

Biomass Facility Diversion Claim

Note: This page has been removed since Biomass is no longer reported in the Electronic Annual Report after 2006. For 2007 and subsequent years, CalRecycle's compares reported disposal tons to population to calculate per capita disposal expressed in pounds/person/day. This new goal measurement system is described in CalRecycle's [Measurement: 2007 and Later](#) web page. Because the annual per capita disposal rate is based on disposal tons, any biomass will not be reported as disposal. In other words, there is no cap on the amount of material a jurisdiction can send to biomass. Therefore, sending material to biomass will help to reduce disposal. A Biomass Facility Diversion Claim Sheet is no longer required for submittal with the jurisdictional Annual Report.
