as defined in this Ordinance) exists, he or she shall
12 implement the following procedures:

13 (1) General Enforcement action. When the Enforcement Officer
14 determines that an activity is being performed in
15 violation of this Ordinance, the Enforcement Officer may
16 initiate an enforcement action using the process set forth
17 in the Paradise Municipal Code and may seek the imposition
18 of costs and civil penalties pursuant to this ordinance
19 and in the Paradise Municipal Code. Nothing in this
20 provision is intended to prevent alternate enforcement
21 mechanisms.

22 (2) Abatement. Pursuant to the authority of California
23 Constitution., art. XI, Section 7; California Government
24 Code Section 38773 and 38773.5, and this Ordinance, if the
25 Enforcement Officer determines that a violation of this

1 Ordinance has created an emergency condition which
2 seriously endangers the public health or safety, the Town
3 may abate the condition within the Town. The costs shall
4 be charged to the property owners(s) and the Town may, at
5 its option, recover the same in an administrative or civil
6 action.

7 B. Such charges shall be in addition to any penalty for a violation
8 of this Ordinance.

9 (1) Pre-Abatement Notice. Unless emergency conditions
10 preclude doing so, the Enforcement Officer shall issue an
11 Abatement Notice and Order with reasonable notice. The Notice
12 and Order shall be mailed to the property owner(s) as listed
13 on the last equalized tax roll. A summary of the Notice and
14 Order shall be posted in a conspicuous location on the property
15 to be abated at least 10 calendar days prior to the abatement
16 action.

17 (2) Appeal and Waiver. The property owner(s) or any person or
18 entity having a legal interest in the property may submit a
19 written appeal of the Enforcement Officer's Order to the Town
20 Council no later than 10 calendar days from the date of mailing
21 of the Notice and Order. The written appeal shall state the
22 basis for the appeal. The appeal shall be heard by a Town-
23 appointed hearing officer regarding the appeal and shall issue
24 a written decision (the "Decision") no later than 10 calendar
25

1 days after receipt. The Decision shall uphold, rescind or
2 modify the determination of the Notice and Order. The Decision
3 on the appeal shall be final. Failure to appeal within the time
4 prescribed shall constitute a waiver of the right to contest
5 the abatement.

6 (3) Post Abatement Notice. After the abatement is completed,
7 the Enforcement Officer shall serve the property owner(s) with
8 a post abatement notice that sets forth: (a) the actions taken
9 by the Town; (b) the reasons for the actions; (c) a statement
10 of the costs, expenses and attorney's fees, if any, of the
11 abatement and notice of the Town's intent to collect those
12 costs; and (d) right to appeal the costs determination within
13 ten (10) calendar days of the notice. If the property owner is
14 responsible for any costs, expenses or attorney's fees, such
15 costs shall become a lien against the property and a Notice of
16 Abatement Lien may be recorded with the Butte County Recorder.

17 (4) Post Abatement Costs Appeal. If the property owner(s) or
18 anyone with a legal interest in the property submits a timely
19 costs appeal, the Town shall schedule an administrative hearing
20 on the matter and provide the appeal party with reasonable
21 notice of the hearing. The hearing officer shall conduct an
22 administrative hearing where each party shall have the
23 opportunity to present evidence and the Town shall have the
24 obligation to establish that the costs, including expenses and
25

1 attorney's fees, if any, incurred for the abatement were
2 necessary by a preponderance of the evidence. After the
3 hearing, the hearing officer shall issue a written decision and
4 order that shall be served upon the appealing party within 30
5 calendar days of the hearing unless extended by agreement of
6 the parties.

7 **Section 3.12. Abatement costs; administrative costs.**

8 A. The term "Abatement Costs" means any costs or expenses
9 reasonably related to the abatement of conditions which violate
10 this Ordinance, and shall include, but not be limited to,
11 enforcement, investigation, collection and administrative
12 costs, and the costs associated with the removal or correction
13 of the violation.

14 B. The term "Administrative Costs," shall include the cost of Town
15 staff time reasonably related to enforcement, for items
16 including, but not limited to, site inspections, travel time,
17 investigations, telephone contacts and time spent preparing
18 summaries, reports, notices, correspondence, warrants and
19 hearing packets. The time expended by the Enforcement Officer
20 to calculate the above costs and prepare itemized invoices, may
21 also be recovered.

22 **Section 3.13. Non-exclusive remedy.**

23 This Ordinance is cumulative to all other remedies now or hereafter
24 available to abate or otherwise regulate or prevent public nuisances.

25 The Town Attorney is authorized to initiate judicial enforcement as

1 to a violation of any provision of this Ordinance without further
2 Town Council approval.

3 **Section 3.14. Summary abatement.**

4 Notwithstanding any other provision of this Ordinance, when any
5 Hazard Tree constitutes an immediate threat to the public health or
6 safety, and where alternate procedures would not result in abatement
7 of that public nuisance within a short enough time period to avoid
8 that threat, the Enforcement Officer may direct any officer or
9 employee of the Town or third-party provider to summarily abate the
10 public nuisance. The Enforcement Officer shall make reasonable
11 efforts to notify the property owner of the property, but the formal
12 notice and hearing procedures set forth in this Ordinance shall not
13 apply. No summary abatement shall occur prior to consultation with
14 the Town Attorney. The Town may nevertheless recover its costs for
15 abating that public nuisance in the manner set forth in this
16 Ordinance.

17 **Section 4. CEQA Exemption.**

18 Adoption of this Ordinance is exempt from the provisions of the
19 California Environmental Quality Act (CEQA) pursuant to California
20 Public Resources Code section 21080(b)(3) regarding projects to
21 maintain, repair, restore, or replace property or facilities damaged
22 or destroyed as a result of a declared disaster and Section
23 21080(b)(4) regarding actions to mitigate or prevent an emergency,
24 and CEQA Guidelines Section 15269(a) regarding maintaining,
25 repairing, restoring, demolishing, or replacing property or

1 facilities damages or destroyed as a result of a disaster-stricken
2 area in which a state of emergency has been proclaimed by the Governor
3 pursuant to the California Emergency Services Act, commencing with
4 Section 8550 of the California Government Code.

5 Section 5. Severability.

6 If any section, subsection, sentence, clause, or phrase of this
7 Ordinance is for any reason held to be unconstitutional or invalid,
8 such decision shall not affect the validity of the remaining portion
9 of this Ordinance. The Town Council hereby declares that it would
10 have passed this Ordinance and every section, subsection, sentence,
11 clause or phrase thereof irrespective of the fact that any one or
12 more sections, subsections, sentences, clauses or phrases be declared
13 unconstitutional or invalid.

14 Section 6. Effective Date and Publication.

15 This Ordinance shall be and the same is hereby declared to be in full
16 force and effect immediately upon its passage by a four-fifths (4/5)
17 or greater vote. The Town Clerk is authorized and directed to publish
18 this Ordinance before the expiration of fifteen (15) days after its
19 passage. This Ordinance shall be published once, with the names of
20 the members of the Town Council voting for and against it, in a
21 newspaper of general circulation published in the Town of Paradise,
22 State of California. A complete copy of this Ordinance is on file
23 with the Town Clerk and is available for public inspection and copying
24 during regular business hours in the office of the Town Clerk, 5555
25 Skyway, Paradise, California.

2 **AN ORDINANCE OF THE COUNTY OF BUTTE ADDING ARTICLE V, ENTITLED**
3 **"HAZARD TREE REMOVAL," OF CHAPTER 53, ENTITLED "CAMP FIRE DISASTER**
4 **RECOVERY ORDINANCE," TO ESTABLISH REQUIREMENTS OF A MANDATORY**
5 **HAZARD TREE REMOVAL PROGRAM**

6 The Board of Supervisors of the County of Butte ordains as
7 follows:

8 Section 1. Emergency Findings. This Urgency Ordinance is adopted
9 pursuant to California Government Code Sections 25123(d) and 25131
10 and shall take effect immediately upon its approval by at least a
11 four-fifths vote of the Board of Supervisors. The Board, in
12 consultation with the Local Health Officer, finds that this
13 Ordinance is necessary for the immediate preservation of the public
14 peace, health and safety, based upon the following facts:

- 15 A. Conditions of extreme peril to the safety of persons and property
16 within the County were caused by the Camp Fire, commencing on
17 the 8th day of November, 2018, at which time the Board of
18 Supervisors was not in session.
- 19 B. California Government Code Section 8630 empowers the County
20 Administrator to proclaim the existence of a local emergency
21 when the county is affected or likely to be affected by a public
22 calamity, subject to ratification by the Board of Supervisors
23 at the earliest practicable time.

1 C. On November 8, 2018, the County Administrator of the County of
2 Butte proclaimed the existence of a local emergency within Butte
3 County due to the Camp Fire.

4 D. On November 8, 2018, the Acting Governor of the State of
5 California proclaimed a State of Emergency for Butte County
6 pursuant to the California Emergency Services Act, commencing
7 with Section 8550 of the Government Code, and on November 14,
8 2018, the Governor issued Executive Order B-57-18 concerning the
9 Camp Fire.

10 E. On November 9, 2018, the Camp Fire was still burning through the
11 County and despite firefighters' best efforts, the wildfire was
12 not contained. Evacuation orders were in place and numerous
13 severe public health and safety hazards were present in the Camp
14 Fire area, including many blocked roads from fallen power lines,
15 burned trees and vehicles, numerous burned vehicles were left
16 throughout the Camp Fire area due to survivors fleeing their
17 vehicles in efforts to survive the wildfire, no available
18 utilities, no available public services and the presence of
19 human remains and animal carcasses. At the time, the County
20 estimated that 2,000 structures had burned in the Camp Fire.

21 F. On November 9, 2018, Dr. Andrew Miller, Butte County's Local
22 Health Officer, issued a Declaration of Health Emergency
23 pursuant to California Health and Safety Code section 101080.
24 Dr. Miller's declaration stated that the local health emergency
25 was a consequence of the debris resulting from the Camp Fire

1 that contains hazardous material in the ash of the burned
2 qualifying structures. The purpose of the Declaration was to
3 address the immediate threat to the public health and the
4 imminent and proximate threat of the introduction of contagious,
5 infectious or communicable disease, chemical agents, non-
6 communicable biologic agents, toxins and/or radioactive agents
7 present at the time in the Camp Fire area. The threats included
8 (1) the enormous amount of fire debris present in the Camp Fire
9 area, including ash and debris containing hazardous materials
10 and probable radioactive materials present in ash and debris
11 from qualifying structures, (2) the threat of infectious or
12 communicable disease and/or non-communicable biologic agents due
13 to animal carcasses, radioactive waste and perishable foods, (3)
14 the potential contamination or destruction of the residential
15 and commercial water supply in the Camp Fire area and (4) the
16 potential pollution of the drinking water downstream from the
17 Camp Fire area if weather conditions caused the spread of the
18 hazardous materials in the ash and debris of burned qualifying
19 structures.

20 G. On November 12, 2018, the President of the United States declared
21 the existence of a major disaster in the State of California,
22 providing assistance from many federal agencies, including the
23 Federal Emergency Management Agency (FEMA).

24 H. On November 13, 2018, the Board of Supervisors adopted
25 Resolution No. 18-169 ratifying the County Administrator's

1 proclamation of the existence of a local emergency in Butte
2 County. The resolution also requested that the State of
3 California waive regulations that may hinder response and
4 recovery efforts, as well as make available assistance under the
5 California Disaster Assistance Act or any other state funding,
6 and that the Federal Government expedite access to federal
7 resources and any other appropriate federal disaster relief
8 program.

9 I. On November 13, 2018, the Board of Supervisors ratified Dr.
10 Miller's Declaration of Health Emergency.

11 J. On November 21, 2018, the status of the Camp Fire area was as
12 follows: firefighters had contained the Camp Fire; the Sheriff
13 had lifted some evacuation orders; work crews had removed fallen
14 power lines, burned vehicles and trees blocking the roads;
15 utilities including electric power, gas and non-potable water
16 had become available; no local businesses were open to serve the
17 public; and no public services were available. Further,
18 preliminary actions had been taken to mitigate the risk from
19 animal carcasses, radioactive waste and perishable foods in the
20 Camp Fire area, however, concerns regarding the threats
21 remained. The public health hazards present in the Camp Fire
22 area included (1) the public health hazards from the enormous
23 amount of fire debris, (2) the public health hazard from the
24 hazardous materials and probable radioactive materials present
25 in the ash and debris from destroyed qualifying structures, (3)

1 the threat of infectious or communicable disease and/or non-
2 communicable biologic agent due to the presence of animal
3 carcasses, perishable foods and radioactive waste and (4) the
4 potential pollution of the drinking water downstream from the
5 Camp Fire area if weather conditions caused the spread of the
6 hazardous materials in the ash and debris of burned qualifying
7 structures. At the time, the County estimated that the Camp Fire
8 had destroyed 18,000 structures.

9 K. On November 21, 2018, Dr. Miller issued a Hazard Advisory
10 strongly suggesting residents should not reside on property with
11 qualifying structures damaged or destroyed by the Camp Fire
12 until the property had been cleared of hazardous waste, ash and
13 debris and certified clean by the Department of Public Health,
14 Environmental Health Division. When the evacuation orders were
15 lifted, the Department of Public Health provided residents who
16 chose to visit their property to collect valuables with re-entry
17 packets to improve their safety during the visit. The re-entry
18 packets included personal protective equipment and information
19 on the dangerous conditions and toxic materials present in the
20 Camp Fire area. The re-entry packets were intended to improve
21 public safety from the public health hazards encountered during
22 the visit, but was not intended to encourage long-term
23 habitation. The purpose of the Hazard Advisory was to address
24 the public health hazards present at the time in the Camp Fire
25 area, including (1) the enormous amount of fire debris present

1 in the Camp Fire area, (2) the hazardous materials and probable
2 radioactive materials present in ash and debris from qualifying
3 structures, (3) the lessened but still present threat of
4 infectious or communicable disease and/or non-communicable
5 biologic agents due to animal carcasses, radioactive waste and
6 perishable foods, (4) the potential contamination or destruction
7 of the residential and commercial water supply in the Camp Fire
8 area and (5) the potential pollution of the drinking water
9 downstream from the Camp Fire area if weather conditions caused
10 the spread of the hazardous materials in the ash and debris of
11 burned qualifying structures.

12 L. The Camp Fire to date has consumed 153,336 acres and has led to
13 the destruction of 13,696 residences, damage to 462 residences,
14 the destruction of 276 multiple family residences, the
15 destruction of 528 commercial buildings, damage to 102
16 commercial buildings, the destruction of 4,293 other minor
17 structures, and resulted in the evacuation of over 50,000
18 people. As a result, the Camp Fire has created an enormous amount
19 of debris.

20 M. There exists the potential for widespread toxic exposures and
21 threats to public health and the environment in the aftermath
22 of a major wildfire disaster, and debris and ash from residential
23 and commercial structure fires contain hazardous materials and
24 the harmful health effects of hazardous materials produced by a
25 wildfire are well-documented.

1 N. The combustion of building materials such as siding, roofing
2 tiles, and insulation results in dangerous ash that may contain
3 asbestos, heavy metals and other hazardous materials. Household
4 hazardous waste such as paint, gasoline, cleaning products,
5 pesticides, compressed gas cylinders, and chemicals may have
6 been stored in homes, garages, or sheds that may have burned in
7 the fire, also producing hazardous materials.

8 O. Exposure to hazardous materials may lead to acute and chronic
9 health effects and may cause long-term public health and
10 environmental impacts. Uncontrolled hazardous materials and
11 debris pose significant threats to public health through
12 inhalation of dust particles and contamination of drinking water
13 supplies. Improper handling can expose residents and workers to
14 toxic materials, and improper transport and disposal of fire
15 debris can spread hazardous substances throughout the community.

16 P. Standards and removal procedures are needed immediately to
17 protect the public health and environment, and to facilitate
18 coordinated and effective mitigation of the risks to the public
19 health and environment from the health hazards generated by the
20 Camp Fire disaster.

21 Q. The Camp Fire has created hazardous waste conditions in Butte
22 County in the form of contaminated debris from household
23 hazardous waste/materials and structural debris resulting from
24 the destruction of thousands of structures. This hazardous waste
25 debris poses a substantial present or potential hazard to human

1 health and the environment until the property is certified
2 clean. The accumulated exposure to hazardous waste debris over
3 an extended period of time poses a severe hazard to human health.

4 R. The Board of Supervisors previously approved urgency ordinances
5 and/or related resolutions relating to the Camp Fire disaster
6 recovery on December 11, 2018, December 21, 2018, January 8,
7 2019, January 29, 2019, February 4, 2019, February 12, 2019,
8 February 24, 2019, April 23, 2019, August 13, 2019 and September
9 10, 2019. The actions addressed the need for the regulation of
10 debris removal to alleviate the public health, safety and
11 welfare concerns associated with the ash and debris of
12 qualifying structures and temporary emergency housing options.

13 S. As of February 4, 2019, the status of the Camp Fire disaster
14 recovery is as follows: (1) Phase I cleanup by the U.S.
15 Environmental Protection Agency and the California Department
16 of Toxic Substances Control is complete, which has reduced the
17 public health concerns relating to the most hazardous materials
18 present in the Camp Fire area, (2) Phase II of the cleanup
19 pursuant to the Government (CalOES) Program and the Alternative
20 Program has commenced, (3) utilities are available (except for
21 potable water), (4) numerous businesses have opened to serve the
22 public, (5) public services are available, including a FEMA and
23 CalOES jointly-operated Disaster Recovery Center in Paradise,
24 California. Current threats include (1) the enormous amount of
25 fire debris present in the Camp Fire area, (2) hazardous

1 materials and probable radioactive materials present in ash and
2 debris from qualifying structures, (3) the potential pollution
3 of the drinking water downstream from the Camp Fire area if
4 weather conditions caused the spread of the hazardous materials
5 in the ash and debris of burned qualifying structures. The
6 purpose of this ordinance is to allow residents to live on
7 properties in the Camp Fire area that do not contain fire ash
8 and debris from a qualifying structure destroyed or damaged by
9 the Camp Fire.

10 T. The Debris Removal Operations Plan for the Camp Fire prepared
11 by the CalOES/CalRecycle Incident Management Team provides that
12 the DTSC has issued reports regarding the assessment of burn
13 debris from wildfires in the past. The studies of burned
14 residential homes and structures from large scale wildland fires
15 indicated that the resulting ash and debris can contain asbestos
16 and toxic concentrated amounts of heavy metals such as antimony,
17 arsenic, cadmium, copper, lead, and zinc. Additionally, the ash
18 and debris may contain higher concentrations of lead if the home
19 was built prior to 1978 when lead was banned from household
20 paint in the United States. The reports indicated that the
21 residual ash of burned residential homes and structures has high
22 concentrations of heavy metals that can be toxic and can have
23 significant impact to individual properties, local communities,
24 and watersheds if the ash and debris is not removed safely and
25 promptly. The plan also indicates that the purpose of the

1 structural debris removal program is to remove debris that poses
2 a risk to health and/or the environment. Debris from structures
3 smaller than 120 square feet are not included in the program.

4 U. The Local Health Officer, Dr. Miller, has indicated the
5 following: (1) the Phase II cleanup of the properties containing
6 ash and debris from a qualifying structure mitigates the public
7 health hazards of the Camp Fire; (2) failing to clean properties
8 containing ash and debris from a qualifying structure can have
9 severely negative long-term consequences to the public health
10 and environment; (3) therefore, the County's focus must be on
11 accomplishment of the Phase II cleanup to address the public
12 health hazards; (4) the standard for determining when a property
13 is clean from ash and debris from a qualifying structure is when
14 the Phase II cleanup work is complete and the property is
15 certified clean by the Department of Public Health,
16 Environmental Health Division; (5) as ash and debris of
17 qualifying structures is the focus of the Phase II cleanup work,
18 the significance of the public health risks is higher on
19 properties with ash and debris from a qualifying structure; (6)
20 given the progress the Camp Fire disaster recovery has made with
21 respect to the hazards identified in the findings above, the
22 remaining significant public health hazard is the ash and debris
23 from qualifying structures; (7) based on the foregoing,
24 properties that contain ash and debris from qualifying
25 structures constitute a significant public health risk and

1 therefore, those properties should be ineligible for temporary
2 emergency housing until Phase II cleanup work is completed on
3 the property and is certified clean by the Department of Public
4 Health, Environmental Health Division; and (8) properties that
5 do not contain ash and debris from a qualifying structure do not
6 pose a significant public health risk and should be eligible for
7 temporary emergency housing.

8 V. There is an immediate need for housing to accommodate persons
9 who have been displaced by the Camp Fire. This Chapter
10 temporarily relaxes some building and zoning regulations to
11 allow for additional housing both inside and outside of the Camp
12 Fire affected area for displaced persons. Due to the magnitude
13 of the destruction, there is a need to provide for sufficient
14 housing options both inside and outside of the Camp Fire affected
15 area.

16 W. As of October 22, 2019, the status of the Camp Fire area was as
17 follows: (1) Phase II of the cleanup pursuant to the Government
18 (CalOES) Program and the Alternative Program have resulted in
19 the majority of Camp Fire parcels with final sign off and
20 clearance for rebuild; (2) the County has received 150
21 applications and issued 70 building permits for residential
22 parcels for Camp Fire survivors inside the Camp Fire area; (3)
23 the County has commenced its nuisance abatement actions on
24 parcels not compliant with debris removal requirements of
25 Chapter 53; (4) dead and dying trees litter the Camp Fire

1 footprint, including areas where some homes still exist and
2 where others existed and are now pending construction; (5) the
3 County has had trees in the County right-of-way assessed by an
4 arborist and removed a small portion of over 6,649 hazard trees¹
5 that have been determined to meet removal criteria; (6) Del Oro
6 Water and Paradise Irrigation District are in the process of
7 testing residential structures for water contaminants in the
8 Camp Fire area; (7) numerous Camp Fire survivors who are unable
9 to live on their property until the fire debris removal is
10 complete are sheltering at non-congregate shelters at Lime
11 Saddle and DeSabra campgrounds; and (8) Camp Fire survivors are
12 reporting barriers to returning to their properties and
13 rebuilding, including but not limited to hazard standing trees,
14 large depressions in the ground as a result of debris removal
15 without adequate fill dirt in the area, delays in accessing
16 temporary power, concerns regarding contaminated drinking water
17 in the area, and being unable to rebuild on their property
18 because it has not yet received final sign-off in the debris
19 removal program.

20 X. The majority of the Camp Fire area is located in a Very High
21 Fire Hazard Severity Zone as shown on the California Department
22
23
24

25 ¹ The criteria for hazard trees for this purpose is set out in Section JJ.
below.

1 of Forestry and Fire Protection's Fire and Resource Assessment
2 Program map dated November 7, 2007.

3 Y. The County generally has a climate conducive to wildfires and
4 is prone to periodic dry summers and wind events. Hazard trees
5 pose a significant danger to the health, safety and welfare of
6 the public by fueling and propelling wildfires, thereby
7 increasing the potential for a severe fire and endangering
8 lives, property and the environment. Increasingly dry summers
9 and severe wind events further exacerbate the fire danger and
10 have the potential to result in catastrophic fire losses to
11 life, property and the environment.

12 Z. Additionally, the Camp Fire created a fuel type conversion
13 whereby the Ponderosa Pine and mixed conifer forests have now
14 been converted to predominantly open land with grass and brush
15 regrowth. The understory grass and brush can precipitate the
16 start and spread of fire with hundreds of thousands of dead
17 trees still standing, many of which are within the urban
18 interface, to further add to the fire threat and intensity. Dead
19 trees that fall on the forest floor over time further complicate
20 the fire environment by adding a large amount of down and dead
21 fuel that will add to surface fire intensity and make control
22 efforts difficult.

23 AA. Dead and dying trees pose a life hazard to firefighters, first
24 responders and the general public if exposed to fire or high
25 wind storm events. Standing trees that are dead or dying and are

1 adjacent to roads have an increased risk of falling onto the
2 roads during a wildfire disaster or high wind storm event as
3 compared to healthy trees. This endangers primary and secondary
4 evacuation routes in the Camp Fire area, which could lead to
5 increased loss of life during a future fire.

6 BB. Of paramount importance to the Board and the residents of the
7 County is the protection of lives and property from the threat
8 of fire, including proper maintenance of evacuation routes and
9 the safety of fire and law enforcement personnel during
10 wildfires.

11 CC. Dead and dying trees suffer an increased risk of pest
12 infestation, such as bark beetles. When dead or dying trees are
13 infested with pests, this also exposes the healthy trees in
14 close proximity. The healthy trees are then endangered by the
15 pests, which potentially creates more fuel for future fires,
16 which increases the future fire risks in the Camp Fire area.

17 DD. The County Fire Chief has stated that the remaining fire damaged
18 trees in the Concow area following the 2008 fires propelled and
19 exacerbated the progression and severity of the Camp Fire.
20 Further, under normal circumstances, dead and down trees hamper
21 fire suppression efforts. The huge number of fire damaged trees
22 from the Camp Fire justifies County action to reduce the risk
23 posed by fire damaged standing trees.

24 EE. The enormity of the standing burnt trees throughout the Camp
25 Fire area must be addressed before rebuilding will be possible

1 on a scale large enough to facilitate economic recovery of the
2 region. As a result of multiple barriers, including tree removal
3 costs that exceed the value of their land, many homeowners are
4 abandoning their property. If owners do not return to the Camp
5 Fire area, businesses will not be able to open and remain in
6 business. The County must eliminate hazard trees from the Camp
7 Fire area to encourage rebuilding projects in the region.

8 FF. The County estimates 80,000 trees must be removed from
9 approximately 4,000 private parcels adjacent to the County's
10 right-of-ways for County-maintained roads.

11 GG. 100 percent of businesses in the burn area were shut down after
12 the Camp Fire. Approximately 150 out of the 1,200 businesses
13 reopened 6 months later. This number does not include all home-
14 based businesses that were displaced as a result of the
15 residential structure burning in the Camp Fire. The survival of
16 new and existing businesses depends primarily on the restoration
17 of the purchasing power in the community. The loss of
18 approximately 14,000 homes in the Camp Fire area and the
19 subsequent displacement of the residents severely reduces the
20 customers for businesses that sell goods and services locally
21 and the workforce available for businesses that produce goods
22 and services for export out of the County. The severe reduction
23 in population dramatically reduces the ability for businesses
24 to recover, including the ability to remain a viable business
25 interest in the community.

1 HH. State law provides property tax relief to homeowners impacted
2 by a natural disaster by reducing their assessed value. This
3 process provides for the removal of the value of the damaged
4 structure effective as of the date of the disaster. Under this
5 provision of law, the County Assessor has removed \$1.93 billion
6 from the property tax roll for the 8 months from November, 2018
7 - June, 2019, which reduces property tax revenue by \$19.3
8 million. The fiscal year 2019-20 roll will reflect 12 months of
9 reduced value as well as additional reductions to land value
10 which could not be adjusted mid-year. Over 50 percent of property
11 tax revenues support schools while the remaining taxes provide
12 revenue to local jurisdictions and special districts to provide
13 critical local services. The County receives about 20% of total
14 property tax revenues. The State of California has committed to
15 backfilling property taxes through fiscal year 2020-21 to
16 account for the substantial reduction in revenue to these
17 agencies. The only way for this critical revenue source to
18 recover is for homes and structures to be rebuilt and property
19 values, and therefore property taxes, to increase. Property tax
20 is the primary discretionary revenue source for the County,
21 accounting for over half of the County's discretionary revenue.

22 II. The health of the communities and local economies largely
23 depends upon repopulation; repopulation largely depends upon the
24 mindset of the public and their sense of security regarding
25 moving back to their land. For example, if evacuation routes

1 continue to suffer from falling trees, residents will not have
2 confidence in their ability to evacuate safely during a future
3 fire, and will choose not to rebuild in the Camp Fire area.
4 Without that sense of security, people are moving elsewhere -
5 which negatively impacts the economy recovery of the region -
6 both the commercial economy and the property tax base for the
7 County.

8 JJ. The County has contracted with a certified arborist and tree
9 health expert company to assess and inventory trees rooted in
10 the public right-of-way for tree mortality risk rating. The
11 arborists have generated a report and forms memorializing the
12 tree mortality data at the time of field reconnaissance and
13 inventory efforts on February 2, 2019 through July 31, 2019. One
14 of the purposes of the field reconnaissance effort was to
15 identify, inventory, and assess the risk of trees rooted in the
16 public right-of-way within the unincorporated areas of the Camp
17 Fire disaster area that:

- 18 • Were damaged by the Camp Fire;
 - 19 • Have a diameter of six inches or greater measured 4.5 feet
20 above ground level;
 - 21 • Pose an immediate threat to life, public health and safety,
22 as a result of threatening public right-of-ways; and
 - 23 • Meet one or more of the following criteria:
 - 24 1. Have a split trunk;
- 25

1 2. Have a broken canopy; or

2 3. Is leaning at an angle greater than 30 degrees;

3 and

- 4 • Is determined, under the professional opinion of the arborist,
5 that the tree is a hazard consistent with criteria set forth in
6 ANSI A300 (Part 9) known as the Tree Risk Assessment Standard.

7 KK. For those trees which met the defined criteria, the arborists
8 employed the ISA's Tree Risk Assessment methods to assess a
9 tree's risk ratings, which was based on the health of the tree
10 and the tree's relation to public right-of-ways.

11 LL. Field reconnaissance and inventory efforts have found
12 approximately 6,649 trees which met the defined criteria.

13 MM. The County's arborists have recommended removal of all hazard
14 trees which meet the defined criteria and are rooted along the
15 County's right-of-way.

16 NN. It is the opinion of the County Fire Chief and County's arborists
17 that the unprecedented level of hazard trees presents the
18 following risks to life, public health and safety: (1) the risks
19 of injury and/or death to County residents who use County-
20 maintained roads due to falling trees; and (2) the increased
21 threat of catastrophic wildfire to the Camp Fire area and
22 surrounding area.

23 OO. A purpose of this Article is to establish a Hazard Tree abatement
24 program that protects the lives and property of the public living
25 in and traveling through the County, and the environment.

1 PP. The Board of Supervisors finds that Hazard Trees (as defined in
2 this Article) pose a danger to the health, safety and welfare
3 of the general public in the vicinity of any real property
4 located throughout the territory of the County for the reasons
5 set forth above. Therefore, all Hazard Trees located on real
6 property within the unincorporated area of the County are deemed
7 a public nuisance and pose a hazard to the safety of the
8 landowners, residents in the vicinity, users of roads and to the
9 public generally.

10 QQ. It is imperative that the County implement immediate and
11 aggressive measures to identify and fell the trees that are dead
12 and dying as a result of the Camp Fire to immediately eliminate
13 or reduce the risks to life, public health and safety,
14 infrastructure, forest health and the community at large.

15 RR. The Board of Supervisors has the authority to take action to
16 protect the health, safety and welfare of the residents of the
17 County pursuant to its police powers granted by Article XI,
18 Section 7 of the California Constitution, California Government
19 Code section 25123, California Health & Safety Code section
20 101025 and Chapter 32A of the Butte County Code.

21 SS. Hazard Trees (as defined below) that:
22 (1) are rooted on private property; and
23 (2) threaten (a) roads and/or right-of-ways of County-maintained
24 roads or (b) public improved property in the unincorporated
25 areas of the Camp Fire area; and

1 (3) may cause physical injury or damage to persons or property
2 creates a serious public health and safety crisis and therefore
3 constitutes a public nuisance.

4 TT. It is essential that this Ordinance become immediately effective
5 (1) to mitigate the harm that could be caused to the public
6 health and safety and to the environment from the failure to
7 remove Hazard Trees and to facilitate the orderly response to
8 the Camp Fire disaster; and (2) to allow the fastest possible
9 transition of homeless and displaced residents to repopulate the
10 Camp Fire area.

11 Section 2. ARTICLE V, MANDATORY HAZARD TREE REMOVAL PROGRAM, is hereby
12 added to read as follows:

13 **Section 53-80. Hazard Tree Removal Program.**

14 Any tree that was fire damaged in the Camp Fire and that is in
15 immediate danger of falling onto a public right-of-way or improved
16 public property is a hazardous tree that must be removed to eliminate
17 the immediate threat to the public at large. This Article establishes
18 a hazardous tree removal program that is mandatory and sets forth the
19 manner in which hazardous trees will be identified and removed.

20 **Section 53-81. Effective Period.**

21 The Hazard Tree removal program shall take effect immediately upon
22 adoption of this Article and shall remain in effect until the removal
23 of Hazard Trees has been completed.

1 **Section 53-82. Definitions.**

2 "Board." The term "Board" shall be defined as the Board of
3 Supervisors.

4 "Enforcement Officer." The term "Enforcement Officer" shall be
5 defined as the Chief Administrative Officer of the County or his/her
6 designee(s). Such designee(s) may be a County employee(s) or third-
7 party provider(s).

8 "County." The term "County" shall be defined as the County of Butte.

9 "Government Hazard Tree Removal Program." The term "Government Hazard
10 Tree Removal Program" shall be defined as the Hazard Tree removal
11 program operated by the California Office of Emergency Services
12 (CalOES) for the Camp Fire area in conjunction with other state and
13 federal agencies.

14 "Government Hazard Tree Removal Program ROE." The term "Government
15 Hazard Tree Removal Program ROE" shall be defined as the permit for
16 providing Hazard Tree removal on private property approved by CalOES
17 for use in the cleanup after the Camp Fire.

18 "Hazard Tree." The term "Hazard Tree" shall be defined as:

19 A wildfire-damaged tree that in the professional opinion of an
20 arborist and/or forester:

21 A. has been so severely damaged by the Camp Fire that its
22 structural integrity is compromised; and

23 B. poses an imminent danger of falling onto a public right-of-way
24 or other public improved property.

25

1 A map reflecting County-maintained roads in the unincorporated
2 portion of the Camp Fire area is attached hereto as Exhibit A.

3 "Inspection Access Form." The term "Inspection Access Form" shall be
4 defined as the permit for providing access to the Enforcement Officer
5 to inspect private property of owners opting to use the Private Tree
6 Program approved by the County for use in the cleanup after the Camp
7 Fire.

8 "Private Tree Program." The term "Private Tree Program" shall be
9 defined as an alternative to the Government Hazard Tree Removal
10 Program, which provides the owner with the option of identifying and
11 removing Hazard Tree(s) on their property at their own cost.

12 **Section 53-83. Government Hazard Tree Removal Program.**

13 A. The Government Hazard Tree Removal Program will remove all Hazard
14 Trees at no out-of-pocket cost to the owner. If an owner does not
15 participate in the Government Hazard Tree Removal Program, and
16 there are Hazard Trees on their property, the owners are required
17 to identify and remove such trees at their own cost.

18 B. To participate in the Government Hazard Tree Removal Program,
19 owners must complete and submit a Government Hazard Tree Removal
20 Program ROE. The Government Hazard Tree Removal Program ROE shall
21 function as the sole permit and authorization for participation in
22 the Government Hazard Tree Removal Program. Notwithstanding any
23 contrary provision in Butte County Code, no County approvals or
24 permits for Hazard Tree removal are required for properties
25

1 participating in the Government Hazard Tree Removal Program, other
2 than the Government Hazard Tree Removal Program ROE.

3 C. If owners whose property contains Hazard Trees do not participate
4 in the Government Hazard Tree Removal Program (at no out-of-pocket
5 cost to owner) or the Private Tree Program (all costs paid by
6 owner), the County will enforce this Article V and charge the
7 owners with any administrative and abatement costs related to such
8 enforcement as described below.

9 D. In implementing this program, property owners who have submitted
10 an application for a development permit shall be given priority in
11 the Government Hazard Tree Removal Program.

12 **Section 53-84. Public nuisance; violations.**

13 Maintaining a Hazard Tree is prohibited and a public nuisance subject
14 to this Article. A violation of any provision of this Article shall
15 be deemed to be a public nuisance and subject to any enforcement
16 process available at law.

17 **Section 53-85 Purpose.**

18 It is the intent of the Board of Supervisors that this ordinance
19 shall apply to the abatement of Hazard Trees threatening the roads
20 and/or right-of-ways of County-maintained roads or other public
21 improved property in the unincorporated areas of the Camp Fire area.

22 **Section 53-86. Private Hazard Tree Removal Program.**

23 As an alternative to the Government Hazard Tree Removal Program, the
24 Private Tree Program provides the owner with the option of identifying
25 and removing Hazard Tree(s) on their property at their own cost. To

1 participate in the Private Tree Program, owners shall submit an
2 Inspection Access Form for their property. Following the owner's
3 identification and removal of Hazard Trees, the Private Tree Program
4 shall require the Enforcement Officer to make a visual confirmation
5 of the removal of Hazard Trees on the subject property. This visual
6 inspection of compliance with the Private Tree Program shall be
7 sufficient for meeting the requirements of this Section. Whether the
8 Hazard Tree removal is adequate shall be in the sole discretion of
9 the Enforcement Officer.

10 The County shall utilize the state and federal standards and cleanup
11 goals of the Government Hazard Tree Removal Program as the standards
12 for the Private Tree Program, including but not limited to the
13 criteria for determining whether a tree is a Hazard Tree. Under the
14 supervision of the Enforcement Officer, the County may
15 administratively update these standards as necessary to address
16 ongoing changes in the administration of the Government Hazard Tree
17 Removal Program and the need to efficiently remove Hazard Trees from
18 the community.

19 **Section 53-87. County Development Permits.**

20 No application for a County Development permit in the Camp Fire area
21 with Hazard Trees shall be considered complete until the applicant
22 has entered into the Government Hazard Tree Removal Program or the
23 Private Tree Program.

1 A. This section shall not apply to permits relating to power, sewer
2 or other utilities for temporary dwellings and the installation
3 of temporary dwellings as provided for in Chapter 53.

4 B. This section shall not apply to permits for wells or septic
5 systems with the Environmental Health Division of Public Health.

6 **Section 53-88. Deadlines and Enforcement.**

7 A. Properties that contain Hazard Trees and that have neither an
8 approved Government Hazard Tree Removal Program ROE nor an
9 approved Inspection Access Form for the Private Tree Program by
10 the deadline set by the Board, are declared a public nuisance
11 and health hazard and such properties may be abated pursuant to
12 this Article.

13 B. The Board may set a deadline for the completion of Hazard Tree
14 removal by resolution. Properties that have Hazard Trees from
15 the Camp Fire after that deadline are declared a public nuisance
16 and health hazard and such properties may be abated pursuant to
17 this Article.

18 The Board's intent is to facilitate orderly remediation of a
19 large scale disaster. Nothing in these deadlines shall limit the
20 authority of the County to abate hazards more quickly where
21 required by exigent circumstances.

22
23 **Section 53-89. Enforcement.**

24 A. Whenever the Enforcement Officer determines that a public
25 nuisance (as specified in this Article) exists, he or she shall

1 use any legal remedies available under California law to
2 address and abate the public nuisance, including but not
3 limited to Chapters 1, 32A and/or 41 of the Butte County Code.

4 B. The County may, in its discretion, abate a violation of this
5 Article by the prosecution of a civil action, including an
6 action for injunctive relief. The remedy of injunctive relief
7 may take the form of a court order, enforceable through civil
8 contempt proceedings, prohibiting the maintenance of a
9 violation of this Article, or requiring compliance with other
10 terms.

11 C. The County may also abate a violation of this Article through
12 the abatement process established by Government Code Section
13 25845.

14 D. If a public nuisance is found to be present on the property in
15 violation of this Article, the Enforcement Officer shall pursue
16 payment for Abatement and Administrative Costs from the owner
17 and the owner of the property shall be responsible for paying
18 all of the County's Abatement Costs and Administrative Costs.

19 **53-90. Abatement costs; administrative costs.**

20 A. The term "Abatement Costs" means any costs or expenses
21 reasonably related to the abatement of conditions which violate
22 this Article of the County Code, and shall include, but not be
23 limited to enforcement, investigation, collection and
24 administrative costs, and the costs associated with the removal
25 or correction of the violation.

1 B. The term "Administrative Costs," shall include the cost of
2 County staff time reasonably related to enforcement, for items
3 including, but not limited to, site inspections, travel time,
4 investigations, telephone contacts and time spent preparing
5 summaries, reports, notices, correspondence, warrants and
6 hearing packets. The time expended by the Enforcement Officer
7 and Auditor-Controller staff, to calculate the above costs and
8 prepare itemized invoices, may also be recovered.

9 **53-91. Non-exclusive remedy.**

10 This Article is cumulative to all other remedies now or hereafter
11 available to abate or otherwise regulate or prevent public nuisances.
12 The County Counsel is authorized to initiate judicial enforcement
13 as to a violation of any provision of this Article without further
14 Board approval.

15 **53-92. Summary abatement.**

16 Notwithstanding any other provision of this Article, when any Hazard
17 Tree constitutes an immediate threat to the public health or safety,
18 and where alternative procedures would not result in abatement of
19 that public nuisance within a short enough time period to avoid that
20 threat, the Enforcement Officer may direct any officer or employee
21 of the County or third-party provider to summarily abate the public
22 nuisance. The Enforcement Officer shall make reasonable efforts to
23 notify the owner. No summary abatement shall occur prior to
24 consultation with the Office of County Counsel. The County may
25

1 nevertheless recover its costs for abating that public nuisance in
2 the manner set forth in this Article.

3 Section 3. CEQA Exemption. Adoption of this Ordinance is exempt from
4 the provisions of the California Environmental Quality Act (CEQA)
5 pursuant to California Public Resources Code section 21080(b)(3)
6 regarding projects to maintain, repair, restore, or replace property
7 or facilities damaged or destroyed as a result of a declared disaster
8 and Section 21080(b)(4) regarding actions to mitigate or prevent an
9 emergency, and CEQA Guidelines Section 15269(a) regarding
10 maintaining, repairing, restoring, demolishing, or replacing property
11 or facilities damaged or destroyed as a result of a disaster stricken
12 area in which a state of emergency has been proclaimed by the Governor
13 pursuant to the California Emergency Services Act, commencing with
14 Section 8550 of the California Government Code.

15 Section 4. Severability. If any section, subsection, sentence,
16 clause, or phrase of this Ordinance is for any reason held to be
17 unconstitutional or invalid, such decision shall not affect the
18 validity of the remaining portion of this Ordinance. The Board of
19 Supervisors hereby declares that it would have passed this Ordinance
20 and every section, subsection, sentence, clause or phrase thereof
21 irrespective of the fact that any one or more sections, subsections,
22 sentences, clauses or phrases be declared unconstitutional or
23 invalid.

24 Section 5. Effective Date and Publication. This Ordinance shall be
25 and the same is hereby declared to be in full force and effect

1 immediately upon its passage by a four-fifths (4/5) or greater vote.
2 The Clerk of the Board of Supervisors is authorized and directed to
3 publish this Ordinance before the expiration of fifteen (15) days
4 after its passage. This Ordinance shall be published once, with the
5 names of the members of the Board of Supervisors voting for and
6 against it, in a newspaper of general circulation published in the
7 County of Butte, State of California. Pursuant to Government Code
8 section 25124, a complete copy of this Ordinance is on file with the
9 Clerk of the Board of Supervisors and is available for public
10 inspection and copying during regular business hours in the office
11 of the Clerk of the Board of Supervisors, 25 County center Drive,
12 Oroville, California.

**AN URGENCY ORDINANCE OF THE COUNTY OF BUTTE AMENDING SECTION 53-86
TO CHAPTER 53, ENTITLED "CAMP FIRE RECOVERY,"
OF THE BUTTE COUNTY CODE**

The Board of Supervisors of the County of Butte ordains as follows:

Section 1. Emergency Findings. This Urgency Ordinance is adopted pursuant to California Government Code Sections 25123(d) and 25131 and shall take effect immediately upon its approval by at least a four-fifths vote of the Board of Supervisors. The Board, in consultation with the Local Health Officer, finds that this Ordinance is necessary for the immediate preservation of the public peace, health and safety, based upon the following facts:

- A. Conditions of extreme peril to the safety of persons and property within the County were caused by the Camp Fire, commencing on the 8th day of November, 2018, at which time the Board of Supervisors was not in session.
- B. California Government Code Section 8630 empowers the County Administrator to proclaim the existence of a local emergency when the county is affected or likely to be affected by a public calamity, subject to ratification by the Board of Supervisors at the earliest practicable time.
- C. On November 8, 2018, the County Administrator of the County of Butte proclaimed the existence of a local emergency within Butte County due to the Camp Fire.

1 D. On November 8, 2018, the Acting Governor of the State of
2 California proclaimed a State of Emergency for Butte County
3 pursuant to the California Emergency Services Act, commencing
4 with Section 8550 of the Government Code, and on November 14,
5 2018, the Governor issued Executive Order B-57-18 concerning the
6 Camp Fire.

7 E. On November 9, 2018, the Camp Fire was still burning through the
8 County and despite firefighters' best efforts, the wildfire was
9 not contained. Evacuation orders were in place and numerous
10 severe public health and safety hazards were present in the Camp
11 Fire area, including many blocked roads from fallen power lines,
12 burned trees and vehicles, numerous burned vehicles were left
13 throughout the Camp Fire area due to survivors fleeing their
14 vehicles in efforts to survive the wildfire, no available
15 utilities, no available public services and the presence of
16 human remains and animal carcasses. At the time, the County
17 estimated that 2,000 structures had burned in the Camp Fire.

18 F. On November 9, 2018, Dr. Andrew Miller, Butte County's Local
19 Health Officer, issued a Declaration of Health Emergency
20 pursuant to California Health and Safety Code section 101080.
21 Dr. Miller's declaration stated that the local health emergency
22 was a consequence of the debris resulting from the Camp Fire
23 that contains hazardous material in the ash of the burned
24 qualifying structures. The purpose of the Declaration was to
25 address the immediate threat to the public health and the

1 imminent and proximate threat of the introduction of contagious,
2 infectious or communicable disease, chemical agents, non-
3 communicable biologic agents, toxins and/or radioactive agents
4 present at the time in the Camp Fire area. The threats included
5 (1) the enormous amount of fire debris present in the Camp Fire
6 area, including ash and debris containing hazardous materials
7 and probable radioactive materials present in ash and debris
8 from qualifying structures, (2) the threat of infectious or
9 communicable disease and/or non-communicable biologic agents due
10 to animal carcasses, radioactive waste and perishable foods, (3)
11 the potential contamination or destruction of the residential
12 and commercial water supply in the Camp Fire area and (4) the
13 potential pollution of the drinking water downstream from the
14 Camp Fire area if weather conditions caused the spread of the
15 hazardous materials in the ash and debris of burned qualifying
16 structures.

17 G. On November 12, 2018, the President of the United States declared
18 the existence of a major disaster in the State of California,
19 providing assistance from many federal agencies, including the
20 Federal Emergency Management Agency (FEMA).

21 H. On November 13, 2018, the Board of Supervisors adopted
22 Resolution No. 18-169 ratifying the County Administrator's
23 proclamation of the existence of a local emergency in Butte
24 County. The resolution also requested that the State of
25 California waive regulations that may hinder response and

1 recovery efforts, as well as make available assistance under the
2 California Disaster Assistance Act or any other state funding,
3 and that the Federal Government expedite access to federal
4 resources and any other appropriate federal disaster relief
5 program.

6 I. On November 13, 2018, the Board of Supervisors ratified Dr.
7 Miller's Declaration of Health Emergency.

8 J. On November 21, 2018, the status of the Camp Fire area was as
9 follows: firefighters had contained the Camp Fire; the Sheriff
10 had lifted some evacuation orders; work crews had removed fallen
11 power lines, burned vehicles and trees blocking the roads;
12 utilities including electric power, gas and non-potable water
13 had become available; no local businesses were open to serve the
14 public; and no public services were available. Further,
15 preliminary actions had been taken to mitigate the risk from
16 animal carcasses, radioactive waste and perishable foods in the
17 Camp Fire area, however, concerns regarding the threats
18 remained. The public health hazards present in the Camp Fire
19 area included (1) the public health hazards from the enormous
20 amount of fire debris, (2) the public health hazard from the
21 hazardous materials and probable radioactive materials present
22 in the ash and debris from destroyed qualifying structures, (3)
23 the threat of infectious or communicable disease and/or non-
24 communicable biologic agent due to the presence of animal
25 carcasses, perishable foods and radioactive waste and (4) the

1 potential pollution of the drinking water downstream from the
2 Camp Fire area if weather conditions caused the spread of the
3 hazardous materials in the ash and debris of burned qualifying
4 structures. At the time, the County estimated that the Camp Fire
5 had destroyed 18,000 structures.

6 K. On November 21, 2018, Dr. Miller issued a Hazard Advisory
7 strongly suggesting residents should not reside on property with
8 qualifying structures damaged or destroyed by the Camp Fire
9 until the property had been cleared of hazardous waste, ash and
10 debris and certified clean by the Department of Public Health,
11 Environmental Health Division. When the evacuation orders were
12 lifted, the Department of Public Health provided residents who
13 chose to visit their property to collect valuables with re-entry
14 packets to improve their safety during the visit. The re-entry
15 packets included personal protective equipment and information
16 on the dangerous conditions and toxic materials present in the
17 Camp Fire area. The re-entry packets were intended to improve
18 public safety from the public health hazards encountered during
19 the visit, but was not intended to encourage long-term
20 habitation. The purpose of the Hazard Advisory was to address
21 the public health hazards present at the time in the Camp Fire
22 area, including (1) the enormous amount of fire debris present
23 in the Camp Fire area, (2) the hazardous materials and probable
24 radioactive materials present in ash and debris from qualifying
25 structures, (3) the lessened but still present threat of

1 infectious or communicable disease and/or non-communicable
2 biologic agents due to animal carcasses, radioactive waste and
3 perishable foods, (4) the potential contamination or destruction
4 of the residential and commercial water supply in the Camp Fire
5 area and (5) the potential pollution of the drinking water
6 downstream from the Camp Fire area if weather conditions caused
7 the spread of the hazardous materials in the ash and debris of
8 burned qualifying structures.

9 L. The Camp Fire to date has consumed 153,336 acres and has led to
10 the destruction of 13,696 residences, damage to 462 residences,
11 the destruction of 276 multiple family residences, the
12 destruction of 528 commercial buildings, damage to 102
13 commercial buildings, the destruction of 4,293 other minor
14 structures, and resulted in the evacuation of over 50,000
15 people. As a result, the Camp Fire has created an enormous amount
16 of debris.

17 M. There exists the potential for widespread toxic exposures and
18 threats to public health and the environment in the aftermath
19 of a major wildfire disaster, and debris and ash from residential
20 and commercial structure fires contain hazardous materials and
21 the harmful health effects of hazardous materials produced by a
22 wildfire are well-documented.

23 N. The combustion of building materials such as siding, roofing
24 tiles, and insulation results in dangerous ash that may contain
25 asbestos, heavy metals and other hazardous materials. Household

1 hazardous waste such as paint, gasoline, cleaning products,
2 pesticides, compressed gas cylinders, and chemicals may have
3 been stored in homes, garages, or sheds that may have burned in
4 the fire, also producing hazardous materials.

5 O. Exposure to hazardous materials may lead to acute and chronic
6 health effects and may cause long-term public health and
7 environmental impacts. Uncontrolled hazardous materials and
8 debris pose significant threats to public health through
9 inhalation of dust particles and contamination of drinking water
10 supplies. Improper handling can expose residents and workers to
11 toxic materials, and improper transport and disposal of fire
12 debris can spread hazardous substances throughout the community.

13 P. Standards and removal procedures are needed immediately to
14 protect the public health and environment, and to facilitate
15 coordinated and effective mitigation of the risks to the public
16 health and environment from the health hazards generated by the
17 Camp Fire disaster.

18 Q. The Camp Fire has created hazardous waste conditions in Butte
19 County in the form of contaminated debris from household
20 hazardous waste/materials and structural debris resulting from
21 the destruction of thousands of structures. This hazardous waste
22 debris poses a substantial present or potential hazard to human
23 health and the environment until the property is certified
24 clean. The accumulated exposure to hazardous waste debris over
25 an extended period of time poses a severe hazard to human health.

1 R. The Board of Supervisors previously approved urgency ordinances
2 and/or related resolutions relating to the Camp Fire disaster
3 recovery on December 11, 2018, December 21, 2018, January 8,
4 2019, January 29, 2019, February 4, 2019, February 12, 2019,
5 February 24, 2019, April 23, 2019, August 13, 2019 and September
6 10, 2019. The actions addressed the need for the regulation of
7 debris removal to alleviate the public health, safety and
8 welfare concerns associated with the ash and debris of
9 qualifying structures and temporary emergency housing options.

10 S. As of February 4, 2019, the status of the Camp Fire disaster
11 recovery is as follows: (1) Phase I cleanup by the U.S.
12 Environmental Protection Agency and the California Department
13 of Toxic Substances Control is complete, which has reduced the
14 public health concerns relating to the most hazardous materials
15 present in the Camp Fire area, (2) Phase II of the cleanup
16 pursuant to the Government (CalOES) Program and the Alternative
17 Program has commenced, (3) utilities are available (except for
18 potable water), (4) numerous businesses have opened to serve the
19 public, (5) public services are available, including a FEMA and
20 CalOES jointly-operated Disaster Recovery Center in Paradise,
21 California. Current threats include (1) the enormous amount of
22 fire debris present in the Camp Fire area, (2) hazardous
23 materials and probable radioactive materials present in ash and
24 debris from qualifying structures, (3) the potential pollution
25 of the drinking water downstream from the Camp Fire area if

1 weather conditions caused the spread of the hazardous materials
2 in the ash and debris of burned qualifying structures. The
3 purpose of this ordinance is to allow residents to live on
4 properties in the Camp Fire area that do not contain fire ash
5 and debris from a qualifying structure destroyed or damaged by
6 the Camp Fire.

7 T. The Debris Removal Operations Plan for the Camp Fire prepared
8 by the CalOES/CalRecycle Incident Management Team provides that
9 the DTSC has issued reports regarding the assessment of burn
10 debris from wildfires in the past. The studies of burned
11 residential homes and structures from large scale wildland fires
12 indicated that the resulting ash and debris can contain asbestos
13 and toxic concentrated amounts of heavy metals such as antimony,
14 arsenic, cadmium, copper, lead, and zinc. Additionally, the ash
15 and debris may contain higher concentrations of lead if the home
16 was built prior to 1978 when lead was banned from household
17 paint in the United States. The reports indicated that the
18 residual ash of burned residential homes and structures has high
19 concentrations of heavy metals that can be toxic and can have
20 significant impact to individual properties, local communities,
21 and watersheds if the ash and debris is not removed safely and
22 promptly. The plan also indicates that the purpose of the
23 structural debris removal program is to remove debris that poses
24 a risk to health and/or the environment. Debris from structures
25 smaller than 120 square feet are not included in the program.

1 U. The Local Health Officer, Dr. Miller, has indicated the
2 following: (1) the Phase II cleanup of the properties containing
3 ash and debris from a qualifying structure mitigates the public
4 health hazards of the Camp Fire; (2) failing to clean properties
5 containing ash and debris from a qualifying structure can have
6 severely negative long-term consequences to the public health
7 and environment; (3) therefore, the County's focus must be on
8 accomplishment of the Phase II cleanup to address the public
9 health hazards; (4) the standard for determining when a property
10 is clean from ash and debris from a qualifying structure is when
11 the Phase II cleanup work is complete and the property is
12 certified clean by the Department of Public Health,
13 Environmental Health Division; (5) as ash and debris of
14 qualifying structures is the focus of the Phase II cleanup work,
15 the significance of the public health risks is higher on
16 properties with ash and debris from a qualifying structure; (6)
17 given the progress the Camp Fire disaster recovery has made with
18 respect to the hazards identified in the findings above, the
19 remaining significant public health hazard is the ash and debris
20 from qualifying structures; (7) based on the foregoing,
21 properties that contain ash and debris from qualifying
22 structures constitute a significant public health risk and
23 therefore, those properties should be ineligible for temporary
24 emergency housing until Phase II cleanup work is completed on
25 the property and is certified clean by the Department of Public

1 Health, Environmental Health Division; and (8) properties that
2 do not contain ash and debris from a qualifying structure do not
3 pose a significant public health risk and should be eligible for
4 temporary emergency housing.

5 V. There is an immediate need for housing to accommodate persons
6 who have been displaced by the Camp Fire. This Chapter
7 temporarily relaxes some building and zoning regulations to
8 allow for additional housing both inside and outside of the Camp
9 Fire affected area for displaced persons. Due to the magnitude
10 of the destruction, there is a need to provide for sufficient
11 housing options both inside and outside of the Camp Fire affected
12 area.

13 W. As of October 22, 2019, the status of the Camp Fire area was as
14 follows: (1) Phase II of the cleanup pursuant to the Government
15 (CalOES) Program and the Alternative Program have resulted in
16 the majority of Camp Fire parcels with final sign off and
17 clearance for rebuild; (2) the County has received 150
18 applications and issued 70 building permits for residential
19 parcels for Camp Fire survivors inside the Camp Fire area; (3)
20 the County has commenced its nuisance abatement actions on
21 parcels not compliant with debris removal requirements of
22 Chapter 53; (4) dead and dying trees litter the Camp Fire
23 footprint, including areas where some homes still exist and
24 where others existed and are now pending construction; (5) the
25 County has had trees in the County right-of-way assessed by an

1 arborist and removed a small portion of over 6,649 hazard trees¹
2 that have been determined to meet removal criteria; (6) Del Oro
3 Water and Paradise Irrigation District are in the process of
4 testing residential structures for water contaminants in the
5 Camp Fire area; (7) numerous Camp Fire survivors who are unable
6 to live on their property until the fire debris removal is
7 complete are sheltering at non-congregate shelters at Lime
8 Saddle and DeSabra campgrounds; and (8) Camp Fire survivors are
9 reporting barriers to returning to their properties and
10 rebuilding, including but not limited to hazard standing trees,
11 large depressions in the ground as a result of debris removal
12 without adequate fill dirt in the area, delays in accessing
13 temporary power, concerns regarding contaminated drinking water
14 in the area, and being unable to rebuild on their property
15 because it has not yet received final sign-off in the debris
16 removal program.

17 X. The majority of the Camp Fire area is located in a Very High
18 Fire Hazard Severity Zone as shown on the California Department
19 of Forestry and Fire Protection's Fire and Resource Assessment
20 Program map dated November 7, 2007.

21 Y. The County generally has a climate conducive to wildfires and
22 is prone to periodic dry summers and wind events. Hazard trees
23
24

25 ¹ The criteria for hazard trees for this purpose is set out in Section JJ.
below.

1 pose a significant danger to the health, safety and welfare of
2 the public by fueling and propelling wildfires, thereby
3 increasing the potential for a severe fire and endangering
4 lives, property and the environment. Increasingly dry summers
5 and severe wind events further exacerbate the fire danger and
6 have the potential to result in catastrophic fire losses to
7 life, property and the environment.

8 Z. Additionally, the Camp Fire created a fuel type conversion
9 whereby the Ponderosa Pine and mixed conifer forests have now
10 been converted to predominantly open land with grass and brush
11 regrowth. The understory grass and brush can precipitate the
12 start and spread of fire with hundreds of thousands of dead
13 trees still standing, many of which are within the urban
14 interface, to further add to the fire threat and intensity. Dead
15 trees that fall on the forest floor over time further complicate
16 the fire environment by adding a large amount of down and dead
17 fuel that will add to surface fire intensity and make control
18 efforts difficult.

19 AA. Dead and dying trees pose a life hazard to firefighters, first
20 responders and the general public if exposed to fire or high
21 wind storm events. Standing trees that are dead or dying and are
22 adjacent to roads have an increased risk of falling onto the
23 roads during a wildfire disaster or high wind storm event as
24 compared to healthy trees. This endangers primary and secondary
25

1 evacuation routes in the Camp Fire area, which could lead to
2 increased loss of life during a future fire.

3 BB. Of paramount importance to the Board and the residents of the
4 County is the protection of lives and property from the threat
5 of fire, including proper maintenance of evacuation routes and
6 the safety of fire and law enforcement personnel during
7 wildfires.

8 CC. Dead and dying trees suffer an increased risk of pest
9 infestation, such as bark beetles. When dead or dying trees are
10 infested with pests, this also exposes the healthy trees in
11 close proximity. The healthy trees are then endangered by the
12 pests, which potentially creates more fuel for future fires,
13 which increases the future fire risks in the Camp Fire area.

14 DD. The County Fire Chief has stated that the remaining fire damaged
15 trees in the Concow area following the 2008 fires propelled and
16 exacerbated the progression and severity of the Camp Fire.
17 Further, under normal circumstances, dead and down trees hamper
18 fire suppression efforts. The huge number of fire damaged trees
19 from the Camp Fire justifies County action to reduce the risk
20 posed by fire damaged standing trees.

21 EE. The enormity of the standing burnt trees throughout the Camp
22 Fire area must be addressed before rebuilding will be possible
23 on a scale large enough to facilitate economic recovery of the
24 region. As a result of multiple barriers, including tree removal
25 costs that exceed the value of their land, many homeowners are

1 abandoning their property. If owners do not return to the Camp
2 Fire area, businesses will not be able to open and remain in
3 business. The County must eliminate hazard trees from the Camp
4 Fire area to encourage rebuilding projects in the region.

5 FF. The County estimates 80,000 trees must be removed from
6 approximately 4,000 private parcels adjacent to the County's
7 right-of-ways for County-maintained roads.

8 GG. 100 percent of businesses in the burn area were shut down after
9 the Camp Fire. Approximately 150 out of the 1,200 businesses
10 reopened 6 months later. This number does not include all home-
11 based businesses that were displaced as a result of the
12 residential structure burning in the Camp Fire. The survival of
13 new and existing businesses depends primarily on the restoration
14 of the purchasing power in the community. The loss of
15 approximately 14,000 homes in the Camp Fire area and the
16 subsequent displacement of the residents severely reduces the
17 customers for businesses that sell goods and services locally
18 and the workforce available for businesses that produce goods
19 and services for export out of the County. The severe reduction
20 in population dramatically reduces the ability for businesses
21 to recover, including the ability to remain a viable business
22 interest in the community.

23 HH. State law provides property tax relief to homeowners impacted
24 by a natural disaster by reducing their assessed value. This
25 process provides for the removal of the value of the damaged

1 structure effective as of the date of the disaster. Under this
2 provision of law, the County Assessor has removed \$1.93 billion
3 from the property tax roll for the 8 months from November, 2018
4 - June, 2019, which reduces property tax revenue by \$19.3
5 million. The fiscal year 2019-20 roll will reflect 12 months of
6 reduced value as well as additional reductions to land value
7 which could not be adjusted mid-year. Over 50 percent of property
8 tax revenues support schools while the remaining taxes provide
9 revenue to local jurisdictions and special districts to provide
10 critical local services. The County receives about 20% of total
11 property tax revenues. The State of California has committed to
12 backfilling property taxes through fiscal year 2020-21 to
13 account for the substantial reduction in revenue to these
14 agencies. The only way for this critical revenue source to
15 recover is for homes and structures to be rebuilt and property
16 values, and therefore property taxes, to increase. Property tax
17 is the primary discretionary revenue source for the County,
18 accounting for over half of the County's discretionary revenue.

19 II. The health of the communities and local economies largely
20 depends upon repopulation; repopulation largely depends upon the
21 mindset of the public and their sense of security regarding
22 moving back to their land. For example, if evacuation routes
23 continue to suffer from falling trees, residents will not have
24 confidence in their ability to evacuate safely during a future
25 fire, and will choose not to rebuild in the Camp Fire area.

1 Without that sense of security, people are moving elsewhere -
2 which negatively impacts the economy recovery of the region -
3 both the commercial economy and the property tax base for the
4 County.

5 JJ. The County has contracted with a certified arborist and tree
6 health expert company to assess and inventory trees rooted in
7 the public right-of-way for tree mortality risk rating. The
8 arborists have generated a report and forms memorializing the
9 tree mortality data at the time of field reconnaissance and
10 inventory efforts on February 2, 2019 through July 31, 2019. One
11 of the purposes of the field reconnaissance effort was to
12 identify, inventory, and assess the risk of trees rooted in the
13 public right-of-way within the unincorporated areas of the Camp
14 Fire disaster area that:

- 15 • Were damaged by the Camp Fire;
- 16 • Have a diameter of six inches or greater measured 4.5 feet
17 above ground level;
- 18 • Pose an immediate threat to life, public health and safety,
19 as a result of threatening public right-of-ways; and
- 20 • Meet one or more of the following criteria:
 - 21 1. Have a split trunk;
 - 22 2. Have a broken canopy; or
 - 23 3. Is leaning at an angle greater than 30 degrees;
 - 24 and
 - 25

- Is determined, under the professional opinion of the arborist, that the tree is a hazard consistent with criteria set forth in ANSI A300 (Part 9) known as the Tree Risk Assessment Standard.

KK. For those trees which met the defined criteria, the arborists employed the ISA's Tree Risk Assessment methods to assess a tree's risk ratings, which was based on the health of the tree and the tree's relation to public right-of-ways.

LL. Field reconnaissance and inventory efforts have found approximately 6,649 trees which met the defined criteria.

MM. The County's arborists have recommended removal of all hazard trees which meet the defined criteria and are rooted along the County's right-of-way.

NN. It is the opinion of the County Fire Chief and County's arborists that the unprecedented level of hazard trees presents the following risks to life, public health and safety: (1) the risks of injury and/or death to County residents who use County-maintained roads due to falling trees; and (2) the increased threat of catastrophic wildfire to the Camp Fire area and surrounding area.

OO. A purpose of this Article is to establish a Hazard Tree abatement program that protects the lives and property of the public living in and traveling through the County, and the environment.

PP. The Board of Supervisors finds that Hazard Trees (as defined in this Article) pose a danger to the health, safety and welfare of the general public in the vicinity of any real property

1 located throughout the territory of the County for the reasons
2 set forth above. Therefore, all Hazard Trees located on real
3 property within the unincorporated area of the County are deemed
4 a public nuisance and pose a hazard to the safety of the
5 landowners, residents in the vicinity, users of roads and to the
6 public generally.

7 QQ. It is imperative that the County implement immediate and
8 aggressive measures to identify and fell the trees that are dead
9 and dying as a result of the Camp Fire to immediately eliminate
10 or reduce the risks to life, public health and safety,
11 infrastructure, forest health and the community at large.

12 RR. The Board of Supervisors has the authority to take action to
13 protect the health, safety and welfare of the residents of the
14 County pursuant to its police powers granted by Article XI,
15 Section 7 of the California Constitution, California Government
16 Code section 25123, California Health & Safety Code section
17 101025 and Chapter 32A of the Butte County Code.

18 SS. Hazard Trees (as defined below) that:

19 (1) are rooted on private property; and

20 (2) threaten (a) roads and/or right-of-ways of County-maintained
21 roads or (b) public improved property in the unincorporated
22 areas of the Camp Fire area; and

23 (3) may cause physical injury or damage to persons or property
24 creates a serious public health and safety crisis and therefore
25 constitutes a public nuisance.

1 TT. It is essential that this Ordinance become immediately effective
2 (1) to mitigate the harm that could be caused to the public
3 health and safety and to the environment from the failure to
4 remove Hazard Trees and to facilitate the orderly response to
5 the Camp Fire disaster; and (2) to allow the fastest possible
6 transition of homeless and displaced residents to repopulate the
7 Camp Fire area.

8 Section 2. Section 53-86, entitled "Private Hazard Tree Removal
9 Program," of Article V, entitled "Mandatory Hazard Tree Removal
10 Program," of Chapter 53, entitled "Camp Fire Disaster Recovery
11 Ordinance" is hereby amended to read as follows:

12 **"Section 53-86. Private Hazard Tree Removal Program.**

13 A. As an alternative to the Government Hazard Tree Removal Program,
14 the Private Tree Program provides the owner with the option of
15 identifying and removing Hazard Tree(s) on their property at their
16 own cost. To participate in the Private Tree Program, owners shall
17 submit an Inspection Access Form for their property. Following the
18 owner's identification and removal of Hazard Trees, the Private Tree
19 Program shall require the Enforcement Officer to make a visual
20 confirmation of the removal of Hazard Trees on the subject property.
21 This visual inspection of compliance with the Private Tree Program
22 shall be sufficient for meeting the requirements of this Section.
23 Whether the Hazard Tree removal is adequate shall be in the sole
24 discretion of the Enforcement Officer.

1 B. Notwithstanding anything herein to the contrary, in the Private
2 Tree Program, owners may choose to temporarily retain and promptly
3 utilize felled Hazard Trees which were standing on their property.
4 This temporary retention and utilization by the owner shall be
5 permitted only to the extent felled Hazard Trees and incidental
6 foliage, slash, tree branches or limbs and chipped or mulched
7 vegetation do not constitute a fire hazard as prohibited by applicable
8 law, including but not limited to California Public Resources Code
9 section 4291 et seq., Title 19 of the California Code of Regulations
10 and Chapter 38A of the Butte County Code. Such requirements include
11 but are not limited to the following:

12 (1) In storing such Hazard Trees prior to utilization, an owner shall
13 be required to:

14 (a) maintain a setback of no less than 100 feet from any inhabited
15 building or structure;

16 (b) maintain a setback of no less than 30 feet from any uninhabited
17 building or structure; and

18 (c) maintain a setback around the parcel's property lines of no
19 less than 30 feet wide.

20 (2) If an owner utilizes felled Hazard Trees for wood chips, the
21 owner shall be required to spread the wood chips to a depth of no
22 greater than 3 inches while maintaining a setback of no less than 5
23 feet from any building or structure.

24 If any temporary retention and utilization of Hazard Trees constitutes
25 a fire hazard, it is a public nuisance and may be abated using any

1 available legal remedy. If the owner chooses to temporarily retain
2 and utilize felled Hazard Trees, the owner is required to utilize
3 such Hazard Trees prior to the Enforcing Officer's visit to the
4 property to confirm compliance with the Private Tree Program.

5 For the purposes of this section, any temporary retention and
6 utilization of felled Hazard Trees by the property owner is not a
7 Temporary Log Storage Yard (AKA: Log Deck) as described in Chapter
8 53. Owners may not receive felled trees from other properties.

9 C. The County shall utilize the state and federal standards and
10 cleanup goals of the Government Hazard Tree Removal Program as the
11 standards for the Private Tree Program, including but not limited to
12 the criteria for determining whether a tree is a Hazard Tree. Under
13 the supervision of the Enforcement Officer, the County may
14 administratively update these standards as necessary to address
15 ongoing changes in the administration of the Government Hazard Tree
16 Removal Program and the need to efficiently remove Hazard Trees from
17 the community."

18 Section 3. CEQA Exemption. Adoption of this Ordinance is exempt from
19 the provisions of the California Environmental Quality Act (CEQA)
20 pursuant to California Public Resources Code section 21080(b)(3)
21 regarding projects to maintain, repair, restore, or replace property
22 or facilities damaged or destroyed as a result of a declared disaster
23 and Section 21080(b)(4) regarding actions to mitigate or prevent an
24 emergency, and CEQA Guidelines Section 15269(a) regarding
25 maintaining, repairing, restoring, demolishing, or replacing property

1 or facilities damaged or destroyed as a result of a disaster stricken
2 area in which a state of emergency has been proclaimed by the Governor
3 pursuant to the California Emergency Services Act, commencing with
4 Section 8550 of the California Government Code.

5 Section 4. Severability. If any section, subsection, sentence,
6 clause, or phrase of this Ordinance is for any reason held to be
7 unconstitutional or invalid, such decision shall not affect the
8 validity of the remaining portion of this Ordinance. The Board of
9 Supervisors hereby declares that it would have passed this Ordinance
10 and every section, subsection, sentence, clause or phrase thereof
11 irrespective of the fact that any one or more sections, subsections,
12 sentences, clauses or phrases be declared unconstitutional or
13 invalid.

14 Section 5. Effective Date and Publication. This Ordinance shall be
15 and the same is hereby declared to be in full force and effect
16 immediately upon its passage by a four-fifths (4/5) or greater vote.
17 The Clerk of the Board of Supervisors is authorized and directed to
18 publish this Ordinance before the expiration of fifteen (15) days
19 after its passage. This Ordinance shall be published once, with the
20 names of the members of the Board of Supervisors voting for and
21 against it, in a newspaper of general circulation published in the
22 County of Butte, State of California. Pursuant to Government Code
23 section 25124, a complete copy of this Ordinance is on file with the
24 Clerk of the Board of Supervisors and is available for public
25 inspection and copying during regular business hours in the office

1 of the Clerk of the Board of Supervisors, 25 County center Drive,
2 Oroville, California.
