How Genentech Supports the Safe Collection and Proper Disposal of Used Sharps

Genentech is recognized as a sustainability leader and is committed to acting as a responsible corporate citizen in all of its activities.

We've taken steps to prevent unintentional sharps injuries among our patients, their families and others who may handle sharps used with our self-injected medicines.

As a manufacturer, we have a responsibility - along with doctors, pharmacists, municipalities and patients - to help facilitate the proper handling and disposal of sharps. We take this responsibility seriously, and work to educate patients about how to safely handle and dispose of our products.

General resources available to patients

To support our commitment to the safe use of sharps, we provide a number of resources to our patients, including:

- injection devices with protective sheaths
- sharps containers
- information and tools on safe injection and proper syringe disposal

We offer a tool to help patients find local sharps disposal locations for their used sharps. "How to Deal with Sharps Responsibly" [<http://www.gene.com/gene/sharps/>] links to information about disposal locations throughout the United States provided by state and local governments and other organizations.

Guidance on proper use and disposal of sharps for specific medicines

Genentech currently markets and sells five self-injected medicines in the United States:

- Actemra® (tocilizumab)
- Fuzeon® (enfuvirtide)
- Hemlibra® (emicizumab-kxwh)
- NutropinAQ® [somatropin (rDNA origin)]
- Pegasys® (peginterferon alfa-2a)

Actemra

ACTEMRA pre-filled syringes and ACTEMRA autoinjector are available for once weekly or once every-other week injections for patients with moderate to severe Rheumatoid Arthritis. The pre-filled syringes and autoinjector are provided with an automatic needle shield that is activated at the end of the injection process, with the shield extending down over the needle, and locking in place to prevent re-use and accidental needle-stick injuries.

Patients starting on ACTEMRA have a number of resources available to support their treatment journey. New patients are encouraged to register for ACTEMRA's patient support program to receive a

free sharps container (no purchase necessary). After the patient registers for the “ACTEMRA & You” patient support program and requests a sharps container, it is mailed directly to the patient for their use, along with information regarding the free of charge retrieval and disposal service offered to patients once the container is filled.

Genentech also provides ACTEMRA patients with instructions for accessing the ACTEMRA Patient Support Line 1-800-ACTEMRA (1-800-228-3672) for any questions and a website at www.actemra.com containing educational information, including injection instructions, medication guide and instructions for use and guidance regarding the safe disposal of ACTEMRA pre-filled syringes and autoinjector.

Fuzeon

Fuzeon is supplied as a powder that must be reconstituted. Patients are provided with a “convenience kit,” which contains items necessary for use of Fuzeon, including safety syringes for reconstituting and injecting the medicine. Specialty pharmacies providing Fuzeon to patients also provide sharps containers to Fuzeon patients free of charge. In addition, patients and/or caregivers can obtain sharps containers from Genentech free of charge by calling 1-866-422-2377.

Fuzeon patient information literature provides information about safe injection and appropriate disposal of used sharps. Patients are encouraged to not throw used sharps into trash or recycling containers and to contact their healthcare provider or pharmacy for disposal information.

Hemlibra

Hemlibra is a clear liquid solution for subcutaneous injection supplied in a single-dose vial. The Prescribing Information and Instructions for Use indicate the need for a syringe and 26G injection needle with safety shield to administer the product, which are provided by specialty pharmacies or Hemophilia Treatment Center pharmacies. Genentech provides “convenience kits” which contain ancillary supplies necessary for use of Hemlibra, including injection needles to pharmacies for distribution to patients free of charge.

Hemlibra patient information literature provides information about safe injection and appropriate disposal of used sharps. Patients are encouraged to not throw used sharps into trash or recycling containers and to refer to the FDA’s website at: <http://www.fda.gov/safesharpsdisposal> for proper sharps disposal practices.

Nutropin

Nutropin is a pre-filled injection device for subcutaneous use. Nutropin provides safe management and collection education to patients and caregivers in a number of ways. Nutropin is distributed through specialty pharmacies, which are contracted to provide appropriate needle disposal methods to patients. All patients receive a Patient Education Kit. The kits include instructional brochures and a DVD, which communicates the need for proper disposal of used sharps. The information encourages patients to contact their healthcare provider for proper disposal methods. Patients may also call the

Nutropin Nurse Hotline at 866-Nutropin (866-688-7674) for information on proper disposal and to obtain a sharps container.

Pegasys

Pegasys is a once weekly injectable which is supplied as a solution in vials, pre-filled syringes, as well as an autoinjector ("ProClick"). The pre-filled syringes include a needle guard. The needle in the autoinjector is not exposed and includes a safety shield.

Genentech also provides a website, www.Pegasys.com, that provides patients with the FDA approved Pegasys Medication Guide, which includes information about proper needle disposal for syringes and vials as well as the pre-filled syringe and the autoinjector.

The information above also comprises Genentech's plan for the safe collection and proper disposal of self-injected medical devices under California Public Resources Code section 47115 and Minnesota Statutes section 116.835.
