3038	Reyes, G., County of Riverside	Remove Section 18083(c) At least once per quarter, the EA shall oversee a minimum of one (1) measurement as described in 14 CCR Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867 and 17896.44.1, during an inspection required in subdivision (a).	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for

Comment Number	Received From	Question/Comment	Response(s)
		<p>a. The sections listed (14 CCR Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867 and 17896.44.1) give LEAs authority to require operators to perform measurements and load checking, therefore not needed in Section 18083.</p> <p>b. The new section creates a mandate and a performance standard for the LEA, binding the LEA to a specific amount of time and effort to review one action at a facility. Current measurement time is estimated to be 3-5 hours.</p> <p>c. This section disregards LEA determination of compliance of a facility unlike the statements in the other sections that leaves the option of observation to the LEA. This is important because if a facility is determined to be consistently in compliance with measurement and load checking, the LEA is mandated to observe quarterly regardless instead of putting time and resources to less compliant facilities.</p>	<p>statewide consistency and ensures the measurements prescribed in the regulations are performed properly.</p>
3039	Reyes, G., County of Riverside	<p>Revise Section 18984.11(a)(3)(A)(1) The jurisdiction, or its authorized hauler, demonstrates to the <b>Solid Waste Local Enforcement Agency</b> that less frequent collection than required by Section 17331 of Title 14 of the California Code of Regulations will not result in the propagation of vectors or other public health and safety, or nuisance issues.</p> <p>a. Section 18984 identifies the Solid Waste Local Enforcement Agency as the designee to allow less frequent collection whereas Section 17331 designates the Local Health Officer. This section conflicts with the section that it cites.</p> <p>b. As an LEA, we do not wish to be the designee for less frequent collection and would like it to remain a Health Officer duty.</p>	<p>The regulations were revised to specify enforcement agency.</p>
6416	Reynolds, City of Blythe	<p>Among the concerns are a lack of local control, insufficient infrastructure capacity for organic waste collection and processing due to the City's remote location, access to funds in the State's Cap and Trade program to help local low-income disadvantage communities develop programs, and unrealistic compliance goals.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-document history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
6417	Reynolds, City of Blythe	As currently drafted, the regulation is expected to impose a significant jurisdictional burden on program enforcement and recordkeeping, diverting already limited funds and resources.	A change to the regulatory text is not necessary. The reporting and recordkeeping requirements are the minimum amount needed to allow CalRecycle to ensure a jurisdictions compliance with

Comment Number	Received From	Question/Comment	Response(s)
			<p>the Chapter. The recordkeeping requirements also assist a jurisdiction in verifying and tracking their own progress and if they are complying with the law.</p> <p>The Chapter allows a jurisdiction the flexibility to fulfill its oversight role by adopting their own enforceable ordinances that are consistent with the requirements of the Chapter.</p>
6418	Reynolds, City of Blythe	Furthermore, the proposed penalty structure for generators of organic waste, specifically residents and small businesses, is excessive and is expected to disproportionately affect many of the City's low-income disadvantage residents.	<p>A change to the regulatory text is not necessary. Section 18984.4 states that organic waste generators, which includes residential generators, shall comply with the applicable local requirements adopted pursuant to Article 3 for the collection and recovery of organic waste by subscribing to collection service and if not subscribing to service, self-hauling organic waste in a manner that complies with the requirements of Article 7 of this Chapter. Section 18984.4 requires a jurisdiction to monitor generators using a three-container or two-container organic waste collection service to minimize prohibited container contaminants. If a jurisdiction observes prohibited container contaminants in a generator's containers on more than three consecutive occasions, the jurisdiction may impose additional contamination processing fee on the generator and may impose penalties. It is within the jurisdiction's discretion through its enforceable ordinance(s) on how to enforce non-compliant residential generators beyond what is required in the Chapter.</p> <p>CalRecycle has revised the penalty amounts in Section 18997.2 from per day violations to per violation. The penalty provisions are consistent with the existing penalty limitations in the Government Code Sections 53069.4, 25132 and 36900. Entities in violation are given ample time through the Notice of Violation process to comply and avoid penalties. Jurisdictions have the discretion to develop their own factors to be considered when determining a penalty amount, such as but not limited to, the impact on a disadvantaged community or the ability to pay, similar to the factors used by the Department listed in section 18997.3(d).</p> <p>A change to the regulatory text is not necessary. The penalty fines listed in Section 18997.2 Base Table 1 are the minimum penalty thresholds imposed by a jurisdiction. The severity levels allow a jurisdiction the discretion to penalize smaller businesses at the minimum penalty and levy a more substantial penalty against larger businesses that may be contributing more to the organic waste stream. These penalties are consistent with the limitations on fine levels for local agencies in the Government Code. The penalty fines listed in section 18997.3 Base Table 1-10 are minimum penalty threshold to be imposed by the Department and are specifically contemplated in the language of SB 1383 as being up to \$10,000 per day. These penalties are reserved for the jurisdictions and for entities when the jurisdiction has failed to enforce. In most programs with a progressive enforcement process, generators or operators have ample time to comply, resulting in very few fines. For example, Section 18995.4 explains the minimum timeframe for the process of issuing a Notice of Violation to an entity if they are found non-compliant. A jurisdiction has 60 days from the date of inspection to issue a NOV. This allows time for the entity to remedy the situation before the jurisdiction has to issue a NOV. If an NOV is issued, the entity has up to 150 days to come into compliance before the jurisdiction must commence action to impose a penalty. This allows an entity up to 210 days to remedy a violation before a penalty is imposed. Additional extensions are available due to extenuating circumstances or infrastructure deficiencies.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>A jurisdiction has two years between 2022-2024 to preform outreach and educate the generators on the requirements of the Chapter. As described in section 18995.4, a jurisdiction can notice a generator found to be non-compliant. The generator has over 200 days to remedy the situation before a jurisdiction shall imposes penalties. Entities have a generous amount of time to come into compliance. A jurisdiction shall impose penalties for violations consistent with the graduated penalty amounts authorized in Sections 53069.4, 25132 and 36900 of the Government Code which is outlined in Section 18997.2(a).</p>
6419	Reynolds, City of Blythe	<p>Section 30.5 Container Contamination Minimization.</p> <p>1. Upon finding prohibited contaminants in a container the jurisdiction or its designee, shall contact the generator or provide written notice to the generator. Comment: It is not feasible to determine and identify individual generators that contaminate a route unless containers are checked individually. Our residential curbside program utilizes automated side loading vehicle and covered bins. Adhering to the proposed legislation would require route drivers to physically examine hundreds of containers on each route on a daily basis and additional staffing resources to issue notices and deal with upset residents. The City recommends exempting residential routes from the requirement.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
6420	Reynolds, City of Blythe	<p>2. Route review on randomly selected containers in all collection routes quarterly is infeasible. Comment: Despite covering a smaller geographic area than its neighboring regional cities, the City's franchised hauler services thousands of containers every week. A quarterly route review for all routes in the City is not possible without the addition of significant staffing and funding. It is not feasible for the collection truck operators to perform this task and complete their service routes in a timely manner. The required additional work will directly impact our franchise hauler. As a result, the City will likely see a significant price increase. The City recommends exempting residential routes from this requirement.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. 6423	Reynolds, City of Blythe	<p>Comment: This is a significant administrative, training, and logistical burden for small businesses to manage its excess edible food, if it generates any, until it can be retrieved by a food recovery organization. The burden on the City to monitor and enforce the proposed rules related to edible food generators and food recovery creates an adversarial and punitive tone to a program that intends positive and beneficial outcomes for those going hungry in our community. The City recommends allowing greater local control in developing programs to address food recovery for community benefit.</p>	<p>Regarding the comment about local control, SB 1383’s statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. In order to meet this goal, SB 1383’s regulations include requirements that jurisdictions shall implement edible food recovery programs that include critical requirements such as educating commercial edible food generators about their requirements under SB 1383, monitoring commercial edible food generator compliance, and expanding edible food recovery capacity if additional capacity is needed in the jurisdiction. These key requirements are critical to help ensure that millions of pounds of edible food stay out of landfills and to help the state achieve its 20% edible food recovery goal. For these reasons, a change to the regulatory text was not necessary.</p> <p>In addition, if the commercial edible food generator requirements were removed from the regulations, and the jurisdiction requirement to monitor commercial edible food generator compliance was also removed, then the regulations would not include any mandates for food to be recovered. Removing these critical requirements would make food recovery voluntary, which is the current situation in California. We have seen that when food recovery is voluntary millions of pounds of edible food are disposed rather than being put to the highest and best use of helping feed people in need.</p>
6424	Reynolds, City of Blythe	<p>Comment: In the current draft, a tremendous amount of effort is placed on the Enforcement and Recordkeeping sections, which will require the City to divert scarce funds and resources away from initiative to an enforcement-based system. The City recommends reducing the burden of enforcement and record keeping so that the City may prioritize program development.</p>	<p>A change to the regulatory text is not necessary. The reporting and recordkeeping requirements are the minimum amount needed to allow CalRecycle to ensure a jurisdictions compliance with the Chapter. The recordkeeping requirements also assist a jurisdiction in verifying and tracking their own progress and if they are complying with the law.</p> <p>The Chapter allows a jurisdiction the flexibility to fulfill its oversight role by adopting their own enforceable ordinances that are consistent with the requirements of the Chapter.</p>
4103	Rich, D, Mtn View	<p>We continue to request, as we did in our prior comments on these regulations (November 2017 and Mary 2018) that jurisdictions that have already demonstrated their commitment to achieving high diversion be allowed to maintain local control</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>of their solid waste and diversion programs, determining how best to divert organic waste in their own communities.</p>	<p>provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4104	Rich, D, Mtn View	<p>We propose that the regulations offer such jurisdiction an Alternative Collection and Compliance system. In our enclosed comments we offer detailed possible revisions to Articles 3 and 13 of the regulations to add this Alternative. Jurisdictions utilizing the Alternative would be allowed to opt out of the prescriptive inspection, enforcement, and reporting measures of Articles 14, 15, and 16, and Sections 18984.5 and 18984.6 of Article 3. Intrad, these jurisdictions would demonstrate that their programs, designed in the maner that the jurisdiction choosees meet the overall diversion goals of SB 1383. We do not believe allowing such an Alternative would be in conflict wth the enabling legislation directive to not impose a minimum diversion requirement on each jurisdiction. It would not be a mandate, but an implementation option a jurisdiction could select. Additionally, this Alternative would relieve the State of burdensome oversight of high-performing jurisdictions. A similar "two-track" compliance system was used by the State Water Resources Control Board in the adoption of its Trash Amendment for the Ocean Plan and the Water Quality Control Plan for Inland Surface Waters. The two-track compliance approach offered by teh State's Trash Amendments gave jurisdictions the choice of installilng trash full-capture devices on inlets throughout the jurisdiction or implementing a trash load reduction program that achieves the equivalent of the State's requirement.</p>	<p>Comment noted. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.</p>
4105	Rich, D, Mtn View	<p>The definition of "organics/organic waste" is not consistent with that used in AB 1826 and AB 901. We are concerned about the inclusion of textiles and carpet in the definition used for these regulations. A significant portion of carpet is PET, which is not organic, and most clothing presents the same issue. There is already a regulatory program for carpet .For organic textiles, a jursidiction may allow them in the recyclin cart, but is not required to. In any case, residents. as organic waste generators, are not allowed to place them in the trash cart and would be subject to enforcement if they did so. Expecting the general public to differentiate between</p>	<p>Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated</p>

Comment Number	Received From	Question/Comment	Response(s)
		organic and inorganic carpet and textiles when deciding on disposal options is impractical.	by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.
4106	Rich, D, Mtn View	<p>Article 2. In Section 18983.2(a)(3), approval of a proposed process or technology depends entirely on a pass/fail conclusion that the process or technology results in GHG emissions reductions equal to or greater than 0.30 MTCO<sub>2</sub>e per ton, which is described as teh GHG reductio achieved by composting mixed organic waste. The ISOR goes int great detail in describing a basis for teh 0.30 MTCO<sub>2</sub>e benchmark. Assuming for the sake of argument that the ISOR calculations are correct in setting this benchmark for mixed organic waste, the methodology may block the use o valuable technologies that targeted the most problematic items - those that do not compost well. For example, a technology that targeted diversion of source-separated organic carpet or lumber, items which release little carbon to the atmosphere but which we still want to divert from disposal, could easily fail to pass teh 0.30 MTCO<sub>2</sub>e hurdle. The rigid 0.30 MTCO<sub>2</sub>e standard could prove to disqualify otherwise valuable diversion methods and hamper the achievement of the diversion goals stated in SB 1383. We ask that this section be revised to provide the CalRecycle Director more flexibility for approval of proposed processes and technologies.</p>	Comment noted. The standard included in this section was developed in consultation with CARB and CalRecycle finds the standard adequate.
4107	Rich, D, Mtn View	<p>Article 3. We propose a new section be added to allow an alternative collection and compliance system, as outlined in our accompanying letter. Suggested language for the new Section is provided below: Section 18984.13 Alternative Collection and Compliance System. (a) A jurisdiction may implement an alternative collection system that consists of any one of any combination of those allowed under Section 18984.1, 18984.2, ad 18984.3. The alternative sstem may, but is not required to, incorporate the provisions required by Section 18984.5 and 18984.6, and will furthermore be considered to be in full compliance with the requirements of Articles 14,15 and 16 if all these conditions are met: (1) a jurisdiction that chooses to implement an alterative collection system must: i. Have a Zero Waste Plan or Zero Waste Police that was adopted prior to January 1, 2019; ii. Have an organics diversion program for both single family residential and commercial customers that was established prior to January 1, 2019; iii. Demonstra a continued reduction in the amount of organics being disposed in the landfill through one of the following measures: 1. A forty percent reduction in the overall population pounds per day disposal rate in 2025 as compared to 2017, demonstrated by the annual AB 939 report submitted on August 1, 2026. 2. No more than 25 percent of the total organic waste generated in the jurisdiction is disposed in landfill. 1 (2) A jurisdiction that has not demonstrated a continued reduction in teh amount of organics being disposed in landfill for the calendar year 2025 using one of the methods allowed in (iii) above will no longer be approved to implement the alternative system and must be in full compliance with all provisions of Sections 18984.5 and 18984.6 and Articles 14, 15, and 16 no later than January 1, 2027. 1 Cal Recycle would need to</p>	Comment noted. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.

Comment Number	Received From	Question/Comment	Response(s)
		<p>document an accepted process by which the amount of disposed organic wastes could be determined. Our suggestions: A community may determine their total organic waste generation rate based on either: 1. The statewide per capita organic waste generation rate as determined by CalRecycle, or 2. A statistically valid waste composition study that would include the determination of all organic wastes currently being diverted, and all organic waste still being landfilled, and not to identify organics disposed as a percentage of the total waste being landfilled. NEW PARAGRAPH The waste generation study (or the statewide per capita generation rate) would provide the base per capita organic waste generation rate against which compliance would be measured. If a full waste generation study was chosen it would identify all organic wastes generated, including organic wastes prevented by actions of the jurisdiction, all organic wastes diverted within the jurisdiction, and all organic wastes still being landfilled. This would include sampling to determine the amount of organic waste generated in the residential sector and separately in the commercial sector (including compactors but not C&amp;D materials). These amounts would be combined to calculate a per capita organic waste generation rate, which would be used to calculate the overall per capita waste generation rate for future years. To demonstrate compliance, only that portion of the waste stream being landfilled would be sampled. The samples would be taken after the organic materials had been processed. Sampling would include organic residue from all processing operations, and unprocessed material collected and hauled directly to landfill. The amount of organic materials in the samples would be used to calculate the total organic waste still being landfilled, and the organic waste landfilled on a per capita basis. NEW PARAGRAPH The base year organic waste generation study would be performed between 2012 (as 10 years before measurement commences) and 2022. The organic waste landfilled sampling would be conducted every year until organic waste landfilled is not more than 25 percent of the total organic wastes generated in the jurisdiction, and once every five years after that to ensure that the jurisdiction maintained the required diversion rate. Communities could update their full base year organic waste generation study as often as they deemed it necessary.</p>	
4108	Rich, D, Mtn View	<p>4108 Article 3 section 18984.1(a)(4) The shade of blue for cart lids in a program using dual stream recycling collection (separating paper from containers) should be specified. We suggest light blue for bottles and cans and dark blue for paper.</p>	<p>CalRecycle revised Section 18984.7(a) in response to this comment to clarify that jurisdictions have to provide containers for the collection service that the jurisdiction implements for organic waste generators, not the indoor bins of businesses. Sections 18984.1(a)(6)(B) and (C) and 18984.2(d)(1) do not require that only light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container. Additionally, if the color is an issue in this circumstance, the business can use labels instead. CalRecycle will clarify in the FSOR that Section 18984.9(b), which allows a commercial business to provide containers that comply with either the color or the labeling requirements, applies to Section 18986.1 and Section 18986.2.</p>
4109	Rich, D, Mtn View	<p>Article 12 Section 18993.1 establishes procurement targets for the purchase of organic waste products. The concept of requiring cities, counties and special</p>	<p>SB 1383 provides a broad grant of regulatory authority to the Department that allows for inclusion of the procurement requirements. CalRecycle has determined these requirements are</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>districts to purchase compost and /or "renewable transportation fuel" derived from "California, landfill - diverted recycled organic waste" is a concept not found in statute.</p>	<p>necessary to achieve the organic waste diversion targets in statute by ensuring end uses for processed organic waste. In Public Resources Code Section 42652.5, "The department, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code." That section also provides that the Department may "include different levels of requirements for local jurisdictions..."</p> <p>Furthermore, the Department also maintains broad, general rulemaking authority in Public Resources Code Section 40502, "The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code." SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where the Department successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that "[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. '[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . . .' The [administrative agency] is authorized to "fill up the details" of the statutory scheme."</p> <p>Consistent with CalRecycle's broad rulemaking authority, the proposed procurement requirements are designed to help achieve the organic waste diversion goals in SB 1383 by supporting markets for recovered organic waste products. The regulations have a direct nexus to achieving those organic waste diversion goals by preventing initially diverted organic waste from being disposed due to lack of end uses.</p> <p>Health and Safety Code Section 39730.8, also in SB 1383, refers to CalRecycle considering recommendations in the California Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for the use of biomethane and biogas. The IEPR recommended that "state agencies should consider and, as appropriate, adopt policies and incentives to significantly increase the sustainable production and use of renewable gas." As such, provisions for the procurement of renewable transportation fuel generated from recovered organic waste.</p> <p>The Air Resources Board's Short Lived Climate Pollutant Strategy states, "CalRecycle will continue to work towards strengthening state procurement requirements relative to use of recycled organic products."</p> <p>The inclusion of compost as an eligible recovered organic waste procurement product aligns with policies and mandates for methane reduction as described in the Air Resources Board's SLCP Strategy. The Economic Analysis conducted for the SLCP Strategy notes several scenarios that can achieve the needed reductions in short-lived climate pollutants from the waste sector, and every scenario modeled includes new compost facilities. The purpose of a compost procurement requirement is to establish markets for compost, which is a product generated by organics recycling facilities which the SLCP Strategy identified as in need of market development.</p> <p>Regarding paper procurement requirements, CalRecycle's 2014 Waste Characterization Study found that paper accounts for 17.4 percent of the disposed waste stream. Requirements on jurisdictions to meet the recycled content paper procurement requirements will help grow</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>markets for recycled content paper. Given the prevalence of paper in the disposal stream, increased procurement of recycled paper is needed to grow the market for recycled paper in order to achieve the organic waste reduction goals. This is necessary to help achieve the organic waste diversion goals in SB 1383 by ensuring an end use for diverted organic waste.</p> <p>Regarding funding, SB 1383 (Public Resources Code Section 42652.5(b)) provides that, "A local jurisdiction may charge and collect fees to recover the local jurisdiction's costs incurred in complying with the regulations adopted pursuant to this section."</p>
4110	Rich, D, Mtn View	<p>Article 12: The assumption and specifics of Article 12 are problematic in several ways. The amount a jurisdiction is required to purchase is based on an assumption that local government accounts for 13% of gross domestic product (GDP) and that local government can and should use 13% of all diverted organics. The calculation are also optimistically based, starting Day One, on the tonnage diverted in 2025 if the 75% diversion level is achieved.</p>	<p>The purpose of the per capita procurement target is to create a transparent method to establish the requirement for jurisdictions to create markets for recovered organic waste products. CalRecycle disagrees with the suggestion to phase-in procurement. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p> <p>However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p>
4111	Rich, D, Mtn View	<p>Article 12 (Comment 4111) State agencies, schools and other entities have no corresponding purchase requirements and penalties. This inconsistency appears arbitrary. Why are state agencies, etc. not required to take similar procurement actions as jurisdictions?</p>	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor's office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to "develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state." These are examples of how CalRecycle works with sister agencies, but</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>Regarding “nonlocal entities”, it is important to clarify that the populations in, for example, local education agencies and special districts are already included in a jurisdiction’s population-based procurement target; the population data published by the Department of Finance (DOF) includes universities, community colleges, and other local education agencies. The populations inherent in these entities are built into the procurement target calculation, and jurisdictions are encouraged to work with these entities to meet their procurement targets, which may be accomplished through a contract or agreement, such as a Memorandum of Understanding (MOU). Applying procurement targets to these entities, especially population-based procurement targets, would result in double counting individuals contributing to the procurement requirements.</p>
4112	Rich, D, Mtn View	<p>Article 12 (comment 4112) The per capita quantities appear to overstate what is practical and achievable. When we calculate the Mountain View purchase quantities, the City must purchase more than 3,200 tons per year of compost. The City currently purchases and distributes free to our residents, through our partnership a the SMaRT Station in Sunnyvale, unlimited amounts of compost. Annual demand for this material is just 360 tons. Even if we provided the purchased compost to every contractor working on City projects and our own parks department (which already mulches used trimming generated in the City), it seems unrealistic that we could ever fully use the amount of material required to be purchased.</p>	<p>The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products, including mulch and renewable electricity from in-vessel digestion and biomass conversion, to provide jurisdictions with even more flexibility to choose product that fit local needs.</p> <p>CalRecycle recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction’s need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. If, as mentioned in the comment, the city has limited need for compost, mulch, or fuel, the city may procure electricity or heating applications derived from renewable gas. If the city is capable of reducing or eliminating its use of fossil gas entirely, it could correspondingly reduce or eliminate its procurement obligation under the regulation. This provision was added to ensure jurisdictions are not required to procure more material than they can actually use, and to ensure that the requirements do not conflict with other environmental goals to reduce the carbon intensity of products and activities cities procure material for use.</p>
4113	Rich, D, Mtn View	<p>Article 12 (comment 4113) Alternatively, the City could attempt to comply by purchasing "renewable transportation fuel, "(very narrowly defined as "fuel derived from renewable gas from organic waste that has been diverted from a landfill an dprocessed at an in-vessel digestion facility...:) To do so would require (assuming a fleet average of 20mpg) buying enough fuel to drive over 2.1 million miles annually. The fact that consumption of such huge amounts is required for compliance calls into question the assumptions and methodology used to calculate the per capita requirements.</p>	<p>The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. 			<p>has limited need for compost, mulch, or fuel, the city may procure electricity or heating applications derived from renewable gas. If the city is capable of reducing or eliminating its use of fossil gas entirely, it could correspondingly reduce or eliminate its procurement obligation under the regulation. This provision was added to ensure jurisdictions are not required to procure more material than they can actually use, and to ensure that the requirements do not conflict with other environmental goals to reduce the carbon intensity of products and activities cities procure material for use.</p>
4114	Rich, D, Mtn View	<p>Article 12 (comment 4114) The requirement to use renewable transportation fuel is likely to result in a large investment of vehicles and equipment that can utilize these fuels. As we do everything reasonable to electrify our fleets in order to meet the State's AB 32 goals, any investments required in vehicles and equipment that run on fuels derived from organics are essentially a step backward in our mutual efforts to combat climate change.</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle disagrees that RNG procurement is contrary to state goals for electrification. The use of renewable natural gas as outlined in the 2017 Climate Change Scoping Plan (2017 Scoping Plan) (CARB 2017), which is the official plan for how the state will meet the greenhouse gas emissions requirements pursuant to Assembly Bill 32 (Nuñez, Chapter 488, Statutes of 2006) and SB 32 (Pavley, Chapter 249, Statutes of 2016). The 2017 Scoping Plan lists the organics diversion regulation as a measure that will be utilized to ensure this emissions reduction goal is met, and</p>

Comment Number	Received From	Question/Comment	Response(s)
			states that “procurement policies [are] needed to encourage in-vessel digestion projects and increase the production and use of renewable gas (CARB 2017: 68). Further, the regulatory procurement requirements were developed in consultation with the California Air Resources Board and the California Energy Commission. Per the provisions of Section 39730.8 of the Health and Safety Code, the regulatory procurement requirements were designed to be in alignment with the recommendations found in the 2017 Integrated Energy Policy Report (IEPR), which was developed by the California Energy Commission in consultation with the Public Utilities Commission and the California Air Resources Board.
4115	Rich, D, Mtn View	Article 12 (comment 4115) Limiting solid end products to "compost" fails to recognize the many other uses made of diverted organics, especially mulch and similar products.	CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
4116	Rich, D, Mtn View	Article 12 (comment 4116) Limiting biofuel to transportation uses fails to give credit to other legitimate uses of renewable methane gas made from landfill- diverted organics, such as pipeline injection and generation of electricity.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction’s procurement target.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest</p>

			value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.
4117	Rich, D, Mtn View	Article 12 (comment 4117) Limiting the feedstock for the purchased materials to California sources, may conflict with the Commerce Clause of the United States Constitution. Federal courts have consistently frowned on states acting to restrict sources and destinations of trade based on state boundaries.	<p>Although the proposed regulations limit procurement of recovered organic waste products to certain enumerated products made from California, landfill-diverted recycled organic waste, relevant U.S. Supreme Court cases regarding the dormant Commerce Clause allow for regulation that discriminates against interstate trade if it serves a legitimate local purpose that cannot be served as well by available nondiscriminatory means. <i>Maine v. Taylor</i>, 477 U.S. 131 (1986); <i>Hughes v. Oklahoma</i>, 441 U.S. 322, 99 S. Ct. 1727 (1979).</p> <p>Here, the legitimate local purpose is to achieve the organic waste diversion goals enumerated by the Legislature in SB 1383. An essential component of achieving such goals is to ensure markets for organic material diverted from landfills within California to prevent that material from being disposed due to lack of end uses. End-use markets must be limited to products actually generated from in-state, diverted organic waste to be consistent with the statutory goals of SB 1383. An alternative, non-discriminatory requirement that allows procurement of out-of-state compost, RNG transportation fuel or other such products would have no effect on preventing the disposal of organic waste in California and would therefore have no nexus to achieving the goals laid out in SB 1383.</p>
4118	Rich, D, Mtn View	Comment 4118. We ask that CalRecycle replace the Article 12 mandate with a simple requirement that all government entities in California, including state agencies, schools, etc. specify recycled material when purchasing compost, mulch and similar products.	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor’s office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to “develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state.” These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p>

Comment Number	Received From	Question/Comment	Response(s)
			Regarding revising the procurement approach to rely solely on jurisdictions' voluntary purchases of recycled content products, CalRecycle disagrees. This approach would be insufficient to drive demand for recovered organic waste products on the scale necessary to help meet the ambitious targets required by SB 1383.
4119	Rich, D, Mtn View	If a procurement requirement is retained, we ask that it: Allow biogas uses other than transportation fuel to qualify; Allow mulch and similar waste-derived materials to qualify; Use calculation factors that result in required amounts bearing some resemblance to what a jurisdiction is capable of consuming; Use calculation factors that adjust annually in accordance with how much organics is actually being diverted during that year.	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p> <p>Regarding calculations for "what a jurisdiction is capable of consuming", it is important to note that the procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products to provide jurisdictions with even more flexibility to choose product that fit local needs. Moreover, the comment lacks specific language for quantifying such an approach for each jurisdiction. Even if the commenter recommended a quantifiable way to determine "what a jurisdiction is capable of consuming", California has over 400 diverse jurisdictions and it would be overly burdensome to account for each jurisdiction's custom needs and to develop a procurement target and enforcement policy for each one.</p> <p>Regarding the commenter's proposal for an alternative calculation factor based on organic waste diversion to determine the per capita procurement target, CalRecycle disagrees with this approach. Legislative language in SB 1383 does not allow CalRecycle to impose the statewide 50% and 75% organic waste reduction targets on individual jurisdictions. Therefore, the per capita procurement target also cannot be individually imposed on each jurisdiction, it must be on a statewide basis. The purpose is to create a transparent method to establish the requirement for jurisdictions to create markets for recovered organic waste products. The current approach already accounts for statewide organic waste diversion and for jurisdiction-specific need by providing flexibility to procure a variety of products that fit local needs.</p>
4120	Rich, D, Mtn View	Comment 4120 We propose the following revisions to Article 13 to specify reporting requirements for a jurisdiction choosing to implement an Alternative Collection and Compliance System, as would be allowed by the suggested change to Article 3 above: Amend Section 18994.2 Jurisdiction Annual Reporting for Jurisdictions Implementing Three-Container, Two-Container, or Unsegregated Collection Systems. (a) through (k) no changes.	A change to the regulatory text is not necessary. It is not necessary to change the title of Section 18994.2. Section 18994.2 outlines the reporting requirements for jurisdiction for Articles leading up to Article 17. Article 17 has specific reporting and recordkeeping requirements for a Performance – Based Source Separated Organic Waste Collection Service listed in Section 18998.2 and Section 18998.4. These reporting requirements include some aspects of Article 1-16 and new requirements specific to Article 17.

Comment Number	Received From	Question/Comment	Response(s)
4121	Rich, D, Mtn View	<p>Add new Section 18994.3. Annual Reporting for Jurisdictions Implementing an Alternative Collection and Compliance System. (a) On August 1, 2022 a jurisdiction choosing to implement an alternative collection system as provided by Section 18984.13 shall provide a written description of all the elements that are included in the system, including: (1) the type of organic waste collection service (s) provided by the jurisdiction to its generators; (2) The total number of generators that receive each type of organic waste collection service provided by the jurisdiction; (3) Any waste processing being conducted, including the facility being used, how such waste processing is used in conjunction with collection systems, and the number of generators that have waste processed at the facility; (4) A description of the outreach and education activities provided by the jurisdiction to organics generators; (5) Copies of any ordinances adopted by the jurisdiction related to the alternative system;(6) The type of inspection and enforcement system in use; (7) Any further system elements the jurisdiction plans to implement prior to January 1, 2025; (8) Which method of compliance allowed in Section 18984.3(a)(1)(iii) they anticipate using to demonstrate high diversion by January December 31, 2025. (b) Commencing on August 1, 2022 and annually thereafter, a jurisdiction shall report the information required by Section 18994.2(g) through (i). The report submitted in 2022 shall cover the period of January 1, 2022 - June 30, 2022. Each subsequent report shall cover the entire previous calendar year. The annual report for 2025 shall include all the information necessary to demonstrate compliance with the alternative method chosen under Section 18984.3 (a)(1)(iii).</p>	<p>Comment noted. CalRecycle developed new regulatory provisions for "Performance – Based Source Separated Organic Waste Collection Service" in response to stakeholder comments. Please see Article 17.</p>
6028	Roberts, S., Citizen of Oakland	<p>Support small scale community based composting</p>	<p>Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.</p>
6029	Roberts, S., Citizen of Oakland	<p>the city of oaklands waste contract is too restrictive and doesn't allow for the transportation of putrescibles or for community composting</p>	<p>Franchise agreements are beyond CalRecycle's authority to regulate.</p>
3030	Roberts, S., Concerned Citizen (from Oakland)	<p>I am writing to urge you to consider the potential of small scale composters. My understanding of the implementation of SB 1383 is that it discourages and not all for small scale community composting. This is extremely problematic and short sighted. Small scale composting combined with your large scale composting can be a winning formula. Small scale community composting has the ability to create a product that is higher quality compost -- something that will create less methane in the production. Small scale would allow for the education pieces to happen for urban dwellers and especially children. It makes no sense to not allow for small composters -- it isn't competition for you. We still need you and will continue to have plenty of material. Again, please reconsider your present policies -- support small scale community composters. We need to all be involved in saving the planet.</p>	<p>Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.</p>

6010	Rodriguez, K., Western Riverside Council of Governments	I assumed that once SB 1383 kicks in that AB 1826 rules abide to SB 1383? Does SB 1383 have requirements such as 1826 had such as four cubic yards of solid waste or more?	There is expected to be some overlap with 1826 such that compliance with SB 1383 will result in 1826 compliance as well. There are no thresholds in cubic yards generated reflected in SB 1383 regulations.
6011	Rodriguez, K., Western Riverside Council of Governments	Regarding AB 1826 and SB 1383: What if you already have a food donations program or food is returned to vendors and fall under the 1/2 yard per week do you still need a compost program?	<p>The regulations do not require “a compost program.” Existence of a food donation program does not exempt a jurisdiction from the regulatory requirements such as the requirement to provide organic waste collection services to generators subject to their authority.</p> <p>A change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in “substantial additional costs”.</p> <p>CalRecycle disagrees with the suggestion to phase-in procurement or to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p> <p>However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p> <p>Finally, the regulations provide delayed implementation for rural jurisdictions. Several commenters recommended that the regulations phase-in the procurement requirements from high population to low population areas. The delayed implementation for rural areas (low population areas) was added in response to this request.</p>
9190	Romanow, K., City of San Jose	Add an 'On-Street Yard Trimmings Collection Service' definition to Section 18982, modify the 'Source Separated Organic Waste' definition in Section 18982, and add references to on-street yard trimmings collection as a compliant method to collect source-separated organic waste in addition to a green container in Sections 18984, 18984.1, 18984.2, and all other sections CalRecycle deems necessary.	
9191	Romanow, K., City of San Jose	Add the following On-Street Yard Trimmings Collection Service definition (derived from our residential yard trimmings contractor agreement) to Section 18982: "On-Street Yard Trimmings Collection Service" means the collection of yard trimmings from an organic generator who does not utilize a yard trimmings cart for the set-out of yard trimmings. Yard trimmings are set out on a paved surface of the public roadway, closed accessible roadway or such other location for collection.	CalRecycle revised Sections 18984.1, 18984.2, 18984.3, and 18984.5(b)(1)(B) to clarify that loose-on street (i.e., un-containerized) green waste collection is allowed as long as it does not include food waste, which must be containerized, and the receiving facility will accept the green waste and still be in compliance with operational and product quality standards. This is necessary because some jurisdictions use this method year-round to collect green waste and others use it as a supplement in the fall due to spikes in green waste generation; it would be costly to provide

Comment Number	Received From	Question/Comment	Response(s)
			<p>extra containers for this material when it can be allowed to accumulate on streets where it can be efficiently collected.</p> <p>This revision necessitated another change to Section 18984.5 to modify the contamination monitoring education requirements, since there would not be a container available to place educational materials on for routes that are exceeding contamination levels. Recommend adding “or door” after the term “container” in section 18984.5(b)(1)(B) to allow for notification in areas where non-containerized loose in the street collection is utilized.</p> <p>Thank you for the comments in support of the language change that was made in response to concerns about green waste loose on the street.</p>
9192	Romanow, K., City of San Jose	Modify the "Source Separated Organic Waste" definition in Section 18982: "Source separated organic waste" means organic waste that is placed in a container <b>or for on-street yard trimmings collection</b> that is specifically intended for the separate collection of organic waste by the generator.	<p>CalRecycle revised Sections 18984.1, 18984.2, 18984.3, and 18984.5(b)(1)(B) to clarify that loose-on street (i.e., un-containerized) green waste collection is allowed as long as it does not include food waste, which must be containerized, and the receiving facility will accept the green waste and still be in compliance with operational and product quality standards. This is necessary because some jurisdictions use this method year-round to collect green waste and others use it as a supplement in the fall due to spikes in green waste generation; it would be costly to provide extra containers for this material when it can be allowed to accumulate on streets where it can be efficiently collected.</p> <p>This revision necessitated another change to Section 18984.5 to modify the contamination monitoring education requirements, since there would not be a container available to place educational materials on for routes that are exceeding contamination levels. Recommend adding “or door” after the term “container” in section 18984.5(b)(1)(B) to allow for notification in areas where non-containerized loose in the street collection is utilized.</p> <p>Thank you for the comments in support of the language change that was made in response to concerns about green waste loose on the street.</p>
9193	Romanow, K., City of San Jose	Change language in all applicable references especially the following for the three-stream and two-stream collection services (Sections 18984.1 and 18984.2):	<p>CalRecycle revised Sections 18984.1, 18984.2, 18984.3, and 18984.5(b)(1)(B) to clarify that loose-on street (i.e., un-containerized) green waste collection is allowed as long as it does not include food waste, which must be containerized, and the receiving facility will accept the green waste and still be in compliance with operational and product quality standards. This is necessary because some jurisdictions use this method year-round to collect green waste and others use it as a supplement in the fall due to spikes in green waste generation; it would be costly to provide extra containers for this material when it can be allowed to accumulate on streets where it can be efficiently collected.</p> <p>This revision necessitated another change to Section 18984.5 to modify the contamination monitoring education requirements, since there would not be a container available to place educational materials on for routes that are exceeding contamination levels. Recommend adding “or door” after the term “container” in section 18984.5(b)(1)(B) to allow for notification in areas where non-containerized loose in the street collection is utilized.</p> <p>Thank you for the comments in support of the language change that was made in response to concerns about green waste loose on the street.</p>
9194	Romanow, K., City of San Jose	Section 18984.1. Three-container organic waste collection services. (a) a jurisdiction may comply with the requirements of this article by implementing a three container organic waste collection service and providing a green container <b>or on-street yard</b>	<p>CalRecycle revised Sections 18984.1, 18984.2, 18984.3, and 18984.5(b)(1)(B) to clarify that loose-on street (i.e., un-containerized) green waste collection is allowed as long as it does not include food waste, which must be containerized, and the receiving facility will accept the green waste</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p><b>trimmings collection</b>, a blue container, and a gray container to each generator in the following manner: (1) The green container <b>or on street yard trimmings collection</b> shall be provided for the collection of organic waste. The green container or on street yard trimmings collection shall be intended for the collection of organic waste only and not non-organic waste. The contents of the green container shall be transported to a facility that recovers source separated organic waste. (2) The blue container shall be provided for the collection of non-organic recyclables only but may include the following types of organic wastes: paper products, printing and writing paper, wood and dry lumber and textiles. The contents of the blue container shall be transported to a facility that recovers the materials for designated for collection in the blue container. (3) The gray container shall be for the collection of non-organic waste only. (4) A jurisdiction may comply with this section by providing a container or containers that are split or divided into segregated sections, instead of an entire container as long as the lids of the separate sections of a split container comply with the container color requirements and material limitations specified in this section. <b>(5) A jurisdiction may comply with this section by providing on-street yard trimmings collection service where material is transported to a facility that recovers source separated organic waste.</b> (6) The following shall not be collected in the green container or on street yarm trimmings collectio service: (A) Carpets, non-compostable paper, and hazardous wood waste.</p>	<p>and still be in compliance with operational and product quality standards. This is necessary because some jurisdictions use this method year-round to collect green waste and others use it as a supplement in the fall due to spikes in green waste generation; it would be costly to provide extra containers for this material when it can be allowed to accumulate on streets where it can be efficiently collected.</p> <p>This revision necessitated another change to Section 18984.5 to modify the contamination monitoring education requirements, since there would not be a container available to place educational materials on for routes that are exceeding contamination levels. Recommend adding “or door” after the term “container” in section 18984.5(b)(1)(B) to allow for notification in areas where non-containerized loose in the street collection is utilized.</p> <p>Thank you for the comments in support of the language change that was made in response to concerns about green waste loose on the street.</p>
9195	Romanow, K., City of San Jose	<p>Section 18984.2. Two-container Organic Waste Collection Services</p> <p>(a) A jurisdiction may comply with the requirements of this article by implementing a two-container organic waste collection service providing a green container <b>or on-street yard trimmings collection</b>, and a blue container to each generator in the following manner:</p> <p>(1) The green container <b>or on-street yard trimmings collection</b> shall be for the collection of organic waste only. The contents of the green container <b>or on-street yard trimmings collection</b> shall be transported to a facility that specifically recovers source separated organic waste.</p> <p>(2) The blue container shall be for the collection of all non-organic waste. However, the blue container may be used for the collection of the following types of organic wastes: paper products, printing and writing paper, wood and dry lumber, and textiles.</p> <p>(3) If either container is intended for the collection of both organic waste and non-organic waste, the contents of that container shall be transported to a high diversion organic waste processing as specified in Section 18984.3 of this article.</p> <p>(4) A jurisdiction shall, consistent with Section 18984.8 of this article, clearly identify the types of wastes accepted in each container and which container shall be used for the collection of any unidentified materials.</p> <p>(5) The following shall not be collected in the green container:</p> <p>(A), Carpets, non-compostable paper, and hazardous wood waste</p>	<p>CalRecycle revised Sections 18984.1, 18984.2, 18984.3, and 18984.5(b)(1)(B) to clarify that loose-on street (i.e., un-containerized) green waste collection is allowed as long as it does not include food waste, which must be containerized, and the receiving facility will accept the green waste and still be in compliance with operational and product quality standards. This is necessary because some jurisdictions use this method year-round to collect green waste and others use it as a supplement in the fall due to spikes in green waste generation; it would be costly to provide extra containers for this material when it can be allowed to accumulate on streets where it can be efficiently collected.</p> <p>This revision necessitated another change to Section 18984.5 to modify the contamination monitoring education requirements, since there would not be a container available to place educational materials on for routes that are exceeding contamination levels. Comment Number	Received From	Question/Comment	Response(s)
		(b) Notwithstanding (a) the contents of containers may be initially transported to a consolidation site as defined in Section 17402 that complies with the requirements of Section 17409.5.10.	
9196	Romanow, K., City of San Jose	It is unclear whether a jurisdiction can comply with a collection system that is any combination of those prescribed under Section 18984.1, 18984.2, and 18984.3. If a jurisdiction can comply through a flexible collection system, then we have no further comments.	CalRecycle revised Section 18984 in response to this comment to further clarify that a jurisdiction can employ any combination of acceptable collection services, even though the regulations already allow a jurisdiction to comply with a flexible collection system.
9197	Romanow, K., City of San Jose	However, if compliance is strictly through one of the systems prescribed in Sections 18984.1, 18984.2, and 18984.3, we request that CalRecycle include in the regulation a collection system option that provides flexibility for jurisdictions like the City of San Jose that have existing residential and commercial organics diversion programs and have demonstrated a commitment to achieving high diversion. We propose to add a new section to Article 3 allowing a jurisdiction to choose an "Alternative Collection System" provided the jurisdiction meets all of the following requirements: (1) Has adopted a Zero Waste Plan or Zero Waste Policy by December 31st, 2019; (2) Has implemented an organics diversion program for residents and business by December 31, 2019; and (3) Can demonstrate a minimum of 90% participation of organics waste generators in the organics diversion program.	Thank you for the comment. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some of the prescriptive requirements that apply to collection systems established under Article 3.
9198	Romanow, K., City of San Jose	We also propose to add the following definition for "participation" in Section 18982. Participation is calculated as the number of generators that have organic waste service less back-haulers or self-haulers.	CalRecycle is not using the term participation in the regulations and thus this definition is not necessary.
9199	Romanow, K., City of San Jose	And we propose to modify Section 18995.1 (a) (B) to read: (B) If a jurisdiction is using the compliance method described in Section 18984.3 <b>or the Alternative Collection System in Section X</b> the jurisdiction shall conduct a compliance review of all garbage accounts for commercial business that are subject to its authority, and generate two cubic yards or more per week of solid waste and produce organic waste; and, also determine their compliance with: 1. Organic waste generator requirements set forth in Section 18984.9 and document if the business is transporting the contents to a high diversion organic waste processing facility, or 2. Self hauling pursuant to Section 18988.3, including whether a business is complying through back-hauling organic waste.	CalRecycle has revised section 18995.1 in response to this comment.
9200	Romanow, K., City of San Jose	The methodology for calculating procurement targets in Section 18993.1 (b) is fundamentally flawed because it does not take into account a jurisdiction's actual need for the recovered organic waste product. (...) We ask CalRecycle to consider a methodology or approach that produces more realistic procurement targets.	The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products to provide jurisdictions with even more flexibility to choose product that fit local needs. Regarding the proposal to base the procurement target methodology on "actual need" CalRecycle disagrees. The comments submitted on this lack specific language for quantifying such an

Comment Number	Received From	Question/Comment	Response(s)
			<p>approach. Even if the commenter recommended a quantifiable way to determine “actual need”, California has over 400 diverse jurisdictions and it would be overly burdensome to account for each jurisdiction’s “actual need” and to develop a procurement target and enforcement policy for each one.</p> <p>However, CalRecycle also recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction’s need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. It can do this by showing that the amount of fuel, electricity, and gas for heating applications procured in the previous year is lower than the procurement target.</p>
9201	Romanow, K., City of San Jose	<p>Composting is a popular method for treating biosolids. Therefore, the City assumes biosolids compost is an eligible product under Section 18993.1(f) but requests explicit confirmation from CalRecycle. Jurisdictions with large populations, such as the City of San Jose, will have difficulty meeting the procurement target if only the purchase of compost and renewable transportation fuel satisfy the procurement target established in Section 18993.1 (b). Basing compliance on the procurement of compost and renewable transportation fuel only, unfairly penalizes jurisdictions in Santa Clara County that have been early adopters of organic waste diversion programs and currently process their organics into renewable electricity at the Zero Waste Energy Development Company , AD Facility. Furthermore, there is no renewable transportation fueling infrastructure in or around Santa Clara County, which make procurement impossible. Therefore, we propose CalRecycle add other beneficial, non-transportation uses for methane resulting from the process of organic waste- such as pipeline injection, on site power generation, and exportation of electricity-to the list of recovered organic waste products. Mulch is another product that should be added as it is a beneficial product resulting from the processing of organic waste.</p>	<p>Regarding biosolids compost, the current draft regulatory text considers compost an eligible recovered organic waste product as long as the final product meets the definition of compost, per Section 17896.2(a)(4), and is produced either at a compost operation or facility or large volume in-vessel digestion facility that composts on-site (refer to Section 18993.1(f)(1)(A) and (B). Biosolids and/or digestate that do not meet the compost definition will not count towards the procurement target.</p> <p>Regarding expanding renewable gas end uses, please see the Final Statement of Reasons regarding the eligible end-uses identified in the regulations and how they should be interpreted. The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction’s procurement target.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
9202	Romanow, K., City of San Jose	<p>Per comments 3 and 4, the City is concerned that the procurement targets are not be achievable. While Section 18993.1 (h) attempts to limit unnecessary increases in the amounts of recovered organic waste products a jurisdiction is required to purchase, it is not clear how a jurisdiction shall substantiate that the amount of recovered organic waste products it purchased in 2022 is the same as the amount of</p>	<p>The referenced section has been revised to Section 18993.1(j). The intent of section 18993.1(j) is to provide jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. Given the potential difficulty of determining conversion factors for comparable products to compost (e.g. liquid chemical fertilizers compared to solid compost), jurisdictions have the option to use their</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>recovered organic waste products it purchased in 2021. Jurisdictions that do not meet or exceed their procurement target for 2022 based on the calculation described Section 18993.1(b) will likely claim that they have purchased an "amount equal to its total purchase of transportation fuel and renewable transportation fuel from the previous year." Furthermore, it is unreasonable to expect that jurisdictions will gather all invoices and records required by Section 18993.2 for any year prior to these regulations taking effect.</p>	<p>previous year's procurement of gas, which have readily available organic waste conversion factors, to lower their procurement target. The focus on energy products is intended to simplify the process by which a jurisdiction can lower its procurement target. Although this mechanism relies only on fuel, electricity, and gas procurement, a jurisdiction can still choose to meet its lowered procurement target with any recovered organic waste products, including compost.</p> <p>CalRecycle disagrees with the comment that records for years prior to the regulation taking effect is "unreasonable". The rulemaking process has been ongoing since 2017, and although the regulations will not take effect until 2022, adopting them in 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022. Enforcement for procurement will also begin on January 1, 2022 and jurisdictions should be prepared to maintain records and report the required information showing they are in compliance at that time.</p>
9203	Romanow, K., City of San Jose	<p>ESD expects both residential and commercial solid waste programs to meet the 50% organics diversion by January 1, 2022. However, in the absence of any significant new innovations in Material Recovery Facility (MRF) sorting, it is unlikely that any mixed waste processing program will meet the 75% diversion requirement by January 1, 2025. An alternate diversion requirement for mixed organics processing could be 70% or more, which is aligned with San Jose's anticipated performance and hauler contracts.</p>	<p>Comment noted. The commenter argues that the regulations must be structured in a way that protects the existing investments of their members. Specifically, the commenter is referring to collection services and material recovery facilities that were established to process mixed waste. CalRecycle has sought to address this concern in a manner that is also in compliance with the statutory targets and requirements. As noted in the Initial Statement of Reasons, which was released for public review in January of 2019:</p> <p>"The draft regulations originally prohibited jurisdictions from implementing new mixed waste processing systems after 2022, and required all new services to implement source-separated curbside collection as a means of ensuring that collected organic waste would be clean and recoverable. In response to stakeholder feedback, CalRecycle eliminated the prohibition on new mixed waste processing systems provided that the receiving facilities demonstrate they are capable of recovering 75 percent of the organic content received from the mixed waste stream on an annual basis. The performance standard addresses stakeholder concerns about limiting flexibility, without compromising the goal for the regulations to achieve the statutory requirements."</p> <p>The ISOR goes on to note that CalRecycle crafted regulations to allow for mixed waste collection provided that these collection services transport collected material to a facility that recovers 50 percent of the organic content it received by 2022 and 75 percent by 2025:</p> <p>"With very few exceptions, unique materials can only be processed and recovered when they are kept separate from other materials. This is primarily due to the fact that distinct materials are recovered through separate processes that are specifically designed to handle only that type of material. For example, metals, paper, and plastics are remanufactured through distinct processes (e.g. metal is smelted, paper is pulped and washed). Largely because of this, while material may be valuable as a homogenous commodity, it can become difficult or impossible to recycle when it is contaminated with other materials (e.g. many materials lose their value when they are commingled with other materials.) This principle holds true, and is perhaps more of a factor in the</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>recovery of organic waste. Required source-separation of organic waste helps ensure that organics are kept clean, separate and recoverable.</p> <p>However; throughout the informal regulatory engagement process stakeholders raised concerns about potential costs associated with providing commercial and residential generators with a third container to source separate organic waste. Stakeholders also noted that several cities and counties implement single container collection services and process all the collected material for recovery. Stakeholders argued that allowing the use of a single-container collection system is a viable and cost-effective alternative that can help the state meet that statutory organic waste recovery targets.</p> <p>To respond to stakeholder requests for additional flexibility CalRecycle crafted this section and Section 18984.2. These sections allow alternatives to providing a three-container source-separated organic waste collection service. Under these section jurisdictions are allowed to require their generators to use a service that does not provide the generators the opportunity to separate their organic waste for recovery at the curb. In order to ensure that the state can achieve the statutory organic waste reduction targets, these collections services are required to transport the containers that include organic waste to high diversion organic waste processing facilities that meet minimum organic content recovery rates (content recovery rates are specified in Subdivision (b) of this section)..."</p> <p>The commenter has stated in each comment period, that they believe the requirement to recover 75 percent of the organic content collected in these mixed waste collection services is unrealistic and infeasible. In turn CalRecycle staff repeatedly communicated to the commenter that the recovery targets cannot be lowered without compromising the integrity of the regulations. This was further documented for this commenter and the public in the ISOR:</p> <p>"These minimum recovery rates are necessary because when the opportunity to recover material through source separation is lost, the state must ensure that minimum recovery levels are met at processing facilities. While this section provides additional flexibility to jurisdictions, CalRecycle must consider its obligation to ensure that the regulations are designed to achieve the statutory targets. If 100 percent of jurisdictions employed this collection option in 2022 the state could not meet the mandatory recovery target of 50 percent unless at least 50 percent of the organic waste collected from these services is recovered. Similarly, if 100 percent of jurisdictions employed this collection option in 2025 the state could not meet the mandatory recovery target of 75 percent unless 75 percent of the organic waste collected from these services is recovered. Therefore, in order to meet the recovery targets specified in statute and the state's ultimate climate goals the recovery standards included in this section are the minimum standards necessary.</p> <p>As generation of organic waste increases with population growth, these minimum recovery rates may need to be revisited. As stated previously the organic waste reduction targets are linked to a 2014 baseline of 23 million tons. This requires the state to dispose of no more than 5.7 million tons by 2025. If, as CalRecycle projects, generation increases to 26 million tons of organic waste by 2025, recovering 75 percent of 25 million tons will only reduce disposal to slightly more than 6 million tons, resulting in the state missing its organic waste recovery targets. The need for this rate increase could be mitigated if higher recovery rates are achieved through source separation, or if efforts to increase source reduction through food recovery and other methods are successful.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>However, the recovery rates established in this regulation should be considered an absolute minimum.”</p> <p>CalRecycle has, prior to and during this rulemaking, communicated that the recovery efficiency requirements established in the regulation is the minimum level that the statute can tolerate. The commenter suggests existing infrastructure that cannot meet this standard should be “protected” or provided a “safe-harbor.” The commenter requests changes in the proposed regulations that cannot be reconciled with the statutory targets because CalRecycle finds that it cannot propose a regulation consistent with a statutory 2025 target that permits an unknown portion of the state from implementing the requirements necessary to achieve that target.</p> <p>CalRecycle acknowledges the role of existing infrastructure and acknowledges that previous investments in infrastructure were consciously made to achieve targets that were established prior to the adoption of SB 1383. However, the legislative direction in SB 1383 is unmistakably clear. The Legislature required CalRecycle to adopt regulations to achieve mandatory organic waste reduction levels. Nothing in the regulations prevents facility operators or jurisdictions from investing in facility upgrades or adapting existing facilities to process waste in a manner that meets the minimum regulatory requirements.</p> <p>Comment noted. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p> <p>The provisions of Section 40004 are general legislative findings and declarations applying to the AB 341 (2011) mandatory commercial recycling program and not specific, affirmative legal requirements CalRecycle is required to adhere to in the proposed regulations. SB 1383 contains specific mandates on organic waste diversion that CalRecycle is required to observe in this rulemaking. The findings and declarations in Section 40004 recognize that adequate processing and composting capacity are essential for diversion and disposal reduction.</p> <p>CalRecycle does not dispute this necessity. But CalRecycle is also more specifically subject to the findings and declarations in SB 1383 (2016, PRC Section 42652) that state that the disposal reduction targets in SB 1383 are essential to achieving the statewide recycling goal of 75% in PRC Section 41780.01 and that significant investment is required to meet these goals and that state and local funding mechanisms are needed to support this expansion. The Legislature acknowledges in this section that infrastructure investment and capacity is a central issue to the success of SB 1383. Since the specific controls the general and the more recent statute controls under common rules of statutory construction, CalRecycle does not find a conflict with Section 40004.</p>
9204	Romanow, K., City of San Jose	We understand the goals of gaining a better understanding of how much organic waste is in various process and residual streams. Section 17409.5 contains several	CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the

Comment Number	Received From	Question/Comment	Response(s)
		<p>requirements intended to quantify, on at least a daily basis, the amounts of organic waste contained in various process and residual streams. The quantification relies on detailed characterization sorts of one-cubic yard samples. Section 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.7, 17409.5.9, and 17409.5.11 require characterization daily (or more often) of samples one-cubic yard in size. Both the frequency and the sample size are impractical. Logistically, a typical hand sort of one 50-pound sample of recovered organic material or post-processing residuals from mixed waste processing of San Jose commercial solid waste, takes 30-45 minutes with three or four sorting staff. It stands to reason that a cubic yard sample would either require more sorters or more time to complete. The requirement to conduct these audits daily on different material streams (organic material and residue streams) would add significantly to facility operating costs, which is then passed on to taxpayers in form of rate increases. We believe that the intent of the section can be met without the very prescriptive and onerous measurement protocols, and we ask that CalRecycle revise this section with guidance from an expert who specializes in statistical science as it relates to learning useful information from sampling and analysis. We would expect this would lead to much smaller sample sizes and less frequent sampling (e.g., only when needed to adjust for seasonality and trends) not the current, arbitrary, daily sampling requirement.</p>	<p>measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. This is needed to determine the efficiency of the facility in order to make required determinations in Article 3.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite sample be a random and representative of a typical operating day for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard.</p> <p>The sampling frequency 10 consecutive days was based on that 2 consecutive weeks per quarter, yielding 10 samples per quarter and 40 samples per year. This is consistent with ASTM calculation method (Standard Test Method for Determination of the Composition of Unprocessed Municipal Solid Waste; ASTM International; Designation: D-5231-92 (Reapproved 2003)) for estimating the number of samples required to achieve a pre-determined precision of specific material type. Using data from the "2014 Disposal-Facility- Based Characterization of Solid Waste in California", the two most abundant "organics" material types found at landfills and/or curbside pick-up collection systems were "Uncoated Corrugated Cardboard" and "Food". Furthermore, the 2014 study used a confidence interval of 90% for all data calculations (2014 Disposal Facility- Based Characterization of Solid Waste in California, Page 22). Applying this information to the equation outlined in the ASTM publication, of a 200-pound sample and a precision of 10%, yields a required sample number of 49 for "Uncoated Corrugated Cardboard" and 24 for "food". Since "Organic Waste Recovery Efficiency" is not specific to a material type such as "Uncoated Corrugated Cardboard" or "Food", rather just "Organic" or "Not Organic", it is rational to average the 2 numbers (a sample number of 49 for "Uncoated Corrugated Cardboard" and 24 for "food") and present a more inclusive required sample number. The average of those two numbers is 37 samples.</p> <p>Additionally, after consulting with divisions within CalRecycle, a significant number of jurisdictions use "Every other week" collection for a portion of their waste stream. Many of these jurisdictions use the same facility or facilities for waste processing. A consecutive two-week sampling standard would ensure that jurisdictions with "Every other week" collections streams are reflected in the sampling. Based on the expert data 10 consecutive days was used instead of 14 to help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>The 200 pounds is what was used for the Statewide waste characterization studies performed during the past 5 years by California (CalRecycle), Washington, New York, Georgia and Connecticut have used a sample weight between 200 to 300 pounds. Furthermore, ASTM international (American Society for Testing and Material) also suggests a minimum sample weight of 200 pounds be used in waste characterization related studies.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>

9205	Romanow, K., City of San Jose	For articles 14 and 15, require a summary report of records (e.g. stats) to be provided upon request by CalRecycle rather than all records. There may be privacy concerns with providing detailed records. Jurisdictions may need to seek legal protections if required to provide detailed information regarding haulers or generators.	The comment refers to recordkeeping requirements for jurisdictions to retain. This information is not required to be reported publicly. To the extent that documents required to be retained in a jurisdiction's Implementation Record contains truly proprietary or trade secret information, there are existing protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow public agencies to withhold such information from public disclosure.
9206	Romanow, K., City of San Jose	The RWF is in the process of transitioning from a four-year-long lagoons and drying beds biosolids cycle to a daily mechanical dewatering facility and off-site transport biosolids handling process. This transition is "a long term infrastructure (...) change which requires a corresponding longer length of time to achieve compliance." The City is currently preparing to award a contract to the highest ranked design-build team who will complete the design and construct the new dewatering facility; however, the new facility is not expected to be substantially complete until late 2022, which is past the effective date of the SB 1383 regulations. Furthermore, after the new facility is in operation, the RWF will not be able to full empty and haul the biosolids from all the lagoons and drying beds until 2027. The City does not currently have a more environmentally-friendly and cost-efficient option than to haul the biosolids from the lagoons and drying beds to Newby Island Sanitary Landfill until a market assessment is completed and can confirm otherwise. The City intends to transport the biosolids from the mechanical dewatering facility to a facility that complies with Section 18987.2.	A change in the regulatory text is not necessary. The regulations are effective in 2022, allowing for ample time for planning for lack of capacity or infrastructure deficiencies. Currently, it is 2020 and jurisdictions have until 2022 to address any capacity deficiencies and if necessary, they can be placed on a Correction Action Plan that allows for an extended timeframe to come into compliance. The regulations allow up to three years to come in to compliance on a CAP (in total this is effectively equivalent to the request five years).
9207	Romanow, K., City of San Jose	Unlike the other materials included in the definition of paper products, building insulation and panels are most frequently not made of paper. In addition, some insulation has a single paper backing on fiberglass layers which is not practically seperable from the fiberglass. Since the regulations of "organic waste" includes paper products, the inclusion of building insulation will lead to confusion and possibly contamination. This problem is magnified when procurement is considered. The regulations require jurisdictions to procure and trach recycled content paper products and meet minimum purchasing percentages. Factors influencing the selection of insulation type and performance are highly technical and subjective. There are several high performing insulations which are not composed of recycled content and building designers should not need to balance a building's energy performance with the recycled content of the building insulation and panels.	CalRecycle has revised Section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in Section 18993.3(c)(2) and therefore agrees with the proposed revision.
9208	Romanow, K., City of San Jose	Per comment #1 above, add an "On-street yard trimmings collection service" definition to section 18982, modify the "source separated waste" definition in Section 18982.	CalRecycle revised Sections 18984.1, 18984.2, 18984.3, and 18984.5(b)(1)(B) to clarify that loose-on street (i.e., un-containerized) green waste collection is allowed as long as it does not include food waste, which must be containerized, and the receiving facility will accept the green waste and still be in compliance with operational and product quality standards. This is necessary because some jurisdictions use this method year-round to collect green waste and others use it as a supplement in the fall due to spikes in green waste generation; it would be costly to provide extra containers for this material when it can be allowed to accumulate on streets where it can be efficiently collected.

Comment Number	Received From	Question/Comment	Response(s)
			<p>This revision necessitated another change to Section 18984.5 to modify the contamination monitoring education requirements, since there would not be a container available to place educational materials on for routes that are exceeding contamination levels. Recommend adding “or door” after the term “container” in section 18984.5(b)(1)(B) to allow for notification in areas where non-containerized loose in the street collection is utilized.</p> <p>Thank you for the comments in support of the language change that was made in response to concerns about green waste loose on the street.</p>
9209	Romanow, K., City of San Jose	Per comment #2 above, add definition for "participation" to section 18982.	CalRecycle is not using the term participation in the regulations and thus this definition is not necessary.
3321	Runsten, D., Community Alliance with Family Farmers	<p>Amend the excluded activity in §17855(a)(1) to say:</p> <p>(1) An activity is excluded if it takes place on an agricultural site and produces compost for use on that same agricultural site, or an agricultural site owned or leased by the owner, parent, or subsidiary of the composting activity. Feedstocks may include green material, agricultural material, agricultural by-product material, herbivore manure, food material, and vegetative food material sourced from off-site in order to supplement and enrich the compost. No more than an incidental amount of up to 1,000 cubic yards of compost product may be given away or sold annually. The 1,000 cubic yards, which was put in place by the commercial waste haulers and commercial composting industry, is not a problem for crop farms. We have found no crop farms in California that want to make compost in order to sell it. They want to make it for their own use and it is the restrictions on bringing materials onto their farms and the limits on the size of the composting operation on their farms that is hindering this activity.</p> <p>However, the dairy industry may want to make and sell compost, and so we ask that CalRecycle consult with CDFA and the Central Valley Water Board on proposals to allow this in greater quantities than 1,000 cubic yards. We believe that the State Water Board is proposing to allow greater quantities to be sold. We object to efforts by the commercial composting industry to monopolize the sale of compost.</p>	Comment noted. Section 17855(a)(1)) is an existing regulation and describes an excluded activity. CalRecycle is not proposing to revise the regulatory permitting tier structure. This is not within the scope of this rulemaking.

1197	Ryan, Paul, PF Ryan and Associates	<p>Section 18984.12 Waivers and Exemptions Granted by the Department</p> <p>( c ) ( c ) Rural Exemptions:</p> <p>{l} The Department shall grant an exemption from complying with the organic waste collection requirements specified in this article for Rural Jurisdictions that meet the definition of a "Rural Jurisdiction" in Section 42649.8 of the Public Resources Code, if the governing body of the jurisdiction adopts a resolution that includes a finding as to the purpose of and need for the exemption.</p> <p>(2) An exemption implemented pursuant to this subdivision shall be valid until January 1, 2025, or until five years after the Department makes a determination pursuant to Section 42649.82 (a){2}(D) that the statewide disposal of organic waste has not been reduced to 50 percent of the level of disposal during the 2014 calendar year, whichever is later.</p> <p>New (d) proposed language</p> <p><b>(d) Extraordinary or extenuating circumstances Exemptions:</b></p> <p><b>(1) The Department shall grant an exemption from complying with the organic waste collection requirements for jurisdictions with populations greater than 5,000 people and are low-income disadvantaged communities that have no organic processing facilities within 100 miles, low volumes of collected organic waste, not in areas of the state that are not unnecessarily affected by poor air quality and with de minimis organic end-product procurement.</b></p> <p><b>(2) An exemption implemented pursuant to this subdivision shall be valid until January 1, 2025, or until five years after the Department makes a determination that the statewide disposal of organic waste has not been reduced to 50 percent of the level of disposal during the 2014 calendar year, whichever is later.</b></p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
1198	Ryan, Paul, PF Ryan and Associates	An exemption is needed for jurisdictions in remote locations in the southern portion of the state's desert areas that have minimal contributions to make in reducing methane and other GHG emissions.	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. 			Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.
1199	Ryan, Paul, PF Ryan and Associates	In keeping with the language of SB 1383 (Lara 2016), efforts to reduce emissions of short-lived climate pollutants should focus on areas of the state that are significantly affected by poor air quality.	The portions of SB 1383 in Public Resources Code Section 42652 et seq. that provide the basis of this rulemaking evince no such requirement. With regard to the intent language of SB 1383 relative to air quality. The cost update included in the Appendix to the ISOR quantifies the economic value of health benefits from reductions in landfill pollutants. These benefits were calculated in consultation with the California Air Resources Board. Emissions generated by organic waste disposal trigger the most acute impacts on communities that live within the footprint of landfills. Currently one-third of landfill disposal occurs within a kilometer of some of our state's most disadvantaged communities. Additionally the regulations include required for applicants seeking to construct new or expanded solid waste facilities to consult with disadvantaged communities.
3066	Sahota, J., Solano County	EDH believes that the proposed regulatory language in Article i., Section 18990.1(a) and (b) appear to be internally contradictory, conflicts with existing state and federal requirements, and may be interpreted to eliminate the human and health and environmental protections currently provided by Chapter 25 of the Solano County Code. An interpretation that would tend to conflict with Solano County Code would inappropriately impinge on the County's police power to ensure activities do not cause or promote public nuisances or human health risks....Chapter 25 of the Solano County Code does not prohibit biosolids land application, but includes certain seasonal and operational requirements to prevent nuisances caused by odor, vector, and runoff contamination, as well as ensuring applications are performed at proper agronomic rates. These local requirements are necessary to ensure minimization of human health and environmental risks. Background on Solano County's Biosolids Land Application regulations....Contradictions and Conflicts with Federal and State Law: Both 40 CFR Part 503 and SWRCB General Order No. 2004-0012-DWQ contain language which specifically allows the enactment of local requirements for land-applied biosolids for beneficial use, as cited below: SWRCB General Order No. 2004-0012-DWQ...40 CFR Part 503:.... It is not clear how the proposed SB 1383 regulations can be compatible with the existing federal and state requirements by unduly constricting the exercise of policy power by local jurisdictions. This contradiction and conflict appear to stem in part from the proposed inclusion of the biosolids in the definition of "organic waste" in section 18982 (a) (46). This is a departure from previous CalRecycle regulations which have not included biosolids in the definition of organic waste. Biosolids are dissimilar to green material, food waste, paper products, and all other organic wastes described in section 18982 as biosolids have known bacteriological and chemical characteristics that require enhanced oversight compared to the other items included in this organic wastes definition. Recommendations: To address contradictions and conflict, Solano County recommends one of more of the following changes to the proposed regulation: 1) In Section 18982 (a)(46), remove "biosolids digestate and sludge: from the definition of organic waste. 2) Amend proposed section 18990.1	<p>A. The requested changes to the regulatory text are not necessary. However, CalRecycle is adding additional language to Section 18990.1(b)(1) to further clarify its meaning in light of comments received regarding it. Article 9, Sections 18990.1 (a) and (b) are not contradictory. 18990.1 (a) clarifies that it does not limit a jurisdiction in adopting more stringent standards than the ones outlined in this chapter. The purpose of the specific limitations set forth in paragraphs 1-5 of 18990.1 (b) are to ensure that jurisdictions do not impose restrictions on the movement and handling of waste and waste-derived recyclables that would interfere with or prevent meeting the organic waste recovery targets established in SB 1383.</p> <p>B. Article 2, Section 18983.1 (b)(6)(b) clarifies that land application of biosolids constitutes a reduction in landfill disposal provided that the application complies with minimum standards. This section specifies that to be considered a reduction in landfill disposal for the purposes of this regulation, land application of biosolids must comply with existing regulatory requirements and have undergone composting or anaerobic digestion. While this regulation defines land application as recovery, this regulation does not allow land application of biosolids be done in a manner that conflicts with existing public health and safety regulations and requirements. Land application of composted or digested biosolids prevents the landfill disposal of this material and reduces greenhouse gas emissions. This supports the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions and is therefore considered a recovery activity for the purposes of this regulation. The additional language will ensure that such restrictions can be reviewed on a case-by-case basis to determine if they are actually necessary and tailored to protect the public health and safety, or if they are actually unnecessary and overbroad restrictions.</p>

Comment Number	Received From	Question/Comment	Response(s)
		by adding the italicized below: (b)(1) Ban or completely prohibit the lawful processing and recovery...(c)(6) Prohibit a jurisdiction from enacting regulations including operational controls and restrictinos to prevent public nuisance conditions. 3) Add the following text to Section 18983.1(b)(6)(B): Section 18983.1(b)(6)(B): Meet the requirements of any locally enacted ordinance or permit requirements.	
1016	Sanford, Karen, Kern Public Health Services Department	18083(c) By placing this in regulations, the public could also go after an LEA under Public Resource Code. They could make the statement the LEA is not meeting its responsibilities under the Public Resource Code.	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
1017	Sanford, Karen, Kern Public Health Services Department	18083(c) -This also creates a state minimum standard of once a quarter. For those facilities which are already inspected monthly, operators could accuse the LEA of administering this standard more than once a quarter.	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
1018	Sanford, Karen, Kern Public Health Services Department	Remove the updated language to Section 21660.2 (c) "The information meeting shall meet the following criteria: (1) The meeting shall be held in a suitable location not more than one (1) mile from the facility that is the subject of the meeting and from any disadvantaged communities affected; ..... (A) The EA shall identify disadvantaged communities in a manner that meets or exceeds the methods of the identification tools developed by ..... (2) The meeting shall be held on a day the (3) EAs shall undertake additional measures to increase public notice and to encourage attendance by any persons interested in the facility Which may include, but not be imited to .... noticing beyond one (1) mile if the nearest residence or business .... " - a. For what purpose would there be by increasing the current mandated noticing of 300-feet to one-mile? The LEA often exceeds the 300-feet and goes up to 1,000-feet, but increasing noticing for up to one-mile from the facility would be overly burdensome for the LEA.	CalRecycle has revised Section 21600.2 (c) in response to comments. The "one (1) mile" requirement in Subsection (c)(3) has been deleted and "shall" has been changed to "may," reverting back to the existing regulatory language.
1019	Sanford, Karen, Kern Public Health Services Department	Section 21660.2 According to the EPA Environmental Justice Screen, the LEA would have to notice virtually every residence within Kern County, with exception to the most affluent sections of Bakersfield.	<p>Comment noted. The commenter is confusing noticing 21660.2 (c)(3) with meeting location 21660.2(c)(1) requirements. To clarify, the public meeting noticing requirements in 27 CCR 21660.2(c)(3) is determining the noticing distance from the facility not the affected disadvantaged communities or EPA Environmental Justice. Whereas, the location of the public meeting takes into consideration the affected disadvantaged communities.</p> <p>CalRecycle has revised this section in response to comments. This section was revised to define the term "affected disadvantaged communities." This is necessary to clarify and assist the LEAs</p>

Comment Number	Received From	Question/Comment	Response(s)
			better identify who would be covered under this term so that they are notified and are provided an adequate opportunity to attend and provide comments on the project.
9037	Scheibly, K., Marin Sanitary Service	We feel in general that the reporting and monitoring requirements are overly burdensome and will result in large increases in costs that may not necessarily result in more diversion of organics from landfills or lower greenhouse gas emissions and may actually hinder the progress of successful programs such as those offered by Marin Sanitary Service to the following jurisdictions: San Rafael, Larkspur, Ross, Fairfax, and the unincorporated areas of the County of Marin.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
9038	Scheibly, K., Marin Sanitary Service	(b) A jurisdiction may designate a public or private entity to fulfill its responsibilities under this chapter. This seems very vague. We ask for some clarity on what this means in more detail. 1. Does this mean that a city can designate all responsibilities to the hauler for program implementation, outreach & education, contamination audits, enforcement and penalties?	CalRecycle revised Section 18981.2 to clarify activities that may be delegated and to clarify that levying of penalties cannot be delegated to a private entity. CalRecycle finds that the imposition of administrative civil penalties involves a level of decision-making of substantial enough import regarding the success of this program that it should be made by jurisdictions as public agencies rather than being delegated to a private entity.
9039	Scheibly, K., Marin Sanitary Service	(b) A jurisdiction may designate a public or private entity to fulfill its responsibilities under this chapter. We have concerns as a hauler regarding enforcement, especially for edible food waste recovery programs.	Comment noted, CalRecycle revised Section 18981.2 to clarify activities that may be delegated and to clarify that levying of penalties cannot be delegated to a private entity. CalRecycle finds that the imposition of administrative civil penalties involves a level of decision-making of substantial enough import regarding the success of this program that it should be made by jurisdictions as public agencies rather than being delegated to a private entity.
9040	Scheibly, K., Marin Sanitary Service	(b) A jurisdiction may designate a public or private entity to fulfill its responsibilities under this chapter. Will our contracts need to be rewritten to include this language or would an MOU be sufficient between a hauler and a city?	Pursuant to Section 18981.2, any designation of a public or private entity to carry out a jurisdiction's responsibilities under Chapter 12 would need to be pursuant to a contract or MOU. As such, a designation would be subject to a negotiated agreement and a potential designee cannot be forced into accepting a designation.
9041	Scheibly, K., Marin Sanitary Service	(44) "Notice and Order to Correct (NOTC)" means a notice that a violation has occurred and that failure to correct the violation may result in a penalty. We suggest that this be changed to --" a warning notice has been issued that if not corrected will result in a violation that may result in a penalty.	A change to the regulatory text is not necessary. These terms are used by the Department when enforcing non-compliant entities. A jurisdiction has the discretion to develop into their ordinances "warning notices."

Comment Number	Received From	Question/Comment	Response(s)
			A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.
9042	Scheibly, K., Marin Sanitary Service	(44) "Notice and Order to Correct (NOTC)" means a notice that a violation has occurred and that failure to correct the violation may result in a penalty. MSS has a robust contamination procedure in which customers may be issued warnings with the ability to correct the issue or a violation which results in a fine. In some cases, there is no option to correct and the material must be immediately emptied as landfill.	A change to the regulatory text is not necessary. Section 18995.4 outlines the progressive enforcement by a jurisdiction. Entities are given ample time through the Notice of Violation process to remedy an alleged failure to comply. In reference to container contamination, Section 18984.5 details noticing a generator when container contaminates are observed. If a jurisdiction observes visible prohibited container contaminates in a generator's container, it may dispose of the container. After more than three consecutive occasions, the jurisdiction may impose additional contamination processing fees on the generator and may impose fees. All entities that are found in violation have an opportunity to remedy the failure to comply before any fines or penalties are imposed. Further, the regulations do not require penalties for contamination.
9043	Scheibly, K., Marin Sanitary Service	(45) "Notice of Violation (NOV)" means a notice that a violation has occurred that includes a compliance date to avoid an action to seek penalties. Shouldn't the correction date be on the (NOTC) notice?	A change to the regulatory text is not necessary. Section 18982(a)(45) states in the definition of a Notice of Violation, the notice does include a compliance date to avoid an action to seek penalties. A Notice and Order to Correct allows an additional 30 days from the original compliance date in the Notice of Violation.
9044	Scheibly, K., Marin Sanitary Service	(75) "Violation" means a lack of compliance with a requirement of this chapter or local ordinance(s) adopted pursuant to this chapter. We would urge CalRecycle define the difference between a warning and a true violation. Reporting, in our opinion, should be on the violations and not on the warnings issued. Since the goal is clean organics.	CalRecycle has revised section 18981 to remove the definition of "violation." The regulations set prescriptive standards. An entity is either in compliance or not with these standards. A jurisdiction may issue a warning within the 60 days before the Notice of Violation is required to be issued.
9045	Scheibly, K., Marin Sanitary Service	We would like to suggest definitions of sample size and/or statistical significance.	Comment noted. Comment is not commenting on the regulatory language.
9046	Scheibly, K., Marin Sanitary Service	(a) Four split carts. We would like to clarify that a dual stream program does not necessarily mean split cart. For residential customers, MSS supplies a brown body split recycling cart with a blue lid for containers and a brown lid for fibers. Commercial and MF customers do not have split carts but are supplied with separate blue carts for fibers and brown carts for containers. To be compliant, would all our recycling cart lids have to be shades of blue?	The regulations specify that it could be a cart or a split container. Sections 18984.1(a)(6)(B) and (C) and 18984.2(d)(1) do not require that only light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container.
9047	Scheibly, K., Marin Sanitary Service	(b) route review for prohibited container and contaminants on a quarterly basis. This is a costly endeavour. We suggest that routes in which contamination is an issue	Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container

Comment Number	Received From	Question/Comment	Response(s)
		<p>are reviewed on a quarterly basis. The time and money should be spent on problematic routes and not on all routes.</p>	<p>on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
9048	Scheibly, K., Marin Sanitary Service	(b) route review for prohibited container and contaminants on a quarterly basis.Should there be a set number to audit for statistical significance?	<p>For clarity, the regulations allow the jurisdictions to determine random selection, which is the least costly and burdensome approach compared to requiring statistically significant sampling. Thank you for the comment. CalRecycle made the proposed changes, including changing from quarterly to annually. Also, jurisdictions may set what the routes are and the number of random containers to select, which is the least costly and burdensome approach. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. 9049	Scheibly, K., Marin Sanitary Service	(b) route review for prohibited container and contaminants on a quarterly basis. Does CalRecycle anticipate issues with violation of privacy complaints from conducting lid flip audits?	This requirement does not violate federal or California privacy laws. California v Greenwood (438 US 35) and its progeny have held that once a person has left trash containers out for collection, there is no reasonable expectation of privacy in the contents of those containers and, therefore, no implication or violation of privacy laws
9050	Scheibly, K., Marin Sanitary Service	observing contamination. All contamination is not equal. One glass bottle in an organics cart is too much. One battery in the recycling is too much. A single bag of trash in either cart that can be easily removed will be removed by our drivers and sorters. MSS would leave notices for all customers; however, we feel there should be more flexibility in enforcement for minimal contamination.	<p>Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
9051	Scheibly, K., Marin Sanitary Service	(d)(1) must report each month to the jurisdiction. MSS feels that monthly reporting may be overly burdensome especially if pictures are required to be attached. Since the goal is less contamination and more diversion, we feel only those that receive fines for violations should be included in the reporting along with addresses and supporting evidence such as photos. We feel that customers who receive warning notices should be tracked but only on a high-level numerical level not at the individual generator level.	CalRecycle has revised Section 18984.5(b)(4) to remove 'if available, any' and add 'the designee shall keep a record.' The change is necessary to clarify that not all photos must be provided because this is too burdensome; a jurisdiction may request more photographic documentation and the designee must retain all photographic documentation. Additionally designees are not required to inspect a set minimum number of individual generators on a monthly basis.
9052	Scheibly, K., Marin Sanitary Service	(a)(3) copies of all written notices, violations and enforcement actions issues to generators. Providing copies of all notices on the generator level will be time consuming and costly. We suggest supplying copies of all materials provided to customers and a log of types of contacts and materials that were sent out with dates.	Comment noted, CalRecycle revised and streamlined the recordkeeping requirements. The recordkeeping requirements for enforcement orders represent the minimum level of record keeping that any entity taking enforcement would need to keep, regardless of the requirements of this regulation.
9053	Scheibly, K., Marin Sanitary Service	This is very burdensome and will be hard to enforce. We feel the De Minimis amount should not be less than the smallest size container offered which is a 32 gallon in most areas. Otherwise, the law as written, makes it sound like a jurisdiction/hauler may have to supply smaller organics containers. De minimis should be less than 32 gallons per week regardless of MSW generated.	A change to the regulatory text is not necessary. A text change is not necessary because the law does not imply jurisdictions must supply smaller organics containers. Rather, this section allows jurisdictions grant waivers for the smallest organic waste generators. The threshold of 10 and 20 gallons respectively equate to roughly 10 percent of waste generation for small businesses that produce less than 2 cubic yards and more than 2 cubic yard of organic waste per week. This de minimis threshold was established based on input from stakeholders while also ensuring that these waivers do not compromise the state's ability to achieve the organic waste reduction targets.
9054	Scheibly, K., Marin Sanitary Service	How often does the generator have to prove they should be exempt? Annually? Quarterly? Who is responsible for the cost of proof?	A change to the regulatory text is not necessary. A text change is not necessary because the comment is asking for clarification not requesting a change. CalRecycle notes that the frequency of inspection has been revised. The language provides some flexibility for the jurisdiction to determine the waiver application and processes.
9055	Scheibly, K., Marin Sanitary Service	Limited english speaking. Is google translate on the website sufficient for the language requirements?	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
9056	Scheibly, K., Marin Sanitary Service	The only way to determine if a business is truly compliant is to do a full waste characterization study. This is not feasible and will add considerable cost to jurisdictions and rate payers. At MSS, we identify if customers meet the required threshold with the law then we audit the service records to see if the customer is	A change to the regulatory text is not necessary. Section 18995.1 requires a jurisdiction to do an annual compliance review of all commercial businesses that generate two cubic yards or more per week of solid waste and produce organic waste. A jurisdiction implementing a two or three container collection service are required to conduct route reviews for prohibited container

Comment Number	Received From	Question/Comment	Response(s)
		<p>subscribing to diversion services. Annually, we perform visual audits to see if divertible materials are still being landfilled.</p>	<p>contaminants on randomly selected containers or performing waste composition studies as prescribed in Section 18984.5.</p>
9057	Scheibly, K., Marin Sanitary Service	<p>According to the definition of organic waste, pg. 5 line 45, the following stream would need a 1 CY sample daily, correct? A. food waste b. green materials c. Wood/lumber d. paper/paper products</p>	<p>CalRecycle staff has noted the comment. Yes, you are correct. Section 18982(a)(46) includes food waste, green material, wood, lumber, paper, and paper products in the definition of organic waste and would therefore be required to meet the measurement protocol.</p>
9058	Scheibly, K., Marin Sanitary Service	<p>This is very costly and time consuming and will significantly slow processing operations. Perhaps load checks could be done with a visual audit using a grid system similar to what was suggested for C&amp;D activities in a report from Cascadia to CIWMB in October 2006. This could be performed monthly and submitted to the LEA. If the LEA determines the materials are clean, then this should go to quarterly visual inspection. Daily, weight-based studies should only be required if a facility is showing a high percentage of non-organics in the processed stream. Also, we are unclear how we would audit food waste that we process prior to sending it to the waste stream treatment plant for digestion since the material is virtually liquid.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
9059	Scheibly, K., Marin Sanitary Service	<p>The MSS SSO collection program is consistently less than 2% contaminated. We have never had a load of organics rejected at the composting facility we use. There should be language that rewards facilities like ours by decreasing the frequency of load checking and reporting.</p>	<p>Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate. Operators can propose an alternative measurement such as a different sampling frequency and/or weight, or a different methodology for determining organic waste recovery efficiency as long as it is as accurate as the prescribed requirement.</p>
3036	Scherson, Y., Anaergia	<p>In the three-cart system summarized in Article 3, section 18984.1 a jurisdiction can choose to collect food waste in the green bin or the black bin. Food waste collection in the black bin requires processing in a high diversion organics facility demonstrating 75% organics capture. Food waste collection in the green bin does not have any quantitative requirement for organics capture. This is a loop hole whereby collection of organics in the green bin is compliant even if only a small fraction of food waste is recovered, and a majority of food waste remains in the black bin destined for landfill. The recommendation is to require food waste collection in the green bin to be subject to the same black bin standard of 75% organics recovery. This can be achieved with a quantitative audit of the green and black bins at the same frequency as the measurement frequency of the high diversion organics processing facility. This revision is necessary to ensure the success of SB 1383 by: (1) eliminating a loop hole that would result in little organics capture and would be a preferred path of least resistance, (2) ensuring that any collection selected by a jurisdiction results in a majority organics diverted from landfill, and (3) providing jurisdictions with options that are equitable so no one option is viewed as "easier" to satisfy and jurisdiction can make the best decision for their constituencies.</p>	<p>Section 18984.5 already requires all types of containers to be monitored. Instead of setting a performance standard on green containers, CalRecycle established container monitoring requirements and facility checking/monitoring. However organic waste recovery efficiency will be measured at facilities receiving source separated organic waste.</p>
3037	Scherson, Y., Anaergia	<p>Article 3, section 18984.1, allows for food waste to be collected in the green bin or the black bin under a three cart collection system. Our concern is that the standards</p>	<p>Section 18984.5 already requires all types of containers to be monitored. Instead of setting a performance standard on green containers, CalRecycle established container monitoring</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>for compliance between the green bin and black bin collection are vastly unequal, thus incentivizing jurisdictions to collect food waste in the green waste bin simply because there is no numeric standard that needs to be met under this approach and compliance is measured by “qualitative” methods that are soft and easy to meet compared to the black bin collection and processing option. The unintended consequence is a jurisdiction would likely have a scenario where little food waste from the catchment is placed in the green cart but the program would still be compliant with SB 1383 simply because residents are “trying” to put food waste, regardless of quantity or actual capture rate, in the green bin. The regulation only requires collection and processing of food waste in the green bin without a numeric standard. Considering the vast majority of food waste is collected in the black bin in California, it is very likely little food waste would be recovered in the green bin with relaxed standards and compliance being met just for attempting to separate food waste in the green bin regardless of overall capture rate.</p> <p>In contrast, food waste collection and processing in the black bin, where the vast majority of California’s food waste is located today, requires a facility to meet and demonstrate a more stringent and quantitative requirement of 75% organics capture to qualify as an SB 1383 complaint solution. Having a numeric and quantifiable standard is important for a successful program to ensure organics are in fact recycled and at large quantities to meet the State’s 75% diversion goal. We are concerned that the current form of the regulation with the preferred three cart system favors the green bin pathway over the black bin pathway for organics recycling with a far easier compliance standard to meet that will fail to recover a majority of organics in a catchment because the green bin pathway only requires a jurisdiction to collect food waste at any quantity and with any capture rate, even if it is low. We firmly believe the success of SB 1383 is paramount in combating climate change and believe an equal numeric requirement is needed for both pathways so jurisdictions can have a truly equal choice and have the ability to require haulers and recyclers to meet numeric standards that ensure a majority of organics in a catchment will in fact be recycled – thus ensuring SB 1383 is in fact effective in diverting organics.</p> <p>We recommend introducing a numeric standard on green bin collection of food waste that is equal in measurement frequency and equal in capture rate requirement as the black bin collection pathway. In other words to “level the playing field”. One way to accomplish this under a green bin collection pathway is to conduct waste characterization audits of the black bin and green bin at equal frequencies and sample size as the compliance requirement on high diversion organic recycling facilities whereby at least 75% of the organics must be captured in the green bin.</p> <p>Our main concern is to ensure both pathways have equally high standards to ensure 75% of organics are in fact diverted from landfill with food waste collection in either the green or black bin. This will ensure jurisdictions have equal options to choose</p>	<p>requirements and facility checking/monitoring. However organic waste recovery efficiency will be measured at facilities receiving source separated organic waste.</p>

Comment Number	Received From	Question/Comment	Response(s)
		from and that the regulation in fact ensures majority of organics are diverted from landfill with clear quantifiable standards.	
3380	Schneider, A., RecycleMore -- West Contra Costa Integrated Waste Mgmt Authority	18984.1 (5-A) – The following shall not be collected in the green container. Rigid Compostable Plastics are a common contaminant in many organics collection programs. Few, if any, facilities actually process them. Consider adding Rigid Compostable Plastics to the definitions, as well as to the list of prohibited items. We suggest “Rigid Compostable Plastics are prohibited in the green container unless allowed by the jurisdiction or hauler”.	<p>The facility would notify the jurisdiction that it no longer accepts compostable plastics. A facility accepting these materials would typically notify the jurisdiction as part of the facility’s normal operating procedures.</p> <p>CalRecycle already revised Sections 18984.1, 18984.2, and 18984.3(e) to provide clarity about when a jurisdiction may allow plastic bags to be placed in containers. The issue of whether to allow bags hinges primarily on whether or not the receiving facility will accept them. Many facilities are not accepting bags because of operational problems and product quality issues. In order to document jurisdiction decisions about the use of bags, CalRecycle also revised Section 18984.4(a) to require that jurisdictions keep information in their records about the facilities to which they send bags.</p> <p>The regulatory language already allows plastic bags to be removed. For any plastic bags, including compostable plastic bags, a facility receiving such material will have to notify the appropriate jurisdiction that compostable plastics will not be recovered at the facility.</p> <p>It would be acceptable for the facility to provide the letter to the hauler and the hauler would provide the letter to the City.</p> <p>Nothing precludes a facility from specifying the type of resins and products the facility will accept. The written notification from the facility is given to the jurisdiction every 12 months after the regulation takes effect. As many stakeholders have noted markets and technology is are dynamic. A solid waste facility needs the ability to determine that accepting plastic bags or compostable plastics is no longer feasible and have the ability to notify a jurisdiction. This may trigger and require behavior change for the collection program in order to improve overall recovery. The notification requirement is intended to foster this. The requirement to annually check with the facility that bags are still allowed is not onerous or burdensome.</p>
3381	Schneider, A., RecycleMore -- West Contra Costa Integrated Waste Mgmt Authority	18984.7 – Container Color Requirements. Requiring only lid of the container to match the color standards is a concern for our jurisdiction. Our hauler uses blue metal bins for trash, recycling and organics, leading to generator confusion and cross contamination. The early draft requirement for standardized container color was going to address part of that problem. We feel that only requiring the container lid to match the color standard will be much less effective for identifying material type. One reason the colored lid alone will not suffice in our jurisdiction is when bin lids are left open after service. If the lid is folded back, colored bin lids will not consistently be an indicator of material type. Likewise, rollcart lids break regularly and are not always repaired in a timely manner. If the regulations will continue to only require the lids to match the container color standard, then the timeline for completion should be reduced to 2025. We also recommend rewording this section to say “lid color requirements” as these “lid only” details are currently only included in the definitions section.	<p>The language was revised and the color may be on the lid or the body of the container with the lid being the same color, black, or gray. The change provides flexibility to jurisdictions. In regards to the lid comment, a change was made to allow for the exposed portion of lid or body to be required color and to allow the required color to be on either the lid or the body, not just the lid. The change is necessary because this approach is the least costly and burdensome one that still achieves the organics disposal reductions. Additionally, it is not necessary to change the title of the section as the requirements do not just apply to the lids.</p>

Comment Number	Received From	Question/Comment	Response(s)
3382	Schneider, A., RecycleMore -- West Contra Costa Integrated Waste Mgmt Authority	18984.8 – Container Labeling Requirement. Container labels are essential to identify the material type for each stream. The current text only requires new containers or lids to be labeled. Consider requiring all containers or lids to be labeled by 2025.	This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. The labeling requirements were refined through the informal public rulemaking process to accommodate the various types of labels jurisdictions currently use on their containers. Stakeholders indicated that these types of labels are effective and durable. Correctly-colored labels may be applied to existing bins or lids until the containers are replaced at the end of their useful life.
3383	Schneider, A., RecycleMore -- West Contra Costa Integrated Waste Mgmt Authority	18981.2 - Implementation Requirement on Jurisdictions We have a general concern that the timeline to complete all ordinances, staffing requirements, customer rate adjustments and hauler fleet additions is insufficient. Jan. 1, 2023 is more reasonable for effective implementation.	Comment noted. CalRecycle is declining to extend the initial compliance date because a substantial delay will be in conflict with the statutory requirement that the regulations achieve 75% organic waste diversion from landfills by 2025. The proposed delay would make the window too small.
2085	Schoonmaker, Kelly; Alameda County StopWaste.org	Expand list of products that may be applied to the procurement target to include at least mulch, biochar, renewable diesel, and electricity.	CalRecycle has revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, heating applications and mulch. CalRecycle determined that biochar should not be included.
2086	Schoonmaker, Kelly; Alameda County StopWaste.org	Reduce the level of the target. It's just more compost than most jurisdictions can use. Ex: Oakland uses about 1,000 CY/yr but would be required to use 43k CY/yr and cost over \$1M/yr. WELO enforcement gets them to about 39k CY.	The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products, including mulch and renewable electricity from in-vessel digestion and biomass conversion, to provide jurisdictions with even more flexibility to choose product that fit local needs. CalRecycle recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction's need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. If, as mentioned in the comment, the city has limited need for compost, mulch, or fuel, the city may procure electricity or heating applications derived from renewable gas. If the city is capable of reducing or eliminating its use of fossil gas entirely, it could correspondingly reduce or eliminate its procurement obligation under the regulation. This provision was added to ensure jurisdictions are not required to procure more material than they can actually use, and to ensure that the requirements do not conflict with other environmental goals to reduce the carbon intensity of products and activities cities procure material for use.
2087	Schoonmaker, Kelly; Alameda County StopWaste.org	Allow additional pathways to compliance, including WELO enforcement, storm water biotreatment areas, and compost application through the healthy soils program. All methods have existing reporting and verification mechanisms.	The proposed regulations were revised in to include a requirement that jurisdictions shall adopt ordinances or other enforceable mechanisms to requirement compliance with MWELo. CalRecycle disagrees with the approach of counting all MWELo-compliant compost and mulch towards a jurisdiction's procurement target. This would allow products procured for new or

Comment Number	Received From	Question/Comment	Response(s)
		Moreover, spreading procurement out over many entities builds a more robust and resilient market than requiring some agencies to buy it.	expanded developments, which jurisdictions should already require to use compost or mulch, to count towards a jurisdiction's procurement target, regardless of whether that entity is a direct service provider to the jurisdiction, or has any relation to the jurisdiction at all. As noted above entities subject to MWELo should already use compost or mulch under MWELo. A jurisdiction must work with non-jurisdictional entities to develop a direct service provider contract or agreement in order to count procurement towards the target. Regarding "spreading procurement out over many entities," CalRecycle cannot impose procurement mandates on other sectors without the necessary statutory authority, which SB 1383 lacks. Regarding the "healthy soils program," CalRecycle participated in development and implementation of the Healthy Soils Initiative (HSI) and assisted the California Department of Food and Agriculture (CDFA) in developing reimbursable compost application rates, estimating nitrate loads following compost application, developing the HSI grant application, and including compost application as an eligible soil management practice. While CalRecycle appreciates the ability to provide input, the HSI is ultimately under the regulatory authority of CDFA, not CalRecycle.
2088	Schoonmaker, Kelly; Alameda County StopWaste.org	Change units to cubic yards, not tons. Bulk densities range from 500-1100 lbs/CY and we find 800 lb / CY is representative	CalRecycle has added the following conversion: 1 ton of organic waste feedstock = 0.58 tons compost = 1.45 cubic yards compost. This is based on 1 ton compost = 2.5 cubic yards using the commenter's recommended bulk density factor of 800 lbs/cubic yard, which is the same value used by the Department of Transportation (CalTrans). Note that cubic yards does not replace tons in the regulatory language; it is simply an alternative unit of measure.
2089	Schoonmaker, Kelly; Alameda County StopWaste.org	Revisit cost analysis, which has a unit mistake in the SLCP economic analysis. Rather than tons, the price for PalO Alto and SF should be per CY—with no change to the value. I.e., change \$25/ton to \$25/CY. Makes a big difference	Comment noted. CalRecycle disagrees that the cost per ton of compost is underestimated. CalRecycle revised the estimated cost of compost in the Appendix to the ISOR. CalRecycle estimated the cost of compost by conducting a survey of several facilities in California, which found that the overall cost to purchase compost at a bulk rate, transport it, and apply the compost to land was \$30 per ton of compost.
2090	Schoonmaker, Kelly; Alameda County StopWaste.org	Application rate assumes for city procurement exemption that is more applicable for compost than fuel is.	Regarding the WELo application rate, CalRecycle acknowledges that the application rate may not apply to all scenarios where compost is applied. The WELo application rate was not used to determine procurement targets or the total cost of the regulations. The WELo application rate was used in the SRIA to illustrate the potential amount of land compost could be applied to as a result of the regulation.
2091	Schoonmaker, Kelly; Alameda County StopWaste.org	Let's work together find a baseline for compost procurement exemption that is more applicable for compost than fuel use is.	The intent of section 18993.1(j) is to provide jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. Given the potential difficulty of determining conversion factors for comparable products to compost (e.g. liquid chemical fertilizers compared to solid compost), jurisdictions have the option to use their previous year's procurement of gas, which have readily available organic waste conversion factors, to lower their procurement target. The focus on energy products is intended to simplify the process by which a jurisdiction can lower its procurement target. Although this mechanism relies only on fuel, electricity, and gas procurement, a jurisdiction can still choose to meet its lowered procurement target with any recovered organic waste products, including compost.

Comment Number	Received From	Question/Comment	Response(s)
2092	Schoonmaker, Kelly; Alameda County StopWaste.org	Support procurement by jurisdictions by providing financial support for regional sustainable landscape trainings. Trainings are provided by ReScape California, G3, and Green Gardener. Using compost is a major paradigm shift for most landscape maintenance staff and without training people won't use it.	Once the regulations are finalized, CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products. Regarding training, CalRecycle generally agrees that training for local sustainable landscape maintenance and design is valuable.
2093	Schoonmaker, Kelly; Alameda County StopWaste.org	Special districts and school districts' use should count toward jurisdiction's procurement requirement. Ex: all of city of Livermore's parks are maintained by the Livermore Area Rec and Park District and the city would want to count that use to any procurement targets.	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor's office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to "develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state." These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>Regarding "nonlocal entities", it is important to clarify that the populations in, for example, local education agencies and special districts are already included in a jurisdiction's population-based procurement target; the population data published by the Department of Finance (DOF) includes universities, community colleges, and other local education agencies. The populations inherent in these entities are built into the procurement target calculation, and jurisdictions are encouraged to work with these entities to meet their procurement targets, which may be accomplished through a contract or agreement, such as a Memorandum of Understanding (MOU). Applying procurement targets to these entities, especially population-based procurement targets, would result in double counting individuals contributing to the procurement requirements.</p>
6328	Schutz, J., City of San Rafael	General: As drafted, the regulations are overly prescriptive and onerous for cities such as ours that already have programs in place. We would like to see a performance-based pathway to compliance. Our City and hauler have been at the forefront in the state in organics recycling, and our hauler and local composting facility already have programs in place that need to be strengthened, not reconfigured to meet prescriptive mandates. We hope that these regulations can be significantly streamlined and simplified.	Comment noted, CalRecycle amended the draft regulatory text to include a performance-based source separated organic waste collection service provision.

Comment Number	Received From	Question/Comment	Response(s)
6329	Schutz, J., City of San Rafael	Reporting Requirements & Cost Burden. The current reporting requirements add a significant burden and extremely significant cost ramifications. The amount of staff time that would be required to document all the detailed aspects of the Implementation Record take away from resources that could be used to educate and enforce the generator and hauler requirements. We would like to see a reduction in the number of reporting requirements and types of information required to only what is necessary to determine compliance.	Comment noted, CalRecycle reduced some reporting requirements and changed many of the reporting requirements to recordkeeping requirements in response to this comment.
6330	Schutz, J., City of San Rafael	Enforcement: As an unfunded mandate, we would prefer to see less prescriptive enforcement provisions, allowing local jurisdictions to craft enforcement protocols that work locally. This would allow us to refine and adapt as necessary and be nimble in the face of constantly changing product compositions. In addition, the current regulations are unrealistic to implement due to the difficulty of gaining access to businesses' internal refuse containers and the cost associated with the extensive time necessary for inspections.	CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.
6331	Schutz, J., City of San Rafael	Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products using targets set by CalRecycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations. This is an industry in flux, and prescriptive regulations run the risk of many unintended consequences. For example, a statewide estimate of organics generated per capita or relying on current transportation fuel use estimates to determine the amount of compost to be procured as proposed in the regulations would result in more compost than could be used and put even more undue financial burden on cities.	Comment noted. CalRecycle did include provisions in the regulations that act as a "safety valve" to relieve levels of required procurement if it exceeds a jurisdiction's need.
6332	Schutz, J., City of San Rafael	Definitions for Organic Waste, Paper Products, and Contamination. The definitions as they stand include items that are considered contamination in our area, and that our local composting and recycling facilities will not accept due to bio hazards and plastic or other non-organic materials being affixed to them. This could have the unintended consequence of causing our local hauler to find new facilities to accept the material, which are much further away and would cause increased emissions and cost. In addition, some of the items in the definitions are considered hazardous waste and could put workers at risk. Toward that end we would like to clarify that local ordinances may be more restrictive in terms of what is mandated to be composted. In this way we can more effectively reduce contamination and increase diversion based on acceptable materials at our local facilities, which serve many more jurisdictions than just San Rafael.	Comment noted. The definition of organic waste employed in these regulations is specific to the purpose and necessity of this regulation. Regulations adopted by other agencies or codified in other portions of statute, can employ a different definition for a different purpose. Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute. Comment noted. The definition of organic waste clearly identifies materials that are types of organic waste. It is not feasible or necessary to state in the negative every conceivable material that is not an organic waste. These regulations specify the minimum standards that apply to each type of collections service that a jurisdictions provides to its

Comment Number	Received From	Question/Comment	Response(s)
			<p>generators. While there are minimum standards, CalRecycle is allowing some flexibility stating what 'may' go into the container in some subsections, instead of stating what 'shall' go into the container. These minimum standards ensure that every Californian understands what material types must go in each container.</p> <p>Regulatory oversight is necessary to ensure that source-separated organic waste is not mixed with non-organic waste. This section is necessary to ensure the state is able to meet organic waste recovery targets established in statute.</p> <p>Also, biohazardous and household hazardous materials must be managed in accordance with other state laws and regulations.</p>
6333	Schutz, J., City of San Rafael	<p>Food Waste Reduction &amp; Recovery. The first item in conservation is to reduce the amount produced or consumed. Food waste prevention is the most impactful and least resource intensive strategy to reduce GHG emissions from food. We wish to see an exemption from food donation provision in the regulations that recognizes and rewards the upstream efforts of generators implementing food waste prevention practices. In addition, although we fully support food recovery programs, we have a concern that these regulations would increase "food dumping" and cause our local nonprofits to have to deal with an influx of inedible or unhealthy food. In addition, providing a statewide platform for generators and food recovery organizations to report directly to the state would reduce the reporting burden on jurisdictions.</p>	<p>SB 1383's statutory requirement is to recover 20% of currently disposed edible food for human consumption by 2025. The statute does not include any requirement for California to achieve a food waste prevention or source reduction of food waste target. As a result, CalRecycle will not require commercial edible food generators or jurisdictions to prevent or source reduce the amount of edible food they generate.</p> <p>CalRecycle does however recognize that some commercial edible food generators could have types of edible food available for food recovery that are not desired by food recovery organizations or services. One example would be a generator having significant quantities of food that does not meet the nutrition standards of food recovery organizations or food recovery services. To address this issue, CalRecycle added language to the edible food recovery education and outreach section to require jurisdictions to annually provide commercial edible food generators with information about the actions that commercial edible food generators can take to prevent the creation of food waste.</p> <p>Adding a section for commercial edible food generator exemptions and de-minimis waivers to the regulatory text was not necessary. Adding a section for exemptions and de-minimis waivers was not necessary because the regulations are already structured so that many food facilities and food service establishments are exempt from compliance due to the smaller amounts of edible food they typically dispose. Only the entities identified as tier one and tier two commercial edible food generators are required to comply. Every other food facility or food service establishment that is not a tier one or tier two commercial edible food generator is exempt from SB 1383's regulations. CalRecycle recognizes, however, that some commercial edible food generators could experience extraordinary circumstances that could make compliance impracticable. To address this issue, CalRecycle revised Section 18991.3. Specifically, language was added to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. For the purposes of Section 18991.3 extraordinary circumstances are specified as (1) a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity. And (2) Acts of God such as earthquakes, wildfires, flooding, and other emergencies or natural disasters CalRecycle recognizes that donation dumping occurs. The regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or service. If a food recovery organization or service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383's regulations prohibiting a food recovery organization or food recovery service from terminating their relationship with that particular generator.</p> <p>CalRecycle also developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and services from donation dumping and unexpected donations. The model food recovery agreement is a template and is intended to be customized based on the needs of food recovery entities and commercial edible food generators.</p> <p>Regarding the comment about developing a statewide platform where food recovery organizations and services and generators could report directly to the state, CalRecycle would like to clarify that commercial edible food generators do not have any reporting requirements. Commercial edible food generators have recordkeeping requirements. Therefore, a statewide reporting platform for commercial edible food generators to report directly to that state is not necessary. In addition, a statewide reporting platform where food recovery services and organizations would report directly to the state rather than to jurisdictions as commenters requested, would severely reduce each jurisdiction's ability to assess the effectiveness of their food recovery program and identify if improvements need to be made. Furthermore, the data that is reported directly to the jurisdiction is critical for helping the jurisdiction better understand the food recovery organizations and services making the greatest impact in their jurisdiction. This data can be used to help jurisdictions make decisions about food recovery organizations and services to promote and potentially direct funds to.</p>
5032	Scott, R. Keep California Beautiful	<p>If the manufactures of carts are going to be producing more carts and lids then they should be held responsible for the amount of carts &amp; lids to be recycle, as part of CalRecycle's Extended Producer Responsibility (EPR). Where in SB 1383 is this addressed to avoid the potential negative impact to landfills and additional costs to residents, commercial and governmental entities of California?</p>	<p>Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. EPR is beyond the scope of this rulemaking.</p>
4572	Selling, M. City of Galt	<p>Financial Burden SB 1383 and the draft regulations represent a significant expenditure mandate to local jurisdictions with essentially no financial support from the State of California. This regulation effectively mandates the City of Galt to require organics collection from its hauler, who will in tum be required to increase their fleet, hire new staff to comply with outreach and enforcement requirements, make significant improvements to existing facilities, and develop new organic processing facilities. The fiscal impact on our residents and businesses will be immediate and cumbersome. The City's monthly rates were recently updated to implement previous legislation requirements, and this could represent an additional increase of up to 50%. The City requests that Cal Recycle considers the overall fiscal impact of the proposed requirements, especially under such short timeframes.</p>	<p>Comment noted. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>

Comment Number	Received From	Question/Comment	Response(s)
4573	Selling, M. City of Galt	<p>Facility Improvements/Development</p> <p>Handling of residential food waste in the green containers will require substantial improvements to the City of Galt's Hauler's facilities. Green waste traditionally has been collected, stored temporarily, and transferred at processing facilities. Introduction of food waste into the green waste will require that material be managed inside covered facilities. Improvements to the existing facilities to transfer organic wastes are costly, and could take years. A delay to the 2022 deadline residential food waste collection would reduce the burden on local jurisdictions, residents, and businesses.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
5013	Serrano, R, San Diego County LEA	<p>Section 18083(c) This section was brought up as a concern at every Local Enforcement Agency (LEA) Round Table meeting throughout the state during January and February 2019. We request it be removed for the following reasons:</p> <ol style="list-style-type: none"> <li>1. The sections described (14 CCR Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867 and 17896.44.1) already give LEAs authority to require the operator to increase the frequency of measurements and/or revise the measurement protocol to improve accuracy in instances where operator measurements do not accurately reflect the records being kept. The LEA already has authority to oversee such measurements when inspection findings warrant it, thereby rendering section 18083(c) unnecessary.</li> <li>2. Section 18083(c) creates a mandate and performance standard for the LEA, requiring the LEA to spend a specific amount of time and effort to review a single action performed by the facility. Current measurement time is estimated to be 3-5 hours.</li> <li>3. Section 18083(c) disregards LEA determination of facility compliance, unlike other sections that leave the LEA the option of observing measurements as needed. So even if a facility is consistently found to be compliant with measurement and load checking requirements the LEA is nonetheless required to perform quarterly observations, instead of dedicating time and resources to less compliant facilities.</li> </ol>	<p>CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.</p>
5014	Serrano, R, San Diego County LEA	<p>Revise Proposed Section 18984.11(a)(3)(A)(1)</p> <p>Section 18984.11(a)(3)(A)(I) of the current draft regulations reads: The jurisdiction, or its authorized hauler, demonstrates to the Solid Waste Local Enforcement Agency that less frequent collection than required by Section 17331 of Title 14 of the California Code of Regulations will not result in the propagation of vectors or other public health and safety, or nuisance issues.</p>	<p>Section 18984.11 was revised to enforcement agency.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>1. Section 18984 identifies the Solid Waste Local Enforcement Agency as the designee to allow less frequent collection whereas Section 17331 designates the Local Health Officer. This section conflicts with the section that it cites.</p> <p>2. As an LEA, we do not wish to be the designee for less frequent collection and would like it to remain a Health Officer duty.</p>	
3611	Sheehan, M., West Valley Solid Waste Management Authority	<p>Section 0.1.2- The provisions of this section require that jurisdictions implement an SB 1383 compliant program by January 1, 2022. The regulations are clear that this timeline will not be altered by the inability of a jurisdiction to negotiate service agreements or implement rate changes. We are concerned that the requirement to implement programs at any cost is unreasonable and should be mitigated by placing controls on profiteering.</p> <p>The majority of agencies around the state have franchise agreements that last beyond this implementation date and assure the existing service provider that their proposal for SB 1383 implementation will not be tested competitively through an RFP. Given the exclusive nature of most franchise agreements and the penalties for non-compliance, private service providers have tremendous leverage over ratepayers in this situation. Our current contract is set to expire in 2024 putting us in a precarious negotiating position to meet the 2022 compliance date.</p> <p>The WWSWMA supports the goals of SB 1383 and we respect that CalRecycle cannot forgive implementation requirements solely on the basis that agencies do not want to increase rates. However, as a public agency, Cal Recycle has a responsibility to ensure that these regulations do not write a "blank check" to the private sector providers of these services. WWSWMA recommends that Cal Recycle provide a mechanism to mitigate the ability of private service providers to take advantage of jurisdictions seeking to comply with the regulations in good faith. While there is no perfect solution to this dilemma, we have a few potential mitigation options:</p> <ul style="list-style-type: none"> <li>• Require private service providers to supply local jurisdictions with any supporting documentation, including all information about current costs of service and operations in their community, during any inducement into a public contract.</li> <li>• Create a process for jurisdictions to appeal to CalRecycle or an independent third party to review and make determinations about whether rates are reasonable or reflect excessive profit generation. In cases where they do, jurisdictions should be: 1) permitted to terminate their agreements, subject to certain notice, without penalty; 2) granted a two year compliance waiver, specific to the compliance elements that are subject to the scope of the franchise agreement; and/or, 3) required to take those responsibilities in-house with the jurisdiction or competitively solicit proposals for the required services.</li> <li>• CalRecycle could regulate the renegotiation process and determine what is considered an appropriate and reasonable rate. CalRecycle may consider modeling this regulatory process after the CPUC rate regulation process for water and energy utilities.</li> </ul>	Under the Public Resources Code 40059, solid waste franchise agreements, negotiations, and fees are reserved for local control. CalRecycle therefore will not be adding regulatory provisions in response to this comment.

3612	Sheehan, M., West Valley Solid Waste Management Authority	<p>Article 13. Reporting</p> <p>Cal Recycle has frequently described these regulations as a shared responsibility between a number of stakeholders in the solid waste management system in California. Local agencies have been encouraged by the promise of this transition from a jurisdiction-focused compliance program to one where all of the stakeholders are accountable. Unfortunately, Article 13 and several other reporting and record-keeping subsections of the agreement appear to revert to a jurisdiction-focused compliance program, ultimately requiring each jurisdiction to gather and report data to CalRecycle and placing nearly all of the penalties on local agencies for failure to comply. Given the cross-jurisdictional nature of hauling and processing facilities, it is easy and very common for private providers to play "shell games" with diversion, reporting the same diversion for multiple agencies.</p> <p>The WWSWMA requests that Ca/Recycle establish a direct reporting requirement to Ca/Recycle for haulers and processors, including but not limited to specifying data by jurisdiction and material type and balancing inputs and outputs. Unlike AB 901, we request that all data submitted through this process be fully transparent to the public, or at least to the jurisdiction(s) that are the subject of the reports. Ca/Recycle should then utilize these reports to reconcile the data provided by the jurisdictions. Furthermore, we recommend that the current requirements on jurisdictions be placed directly on haulers and processors (public or private) for contamination monitoring, outreach, and recordkeeping/reporting. We believe this approach will better align with the "shared responsibility" intention of SB 1383 and may result in more actual organics diversion rather than reported diversion.</p>	<p>Comment noted. The regulations require use of existing RDRS reporting for requirements that haulers and solid waste facilities must report. AB 901 eliminated reporting from facilities to counties and requires reports to be sent directly to CalRecycle. It would be contrary to legislative intent to reinstate a requirement for data to be reported to counties or jurisdictions. CalRecycle makes the results of data that is not proprietary available to the public, can additional data is available through a public records act request. The requirements in the regulation are appropriately distributed between haulers and jurisdictions according to their authority. Jurisdictions are required to provide services to their residents. Private haulers do not have "residents" subject to their authority except through the authorization of the jurisdiction. CalRecycle included language in the regulations authorizing jurisdictions to their responsibilities to haulers as appropriate.</p>
3613	Sheehan, M., West Valley Solid Waste Management Authority	<p>Section 18982(a)(65) - "Route review" is defined as "a visual inspection of containers along a hauler route for the purpose of determining container contamination and may include mechanical inspection methods such as the use of cameras." While the regulations require route reviews to be conducted on randomly selected containers so that all collection routes are reviewed quarterly, no minimum quantity of container inspections per route is specified. This may result in haulers or jurisdictions inspecting minimal containers during route reviews. Another concern is an inconsistent interpretation or application of the minimum standards by Local Enforcement Agents.</p> <p>The WWSWMA recommends that Ca/Recycle amend this definition or the corresponding container contamination section (18984.5) to specify a minimum percentage of containers or number of customers along the route to be inspected. This approach will allow for a consistent application of the regulations across jurisdictions and ensure that the intent of this section is realized.</p>	<p>Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction.</p>
3614	Sheehan, M., West Valley Solid Waste Management Authority	<p>Article 3. Organic Waste Collection Services</p> <p>Section 18984.11(a){2} -This subsection allows jurisdictions to waive organics program requirements due to physical space limitations. While it seems appropriate and necessary to allow for some limited space waivers, those waivers could potentially exempt a significant number of generators in older buildings and in</p>	<p>Since it is a jurisdiction provided waiver, a jurisdiction can set more stringent criteria in administering the physical space waiver. CalRecycle rejects the assumption that a significant number of generators could demonstrate legitimate physical space constraints. According to jurisdictions with similar space constraints waivers, very few businesses can demonstrate the existences of space constraints that cannot be addressed. There are few instances where a</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>urban areas where parking and rentable space are highly valuable. In addition, in non-exclusive service areas, the ability of the hauler to sign off on the space accommodation waiver may create unintended consequences that allow haulers to sign off on those waivers to undercut competition, and/or avoid providing recycling service.</p> <p>The WVSWMA recommends that Ca/Recycle clarify what constitutes "evidence demonstrating a lack of adequate space." Implementing standards, a process for allowing potential waivers for space constraints, or minimum documentation standards will encourage a consistent application of this section across jurisdictions, as opposed to leaving interpretation up to the Local Enforcement Agents.</p>	<p>business's existing waste collection space could not accommodate an additional organic waste recycling container if the existing containers are downsized (e.g. two 90-gallon bins could be replaced with three 60-gallon bins and occupy the same space). This waiver intends to allow flexibility for businesses with legitimate and cost-prohibitive space constraints without compromising the state's ability to achieve the organic waste reduction targets.</p> <p>In regards to levying fees jurisdictions should consult their city or county counsel on how to appropriately structure fees.</p> <p>CalRecycle has not included implementation standards or minimum documentation requirements to allow jurisdictions set appropriate criteria. Jurisdictions, not haulers, administer the waiver, so the physical space waiver will not result in a race to the bottom in nonexclusive service areas. A hauler, licensed architect, engineer, or similarly qualified source may provide evidence that a premise has a legitimate space constraint. If a jurisdiction has concerns about haulers in nonexclusive service areas, they can opt not to issue waivers or use a qualified source other than a hauler to demonstrate lack of adequate space for separate organic waste containers.</p>
3615	Sheehan, M., West Valley Solid Waste Management Authority	<p>Section 18985.2(a) -This section requires that each jurisdiction develop a list of edible food recovery services and organizations operating within each jurisdiction and post the information on their website. It seems that many food recovery service providers and organizations work across jurisdictional boundaries including across county boundaries. There may be a significant amount of duplication of effort and dozens of inquiries to the food recovery services and organizations (who are typically short-staffed, understaffed, or run by volunteers).</p> <p>The WVSWMA recommends that Ca/Recycle consider establishing a State-wide database similar to FACIT where food recovery service providers and organizations can register and provide their information once for access to all jurisdictions and generators. This would also allow for a comparable level of information to be requested and provided in these lists (such as what type of food will and will not be accepted}. Alternatively, Ca/Recycle may want to consider establishing the generation of the list as a county requirement with the posting of the county-produced list on a jurisdiction's website as a jurisdictional requirement.</p>	<p>Although CalRecycle intends to provide tools and resources prior to 2022 to assist with SB 1383 edible food recovery regulatory compliance, it is critical that jurisdictions develop their own lists of food recovery organizations and services operating in their area. Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help jurisdictions assess their edible food recovery capacity and identify capacity needs that exist. In addition, developing local lists will help commercial edible food generators find organizations and services that are capable of safely handling and distributing recovered food on a regular basis in their area. The list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with, and thereby help ensure that edible food in the jurisdiction is not sent to landfills, but rather put to its highest and best use of helping to feed people in need. For these reasons, it is critical that each jurisdiction develop their own list.</p>
3616	Sheehan, M., West Valley Solid Waste Management Authority	<p>Article 14. Enforcement Requirements</p> <p>General -This article will require a significant expenditure by jurisdictions throughout California to staff the enforcement efforts, including but not limited to: route reviews, compliance reviews, contamination monitoring, follow-up site visits, and the issuing of fines. Some agencies will choose to hire staff or incorporate these responsibilities into the work performed by existing code enforcement officers and/or health inspectors. In some agencies, there may not be a sufficient workload created by these requirements to justify a full-time position. In other agencies, there may be political objections to funding staff positions for this type of enforcement when other critical public health and safety matters are under-enforced. During the enforcement workshop, Cal Recycle suggested the potential for CalRecycle to perform the enforcement on behalf of agencies, similar to how agencies can arrange for CalRecycle to be the Local Enforcement Agency for</p>	<p>A change to the regulatory text is not necessary. CalRecycle will not be contracting with jurisdictions to perform inspection and enforcement actions. There are insufficient resources at the state level to contract out for jurisdictions.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>regulating solid waste facilities. The WVSWMA recommends that Ca/Recycle provide an option for jurisdictions to contract with Ca/Recycle to perform the inspection and enforcement procedures.</p>	
3617	Sheehan, M., West Valley Solid Waste Management Authority	<p>Section 18982(a)(55) -This section describes prohibited container contaminants as a zero tolerance definition. This becomes costly for jurisdictions or their designees to tag, notice, document, and report when conducting container inspections. The WVSWMA requests that Ca/Recycle please consider providing some allowance for minimal or insignificant levels of prohibited container contaminants in order to minimize costs and increase compliance for jurisdictions.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels. CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination. In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3618	Sheehan, M., West Valley Solid Waste Management Authority	<p>Article 2: Landfill Disposal and Reductions in Landfill Disposal Section 18983.1(a)(3) -If it is correct to interpret that the regulations require that materials collected in blue containers be delivered to high diversion organic waste facilities, this seems to be an unrealistic requirement for all recyclable materials. The WVSWMA requests that Ca/Recycle clarify if the regulations allow for recyclable materials collected in the blue carts to be delivered to a transfer/processing facility provided that the materials are processed for 50% and then 75% recovery of the organic portion (e.g., papers are targeted for recovery).</p>	<p>Blue containers are not required to be transported to a high-diversion organic waste processing facility.</p>
3619	Sheehan, M., West Valley Solid Waste Management Authority	<p>Article 3. Organic Waste Collection Services Section 18984.7 -This section requires that containers at the end of their useful life are replaced with SB 1383 color-compliant containers. This may lead to conflicts with current color schemes, or at a minimum may lead to containers of inconsistent colors throughout a jurisdiction. Inconsistent coloring dispersed throughout jurisdiction makes education and outreach a challenge as customers with different colored containers will require different messaging. Furthermore, this approach</p>	<p>The regulations provide that a jurisdiction is not required to replace functional containers, including containers purchased prior to January 1, 2022, that do not comply with the color requirements of this article prior to the end of the useful life of those containers, or prior to January 1, 2036, whichever comes first. Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>does not consider current container inventories that have already been procured to replace containers at the end of their useful life.</p> <p>The WVSWMA recommends that Co/Recycle eliminate the need to replace containers at the end of their useful life with SB 1383 color-compliant containers, and instead mandate that all containers comply with the color requirements described above by 2032. This will allow jurisdictions to utilize current container Inventor/es and allow for a uniform replacement of new containers and messaging throughout the jurisdiction.</p>	<p>in by 2036. This includes using existing inventory that was purchased prior to Jan. 1, 2022. Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. Jurisdictions may also use inventory that was purchased prior to 2022.</p>
3620	Sheehan, M., West Valley Solid Waste Management Authority	<p>Section 18984.13- China's National Sword has presented difficult market conditions for paper.</p> <p>The WVSWMA asks if any waivers can be provided to address lack of markets.</p>	<p>A change to the regulatory text is not necessary. This section will not conflict with market conditions. Potential market shifts will impact all facilities. This section is necessary because the statute is intended to increase organics recycling, not decrease organics recycling. This provision is simply designed to prohibit a jurisdiction from requiring a generator to send its material to a facility that will recycle less of it than one they are currently sending it to</p>
3621	Sheehan, M., West Valley Solid Waste Management Authority	<p>Section 18994.1(a) - This section details the requirement for an initial compliance report on February 1, 2022 and then a first annual report on August 1, 2022, including data through June 30, 2022. It is unrealistic for jurisdictions to be able to receive the necessary hauler reports with June data in order to compile this information in time for an August 1 submittal.</p> <p>The WVSWMA requests that Ca/Recycle please reconsider and modify these dates in order to provide a more realistic timeline for submission of high quality and accurate reports.</p>	<p>A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.</p>
3622	Sheehan, M., West Valley Solid Waste Management Authority	<p>Article 14. Enforcement Requirements</p> <p>Section 18995.1(a)(1)(A) - This section states that compliance reviews and route reviews shall be conducted to ensure compliance with the generator requirements outlined in Section 18984.9. It appears that this section is requiring the compliance reviews and route review to entail more than what the definition of these terms require in Sections 18982(a)(9) and 18982(a)(65). Under Section 18984.9(b) it states that commercial businesses shall periodically inspect organic waste containers for contamination and inform employees if containers are contaminated. It is unrealistic to expect that a jurisdiction's designee will be monitoring communication between businesses and their employees.</p> <p>The WVSWMA recommends that Section 18995.1(a)(1)(A) be amended to require that compliance reviews and route reviews ensure compliance with the generator requirements set forth in Section 18984.9(a). This will align the requirements of Section 18995.1(a)(1)(A) with the definitions specified in Article 1.</p>	<p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p>
3623	Sheehan, M., West Valley Solid Waste Management Authority	<p>Section 18995.1(a)(1)(A) - If the intent of this section is a desktop compliance review, then compliance with Section 18984.9(b) cannot be verified because Section 18984.9(b) will require site visits and inspection of internal operations of businesses.</p> <p>The WVSWMA recommends that the language be modified to exclude annual review of compliance with Section 18984.9(b).</p>	<p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter. The Department wanted to ensure a fair playing field for all entities and to identify that jurisdictions have the primary responsibility in monitoring compliance</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>and taking enforcement on entities failing to comply with the chapter. A compliance review is intended to be a “desk audit” to verify that all solid waste accounts for commercial businesses, that generate two cubic yards or more per week of solid waste, are subscribing to service or self-hauling organic waste to a facility that processes source separated organic waste or to a high diversion organic waste processing facility, whichever if applicable. The regulations allow the jurisdiction flexibility when conducting a “sufficient number of route reviews and inspections.” Jurisdiction may prioritize route reviews and inspections to large generators or entities it determines to be more likely out of compliance. If an entity is found to be noncompliant between January 1, 2020 through December 30, 2023, jurisdictions are required to provide educational material describing the applicable requirements of this Chapter.</p>
3624	Sheehan, M., West Valley Solid Waste Management Authority	Section 18996.l(b) -- The WVSWMA requests that Ca/Recycle specify the proposed frequency of the compliance evaluation.	<p>3624 The regulations do not establish a minimum or maximum frequency for CalRecycle review of compliance with the regulations. CalRecycle will prioritize compliance reviews in a manner that ensures compliance and that the state is able to achieve compliance with the statutory targets.</p> <p>3625 A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter. The Department wanted to ensure a fair playing field for all entities and to identify that jurisdictions have the primary responsibility in monitoring compliance and taking enforcement on entities failing to comply with the chapter. A compliance review is intended to be a “desk audit” to verify that all solid waste accounts for commercial businesses, that generate two cubic yards or more per week of solid waste, are subscribing to service or self-hauling organic waste to a facility that processes source separated organic waste or to a high diversion organic waste processing facility, whichever if applicable. 3626	Sheehan, M., West Valley Solid Waste Management Authority	Section 18997.3(c)-The 1st, 2nd, and 3rd violations layered with Level 1 through 6 penalty levels may be overly complex for this purpose.	CalRecycle has revised section 18997.2 in response to this comment. The penalty table for penalties imposed by the jurisdiction has been removed. A jurisdiction shall impose penalties for violations consistent with the graduated penalty amounts authorized in Sections 53069.4, 25132 and 36900 of the Government Code which is outlined in Section 18997.2(a).
4575	Smialek, K, Copia	We do have some concern that as a result of this regulation, nonprofits accepting food could face “donation dumping.” Donation dumping could result due to negligence from generators of edible food, or because of a lack of information on the specific quantity and types of food that are in demand at a specific nonprofit recipient. As the legislation is currently written, generators are not held accountable for validating that their donations are actually eaten versus composted at nonprofits, which leaves substantial risk of CalRecycle not understanding the true diversion thru these donations. Copia recommends having generators also report on how much of their donations are actually eaten, so that they are responsible for donating truly edible food to nonprofits that actually need that food at any given time. We suggest adding a reporting requirement for generators to maintain data on how much of their donations are actually eaten by their nonprofit recipients in ‘ Section 18991.4. Record Keeping Requirements For Commercial Edible Food Generators’.	<p>CalRecycle recognizes that donation dumping occurs. The regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or service. If a food recovery organization or service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383’s regulations prohibiting a food recovery organization or food recovery service from terminating their relationship with that particular generator.</p> <p>In addition, CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. The model food recovery agreement does include language to protect food recovery organizations and services from donation dumping and unexpected donations. The model food recovery agreement is a template and is intended to be customized based on the needs of food recovery entities and commercial edible food generators.</p> <p>With regard to adding more recordkeeping and new reporting requirements for commercial edible food generators, a change to the regulatory text was not necessary. The proposed requirements would be overly burdensome for commercial edible food generators and would increase their recordkeeping costs significantly.</p> <p>CalRecycle would like to note that during the informal rulemaking process the California Association of Food Banks expressed concerns that tracking residual food waste from generators would be very difficult for food recovery organizations and services. If it is already difficult for food recovery organizations and services to track the amount of recovered food that is actually consumed by people, then it is unreasonable to think that commercial edible food generators would be able to acquire this data from food recovery organizations and services.</p>
4576	Smialek, K, Copia	Section 18991.4. Record Keeping Requirements For Commercial Edible Food Generators’, Copia recommends that generators are also held accountable for	Regarding adding more recordkeeping requirements for commercial edible food generators, a change to the regulatory text was not necessary. A text change was not necessary because adding

Comment Number	Received From	Question/Comment	Response(s)
		<p>maintaining data on their baselines for both edible and inedible surplus. The volume of food waste will change throughout the year based upon a number of factors including seasonality, menu changes, weather patterns, among others. In order to ensure that 20% of edible surplus is donated, there will need to be a continuous baseline for what is edible and what is inedible at any given generator. In order to ensure accurate reporting, CalRecycle should include edible and inedible baseline reporting throughout the year as a requirement for generators to maintain compliance with the regulation. Copia's platform enables this by allowing kitchens to track both edible and inedible food on a daily basis, which not only unlocks our food waste prevention analytics to help the business' bottom line, but also provide a realtime baseline for what percentage of food waste is edible, and what percentage of edible food waste is donated.</p>	<p>the proposed recordkeeping requirements would be overly burdensome for commercial edible food generators and would also increase their record keeping costs significantly.</p>
3047	Smith, B., Kern County	<p>The process of comparing any new technology to the standard reduction of emissions of 0.30 MTCO<sub>2</sub>e/short ton organic waste appears to restrict comparison of technologies, which target a subset of mixed organic waste. The emission reduction goal for a new technology may not be met due to organic fraction emission factor differences. Since the composting reduction study assumes a certain organic waste mix of food, grass and other organics, a technology comparison that proposes a targeted organic waste type could be beneficial, cost effective and ideal in certain areas but would be eliminated due to not achieving emissions reduction at or above the prescribed aggregate metric. Recommendation: Construct language to allow the State more flexibility for new tech no logy consideration.</p>	<p>Several commenters suggested providing more flexibility to consider new technologies that target diversion of source-separated organic materials that do not compost well such as carpet or lumber, and that have a lower methane emissions reduction potential than mixed organic waste decaying in a landfill. The point of utilizing the greenhouse gas reductions associated with composting as a threshold was not to incentive composting, but rather to set a reasonable threshold for ensuring that the regulation incentivizes the greenhouse gas emissions reductions required to meet the methane reduction target required by SB 1383 and the organics diversion targets specified in the Short-Lived Climate Pollutant Reduction Strategy. The benchmark value of 0.30 MTCO<sub>2</sub>e per short ton organic waste was set to ensure emission reductions for any new technology are comparable to the emission reductions necessary to achieve the strategy's emission reduction goal of 4 MMTCO<sub>2</sub>e for this sector.</p>
3048	Smith, B., Kern County	<p>Standardizing the color of carts is not necessary since programs throughout the State will not be standardized. Material acceptance can/will be different (paper in blue, paper in green, food waste in green, food waste in yellow, food waste in gray going to a high organics diversion facility, plastics in blue, plastics in gray .... ) and the handling of materials is dynamic and continually evolving. If we can agree that markets change and there are nuances among jurisdictional programs, the benefits of standardizing colors are marginalized and ultimately can create confusion for relocating residents. Other measures within the proposed regulations (labels and public education) should be the foci to affect uniformity. For example, when moving a residence or business from the bay area to Los Angeles, the Public would know to rely on the labels for instruction on what to place in each cart; there would be no potentially incorrect preconceived notions of what items should belong in each cart. Recommendation: keep the various cart/container options but eliminate color stipulations.</p>	<p>The collection container uniformity required by this and subsequent sections is necessary to respond to stakeholder feedback, enhance consumer education about organic waste recycling, reduce contamination, and maintain the highest degree of recoverability for source separated organic wastes. This will enhance the education of generators regardless of their location in California. This requirement was recommended by various stakeholders to create consistency and reduce generators' confusion about which container to place organic waste into and thus will result in less contamination and maximize organic waste recovery. See statement of purpose and necessity for Article 3 and for Section 18984.1 -18984.7.</p>
3049	Smith, B., Kern County	<p>There are many reasons for consideration in modifying or eliminating the process of cart inspections. The process of inspection can/will create public confrontation scenarios that could lead to health and safety related incidents. If physical altercations occur between inspectors and residents, public perception of such</p>	<p>CalRecycle has determined it is necessary to monitor container contamination on the front end of the solid waste collection and processing chain in order to ensure diversion of organic waste will achieve the targets set in statute. The regulations do not require jurisdictions to impose monetary fines and instead provide notice when container contamination is evident.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>incidents can impact future inspections. The public can question the need of the inspection program then target local governments, which will acquiesce and defer to the State.</p> <p>Additionally, this punitive process potentially has no favorable outcome, either a resident is compliant, by which there is minimal satisfaction given expectations or a resident is not compliant, monitored, educated/admonished and then possibly fined. This process potentially leads to less recycling since it may be favorable for residents to prevent scrutiny/punishment by using the refuse cart exclusively. Since the inspection process is not "standardized" regarding number of checks on each route, there is a concern on regulatory oversight and evolving demands over time. Much like inspections for hazardous waste at solid waste facilities, load check programs differ throughout the State. Some programs include one load check per day while others include a commitment of 250 hours per month or up to 25 load checks per day. Load checks do not prevent all loads of hazardous waste entering landfills and similarly cart checks will not prevent all contamination.</p> <p>Efforts for Statewide collection standardization will be a challenge since acceptance criteria for each collection option can be different among jurisdictions per regional processing differences. Residuals will always be a part of the recycling/composting process and the scope of materials comprising residuals will differ over time.</p> <p>If there is any contamination, processing facilities will remove that contamination or the result will be unusable product. In as much as a zero contamination level will never be achieved, all processing facilities will have processes and systems to remove the contamination. If that has to occur regardless of the amount, then why place a potentially disproportionate effort towards zero contamination? The cost-benefit is not favorable.</p> <p>Regarding punitive actions specifically, please also note that while the draft legislation grants local jurisdictions the power and ability to establish oversight and, when necessary, fines in this process, each jurisdiction must pass this ordinance, independently. There is, however, no stipulation in the draft legislation for jurisdictions wherein the proposed ordinance fails to be passed due to voters overturning the proposed ordinance. This will result in a conflict between draft legislation and the feasibility of a jurisdiction to comply.</p> <p>Recommendation: Allow jurisdictions to deal with contamination issues locally based on need. Market forces can drive more oversight; however, as we have seen, contamination levels alone do not determine marketability. Alternatively, setting contamination limits, oversight and fines would need to be addressed and legislation passed on a State level with jurisdictions being made responsible for handling oversight and enforcement.</p>	
3050	Smith, B., Kern County	The census bureau uses at least 500 persons per square mile as denoting a potential urbanized area. Raising the density threshold can validate jurisdictions implementing cost effective collection services and including a second variable of	CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these

Comment Number	Received From	Question/Comment	Response(s)
		<p>organics generation/disposal, will enable the State to improve evaluation of waiver requests by including need.</p> <p>Draft regulations allow for low population waivers for jurisdictions with populations less than 5,000 people and less than 5000 tons of solid waste in 2014. Population densities for jurisdictions with less than 5,000 people are typically much greater than 500 ppsm, thus there should be consideration in increasing the viable population density for waiver consideration. Additionally, low population areas, in our particular case, are typically in arid areas of the state. Areas with 100 - 500 ppsm in remote, arid areas would generate a small amount of organic waste in residential areas. Low-density areas also contain large parcels, thus much of the generated organic waste in these areas are currently handled on site.</p> <p>Recommendation: Increase low population waivers threshold to either increase to 250 - 500 persons per square mile or modify language to include "for census tracts located in unincorporated portions of the county with low population density (50 - 500 ppsm) or low organics generation ... "</p>	<p>changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-document history of animal instruction is not quantifiable, therefore the Department cannot determine if</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife’s black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383’s organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
3051	Smith, B., Kern County	<p>Growth rates in sparse unincorporated areas are typically low and even in cases of significant growth, on a percentage basis, would still equate to an overall low density. In cases of anticipated growth prospects in unincorporated areas, solid waste services are addressed during the LAFCo/Municipal Service Review process. This would help ensure review of solid waste/recycling collection and handling services moving forward.</p> <p>Recommendation: Increase the valid waiver/exemption time to at least five years or allow for 2-year re-evaluation/approval processes to be extremely efficient and user-friendly.</p>	
3052	Smith, B., Kern County	<p>As documented in State SCLP studies, the bulk of the compostable materials capacity is in the San Joaquin Valley. Given that proposed regulations prohibit a jurisdiction from limiting out-of-jurisdiction organic waste, disposal tonnages will increase substantially for jurisdictions where composting facilities are located. Per AB 901 regulations, solid waste disposal from compost facilities (including residuals from the compost process) shall be appropriated to the jurisdiction of facility location. Even though there are proactive provisions within the proposed regulations to control contamination, the significant amounts of material handled by composting facilities will inevitably contain contamination in the 5 - 20% range. Additionally, as quality standards drive for more effective contamination separation, the affinity for increased residual disposal may continue. There are also no provisions or limitations, other than quality standards and permitted tonnage for a solid waste facility, to reject imported organic waste. Note that this would impact or question every CEQA process ever done particular to each facility with organics handling capabilities.</p> <p>Recommendation: Allow jurisdictions disposal modification opportunities to off-set increased disposal due to compost facility and organic waste processing residuals. Add language that would allow a solid waste facility additional reasoning to control the acceptance of imported organic waste.</p>	<p>Commenter is requesting disposal modification opportunities which are beyond the scope of this rulemaking and instead relevant to AB 939 oversight. In addition, nothing in the regulatory text would limit the application of appropriate standards to imported waste. Section 189901 (c) (1) provides that this section does not require a solid waste facility or operation to accept organic waste that does not meet the quality standards established by the solid waste facility or operation.</p>

Comment Number	Received From	Question/Comment	Response(s)
3053	Smith, B., Kern County	<p>The following comment is in regards to AB 901 /939 jurisdictional disposal accounting:  Recommendation: Should biosolids be deemed not suitable for additional processing or recovery, we recommend consideration for these unacceptable biosolids to qualify for annual disposal modification .</p>	<p>Comment is not relevant to the proposed regulations and is instead directed at AB 901/939 compliance.</p>
3054	Smith, B., Kern County	<p>In creating a guaranteed market for compost, it will be extremely difficult to predict the effects on the overall market. Since much of the material will now be earmarked and more composting will take place, we cannot ascertain market pricing and end-use waste-derived product quality may decrease. With drought conditions, movement towards more drought tolerant landscaping, artificial grass and water conservation efforts, we can expect the organic waste stream to moderate over time. This will put additional complexity on markets that may not be addressed in a timely manner through current re-evaluation language. Also, procurement protocol based on population without considering generation would not be equitable for jurisdictions with low-organic waste generation.  Recommendation: To either remove the procurement requirement to maintain the free market system or take a more measured approach with more flexibility added on purchasing levels and re-evaluation opportunities.</p>	<p>CalRecycle appreciates the complexity of predicting markets shifts once the requirements of SB 1383 are fully implemented. With that exact sentiment, we have deemed it important to ensure robust markets for recovered organic waste products by requiring local jurisdictions to procure and use those products. Public sector procurement will become even more important if product quality is impacted by poor program implementation, evolving waste streams, or other climate-induced impacts on organic waste generation.  CalRecycle disagrees with revising the population-based procurement target. The current approach relies on publicly available population data from the Department of Finance (DOF) to calculate a jurisdiction’s annual recovered organic waste product procurement target. In contrast, the comment does not recommend a methodology or data sources for their suggestions therefore any such approach would be subject to interpretation and would not be based on a public database.</p>
3055	Smith, B., Kern County	<p>Imposing penalties on non-profits that fail to keep records regarding pounds of edible food collected and transported per month and number of meals served to the under privileged would seem would seem immoral within the context of needing information for food recovery performance. A welcome issue would be that edible food collection increases such that the food cannot be distributed/serviced in a timely manner. This organic material will become an organic waste, if generation is higher than demand. When generation/processing is higher than demand, edible food will become hard to handle organic waste due to packaging and protein-content issues.  Food Recovery Organizations have supplied food to the under privileged for some time now and many non-qualifying restaurants and bakeries currently donate food but directly to the homeless. Organizational listings and assuring participating qualified generators and food recovery organizations are monitored should be sufficient. Markets will dictate since qualified generators desire to work with properly run and effective food recovery organizations.  Recommendation: Remove any penalties on food recovery organizations.</p>	<p>CalRecycle has revised the penalty amounts in Section 18997.2 from per day violations to per violation. The penalty provisions are consistent with the existing penalty limitations in the Government Code Sections 53069.4, 25132 and 36900. Entities in violation are given ample time through the Notice of Violation process to comply and avoid penalties. Jurisdictions have the discretion to develop their own factors to be considered when determining a penalty amount, such as but not limited to, the impact on a disadvantaged community or the ability to pay, similar to the factors used by the Department listed in section 18997.3(d).  A change to the regulatory text is not necessary. The penalty fines listed in Section 18997.2 Base Table 1 are the minimum penalty thresholds imposed by a jurisdiction. The severity levels allow a jurisdiction the discretion to penalize smaller businesses at the minimum penalty and levy a more substantial penalty against larger businesses that may be contributing more to the organic waste stream. These penalties are consistent with the limitations on fine levels for local agencies in the Government Code. The penalty fines listed in section 18997.3 Base Table 1-10 are minimum penalty threshold to be imposed by the Department and are specifically contemplated in the language of SB 1383 as being up to \$10,000 per day. These penalties are reserved for the jurisdictions and for entities when the jurisdiction has failed to enforce. In most programs with a progressive enforcement process, generators or operators have ample time to comply, resulting in very few fines. For example, Section 18995.4 explains the minimum timeframe for the process of issuing a Notice of Violation to an entity if they are found non-compliant. A jurisdiction has 60 days from the date of inspection to issue a NOV. This allows time for the entity to remedy the situation before the jurisdiction has to issue a NOV. If an NOV is issued, the entity has up to 150 days to come into compliance before the jurisdiction must commence action to impose a penalty. This allows an entity up to 210 days to remedy a violation before a penalty is imposed. Additional extensions are available due to extenuating circumstances or infrastructure deficiencies.</p>

Comment Number	Received From	Question/Comment	Response(s)
3056	Smith, B., Kern County	<p>Section 20700.5 Implementing this requirement arbitrarily without utilizing current landfill gas monitoring practices may not be prudent. Landfill gas programs already include surface emission monitoring and gas collection systems are under vacuum. Adding additional emission control measures at landfills would theoretically change the emissions reduction model based on the State's empirical-offset results regarding additional cover and should impact comparisons to composting and other proposed new technologies. This proposal can also initiate detrimental effects on groundwater by forcing landfill gas to migrate down towards aquifers. Another concern that needs consideration is the impact this will have on the existing landfill capacity. Increasing the required cover will have a direct impact on the lifespan of the landfill. While the overall goal is to move toward a "Zero Waste" principal, it should be recognized that these changes will not occur overnight. With the reduction in new landfills being permitted to be sited within the State, consideration must be given to the impacts to the projected lifespans of the existing landfills. Will early closure of landfills due to loss of capacity result in additional landfills (generally frowned upon) needing to be constructed? Will increased disposal costs due to loss of capacity in existing landfills result in the waste stream being sent out-of-state where GHG standards are not as strict? Will this regulation result in a net decrease in GHG, or simply add additional costs to customers for disposal outside of the regulated area?</p> <p>Recommendation: Add a provision to include an empirically based verification of need. If landfill gas is quantified at a certain level (x) during surface monitoring inspections, sufficient compacted earthen material shall be placed on surfaces of the fill to limit gas emissions to non-quantifiable level (x). Quantifiable level is based on the monitoring technologies used and reliability of results.</p> <p>In summation, adding language to add more flexibility will give us a better chance of success by targeting effectively while controlling disruption of current efforts and public perception. We also believe that the prescriptive and punitive bias written into the proposed regulations undermines a preferred holistic approach to control organic waste emissions. Regulatory-driven behavior of participants will differ. A natural inclination is for jurisdictions is to restrict lawns on new development (occurring now), encourage residents to renovate landscaping and replace/minimize lawns, use artificial grass and basically limit organics generation. This would appear as a win-win-win, decreased organics waste generation/handling, water conservation, and less maintenance costs for esidents and businesses. Implementing drought-tolerant landscaping with no grass lawns can impact local standardized collection since green carts would most likely not be required in new development areas. Las Vegas has implemented such programs. Are we also considering the photosynthesis rates that are currently taking place and will be reduced if regulations disrupt moving forward? Will we create a vast infrastructure for organic waste feed stocks that may moderate over time? Will water rates to consumers increase significantly because of less demand, which occurred during the</p>	<p>CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.</p>

Comment Number	Received From	Question/Comment	Response(s)
		recent drought? As you are aware, this is a balancing act, thus we recommend more flexibility to allow all of us to be more nimble to comply according to local needs with the constantly evolving markets, generation rates and waste streams.	
6058	Smith, B., Kern County	On behalf of the governing jurisdiction(s), business enterprises, and the citizens of Kern County, this Committee has found that the SB 1383 regulations will result in hardships on all parties related to the upfront cost, the competitive viability of organic end use products, increased monitoring and reporting, cross-jurisdictional contamination, and the general intrusive nature that will be placed upon our businesses and citizens.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
6059	Smith, B., Kern County	This committee is concerned that the overall nature of this Senate Bill has been derived from a theoretical model that has not been vetted in the real world and will not have a successful practical application and the jurisdictions, businesses, and citizens will be left with the fallout.	Comment noted. The commenter is expressing an opinion regarding the authorizing statute rather than the regulations or regulatory process.
6060	Smith, B., Kern County	The Kern County Solid Waste Management Advisory Committee and Local Task Force, in good faith; cannot support SB 1383, as presented.	Comment noted. The commenter is expressing an opinion regarding the authorizing statute rather than the regulations or regulatory process.
6061	Smith, B., Kern County	For these reasons, we urge you to reconsider many of the proposed components of SB 1383 and take a more flexible approach on timelines, specified scientific parameters, and the penal nature of the bill. It is our deepest hope that many of the submitted comments are adhered to and those facets of the bill are changed accordingly. .	The timelines are specified in statute and are beyond the authority of CalRecycle to change.
6406	Sommer, W., StopWaste	Enforcement: The current regulations codify much of our internal enforcement protocol, which is continually being refined for efficiency and effectiveness. Codifying internal processes makes them much harder to change and adapt based on what is learned from implementation in the field. Jurisdictions are expected to enforce very specific requirements, such as whether the bins inside a business are properly color coded, labeled and located in all customer areas that, in our experience, are unrealistic to implement due to the difficulty of gaining access and the cost that would be needed to spend extensive time for each inspection.	CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.

Comment Number	Received From	Question/Comment	Response(s)
		<p>Inspecting at the hauler-serviced bins, often outside in a publicly accessible area, is where the rubber meets the road in showing the results of employee sorting behavior. A generator successfully sorting organics as demonstrated at the hauler-serviced bin should not be penalized for not complying with color and labeling requirements for bins inside the business.</p>	
6407	Sommer, W., StopWaste	<p>Food Waste Prevention: Moving upstream to prevent food from going to waste avoids GHG emissions across the food cycle from production to consumption, in addition to avoiding landfill emissions when food goes to waste. Collective research shows that food waste prevention is the most impactful and least resource intensive strategy to reduce GHG emissions from food. For example, the EPA's Waste Reduction Model (WARM) demonstrates that source-reducing wasted food prevents 3.66 MTCO2E per ton of food. Bay Area Air Quality Management District's consumption-based emissions inventory shows an average two tons of CO2e avoided per ton of food waste prevented.</p> <p>We recommend that CalRecycle provide an exemption from food donation that recognizes and rewards the upstream efforts of generators implementing food waste prevention practices.</p>	<p>SB 1383's statutory requirement is to recover 20% of currently disposed edible food for human consumption by 2025. The statute does not include any requirement for California to achieve a food waste prevention target. As a result, CalRecycle will not require commercial edible food generators or jurisdictions to prevent or source reduce the amount of edible food they generate. CalRecycle does however recognize that some commercial edible food generators could have types of edible food available for food recovery that are not desired by food recovery organizations or services. One example would be a generator having significant quantities of food that does not meet the nutrition standards of food recovery organizations or food recovery services. To address this issue, CalRecycle added language to the edible food recovery education and outreach section to require jurisdictions to annually provide commercial edible food generators with information about the actions that commercial edible food generators can take to prevent the creation of food waste.</p> <p>To clarify, this is not a requirement for commercial edible food generators or jurisdictions to source reduce the amount of surplus edible food they generate. This is an education requirement intended to help generators learn how they can prevent the creation of food waste. Providing this education is critical to help generators that struggle to find outlets for their currently disposed edible food comply with SB 1383's commercial edible food generator requirements, as all tier one and tier two commercial edible food generators are still required to comply.</p> <p>Regarding the comment that CalRecycle provide an exemption from food donation that recognizes and rewards the upstream efforts of generators implementing food waste prevention practices. Adding a section for commercial edible food generator exemptions and de-minimis waivers to the regulatory text was not necessary. Adding a section for exemptions and de-minimis waivers was not necessary because the regulations are already structured so that many food facilities and food service establishments are exempt from compliance due to the smaller amounts of edible food they typically dispose. Only the entities identified as tier one and tier two commercial edible food generators are required to comply. Every other food facility or food service establishment that is not a tier one or tier two commercial edible food generator is exempt from SB 1383's regulations.</p> <p>CalRecycle recognizes, however, that some commercial edible food generators could experience extraordinary circumstances that could make compliance impracticable. To address this issue, CalRecycle revised Section 18991.3. Specifically, language was added to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. For the purposes of Section 18991.3 extraordinary circumstances are specified as (1) a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity. And (2) Acts of God such as earthquakes, wildfires, flooding, and other emergencies or natural disasters.</p>

Comment Number	Received From	Question/Comment	Response(s)
6408	Sommer, W., StopWaste	<p>Edible Food Recovery: We urge CalRecycle to more directly address the issue of “donation dumping” by generators on food recovery organizations. Although the proposed regulations allow food recovery organizations to reject certain types of food, in practice organizations are unlikely to reject donations out of concern that that they will not receive future donations. In addition, if an organization is accepting large quantities of food in one delivery, it is not possible to review the contents and reject part of the load. Adding types of food accepted to the list of food recovery organizations, as well as tracking the types of food received by food recovery organizations would reduce the potential for donation dumping. In addition, providing a statewide platform for generators and food recovery organizations to report directly to the state would reduce the reporting burden on jurisdictions.</p>	<p>Regarding the comment about donation dumping, CalRecycle recognizes that donation dumping occurs. The regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or a food recovery service. If a food recovery organization or service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383’s regulations prohibiting a food recovery organization or service from terminating their relationship with that particular generator.</p> <p>In addition, CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, commercial edible food generators, and jurisdictions. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and services from donation dumping and unexpected donations. We again would like to reiterate that the model food recovery agreement is only a template and is intended to be customized based on the needs of food recovery groups and commercial edible food generators.</p> <p>Regarding the commenter’s suggestion to add the types of food accepted to the list of food recovery organizations. CalRecycle has added a requirement to section 18985.2 in response to this comment and other comments that raised a similar concern. The new language requires the following to also be included with the list of food recovery organizations and food recovery services that the jurisdiction develops and maintains - "an indication of the types of food that the food recovery service or organization can accept for food recovery."</p> <p>The list of food recovery organizations and services is intended to serve as a tool to help generators find appropriate food recovery organizations and services to have a contract or written agreement with for food recovery. This addition was necessary to help make the list a more useful tool for commercial edible food generators. Listing the types of food the organization can accept will help generators determine what food recovery organizations or services they could potentially establish a contract or written agreement with. This addition to the regulatory text was also necessary to help protect food recovery organizations and food recovery services from receiving food that they are not equipped to handle.</p> <p>Regarding the comment about providing a platform where generators could report directly to CalRecycle, CalRecycle would like to clarify that commercial edible food generators do not have any reporting requirements. Commercial edible food generators have recordkeeping requirements. Therefore, a statewide reporting platform for commercial edible food generators to report directly to that state is not necessary. In addition, a statewide reporting platform where food recovery services and organizations would report directly to the state rather than to jurisdictions would severely reduce each jurisdiction’s ability to assess the effectiveness of their food recovery program and identify if improvements need to be made. Furthermore, the data that is reported directly to the jurisdiction is critical for helping the jurisdiction better understand the food recovery organizations and services making the greatest impact in their jurisdiction. This data can be used to help jurisdictions make decisions about food recovery organizations and services to promote and potentially direct funds to.</p>

Comment Number	Received From	Question/Comment	Response(s)
6409	Sommer, W., StopWaste	A more effective and easily enforced market-building tool is to require jurisdictions to enforce the Water Efficient Landscape Ordinance, which requires compost use in landscape construction. Compliance can be enforced through existing required permit documentation and jurisdictions' reports to the CA Department of Water Resources. This would be similar to the approach in Article 8: CALGreen Building Standards, which directs jurisdictions to require compliance with relevant measures in CALGreen, and could easily approximate the procurement targets set in the current draft. For example, the City of Oakland would be required to procure 43,392 cubic yards of compost (17,357 tons), which would cost over \$1M in materials. In 2017, the City of Oakland procured 950 CY compost. Through WELO enforcement in 2017, a total of 38,552 CY of compost (15,421 tons) was specified.	The proposed regulations have been changed to include a requirement that jurisdictions shall adopt ordinances or other enforceable mechanisms to require compliance with MWELO. There are specific aspects of MWELO that relate to the use of compost or mulch on landscaping and construction projects. These already adopted requirements provide a potential market for recovered organic waste products, like other ordinances jurisdictions adopt, this should already be enforced by jurisdictions. The MWELO provisions that are pertinent to reducing the disposal of organic waste are included in the regulations so that CalRecycle can ensure that those provisions are enforced. See also response to comment (refer to comment justification enforcement). The Procurement requirements are designed to further reduce organic waste disposal by increasing the procurement of recovered organic waste products. Enforcing laws that were already adopted to facilitate increased procurement is a method of ensuring that the organic waste products that should already be procured are procured. In other words, enforcing MWELO is a method of ensuring that minimum procurement amounts required by entities identified by MWELO prior to the adoption of SB 1383 are met. The proposed procurement requirements are separate and are designed to increase procurement of organic waste products in order to meet the statutory targets of SB 1383.
6410	Sommer, W., StopWaste	Infrastructure Capacity Planning: This information should be gathered at the state level by interviewing composting facilities throughout the state. Counties do not have access to the information required by SB 1383 (or AB 876). It is impossible for a county to know of all the other counties that are sending material to the same composting facility. Moreover, counties do not have contracts directly with facilities; more commonly this is done through haulers that have contracts with cities. Those agreements rarely specify a particular composting facility.	The purpose of this section is to require counties, in coordination with cities and regional agencies located within the county, to comply with provisions referenced in the following sections, and to provide CalRecycle with the ability to ensure that counties, cities, and regional agencies are cooperating on their overall organic waste capacity planning. The purpose of this section is to require that counties, and other local entities within their boundaries, work in conjunction with each other when compiling information related to estimating their organic waste tonnage, identifying existing organic waste recycling capacity, and estimating organic waste recycling capacity that will be needed. The capacity planning required by this section is necessary to ensure local jurisdictions are aware of and can address their capacity shortfalls and secure access to facilities that recovery organic waste. This will help increase organic waste recovery in California.
2061	St. John, Cerene; Page 1 of 3 Law Office of Cerene St. John	Section 18982. Definitions. There is no definition of "Container". It would be helpful to add one to clarify whether "container" includes bins and wheeled carts. The definition should also refer to whether or not this applies to all containers: residential, multi-family and commercial. Does it also include roll off boxes? (For example, a roll off of cardboard from a supermarket or a special event.)	"Containers" is a common term used to describe bins, carts, dumpsters, carts, roll-offs, debris bins, etc., and related and is for all containers, including residential and commercial.
2062	St. John, Cerene; Page 1 of 3 Law Office of Cerene St. John	Section 18982. Definitions. "Yellow Container" is the only container definition that still says the entire container must be yellow (lid and body). Is this an oversight or are all other containers required to have colored lids only, but the yellow (presumably food scrap) container is required to be entirely yellow. This is important particularly with regard to commercial and multi-family carts and bins.	CalRecycle responded to stakeholders who initial had issues with the container color being yellow because yellow containers will quickly become discolored and unattractive if used for the collection of food waste; and yellow coloration does not hold up well in UV conditions. Therefore, brown was chosen because brown coloration shows dirt less; and cart manufacturers can use higher percentages of recycled plastic to make brown versus yellow containers and lids, leading to more market demand for recycled plastic. CalRecycle has revised the definitions of the containers to be consistent with each other.

Comment Number	Received From	Question/Comment	Response(s)
2063	St. John, Cerene; Page 1 of 3 Law Office of Cerene St. John	Section 18982. Definitions. The definitions of “Blue Container”, “Green Container” and “Gray Container” are all slightly different. It would be helpful to conform all three plus the definition of “yellow container”.	CalRecycle has revised the definitions of the containers to be consistent with each other. CalRecycle responded to stakeholders who initial had issues with the container color being yellow because yellow containers will quickly become discolored and unattractive if used for the collection of food waste; and yellow coloration does not hold up well in UV conditions. Therefore, brown was chosen because brown coloration shows dirt less; and cart manufacturers can use higher percentages of recycled plastic to make brown versus yellow containers and lids, leading to more market demand for recycled plastic.
2064	St. John, Cerene; Page 1 of 3 Law Office of Cerene St. John	Section 18982. Definitions. While there is a definition for “High Diversion Organic Waste Processing Facility” there is no parallel definition that we can find in the Public Resources Code (PRC) for a High Diversion Recyclable Materials Processing Facility (aka a “Dirty MRF”). This would be the diversion level required for recyclable materials (glass, cans, plastics, paper, cardboard, etc.). While SB 1383 is focused on organics diversion, this “hole” in the PRC is a large loophole that could defeat the goals and purposes of AB 341. In writing local ordinances, the standards for use of a “dirty MRF”, if allowed, must be spelled out clearly and cover both recyclable materials and organics. Please clarify the level of diversion required for such a dirty MRF with regard to recyclable materials. We encourage you to make the requirement very high, in keeping with what a source-separated or “single stream” recycling program can achieve.	Comment noted. SB 1383 focuses on mandatory organics recycling. A dirty MRF would be required to meet the requirements of Title 14, Sections 17409.5.1 - 17409.5.11 for the purposes of organic waste recovery. SB 1383 does not establish diversion requirements for non-organic recyclables.
2065	St. John, Cerene; Page 1 of 3 Law Office of Cerene St. John	Sections 18984.1 “Three Container System” and 18984.2 “Two Container System”. A clarification in these sections would be helpful to confirm these apply to all generators: residential, commercial, and multi-family. A reader might assume they only apply to residential.	CalRecycle revised Section 18984 in response to this comment to further clarify that a jurisdiction can employ any combination of acceptable collection services, even though the regulations already allow a jurisdiction to comply with a flexible collection system.
2066	St. John, Cerene; Page 1 of 3 Law Office of Cerene St. John	Section 18984.1 (a) (6 ) A and B: Since CalRecycle has prescribed the specific color for all materials except food scraps, if a jurisdiction is operating a source-separated food scrap program, it would be helpful to standardize colors by saying that source-separated food scraps must be in a yellow container (or a yellow-lidded container). As you are aware, food scraps can be diverted as bioengineered feedstock, in which case they must be segregated from green waste and wood. It appears the goal of the regulations is to ultimately standardize colors statewide so when residents, businesses and customers move from city to city the color for the container for each material type is the same. This will greatly assist with public education, especially regarding food scraps diversion.	CalRecycle has revised the definitions of the containers to be consistent with each other. CalRecycle responded to stakeholders who initial had issues with the container color being yellow because yellow containers will quickly become discolored and unattractive if used for the collection of food waste; and yellow coloration does not hold up well in UV conditions. Therefore, brown was chosen because brown coloration shows dirt less; and cart manufacturers can use higher percentages of recycled plastic to make brown versus yellow containers and lids, leading to more market demand for recycled plastic.
2067	St. John, Cerene; Page 1 of 3 Law Office of Cerene St. John	Section 18984.5 “Container Contamination Minimization”. The draft regulations now contain no minimum level for what constitutes “Contamination”. A literal reading of the definition of “Container Contamination” in Section 18982 (“Definitions”) results in zero tolerance for any contamination in a container. That is an impossible standard to enforce at the local level via an ordinance. Likewise, without a specific percentage that constitutes contamination, a city cannot be expected to levy fines or penalties for violations, as required in Section 18997.2. Evidence is needed to prove that a violation has taken place. Therefore, a specific percentage of what constitutes contamination must be written into local mandatory	During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews.

Comment Number	Received From	Question/Comment	Response(s)
		<p>ordinances. It would be best if CalRecycle set the standard and applied it uniformly statewide. This would assist in public education and standardization of what is expected from city to city (especially for large restaurant and supermarket chains that have locations throughout the state). If CalRecycle fails to include a specific percentage contamination, then each jurisdiction will be forced to promulgate their own standard. This will lead to a hodge-podge of disparate requirements throughout the state. It is our recommendation that CalRecycle establish an achievable yet reasonable standard, somewhere between 5-15%.</p>	<p>These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
2068	St. John, Cerene; Page 1 of 3 Law Office of Cerene St. John	<p>I would also like to bring to your attention that there are already two contracts awarded by the City Councils of Tustin and Laguna Niguel (in October 2018 and November 2018 respectively) that fully incorporate the requirements and provisions of the draft SB 1383 regulations. Although it required a great deal of original and create drafting of the contracts, including performance standards, auditing and reporting requirements, both City Councils recognized the importance of the new law. Both contracts are now effective and program implementation, as required by SB 1383, is proceeding.</p>	<p>A change to the regulatory text is not necessary because the comment is not requesting any specific change but rather is noting actions that two cities have taken in response to SB 1383.</p>
6365	Steuer, M., City of Irvine	<p>In addition to allowing more time for processing capacity to develop, we encourage the state to commit financial resources (e.g., grant and payment programs) and utilize fiscal mechanisms (e.g., tax incentive programs) to encourage public and private investment in such infrastructure; these commitments should be memorialized and calendared within the regulations.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>

Comment Number	Received From	Question/Comment	Response(s)
6366	Steuer, M., City of Irvine	Deferral of Enforcement and Penalties: While we appreciate that the regulations allow for violation corrections prior to imposition of fines, we request as a matter of fairness that implementation of the compliance and penalty provisions on jurisdictions be deferred until such time when adequate local processing capacity is achieved in all regions of California including the Los Angeles - Orange County region.	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for 5053 waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.
6367	Steuer, M., City of Irvine	Exemption of Specified Materials from Organics Classification: We request that some materials be redefined or reclassified under the regulations. These include removing "building insulation and panels" from the definition of paper products, and exempting from the regulations certain organics within quarantine zones.	CalRecycle has revised Section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in Section 18993.3(c)(2) and therefore agrees with the proposed revision.
6368	Steuer, M., City of Irvine	Education and Outreach: To contain costs associated with preparation of public education materials, we request the provision requiring multi-lingual public education materials be changed to allow for compliance through 1) a short statement on each education piece (in the applicable language) that directs the non-English speaking person to the jurisdiction's website for materials in other languages, and/or 2) allows for graphic-rich public education materials as an option.	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
6334	Stewart, J., City of Bellflower	As currently drafted, the legislation is expected to impose a significant jurisdictional burden on program enforcement and recordkeeping, diverting already limited funds and resources. For example, Section 30.5 regarding Container Contamination Minimization states that upon finding prohibited contaminants in a container the jurisdiction or its designee will contact the generator or provide written notice to the generator. It is not feasible to determine and identify individual generators that contaminate a route unless containers are checked individually. Our residential curbside program utilizes automated side loading vehicles and covered bins. Adhering to the proposed legislation would require route drivers to physically examine hundreds of containers on each route on a daily basis and additional staffing resources to manage the processing of notices.	Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.

Comment Number	Received From	Question/Comment	Response(s)
			<p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
6335	Stewart, J., City of Bellflower	The proposed penalty structure for generators of organic waste, specifically residents and small businesses, is expected to disproportionately affect many of our low-income residents located within the community.	A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.
6336	Stewart, J., City of Bellflower	The City respectfully requests more flexibility in the regulations as currently drafted as well as more consideration on the burden that compliance with the proposed regulations will impose on jurisdictions.	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for 5053waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving

			significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.
21	Tai, N, Greenlynx	<p>It appears that lumber has been removed from this rulemaking altogether in any meaningful way, except as part of the definition of #46 "Organic Waste" and as acceptable in the "blue bin". Are you planning on dealing with the actual recovery of lumber in another rule or format? Deferring to Cal Green Code does not address the issue of recycling or reuse of lumber because it is not currently recycled in any jurisdiction - according to the CalRecycle definition of "recycling", except for the areas that are able to sell it as mulch.</p> <p>There is nothing under Article 8 requiring the recycling of lumber, which by your definition #46 is an organic waste. The requirement in CalGreen Code to recycle 65% of construction waste can easily be achieved with concrete alone on commercial projects and many residential projects, thus wood will not need to be recycled to meet this requirement in most cases.</p>	Wood/lumber is subject to organic waste collection requirements for commercial and residential generators, further the regulations require jurisdictions to enforce CALGreen standards for the recovery of construction and demolition waste which includes wood waste. CalRecycle disagrees that wood is not addressed in a consequential manner.
22	Tai, N, Greenlynx	Recycling is not waste prevention because only waste can be recycled. One must generate waste in order to recycle the waste. Therefore, if you are recycling, you have already generate waste. Although recycling is a very good thing, ideally it would be better to not generate any waste.	Thank you for the comment. The comment is not specific to any draft language released during the first comment period. SB 1383 is not specific to waste reduction - it is designed for organic waste diversion.
6369	Tenorio, T., Community Action Agency of Butte County, Inc.	Meeting the goals in SB 1383 will create significant burdens on food recovery organizations, as the pressure to take more food will occur with tightening mandatory commercial organics recycling costs requirements from AB 1826 (Chesbro, 2014) that will raise costs for food banks. We urge inclusion, in Article 13, of an impact assessment on food recovery organizations to understand this issue and provide information to jurisdictions and other stakeholders about how to respond to any challenges raised. For example, food banks will be wondering: Is the additional food recovery estimated from this equal to, less than, or more than the additional cost on food banks to meet the mandated requirements?	The regulations specify in Section 18990.2 that nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible generator. Food recovery organizations and services are not mandated to recover food nor are they mandated to establish contracts or written agreements with commercial edible food generators pursuant to Section 18991.3(b). If the costs to recover additional food are too great, then food recovery organizations and services do not have to recover additional food. Adding a requirement to Article 13 requiring jurisdictions to perform an impact assessment on food recovery organizations and services would be overly burdensome for jurisdictions as they are already required to assess edible food recovery capacity and increase capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs.
6370	Tenorio, T., Community Action Agency of Butte County, Inc.	We further urge CalRecycle to encourage jurisdictions to develop funding mechanisms that offset higher mandatory commercial organics recycling incurred that emerge in new partnerships due to recovery activities necessary to meet the 20% diversion goal. These include many possibilities, such as working with generators from which food banks currently do not receive donations that would require de-packaging due to organizational nutrition policies; and working with donors whose offerings have a lower yield of edible food and an accordingly higher percentage of food loss during the recovery process.	<p>CalRecycle recognizes that there is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10, Section 18991.1 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. If a jurisdiction decides to fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms, then it is at the discretion of the jurisdiction, not CalRecycle, to determine how the funding will be dispersed.</p> <p>CalRecycle would also like to clarify that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing specifications in their contracts or written agreements with commercial edible food generators. For further clarification, please refer to the FSOR.</p>

Comment Number	Received From	Question/Comment	Response(s)
6371	Tenorio, T., Community Action Agency of Butte County, Inc.	We request that funding mechanisms recognize that, 1) a large share of the costs associated with increasing the capacity for food rescue will be for labor and physical infrastructure costs associated with coordinating the additional food; and 2) recovery activities pursuant to SB 1383’s goal will nearly always augment work already being done with a mixture of existing and new capacity (staff, cold storage, vehicles, fuel and other fixed costs), and therefore funding should not be restricted to incremental pounds of food.	CalRecycle recognizes that there is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10, Section 18991.1 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. This language was included to encourage jurisdictions to establish a sustainable funding source to help cover their program implementation costs. If a jurisdiction decides to fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms, then it is at the discretion of the jurisdiction, not CalRecycle, to determine how the funding will be dispersed. CalRecycle would also like to clarify that nothing in SB 1383’s regulations requires a food recovery organization or service to establish a contract or written agreement with a commercial edible food generator. A food recovery organization or service may wish to consider any costs associated with recovering additional food when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator. CalRecycle would also like to note that nothing in SB 1383’s regulations prohibits a food recovery organization or a food recovery service from including cost-sharing language in their contracts or written agreements with commercial edible food generators. For further clarification please refer to the FSOR.
6372	Tenorio, T., Community Action Agency of Butte County, Inc.	CalRecycle should consider using the nationally established definition of food eligible for donation by the Bill Emerson Good Samaritan Food Donation Act & mirrored in AB 1219 (Eggman, 2017). If this language is not adopted, not only will there be inconsistency with existing practice, but also some food would require additional labeling to allow recovery and donation, placing an additional burden on food banks	In an early draft of the proposed regulations edible food was defined as: “Edible food” means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, “edible food” is not solid waste if it is recovered and not discarded.” Several commenters made the argument that this definition was too restrictive, because it described “recoverable food” not “edible food.” Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters’ concerns about the definition of “edible food” being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following: “Edible food” means food intended for human consumption. (A) For the purposes of this chapter, “edible food” is not solid waste if it is recovered and not discarded. (B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code. Although the final definition of “edible food” is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities.
6373	Tenorio, T., Community Action Agency of Butte County, Inc.	It is critical that CalRecycle and jurisdictions exempt the ‘nonprofit charitable organizations’ (food banks and their non-profit partners) from fees and penalties related to their own waste incurred during compliance with SB 1383 as long as they are accepting donations with the intention to distribute the food for consumption.	Nothing in SB 1383’s regulations requires a food recovery organization or a food recovery service to accept edible food. Section 18990.2 of the regulations already states, “(d) Nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible food generator.” If a food recovery organization or service cannot safely

Comment Number	Received From	Question/Comment	Response(s)
		Below we ask for a significant overhaul of the role of food recovery organizations in the data reporting regime. Reporting requirements must be re-centered on the generators that must comply with the diversion goal.	<p>collect and distribute food because it is at maximum capacity, then it should not be collecting any more food. In addition, nothing in SB 1383's regulations requires a food recovery organization or service to establish a contract or written agreement with a commercial edible food generator. A food recovery organization or service may wish to consider any costs relating to their own waste or residual food waste, when deciding whether or not to establish a contract or written agreement with a commercial edible food generator, thus subjecting them to increased costs associated with their own waste.</p> <p>With regard to the comment that reporting requirements be placed on generators, it is not prudent to require each individual commercial edible food generator to report information to the jurisdiction. Such a revision would require jurisdictions to review and aggregate data from thousands of commercial edible food generators rather than a much smaller number of food recovery organizations and food recovery services. For example, one food bank could work with over a hundred commercial edible food generators. It is far more efficient and feasible for a jurisdiction to review one report from the food bank rather than 100 individual reports from generators that all work with the same food bank.</p>
6374	Tenorio, T., Community Action Agency of Butte County, Inc.	We caution CalRecycle on the potential for SB 1383 regulations to create unintended consequences that could threaten the ability of food recovery organizations – charity non-profits that feed people experiencing hunger – to access sufficient food and nutrition resources. We ask that CalRecycle emphasize the EPA's Food Recovery Hierarchy pyramid, which highlights "Feed Hungry People – Donate extra food to food banks, soup kitchens, and shelters" as the primary strategy after "Source Reduction."	<p>A change to the regulatory text was not necessary for the following reasons. The first reason is that the U.S. EPA Food Recovery Hierarchy identifies food waste diversion practices that extend beyond the scope of SB 1383's edible food recovery statutory goal. Specifically, the U.S. EPA Food Recovery Hierarchy identifies source reduction of food waste as the most preferred diversion strategy and feeding animals as a key food waste diversion practice as well. Both source reduction of food waste and diverting food waste to feed animals extend beyond the scope of SB 1383's edible food recovery statutory goal and therefore it would not be appropriate to reference the U.S. EPA Food Recovery Hierarchy in SB 1383's edible food recovery regulations.</p> <p>In addition, most food banks, soup kitchens, and shelters in California are non-profit food recovery organizations. SB 1383's statute does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.</p>
1186	Thompson, David, City of Los Angeles, Dept. of Building & Safety, Local Enforcement Agency Program	a. Section 18984 identifies the Solid Waste Local Enforcement Agency as the designee to allow less frequent collection whereas Section 17331 designates the Local Health Officer. This proposed section of the regulations conflicts with the existing section that it cites. In the spirit of AB 1220, the LEA does not believe that having dual governing agencies regulating the collection frequency is efficient or necessary. The Local Health Officer through the Health Departments is doing an adequate job of monitoring compliance.	<p>CalRecycle has revised this section in response to comments. The section was modified to better clarify the LEAs role and responsibility as it pertains to this section. Section 17331 allows the local health officer to grant a waiver for the storage of waste for less than seven days. Whereas, Section 18984.11 (a)(3) (A)(1) will allow the jurisdiction, in consultation with the LEA, the ability to grant a waiver for the collection of waste at a frequency beyond the seven days. Including the LEA in this section gives them the opportunity to provide input before a jurisdiction grants a waiver. The jurisdiction or authorized hauler would demonstrate to the LEA that the longer storage of waste is done in a manner that would not cause the receiving solid waste facility or operation to be in violation of any applicable state minimum standards. It would be the jurisdiction's responsibility to (among other things) review and consider the franchise hauling agreements, city/county code, the public health and safety, and the LEAs recommendation whether the longer storage would impact the receiving facility before granting the waiver under this subsection.</p>

Comment Number	Received From	Question/Comment	Response(s)
1187	Thompson, David, City of Los Angeles, Dept. of Building & Safety, Local Enforcement Agency Program	Section 18984.11 b. The LEA's jurisdiction is in general with permitted solid waste facilities and operations. It does not regulate each individual property for collection frequency. Please clarify the role of the LEA if a property fails to submit the required waiver and does not remove waste as required per regulations, will the LEA be required to enforce this condition? If so, the LEA does not have the resources to conduct these new monitoring activities.	CalRecycle has revised this section in response to comments. The section was modified to better clarify the LEAs role and responsibility as it pertains to this section. Section 17331 allows the local health officer to grant a waiver for the storage of waste for less than seven days. Whereas, Section 18984.11 (a)(3) (A)(1) will allow the jurisdiction, in consultation with the LEA, the ability to grant a waiver for the collection of waste at a frequency beyond the seven days. Including the LEA in this section gives them the opportunity to provide input before a jurisdiction grants a waiver. The jurisdiction or authorized hauler would demonstrate to the LEA that the longer storage of waste is done in a manner that would not cause the receiving solid waste facility or operation to be in violation of any applicable state minimum standards. It would be the jurisdiction's responsibility to (among other things) review and consider the franchise hauling agreements, city/county code, the public health and safety, and the LEAs recommendation whether the longer storage would impact the receiving facility before granting the waiver under this subsection.
1188	Thompson, David, City of Los Angeles, Dept. of Building & Safety, Local Enforcement Agency Program	a. In Section 21660.2 (c)(3) states that LEA shall undertake additional measures to increase public notice and to encourage attendance. It goes on to state that the LEA may increase the noticing beyond one (1) mile. If going beyond a mile is "a choice", the use of the word "may", implies that everything less than a mile is a requirement. If this is the intent of the regulation, the LEA strongly opposes the one mile notification requirement. This would be extremely burdensome and costly to the LEA and facility operators, especially in highly dense urban neighborhoods.	CalRecycle has revised Section 21600.2 (c) in response to comments. The "one (1) mile" requirement in Subsection (c)(3) has been deleted and "shall" has been changed to "may," reverting back to the existing regulatory language.
1189	Thompson, David, City of Los Angeles, Dept. of Building & Safety, Local Enforcement Agency Program	b. Please explain how the 1 mile radius was determined for this section.	CalRecycle has revised Section 21600.2 (c) in response to comments. The "one (1) mile" requirement in Subsection (c)(3) has been deleted and "shall" has been changed to "may," reverting back to the existing regulatory language.
1190	Thompson, David, City of Los Angeles, Dept. of Building & Safety, Local Enforcement Agency Program	The purpose of the Short-Lived Climate Pollutants regulatory package was to address the reduction of organic waste methane emissions. Many of these proposed regulations do not appear to address this issue.	As they apply to CalRecycle, the Short-Lived Climate Pollutants requirements are to ensure the diversion of organic waste from landfills as opposed to having specific, quantifiable targets for methane reduction.
3638	Thompson, G., City of Jurupa Valley	Article 3, Section 18984.11 There is no waiver process granted to communities based on median income, or other widely utilized measure of economic means of the community. Lower income communities and the businesses that operate within them are subject to the same compliance procedures and implementation dates as higher income communities. Lower income communities have less discretionary income available to help offset inevitable service cost increases required to ensure compliance.	Numerous stakeholders suggested revisions to expand the number and type of areas eligible for waivers. In response, CalRecycle analyzed numerous alternatives including cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ). CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted and would unacceptably compromise the ability to meet the statutory organic waste diversion targets.
3639	Thompson, G., City of Jurupa Valley	Article 4, Section 18958.1	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.

Comment Number	Received From	Question/Comment	Response(s)
		<p>The direction to provide multi-language outreach efforts for limited English-speaking households creates an increased communication cost burden on minority communities; many of which have relatively more low to moderate-income residents based on recent census tract data. This creates a additional communication cost burden on communities that are relatively less able to absorb these costs. This section does not provide for any type of cost relief mechanism - by way of delayed implementation deadlines or other mechanisms that would mitigate the immediate cost burden to these communities</p>	
3640	Thompson, G., City of Jurupa Valley	<p>Article 16, Section 18997.2  The State is prescribing penalty amounts by which local jurisdictions must levy. This presents a fundamental paradigm shift from local jurisdictions as a neutral service delivery manager of solid waste hauling services to an enforcer of State laws regarding solid waste hauling services. Local jurisdictions are not provided flexibility in administering a fee assessment schedule that is based on the evidence and strategies derived from local officials who know their community dynamic better than the State. Local jurisdiction officials can theoretically develop less harsh penalties to encourage compliance, yet the regulation would not allow them to do so. This approach is not evidence-based, as it prescribes a compliance system without taking local considerations into account. Local jurisdictions should be given flexibility and independence in implementing fee schedules based on local knowledge and familiarity with other successful compliance efforts that the local jurisdiction has implemented.</p>	<p>A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.</p>
3068	Thompson, G., Jurupa Valley	<p>There is no waiver process granted to communities based on median income, or other widely utilized measure of economic means of the community. Lower income communities and the businesses that operate within them are subject to the same compliance procedures and implementation dates as higher income communities. Lower income communities have less discretionary income available to help offset inevitable service costs increases required to ensure compliance.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers. CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state. Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
3069	Thompson, G., Jurupa Valley	The direction to provide multi-language outreach efforts for limited English-speaking households creates an increased communication cost burden on minority	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.

Comment Number	Received From	Question/Comment	Response(s)
		<p>communities; many of which have relatively more low to moderate-income residents based on recent tract data. This creates an additional communication cost burden on communities that are relatively less able to absorb these costs. This section does not provide for any type of cost relief mechanism -- by way of delayed implementation deadlines or other mechanisms that would mitigate the immediate cost burden to these communities.</p>	
3070	Thompson, G., Jurupa Valley	<p>The State is prescribing penalty amounts which local jurisdictions must levy. This presents a fundamental paradigm shift from local jurisdictions as a neutral service delivery manager of solid waste hauling services to an enforcer of State laws regarding solid waste hauling services. Local jurisdictions are not provided flexibility in administering a fee assessment schedule that is based on the evidence and strategies derived from local officials who know their community dynamic better than the State. Local jurisdiction officials can theoretically develop less harsh penalties to encourage compliance, yet the regulation would not allow them to do so. This approach is not evidence-based, as it prescribes a compliance system without taking local considerations into account. Local jurisdictions should be given flexibility and independence in implementing fee schedules based on local knowledge and familiarity with other successful compliance efforts that the local jurisdiction has implemented.</p>	<p>A change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in "substantial additional costs".</p> <p>CalRecycle disagrees with the suggestion to phase-in procurement or to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p> <p>However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p> <p>Finally, the regulations provide delayed implementation for rural jurisdictions. Several commenters recommended that the regulations phase-in the procurement requirements from high population to low population areas. The delayed implementation for rural areas (low population areas) was added in response to this request.</p>
6001	Thompson, S., Sacramento	<p>Regarding the management of organic materials on State lands, the regs should:</p> <ol style="list-style-type: none"> <li>1) Garden trimmings and other green waste generated by plant growth on State lands must be mulched or composted onsite, or at the nearest feasible location, and may not under any circumstances be sent to a landfill.</li> <li>2) Mulch and/or compost used on State lands must be sourced from the results of Rule #1. These materials can be purchased from other sources only if all State sources within a 50-mile radius are exhausted.</li> </ol>	<p>CalRecycle is declining to make this change because the scope of the rulemaking is not intended to cover mandates on where composting must occur and finds that the requirements for procurement adequately address encouraging end uses for landfill diverted material.</p>

		SB 1383 by hauling green waste to the landfill and purchasing commercial mulch and compost by the pallet, in single-use plastic bags.	
4433	Tillotson, T., County of Nevada Department of Public Works	Section 18984.10. Property and Business Owner Responsibilities, this requirement, as it relates to single family residential property owners, will be difficult for jurisdictions to verify, monitor and enforce. Additionally, this section is essentially requiring mandatory collection for all rental properties, which represents about 44% of total housing units in Nevada County. Many rural communities do not have mandatory collection. Due to the topography and climate in Nevada County there are also accessibility issues that could make this requirement problematic. We recommends that this requirement be limited to multifamily property owners (5 or more units), and businesses.	CalRecycle revised Section 18984.10 in response to this comment to clarify that requirements on commercial business owners do not pertain to single family residences. Also note, in the current language, CalRecycle removed 'property owners' from this section.
4434	Tillotson, T., County of Nevada Department of Public Works	Section 18984.12. Waivers and Exemptions Granted by the Department, Nevada County is particularly concerned with the effect SB 1383 will have on our higher elevations customers in Eastern County (above 5,000 feet). Higher elevation customers live in "Bear Country" and currently utilize bear boxes which have serious capacity and siting issues. In the winter months snow creates additional issues with access and available space for bins. Nevada County believes that this is going to create an undue burden for these customers and a potential nuisance related to bears and other wildlife. For that reason Nevada County supports a 5,000 foot elevation exemption.	CalRecycle added Section 18984.12(d) in response to this comment. The changes will allow jurisdictions located at or above 4,500 feet apply for a waiver from the food and food soiled paper organic waste collection requirements. Jurisdictions would also be waived from providing containers to their generators. This waiver would apply for residential and small commercial generators that are not regulated by AB 1826. As the commenter noted, jurisdictions 4,500 feet and above face specific waste collection challenges as high-elevation, forested areas that include bear and other wild animal habitat. Food waste collection can attract vectors, including bears, to populated areas creating collection and public safety issues. This change is necessary to prevent a public safety issue that food waste separation and recycling can pose. Generators in high-elevation jurisdictions will be able to continue to use customer provided containers that fit in their locked bear boxes. Jurisdictions that qualify for this waiver, however, will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. This comment argued that the limited space of locked bear boxes, which this commenter's jurisdiction uses to secure garbage bins, creates a capacity issue. Although CalRecycle recognizes the threat that vectors, like bears, pose from the collection of food waste, nothing prevents the jurisdiction from providing smaller containers that could fit inside bear boxes.
4435	Tillotson, T., County of Nevada Department of Public Works	Section 18992.1. Organic Waste Recycling Capacity Planning, places the responsibility of providing or identifying sufficient organic waste processing capacity on local jurisdictions. However, it is common knowledge that California does not have sufficient infrastructure capacity to handle the amount of organics proposed under this legislation. Infrastructure required to implement these regulations are expected to cost billions and these facilities are difficult to site, and can take between five to ten years to get through the permitting process. This is particularly problematic in rural jurisdictions like Nevada County, which is in a uniquely sensitive zone of the Sierra Nevada mountain range, with many historic sites, mines, sensitive plant and animal species, etc. Additionally, topography, water quality and drainage issues make siting a facility very difficult in this region. The current Solid Waste Division operation employs two County staff. Our facilities include a closed landfill and 3 small transfer stations operated through a franchise agreement. Nevada	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA).

Comment Number	Received From	Question/Comment	Response(s)
		<p>County has neither the space at existing facilities, nor the staff and funding to support an organic waste processing facility. This legislation will result in an onerous unfunded mandate to local jurisdictions and disproportionately shifts the implementation, infrastructure and enforcement cost burden from the Cities and State. to Counties. The timing of this legislation could not be worse, global recycling markets are at an all-time low with an unstable future and labor and hauling costs steadily increasing. Nevada County is currently drafting a resolution in support of a statewide commission on recycling markets (see attached).</p>	<p>CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4436	Tillotson, T., County of Nevada Department of Public Works	<p>4) Section 18993.1. Recovered Organic Waste Product Procurement Target, the county has a green procurement policy and purchases products, including paper, made from recycled content whenever possible. Under this mandate, Nevada County would be required to purchase 7,000 tons of recycled organic waste products per year. Due to the climate and terrain, County facilities utilize xeriscaping so purchasing compost in large quantities is not required or practical. It is unclear what the benefits of purchasing this material would be to the County or how it would be used. This requirement should take into consideration the jurisdictions actual need for such material. Encouraging the use of "recycled" organic material is ok; however, requiring jurisdictions to purchase something we do not need is problematic. Additionally, our hauler Waste Management utilizes a natural gas fleet in Nevada County, however, it is our understanding that only RNG purchased from an instate digestion facility would count toward the purchase of organic products. Rural jurisdictions do not have access to these facilities for the purpose of refilling our vehicles but we should get credit for using a natural gas fleet.</p>	<p>The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products to provide jurisdictions with even more flexibility to choose product that fit local needs.</p> <p>Regarding the proposal to base the procurement target methodology on "actual need" CalRecycle disagrees. The comments submitted on this lack specific language for quantifying such an approach. Even if the commenter recommended a quantifiable way to determine "actual need", California has over 400 diverse jurisdictions and it would be overly burdensome to account for each jurisdiction's "actual need" and to develop a procurement target and enforcement policy for each one.</p> <p>However, CalRecycle also recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction's need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. It can do this by showing that the amount of fuel, electricity, and gas for heating applications procured in the previous year is lower than the procurement target.</p> <p>Achieving the SB 1383 reductions will require the state to reduce landfill disposal to no more than 5.7 million tons of organic waste by 2025. In order to achieve these ambitious targets, the procurement regulations mandate that recovered organic waste products are produced from California, landfill-diverted organic waste. It is inconsistent with SB 1383 to mandate or incentivize activities that do not reduce in-state landfill disposal (e.g. procurement of compost produced from other states, or mulch produced from material that is not landfilled in California).</p>

Comment Number	Received From	Question/Comment	Response(s)
4437	Tillotson, T., County of Nevada Department of Public Works	Section 18996.2 Department Enforcement Action Over Jurisdictions. there does need to be some clarity regarding "sufficient funding" and an acknowledgment that there are limitations without funding support from the State. Low income conunULuties, excess tipping fees or hauling costs associated with new or struggling organic waste facilities, construction of new facilities, staffing. etc., should be taken into consideration when evaluating a jmjsdiction's good faith effort to comply with this .mandate. For example green waste rates have been an increasingly challenging issue for jurisdictions in high fire zones over the past few years. Nevada County has been looking for ways to lower rates and increase access to green waste services in our community and cannot afford to simply subsidize this service. We are concerned that one of the unintended consequences of this 1egislation will he increased organics waste rates and ultimately less access to adequate disposing of green waste. I know Calrecycle is taking a hard line on determining burdens to rate payers, but I think this will become an issue of particular concern for jurisdictions in high fire zones.	The statutory language of SB 1383 allows local jurisdictions to charge fees to offset the costs of compliance. Use of the phrase "sufficient funding" is a component in determining when a jurisdiction may be eligible for a Corrective Action Plan that will extend compliance deadlines. The purpose is to ensure that jurisdictions receive appropriate relief from administrative civil penalties when they are subject to circumstances truly beyond their control. A failure to fund SB 1383 enforcement is an element fully within the control of a jurisdiction given their statutory permission to charge fees to ensure that they can meet their regulatory obligations. The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
4438	Tillotson, T., County of Nevada Department of Public Works	Section 18997.2 Penalty Amounts, this will require the jurisdictions to hire staff and create a new administrative and enforcement division without providing any funding to support these efforts.	Statue 42652.5 states a local jurisdiction may charge and collect fees to recover the local jurisdiction's costs incurred in complying with the regulations
3843	Transcript Part 1 3843 (Edgar, E., Edgar Associates)	What's also going on today is procurement of the compost that comes from the reduction of methane and the RNG, the renewable natural gas, and the bioenergy. So, this is a case where one silo here with regards to the short-lived pollutants, but what's important is that the other silos need to be mentioned as well, which you do later on today with regards to the compost market development to sequester carbon in a land base, in order to create RNG for the -- get off petroleum, and add on bioenergy for woodchip. So, in the future, it would be nice to kind of look at the holistic picture. So, that's why this year we're looking at AB 144, and it's called the organic waste scoping plan, to kind of get out of their silos and try to have some type of cross-relational aspects of organic waste. So, this slide kind of demonstrates everybody's in their silos. And as we move forward, it would be nice to get out of the silos and try to have that type of interrelation with the market development of organic products.	Also, CalRecycle cannot expand the universe of organic waste to include materials that are not landfilled and thus are outside the scope of SB 1383. However, CalRecycle has already worked with the Governor's Office of Planning and Research to include capacity planning and related issues into the General Plan Guidelines ( <a href="https://www.calrecycle.ca.gov/organics/slcp">https://www.calrecycle.ca.gov/organics/slcp</a> ).
3844	Transcript Part 1 3844 (Pardo, V., California Refuse Recycling Council, Northern District)	I know we're not the only stakeholder community that's concerned about the organic waste definition. And I just want to reiterate that we'd like to see that definition be limited in scope to food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper as we see in AB 1826. And to that point, as we discussed and we'll discuss this later, the source-separated organic waste faction, we really see this looking at that green container and looking	Comment noted. CalRecycle disagrees that the definition of organic waste is too broad. The statute requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition. Organic waste defined in the regulation are subject to specific requirements

Comment Number	Received From	Question/Comment	Response(s)
		for that separate, you know, food waste focus. Not, you know, your carpet, your hazardous wood waste, or noncompostable paper. And to that point, the recyclable commodities that are tersely in the blue bin remaining in the blue bin and being managed as they have been under the 939 and 341 frame work.	(e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.
3845	Transcript Part 1 3845 (Scheibly, K., Marin Sanitary Service)	But on my drive over this morning, from San Rafael, watching the sun rise, I started thinking about AB 341 and its goals to skyrocket recycling, the recycling rate in California. Every year since that legislation in 2012, the recycling rate has declined. And so, I'm thinking about SB 1383 and its goals. It's a good law. The intent of the law is good. But are we thinking that AB 341 didn't succeed because we didn't have daily, weekly, monthly, quarterly reporting, because we didn't have robust load-checking policies at our materials recovery facilities, because we didn't have outreach and education programs? It just made me think what is the intent of all of the reporting requirements.	Comment noted. The intent of reporting requirements is to track compliance with the regulations and to measure progress in meeting the organic waste diversion goals in statute.
3846	Transcript Part 1 3846 (Schiavo, P., CR&R Environmental)	Since the 1980s, we've collectively, you know, the industry has invested billions of dollars for a pretty enhanced collection system. We're the best in the country. Right now, because of China's National Sword and other conditions, because paper is an international commodity, we don't have anywhere to go with it because of those issues. So, what's going to happen when we introduce another few million tons of paper into the system? Most likely, it's going to be getting disposed, which is already happening. This is just going to exacerbate the problem. What's going to happen with homeowners who are paying higher fees to have their so-called recyclables collected and find out they're going to be disposed? I think it's going to be a big, potential PR problem. So, we'd like to see either a suspension or omission of paper from the definition. We already submitted written comments, as well.	Comment noted. The statute requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.
3847	Transcript Part 1 3847 (Wiraatmadja, V., Weideman Group, for Harvest Power)	The first one is that in Article 12 procurements, the list of organic waste products eligible for procurement has to be expanded well beyond the compost and transportation categories. We don't want to prematurely cut off any new technologies that might be new products that come about as new technologies roll out into this space. And, specifically, we do want to see eligibility for pipeline injection of the renewable natural gas.	The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction's procurement target.

Comment Number	Received From	Question/Comment	Response(s)
			CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
3848	Transcript Part 1 3848 (Wiraatmadja, V., Weideman Group, for Harvest Power)	Second, we just want reiterate the need to adhere to the timeline. All of these projects take a lot of time to get up and running. The permitting-deciding, the actual building. And so, we need the regulatory certainty from like a strong adherence to the timeline to get the financing needed to build out these projects.	Thank you for the comment. The comment is in support of the current regulations and the timelines.
3849	Transcript Part 1 3849 (Wiraatmadja, V., Weideman Group, for Harvest Power)	And, finally, the enforcement mechanism and strong enforcement at the back end. It's going to be necessary in order to provide that market certainty, once again for these investments.	Comment noted. Comment is not recommending a change to the regulatory text.
3850	Transcript Part 1 3850 (Levin, J., Bioenergy Association of California)	Most importantly, there is no reason, legally or scientifically, to limit renewable transportation fuels to only the fuels that can be produced from anerobic digestion. And, in fact, the Air Resources Board right now is funding a study of converting urban wood waste, that would otherwise go to a landfill, as agricultural and forest wastes. But for CalRecycle purposes, the Air Board is already funding a study that would convert urban wood-based, through gasification, to pipeline biogas and then transportation fuel. And the regulations currently exclude a project that your sister agency is funding that would be carbon negative transportation fuel from wood waste, that would otherwise go to a landfill. So, we strongly urge CalRecycle to expand the definition in Article 1. It's definition number 62, of renewable transportation fuel, to include not just fuels produced from anerobic digestion, but fuels produced through gasification of other technologies consistent with Public	Regarding expanding the definition of "renewable gas" to include gas from technologies beyond anaerobic digestion such as combustion or noncombustion thermal technologies, CalRecycle disagrees with this approach. These technologies are not yet in practice on a commercial scale in California and lack the necessary conversion factors to include in Article 12. For the current regulatory proposal, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products using publicly available pathways and conversion factors. CalRecycle has revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.
3851	Transcript Part 1 3851 (Levin, J., Bioenergy Association of California)	We also urge you to adopt a definition of renewable electricity so that when we get to Article 12 this afternoon, we can talk about other end uses of biogas. Because it doesn't make sense to have projects that are already producing electricity, like landfill gas, or wastewater treatment facilities that could take additional diverted organic waste, and exclude electricity as an end use. So, we urge you to adopt a definition of renewable electricity in Article 1 as well.	The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable

Comment Number	Received From	Question/Comment	Response(s)
			<p>transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>Regarding landfill gas, the SB 1383 mandate is to recover organic waste that would be disposed. Generating gas in municipal solid waste landfills requires disposal of organic waste in landfills; therefore, it is inconsistent with statute to incentivize or mandate activities that do not reduce landfill disposal.</p>
3852	Transcript Part 1 3852 (Bullis, C., Rethink Waste)	<p>So, we would just ask that once we get kind of through adopting the regulations that we work with you, CalRecycle, and receive technical support and guidance from you on how to actually achieve these things. Whether it's from implementing route reviews, or developing an ordinance, or calculating some of our targets for procurement of organic waste, or what have you, those are all things that we need to build new technical capacity for.</p> <p>And as the agency that's the architect of the regulation, we would hope that you guys would be able to provide, you know, outreach, and support, and guidance to the locals.</p>	<p>Comment noted. This comment is not specific to any aspect of the regulatory text. CalRecycle intends to provide guidance to jurisdictions throughout 2020 and 2021 prior to the implementation date of the regulatory requirements. CalRecycle will additionally continue to provide regulatory guidance as the regulations take effect.</p>
3853	Transcript Part 1 3853 (Davis, J., Mojave Desert & Mountain Joint Powers Authority)	<p>In the regulatory impact assessment, we've got to look at what CalRecycle anticipates the cost impacts to be, about \$17 a year on single-family residents. The feedback I'm getting from our nine communities is it's substantially more than that in our area, and in some places it's multiples, you know, ten times to comply because of circumstances that we're still struggling to overcome in the regulations. All of our cities are economically disadvantaged by the State's own definition. CalRecycle recognizes the impacts on disadvantaged communities in some of the programs. And I'm asking that you consider that now, and particularly for economic disadvantaged communities.</p> <p>We have a city that is at 40 percent of the statewide median. If, in fact, it was a \$17 annual impact, the impact on a community that's 40 percent is much greater than the median income community. So, that \$17 as a median, you're looking at somewhere above, close to \$40 of impact, actual, you know, real felt impact on a community at 40 percent. So, you know, please give some consideration for waivers and also extenuating circumstances for the financial impact of these regulations.</p>	<p>Comment noted. CalRecycle disagrees that the cost per household is underestimated. Various commenters making this claim identified that they estimated the cost per household in their community is higher than the estimate estimated in the SRIA, or in the revised costs presented in the Appendix to the ISOR. The SRIA and the Appendix to the ISOR were not designed to specifically estimate the cost per household in, for example, Elk Grove or Santa Barbara. CalRecycle reiterates that the costs presented in both documents represent an estimated statewide average based on source documents that average costs from various regions across the state. Notably, the SRIA included the following disclaimer:</p> <p>“Note that actual increases in rates may vary among jurisdictions and may reflect other factors specific to that jurisdiction, including the existing level of program implementation the jurisdiction is already performing without a statutory mandate. For example, lower costs will result if the city or county has already implemented mandatory food waste collection for residential and/or commercial, and other programmatic activities, such as edible food recovery programs, education, and/or contamination monitoring. And larger cities and counties will have higher costs, e.g., they will have a larger number of inspections to conduct, etc. Rural cities and counties may</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>There's a lot to do for some communities that are going to be struggling to reach that.</p>	<p>have lower costs as they will have fewer inspections and they may be able to phase in implementation due to a lack of recycling infrastructure.”</p> <p>The Appendix to the ISOR also presents several statewide cost scenarios. CalRecycle conservatively estimated household costs based on the highest estimated cost scenario. CalRecycle acknowledges that jurisdictions that opted to require all businesses to have organic waste recycling services as a part of their implementation of AB 1826 will experience smaller cost increases than the jurisdictions that simply offered services rather than required them. CalRecycle additionally provided two regional variations in the Appendix to the ISOR to address</p> <p>The comment posits that the financial impacts of the regulations will be greater for disadvantaged communities but does not provide evidence or quantification of how the impacts will be greater in these communities. For example, will haulers or jurisdictions charge disadvantaged communities more to provide the same level of service provided to other generators? The comment does not provide specific examples of how waivers could be provided for disadvantaged communities, nor does it consider the impact such waivers could have on the state’s ability to achieve the statutory targets. CalRecycle considered the development of a waiver for disadvantaged communities statewide but found that a statewide exemption for disadvantaged communities would exempt a portion of organic waste generation that would threaten the ability of the state to achieve the statutory targets.</p> <p>CalRecycle encourages haulers and jurisdictions to structure their rates in a manner that reduces the economic burden experienced by low income communities. Haulers and jurisdictions have sufficient flexibility under existing law, and within the structure of the regulations to design their programs and rates in a manner that reduces the financial burden on economically disadvantaged communities. For example, haulers and jurisdictions could base their service rates on waste generation, which would allow economically disadvantaged generators that are likely to produce less waste to receive a lower rate. Jurisdictions and haulers could also identify other mechanisms to subsidize services for economically disadvantaged portions of their community.</p>
3854	Transcript Part 1 3854 (Brown, K., California Alliance for Community Composting)	<p>We're recommending that you create new and robust relevant definitions for community benefit composting, as opposed to what's existing now as community composting.</p> <p>We feel that definition that we submitted would recognize the community benefit nature of our work, in addition to setting size and volume limitations. It would also help replace and remedy the redundancy that exists in the current definition for community composting.</p>	<p>CalRecycle has noted the comment. CalRecycle is not proposing to revise the regulatory permitting tier structure. This is not within the scope of this rulemaking.</p>
3855	Transcript Part 1 3855 (Brown, K., California Alliance for Community Composting)	<p>We also made a suggestion, too, for adding an additional definition for micro composting. And reducing this to composting on site at any one time that does not exceed 20 cubic yards and 200 square feet.</p>	<p>CalRecycle has noted the comment. CalRecycle is not proposing to revise the regulatory permitting tier structure. This is not within the scope of this rulemaking.</p>

Comment Number	Received From	Question/Comment	Response(s)
3856	Transcript Part 1 3856 (Green, S., Sanitation District of Los Angeles County)	<p>I also had one comment about one of the definitions. I wanted to comment on the proposed definition of jurisdiction. So, from our perspective, the proposal now includes special districts that provide solid waste handling services. This would appear to include special districts, such as the sanitation districts, although solid waste handling isn't defined in the regs. It's defined in the code. Not sure if that applies.</p> <p>But as we're looking at the regulations, using that Public Resources Code definition, we are concerned because under the County Sanitation District Act, the act under which we were formed, we have a limited role. It does not include collection services.</p> <p>And so, in fact, it would be impossible for us to be able to fulfill the role of a jurisdiction under the proposed regulations. And so, that our request is to narrow that definition, either to exclude special districts, or to narrow it to just apply to special districts providing collection services, particularly if it's in lieu of a city or county.</p>	Thank you for the comment. CalRecycle revised the definition of 'jurisdiction' in Section 18982(a)(36) because the original term "handling" as used in the definition is overly broad. This change is necessary to provide clarity.
3857	Transcript Part 1 3857 (Boone, A., Center for Recycling Research)	<p>It was 30 years ago that we enacted AB 939. If you would ask the people who were involved at that time how much garbage we would have 30 years from now, nobody would have guessed the number that we have today. Okay, 42 million tons a year going to the dump was a crisis in 1989. Today, we don't seem to be too upset about that. I think we should be upset. I think we have to look back and what we've done in terms of enforcement, the kind of activities that have happened in the past 30 years that have failed to meet more significant waste reduction goals. It's very important and you need to understand that.</p>	Comment noted. The commenter is expressing an opinion regarding AB 939.
3858	Transcript Part 1 3858 (Boone, A., Center for Recycling Research)	<p>The second thing, mixed waste processing is a bad idea. Everybody in Europe knows that. A year and a half ago the European Union mandated that by 2024 all organics, all organics would be collected separately throughout the 500 million people who live in the European Union.</p> <p>We are now embarking on the step that they took 20 years ago and we're going to spend a lot of time pissing around, and fooling around with trying to rate and understand mixed waste processing, and we're going to come to the same conclusion they did, that it doesn't work very well. Okay. A lot of organics stay with the trash, et cetera.</p> <p>So, I think as both the National Recycling Coalition, and these are things I did not know the last time I talked to you, both the National Recycling Coalition and the Recycling Industries Coalition, which is the organization that includes all the paper manufacturers, and the glass manufacturers, and the metal manufacturers, they have all opposed mixed waste processing. Okay. You swimming upstream for the state that's supposed to be the innovation capital of the world. So, I'd like to see some changes there.</p>	Comment noted. The commenter is expressing a perspective on mixed waste processing.
3859	Transcript Part 1 3859 (Boone, A.,	<p>The third thing is that the 2011, we raised the question of what is comparable to source separation, okay. In nine years, this agency, in eight years this agency has failed to define what that means. I know people who are zero waste consultants</p>	Although it is unclear from the comment, the commenter is apparently referring to AB 341 (Chesboro, 2011) which has a requirement that commercial waste generators take at least one of the following actions:

Comment Number	Received From	Question/Comment	Response(s)
	Center for Recycling Research)	who are getting 90 percent waste reduction in various businesses that they set up zero waste programs in. Okay. That number, those kinds of numbers need to be understood by the agency and they need to be factored into what kind of expectations do we have on the part of people who want to do non-mixed waste processing. Do you understand that?	<p>(1) Source separate recyclable materials from solid waste and subscribe to a basic level of recycling service that includes collection, self-hauling, or other arrangements for the pickup of the recyclable materials.</p> <p>(2) Subscribe to a recycling service that may include mixed waste processing that yields diversion results comparable to source separation.</p> <p>The commenter is conflating the quantitative requirement of comparable waste diversion rates in AB 341 with a qualitative value determination on the nature of waste that is diverted after processing. The commenter appears to be suggesting that AB 341 puts requirements on the cleanliness or quality of waste that is diverted from disposal through mixed waste processing. It is clear from the language of AB 341 that this is not the case. The language speaks to “diversion results,” meaning a quantitative determination on levels of diversion.</p> <p>Regardless, there are existing requirements on land application of compostable material as well as finished compost that limit the content of pathogens, physical contaminants and metals and thus address the quality of diverted organic material anyway.</p> <p>It is notable that AB 341 is silent regarding organic material. The statute that is more relevant is AB 1826, which deals with business recycling of organic waste. AB 1826 contains no provisions regarding “comparable to source separation” and instead simply has a provision in PRC Section 42649.81(b) giving businesses the option to “subscribe to an organic waste recycling service that may include mixed waste processing that specifically recycles organic waste.”</p>
3860	Transcript Part 1 3860 (Noble, D., Association of Compost Producers)	One, Article 1, which has the definitions we did introduce and I will reintroduce them today, in addition to some further comments. Just general themes, there are some definitions that are leaving out, and we proposed a few new ones, particularly relative to compost. Certified compost in particular, because not all composts are alike. So, using and making distinctions. Also, compost end-use products. In addition, chip and grind material is not included. We would argue to include that. As well as compost overs, in addition to compost -- compostable materials.	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. However, CalRecycle disagrees with adding the specific terms listed in the comment due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of potential products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.
3861	Transcript Part 1 3861 (Noble, D., Association of Compost Producers)	And then, as we did last year, wanting to introduce the terms bioproduct and bioresource to get away from or migrate away from the organic waste term.	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. Once the regulations are finalized, CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products. CalRecycle disagrees with the need to add definitions or examples of specific end uses in the regulatory language as recommended. For example, a jurisdiction has the flexibility to use compost for its local needs, which could be as varied as erosion control, school and community gardens, or a compost giveaway. It is overly burdensome and not feasible to list all the possible compost uses in the regulations.
3862	Transcript Part 1 3862 (Noble, D.,	But even the organic waste term has -- you have two different definitions. You know, one in the definitions and then one in the Article 11. And we argue that you	Comment noted. Article 11 uses a narrower definition of organic waste that aligns with existing planning requirements which jurisdictions must engage in to plan for organic waste capacity.

Comment Number	Received From	Question/Comment	Response(s)
	Association of Compost Producers)	<p>keep them the same, rather than creating a new definition for facility management. And the main reason for that is because you've limited a few of the terms, I have them written here, one of the main ones being manure.</p> <p>Since I know CalRecycle doesn't really manage manure, but the fact is that counties and local jurisdictions do have to manage that in concert with the woody material that is not part of the traditional waste system. And that's, in particular relative to how we define capacity. If we're only defining capacity as production capacity, under a given jurisdiction's regulations, or State regulations versus local, I think production capacity needs to also include market capacity. In other words, where are all these materials going. Use capacity, if you will. Because they're not going into the landfill, so where are they going? And if you produce too many products without having homes for those products, then you just have, you know, big piles of finished material with no market. So, all of that is in sort of nuanced definitions.</p>	
3863	Transcript Part 1 3863 (Noble, D., Association of Compost Producers)	<p>In addition, I think all of the articles need to be thought of in a whole systems way, not siloed, but fully integrated in terms of scale, from community compost up to huge facilities and everything in between. Because local communities have to integrate that with the markets, with the supply, as well as on the other side of integrating between all the departments and the different forms of capital, whether it be social, human, production, natural resources, and then financial capital.</p>	<p>Comment noted. The commenter is expressing a general opinion of how the regulations should be thought of.</p>
3864	Transcript Part 1 3864 (Oster, R., Diversion Strategies Consulting)	<p>And I felt compelled to get up here today because I think that today we're going to be hearing a lot about the challenges associated with designing, and implementing, and enforcing SB 1383. And those are all very just and it's important to work through the details with a fine toothed comb about how these regulations are going to be implemented. And we have a lot of fine, smart people who are doing that here.</p>	<p>Comment noted. Commenter is expressing an opinion as to the individuals involved in the rulemaking and general ideas as to how the rulemaking should be approached.</p>
3865	Transcript Part 1 3865 (Oster, R., Diversion Strategies Consulting)	<p>But I also felt the need to sort of get up and infuse a bit of hope and optimism into the conversation. And say that I think there are solutions providers outside of these walls that may not have the resources to dedicate to going through 1383, or coming here today to speak on behalf of their organization. But that there are solutions providers, and as far as I know, the edible food recovery space, the contamination identification and reporting space, as well as just the reporting and data collection in general that have readymade solutions for 1383, and are working diligently to design and provide new products. And so, I think more than ever before in this industry we are seeing a need to break down the barriers between hauling organizations and collection companies with technology providers, consultants, local government consultants, the nonprofit academia sector. And I'd just encourage everyone in the room to be aware of the people that are working to provide solutions, to reach across the table that you may not have before and come together to figure out ways to implement this really important rule.</p> <p>And so, I just wanted to encourage that, and infuse some hope and optimism, and say that California is the place where we applaud and incentivize innovation. And I believe that's happening around 1383.</p>	<p>Comment noted. Commenter is expressing general opinions regarding how the rulemaking should be approached and offering encouragement.</p>

Comment Number	Received From	Question/Comment	Response(s)
3866	Transcript Part 1 3866 (Lapis, N., Californians Against Waste)	It seems like a change from the previous draft is that there's no longer a requirement that the Air Board actually -- the Board, itself, actually vote to approve these individual technologies. It seems like it's now at the discretion of CalRecycle. That's potentially a workable option as long as we maintain the public process of it being approved at a public meeting, with notice, et cetera. Right now, it seems like it could be a staff decision. And I think given the nature of some of the things that will be proposed, it's important to have public input.	The commenter requests more certainty in approval of technologies and processes that might be considered technologies that constitute a reduction in landfill disposal pursuant to section 18983.2 of the regulation. To respond to the urgency of a need for approved technologies, section 18983.1 of the regulation was included in the proposed regulation. This section lists many technologies that are available today as approved landfill reduction technologies. For those technologies and processes that might constitute a reduction in landfill disposal, CalRecycle, in consultation with CARB, must do its due diligence to ensure that the technologies truly do reduce landfill disposal of organics as well as reduce greenhouse gas emissions—the latter being the primary purpose of the authorizing legislation (SB 1383) of this regulation. Further, to ensure that there is a clear timeline for approval of technologies and processes, CalRecycle proposed changes to the regulation that outline how long CalRecycle has to approve technologies and processes.
3867	Transcript Part 1 3867 (Lapis, N., Californians Against Waste)	And, additionally, I'd recommend that you add consideration of other potential impacts and impacts on disadvantaged communities, as well.	Comment noted. CalRecycle included provisions requiring additional notification/outreach requirements to disadvantaged communities in the solid waste permitting process.
3868	Transcript Part 1 3868 (Boone, A., Center for Recycling Research)	About five years ago, I was drawn to the fact that in the EPS laws being enacted around the country there was no rhyme or reason to it, but each state was sort of picking different materials to go after. And the question raised, that's current in my mind, is there a coordinated system to determine materials which are currently not marketable? And from that, I started making a list of all the materials I know that are not marketable. They have no market anywhere. And that's what belongs in the garbage can. What we always do, now, is we tell people hat to put in the recycling containers. What we really need to do is to tell people these are the materials that are allowed in the garbage can because there is no market for them. If we do that, then that does several tihnngs . One is it tells people what you need. It gives guidance to the people who are doing waste checking. And the other thing it does is it alerts the people who are manufacturing or handling these materials that they're on the S list from the State, because they belong in the garbage, because there's nothing else to do with them. Okay, and that to me -- nobody's tried that, yet. But it seems to me that if we're going to be innovative, we need to think about telling people these are the materials you cannot put in the garbage, rather than these are the materials you should put in the recycling. In Berkeley, now, we're currently designing a new transfer station. And it occurred to me, looking at that pile of stuff that people was allowed to dump in the transfer station, is we're actually enabling wasters by offering them a service. Because they come in with all this stuff mixed up. But if you sit there and take it all apart, it will be -- it's 90 percent of it's recyclable, over 90 percent. So, I think it's just a different way of looking at things.	Comment noted. Commenter is expressing a general opinion regarding the importance of markets for recyclables.
3869	Transcript Part 1 3869 (Levin, J., Bioenergy Association of California)	There's no reason to limit the conversion method to anerobic digestion. And in fact, many wastewater treatment facilities around the State want to take a second energy bite at that waste, reduce truck miles. In the Bay Area, alone, transporting digestate or biosolids from wastewater treatment facilities to the Central Valley, where they can be land applied, is 100,000 truck miles a year just to transport those	CalRecycle disagrees with expanding the definition of renewable gas beyond anaerobic digestion. The purpose of the current regulatory language is to be consistent with SB 1383 statute that specifies the adoption of policies that incentivize biomethane derived from solid waste facilities. In-vessel digestion facilities are solid waste facilities, which allows CalRecycle to verify that these facilities are reducing the disposal of organic waste. These alternative conversion technologies,

Comment Number	Received From	Question/Comment	Response(s)
		<p>biosolids to where they can be land applied. Many wastewater facilities and the California Association of Sanitation Agencies would like to be able to further convert biosolids to biochar, using gasification. They'll get additional energy out of the waste and significantly reduce the tons that then have to be trucked to where they can be land applied. So, we urge you to expand the definitions in Section 18983.1(6)(b) to include opportunities to further convert digestate and biosolids through gasification to biochar. Which according to the Air Resources Board is the only way to provide permanent carbon sequestration, which compost does not do. It provides nutrients and many other benefits, but not permanent, long-term carbon sequestration. So, there are many short-lived climate pollutant and greenhouse gas reasons to expand the definition of what can be land applied.</p>	<p>such as gasification as mentioned in the comment, are not yet in practice on a commercial scale in California and lack the necessary conversion factors to include in Article 12. For the current regulatory proposal, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products using publicly available pathways and conversion factors.</p>
3870	Transcript Part 1 3870 (Foster, C., City of Oceanside)	<p>This law is very important and our city supports it. However, the solutions to comply with this law shouldn't be one-size-fits-all and it needs to understand the complexities of the different industries impacted and involved. And limiting diversion opportunities to only anaerobic digestion and composting makes it extremely difficult for advancement in regards to our wastewater treatment facilities or other diversion opportunities.</p>	<p>The regulations include opportunities for other technologies to be considered as reduction of landfill disposal in Section 18983.2.</p>
3871	Transcript Part 1 3871 (Foster, C., City of Oceanside)	<p>And I see this section as CalRecycle trying to respond to the issues associating with limiting the diversion opportunities. But, truthfully, it's not enough. And it doesn't give us the confidence to be able to invest in infrastructure now, if we don't know if it will be approved from CalRecycle down the road.</p> <p>For example, has CalRecycle tested this Section 189 to see whether some of the other technologies and systems proposed would even comply, would even be approved by CalRecycle. For us to meet the diversion goals or the compliance goals by 2024, we need to invest in infrastructure now. And I can't get financial lending based off of something that may or may not be approved by CalRecycle, or a public comment process, as mentioned by Nick Lapis. So, that's very important.</p> <p>And that's different. That's not in my letter. The City of Oceanside submitted a letter. So, it's really important that you understand the need that we need confidence today, not in 2022 when the law is passed and this process is done.</p>	<p>The commenter does not request changes to the regulation, but requests that CalRecycle make available any tools or methodologies utilized to quantify greenhouse gas emissions reductions from organic waste diversion technologies, as well as other already-approved technologies and processes such as composting and anaerobic digestion. CalRecycle staff recognize that such tools and methodologies may be helpful to jurisdictions and will consider this request outside of the official regulatory process.</p> <p>The commenter requests more certainty in approval of technologies and processes that might be considered technologies that constitute a reduction in landfill disposal pursuant to section 18983.2 of the regulation. To respond to the urgency of a need for approved technologies, section 18983.1 of the regulation was included in the proposed regulation. This section lists many technologies that are available today as approved landfill reduction technologies. For those technologies and processes that might constitute a reduction in landfill disposal, CalRecycle, in consultation with CARB, must do its due diligence to ensure that the technologies truly do reduce landfill disposal of organics as well as reduce greenhouse gas emissions—the latter being the primary purpose of the authorizing legislation (SB 1383) of this regulation. Further, to ensure that there is a clear timeline for approval of technologies and processes, CalRecycle proposed changes to the regulation that outline how long CalRecycle has to approve technologies and processes.</p>
3872	Transcript Part 1 3872 (Foster, C., City of Oceanside)	<p>Additionally, I'd like to also just mention, to add to her comments, is I wouldn't even limit it to biochar. We're recommending that the language is changed to be more general, to state essentially diversion processes that would limit pathogen. So, CalRecycle to accept any processes in regards to land application that would limit the pathogen aspects of the material.</p>	<p>CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2e</sub> per short ton organic waste processed. Therefore, section 18983.1(b)(6)(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383.</p> <p>However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste.</p> <p>Please refer to Section 18983.2 for more information.</p>
3873	Transcript Part 1 3873 (Helget, C., Republic Services)	<p>Just a quick comment on MRF fines. Some comments are contained in our letter. I don't think this is redundant. But when you say substantially free of organics, I think is the term you used, does that mean 10 percent? What does that mean? I think we need to have a clearer definition. For plugging MRF fines, there are residuals that come off the line. There really isn't another use for them. And so, having an organic standard tied to them doesn't make any sense to us.</p>	<p>The provisions regarding MRF fines were removed from the regulatory language</p>
3874	Transcript Part 1 3874 (Schoonmaker, K. Stop Waste)	<p>But, it's about the compost emissions reduction factor that you're using for -- to constitute an efficient technology, an acceptable technology. So, that seems a lot lower, .3 is what you've got now, after the revisions. And the CERF is .56, right, for food and yard trimming. When I looked at the revisions that you made, one thing that stood out to me was using the Healthy Soils Initiative application rate, which works out to about like .1 inch, which is much lower than you would typically apply. And the way that they got that application, it was more kind of, to my understanding, what they would subsidize with the funding they had so they could spread it. So, it's not so much a recommended application rate that you would find for compost in an agricultural application. So, and it also doesn't take into account emission reductions from landscape, which is a higher application rate. So, I just wanted to make that point that that might be a little low, and I don't know if it's possible to refine it.</p>	<p>As the commenter notes, the 0.30 MTCO<sub>2</sub>e/short ton organic waste threshold for determining if a technology or process constitutes a reduction in landfill disposal is based on the greenhouse gas emissions reductions associated with composting. Staff used the best available science to derive a value that represents greenhouse gas emissions benefits for applying compost in lieu of synthetic fertilizer to agricultural crops throughout the state. Healthy Soils Program application rates are found in the Compost Application Rates for California Croplands and Rangelands for a CDFA Healthy Soils Incentives Program,<sup>2</sup> and those rates are based on scientific literature reviews, recommendations from the compost subcommittee of the Environmental Farming Act Science Advisory Panel, and public comments. Actual compost applications rates will vary depending on site-specific conditions, soil fertility needs, and other factors. Landscaping application rates were not considered since the majority of compost sold in California is used for agriculture.<sup>3</sup> The commenter asks if the compost emission factor is 0.56 MTCO<sub>2</sub>e per short ton for food and yard waste. This value cited is based on an incorrect value summarized in Table 14 from CARB's Method for Estimating Greenhouse Gas Emission Reductions from Diversion of Organic Waste from Landfills to Compost Facilities,<sup>4</sup> which did not subtract greenhouse gas emissions associated with producing compost. After subtracting greenhouse gas emissions from composting operations (e.g., fugitive methane and nitrous oxide from windrow composting operations), the final emission factor should have been 0.49 MTCO<sub>2</sub>e per short ton mixed organic waste. The commenter should note that staff modified CARB's methodology to derive an appropriate threshold for determining if a technology or process constitutes a reduction in landfill disposal.</p> <p>Several commenters suggested using avoided landfill emissions as the benchmark in the determination of processes or technologies that constitute a reduction in landfill disposal. Although this proposal might increase diversion of organics from landfills, it would not achieve the greenhouse gas emissions reductions required to meet the methane reduction target required by SB 1383 or the organics diversion targets specified in the Short-Lived Climate Pollutant Reduction Strategy. The benchmark value of 0.30 MTCO<sub>2</sub>e per short ton organic waste was set to ensure emission reductions for any new process or technology are comparable to the emission reductions necessary to achieve the strategy's emission reduction goal of 4 MMTCO<sub>2</sub>e for this sector.</p>

Comment Number	Received From	Question/Comment	Response(s)
			Several stakeholders submitted comments that indicate confusion about how the 0.30 number was calculated. To provide greater clarity, staff provide a detailed description about the calculation of this number in the guidance doc included in the record
3875	Transcript Part 1 3875 (Stein A., Environmental Health Trust)	The comment I wanted to make is that it seems as though the solution to pollution is -- you know, we all know the answer, right? But in this case, the solution to dilution really needs to be, you know, not diversion, not dilution. It really needs to be prevention. And we can't just think that we're going to avoid the pollution by just mixing it all up and making the contaminants, the pathogens, the toxics just by making them less because we're putting it in a bigger sea of stuff. It just isn't right. I don't know. But that's one comment.	Comment noted. Commenter is expressing a general opinion regarding the importance of markets for recyclables.
3876	Transcript Part 1 3876 (Stein A., Environmental Health Trust)	The other comment is that source-separated waste, mixing it with the mixed waste organics, or the remnants, it's -- you know, we're expending all kinds of capital to get the source-separated materials ready to be composted or processed. And then, we're thinking of mixing them together. I mean, we just spent all this money to keep them separate and now we're mixing them back. I just think that just doesn't fit in the definitions that you have.	A change to the regulatory text is not necessary. CalRecycle is interpreting this comment as requesting a prohibition on mixed waste processing. CalRecycle already determined that mixed waste processing is allowable if it meets the high diversion performance standard.
3877	Transcript Part 1 3877 (Cheyne, A., California Association of Food Banks)	On Article 11, specifically 18992.2 in the edible food recovery piece. In A, we ask for inclusion of additional stakeholders. We support the planning process completely and want to be on record on that. But would encourage that the counties, and cities, and regional agencies coordinate with the stakeholders as they do the assessments. Currently, as it's written there is specified engagement with emergency food recovery groups and other organizations in B, but that's only after the capacity is assessed. And we think it's prudent to actually talk with the groups on the ground who are going to have that firsthand knowledge. And so, to specify that that engagement occur, please, in A.	A change to the regulatory text was not necessary because it is inherent in the requirements of Section 18992.2 (a)(2)-(4) that counties, in coordination with jurisdictions and regional agencies located within the county, will have to consult with food recovery organizations and food recovery services. Section 18992.2 also states that in complying with this section the county in coordination with jurisdictions and regional agencies located within the county shall consult with food recovery organizations and food recovery services regarding existing, or proposed new and expanded capacity that could be accessed by the jurisdiction and its commercial edible food generators. CalRecycle would also like to clarify that nothing in SB 1383's regulations prohibits a county, jurisdiction, or regional agency from consulting with additional relevant stakeholders to assess edible food recovery capacity.
3878	Transcript Part 1 3878 (Cheyne, A., California Association of Food Banks)	And then, in B, I just want to offer our strong and vocal support that this language remain in the final regulations. Coming from one of the few stakeholders who has been involved in this process since the beginning, I want to thank the Department for making sure that our voice is part of this conversation. I know that we are kind of an interesting piece that fits into this much larger discussion. But it's simply the case that we are under-resourced nonprofits. There's 41 or so food banks across California and there's about 6,000 other agencies that we would probably label food recovery organizations in this language. And, obviously, there's a dynamic space of food recovery services, and we all need to grow this. But simply put, you know, this food is not going to truck itself, keep itself cold. You know, the fuel that's required, the staff time, and the administrative costs. And so, the only way that this is going to work is to maintain the language that enables and empowers local jurisdictions to be able to decide what the capacity is, what the gaps are, and then what the	A change to the regulatory text was not necessary because this comment is in support of SB 1383's edible food recovery capacity planning requirements and the requirement that jurisdictions implement food recovery programs.

Comment Number	Received From	Question/Comment	Response(s)
		response is. Including the revenues, and resources, and approaches used to close that gap.	
3879	Transcript Part 1 3879 (Cheyne, A., California Association of Food Banks)	Finally, I just wanted to quickly comment on self-hauling. I realize that self-hauling is not exclusive to edible food by any means. But as I just mentioned, because of the lack of capacity, we think of self-hauling as one creative way to get at those edible food recovery gaps in terms of recovery organizations, and potentially be able to work out one-to-one relationships as it fits all the parties.	A change to the regulatory text was not necessary because this comment is in support of the regulatory provision allowing commercial edible food generators to self-haul their edible food to a food recovery organization provided that they have a contract or written agreement with that organization that allows them to self-haul.
3880	Transcript Part 1 3880 (Goncharoff, T., Santa Cruz County)	I wanted to focus for a moment on the educational institutions. Those of us who speak on these issues around the State know that the level of awareness among local governments is not nearly what we would with it to be. I can tell you, among educational institutions this is not on their radar at all. So, I would encourage the Department to consider a targeted outreach program specifically for local school districts who need to know what's coming and start preparing.	Comment noted. Commenter is suggesting target outreach will be important for education institutions. CalRecycle will be performing outreach as a component of regulatory implementation.
3881	Transcript Part 1 3881 (Goncharoff, T., Santa Cruz County)	I also wanted to share a little bit from our experience in Santa Cruz County. We began collecting and processing food waste from businesses, institutions, and schools in Santa Cruz County in 2006. At the elementary school level, we have seen a lot of succes. Middle schools and high schools not so much. You might imagine, because they tend to be sprawling campuses full of teenagers that the logistical and oversight challenges are really problematic. And because local jurisdictions have very limited authority over schools, our ability to address these problems are also limited. So, if we're going to have a successful program among educational institutions, I think the Department is going to need to consider what kind of oversight and assistance they can provide to help a school district succeed.	Local jurisdictions should still provide education to non-local entities and local education agencies within their geographic boundaries, as they already are doing under AB 1826 and AB 341. It is Important for these entities to know what collection options are available locally. CalRecycle will also provide assistance to local education agencies in implementing programs. The regulations already provide that compliance with this provision by these entities would be enforced by CalRecycle. CalRecycle will be providing guidance and training to regulated entities including schools.
3882	Transcript Part 1 3882 (Davis, J., Mojave Desert & Mountain Recycling Authority)	But Cara, on the slides you'd show on the collection system I think were helpful. There's language in 18984.2(a)(3) that seems to allow what I would call a hybrid system, where you can put stuff in one container that isn't otherwise allowed. You really need to split that out from the section. It's really hard to read through and understand what is meant by that (a)(3) exclusion because there's language that comes back and seems to say, yeah, you can do it, but you can't do it. And then, clarify both the monitorin bags, prohibited materials, all of those if you're going to relate it back to (a)(3) when you read down forward, do you really need to do the same level of monitoring on that hybrid container or is it like a grey container? So, just a suggestion. It would make it much more helpful to understand it.	During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels. CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions.

Comment Number	Received From	Question/Comment	Response(s)
			<p>However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in 31 Section 18982 (a)(65) which allows the use of cameras to determine container contamination. In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization</p>
3883	Transcript Part 1 3883 (Davis, J., Mojave Desert & Mountain Recycling Authority)	<p>On monitoring, generally, it seems like when you start a program, when you change something, you know, it's important to emphasize the quality to maybe the quarterly monitoring of all routes makes sense. As you go forward and people are performing well, why keep going back and requiring the pretty massgive expenditure of effort and funds. So, you know, give some relief once there's evidence that the program's working well. To me, the evidence is at the receiving facility, the compost facility, the organics facility, the recycling facility that receives the material. And you've already got language in there that feeds that back into the monitoring loop. So, give some thought to not continually requiring quarterly monitoring when there's no necessity for it.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. CalRecycle also revised it to be annual. A jurisdiction could change from route based to facility based monitoring in the scenario that the commenter provides.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. 3884	Transcript Part 1 3884 (Davis, J., Mojave Desert & Mountain Recycling Authority)	<p>Howard, on the -- low population, that's really generation and not all communities are the same. And economically disadvantaged communities typically generate less per capita. And yet, you've got a population threshold that they have to reach. I'd suggest using 5,000 tons. If that's the number to use, use 5,000 tons. Why tie it to a population number, when you're really after the generation and you're after the reduction.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500.</p>
3885	Transcript Part 1 3885 (Davis, J., Mojave Desert &	<p>And far as the de minimis language, I looked at it and if you're less than two cubic yards, you need to be ten gallons of material. If you're over two cubic yards, you've got 20 gallons. You know, is it really 20? And, you know if you're less than 10 cubic</p>	<p>As explained in the FSOR, 10 and 20 gallons respectively equate to roughly 10 percent of waste generation for small businesses that produce 2 cubic yards and 1 cubic yard of organic waste for that specific container per week. This de minimis threshold was established based on input from</p>

Comment Number	Received From	Question/Comment	Response(s)
	Mountain Recycling Authority)	yards and you're, you know, 15 gallons, do you sign up for more service so you can get the exemption as a two-cubic-yard. You know, so if it's really 20, just let it be 20 and not set that second hurdle on the really small generators.	stakeholders while also ensuring that these waivers do not compromise the state's ability to achieve the organic waste reduction targets.
3886	Transcript Part 1 3886 (Davis, J., Mojave Desert & Mountain Recycling Authority)	Just a couple more, quickly. I've made suggestions before on using language that's in the Beverage Container Recycling Act to give some more flexibility on the rural definition. It uses a federal definition. It's already in statute at CalRecycle and would give you more flexibility. It's not a hard, fast number. It just says, you know, there may be other circumstances than being in a rural county. The statute specifically did not use rural county as the threshold, and yet you've defaulted back to rural county. That's fine. But give some flexibility to those jurisdictions that are in non rural counties, and it's already in your statute to do that.	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
3887	Transcript Part 1 3887 (Davis, J., Mojave Desert & Mountain Recycling Authority)	<p>And, lastly, on the capacity I admit that I did not break down that section maybe enough. Because, Howard, I think I understood you to say that if the county doesn't have sufficient capacity, then all the cities in the county have to work to provide capacity. And maybe I misunderstood that. Because if a city has the reservation of capacity, you know, they shouldn't have to go through an extensive process to provide the capacity they already have.</p> <p>Note Response from Cara....MS. MORGAN: John, I'm not sure I completely understood you. So, one thing I'll clarify is that it is only the jurisdiction that does not demonstrate it has adequate capacity has to provide the implementation schedule. So, if the other cities and counties have demonstrated adequate capacity, there's nothing -- they just continue to report in subsequent reports.</p> <p>MR. DAVIS: There may be cities that don't have capacity. Overall county may not have adequate capacity. But there would be cities within that county that have adequate capacity there.</p> <p>MS. MORGAN: Correct. Does that answer it?</p> <p>MR. DAVIS: Okay, then I misunderstood. So, yeah, thank you.</p>	<p>This comment was addressed in the workshop. Only the jurisdiction that does not demonstrate it has adequate capacity has to provide the implementation schedule. So, if the other cities and counties have demonstrated adequate capacity, they just continue to report to the County for subsequent reports.</p>
3888	Transcript Part 1 3888 (Astor, K.)	<p>The first is facilities. And I guess I'm still somewhat concerned that these regulations appear to presume the sustained viability of the existing network of facilities and that the additional hundred or so facilities that we need to have come online will appear. You make that assumption at the same time that the regulations</p>	<p>Stakeholder comments regarding mixed waste processing facilities span a wide spectrum -- from allowing existing facilities to continue to operate even if they do not meet higher diversion standards, to establishing a waiver process for allowing such facilities to continue to operate for 10 to 15 years beyond the target dates in statute or the effective date of the regulations</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>themselves threaten the continued viability of certain kinds of facilities. As I've explained many times before in meetings and in public, a number of these facilities were financed by my clients, who despite having a corporate history of 30 or 40 years of operation, where the owners were forced to personally guarantee them. We're talking tens of millions of dollars. They didn't fall out of the sky. Someone has to come build them. I'm concerned about the chilling effect some of the performance standards these regulations imposed will have on the development of the new facilities that these regulations rely on. I, therefore, believe that there ought to be some form of allowance. Call it a grandfather, or whatever you want, for facilities. And this can be mixed waste facilities. I can be other kinds of facilities. There are facilities out there that are 939 driven that provide significant diversion, that perform as they were designed to perform. Let us not do any injury to them. We know that Section 2 of AB 341 actually stated the Legislature's intent six years ago that these facilities should be as a valuable asset. They provide a net environmental benefit to the community. Their continued operation should be sustained and they should be expanded. Let's do no harm to the existing network. Give them at least a ten-year glide path where they can continue to operate, even if they don't qualify as high-performing MRFs, or whatever the new terminology is. And let's let the new rulemaking be supplemental to, rather than diametrically opposed to some of the 939 efforts that we undertake.</p>	<p>respectively. As currently written, the regulations allow some time for a non-compliant facility to come into compliance; i.e., at a minimum, it will be over 6 months after the regulations are in effect before sufficient information is available to determine whether a facility has been out of compliance for two consecutive quarters. When this is the case, then a NOV would be issued to the jurisdiction(s) using that facility, requiring compliance within 90 days. The department may extend this period to a total of 180 days, after which it may issue a Corrective Action Plan for up to 24 months. This means that it will be at least 2 and possibly 3 years after the effective date of the regulations before the jurisdiction is not allowed to use a non-compliant facility. This would give facility operators several years in which to make necessary operational changes to come into compliance.</p> <p>During the informal rulemaking period, CalRecycle responded to many stakeholder requests for additional flexibility to allow these mixed waste facilities to continue operating beyond the effective date of the regulations. As noted in the ISOR, Sections 18984.2 and 18984.3 allow alternatives to providing a three-container source-separated organic waste collection service. Under these sections, jurisdictions are allowed to require their generators to use a service that does not provide generators with the opportunity to separate their organic waste for recovery at the curb. To ensure that the state can achieve the statutory organic waste reduction targets, these collection services are required to transport the containers that include organic waste to high diversion organic waste processing facilities that meet minimum organic content recovery rates (content recovery rates that are specified in Section 17409.5.1. While there is a lack of data demonstrating that organics can be effectively separated from other materials and still be recovered at a rate necessary to meet the statutory targets, a significant portion of stakeholders argued that such technologies are in development and should not be stymied by this regulation. To respond to stakeholders, Sections 18984.2 and 18984.3 provide the flexibility requested and lay out minimum standards for two-container and unsegregated single-container organic waste collection services.</p> <p>Regarding the proposed exemption for one facility, CalRecycle disagrees in principle with the concept of carving out exemptions for specific facilities or specific jurisdictions on the basis of regulatory criteria that only fit that situation. If CalRecycle allowed this for one facility or one jurisdiction, then there would be no justification for not allowing similar proposals. This effectively invalidates the ability to create an even playing field with a single statewide regulation designed to achieve a statutory target. This could result in an unknown but conceivably large number of facilities and jurisdictions being exempted, with associated negative impacts on the ability to reach the mandated statewide organics disposal reduction goals.</p>
3889	Transcript Part 1 3889 (Astor, K.)	<p>Facilities aside, my other general comment is this. I've read the law itself, the statute rather closely, lately. And, you know, I see something of a gulf between what the statute says and the regs. But some of that is stylistic. You have, I think, the ability to be creative where you need to be and I recognize some of that discretion properly belongs with you. But when we talk about safe harbors or we talk about good faith effort, or something in that vein, the reaction we've gotten thus far is it wasn't authorized by the statute. I'm here to tell you there's an S load of stuff in your regulations that isn't directly, expressly authorized by the statute. So,</p>	<p>Consistent with CalRecycle's broad rulemaking authority, the proposed procurement requirements are designed to help achieve the organic waste diversion goals in SB 1383 by supporting markets for recovered organic waste products. The regulations have a direct nexus to achieving those organic waste diversion goals by preventing initially diverted organic waste from being disposed due to lack of end uses.</p> <p>Health and Safety Code Section 39730.8, also in SB 1383, refers to CalRecycle considering recommendations in the California Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for the use of biomethane and biogas. The IEPR recommended that "state agencies should</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>just as you've taken some liberties there, and for good cause, I would urge you to consider providing some recognition in the regulations for what happens if. If all of the assumptions that are being made don't prove true. Some of us believe, we already know that the facilities development will not occur at the pace it needs to and we're going to be left with inadequate processing capacity. And then, of course, there's the whole markets question. If National Sword has taught us anything, we can't presume, indefinitely, the availability of adequate markets for the material we hope to recover in this way. So, I'm not sure how that gets done, but I don't see an adequate enough expression of it now.</p>	<p>consider and, as appropriate, adopt policies and incentives to significantly increase the sustainable production and use of renewable gas." As such, provisions for the procurement of renewable transportation fuel generated from recovered organic waste.</p> <p>The Air Resources Board's Short Lived Climate Pollutant Strategy states, "CalRecycle will continue to work towards strengthening state procurement requirements relative to use of recycled organic products."</p> <p>The inclusion of compost as an eligible recovered organic waste procurement product aligns with policies and mandates for methane reduction as described in the Air Resources Board's SLCP Strategy. The Economic Analysis conducted for the SLCP Strategy notes several scenarios that can achieve the needed reductions in short-lived climate pollutants from the waste sector, and every scenario modeled includes new compost facilities. The purpose of a compost procurement requirement is to establish markets for compost, which is a product generated by organics recycling facilities which the SLCP Strategy identified as in need of market development.</p> <p>Regarding paper procurement requirements, CalRecycle's 2014 Waste Characterization Study found that paper accounts for 17.4 percent of the disposed waste stream.</p> <p>Requirements on jurisdictions to meet the recycled content paper procurement requirements will help grow markets for recycled content paper. Given the prevalence of paper in the disposal stream, increased procurement of recycled paper is needed to grow the market for recycled paper in order to achieve the organic waste reduction goals. This is necessary to help achieve the organic waste diversion goals in SB 1383 by ensuring an end use for diverted organic waste.</p> <p>Comment noted. The commenter argues that the regulations must be structured in a way that protects the existing investments of their members. Specifically, the commenter is referring to collection services and material recovery facilities that were established to process mixed waste. CalRecycle has sought to address this concern in a manner that is also in compliance with the statutory targets and requirements. As noted in the Initial Statement of Reasons, which was released for public review in January of 2019:</p> <p>"The draft regulations originally prohibited jurisdictions from implementing new mixed waste processing systems after 2022, and required all new services to implement source-separated curbside collection as a means of ensuring that collected organic waste would be clean and recoverable. In response to stakeholder feedback, CalRecycle eliminated the prohibition on new mixed waste processing systems provided that the receiving facilities demonstrate they are capable of recovering 75 percent of the organic content received from the mixed waste stream on an annual basis. The performance standard addresses stakeholder concerns about limiting flexibility, without compromising the goal for the regulations to achieve the statutory requirements."</p> <p>The ISOR goes on to note that CalRecycle crafted regulations to allow for mixed waste collection provided that these collection services transport collected material to a facility that recovers 50 percent of the organic content it received by 2022 and 75 percent by 2025:</p> <p>"With very few exceptions, unique materials can only be processed and recovered when they are kept separate from other materials. This is primarily due to the fact that distinct materials are recovered through separate processes that are specifically designed to handle only that type of material. For example, metals, paper, and plastics are remanufactured through distinct processes</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>(e.g. metal is smelted, paper is pulped and washed). Largely because of this, while material may be valuable as a homogenous commodity, it can become difficult or impossible to recycle when it is contaminated with other materials (e.g. many materials lose their value when they are commingled with other materials.) This principle holds true, and is perhaps more of a factor in the recovery of organic waste. Required source-separation of organic waste helps ensure that organics are kept clean, separate and recoverable.</p> <p>However; throughout the informal regulatory engagement process stakeholders raised concerns about potential costs associated with providing commercial and residential generators with a third container to source separate organic waste.</p> <p>Stakeholders also noted that several cities and counties implement single container collection services and process all the collected material for recovery. Stakeholders argued that allowing the use of a single-container collection system is a viable and cost-effective alternative that can help the state meet that statutory organic waste recovery targets.</p> <p>To respond to stakeholder requests for additional flexibility CalRecycle crafted this section and Section 18984.2. These sections allow alternatives to providing a three-container source-separated organic waste collection service. Under these section jurisdictions are allowed to require their generators to use a service that does not provide the generators the opportunity to separate their organic waste for recovery at the curb. In order to ensure that the state can achieve the statutory organic waste reduction targets, these collections services are required to transport the containers that include organic waste to high diversion organic waste processing facilities that meet minimum organic content recovery rates (content recovery rates are specified in Subdivision (b) of this section)..."</p> <p>The commenter has stated in each comment period, that they believe the requirement to recover 75 percent of the organic content collected in these mixed waste collection services is unrealistic and infeasible. In turn CalRecycle staff repeatedly communicated to the commenter that the recovery targets cannot be lowered without compromising the integrity of the regulations. This was further documented for this commenter and the public in the ISOR:</p> <p>"These minimum recovery rates are necessary because when the opportunity to recover material through source separation is lost, the state must ensure that minimum recovery levels are met at processing facilities. While this section provides additional flexibility to jurisdictions, CalRecycle must consider its obligation to ensure that the regulations are designed to achieve the statutory targets. If 100 percent of jurisdictions employed this collection option in 2022 the state could not meet the mandatory recovery target of 50 percent unless at least 50 percent of the organic waste collected from these services is recovered.</p> <p>Similarly, if 100 percent of jurisdictions employed this collection option in 2025 the state could not meet the mandatory recovery target of 75 percent unless 75 percent of the organic waste collected from these services is recovered.</p> <p>Therefore, in order to meet the recovery targets specified in statute and the state's ultimate climate goals the recovery standards included in this section are the minimum standards necessary.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>As generation of organic waste increases with population growth, these minimum recovery rates may need to be revisited. As stated previously the organic waste reduction targets are linked to a 2014 baseline of 23 million tons. This requires the state to dispose of no more than 5.7 million tons by 2025. If, as CalRecycle projects, generation increases to 26 million tons of organic waste by 2025, recovering 75 percent of 25 million tons will only reduce disposal to slightly more than 6 million tons, resulting in the state missing its organic waste recovery targets. The need for this rate increase could be mitigated if higher recovery rates are achieved through source separation, or if efforts to increase source reduction through food recovery and other methods are successful. However, the recovery rates established in this regulation should be considered an absolute minimum.”</p> <p>CalRecycle has, prior to and during this rulemaking, communicated that the recovery efficiency requirements established in the regulation is the minimum level that the statute can tolerate. The commenter suggests existing infrastructure that cannot meet this standard should be “protected” or provided a “safe-harbor.” The commenter requests changes in the proposed regulations that cannot be reconciled with the statutory targets because CalRecycle finds that it cannot propose a regulation consistent with a statutory 2025 target that permits an unknown portion of the state from implementing the requirements necessary to achieve that target.</p> <p>CalRecycle acknowledges the role of existing infrastructure and acknowledges that previous investments in infrastructure were consciously made to achieve targets that were established prior to the adoption of SB 1383. However, the legislative direction in SB 1383 is unmistakably clear. The Legislature required CalRecycle to adopt regulations to achieve mandatory organic waste reduction levels. Nothing in the regulations prevents facility operators or jurisdictions from investing in facility upgrades or adapting existing facilities to process waste in a manner that meets the minimum regulatory requirements.</p>
3890	Transcript Part 1 3890 (Balsley, R., Alameda Stop Waste)	As it pertains to collection and planning, since multi-family properties are included in the definition of a commercial business, I'm concerned with the assumption that multi-family properties and businesses can be treated the same, with generator requirements and associated enforcement. Particularly, in regards to inspecting for organics in the garbage, and garbage and organics, and provision of organic and recycling containers in all areas where disposal containers are provided. Our ordinance acknowledges that a property owner or manager at a multi-family property does not have control over the sorting behavior of their tenants. And we only enforce against a lack of provision of service.	CalRecycle agrees that the provisions for commercial business sometimes need to differentiate between businesses and multifamily residential dwellings. However, rather than creating a new and separate definition of multifamily residential dwellings, CalRecycle added clarifying language in Section 18984.9.
3891	Transcript Part 1 3891 (Balsley, R., Alameda Stop Waste)	There is also a higher expectation of privacy in residential settings that needs to be considered. Early in our enforcement, ordinance enforcement, we attempted to inspect multi-family properties to verify provision of service and found that nearly half the time they couldn't get to the hauler bins due to access issues.	CalRecycle has revised Section 18984.10 in response to this comment. Section 18984.10 states that a commercial business shall provide or arrange access to their properties during all inspections conducted pursuant to Article 14 of this Chapter. For businesses such a multi-family that have access issues, a jurisdiction may prearrange with the property owner for an inspection. Section 18984.10(a)(1) was added to clarify the it is not intended for an employee or agent of the Department, or a jurisdiction, to enter the interior of a private residential property.
3892	Transcript Part 1 3892 (Balsley, R.,	Also, our ordinance provides for granting of waivers, such as de minimis generation of physical space constraints. The draft regulation language that requires annual	CalRecycle has revised the verification period to five years in response to this comment. Thank you for the support comment. This comment is in support of the current language.

Comment Number	Received From	Question/Comment	Response(s)
	Alameda Stop Waste)	verification of these waivers divert inspection and staff resources to these smaller generators from more important, larger generators, in my opinion.	
3893	Transcript Part 1 3893 (Balsley, R., Alameda Stop Waste)	Also, as it pertains to self-hauler requirements, in our ordinance and limitation we require businesses that self-haul, back-haul, share service or use a third-party, independent recyclers to submit a certification of recycling service form with information about where they're taking their recyclables and organics. While some of these are larger corporate entities that we've approved, many are small businesses that are trying to save money on collection costs by either taking their small amount of generated recyclables home or to a drop off recycling facility.	Jurisdictions are not required to identify every self-hauler. They are required to adopt an ordinance that requires compliance and provide general education about self-hauler requirements. Many comments noted that it would be difficult to identify and provide education information to all self-haulers, such as landscape companies, because jurisdictions do not have business license information on these entities; dedicating additional resources to identifying and educating all self-haulers would be burdensome and costly. Some jurisdictions do require businesses that self-haul, back-haul, share service, or use a third-party independent recycler to submit a Certification of Recycling Service form with information about where they are taking the recyclables or organics. CalRecycle modified deleted the requirements that jurisdictions separately identify and provide education to all self-haulers, along with associated reporting requirements. CalRecycle added a new Section 18985.1(a)(7) to require jurisdictions to include educational material on self-hauling requirements in the educational material that the jurisdictions already are required to provide to all generators. CalRecycle revised Section 18985.1(b) to include all education requirements for single unsegregated collection systems.
3894	Transcript Part 1 3894 (Balsley, R., Alameda Stop Waste)	The requirement to collect annual organic waste tonnage from smaller businesses would not be possible from those who aren't keeping track of the weights and back-hauling. And it's not worth the staff time to try and track that down.	Jurisdictions are not required to identify every self-hauler. They are required to adopt an ordinance that requires compliance and provide general education about self-hauler requirements. Many comments noted that it would be difficult to identify and provide education information to all self-haulers, such as landscape companies, because jurisdictions do not have business license information on these entities; dedicating additional resources to identifying and educating all self-haulers would be burdensome and costly. Some jurisdictions do require businesses that self-haul, back-haul, share service, or use a third-party independent recycler to submit a Certification of Recycling Service form with information about where they are taking the recyclables or organics. CalRecycle modified deleted the requirements that jurisdictions separately identify and provide education to all self-haulers, along with associated reporting requirements. CalRecycle added a new Section 18985.1(a)(7) to require jurisdictions to include educational material on self-hauling requirements in the educational material that the jurisdictions already are required to provide to all generators. CalRecycle revised Section 18985.1(b) to include all education requirements for single unsegregated collection systems.
3895	Transcript Part 1 3895 (Ryan, P., PF Ryan & Assoc.)	I represent and assist low and moderate-income communities in the Southern California desert...Within the structure of the exemptions that your Department provides, we have no relief for those communities. And as pointed out by John Davis earlier, we need to give some consideration to those communities. Because one current community that I work with has less than a ton a day of green waste, and primarily its palm, which you can't very easily process into viable products What I'm introducing today is some language that addresses a new section under the waivers and exemption criteria for extraordinary and extenuating circumstances exemptions. And this would mirror the rural exemptions, but only for those communities that are disadvantaged in the south...I would hate to think that the	CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers. CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square

Comment Number	Received From	Question/Comment	Response(s)
		<p>City of Blythe, for example, would have to process at the same level as Beverly Hills. That's just ludicrous and impossible to consider.</p>	<p>mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-document history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
6489	Transcript Part 2 6489 (Stein, A., Environmental Health Trust)	<p>My comments on this section is from Article 5, 17867, the general operating standards, but it applies to some other sections, too. It's about the LEA or the authority having jurisdiction, the AHJ, and other code. It appears that you're giving the LEAs the oversight on odors, and on other matters of quality of the operations. And there's not a uniformity from one LEA, in my county, of Alameda County, thank you very much -- Alameda County versus the LEA down in Santa Clara County. They act and have completely different ways of responding to the odor complaints. Five years, Milpitas odor. If you go there, five years of complaints and, you know, there hasn't been much solution. The LEA where I live, Davis Street, Alameda County says odors are not something that they have any authority over. So, I think you have it written in here the odors and the LEA has jurisdiction. You know, I think there needs to be more uniformity. Thank you.</p>	<p>CalRecycle has noted the comment. This is not within the scope of this rulemaking.</p>
6490	Transcript Part 2 6490 (Scheibly, K., Marin Sanitary Service)	<p>I believe this is Article 3, Section 1898.4 something, color-coding. It might be page 10, lines 27 through 29. I read it a few times. One, color-coding is a great step forward for the State, I firmly believe. However, I do not feel -- and this is in my comment letter along with pictures. But I thought it was worth reiterating. Dual stream recycling is not a split cart, necessarily. Dual stream recycling, from most in California, is separating fibers from containers. Not one side of a card landfill, one side food waste, one side recycling, one side compost. But one side's fiber and one side's container. So, if the color's blue, am I dark blue, light blue now? Or, am I different color? Because it says I can choose a fourth color for a fourth stream. But now, my recyclables are a different color and everyone else's are blue. Just a thought.</p>	<p>Sections 18984.1(a)(6)(B) and (C) and 18984.2(d)(1) do not require that only light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container. The regulations do not preclude a jurisdiction from having split carts, but in the commenter's scenario this would mean the jurisdiction has a 3-container system that meets the requirements of Section 18984.1. Also, Subsections 18984.1(a)(6)(B) and (C) do not require only that light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container.</p> <p>Further language was added clarifying that a jurisdiction could split the recycling portion of a two-container service to further segregate recyclables, however the gray container would still be required to be transported to a high diversion organic waste processing facility. See statement of purpose and necessity for Section 18984.2</p>
6491	Transcript Part 2 6491 (Brown, k., California Alliance for Community Composting)	<p>But we'd like to start out with Article 3 on collections, on the de minimis waivers, especially in rural areas. We're finding that this could be another opportunity to strengthen the language around supplemented onsite composting, on farm composting cooperatives by allowing up to 30 percent of feedstock to be sourced from offsite. So that farm cooperatives, themselves, can provide an opportunity for rural facilities to exist without needing to go through a full permitting process with CalRecycle. This could be for facilities that accept green material, agricultural material, agricultural byproduct material, herbivore manures, food material and vegetative food material up to 12,500 cubic yards. And</p>	<p>CalRecycle has noted the comment. CalRecycle is not proposing to revise the regulatory permitting tier structure. This is not within the scope of this rulemaking.</p>

Comment Number	Received From	Question/Comment	Response(s)
		the reason for this is that it could really offer an opportunity for community composting to not only be successful in urban areas, but also to be an option in rural areas that wouldn't be as accessible by collection haulers and local facilities in the area.	
6492	Transcript Part 2 6492 (Brown, k., California Alliance for Community Composting)	And then, the next point on collection, for self-hauling, we do appreciate that there is some language added to the draft regulations that say that any individual generator or a business, commercial can self-haul to community composting sites. However, I'm not sure if you're quite familiar with the self-hauling permit process. In Alameda County, especially Oakland, this is an all or nothing package deal. You can't just apply for a self-haul permit for organic material, only. So, it puts the generator into a really tough position to say I'd like to donate some of this organic material to a community composting site in hopes that I would reduce my overall waste collection bill. However, I'm only given the option to self-haul everything. That's makes them responsible for getting rid of their black bin and their blue bin on their own. So, we're asking that maybe there could be language put in that allows self-hauling of organics only to community benefit composting. Specific language that we'd like to recommend is for Section 18988.1, under Jurisdiction of Haulers and Self-Haulers, we'd like to add Section D. That would read: A jurisdiction shall not create unreasonable barriers to, or prohibitions against, the transport of organic material to a micro composting site, a community benefit composting site, or a supplemented onsite composting.	No change to the regulatory text is necessary to specifically mention community composting because Section 18990.1(b) establishes that a jurisdiction shall not implement or enforce an ordinance, policy, procedure, permit condition, or initiative that includes provisions that would prohibit the lawful processing and recovery of organic waste.
6493	Transcript Part 2 6493 (Brown, k., California Alliance for Community Composting)	And then, we'd also just like to emphasize the education and public outreach portion, and also capacity planning. We do understand that you've put in some language here that encourages jurisdictions to include us in not only their capacity planning, when they think about total volumes of material that's passing through these sites. But recognize as the role that we play in educating communities on the proper way to compost. And this would help an overall system succeed in reducing the amount of contaminants that make it into the green bin. As soon as individuals have an individualized connection with the composting process, they have more incentive to do it correctly and us a three-bin system. So, as far as the public outreach, support and a little bit more coordination between jurisdictions and community composters. Maybe that could be through funding or budgeting offered also in these regulations. Thank you very much.	The regulations include a requirement for consultation with relevant entities including jurisdictions, community composting operations, and edible food recovery services and organizations. Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.
6494	Transcript Part 2 6494 (Foster, C., City of Oceanside)	Actually, I'm going to jump to community composting . After about 15 years in this industry and hearing about every opportunity and loophole for generators to get out of paying their bills, or to be able to dump on their neighbor, or dump in the backyard, all their restaurants food waste or waste, I'm very concerned at the lack of accountability on community composting, in particular. I do community composting. I support community composting. I think this regulation needs to support community composting. However, we need accountability for community composting. This regulation provides exemptions on community composting in regards to public nuisances, storage, size. It provides no language as to whether	Community composting, as specified in Section 17855(a)(4), is an excluded activity and therefore does not require a solid waste facility permit or EA Notification. CalRecycle determined during the rulemaking process for the 2015 compostable material handling rulemaking that the small size of these operations does not represent a significant enough threat to public health, safety, or the environment to require permitting. To ensure oversight, however, a solid waste Enforcement Agency may inspect these activities to verify that continued qualification as an excluded activity and may take any necessary enforcement action. Nothing in the cited section allows for community composting operations to be exempt from registering or reporting to the jurisdiction. In addition, any community composting operation must operate lawfully in accordance with all

Comment Number	Received From	Question/Comment	Response(s)
		community composting operations should report. However, businesses can say they're using community composting and I have no way to find out if that's true or not because there's no reporting system or interaction between the jurisdiction and the community composters, because they have a blanket exemption throughout the regulation and rule.	applicable local and state requirements regarding size and throughput. These regulations also do not allow community composting operations to be in violation of any local franchise agreement. Nothing in the regulations prohibits a jurisdiction from having more stringent requirements, such as requiring reporting. Regarding the comment that “this is contradictory to other requirements throughout the law that require jurisdictions to report on all diversion activities including community composting”, there is nothing in the regulations that requires jurisdictions to report on all diversion activities.
6495	Transcript Part 2 6495 (Foster, C., City of Oceanside)	That also goes, taht also speaks to the other issue that I'm struggling with, our city is struggling with , is the physical space waiver. It's really interesting, this rule is extremely prescriptive everywhere else. And overly prescriptive, that is the general comment throughout our letter. But in regards to the physical space waiver, I can tell a business they have to put a can next to every trash and recycling inside their business, they have to label it such and such, et cetera. They have to do A, B all the way through Z. But if they claim they have a physical space waiver, they can get out of everything. And I'm a coastal city, probably over 50 percent of my generators would qualify under this physical space waiver. And when I look at having to fund the staffing and the infrastructure systems for this regulation, I can't do that if half my ratepayers are now exempt from these regulations just because their building was built in 1920, which is a significant portion of our buildings in our agency.	Since it is a jurisdiction provided waiver, a jurisdiction can set more stringent criteria in administering the physical space waiver. CalRecycle rejects the assumption that a significant number of generators could demonstrate legitimate physical space constraints. According to jurisdictions with similar space constraints waivers, very few businesses can demonstrate the existences of space constraints that cannot be addressed. There are few instances where a business’s existing waste collection space could not accommodate an additional organic waste recycling container if the existing containers are downsized (e.g. two 90-gallon bins could be replaced with three 60-gallon bins and occupy the same space). This waiver intends to allow flexibility for businesses with legitimate and cost-prohibitive space constraints without compromising the state’s ability to achieve the organic waste reduction targets. In regards to levying fees jurisdictions should consult their city our county counsel on how to appropriately structure fees. CalRecycle has not included implementation standards or minimum documentation requirements to allow jurisdictions set appropriate criteria. Jurisdictions, not haulers, administer the waiver, so the physical space waiver will not result in a race to the bottom in nonexclusive service areas. A hauler, licensed architect, licensed engineer, may provide evidence that a premise has a legitimate space constraint. If a jurisdiction has concerns about haulers in nonexclusive service areas, they can opt not to issue waivers or use a qualified source other than a hauler to demonstrate lack of adequate space for separate organic waste containers.
6496	Transcript Part 2 6496 (Foster, C., City of Oceanside)	And lastly, I must reiterate, similar to what John Davis was saying earlier, Article 3, the collection section, is extremely difficult to navigate and understand. We're really struggling with the concept of, really, the opportunity we're looking at is a fourth cart or a split cart. If I was to pursue those opportunities, I might as well throw our Climate Action Plan, Transportation Emission Reductions away because I'll have to add a whole new collection vehicle. I have to add new carts, new systems out there. We were looking forward to using the yellow bag program, but I also do not like the idea of telling my generators to throw the yellow bag of food waste into a landfill bin. And so, there is confusion as to whether we could do a yellow bag program in our green waste or our blue recycling cart. I'm aware -- unsure it's why we can't do that, if we can do it in the landfill bin. So, thank you.	The facility would notify the jurisdiction that it no longer accepts compostable plastics. A facility accepting these materials would typically notify the jurisdiction as part of the facility’s normal operating procedures. CalRecycle already revised Sections 18984.1, 18984.2, and 18984.3(e) to provide clarity about when a jurisdiction may allow plastic bags to be placed in containers. The issue of whether to allow bags hinges primarily on whether or not the receiving facility will accept them. Many facilities are not accepting bags because of operational problems and product quality issues. In order to document jurisdiction decisions about the use of bags, CalRecycle also revised Section 18984.4(a) to require that jurisdictions keep information in their records about the facilities to which they send bags. The regulatory language already allows plastic bags to be removed. For any plastic bags, including compostable plastic bags, a facility receiving such material will have to notify the appropriate jurisdiction that compostable plastics will not be recovered at the facility. It would be acceptable for the facility to provide the letter to the hauler and the hauler would provide the letter to the City. Nothing precludes a facility from specifying the type of resins and products the facility will accept.

Comment Number	Received From	Question/Comment	Response(s)
			<p>The written notification from the facility is given to the jurisdiction every 12 months after the regulation takes effect. As many stakeholders have noted markets and technology is are dynamic. A solid waste facility needs the ability to determine that accepting plastic bags or compostable plastics is no longer feasible and have the ability to notify a jurisdiction. This may trigger and require behavior change for the collection program in order to improve overall recovery. The notification requirement is intended to foster this. The requirement to annually check with the facility that bags are still allowed is not onerous or burdensome.</p>
6497	Transcript Part 2 6497 (Ozorak, E., Sacramento County)	<p>And my question has to do with Section 18984, which has to do with identifying organic waste generators and then the definition that needs the person responsible for the initial creation of the material. And in our county, we have about 40,000 registered businesses. In our inspection regime, we have about 18,000. And the number of customers that actually have waste collection service aggregated between three haulers, three or four haulers is about 7,000. So, when we're talking about enforcing, understanding these regulations, on enforcement would really apply to the 40,000 generators. So, some clarifying language would be useful. Because under 1 it says: Subscribing to and complying with the requirements of service or self-hauling So , the language should allow for joint sharing or, obviously where you've got multiple tenants in one as opposed to, you know, verifying service for 40,000 generators. Thank you.</p>	<p>Comment noted. SB 1383 allows a local jurisdiction to charge and collect fees to recover the costs incurred in complying with the regulations.</p> <p>A change to the regulatory text is not necessary. A compliance review does not require a physical inspection of each commercial business that is subscribing to collection service. This was intended to be a desk review of all garbage accounts within the jurisdiction and to verify collection service. Businesses that generate less than two cubic yards of solid waste and produce organic waste are excluded from this requirement.</p>
6498	Transcript Part 2 6498 (Noble, D., Association of Compost Producers)	<p>Most of my comments, now, are on Article 11, but that's really tied in to Article 12, the procurement regulations. But capacity building, again, I want to reinforce the notion that capacity isn't just, in our mind, production capacity. Because in a private sector business you would never build production unless you had a market. These regulations, because we're diverting from landfills, we're creating production capacity assuming that somehow the local jurisdictions will take care of the markets. Unfortunately, every player in this industry does not have access to all the markets. It depends on what products they're making. So, to Julia Levin's point, not only do we have compost, we do have mulch, and chip and grind material. We also have biofertilizers, which are organic fertilizers made from bioresource feedstocks. We also have biochar, which is made from a totally different process, as Julia pointed out. All of us are competing in the same market space. In addition, you have food recovery, which can go to animal feed, which goes to the AG markets, which have their own residuals. So, I think we have to look at this regulation in the context of local markets. Every county has more or less urban versus rural. So, I don't know, necessarily, how you put it in the regulations. One of the best ways to highlight the notion that you have to balance supply with demand capacity is just to define capacity as balanced supply and demand. The idea is to get profit, is to have more demand than you have supply. Otherwise, you're going to lose money. So, that's part of the triple bottom line. Also, there's a whole planning process which came through -- you know, was initiated in AB 876, which looks like it's being folded into Article 11. I don't know if that's on purpose, or it's assumed but -- it is assumed.</p>	<p>CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. However, estimating how much capacity is needed to handle the amount of organics generated in a jurisdiction or region is dependent on organic waste generation not market availability. In addition, there is no need for a new definition as proposed. CalRecycle already defines organic waste in Section 18982(a)(46) and further delineates how this applies to the capacity planning requirements in Section 18992.1.</p> <p>Also, CalRecycle cannot expand the universe of organic waste to include materials that are not landfilled and thus are outside the scope of SB 1383. However, CalRecycle has already worked with the Governor's Office of Planning and Research to include capacity planning and related issues into the General Plan Guidelines (<a href="https://www.calrecycle.ca.gov/organics/slcp">https://www.calrecycle.ca.gov/organics/slcp</a>).</p>

Comment Number	Received From	Question/Comment	Response(s)
6499	Transcript Part 2 6499 (Noble, D., Association of Compost Producers)	Okay, so I have these in writing. But the question is, is how much gets written into the regs as a pointer versus how much are you expecting to happen by the local industry on the back end.	The requirements in regulatory language are enforceable and are to be complied with by the appropriate entities.
6500	Transcript Part 2 6500 (Edgar, N., CA Compost Coalition)	I'm on behalf of the California Compost Coalition, some questions about the collection, cart colors, yellow bag programs. I think the examples you've provided maybe don't show the full range of flexibility that are available and entail. I know there are existing programs where there are green or yellow inserts into existing grey and black bins. Those programs probably need to be considered as part of future options. Also, as has been mentioned, loose-in-the street collection is a pretty prevalent practice in the State and is not considered in the regulations, and should be. And then, in several sections of this article there are references to green carts, in particular with the collection frequency waivers and other sections, it doesn't have any recognition of the yellow cart. So, clearly, a separate item that should be subject to the same limitations.	<p>CalRecycle revised Sections 18984.1, 18984.2, 18984.3, and 18984.5(b)(1)(B) to clarify that loose-on street (i.e., un-containerized) green waste collection is allowed as long as it does not include food waste, which must be containerized, and the receiving facility will accept the green waste and still be in compliance with operational and product quality standards. This is necessary because some jurisdictions use this method year-round to collect green waste and others use it as a supplement in the fall due to spikes in green waste generation; it would be costly to provide extra containers for this material when it can be allowed to accumulate on streets where it can be efficiently collected.</p> <p>This revision necessitated another change to Section 18984.5 to modify the contamination monitoring education requirements, since there would not be a container available to place educational materials on for routes that are exceeding contamination levels. Recommend adding "or door" after the term "container" in section 18984.5(b)(1)(B) to allow for notification in areas where non-containerized loose in the street collection is utilized.</p> <p>Thank you for the comments in support of the language change that was made in response to concerns about green waste loose on the street. The facility would notify the jurisdiction that it no longer accepts compostable plastics. A facility accepting these materials would typically notify the jurisdiction as part of the facility's normal operating procedures.</p> <p>CalRecycle already revised Sections 18984.1, 18984.2, and 18984.3(e) to provide clarity about when a jurisdiction may allow plastic bags to be placed in containers. The issue of whether to allow bags hinges primarily on whether or not the receiving facility will accept them. Many facilities are not accepting bags because of operational problems and product quality issues. In order to document jurisdiction decisions about the use of bags, CalRecycle also revised Section 18984.4(a) to require that jurisdictions keep information in their records about the facilities to which they send bags.</p> <p>The regulatory language already allows plastic bags to be removed. For any plastic bags, including compostable plastic bags, a facility receiving such material will have to notify the appropriate jurisdiction that compostable plastics will not be recovered at the facility.</p> <p>It would be acceptable for the facility to provide the letter to the hauler and the hauler would provide the letter to the City.</p> <p>Nothing precludes a facility from specifying the type of resins and products the facility will accept. The written notification from the facility is given to the jurisdiction every 12 months after the regulation takes effect. As many stakeholders have noted markets and technology is are dynamic. A solid waste facility needs the ability to determine that accepting plastic bags or compostable plastics is no longer feasible and have the ability to notify a jurisdiction. This may trigger and require behavior change for the collection program in order to improve overall recovery. The notification requirement is intended to foster this. The requirement to annually check with the facility that bags are still allowed is not onerous or burdensome. CalRecycle responded to</p>

Comment Number	Received From	Question/Comment	Response(s)
			stakeholders who initial had issues with the container color being yellow because yellow containers will quickly become discolored and unattractive if used for the collection of food waste; and yellow coloration does not hold up well in UV conditions. Therefore, brown was chosen because brown coloration shows dirt less; and cart manufacturers can use higher percentages of recycled plastic to make brown versus yellow containers and lids, leading to more market demand for recycled plastic.
6501	Transcript Part 2 6501 (Edgar, N., CA Compost Coalition)	And then, lastly, as other folks have mentioned, I think there needs to be some future process whereby, as my good friend Rachel Oster said, the success of this program is robust, and people are -- birds are singing in the trees, if they haven't been wiped out by global warming. And operators may be able to reduce the frequency of route reviews and other practices. There should be some sort of end-of-life where mature, successful programs that have proven compliance can reduce alot of the busy work.	Depending on the success of these proposed regulations, CalRecycle may consider future rulemaking to address needed revisions and perhaps relax certain standards if necessary.
6502	Transcript Part 2 6502 (Boskovich, A., Alameda County Community Food Bank)	But also want to reiterate a couple of points that our association has made, which is that we are in strong support of the capacity planning process outlined in Article 11. However, we really want to ensure that food banks continue to be partners. And we'd like that language strengthened in the fact that as counties and jurisdictions are doing those internal assessments that food recovery organizations, like food banks, are not considered after the fact. We want to be at the table early on and we'll want to give credit to our partners locally, like StopWaste, like the Cities of Livermore and Oakland, who are already beginning to engage us. One of these we constantly hear is there's a lot of cross-informing that needs to happen. And so, you know, we don't want our government officials to do all this work only to have us say, actually, you missed some really huge components and we need to go back to the drawing table. There's a fast time, I understand.	Section 18992.2 states that in complying with this section the county in coordination with jurisdictions and regional agencies located within the county shall consult with food recovery organizations and food recovery services regarding existing, or proposed new and expanded capacity that could be accessed by the jurisdiction and its commercial edible food generators. It is inherent in the requirements of Section 18992.2 (a)(2)-(4) that counties, in coordination with jurisdictions and regional agencies located within the county, will have to consult with food recovery organizations which includes local food banks.
6503	Transcript Part 2 6503 (Boskovich, A., Alameda County Community Food Bank)	The other piece of this is we also strongly support the process around having clear implementation schedules. But we have to reiterate that we need a prioritization of the actual cost to recover food safety. Food safety is imperative. And costs that maybe are typically overlooked, like transportation, fuel, cold storage, all the roots of food safety standards cannot be overlooked. Administrative support cannot be overlooked. A food bank of ours, which we have over 100 staff and over 200 community-based organization partners, 50 percent of those 200 partners are 100 percent volunteer run. So, everything from the thermal gun to an experienced driver. If we're to meet the State's goals around food recovery, we need to be able to do so with true and accurate capacity.	CalRecycle recognizes that there is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10, Section 18991.1 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. If a jurisdiction decides to fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms, then it is at the discretion of the jurisdiction, not CalRecycle, to determine how the funding will be dispersed. CalRecycle would also like to clarify that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing specifications in their contracts or written agreements with commercial edible food generators. For further clarification, please refer to the FSOR.
6504	Transcript Part 2 6504 (Heaton, S., Rural County Representatives of California and the Rural County	So, I wanted to specifically address Article 11, Section 18992.2, and I'll be brief. So, we realize that, you know, local solid waste managers are our partners in achieving edible food recovery goals and that it's rational to include an education and outreach competent to the food recovery program, and for us to assist in providing access to the organizations and services available to generators. And that monitoring and compliance adds significant staff time and costs. And we recognize	A change to the regulatory text is not necessary. The regulations do not require that this be carried out by the solid waste management organization. The jurisdiction will have to determine who within its organization will implement this provision.

Comment Number	Received From	Question/Comment	Response(s)
	Environmental Services Joint Powers Authority)	that and understand the necessity to be able to measure achievements. But we believe that it's really beyond the scope and capacity of our solid waste managers to increase and fund edible food recovery capacity because of our constraints. So, thank you.	
6505	Transcript Part 2 6505 (Boone, A., Center for Recycling Research)	The idea of leaving the discretion of what you're going to do with materials to the local government is a very scary process. Because recycling was absolutely the last thing on everybody's mind.	A change to the regulatory text is not necessary. The comment does not suggest specific changes but disagrees with the concept of having local government be responsible for what happens to collected materials. SB 1383 requires CalRecycle to adopt regulations that place responsibility on jurisdictions.
6506	Transcript Part 2 6506 (Boone, A., Center for Recycling Research)	The second point has to do with the use of the term waste to refer to source-separated organics. I've had a couple of potential clients scared away from setting up collection systems to move source-separated organics to the East Bay MUD facility.	Comment noted. Commenter is not recommending a change to the regulatory text.
6507	Transcript Part 2 6507 (Boone, A., Center for Recycling Research)	So, I think it's really important to leave the market open to encourage people to set up these kinds of managements. Waste Management chose not to contract with East Bay MUD to haul the organics to that facility. That has never been discussed. But the fact that it's called a waste scares away people who want to argue about that.	Comment noted. Commenter is not recommending a change to the regulatory text.
6508	Transcript Part 2 6508 (Brown, K., California Alliance for Community Composting)	Community composting, I just want to clarify it's not really getting a blank slate under SB 1383. This is just clarifying the role of a supplemental role that we can play in meeting the State's goal for capacity. So, what we would like to do to build confidence in not only jurisdictions, but also the State, is suggest that there be additional amendments made to Title 14, Chapter 3.1, on composting operations regulatory requirements. In our written comments we actually submitted, we said we'd like to see a published list of best management practices for community benefit composting and micro composting. This can be recommended voluntary self-assessment, or it could be a voluntary State certification program in an effort to alleviate local regulatory concerns and inconsistencies across jurisdictions and State agencies. We've seen that done in other states.	Publishing a list of best management practices may be worthwhile but can be accomplished by the organization or the state outside of these regulations. The suggestion to establish a voluntary self-assessment or state certification program to alleviate local regulatory concerns would be counter to the provisions in Section 17855, which state that persons are obligated to obtain all licenses, permits, etc.
6509	Transcript Part 2 6509 (Brown, K., California Alliance for Community Composting)	And then, also to reemphasize that the micro hauling option of community composting can also be supplemental to a jurisdiction's large scale hauling programs, and we've seen that be successful in other states.	The terms community benefit composting and supplemental on-site compost are not used in the regulation. This comment proposes to add the definitions of 'Community Benefit Composting' and 'Micro-composting' to Article 1, thereby creating two additional categories of composting that do not reference the size and volume limitations of Section 17855(a)(4). The proposed terms for these two activities would expand the suite of activities that are not excluded from regulatory requirements. CalRecycle is not proposing amendments to the compost size thresholds in Section 17855, therefore the comment is not germane to the text CalRecycle is adopting or amending. The existing exclusion thresholds were thoroughly vetted and subject to stakeholder comment in a previous rulemaking amending those standards. No change to the regulatory text is necessary to specifically mention community composting because Section 18990.1(b) establishes that a jurisdiction shall not implement or enforce an ordinance, policy, procedure, permit condition, or initiative that includes provisions that would prohibit the lawful processing and recovery of

Comment Number	Received From	Question/Comment	Response(s)
			organic waste. Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.
6510	Transcript Part 2 6510 (Brown, K., California Alliance for Community Composting)	And so, if there were -- are definitely concerns about quality control and rate structures, that some set of best management practices and also working in tandem with the jurisdictions can help alleviate a lot of those concerns.	Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.
6511	Transcript Part 2 6511 (Oseguera, A., Waste Management)	In terms of the mentioning of looking at route reviews, education and outreach, and then I think a concerning area is that there's a May Statement to Notice. So, in terms of having a holistic program, if there is, you know, the route reviews and analysis, there is the education and ongoing outreach, then there should be a will statement to the notice.	A change to the regulatory text is not necessary. The comment does not specify where a change to "will" is needed. The comment appears to be about Section 18984.5 re: container contamination minimization, which includes provisions that jurisdictions must implement. If the comment is about changing 18984.5(b)(1)(B) re: the notice "may be left", CalRecycle disagrees; the provision is written to provide flexibility in how the notice is given to the generator. The comment may also be about Section 18985.1, but it is unclear what part of this section.
6512	Transcript Part 2 6512 (Oseguera, A., Waste Management)	And the State encourage and provide examples throughout the State as what's working in terms of those notices. Is it a warning system? Is it a warning system with something that's punitive? Or, how do you address the contamination?	A change to the regulatory text is not necessary. CalRecycle will provide examples of what is working well with container contaminant minimization in other jurisdictions.
6513	Transcript Part 2 6513 (Oseguera, A., Waste Management)	And in terms of AB 1383, we have to ensure that the feedstock that we get into the facilities is something that's usable. If we produce a very low-quality compost or other products, where will the markets be for that material if no one wants it?	A change to the regulatory text is not necessary. CalRecycle agrees that producing low-quality compost or other products is not desirable. The regulations are designed to ensure that feedstock produces marketable products.
6514	Transcript Part 2 6514 (Oseguera, A., Waste Management)	So, once again encourage that, yes, we're going to have route reviews, we're going to have education and outreach, and continually, but also making sure that that last portion is also a will statement. So, thank you.	A change to the regulatory text is not necessary. The comment does not specify where a change to "will" is needed. The comment appears to be about Section 18984.5 re: container contamination minimization, which includes provisions that jurisdictions must implement. If the comment is about changing 18984.5(b)(1)(B) re: the notice "may be left", CalRecycle disagrees; the provision is written to provide flexibility in how the notice is given to the generator. The comment may also be about Section 18985.1, but it is unclear what part of this section.
6515	Transcript Part 2 6515 (Goncharoff, T., Santa Cruz County)	I wanted to speak to the 2014 benchmark year. For those of us who are early adopters, this is an issue in regard to organic waste diversion. But even more so in regard to food rescue. Santa Cruz County had the very first food rescue program in California. It's still one of the largest, most robust and successful programs. It's been operating since 1972. And using 2014 as the benchmark year means that more than 4,000 tons of food rescued annually will not count. And the ironic result of that is that one of the more successful programs in this State may appear to be in noncompliance. And I'm sure that's not your intention. I suggest a simple fix. You might add to the regulations a provision that those jurisdictions that had program	Some commenters misinterpreted the edible food recovery goal to be measured using 2014 as the baseline year. To clarify, unlike the organic waste disposal reduction targets, SB 1383's statute does not specify a baseline year for measuring the amount of currently disposed edible food. As a result, the baseline measurement year for edible food will not be 2014. More recent data from CalRecycle's 2018 waste characterization study will be used to measure the edible food baseline. These commenters also misinterpreted the statewide requirement to recover 20% of currently disposed edible food for human consumption by 2025. They interpreted the requirement to be that each jurisdiction shall recover 20% of currently disposed edible food for human consumption by 2025. This interpretation is incorrect. To clarify, the 20% edible food recovery goal is a

Comment Number	Received From	Question/Comment	Response(s)
		prior 2014 could appeal to have those totals included in a total amount of food rescued being calculated. Thank you.	statewide goal that the California must collectively achieve. Individual jurisdictions will not be penalized for failure to recover at least 20% of currently disposed edible food.
6516	Transcript Part 2 6516 (Foster, C., City of Oceanside)	One thing that I'd like to ask CalRecycle for assistance with is do everything you can with this rulemaking to help not make the jurisdictions the bad guy. Okay. And I think there are sections in this rule that really put the burden on the jurisdiction to be the difficult one with our generators and our diversion activities	A change to the regulatory text is not necessary. CalRecycle has prepared various tools that jurisdictions staff can use to educate elected officials, residents, and businesses about the mandates of this state law.
6517	Transcript Part 2 6517 (Foster, C., City of Oceanside)	So, that falls into play a little bit with edible food recovery, as well as community composting is we want to support these activities. We appreciate the fact that this rule is trying to really create space for these opportunities. But one of the issues we're seeing throughout the rule is that there is a significant burden on the jurisdictions for reporting about all of these activities.	Comment noted. CalRecycle may consider streamlined jurisdiction reporting opportunities, such as modifying the Electronic Annual Report process.
6518	Transcript Part 2 6518 (Foster, C., City of Oceanside)	However, it's not very clear on the reporting requirements for these types of activities. So, for example, in edible food recovery you require recordkeeping by edible food recovery generators and services. However, there's nothing in there to say that they need to provide those records to the jurisdiction that's being required to report on these activities to the State. And I've been a Chair of The Food Policy Council for the next -- for the last four years. And there's actually a lot of privacy within the edible food recovery space and within the feeding agency space. So, when a jurisdiction goes to these agencies and services and asks what are you doing, there's not an open arm tendency to provide the information that they do have.	The regulations specify that food recovery organizations and services are subject to inspection, and since an "inspection" is defined in Section 18982 to include the review of applicable records, food recovery organizations and services must provide jurisdictions with access to the records required under this section upon request by the jurisdiction. A failure to provide such access may be considered a failure to maintain records. Maintenance of and access to the records described in this section is critical for jurisdictions to monitor food recovery services' and organizations' compliance with Section 18991.5.
6519	Transcript Part 2 6519 (Foster, C., City of Oceanside)	so what we're asking is help us support these agencies, help us be able to provide the information you require in the reporting by making sure that you clarify that community composting, edible food recovery is required to provide those records and documents for activities to jurisdictions per their request or, maybe at minimum, on an annual basis. That will help us support them and our community. Thank you.	The regulations specify that commercial edible food generators are subject to inspection, and since an "inspection" is defined in Section 18982(a)(35) to include the review of applicable records, commercial edible food generators must then provide jurisdictions with access to their records upon request by the jurisdiction. A failure to provide such access to records may be considered a failure to maintain records. Maintenance of and providing access to the records that are required is necessary in order for jurisdictions to be able to monitor commercial edible food generator compliance as is required in Section 18991.1 (a)(3).
6520	Transcript Part 2 6520 (Beniwal, B., Californian's Against Waste)	We see two potential issues in this section. First, we see potential for a loophole, as evidence by France's food waste laws. Currently, there's a mandate for generators to have a written contract with food recovery services and organizations, but not actually done the food. So, this has been seen for the past two years in France, through anecdotal evidence where generators can donate, you know, even as little as one percent of the food that would be disposed of. So, we recommend, you know, looking through the wording of this and making sure that there's some sort of minimum set.	CalRecycle revised the regulatory text in response to this comment. The regulatory text was revised to the following: "Commercial edible food generators shall arrange to recover the maximum amount of edible food that would otherwise be disposed." If Section 18991.3(b)'s 'maximum amount' language was not included in the regulations there would be a loophole where commercial edible food generators could for example, recover 1% of their edible food that would otherwise be disposed and still be in compliance. The 'maximum amount' language was added to the regulations to eliminate this loophole for non-compliance and to ensure that commercial edible food generators arrange to recover the maximum amount of their edible food that would otherwise be disposed, which will be critical for helping the state achieve SB 1383's 20% edible food recovery goal.

Comment Number	Received From	Question/Comment	Response(s)
6521	Transcript Part 2 6521 (Beniwal, B., Californian's Against Waste)	Second of all, we would like to see a separation definition for edible food and recoverable food. Specifically, in edible food, the phrase unserved and unsold lowers the baseline of the 20 percent that would need to be recovered. Including, you know, amongst others, food waste generated at home. So, we'd like to see a more inclusive definition. So, you know, that these regulations can be as effective as possible in meeting its many goals including co	<p>In an early draft of the proposed regulations edible food was defined as:  “Edible food” means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, “edible food” is not solid waste if it is recovered and not discarded.”</p> <p>Several commenters made the argument that this definition was too restrictive, because it described “recoverable food” not “edible food.” Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters’ concerns about the definition of “edible food” being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following:  “Edible food" means food intended for human consumption.  (A) For the purposes of this chapter, “edible food” is not solid waste if it is recovered and not discarded.  (B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code.  Although the final definition of “edible food” is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities and eliminated the need to provide a separate definition for "recoverable food."</p>
6522	Transcript Part 2 6522 (Schoonmaker, StopWaste)	Okay, here's a question. I can't wait until the next job to find out. So, the first question is about the six tons and the food recovery organizations that accept six tons or more need to, you know, report on which generators. Now, does that mean six tons from tier one and tier two generators, only, or all generators?	<p>Please note, the 6-ton recordkeeping and reporting threshold was removed from the regulations. To help clarify the reporting requirements for food recovery organizations and food recovery services the regulatory text was revised. The revised text clarifies that a jurisdiction shall require food recovery organizations and food recovery services that are physically located within the jurisdiction and contract with or have written agreements with commercial edible food generators pursuant to Section 18991.3 (b) to report the total pounds of edible food recovered (from commercial edible food generators) in the previous calendar year to the jurisdiction. To clarify further, any food recovery organization or food recovery service that has a contract or written agreement with one or more commercial edible food generators is required to report to the jurisdiction. Specifically, they are required to report (to one jurisdiction) the total pounds of edible food that were collected or received directly from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Regulated food recovery organizations and food recovery services are not required to report the pounds of edible food recovered from entities that are not commercial edible food generators, nor are they required to track or report residual food waste as such a requirement could be overly burdensome and infeasible to comply with. Food recovery organizations and services should have the data on the pounds of edible food recovered from tier one and tier two commercial edible food generators because Section 18991.5 requires them to maintain a record of the quantity in pounds of edible food collected and received from each commercial edible food generator that they contract with or have a written</p>

Comment Number	Received From	Question/Comment	Response(s)
			agreement with pursuant to Section 18991.3 (b). If food recovery organizations and food recovery services are in compliance with the recordkeeping requirements specified in Section 18991.5, then they will have the information that is necessary to comply with the requirement to report the total pounds collected from tier one and tier two commercial edible food generators in the previous calendar year to the jurisdiction.
6523	Transcript Part 2 6523 (Schoonmaker, StopWaste)	The other one is kind of similar which is when the jurisdictions have to provide a list. Now, is that just recovery organizations that accept food from tier one and tier two, or like everything, very comprehensive.	<p>To clarify, the requirement does not specify that the jurisdiction shall maintain a list of all food recovery organizations and food recovery services operating within the jurisdiction, just that “a list” be created and maintained on the jurisdiction’s website. It is at the jurisdiction’s discretion to determine the food recovery organizations and services that they feel should be included on the list.</p> <p>The list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with, and thereby help ensure that edible food in the jurisdiction is not sent to landfills, but rather put to its highest and best use of helping feed people in need.</p> <p>Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help commercial edible food generators find food recovery organizations and services that are capable of safely handling and distributing edible food on a regular basis.</p> <p>To clarify, it is at the discretion of the jurisdiction to determine the method that will be used for maintaining the list (e.g. updating/keeping the list current and relevant). How each jurisdiction’s list is maintained will differ from jurisdiction to jurisdiction.</p>
6524	Transcript Part 2 6524 (Shane, A., California Association of Food Banks)	In terms of Article 9 and I'm sorry, I'm not exactly sure where that is being talked about today, I didn't see it on the agenda. We just want to make sure that it's essential, that it's retained that the acceptance of donations of loads on the recovery side is voluntary. I mean, this is only going to work in that situation, in the sense that we have already-under-resourced nonprofits who are simply not able to take all types of loads.	A change to the regulatory text was not necessary because Article 9, Section 18990.2 (d) specifies that nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible food generator. In addition, nothing in SB 1383's regulations requires a food recovery organization or service to enter into a contract or written agreement with a commercial edible food generator. A food recovery organization or service can choose not to participate.
6525	Transcript Part 2 6525 (Shane, A., California Association of Food Banks)	And again, we think that there is strong structures in place in terms of either self hauling, or working through the jurisdiction process to have that. But those are only -- those structures are only going to work with some very clear language that's here, that must be retained about that voluntary participation.	<p>CalRecycle provided information in the FSOR to clarify that commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food recovery where the contract specifies that the generator is permitted to self-haul edible food during pre-established delivery or drop off times. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement.</p> <p>If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in the contract or written agreement, the commercial edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. It is at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the exact self-haul provisions to include in their contracts or written agreements.</p>

Comment Number	Received From	Question/Comment	Response(s)
			CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and food recovery services from donation dumping and unexpected donations. The model agreement is a template that is intended to be customized based on the needs of food recovery organizations, food recovery services, and commercial edible food generators.
6526	Transcript Part 2 6526 (Shane, A., California Association of Food Banks)	We also want to make sure that food recovery organizations are treated different from food recovery services in a couple of ways. One is sort of an overarching point that we know is difficult to land in the language, and so I just want to acknowledge that, but continue our emphasis about the potential for unintended consequences. That as some organizations are able to accept donations, and then repurpose them and sell, even if it's under a 501(c)(3) tax structure of a nonprofit that that is going to create a potential revenue stream that for emergency food organizations who are always going to give that food away to people in need, that that creates a potential imbalance, especially down the road. And again, we understand that the emergency food recovery organizations cannot and should not take all of this edible food. We're not advocating for that by any means. But that dynamic is of a serious concern when food banks and the organizations are already struggling to access enough food to feed hungry people.	Nothing in SB 1383's statute specifies that recovered edible food should first be provided for free to the public for consumption. The statutory goal is that no less than 20% of currently disposed edible food be recovered for human consumption by 2025. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.
6527	Transcript Part 2 6527 (Shane, A., California Association of Food Banks)	And we think that there is just no better documentation than the EPA's food recovery hierarchy, right, which very clearly says that the food should go to hungry people. That's obviously not in the statute. But we encourage consideration in the regulations about donations for free or for people in need. There's several in which we've provided examples for how to get to that.	Nothing in SB 1383's statute specifies that recovered edible food should first be intended for food banks, soup kitchens, or shelters. The statutory goal also does not specify that recovered food must go to hungry people. The statutory goal is that no less than 20% of currently disposed edible food be recovered for human consumption by 2025. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.
6528	Transcript Part 2 6528 (Shane, A., California Association of Food Banks)	And then, finally, on the data reporting, I know that's formally later, but it did come up a bit in the presentation, I just want to acknowledge that we have -- we asked for the six-ton requirement. It was put in place. And now, we're asking for something else. And I'm sorry that we are changing midstream. But it just -- you know, in full transparency for all the stakeholders in the room, I was unfortunately given some inaccurate information from one of our member food banks. And upon further consultation, and I just want to respond specifically to the very valid point, I believe by the presenter from -- the comment from Oceanside that there are serious privacy concerns.	The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance. To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold from the regulatory text. The final regulations require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food

Comment Number	Received From	Question/Comment	Response(s)
			<p>directly from commercial edible food generators, pursuant to Section 18991.3 (b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators. Regarding the comment about privacy concerns, CalRecycle would like to clarify that SB 1383's reporting requirements do not violate donor confidentiality. There is no requirement in SB 1383's regulations for food recovery organizations or food recovery services to report donor names. They are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.</p>
6529	Transcript Part 2 6529 (Shane, A., California Association of Food Banks)	<p>And that there are MOUs with donors that occur, actually not just in California, but across the country in how food banks secure donations from several types of what we call generator or donators, donors that prevent the sharing of donor level data. And that we are really asking for a different approach that acknowledges that if there is the need for a jurisdiction to verify some potential discrepancy or an evaluation toward the 20 percent goal that the data are largely held, especially by organizations that are taking large amounts of material. But we need to design the regulations in a way that's not going to be disruptive. And it's in some ways impossible for food recovery organizations to provide. And it sounds like there's already some issues in the field. And so, I think that we can come together and figure that out. But as written, it's unworkable. And I just want to apologize from our own contribution to that, the way it's written.</p>	<p>CalRecycle would like to clarify that SB 1383's reporting requirements do not violate donor confidentiality and the regulations also do not require individual donor level data to be reported. There is no requirement in SB 1383's regulations mandating food recovery organizations or food recovery services to report donor names or the pounds recovered by donor. Please note however, that regulated food recovery organizations and services are required to maintain records of the food that is recovered from the commercial edible food generators that they have established a contract or written agreement with pursuant to Section 18991.3 (b).</p> <p>To clarify the reporting requirement, regulated food recovery organizations and services are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.</p>
6530	Transcript Part 2 6530 (Shane, A., California Association of Food Banks)	<p>Finally, I just want to reiterate, but because it came up again, my comments earlier this morning is that the State's only going to be able to meet its goals if jurisdictions, and generators, and food recovery organizations have the ability to come together and figure out the resources and the capacity necessary to move this food. It's simply not going to move itself, certainly not in a food safe manner. And so, I just strongly want to encourage the language we retained there.</p>	<p>A change to the regulatory text was not necessary because this comment is in support of SB 1383's edible food recovery capacity planning requirements.</p>
6531	Transcript Part 2 6531 (Larrowe, K., Alameda County Food Bank)	<p>And so, piggy-backing a little bit off of Andrew, but really strong support of separating edible food and recoverable food. I think we see this all the time in the field where a generator will have a donation for the day, but in theory that might be ready to eat that day, but three days later when our agency has distribution it's no longer edible. So, it's edible on the day that you might pick it up, but it's not</p>	<p>In an early draft of the proposed regulations edible food was defined as:  "Edible food" means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, "edible food" is not solid waste if it is recovered and not discarded."</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>technically recoverable because we can't actually distribute it. And then, taht ends up putting the cost on our agencies, which Alex mentioned earlier 60 percent of them are all volunteer run. And so, many of them are now having to pay more for compost, or other ways of disposing of the product. So, really looking for separation between those two definitions.</p>	<p>Several commenters made the argument that this definition was too restrictive, because it described "recoverable food" not "edible food." Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters' concerns about the definition of "edible food" being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following:</p> <p>"Edible food" means food intended for human consumption.</p> <p>(A) For the purposes of this chapter, "edible food" is not solid waste if it is recovered and not discarded.</p> <p>(B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code.</p> <p>Although the final definition of "edible food" is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities and eliminated the need to provide a separate definition for "recoverable food."</p>
6532	Transcript Part 2 6532 (Larrowe, K., Alameda County Food Bank)	<p>We're in very strong support of contracts, so thank you for having that in there. We think that that will help just provide insurance that if we're in a contract with a generator, no one else can swoop in and take over that relationship. And so, we appreciate that and hope that stays in.</p>	<p>A change to the regulatory text was not necessary because this comment is in support of the requirement for commercial edible food generators to establish contracts or written agreements with food recovery organizations and services.</p>
6533	Transcript Part 2 6533 (Larrowe, K., Alameda County Food Bank)	<p>And lastly, we are hoping that the reporting pieces for -- or, reporting and collecting pieces for food recovery organizations and food recovery services can be more defined. So, the way we understand it is that if you're picking it up, you have to weigh and record in-transport and once it's collected. And so, as a food bank, we do a lot of the collection, but it goes to our member agencies versus a strictly transportation service for food recovery. So, we kind of do both and that would be very onerous for us to have to weigh for transport and for collection. So, hoping there could be some separation between specific transportation agencies and ones like food banks, who do kind of all of those services.</p>	<p>To help clarify the reporting requirements for food recovery organizations and food recovery services the regulatory text was revised. The revised text clarifies that a jurisdiction shall require food recovery organizations and food recovery services that are physically located within the jurisdiction and contract with or have written agreements with commercial edible food generators pursuant to Section 18991.3 (b) to report the total pounds of edible food recovered (from tier one and tier two commercial edible food generators that they have established a contract or written agreement with pursuant to Section 18991.3 (b)) in the previous calendar year to the jurisdiction.</p> <p>To clarify further, any food recovery organization or food recovery service that has a contract or written agreement with one or more commercial edible food generators pursuant to Section 18991.3 (b) is required to maintain records and report to the jurisdiction. Specifically, they are required to report (to one jurisdiction) the total pounds of edible food that were collected or received directly from the commercial edible food generators that they contract with or have written agreements with.</p>
6534	Transcript Part 2 6534 (Hilton, R., HF&H Consultants)	<p>You've heard a couple of comments about the contracts required with the food rescue organizations. It's very much the case that some organizations that collect the material want those and some very much don't. And you should think about whether there are other forms of demonstrations. Sort of the point CAW made, we want the stuff to get rescued. We don't care about the arrangement, necessarily, by which it's being rescued. And so, if there's some other demonstration that the</p>	<p>A change to the regulatory text was not necessary for the following reasons. First, having a contract or written agreement with supporting documentation of the contract or written agreement is critical for enforcement purposes and to ensure that edible food is recovered in a safe, professional, and reliable manner. Contracts and written agreements add a layer of food safety, professionalism, and reliability into food recovery and can serve as a mechanism to help to</p>

Comment Number	Received From	Question/Comment	Response(s)
		business is donating and doing the thing, even if there isn't a formal contract setting out the terms of that, that may be helpful, or if there's some other arrangement demonstration that you'd be okay with.	protect food recovery organizations and services from receiving foods they do not want and also can help prevent donation dumping. CalRecycle would also like to clarify that only tier one and tier two commercial edible food generators are required to contract with or have written agreements with food recovery services or organizations that will accept their edible food for food recovery. The expectation is that jurisdictions verify that each contract or written agreement has been established. To help jurisdictions monitor compliance, the regulations include recordkeeping requirements for commercial edible food generators and for food recovery organizations and services. A jurisdiction could use the record to verify that a commercial edible food generator has established a contract or written agreement with a food recovery organization or service by requesting to see their records.
6535	Transcript Part 2 6535 (Hilton, R., HF&H Consultants)	One of the concerns that we've heard from franchise haulers, in negotiations, is that they believe this material is within the scope of their exclusive franchises, even though it's for human consumption. And I think we should clarify that because for nonprofits, that are not charging for their service, I think the Rancho Mirage decision gives us a clear pathway for that material to escape the franchise.	Some commenters have suggested that there are franchise haulers that believe edible food is within the scope of their exclusive franchises. Please note, in the regulations the definition of edible food specifies that edible food is not solid waste if it is recovered and not discarded.
6536	Transcript Part 2 6536 (Hilton, R., HF&H Consultants)	However, there are a number of services that are charging for the collection and we want to stimulate sustainable funding for these folks, right. So, we want folks to have an enterprise model where they charge. If the franchisee believes that that's their material, we may not be able to allow others to charge. So, it would be great if the regulations could provide some clarity that this is not solid waste. It's not organic materials destined for compost. This isn't discarded. This is for a productive use. That would be helpful to us.	Some commenters have suggested that there are franchise haulers that believe edible food is within the scope of their exclusive franchises. Please note, in the regulations the definition of edible food specifies that edible food is not solid waste if it is recovered and not discarded.
6537	Transcript Part 2 6537 (Hilton, R., HF&H Consultants)	The biggest thing that we've noticed in looking at this is that these are regional programs. They span jurisdictions, they span counties. And so its overly challenging for a city, in a county, to manage everything you're asking them to do and there will be a lot duplication. Not in the capacity planning, but in the reporting about what the food recovery organizations are doing. And so, the extent to which you can bring this up, maybe even to a State level, would really help. Because I think the duplication is going to be frustrating to the food service organizations that are responding to multiple agencies asking for the same stuff.	Section 18994.2 includes the reporting requirements for food recovery organizations and food recovery services. Only food recovery organizations and food recovery services that contract with or have written agreements with commercial edible food generators pursuant to Section 18991.3 (b) are required to report the total pounds collected in the previous calendar year to the one jurisdiction that they are physically located in. To clarify, a food recovery organization or service that has established a contract or written agreement with a commercial edible food generator should only be reporting to one jurisdiction. That is, the jurisdiction that where the organization's or service's primary address is physically located. Therefore, duplicate reporting should not occur. CalRecycle also recognizes that food recovery operations can span regions. However, there is still a critical need for jurisdictions to be able to review records and receive reports of the total pounds recovered from commercial edible food generators in the previous calendar year. For a jurisdiction to implement an effective edible food recovery program it is critical that the jurisdiction is familiar with the regulated food recovery organizations and food recovery services operating in the jurisdiction, and also aware of the pounds recovered from tier one and tier two commercial edible food generators. Receiving reports from regulated food recovery organizations and services can also be used to help jurisdictions assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.

Comment Number	Received From	Question/Comment	Response(s)
6538	Transcript Part 2 6538 (Hilton, R., HF&H Consultants)	And then, I think you need to think about incompatible materials with donation, the same way we are with recycling and composting. There are materials that the food service organizations don't want. Unhealthy stuff, stuff that's, you know, at a certain age, whatever. And so, I think there needs to be some understanding of that in this language and some permission to do other things with that material. So, thank you.	SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed of is recovered for human consumption by 2025. The statute does not state that 20% of healthy or nutritious food must be recovered. The statute requires that 20% of all currently disposed edible food be recovered by 2025. As a result, SB 1383's regulations do not include requirements that differentiate between healthy and unhealthy food. CalRecycle recognizes however, that a core value of many food recovery organizations and services is to reduce food insecurity in their communities by rescuing and distributing healthy and nutritious food to help feed people in need, and that some organizations have nutrition standards for the food they are willing to accept. As a result, CalRecycle included language in Section 18990.2 that states, "(d) Nothing in this chapter prohibits an edible food recovery service or organization from refusing to accept edible food from a generator." Therefore, nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from following their own internal standards and requirements for acceptance related to nutrition or quality of the food when it is recovered.
6539	Transcript Part 2 6539 (Boone, A., Center for Recycling Research)	I've been involved in a lawsuit regarding a mixed waste processing facility being erected in San Leandro, California. The proposer said that they would get up to 61 percent diversion at this facility. They said that they didn't see exactly how this would all be related to their proposal. The remnant organic materials suggests as much as I understand it, that there will be organic materials which will be included in the material that will be carried over to the transfer station. And then, there will be organic materials that will be fed into the composting operation on the property or trans/shipped outward for composting. So presumably they should be keeping records of how much organics is not being captured in the separation system, so that what we know that goes to the transfer station is in fact a low-end organics. That's my understanding of what you're saying, but I'm not sure I got that right. So, I just want to make sure that I know what that means.	Comment noted. Remnant Organic Material is organic waste that is in the gray container of a three-container collection system. Organic waste is prohibited from being placed in the gray container, but in the event that organic waste is present, facilities can remove the organic waste from the container and send it out for recovery with their Source Separated Organic Waste Stream once that waste stream has been sampled/measured.
6540	Transcript Part 2 6540 (Pardo, V., California Refuse Recycling Council)	We interpret the source-separated organic waste to mean the material that is in the green or yellow container, as described, not the material that you would find in the blue container. And your images showed a very beautiful picture of green and food waste, as demonstrated for the source-separated organic waste. So, that is our interpretation that the protocol, this isn't in regards to mixed organics, but the source of greater organic waste would be for that green or yellow container in those cases.	This comment describes the commenter's interpretation of regulatory requirements and does not suggest a language change or comment on the regulatory process that was followed.
6541	Transcript Part 2 6541 (Pardo, V., California Refuse Recycling Council)	And I'd also like to point out that onsite transfer of material -- this kind of goes back to some of the conversation we had with AB 901. You're going to have facilities that are going to be receiving source-separated organic wastes at a transfer processing facility that might have an anaerobic digestion facility onsite. So, the expectation would be that you're not going to be sampling and measuring the material that you're sending to yourself. So, we'd ask that that material not be subject to the measurement protocols if they're keeping that material onsite. Thank you.	CalRecycle has revised the proposed regulations in response to comments. The change added Section 17409.5.10.5 to address co-located facilities or operations. The change was necessary to clarify when the measurement protocol is required to be completed if two activities are co-located.  Section 17409.5.10.5 requires the measurement protocol to be performed by each activity even if the material from the first activity is sent to the co-located activity, if the facility as a whole sends more than 20% of organic waste to disposal on and after 2022 and 10% on and after 2024. However, if the facility as a whole sends less than 20% of organic waste sent to disposal on and

Comment Number	Received From	Question/Comment	Response(s)
			after 2022 and 10% on and after 2024, then the operator would not be required to perform the measurement protocol on the material sent to the co-located activity, only the material sent off-site.
6542	Transcript Part 2 6542 (Green, S., Sanitation Districts of Los Angeles County)	So, in a couple of different places in the Article 6, in Title 14 regulations it appears when you are defining what are allowed management methods, that you're saying - like, for instance, with the biosolids, they may only go to these types of things. And it's kind of the word only that makes it seem like it's a kind of implicit ban on landfilling. And then, there's the exception and you pointed this out in your presentation. Our concern, though, is that there may be other circumstances that may necessitate a need to send material for disposal, whether it's from a MRF, organic material received there, or from -- or our biosolids. There could be things that aren't strictly meeting those conditions that you mentioned, such as new regulatory standards that come into being, that we can't meet and we have to -- it may take us time to be able to. So, that's one example.	CalRecycle has noted the comment. The effects of possible future regulations are not within the scope of this rulemaking.
6543	Transcript Part 2 6543 (Green, S., Sanitation Districts of Los Angeles County)	And then, another area we wanted to just highlight is about the load-checking requirements. And while we understand the desire to minimize the contamination and collect a lot of detailed data, it seems like some of the requirements are overly onerous and will significantly impact our facility's ability to operate. So, we do appreciate the ability for the enforcement agency to approve alternative measurement protocols, but we also think there are some changes to the regulations themselves that would be helpful. And, so there's -- for instance, there are certain instances where load-checking would be pretty impossible, like preprocessed organic waste or where you have a very consistent waste stream it may not really be warranted. And then, also, there's often space constraints in some of our facilities and it would be difficult to do multiple daily load-checks.	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 14709.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
6544	Transcript Part 2 6544 (Green, S., Sanitation Districts of Los Angeles County)	Section 20700.5. And then, the last issue we wanted to comment on is that the requirement for the long term intermediate cover for the 36 inches of cover, seems excessive to us. We don't think it's necessary. We think that the existing requirements, you know, to prevent emissions, as well as to maintain the cover requirements to prevent nuisance and so forth are already well defined and are sufficient. And so, we would like to see those changed. We do appreciate that there is that ability for the enforcement agency to approve an alternative, but there's kind of no indication of what would be the criteria for doing that. And so, that's -- you know, it doesn't give us a lot of comfort because we don't really know how that will be decided. Thank you.	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.
6545	Transcript Part 2 6545 (Potashner, E., Recology)	To echo the LA Sanitation District's concern around the load checking, Recology operates a number of compost and transfer stations throughout the State. And our waste stream is pretty consistent. It's the same local jurisdictional programs. Some large distribution centers around grocery are coming into our facilities. That feedstock is consistent from day to day. The frequency that	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 14709.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container

Comment Number	Received From	Question/Comment	Response(s)
		these regulations require us to do the load-checking is something that we'd ask gets revisited. We believe something along the lines of a weekly load check for our waste stream would probably still get you the data that you need and make sure that the facilities are complying with the spirit of this regulation.	waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
6546	Transcript Part 2 6546 (Foster, C., City of Oceanside)	I want to reiterate the fact that for biosolids management, we'd like it to not be limited to anaerobic digestion or composting. We really want CalRecycle to incorporate language that allows us to consider other technologies and future technologies that would result in diversion from landfills.	Composting and anaerobic digestion of biosolids are required because CalRecycle determined the restriction necessary to ensure methane reduction.
6547	Transcript Part 2 6547 (Foster, C., City of Oceanside)	The caveat you state about you require a landfill, if there is an expansion, that they would need to incorporate organic recovery into their facility, if I'm reading that slide correctly. But you don't qualify an expansion as being hours. So, if a landfill was to expand their number of hours for accessibility, wouldn't that qualify as additional access to land-filling?	A change to the regulatory text is not necessary. Yes, expanding the hours would allow for more access to the landfill, but it does not increase the tonnage of solid waste that the facility is permitted to receive or the overall capacity of the facility. So for the purposes of this section, increased hours of operation do not considered an expansion. Section 20750.1(c) defines the term "expanding" which means a solid waste landfill proposing to make a significant change to the design or operation pursuant to 27 CCR 21665.
6548	Transcript Part 2 6548 (Foster, C., City of Oceanside)	Then, I guess our comment would be would CalRecycle consider allowing hours to be considered, if it was an expansion of hours to those facilities? So, if a facility expanded their hours of operation, then I think that would call to question whether they're opening access to landfilling, and I'd like to see that facility to develop organic recovery systems, instead of increased access to landfilling.	A change to the regulatory text is not necessary. Yes, expanding the hours would allow for more access to the landfill, but it does not increase the tonnage of solid waste that the facility is permitted to receive or the overall capacity of the facility. So for the purposes of this section, increased hours of operation do not considered an expansion. Section 20750.1(c) defines the term "expanding" which means a solid waste landfill proposing to make a significant change to the design or operation pursuant to 27 CCR 21665.
6549	Transcript Part 2 6549 (Stein, A., Environmental Health Trust)	Section 17409.5.6, source-separated organic waste handling. I think this section, someone else, you read it from the email, Hank. Source-separated organic waste processing shall be kept separate from other solid waste streams. It's in there. It's just then you follow it up with all these other, you know, one, remnant organic material separated from the grey container collection can be combined with organic material removed from the source-separated organic collection. You go on. They aren't compatible. You can't do both. Either/or, one or the other. And if you say that it needs to be separate and we collected it in the green bin separate for the intention of creating what we defined as compost. But then, you're allowing it to be contaminated with other material right in the regulations. I don't understand it. And I do understand it and I want it to be struck. For example, B, source-separated organic waste and waste removed from a mixed waste organic collection service for recovery shall be stored away from activity areas specified, and identifiable areas as described in the facility plant transfer report. And then, we're back to, you know, the local, the LEA approving things. It just -- why not keep the two things separate? You have source-separated green bin material. It needs to be kept separate and aside from the mixed waste matter, organics. You're wanting them both to be processed, but why are you mixing one with the other? It's not working. And we're doing our best to separate it and I think you're contaminating this whole process of	Comment noted. Section 17409.5.6 requires that source-separated and mixed organic waste be stored and processed separately. However, the recovered organic waste from both waste streams can be combined once sampling/measurements have taken place.

Comment Number	Received From	Question/Comment	Response(s)
		1383, thinking that you're just going to get energy out of it. Energy reductions from the methane. But you're making a mess out of it all. So, please don't do it.	
6550	Transcript Part 2 6550 (Edgar, E., Edgar Associates)	Just do it. If we can get a three-cart system to get to 50 percent and some operations at mixed waste process facilities can have a source separation line that gets to 50 percent, then without backing away from source separation, the same facility could add a mixed waste processing for mulit-family and for commercial waste. So, some facilities can have a dual system whereby you have source separation to get to 50 percent, keep doing that as much as possible. And to get to 75 percent, you may have to squeeze the garbage and within the same facilities. I think your regulation says there's two separate tipping pads, two different ways to test for it. So, there is a way to keep them separation, store separation from mixed waste processing at the same facility. And I believe your regulations separate them and they have different types of waste characterization for each type operation when it's commingled at the same facility. But I came up here for another reason. I was just rebutting Dr. Teri (sic) Stein.	Comment noted. Commenter supports the regulatory text.
6551	Transcript Part 2 6551 (Edgar, E., Edgar Associates)	On one of the slides on post processing, under organic waste recovery activities, you have a new terminology that's not defined. They're called organics recycling center. As part of Beatrice's presentation, you talk about a recycling center has to pass a three-part test, which is ten percent residual and one percent for putrescible. So, I'm trying to get my mind wrapped around as to what exactly is a recycling center, given the fact that its mostly for putrescible food waste and organics. So, I think that if you have an organics recycling center, I don't think it can pass the three-part test. It's impossible. So, can you give some examples of what you're thinking about on an organic recycling center? MR. DE BIE: A site that's handling paper or cardboard.MR. EDGAR: Paper products. Okay. Well, I was thinking food wastes and greens. Is there an example of that where this would apply for food wastes, given the one percent per putrescible?	Comment noted. Comment is not commenting on the regulatory language.
6552	Transcript Part 2 6552 (Boone, A., Center for Recycling Research)	In 2008, the County of Alameda and in all landfills in Alameda County, the disposal of yard debris. And I would assume that the requirement or the allowance of biomass as a destination for separated organics does not preclude local action. There's no preemption on the State's part to requiring that or allowing that access. I would see an organizing factor in Alameda County, basically, to ban the disposal of any organic material in a landfill. And I just wondered if there's anything in this that would preclude local action on that. Thank you.	Pursuant to section 18983.1(b)(4), taking materials to a biomass conversion operation or facility is considered a reduction in disposal. SB 1383 preempts a jurisdiction from banning the use of biomass conversion as a means of disposal reduction. It has no impact on a landfill ban for yard debris.
6553	Transcript Part 2 6553 (Boone, A., Center for Recycling Research)	The local government cannot ban the access, using biomass as a suitable placement point for this organic material. You're saying that?	It is unclear what the commenter is saying, but the regulations do not prohibit landfill bans, but they do prohibit bans of material going to biomass as that is considered an authorized type of recycling.  Pursuant to section 18983.1(b)(4), taking materials to a biomass conversion operation or facility is considered a reduction in disposal. SB 1383 preempts a jurisdiction from banning the use of biomass conversion as a means of disposal reduction. It has no impact on a landfill ban for yard debris.

Comment Number	Received From	Question/Comment	Response(s)
6554	Transcript Part 2 6554 (Boone, A., Center for Recycling Research)	You're not allowing us -- you're not allowing the county to restrict access to biomass facilities, is that what you're saying?	Pursuant to section 18983.1(b)(4), taking materials to a biomass conversion operation or facility is considered a reduction in disposal. SB 1383 preempts a jurisdiction from banning the use of biomass conversion as a means of disposal reduction. It has no impact on a landfill ban for yard debris.
6555	Transcript Part 2 6555 (Vazifdar, K., Los Angeles County Public Works)	Who is responsible for monitoring and enforcing solid waste facilities' compliance with the SB 1383 regulations? It will be the responsibility of local jurisdictions' LEAs or of the State.	Comment noted. The Local Enforcement Agencies and CalRecycle will be required to enforce facilities, depending on the facility and the oversight required.
6556	Transcript Part 2 6556 (Vazifdar, K., Los Angeles County Public Works)	There is no, to my knowledge, there is no hard and fast, or good science on the question of how much methane is actually captured at a landfill. Okay. There is some science that says that all of the organic materials which are deposited in landfills are gone -- are demethanized within six weeks of deposition. And so, they're methane never is approached by the gas capture system. If that is true, then it's extremely important to keep that material out of the landfill. And I want to make sure that the kind of information that you're going to have is going to be able for us to say we are confident that the State's procedures keep all of those readily methanizable -- whatever you call it -- demethanized materials out of the landfill. That's been the issue in Europe for 20 years and we don't want to see it happen here. Thank you, over.	Comment noted. Comment is not commenting on the regulatory language.
6557	Transcript Part 2 6557 (Stein, A., Environmental Health Trust)	Okay, I want to just follow up on what you were just talking about. On page 9 of AB6, Article 2, you have the determination of technologies that constitute reduction in landfill, and you give a number of .30 million tons - tell me what's the unit on that? Anyone know? MR. BRADY: That's M2CO2E, it's metric tons of CO2 equivalent. MS. STEIN: Metric tons, sorry about that. So, you have that number. You worked with CARB, probably, to get that number from established, published peer-reviewed research. My question is, or it's not really a question, it's a comment. The digestate that's coming out of the AD facilities, do we think that it's going to meet that and, you know, on an absolute basis? Because I think that there's some variability when you pull it out and, you know, that's a decision being made by the operator. It would be good to -- I've been promoting that it be matured and stabilized to get to that level and be below, but it's unclear. So, could we put a metric on the AD digestate design criteria for opening and moving the material to -- if you're going to move it out to the landfill to mature it, it's going to be a drive. And so, that's my concern is can you put some metrics on where the AD material should be? Because it's going to be emitting methane when you get it out, if you don't completely stop the process. So, that's it.	Staff used the methodology described in guidance doc referenced in the FSOR to derive the 0.30 MMTCO2e/short ton organic waste threshold specified in Section 18983.2. As noted in the appendix, staff utilized CARB's Method for Estimating Greenhouse Gas Emission Reductions from Diversion of Organic Waste from Landfills to Compost Facilities, which considers transportation emissions from organic material feedstock collection to compost product delivery to be functionally equivalent to transportation emissions from collection of organic waste to landfill disposal. Therefore, transportation emissions associated with composting (feedstock collection and delivery of finished product) are accounted for in the 0.30 MTCO2e threshold and therefore must be considered in the GHG emissions reduction and the lifecycle GHG emissions calculations.
4577	Transcript Part 3 4577 (Levin, Julia, Bioenergy)	I just looked back at SB 1383, Health and Safety Code 39730.6. And no where in that section of code dealing with diverted organic waste does it mention the 2017 IEPR. That's in a different section of the bill about creating recommendations more	The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.

Comment Number	Received From	Question/Comment	Response(s)
	Association of California)	generally for renewable gas. But it is not in the section about diverted organic waste. So, that's simply not accurate.	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle disagrees with the comment's interpretation that because section 39730.6 does not mention the 2017 IEPR, therefore CalRecycle is exempt from having to consider it. Section 39730.8 specifically requires state agencies to consider the recommendations pursuant to the 2017 IEPR to increase renewable gas use to meet the state's climate change goals, including "landfill diversion". Therefore, CalRecycle will continue to consider recommendations in the 2017 IEPR.</p>
4578	Transcript Part 3 4578 (Levin, Julia, Bioenergy Association of California)	<p>Having said that, I looked back at the IEPR section on renewable gas that was required by another part of SB 1383. And this is what it says on electricity. Generating electricity using in-state renewable gas assists with meeting the State's waste stream reduction requirements, brings environmental and public health benefits, and reduces short-lived climate pollutants.</p> <p>Nothing in the 2017 IEPR expresses an environmental or carbon preference for transportation fuel over electricity, pipeline injection, combined heat and power, industrial uses, renewable hydrogen. In fact, the 2017 IEPR talks at length about all the benefits of using renewable gas for hydrogen and for pipeline injection.</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4584	Transcript Part 3 4584 (Schoonmaker, K. Stop Waste)	<p>And for pathways to compliance, I think I'll talk about this a little bit more, but the water-efficient landscape ordinance, as you know requires four cubic yards per thousand square feet of compost on all new construction and major renovations. And I think if cities -- and I don't know if you guys know this, but DWR says in their last reporting they've got 27 percent of jurisdictions enforcing and reporting to them. Because they don't have any teeth to make them enforce. And so, I think it would be great. You would have a precedent for requiring compliance with CalGreen. If you could also have that for the WELO as part of the pathway to meet this procurement target, that would be great. So, I'll give an example of one jurisdiction in a minute. And I know that doesn't make sense for everyone, like rural jurisdictions probably don't have that much development. So, could be a compost application on range land, or ag, in the rural jurisdictions just for an example.</p>	<p>The proposed regulations have been changed to include a requirement that jurisdictions shall adopt ordinances or other enforceable mechanisms to require compliance with MWELO. There are specific aspects of MWELO that relate to the use of compost or mulch on landscaping and construction projects. These already adopted requirements provide a potential market for recovered organic waste products, like other ordinances jurisdictions adopt, this should already be enforced by jurisdictions. The MWELO provisions that are pertinent to reducing the disposal of organic waste are included in the regulations so that CalRecycle can ensure that those provisions are enforced. See also response to comment (refer to comment justification enforcement). The Procurement requirements are designed to further reduce organic waste disposal by increasing the procurement of recovered organic waste products. Enforcing laws that were already adopted to facilitate increased procurement is a method of ensuring that the organic waste products that should already be procured are procured. In other words, enforcing MWELO is a method of ensuring that minimum procurement amounts required by entities identified by MWELO prior to the adoption of SB 1383 are met. The proposed procurement requirements are separate and are designed to increase procurement of organic waste products in order to meet the statutory targets of SB 1383.</p>
4585	Transcript Part 3 4585 (Schoonmaker, K. Stop Waste)	<p>So, in general, I think the requirement's still really too high. And I think this is due, in part, maybe to a couple things. I know, I think it was in the -- oh, shoot, the Regulatory Impact Assessment. I was trying not to use the jargon and I had a hard time remembering what it was. Looking at that, I think it was an assumption of a WELO application rate, which is sort of 4 cubic yards per thousand square feet. That's about an inch and a third of compost, and that's what you would use in new construction, totally makes sense.</p> <p>But if a city is going to buy compost, they're going to apply it on parks, medians, what have. That application rate is about a half inch, so it's almost a third less and that could be pretty significant when we're talking about when you're scaling up.</p>	<p>The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products, including mulch and renewable electricity from in-vessel digestion and biomass conversion, to provide jurisdictions with even more flexibility to choose product that fit local needs.</p> <p>CalRecycle recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction's need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. If, as mentioned in the comment, the city has limited need for compost, mulch, or fuel, the city may procure electricity or heating applications derived from renewable gas. If the city is capable of reducing or eliminating its use of fossil gas entirely, it could correspondingly reduce or eliminate its procurement obligation under the regulation. This provision was added to ensure jurisdictions are not required to procure more</p>

Comment Number	Received From	Question/Comment	Response(s)
			material than they can actually use, and to ensure that the requirements do not conflict with other environmental goals to reduce the carbon intensity of products and activities cities procure material for use.
4586	Transcript Part 3 4586 (Schoonmaker, K. Stop Waste)	So, the City of Oakland buys about a thousand cubic yards of compost a year. And with the new procurement requirements, they would be required to purchase 43,000 cubic yards of compost, which is a quite a bit more. But if they were to enforce their WELO, which they do, but through enforcement of their WELO, they end up with about 39,000 cubic yards being applied.	<p>The proposed regulations were revised in to include a requirement that jurisdictions shall adopt ordinances or other enforceable mechanisms to requirement compliance with MWELo. There are specific aspects of MWELo that relate to the use of compost or mulch on landscaping and construction projects. These already adopted requirements provide a potential market for recovered organic waste products, like other ordinances jurisdictions adopt, this should already be enforced by jurisdictions. The MWELo provisions that are pertinent to reducing the disposal of organic waste are included in the regulations so that CalRecycle can ensure that those provisions are enforced. See also response to comment (refer to comment justification enforcement). The Procurement requirements are designed to further reduce organic waste disposal by increasing the procurement of recovered organic waste products. Enforcing laws that were already adopted to facilitate increased procurement is a method of ensuring that the organic waste products that should already be procured are procured. In other words, enforcing MWELo is a method of ensuring that minimum procurement amounts required by entities identified by MWELo prior to the adoption of SB 1383 are met. The proposed procurement requirements are separate and are designed to increase procurement of organic waste products in order to meet the statutory targets of SB 1383.</p> <p>However, CalRecycle also recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction’s need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. It can do this by showing that the amount of fuel, electricity, and gas for heating applications procured in the previous year is lower than the procurement target.</p>
4587	Transcript Part 3 4587 (Schoonmaker, K. Stop Waste)	So, this is what I think, if you had alternative pathways to compliance you could -- if you're going to build those in, then you can still get what you want, which is market development. Right, you want a resilient market. And then, just a couple -- oh, also, that would cost about a million dollars.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
4588	<p>Transcript Part 3 4588 (Schoonmaker, K. Stop Waste)</p>	<p>In the economic analysis, it said that the price of compost was \$25 a ton for San Francisco or Palo Alto, or both. It should be \$25 a cubic yard. And considering you get about - - you know, it's 800 pounds per cubic yard. So, that's a factor of over -- that's a gross overestimate and a gross underestimate of price.</p>	<p>Comment noted. CalRecycle disagrees that the cost per ton of compost is underestimated. CalRecycle revised the estimated cost of compost in the Appendix to the ISOR. CalRecycle estimated the cost of compost by conducting a survey of several facilities in California, which found that the overall cost to purchase compost at a bulk rate, transport it, and apply the compost to land was \$30 per ton of compost.</p>
4589	<p>Transcript Part 3 4589 (Schoonmaker, K. Stop Waste)</p>	<p>And in general, in a landscape market, cities are going to buy compost with -- by the cubic yard, not a ton. And so, what should happen, I think, is develop an appropriate bulk density. We like to use 800 pounds because it's kind of right in the middle. I'm sure people here disagree with me for very good reasons. We can talk about that later. But find a bulk density and just kind of settle on it for people.</p>	<p>CalRecycle has added the following conversion: 1 ton of organic waste feedstock = 0.58 tons compost = 1.45 cubic yards compost. This is based on 1 ton compost = 2.5 cubic yards using the commenter's recommended bulk density factor of 800 lbs/cubic yard, which is the same value used by the Department of Transportation (CalTrans). Note that cubic yards does not replace tons in the regulatory language; it is simply an alternative unit of measure.</p>
4590	<p>Transcript Part 3 4590 (Schoonmaker, K. Stop Waste)</p>	<p>And then, lastly, for jurisdictions that are going to be relying on compost, so all of our member agencies have really used composting to deal with their organics. So, I don't know how much of a pathway to buying renewable natural gas we would have. If most of it's being used by the facilities that make it and the jurisdictions that send organics there, the cities that use composting are kind of like they don't really have much of that hybrid pathway. I don't know how open that is to them.</p>	<p>CalRecycle disagrees with the comment's interpretation that the draft regulations mandate the use of compost. The draft regulations provide flexibility for jurisdictions to choose the recovered organic waste product(s) that best fit local needs. A jurisdiction has the option to procure other products instead of, or in addition to, compost and mulch.</p>
4591	<p>Transcript Part 3 4591 (Schoonmaker, K. Stop Waste)</p>	<p>So, and related to that, that fuel, fuel use should not be the indicator. I know you guys were struggling with like how do you figure out a baseline, because there's no similar organic products that you could have relied on to get a baseline for compost use. But fuel is not the answer, I don't think. I think we still need to think that one through about how you decide how much they really need. Which I do appreciate, thank you for trying to not make them buy more than they need.</p>	<p>CalRecycle disagrees with the proposed revision to add compost in Section 18993.1(j) on the basis that equivalent products are not well defined and lack conversion factors. The intent of this section is to provide jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. Given the potential difficulty of determining conversion factors for comparable products to compost (e.g. liquid chemical fertilizers compared to solid compost), jurisdictions have the option to use their previous year's procurement of gas, which have readily available organic waste conversion factors, to lower their procurement target. The focus on energy products is intended to simplify the process by which a jurisdiction can lower its procurement target. Although this mechanism relies only on fuel, electricity, and gas procurement, a jurisdiction can still choose to meet its lowered procurement target with any recovered organic waste products, including compost.</p>

Comment Number	Received From	Question/Comment	Response(s)
4592	Transcript Part 3 4592 (Lapis, Nick, Californians Against Waste)	I'm actually going to echo the previous two commenters on the need to expand the types of products that are eligible for procurement.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4593	Transcript Part 3 4593 (Lapis, Nick, Californians Against Waste)	I can't think of a single reason why we would not allow pipeline injection, Ultra C generation. In fact, if you were to look at the green house gas benefits, you know, when you're producing LCFS fuel that's being sold into a market that will probably be limited by the LCFS in terms of people aren't going to buy more than they need. And if that fuel were not on the market, they would be buying something else. So, the overall carbon impact there would be almost none as opposed to putting it into the pipeline. Not to say that we shouldn't include vehicle fuel, but pipeline injection seems better environmentally, when you factor in the existing programs. And just generally, it doesn't make a lot of sense to limit it purely to vehicle fuel.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4594	Transcript Part 3 4594 (Lapis, Nick, Californians Against Waste)	<p>And on the composting side, I think you should expand it to include mulch products as well. And I realize that there are some concerns that I think have held you back from doing that. One being that there's a lot of mulch on the market. It's heavy and somebody could, you know, meet all their requirements very quickly with a small, relatively small amount of woody material. And while I understand that, that woody material would have a different conversion factor from a greenhouse gas benefit perspective, and it could be listed as a third separate pathway. And so, it might be a 3 to 1 ratio, or whatever, of mulch purchases to compost purchases.</p>	<p>CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4595	Transcript Part 3 4595 (Lapis, Nick, Californians Against Waste)	<p>And the second concern, as I think about direct land application and, you know, I share that concern, but I think there are ways to prevent that in the regulations. We do have a glut of wood in the market and it seems like that's an opportunity for procurement. If anything, I mean in Northern California we don't have a glut of compost, but we definitely have a glut of wood.</p>	<p>CalRecycle has revised the regulatory language to add mulch, that would include wood mulch, provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4596	Transcript Part 3 4596 (Lapis, Nick, Californians Against Waste)	<p>And then, finally, State procurement is noticeably absent. I think it's probably unreasonable to require all these folks to buy material when the State isn't doing its own part, and when the State is a major landowner.</p>	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor’s office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to “develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state.” These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p>
4597	Transcript Part 3 4597 (Wade, Sam, Coalition for Renewable Natural Gas)	I'd like to just offer our support for the proposal overall. I really think it's a strong framework. I think it makes a lot of sense to have these types of procurement targets in place.	Thank you for your comment. CalRecycle agrees that procurement will be an important part of meeting SB 1383's organic waste diversion goals.
4598	Transcript Part 3 4598 (Wade, Sam, Coalition for Renewable Natural Gas)	But that said, our coalition does advocate and deployment of RNG across all end use applications. And we're, therefore, strongly in favor of broadening what would count toward the procurement targets to include other end uses.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. 4600	Transcript Part 3 4600 (Price, Brandon, Clean Energy)	<p>And like Sam said, there's greater conversations going on in the State of California about the best use for RNG. We really want to keep that RNG market open, with free competition, so that hauler, that transit agency isn't forced onto a particular source of RNG. You know, we want them to get the most negative carbon-intense</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>RNG to the fleets that we can. That way, we're recognizing the biggest reduction. And limiting their purchases to this 1383 RNG really segments the market, so you're really kind of cutting off a big portion of the NGB demand, and that can have a crippling effect on the overall RNG market as a whole. At the onset of your presentation, you know, you said we need markets here for this product. You know, these recovered organic waste products. Well, the transportation market for RNG is already well established. And, you know, I also support Julia's comments with allowing for pipeline injection, because then the markets will determine what the best use for that RNG will be. We have a need for it in decarbonizing the pipelines. You know, SoCalGas and PG&amp;E are actively looking for RNG to reduce their own carbon footprint. Electrification -- or, using RNG for electrification is a great thing as well. Really, we want to keep all of the options open because, again, we're already doing a great thing with diverting this organic waste. Now, let's let the market determine what the best use for that is and let's not hamstring those who are already using it.</p>	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction's procurement target.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
4601	Transcript Part 3 4601 (Price, Brandon, Clean Energy)	<p>Because for the most part all of the entities that are covered by this, are already using RNG today. So, there would be a lot of uncertainty on, you know, contracting going forward and what they're actually going to be able to do. They're not going to be looking out for a ten-year contract with, you know, a company like myself, where others in the RNG space -- you know, presents a lot of uncertainty.</p>	<p>The intent of these regulations is not to disrupt existing renewable transportation fuel procurement contracts between jurisdictions and providers. CalRecycle generally supports the procurement of renewable transportation fuels; however, in order to be consistent with the organic waste diversion goals of SB 1383, the procurement requirements on jurisdictions must focus on California, landfill-diverted organic waste. As such, only eligible products defined in Section 18982(60) as "recovered organic waste products" may count towards a jurisdiction's recovered organic waste product procurement target. If existing contracts supply jurisdictions with renewable transportation fuel that meet this definition, then a jurisdiction may count that fuel toward its procurement target. CalRecycle disagrees with the recommendation to "grandfather" existing suppliers who do not meet the recovered organic waste product definition,</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>as it is inconsistent with the goals of SB 1383 to mandate or incentivize products that do not contribute to in-state landfill diversion.</p> <p>The comment only refers to renewable gas, but it is important to note that a jurisdiction may procure other recovered organic waste products to fulfill the procurement requirement. CalRecycle has revised Section 18993.1 to expand the list of recovered organic waste products to provide more flexibility to jurisdictions for the products they can choose to procure. If a jurisdiction already has an existing RNG contract, the procurement requirements do not require the replacement of the RNG contract. Rather, the jurisdiction may procure other eligible products such as compost or electricity. Each jurisdiction has different needs for recovered organic waste product, and the draft regulations are intended to provide jurisdictions the flexibility to choose products that fit local needs.</p>
4602	Transcript Part 3 4603 (Price, Brandon, Clean Energy)	<p>And then, one other clarifying point that I would like to raise, the LCSF does a great job in incentivizing RNG, but there is this provision in the LCSF that removes the avoided methane emission credit or the burned organic waste credit, which really gives you that negative CI score. So, I want to make sure there's a clarifying -- that we have this discussion about whether that negative CI would stay in place if this mandate -- when this mandate goes into play. You know, is the 50 percent and the 75 percent diverter organic mandate does that, you know, preempt these digesters from maintaining that negative carbon intensity score. Because, then, that really starts to slip the -- that starts to flip that economic value.</p>	<p>A change to the regulatory text is not necessary. The Low Carbon Fuel Standard (LCFS) program and the associated carbon intensity calculations are administered by the Air Resources Board (ARB). While CalRecycle recognizes that the LCFS program may impact the economics of some recovered organic waste products, it is not within CalRecycle's purview to comment on potential future changes to carbon intensity calculations.</p>
4603	Transcript Part 3 4603 (Price, Brandon, Clean Energy)	<p>there is also the RFS value. In talking with the D3 and the D5 RIN, there's a lot of things that come into this conversation. The D3, D5 value is something that EPA still is trying to wrap their heads around. There's no clarity on that issue.</p>	<p>A change to the regulatory text is not necessary. Comment noted. The Renewable Fuel Standard (RFS) program and the associated Renewable Identification Numbers (RINs) are administered by the Environmental Protection Agency (EPA). While CalRecycle recognizes that the RFS program may impact the economics of producing renewable transportation fuel, it is not within CalRecycle's purview to comment on the clarity of the D3/D5 RINs issue.</p>
4604	Transcript Part 3 4604 (Stein, A, Environmental Health Trust)	<p>The presentation had some slides about counting for procurement -- the calculation didn't talk about the digestate, the weight of the digestate. Is that going to be subtracted? Because you're saying that you can use the calculation you came up with to count for getting fair allocation of how much they need to purchase. But you have to subtract out what -- because when you're creating that fuel, you have digestate that you're then going to either send to a landfill, or compost it to turn into something else. But you're not including that weight in the calculation that you just described. It's just you didn't even bring it up when you had the slide, so it didn't get discussed. It's an important issue because it's probably half the weight. I mean, you know. So, I really think that it's a loophole and it's silent. You're silent on it, absent on it. Hopefully, it drives people to compost, instead of turn it into some lightweight energy that -- gas that can be used. But if it works, great. But the question is, just because you're then hauling off the digestate after you took out the energy, you know, that has to play into the calculation.</p>	<p>Digestate is part of the "organic waste" definition per section 18982(46), and is therefore subject to the 50% and 75% landfill diversion requirements. Nothing in the draft procurement regulations prevent a jurisdiction from procuring recovered organic waste products made with digestate feedstock, provided the end product (i.e. compost) meets all applicable definitions and relevant regulatory requirements. The intent of the procurement requirements is to incentivize markets for products made from organic waste materials that have historically been disposed of, such as digestate. Therefore, CalRecycle disagrees with the comment's interpretation that the procurement requirements are incentivizing landfilling of digestate.</p>
4605	Transcript Part 3 4605 (Noble, D, Association of	<p>I'm really admonishing CalRecycle to not be overly restrictive in the kinds of products that can be made from this resource. Because right now we're saying just compost and renewable natural gas. Since I represent a compost association, I'm all</p>	<p>CalRecycle has revised the proposed regulatory text to add additional products, such as renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also</p>

Comment Number	Received From	Question/Comment	Response(s)
	Compost Producers)	over the compost part of this. But compost isn't going to take care of the whole bioresources marketplace, all the renewable carbon.	<p>allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities.</p> <p>CalRecycle is also adding mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4606	Transcript Part 3 4606 (Noble, D, Association of Compost Producers)	And not only that, compost as is defined, it doesn't include uncomposted material, which is definitely part of the marketplace. You know, sometimes what's called, you know, composted overs and that sort of thing. I mean, if it is composted, you'll call it compost.	<p>CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. However, CalRecycle disagrees with adding the specific terms listed in the comment due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of potential products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>
4607	Transcript Part 3 4607 (Noble, D, Association of Compost Producers)	In terms of the gas, whether it comes from the digestate or if it comes from anerobic digestion and now, you know, pyrolytic conversion has already been permitted in a renewable facility in South Coast Air District. That produces a lot of energy. And biochar, biochar is the up and coming additive to not only compost, but soil.	<p>CalRecycle disagrees with the comment's recommendation to broaden recovered organic waste products to byproducts of pyrolysis, such as biochar. The purpose of the current regulatory language is to be consistent with SB 1383 statute that specifies the adoption of policies that incentivize biomethane derived from solid waste facilities. In-vessel digestion facilities are solid waste facilities, which allows CalRecycle to verify that these facilities are reducing the disposal of organic waste.</p> <p>Thermal and noncombustion thermal conversion technologies are not yet in practice on a commercial scale in California and lack the necessary conversion factors to include in Article 12. For the current regulatory proposal, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products using publicly available pathways and conversion factors.</p>
4608	Transcript Part 3 4608 (Noble, D, Association of Compost Producers)	Also, organic fertilizers can be made from this material. We can call them biofertilizers. So, there's a whole suite of soil amendments. And that even mention, what about animal feed, like hog slop from the food waste, which is traditionally how it was done. Why isn't that being counted as recycling.	<p>CalRecycle disagrees with including animal feed as a recovered organic waste product because animal feed is typically produced from feedstocks such as industrial food waste, that have not historically been landfilled. SB 1383 requires ambitious landfill diversion targets. Therefore, the definition of recovered organic waste product specifies that products must be made from "California, landfill-diverted recycled organic waste processed in a permitted or otherwise authorized facility." The SB 1383 mandate is to recover organic waste that would be disposed. It is inconsistent with SB 1383 to incentivize or mandate activities that do not reduce landfill disposal.</p> <p>CalRecycle disagrees with the recommendation to allow "biofertilizers" due to lack of verifiable conversion factors. The broad range of potential products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>

Comment Number	Received From	Question/Comment	Response(s)
4609	Transcript Part 3 4609 (Noble, D, Association of Compost Producers)	And then, all the materials that you can make, and all the chemicals that you can make, as well as the different forms of energy. So, there's a whole portfolio of bioproducts that can be produced from bioresources. So, what this points to is not wanting to restrict the market to just two choices, compost or biogas. But, you know, we're trying to create an industry here. Could you imagine, you know, saying that in the renewable, or the water industry, or the renewable fruit industry that we're only going to have two kinds of beverages? I mean, it just doesn't make sense in terms of building a marketplace.	of Reasons regarding the eligible end-uses identified in the regulations and how they should be interpreted. The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.
4610	Transcript Part 3 4610 (Noble, D, Association of Compost Producers)	MR. BRADY: And just one quick clarification on animal feed. That is recovery or recycling. But I think your point is that it's not considered -- it's not procurement, but it is considered in the regulations. MR. NOBLE: Yeah. Most municipalities probably don't have hog farms, but we said it could be a contractor within the municipality, right? I mean, that's in the regs as you currently wrote it. So, if they did have hog farms nearby that should count, right? MR. BRADY: I understand the point. MR. NOBLE: Yeah, okay. MR. BRADY: I just wanted to clarify that it is considered recovery, it's just not in the procurement portion.	Comment is from Public Hearing and was responded to during Public Hearing and noted in the comment.
4611	Transcript Part 3 4611 (Green, S., Sanitation Districts of Los Angeles County)	please add flexibility for allowing more and different types of products. And there may be new things that come along as this marketplace grows, right, and as more waste is diverted, and people are innovative and come up with new products.	CalRecycle has revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
4612	Transcript Part 3 4612 (Green, S., Sanitation Districts of Los Angeles County)	allow new or additional organic products as approved by CalRecycle. So, leave some flexibility to add things along the way.	CalRecycle has revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.

Comment Number	Received From	Question/Comment	Response(s)
			Regarding "flexibility to add things along the way", CalRecycle disagrees with adding an open-ended option for procurement. The broad range of potential recovered organic waste products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.
4613	Transcript Part 3 4613 (Green, S., Sanitation Districts of Los Angeles County)	And then, the second, more sort of specific comment that we have, we related it back to the definition of renewable transportation fuel. It's possible that this could be addressed in a different way, but that made the most sense to us. But, basically, this particular situation we want to comment on is when you have a wastewater treatment digester that's taking in food water, and then we produce fuel. At our treatment plant, where we're doing this now, one of the considerations, we're currently building infrastructure and converting a natural gas fueling station to a renewable natural gas fueling station, as a result of the additional gas that we are and will be producing.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4614	Transcript Part 3 4614 (Green, S., Sanitation Districts of Los Angeles County)	But the issue that we wanted to highlight is the RIN issue that a previous speaker mentioned. So, in order to take advantage of the highest value of the RINs to make the project more viable, and cost effective, we're trying -- we're thinking what we need to do is put wastewater biogas into the fuel system and do -- and then, sort of	CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. 4616	Transcript Part 3 4616 (Foster, C, City of Oceanside)	Wastewater treatment facilities within our agency. We actually have excess digesters currently not being used. We can easily integrate food waste into our system. We are currently taking our biosolids and generating electricity, able to electrify our wastewater facilities. It would be very unfortunate to create this whole food waste system and not be able to use the credit for what we're doing at our own facility and need to buy additions things, outside of our system. So, that's really important to address that. Especially for our ratepayers, because they don't understand the need to go and buy more product when you're already doing a good thing with your current system.	The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. Comment Number	Received From	Question/Comment	Response(s)
			CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
4617	Transcript Part 3 4617 (Foster, C, City of Oceanside)	And one of the big things identified in that is some of the biggest areas to our agricultural and our range land operators is being able to afford the application and use of these materials, from a transportation and distribution perspective. So, as we consider driving the use of these materials, consider subsidy programs, programs that help support those industries and being able to use these materials. So, if a jurisdiction was developing some sort of supportive subsidy program. The money they're putting towards that, could that be counted as consideration in promoting procurement of these types of materials.	Nothing in the regulations prevents a jurisdiction from establishing a subsidy program or implementing and enforcing an ordinance to support the use of recovered organic waste products. If those subsidies or ordinances help drive procurement and use of eligible recovered organic waste products and all applicable requirements of Article 12 are met, then a jurisdiction may count that procurement towards its target.
4618	Transcript Part 3 4618 (Foster, C, City of Oceanside)	I also appreciate requiring, the recommendation to require the landscape model ordinance. Few jurisdictions are doing that. So, I think if we drive that and give credit for jurisdictions to do that, that would help.	The proposed regulations were revised in to include a requirement that jurisdictions shall adopt ordinances or other enforceable mechanisms to requirement compliance with MWELo.
4619	Transcript Part 3 4619 (Foster, C, City of Oceanside)	we do not have a centralized purchasing agent in the City of Oceanside. We have a couple thousand employees, half of which might be their own individual division, or department purchasing agent. They're buying their own paper products, their own toilet paper and paper towels. It's been hard enough to get them to try to buy recycled content paper and now I need to tell them they need recycled content toilet paper? Talk about a way to just make it impossible to try to implement this type of organics program.	CalRecycle has revised the regulatory language to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content. Regarding decentralized purchasing, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them by early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.
4621	Transcript Part 3 4621 (Foster, C, City of Oceanside)	requiring recycling content paper products could really, actually, be seen as a Prop 2018-26 (Prop 218) issue, an unfunded tax. I don't want to be the solid waste division that all of a sudden has to start paying for every other department's toilet paper simply because it's a solid waste law requiring the purchase of these materials.	This is not a tax imposed by the state because the state is not imposing a particular levy and is not raising revenue through procurement. To the extent commenter appears to be saying this is an unfunded mandate, CalRecycle disagrees. First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, "No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code." Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)). Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a "tax" under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe "any fees" that may in the future be imposed by the numerous local jurisdictions in California as "likely" to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating

Comment Number	Received From	Question/Comment	Response(s)
			<p>that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p>
4622	Transcript Part 3 4622 (Helget, C, Republic Services)	With that, I'd like to reiterate what Nick said, Nick Lapis said about the State procurement policies and expanding it more into the State areas.	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor's office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to "develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state." These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p>
4623	Transcript Part 3 4623 (Helget, C, Republic Services)	Also, to keep things simple, what was stated earlier by the California Renewable Natural Gas Coalition, and Julia Levin, and the City of Oceanside. I think she made some very good, solid points and I'll lend her support to those comments.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
4625	Transcript Part 3 4625 (Schiavo, P, CR&R)	concern about the language right now would stifle future innovations, technologies that we may not even envision at this point in time.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle has revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p> <p>CalRecycle disagrees with adding an option for “future innovations, technologies” for procurement. The broad range of potential recovered organic waste products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>
4626	Transcript Part 3 4626 (Edgar, E., Edgar and Assoc.)	I do think direct procurement is a key part of program implementation, but not necessarily to drive market. At least it's important because it provides a feedback mechanism for local governments to understand the quality of the programs that they're executing and the success of those programs.	Thank you for your comment. CalRecycle agrees that procurement will be an important part of meeting SB 1383’s organic waste diversion goals.
4627	Transcript Part 3 4627 (Edgar, E., Edgar and Assoc.)	I think there could be options for developing, the jurisdictions to develop ordinances that could help drive the measurable purchases of the materials that we're talking about. And if that includes additional materials and expand the scope of that, you know, mandating ordinance implementation, minimum soil organic matter content, requirements for development projects, other city contractor uses of RNG through other policy drivers may be another way for cities to achieve success.	Nothing in the regulations prevents a jurisdiction from establishing a subsidy program or implementing and enforcing an ordinance to support the use of recovered organic waste products. If those subsidies or ordinances help drive procurement and use of eligible recovered organic waste products and all applicable requirements of Article 12 are met, then a jurisdiction may count that procurement towards its target.

Comment Number	Received From	Question/Comment	Response(s)
4628	Transcript Part 3 4628 (Edgar, E., Edgar and Assoc.)	I would echo what Mr. Lapis said about the glut of wood chips on the market, now. Only going to get larger with trying to recover four and a half million tons of wood that's currently being disposed.	CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
4629	Transcript Part 3 4629 (Edgar, E., Edgar and Assoc.)	And I would also echo the need to have other procurement requirements on other State agencies, education, and nonlocal entities to help promote the development and the success of these programs.	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor's office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to "develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state." These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>Regarding "nonlocal entities", it is important to clarify that the populations in, for example, local education agencies and special districts are already included in a jurisdiction's population-based procurement target; the population data published by the Department of Finance (DOF) includes universities, community colleges, and other local education agencies. The populations inherent in these entities are built into the procurement target calculation, and jurisdictions are encouraged to work with these entities to meet their procurement targets, which may be accomplished through a contract or agreement, such as a Memorandum of Understanding (MOU). Applying procurement targets to these entities, especially population-based procurement targets, would result in double counting individuals contributing to the procurement requirements.</p>
4630	Transcript Part 3 4630 (Balsley, R., Stop Waste)	But what I am struggling with is that the requirements mean that the jurisdictions would have to -- in order to prove that they're purchasing 75 percent of paper products, and printing and writing paper, they have to track all purchases so that you get the total amount to prove the 75 percent. And most of our jurisdictions do have decentralized purchasing.	<p>CalRecycle has revised the regulatory language to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content.</p> <p>Regarding decentralized purchasing, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them by early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary,</p>

Comment Number	Received From	Question/Comment	Response(s)
			contractual, and other programmatic changes. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.
4632	Transcript Part 3 4632 (Balsley, R., Stop Waste)	Also, the definition of paper products right now includes building insulation and panels, and that is purchased quite differently than office supplies. So, I think if you do keep the language in around this, I think you should remove -- have language that says except building materials, or building insulation and panels. Because that's in capital projects and it's done very differently, and usually by contractors.	CalRecycle has revised Section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in Section 18993.3(c)(2) and therefore agrees with the proposed revision.
4633	Transcript Part 3 4633 (Balsley, R., Stop Waste)	And then, also, on the tracking aspect one more time, that I think purchasers as big as, say, Alameda County itself, can get vendor reports that may be able to help with some of this reporting. But most of the smaller jurisdictions would not, and they just don't have the staff resources to be able to track that level or purchasing of an expanded list of paper products. Maybe they could do it on the printing and writing paper, but I don't think that's possible on the paper products.	CalRecycle has revised Section 18993.4(a)(1) to allow proof of purchase other than receipts and invoices to be used. CalRecycle disagrees with narrowing the definition of "paper products". Paper is an organic material, and as such is subject to the ambitious organic waste diversion targets required by SB 1383. Therefore, it is within the purview of this regulation to build markets for recycled content procurement of all paper products, not just printing and writing paper. It should also be noted that the broad range of products is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. There is no requirement to purchase all of the paper products listed. Note, the language has already been changed in the previous draft to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content.
4634	Transcript Part 3 4634 (Stein, A., Environmental Health Trust)	I worked in the EPP, Environmentally Preferable Purchasing Office of DTS. So, one of the things is it would be really good -- we heard some comments that it's hard for local jurisdictions to purchase these goods, to have the commodity contracts from the State available. So that local governments, and nonprofits, and others could come to access these very large contracts that give really good prices, so -- and have the specifications inserted already.	CalRecycle generally agrees with the comment that a synergy between state and local purchasing would be beneficial. The Department of General Services (DGS) maintains state purchasing contracts and provides resources to local jurisdictions, such as "master agreements", which are contracts available to any agency that expends public funds. CalRecycle encourages jurisdictions to use these available resources.
4635	Transcript Part 3 4635 (Stein, A., Environmental Health Trust)	loophole issue of counting the digestate. I mean, the issue is you want to count the material that's going to go to create fuel. But that's a weight, how much is going to come in. You're having an amount digestate from that weight that came in and if it's just a loophole, you know, you can send it all to try and get some energy out of it, and then you get these credits. But you don't count the digestate. I want to repeat that again.	Digestate is part of the "organic waste" definition per section 18982(46), and is therefore subject to the 50% and 75% landfill diversion requirements. Nothing in the draft procurement regulations prevent a jurisdiction from procuring recovered organic waste products made with digestate feedstock, provided the end product (i.e. compost) meets all applicable definitions and relevant regulatory requirements. The intent of the procurement requirements is to incentivize markets for products made from organic waste materials that have historically been disposed of, such as digestate. Therefore, CalRecycle disagrees with the comment's interpretation that the procurement requirements are incentivizing landfilling of digestate.
4636	Transcript Part 3 4636 (Stein, A.,	But the fuel, we heard from the procurement end, could be purchased. But I didn't hear you say that there's a certification on that fuel quality, other than it's going to	CalRecycle generally agrees that renewable transportation fuel should be of appropriate quality for use in vehicles. Fuel quality standards are outside the scope of the rulemaking, which is

Comment Number	Received From	Question/Comment	Response(s)
	Environmental Health Trust)	hit the pipeline and then there will be some requirements for a purity of that material, so there's no toxics in it. But we have the certifications already in place, several of them exist. So, I highly recommend that in the procurement requirements include some certification of quality for the goods, and not to get really bad quality with toxics. I can imagine shimmering, with lots of bottle caps in the soil of any park that I could go to, if we didn't have the certifications that we need to make sure there's cleanliness.	focused on landfill diversion of organic waste and reduction of short-lived climate pollutants. It is incumbent on the off-taker to ensure that any renewable transportation fuel procured for the purposes of this requirement meets any and all applicable federal, state, or local standards.
4637	Transcript Part 3 4637 (Edgar, E., Edgar and Assoc.)	On behalf of GreenWaste Recovery. And they submitted a letter today with regards to opening up the procurement to include combined human-powered (phonetic) electricity. So, I concur with the comment from Julia Levin today, that we need to open up procurement to include CHP and electricity. There's a glut of wood chips out there and the ability to go biomass conversation to renewable energy is important.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4638	Transcript Part 3 4638 (Edgar, E., Edgar and Assoc.)	On behalf of the anerobic digester industry, I represented a few facilities whereby once a digestate's out of an anerobic digestion facility, the methane has been removed. So, there is no methane coming of an AD process. So, that AD then goes off to a compost facility, a permitted compost facility in order to be composted and	CalRecycle disagrees with the interpretation that the regulations mandate cities to buy low quality compost. Nothing in the draft regulations forces a jurisdiction to accept material that does not meet their quality standards. If a city chooses not to procure compost, they can procure other recovered organic waste products such as mulch or renewable gas energy products. To clarify this

Comment Number	Received From	Question/Comment	Response(s)
		the material is screened to a specification of 0.5 percent. So, there is a quality control aspect of removing digestate from anaerobic digestion with quality products through permitted facilities.	point, CalRecycle has added language requiring that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. The definition of renewable gas specifies that it must be processed at a facility that is "permitted or otherwise authorized by Title 14 to recover organic waste."
4639	Transcript Part 3 4639 (Davis, J., Mojave Desert & Mountain Recycling Authority)	On the population, consider excluding State and Federal facilities, prisons, military bases. Some of the communities I work with, almost half again of their population is in their prisons or military facilities. And so, it distorts their population numbers pretty considerably.	The jurisdiction population, as defined in Section 18993.1, equals the number of residents in a jurisdiction, using the most recent annual data reported by the California Department of Finance (DOF). The DOF population estimates include "group quarters", which includes prisons, military bases, college dorms, group homes, nursing homes, etc. CalRecycle disagrees with the comment's recommendation to remove certain populations from a jurisdiction's population estimate, as it is unclear how this would be quantified, implemented, and verified. Nor is this approach transparent. The intent of using population data from DOF is to ensure that data are publicly available and transparent. Additionally, all of these residents generate organic waste within the jurisdictional boundaries.
4640	Transcript Part 3 4640 (Davis, J., Mojave Desert & Mountain Recycling Authority)	Also, I understood that the intent of that exclusion on the fuel, the prior year's fuel purchase, does it also comply to requirements for compost somehow? When I read it, I didn't see it that way. I saw it just applying on the fuel side. And strongly suggest -- I mean, I ran the numbers for a couple of communities that have literally no turfed areas. They're high desert communities, with no turfed park areas, no medians, and they'd be required to purchase several thousand tons of compost with, really, no place to apply it.	<p>A change to the regulatory text is not necessary. The intent of section 18993.1(j) is to provide jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. Given the potential difficulty of determining conversion factors for comparable products to compost (e.g. liquid chemical fertilizers compared to solid compost), jurisdictions have the option to use their previous year's procurement of gas, which have readily available organic waste conversion factors, to lower their procurement target. The focus on energy products is intended to simplify the process by which a jurisdiction can lower its procurement target. Although this mechanism relies only on fuel, electricity, and gas procurement, a jurisdiction can still choose to meet its lowered procurement target with any recovered organic waste products, including compost.</p> <p>Regarding communities with no turfed areas, the procurement regulations do not mandate a jurisdiction to procure compost. The intent of the regulation is to provide flexibility to jurisdictions to procure products that fit local needs. If a desert community does not have a use for compost, it can procure other recovered organic waste products.</p>
4641	Transcript Part 3 4641 (Hilton, R., HF&H Consultants)	I'm going to echo a lot of the comments on you're asking for too much procurement, at least of the couple of things you're letting us procure. And so, please either reduce the requirement because it's way more than communities need, or change the mix of the materials, adding mulch, adding power, all the things that have been suggested are good ones. But these are like factor of five overruns on what people need in the communities that we've run the numbers. So, we need to either have some diversity or a level requirement.	<p>The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products, including mulch and renewable electricity from in-vessel digestion and biomass conversion, to provide jurisdictions with even more flexibility to choose product that fit local needs.</p> <p>However, CalRecycle also recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction's need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction</p>

Comment Number	Received From	Question/Comment	Response(s)
			does not procure more recovered organic waste products than it can use. It can do this by showing that the amount of fuel, electricity, and gas for heating applications procured in the previous year is lower than the procurement target.
4642	Transcript Part 3 4642 (Ozorak, E., Sacramento County)	I just wanted to echo the information that my colleague from the City of Oceanside presented. In the case of Sacramento County, we have 11,500 employees, as well as an untold number of vendors. Trying to track the amount spent on paper purchases and the amount of paper purchased is certainly going to be very challenging because there is no centralized purchasing.	CalRecycle has revised the regulatory language to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content. Regarding decentralized purchasing, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them by early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.
4643	Transcript Part 3 4643 (Astor, JK.)	If you're going to give locals the relief that they're seeking, which I'm a little bit ambivalent on, I sure hope you're going to give the haulers, who are stuck with material they had to process with no home, concomitant relief. And all too often I'm confronted, not by anybody in this room, and I mean that sincerely, but by municipal consultants or municipal employees who sit across from me at the franchise table and say that's your problem. So, don't add to the haulers' burden, please. We're still waiting for the hundred new facilities. And once we process all this, there's been no indication to my knowledge that we're going to have a guaranteed market for any of this, particularly in Southern California. So, if somebody makes a case for relief, by all means give it to them. But give that same relief or something corresponding to it to the haulers who are charged with the infrastructure, and the collection, and all the other nonsense. Otherwise, we're going nowhere fast.	The proposed regulations are requirements on jurisdictions to procure specified amounts of recovered organic waste products. A hauler could be a direct service provider to a jurisdiction, for example. CalRecycle has revised the regulatory text in Section 18982(17) to amend the definition of "direct service provider" to clarify that a contract or other written agreement, for example a Memorandum of Understanding (MOU), could be used to prove the direct service provider relationship.
4644	Transcript Part 3 4644 (Boone, A., Center for Recycling Research)	The real question is how much of the methane is escaping into the atmosphere? Nobody can tell us. If 30 percent of the methane is escaping into the atmosphere, we're making things worse instead of better by doing it. But if it's zero percent then, hey, maybe it's worth doing. But we need those kinds of numbers and they're not there. In the same way the landfill numbers seemed to get stuck a couple of years ago, there have been no numbers at all on the methane generation from AD facilities, to the best of my knowledge. When I asked the wastewater treatment engineer what percent do you recover? He said 100 percent. We know that's not true. What is the right number? I don't know. But I think you all ought to find out.	Comment noted.
4645	Transcript Part 3 4645 (Schoonmaker, K., Stop Waste)	So, while I know it's not something that would make it into the regs directly, I would think it would be great if Cal Recycle could encourage and support local sustainable landscape training for maintenance and design. So, things like rescape, Bay friendly, G-3.	Once the regulations are finalized, CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products. Regarding training, CalRecycle generally agrees that training for local sustainable landscape maintenance and design is valuable.
4646	Transcript Part 3 4646 (Levin, J., Bioenergy)	One of the other concerns we've heard from CalRecycle staff about broadening the uses of renewable gas in the procurement side of the equation is a lack of metrics. So, we suggested one in our written comments, which is how you convert	The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.

Comment Number	Received From	Question/Comment	Response(s)
	Association of California)	<p>biomethane to electricity, according to the Department of Energy's website. I believe found a number of additional metrics since then. The Energy Commission has its own metrics for conversion to combined heat and power. You don't need any more metrics for pipeline gas. It would be the same metric that you're using for vehicle fuel, it's just the conversion of tons of organic waste to standard cubic feet of biomethane.</p> <p>But for electricity and combined heat and power, there are multiple sources from the International Energy Agency, to the U.S. Department of Energy, and the California Energy Commission. So, the metrics are readily available, so please don't let that be a reason for not expanding the uses of biomethane.</p>	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
4647	Transcript Part 3 4647 (Stein, A., Environmental Health Trust)	<p>We have a thousand school districts. They're a local entity in my mind. They're a different type. They're not, you know, a city or county, but they're part of our governmental system. And that would be perfect to make these same requirements in the school districts. Because the children are the ones learning, and they're the ones that spread this message to the rest of the State. And so, if we could instill it at the schools, I think parents would be more accepting. You heard that this is not something people want to do. And it's not new. The fabric has been here for many years and we haven't made the progress we need. I think we need our children to really help us, give us a boost, a kick in the pants.</p>	<p>"Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor's office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. 4648	Transcript Part 3 4648 (Davis, J., Mojave Desert & Mountain Recycling Authority)	<p>Communities that are economically disadvantaged have a far higher hurdle, particularly per capita in compliance. And so, if you consider the median income consequence to the regulatory review of \$17 a month -- I'm sorry, \$17 a year for single family homes to comply. That's what's in the regulatory assessment. If that's a hundred percent, if you're a city that's at 50 percent of median income, that's a much higher hurdle. It's much more painful to those residents and the communities generally are not as well off and have to struggle to meet other service requirements. So, in a substantial effort, and the corollary provision that allows exceptions, please consider the impact on these economically disadvantaged communities. That, really, it's a real struggle for some of the communities. And I've seen numbers that are way beyond the \$17 a year to comply, for some of these communities. Because they're economically disadvantaged for reasons. They're remote. They're isolated and the nature of their population is going to make it really, really difficult to comply.</p>	<p>The comment posits that the financial impacts of the regulations will be greater for disadvantaged communities but does not provide evidence or quantification of how the impacts will be greater in these communities. For example, will haulers or jurisdictions charge disadvantaged communities more to provide the same level of service provided to other generators? The comment does not provide specific examples of how waivers could be provided for disadvantaged communities, nor does it consider the impact such waivers could have on the state’s ability to achieve the statutory targets. CalRecycle considered the development of a waiver for disadvantaged communities statewide but found that a statewide exemption for disadvantaged communities would exempt a portion of organic waste generation that would threaten the ability of the state to achieve the statutory targets.</p> <p>CalRecycle encourages haulers and jurisdictions to structure their rates in a manner that reduces the economic burden experienced by low income communities. Haulers and jurisdictions have sufficient flexibility under existing law, and within the structure of the regulations to design their programs and rates in a manner that reduces the financial burden on economically disadvantaged communities. For example, haulers and jurisdictions could base their service rates on waste generation, which would allow economically disadvantaged generators that are likely to produce less waste to receive a lower rate. Jurisdictions and haulers could also identify other mechanisms to subsidize services for economically disadvantaged portions of their community.</p>
4649	Transcript Part 3 4649 (Foster, C., City of Oceanside)	<p>The reporting and enforcement section is over 25 pages long. I think our attorney even still struggles with interpreting and how we would implement it from a jurisdictional staffing approach. It's extremely prescriptive, extremely complicated. Very difficult to convey to my stakeholders and council members what needs to be done. The reporting requirements, alone, are overly burdensome and too</p>	<p>A change to the regulatory text is not necessary. The reporting and recordkeeping requirements are the minimum amount needed to allow CalRecycle to ensure a jurisdiction’s compliance with the Chapter and the implementation and enforcement within the jurisdiction. The recordkeeping requirements also assist a jurisdiction in verifying and tracking their own progress and if they are complying with the law.</p>

Comment Number	Received From	Question/Comment	Response(s)
4650	Transcript Part 3 4650 (Foster, C., City of Oceanside)	<p>prescriptive, making it completely impossible to be able to comply. I think it sets up jurisdictions who are making a good faith effort to comply with this regulation.</p> <p>I think jurisdictions right now concerned about just trying to figure out how to build a facility or a system for food waste. They're not even comprehending the staffing reality and programmatic reality of needing to do those route reviews, those reporting requirements, needing to chase after our haulers, and our edible food recovery generators, and our self-haulers, and all the physical space waivers that we're going to face.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4651	Transcript Part 3 4651 (Foster, C., City of Oceanside)	<p>It's also extremely difficult to put the burden on the jurisdiction to make a higher -- be able to do a more stringent standard on our entities. So, if the regulation fails to require all generators to comply and the regulators tell us, well, the city can pass a more stringent standard, that's impossible to do at a local jurisdictional level considering the cost implications of this program.</p>	<p>Comment noted. Comment Number	Received From	Question/Comment	Response(s)
4652	Transcript Part 3 4652 (Foster, C., City of Oceanside)	We're looking to implement a commercial food waste program as early as next year, and I'm already looking at a 6 to 14 percent rate increase, and that's infrastructure alone. That does not take into consideration the staffing and programmatic implementation cost for commercial recycling. And I haven't even looked at the residential side of it, yet.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. 4653	Transcript Part 3 4653 (Foster, C., City of Oceanside)	I don't think you see many cities here, because I don't think cities realize what's coming up, and they're still struggling to keep up with AB 341 and AB 1826, two mandates that I don't think have been that successful. So, I encourage you to take a look again at this section to see what you can do. And it's not just about creating two-year extensions, or things of that nature. It's really looking at how prescriptive you've done. And considering opportunities for jurisdictions to come to you with compliance plans, education plans that may look different than what you think needs to be done, but are effective for those communities.	Comment noted. This comment is not recommending a change to the regulatory text
4654	Transcript Part 3 4654 (Balsley, R., Stop Waste)	...piggy-backing off of what was just said, I do feel like in many ways, with seven years of implementation of our mandatory recycling and our composting ordinance, we are ahead in many ways. But we have spent, you know, \$1.5 million per year on implementation of this project over those times. We've spent thousands, tens of thousands of dollars, probably, on customizing our own customer relationship management software.	SB 1383 provides a broad grant of regulatory authority to CalRecycle to impose requirements on jurisdictions in order to achieve the organic waste diversion goals of a 50-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2025. This authority includes creation of rules designed to implement these statewide mandates and ensure that the statewide organic requirements are met. CalRecycle has determined that the mandatory collection service requirements and container color and labeling provisions are necessary to maintain consistent standards throughout the state to reduce contamination of organic waste and ensure that collected organic waste is clean and recoverable in order to meet the aforementioned diversion goals.
4655	Transcript Part 3 4655 (Balsley, R., Stop Waste)	Because if you look at how prescriptive -- you know, the six -- even just tracking the 60 days, 90 days, all of those different time periods per account is very difficult. And we are, like I said, ahead because we created that system. But someone who's starting from scratch would have to spend a lot of money to do that kind of tracking.	A change to the regulatory text is not necessary. Section 18995.4 explains the minimum timeframe for the process of issuing a Notice of Violation to an entity if there are found non-compliant. A jurisdiction has 60 days from the date of inspection to issue a NOV. This allows time for the entity to remedy the situation before the jurisdiction issues a NOV. Extending this time

Comment Number	Received From	Question/Comment	Response(s)
			frame would allow the entity to be non-compliant an additional 30 days. Once the jurisdiction issues a NOV, it must follow up within 90 days. This subsection conforms to the Departments general procedure of written notices of potential failure and a reasonable timeframe for remedy.
4656	Transcript Part 3 4656 (Balsley, R., Stop Waste)	But also, I wanted to talk about how over time we've honed our commercial inspection times. We average about 15 minutes per site. That is not including the time by our other staff to review and process the inspection results. But this is only because many times the inspector only needs to look at the hauler service bins that are outside, in publicly accessible areas. Having to go into a business to verify the appropriately-labeled, indoor containers are in all areas, or that education has been provided to employees annually, would mean significantly more time needed per inspection and increase access issues. In our ordinance enforcement, we determined that the inspection at the hauler service bins was where it was the most effective to see where proper sorting -- whether proper sorting was occurring. And if a generator was properly sorting their materials, it shouldn't matter if they don't have color-coded bins or extensive signage. They're sorting properly.	CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.
4657	Transcript Part 3 4657 (Balsley, R., Stop Waste)	Penalties that indicate that CalRecycle can fine jurisdictions if they don't enforce against generators' indoor containers specific are inappropriate.	CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.
4658	Transcript Part 3 4658 (Balsley, R., Stop Waste)	Your flags (regs) also indicated that enforcement would mostly have to consist of annual compliance reviews, which is the provision of service, and route reviews for container contaminants. But then why keep in penalties to the -- potentially to the jurisdiction on what happens indoors for those businesses.	CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.
4659	Transcript Part 3 4659 (Balsley, R., Stop Waste)	Also, you know, as has been mentioned previously, the current requirement to submit a massive amount of data is very burdensome under restrictions. And specifically, I wanted to point out that your requirement for the January to June 2022 time period being required one month at the end of that period is not doable. For instance, the processing of our citations sometimes has a six- to eight-week lag. Also, many reporting provisions in the franchises don't have that quick of a turnaround time to provide the data that would be needed, you know, for something that happened in that June time period that's due August 1st. Also, so there are reasons by the electronic annual report, now, has jurisdictions reporting in August for the prior calendar year. So, I think it's inappropriate to have that six-month time due one month later.	A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.
4660	Transcript Part 3 4660 (Balsley, R., Stop Waste)	Furthermore, in our MRO implementation, we regularly convey information about the enforcement and technical assistance activities that we conduct in our member jurisdictions. But to have to transfer copies of all inspection data, photos, copies of enforcement letters to that the jurisdiction is the sole holder of the implementation	CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.

Comment Number	Received From	Question/Comment	Response(s)
		record would require massive data management systems that don't, in and of themselves, do anything to make progress on diverting organics from the landfill.	Section 18995.2(b) states that the records can be maintained in physical or electronic form. This level of recordkeeping is essential to have an evidentiary record to verify jurisdiction compliance with the requirements of the Chapter.
4661	Transcript Part 3 4661 (Balsley, R., Stop Waste)	We request that if a jurisdiction is designated another entity, such as us, to be responsible for major components of the requirements, that they also be able to designate that entity as the holder for that portion of the implementation record. And that you listen that it all needs to be in one central location.	A change to the regulatory text is not necessary. A central location for the implementation record is necessary to allow for timely, convenient and certain access to records and the proposed regulations state that jurisdictions are to provide access. If the record is under the control of a separate entity, the jurisdiction cannot provide that access.
4662	Transcript Part 3 4662 (Balsley, R., Stop Waste)	I also want to really encourage CalRecycle to think about how the massive amount of reporting data that's currently required is going to take away from the resources that could be used to affect behavior change and that's what's really -- and what's really need to show that a jurisdiction is making the appropriate progress towards the goal that needs to be really looked at.	A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.
4663	Transcript Part 3 4663 (Cote, K., City of Fremont)	I just wanted to echo some of the things that Rachel said. When I read the regulations, I'm really concerned there are some things that are so prescriptive and so impractical to implement in the field that there's no way we're going to be able to do them effectively. Even as organized and as experienced as we have been, having StopWaste, you know, doing inspections, and helping us, and implementing the organics program.	SB 1383 provides a broad grant of regulatory authority to CalRecycle to impose requirements on jurisdictions in order to achieve the organic waste diversion goals of a 50-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2025. This authority includes creation of rules designed to implement these statewide mandates and ensure that the statewide organic requirements are met. CalRecycle has determined that the mandatory collection service requirements and container color and labeling provisions are necessary to maintain consistent standards throughout the state to reduce contamination of organic waste and ensure that collected organic waste is clean and recoverable in order to meet the aforementioned diversion goals.
4664	Transcript Part 3 4664 (Heaton, S., Rural County representatives of California and Rural Counties Environmental Services JPA.)	This section talks about requirements for evaluation of a jurisdiction's compliance and notification in writing of the findings for the jurisdiction. But it only provides a jurisdiction to correct deficiencies of an ordinance. It's very specific about that, and not other types of compliance issues. It speaks very specifically to ordinances. And that could be problematic. We have some recommended language that is really similar to what was just adopted in the AB 901 reporting requirements. And I have -- I could read it to you, but I don't really think anybody wants that. But I have it in writing and I'm going to drop in that box before I sit back down. So, that will make it a little easier, unless you really want me to read it, but I don't think you want me to.	<p>A change to the regulatory text is not necessary Section 18996.2 outlines the process in which the Department will notice a jurisdiction of any alleged failure to comply. The jurisdiction will be noticed and given 90 days to comply. The Department may grant an extension for 90 days, if additional time is needed to comply. If the jurisdiction has made substantial effort to meet the maximum compliance deadline but there are extenuating circumstances beyond the control of the jurisdiction, the Department may issue a Corrective Action Plan and extend the deadline for no more than 24 months beyond the date of the original Notice of Violation. Section 18996.1 outlines the process for noticing a jurisdiction for a deficient ordinance. The jurisdiction shall have 180 days to correct deficiencies. If not, the department may commence enforcement action. A violation due to a deficient ordinance is not eligible for placement on a Corrective Action Plan. An ordinance adopted by a jurisdiction that is inconsistent with or does not meet the requirements set forth in this chapter is not upholding the tenets of the chapter and must be corrected in a much shorter timeline.</p> <p>Section 18996.2 provides opportunities for a jurisdiction to correct compliance issues after a Notice of Violation but before the imposition of penalties.</p>

Comment Number	Received From	Question/Comment	Response(s)
4665	Transcript Part 3 4665 (Heaton, S., Rural County representatives of California and Rural Counties Environmental Services JPA.)	So, and the other comment that I had was with respect to when there is an inconsistency in an ordinance, the Department -- the section is only allowing 90 days to fix the inconsistencies before enforcement action is undertaken. And, you know, 90 days might seem like a long time, but if it's a pretty severe inconsistency when you're dealing with a public process, and then a board of elected officials and, you know, that can get pretty complicated. Ninety days may not be sufficient time, so we'd just ask that you would consider that.	CalRecycle has revised section 18996.1(e) in response to this comment. The change increases the relevant timeline to 180 days.
4666	Transcript Part 3 4666 (Haas-Wajdowicz, J., City of Antioch)	However, our initial cost proposal is looking at, at least a 40 percent increase in residential garbage rate costs to our consumers. So, it's a little -- it's not looking good for adding the food waste to our green waste program.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
4667	Transcript Part 3 4667 (Haas-Wajdowicz, J., City of Antioch)	Additionally, the timeline. We are still negotiating a commercial organics rate for SB 1826. Right now, our franchise hauler is offering it at no cost because we haven't been able to reach an agreement. So, I'm really concerned about how long it's going to take us to reach an agreement once we have our formal rulemaking done on the residential rates. And so, I just am really concerned about the timeline that you're proposing for compliance with local government.	Comment noted. The organic waste reduction goals for 2020, 2022, and 2025 are specified in the statutory text of SB 1383 and CalRecycle has no discretion to change these timeframes.
4668	Transcript Part 3 4668 (Pascoe, H., Alameda Food Bank)	I just want to reiterate our strong support for robust capacity planning that includes the recovery organizations. We really hope that this will help to mitigate any unintended consequences related to violations and fines with food recovery organizations. More specifically, because our smaller, volunteer staffed organizations could be disproportionately impacted by them.	A change to the regulatory text was not necessary because this comment is in support of SB 1383's edible food recovery capacity planning requirements specified in Article 11.
4669	Transcript Part 3 4669 (Ozorak, E., Sacramento County)	in our county, we've been partnering with the county's environmental management department for many years for the 341 and other inspection regimes. And the cycle that we've had has been a three-year cycle, instead of a one-year cycle. But under this -- so, we have a track record on how much we spend on enforcement. And per inspection, it's anywhere between \$320 to \$380. So, if we magnify that by the	Comment noted. SB 1383 allows a local jurisdiction to charge and collect fees to recover the costs incurred in complying with the regulations.

Comment Number	Received From	Question/Comment	Response(s)
		number of generators, and as I mentioned this morning the big pool is 40,000, the EMD pool is 18,000. Using the hauler list, it's 7,000. So, based on 7,000, we're looking at anywhere between \$2.2 to \$2.6 million just for that part of the program.	
4670	Transcript Part 3 4670 (Edgar, E., Edgar and Assoc.)	I was around back in the AB 939 days, and we used to do county-integrated risk management plans, source reduction elements, compost components and nondisposal facility elements with a local task force. I understand that will keep on going on every five years, with a five-year review. And then there was AB 341 and 1826 about annual reports. And now, we have another level of instruments for compliance. Is there any opportunity to combine them all into one document versus trying to do a -- do we still need to do CIWMPs, are CIWMP and compost components of yesteryear no longer an instrument to use? Are we pivoting towards this new format? And why would we need to do county integrated management plan updates every five years, if they're irrelevant in today's reporting and planning aspects?	Commenter is asking questions about integration of these regulations with other statutory programs and is not suggesting changes in the regulatory language or commenting on the regulatory process CalRecycle followed.
4671	Transcript Part 3 4671 (Foster, C., City of Oceanside)	...one of the biggest challenges we're seeing is how are we going to staff this whole regulation in general. And, in particular, this section. You talk about desk audits. I lack in staffing who would know what to do with regard to annual reporting, or quarterly reviews, et cetera. Our city, alone, we've had two full time vacancies open for the past year. We've gone through one full recruitment process. I ended up with 175 applications, all of which had stormwater and water conservation experience. But the majority of experience in solid waste was a recycling bin at their office. So, there's really a lack of experience and a lack of understanding of our industry, and let alone this type of regulation. So, we'd like CalRecycle to really consider the staffing list that needs to happen in order to meet the needs of SB 1383, not just the infrastructural.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
4672	Transcript Part 3 4672 (Wine, S., Clean Energy)	...you gave an example of the City of Los Angeles. And the city, based on its population would have around five million gallons of renewable transportation fuel they would have to purchase. Ironically, the city does actually use just about 5 million gallons of fuel today. Now, I don't need to go back and echo what my colleagues and stakeholders have said here, but I think it's important to open up the purchasing requirements that allow for optionality.	The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more

Comment Number	Received From	Question/Comment	Response(s)
			<p>flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
4673	Transcript Part 3 4673 (Wine, S., Clean Energy)	<p>Subsequently, I think you should really look at the injection point into the pipeline system. The city has around six or seven solid waste facilities where they park and domicile their trucks and having fueling infrastructure in place. So, in theory, if you have all these digester facilities in play by 2022, and the city has one digester that's collecting this, if it could inject into the pipeline system, they would be able to allocate that fuel to its existing infrastructure. I think we're missing an important point that logistics does definitely become a big challenge. Everybody knows the freeways are congested and the communities are already impacted by trucks on the road. So, having more logistical issues with trying to go to one central fueling location can present a challenge, not only for a city, but also for a contracted refuse.</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction’s procurement target.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
4674	Transcript Part 3 4674 (Wine, S., Clean Energy)	<p>The second comment I'd like to say is earlier today a colleague, who will remain nameless, who is not representing anybody here today, talked a lot about grandfathering or potentially making sure that people who have invested in infrastructure are able to have some way to amortize those investments. I think it's also important to consider that there are many refuse (indiscernible) -- some of which were early adopters of renewable natural gas when the Low Carbon Fuel Standard was adopted in 2011. They were some of the first users. Many of them have used RNG and have long term contracts whereby they are receiving RNG from people like Clean Energy, that's distributing renewable natural gas in the pipeline system. If 2022 comes around, in theory they would have to use 1383 renewable transportation fuel and they could become into a peculiar position whereby they might have to break or breach an existing agreement with renewable gas, from the existing supplier, potentially, as we see it. And many of those off-take contracts that these fleets have signed up to receive this gas were really the precipice for how RNG projects have been developed to date. So, I think we need to be mindful of the fact that those contracts are in place. And then, I would encourage CalRecycle to take that into consideration as a way, or a mechanism to potentially grandfather those types of fleets into this program.</p>	<p>The intent of these regulations is not to disrupt existing renewable transportation fuel procurement contracts between jurisdictions and providers. CalRecycle generally supports the procurement of renewable transportation fuels; however, in order to be consistent with the organic waste diversion goals of SB 1383, the procurement requirements on jurisdictions must focus on California, landfill-diverted organic waste. As such, only eligible products defined in Section 18982(60) as "recovered organic waste products" may count towards a jurisdiction's recovered organic waste product procurement target. If existing contracts supply jurisdictions with renewable transportation fuel that meet this definition, then a jurisdiction may count that fuel toward its procurement target. CalRecycle disagrees with the recommendation to "grandfather" existing suppliers who do not meet the recovered organic waste product definition, as it is inconsistent with the goals of SB 1383 to mandate or incentivize products that do not contribute to in-state landfill diversion.</p> <p>The comment only refers to renewable gas, but it is important to note that a jurisdiction may procure other recovered organic waste products to fulfill the procurement requirement. CalRecycle has revised Section 18993.1 to expand the list of recovered organic waste products to provide more flexibility to jurisdictions for the products they can choose to procure. If a jurisdiction already has an existing RNG contract, the procurement requirements do not require the replacement of the RNG contract. Rather, the jurisdiction may procure other eligible products such as compost or electricity. Each jurisdiction has different needs for recovered organic waste product, and the draft regulations are intended to provide jurisdictions the flexibility to choose products that fit local needs.</p>
4000	Tseng, E, LA LEA	<p>Source separated organics (SSO) typically has way more than 10% contamination (so it does not meet the requirement of the three part test), so technically/legally, the processing of SSO is the same as "mixed waste processing". (Note: Composition tests show up to about 30%+ contamination in a SSO collection program). Does SSO processing require the 75% recovery (high diversion organics facility) of targeted organics?</p>	<p>Comment noted. Facilities that receive source separated organic waste collection stream would not be subject to the recovery efficiency requirement but would be required to comply with the limitation of no more than 20% of organic waste on and after 2022 and 10% on and after 2024 sent for disposal.</p>

Comment Number	Received From	Question/Comment	Response(s)
4001	Tseng, E, LA LEA	<p>In the three-cart system summarized in Article 3, section 18984.1 a jurisdiction can choose to collect food waste in the green bin or the black bin. Food waste collection in the black bin requires processing in a high diversion organics facility demonstrating 75% organics capture. Food waste collection in the green bin does not have any quantitative requirement for organics capture. This is a loop hole whereby collection of organics in the green bin is compliant even if only a small fraction of food waste is recovered, and a majority of food waste remains in the black bin destined for landfill. The recommendation is to require food waste collection in the green bin to be subject to the same black bin standard of 75% organics recovery. This can be achieved with a quantitative audit of the green and black bins at the same frequency as the measurement frequency of the high diversion organics processing facility. This revision is necessary to ensure the success of SB 1383 by: (1) eliminating a loop hole that would result in little organics capture and would be a preferred path of least resistance, (2) ensuring that any collection selected by a jurisdiction results in a majority organics diverted from landfill, and (3) providing jurisdictions with options that are equitable so no one option is viewed as "easier" to satisfy and jurisdiction can make the best decision for their constituencies."</p>	<p>Comment noted. The commenter argues that the regulations must be structured in a way that protects the existing investments of their members. Specifically, the commenter is referring to collection services and material recovery facilities that were established to process mixed waste. CalRecycle has sought to address this concern in a manner that is also in compliance with the statutory targets and requirements. As noted in the Initial Statement of Reasons, which was released for public review in January of 2019:</p> <p>"The draft regulations originally prohibited jurisdictions from implementing new mixed waste processing systems after 2022, and required all new services to implement source-separated curbside collection as a means of ensuring that collected organic waste would be clean and recoverable. In response to stakeholder feedback, CalRecycle eliminated the prohibition on new mixed waste processing systems provided that the receiving facilities demonstrate they are capable of recovering 75 percent of the organic content received from the mixed waste stream on an annual basis. The performance standard addresses stakeholder concerns about limiting flexibility, without compromising the goal for the regulations to achieve the statutory requirements."</p> <p>The ISOR goes on to note that CalRecycle crafted regulations to allow for mixed waste collection provided that these collection services transport collected material to a facility that recovers 50 percent of the organic content it received by 2022 and 75 percent by 2025:</p> <p>"With very few exceptions, unique materials can only be processed and recovered when they are kept separate from other materials. This is primarily due to the fact that distinct materials are recovered through separate processes that are specifically designed to handle only that type of material. For example, metals, paper, and plastics are remanufactured through distinct processes (e.g. metal is smelted, paper is pulped and washed). Largely because of this, while material may be valuable as a homogenous commodity, it can become difficult or impossible to recycle when it is contaminated with other materials (e.g. many materials lose their value when they are commingled with other materials.) This principle holds true, and is perhaps more of a factor in the recovery of organic waste. Required source-separation of organic waste helps ensure that organics are kept clean, separate and recoverable.</p> <p>However; throughout the informal regulatory engagement process stakeholders raised concerns about potential costs associated with providing commercial and residential generators with a third container to source separate organic waste.</p> <p>Stakeholders also noted that several cities and counties implement single container collection services and process all the collected material for recovery. Stakeholders argued that allowing the use of a single-container collection system is a viable and cost-effective alternative that can help the state meet that statutory organic waste recovery targets.</p> <p>To respond to stakeholder requests for additionally flexibility CalRecycle crafted this section and Section 18984.2. These sections allow alternatives to providing a three-container source-separated organic waste collection service. Under these section jurisdictions are allowed to require their generators to use a service that does not provide the generators the opportunity to separate their organic waste for recovery at the curb. In order to ensure that the state can achieve the statutory organic waste reduction targets, these collections services are required to transport the containers that include organic waste to high diversion organic waste processing</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>facilities that meet minimum organic content recovery rates (content recovery rates are specified in Subdivision (b) of this section)..."</p> <p>The commenter has stated in each comment period, that they believe the requirement to recover 75 percent of the organic content collected in these mixed waste collection services is unrealistic and infeasible. In turn CalRecycle staff repeatedly communicated to the commenter that the recovery targets cannot be lowered without compromising the integrity of the regulations. This was further documented for this commenter and the public in the ISOR:</p> <p>"These minimum recovery rates are necessary because when the opportunity to recover material through source separation is lost, the state must ensure that minimum recovery levels are met at processing facilities. While this section provides additional flexibility to jurisdictions, CalRecycle must consider its obligation to ensure that the regulations are designed to achieve the statutory targets. If 100 percent of jurisdictions employed this collection option in 2022 the state could not meet the mandatory recovery target of 50 percent unless at least 50 percent of the organic waste collected from these services is recovered.</p> <p>Similarly, if 100 percent of jurisdictions employed this collection option in 2025 the state could not meet the mandatory recovery target of 75 percent unless 75 percent of the organic waste collected from these services is recovered.</p> <p>Therefore, in order to meet the recovery targets specified in statute and the state's ultimate climate goals the recovery standards included in this section are the minimum standards necessary.</p> <p>As generation of organic waste increases with population growth, these minimum recovery rates may need to be revisited. As stated previously the organic waste reduction targets are linked to a 2014 baseline of 23 million tons. This requires the state to dispose of no more than 5.7 million tons by 2025. If, as CalRecycle projects, generation increases to 26 million tons of organic waste by 2025, recovering 75 percent of 25 million tons will only reduce disposal to slightly more than 6 million tons, resulting in the state missing its organic waste recovery targets. The need for this rate increase could be mitigated if higher recovery rates are achieved through source separation, or if efforts to increase source reduction through food recovery and other methods are successful. However, the recovery rates established in this regulation should be considered an absolute minimum."</p> <p>CalRecycle has, prior to and during this rulemaking, communicated that the recovery efficiency requirements established in the regulation is the minimum level that the statute can tolerate. The commenter suggests existing infrastructure that cannot meet this standard should be "protected" or provided a "safe-harbor." The commenter requests changes in the proposed regulations that cannot be reconciled with the statutory targets because CalRecycle finds that it cannot propose a regulation consistent with a statutory 2025 target that permits an unknown portion of the state from implementing the requirements necessary to achieve that target.</p> <p>CalRecycle acknowledges the role of existing infrastructure and acknowledges that previous investments in infrastructure were consciously made to achieve targets that were established prior to the adoption of SB 1383. However, the legislative direction in SB 1383 is unmistakably clear. The Legislature required CalRecycle to adopt regulations to achieve mandatory organic waste reduction levels. Nothing in the regulations prevents facility operators or jurisdictions from</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>investing in facility upgrades or adapting existing facilities to process waste in a manner that meets the minimum regulatory requirements.</p> <p>Comment noted. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4002	Tseng, E, LA LEA	If a 75% recovery rate is going to be required of mixed waste processing to recover organics, maybe even a higher recovery rate is required of a feedstock (greenwaste and foodwaste) should be considered for this potentially already source separated feedstock stream.	Comment noted. Facilities that receive source separated organic waste collection stream would not be subject to the recovery efficiency requirement but would be required to comply with the limitation of no more than 20% of organic waste on and after 2022 and 10% on and after 2024 sent for disposal.
4003	Tseng, E, LA LEA	Since "green bin" will still most likely will not meet the definition of "clean green" (1% contamination), the LEAs has been requiring processing of the greenwaste be permitted as a "transfer station", essentially a "mixed waste processing facility".	Comment noted. Comment is not commenting on the regulatory language.
4004	Tseng, E, LA LEA	what happens when the facility only achieves a 73% diversion rate"	Section 18984.3 allows for some fluctuation in diversion rate before a facility is disqualified from being a high diversion organic waste processing facility. The measurement is based on either two (2) consecutive quarterly reporting periods or three (3) quarterly reporting periods within three (3) years.
4005	Tseng, E, LA LEA	How is diversion rate defined?	The term "diversion rate" is not defined because the term is not used in the proposed regulations. SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025, which has been mentioned throughout the regulations. However, recovery efficiency is used to determine if transfer/processing facility meets the definition of a "High diversion organic waste processing facility" which is defined in Section 18982(a)(33).
4006	Tseng, E, LA LEA	What happens if the facility can technically process and recover 80% of the targeted materials, but there is no actually no market for the materials (beyond the control of processing facility)? Market based determination for recover rates ties "market conditions" to processing recovery efficiency.	The market for processed materials is not directly relevant to the volume of organics that a facility can recovery from the waste stream.
4007	Tseng, E, LA LEA	Month to month waste compostion variations can make the recovery rate vary significantly	Comment noted. The commenter is expressing an opinion regarding the frequency of waste composition evaluations.
4008	Tseng, E, LA LEA	Processing line operations offer flexibility in how materials are processed on a day to day basis depending upon the wastestream, .... bidirection conveyors, unit process bypass, emergency mode operations are all part of the overall factors that have to be accounted for as part of developing a "recovery efficiency rate", and is extremely complex. Processing recovery rates can chance dramatically depending upon the wasteshed, weather conditions, changes in the materials in the	CalRecycle has revised the sections to phase in the acceptable levels of incompatible material and the acceptable levels of organic waste in the material sent to disposal. The phase in will allow entities time to plan and make any adjustments in order to comply with the revised acceptable limits of 20% on and after 2022 and 10% on and after 2024. This is necessary to ensure that the organic waste recovery target established in statute can be met.

Comment Number	Received From	Question/Comment	Response(s)
		wastestream itself. Setting a "minimum recovery rate" as a threshold and not accounting for conditions that a facility does not have control over, e.g., market conditions for recovered materials, changes in the wasteshed, etc. does not make for a reasonable regulatory infrastructure.	
4009	Tseng, E, LA LEA	General comment, if you are trying to encourage the building of an organics infrastructure, there needs to be a more "supportive" regulation/legislation, and there needs to be a much more holistic approach (e.g., integrated waste management with conversion technologies) like they do in the European Union and in Asia (specifically Japan, where they are able to achieve over 90% diversion from landfill disposal	Comment noted. The commenter is expressing an opinion regarding the overall regulatory model used by CalRecycle. CalRecycle has determined this model is necessary to achieve the ambitious organic waste diversion mandate in statute.
2017	Vaccaro, Larry; Athens Environmental Services De Garmo Office	How will 20% success be known? In other words, how would we know what 100% edible originally was?	CalRecycle's 2018 statewide waste characterization studies will be used to help measure the edible food baseline for SB 1383. CalRecycle's 2018 disposal-based and generator-based waste characterization studies sorted food waste into eight categories based on the edibility of the food that was disposed. CalRecycle will measure the state's success toward achieving the 20% edible food recovery goal by analyzing the reports that each jurisdiction is required to submit on the total pounds recovered from commercial edible food generators in the previous calendar year.
6084	Vaus, S., City of Poway	Infrastructure Capacity: California lacks sufficient capacity today to be able to meet the needs for new organic waste processing. While the City's waste hauler, EDCO, is in the process of building an anaerobic digestion (AD) facility to serve our region, many cities throughout the state will not be able to comply with the organic waste diversion requirements due to a lack of waste disposal infrastructure. To meet these goals, California will need billions in capital investment to incentivize and assist in the building of AD facilities. The Governor's proposed cap and trade plan includes a wholly inadequate \$25 million in funding for waste diversion for its FY 19-20 budget. Capacity is a statewide issue that is tied to resources and, unfortunately, this requirement is beyond the ability of most local jurisdictions to achieve and should be part of a broader effort focused on the development of organic infrastructure and associated funding in California.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
6085	Vaus, S., City of Poway	Re: Article 3, Section 18984.5.) -- It is not reasonable to determine and identify individual generators that contaminate a route unless containers are checked individually. Our residential curbside program utilizes automated side loading vehicles and covered bins. Adhering to the proposed regulations would require route drivers to physically examine thousands of containers on each route daily and/or require additional staffing resources to inspect individual bins stop by stop,	During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.

Comment Number	Received From	Question/Comment	Response(s)
		<p>resulting in slower service levels and increased costs. The City recommends exempting single-family and multi-family residential routes from this requirement.</p>	<p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
6086	Vaus, S., City of Poway	<p>the monitoring requirements of edible food generators and food recovery efforts (Article 10) is an onerous task passed onto local government and on local businesses.</p>	<p>Removing the requirement to monitor compliance would remove enforcement from the edible food recovery regulations making it voluntary for commercial edible food generators to recover their edible food, which is the current situation in California. CalRecycle has seen that when food donation is voluntary millions of pounds of edible food are sent to landfills rather than being put to the highest and best use of helping feed people in need. Monitoring compliance is critical for helping California achieve SB 1383's 20% edible food recovery goal and therefore was not removed from the regulations.</p>
6087	Vaus, S., City of Poway	<p>An edible food generator that is required to collect multiple series of information (e.g., food recovery contractor, types of food to be recovered, collection frequency, quantity of food collected and transported, etc.) results in a significant administrative and logistical burden for small businesses to manage their excess edible food, if they generate any, until it can be retrieved by a good recovery organization. The burden on the City to monitor and enforce the proposed rules related to edible food generators and food recovery creates an adversarial and punitive tone to a program that intends positive and beneficial outcomes for those in need in our community. The City recommends allowing greater local control in developing programs to address food recovery for community benefit.</p>	<p>A change to the regulatory text was not necessary because without the recordkeeping requirements for commercial edible food generators, jurisdictions will not be able to verify if a commercial edible food generator is complying with SB 1383's edible food recovery regulations. The recordkeeping requirements are a critical enforcement mechanism. For that reason, they were not removed from the regulatory text. Another reason why the regulatory text was not changed is because when edible food generators consistently track their donations over time, they are more likely to source reduce the amount of surplus edible food they generate. Prior to 2022, CalRecycle does intend on making SB 1383 recordkeeping tools available to assist commercial edible food generators with compliance.</p> <p>CalRecycle would also like to note that that in many, (if not most) cases, well-established food recovery organizations and services already provide their donors with some kind of receipt of donation that often has the amount of food donated. Many organizations do this to provide their donors with information that will help the donor if they intend on claiming any of the tax incentives offered for food donation.</p> <p>Regarding the comment, "The City recommends allowing greater local control in developing programs to address food recovery for community benefit." Cities have been given control over</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>developing their own food recovery programs under AB 1826. While some cities have made significant efforts to recover surplus edible food, many cities have not, and as a result, millions of pounds of edible food are still being disposed in California’s landfills. SB 1383’s statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. In order to meet this goal, SB 1383’s regulations include requirements that jurisdictions shall implement edible food recovery programs that include critical requirements such as educating commercial edible food generators about their requirements under SB 1383, monitoring commercial edible food generator compliance, and expanding edible food recovery capacity if additional capacity is needed in the jurisdiction. These key requirements are critical to help ensure that millions of pounds of recoverable edible food stay out of landfills and to help the state achieve its 20% edible food recovery goal.</p>
6088	Vaus, S., City of Poway	<p>The proposed regulations include new procurement requirements (Article 12) that require local governments to purchase recovered organic waste product and recycled content paper within targeted requirements established by CalRecycle. These requirements will result in substantial costs to local governments, over and above the costs we already anticipate will comply with the extensive programmatic requirements of the proposed regulations. The City views this procurement regulation as an unfunded mandate, as the regulation would impose a new program on cities without a state funding source.</p>	<p>CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.</p> <p>First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a</p>

Comment Number	Received From	Question/Comment	Response(s)
			form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.
6089	Vaus, S., City of Poway	Local jurisdictions carry the burden in the implementation of SB 1383 through applicable account (generator and hauler) record keeping, various inspections for compliance, and addressing of complaints and issuing violations. The proposed regulations place a tremendous amount of responsibility on the Enforcement and Recordkeeping sections (Articles 13 and 14) which will require the City to divert scarce funds and resources away from initiatives to an enforcement-based system. The City recommends reducing the burden of enforcement and record keeping so that the City may prioritize program development.	A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.
6090	Vaus, S., City of Poway	Finally, we believe the set of penalties (Article 16) included in the proposed regulations are onerous and premature. Given the challenges ahead, a schedule of penalties should be developed after the implementation of programs in 2022. It is very difficult to determine at this moment whether the penalties are appropriate if we have not implemented this new, aggressive program. The City requests that CalRecycle adopt penalties in a second set of regulations to take effect at a future date.	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for 5053waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.
3822	Vazifdar, K., Los Angeles County Public Works	Who is responsible for monitoring and enforcing solid waste facilities' compliance with the SB 1383 regulations? Will it be the responsibility of local jurisdictions/LEAs or of the state?	Comment noted. Local Enforcement Agencies, including Counties where CalRecycle is the EA, will be responsible for enforcing compliance at solid waste facilities and operations with SB 1383 regulations.
3057	Vinatieri, J., City of Whittier	Many of the City's existing trash enclosures and alleys in our Uptown Historic District lack space for additional bins for organics.	The regulations provide for physical space waivers for commercial businesses. According to jurisdictions with similar space constraints waivers, very few businesses can demonstrate the existences of space constraints that cannot be addressed. There are few instances where a business's existing waste collection space could not accommodate an additional organic waste recycling container if the existing containers are downsized (e.g. two 90-gallon bins could be replaced with three 60-gallon bins and occupy the same space). This waiver intends to allow flexibility for businesses with legitimate and cost-prohibitive space constraints without compromising the state's ability to achieve the organic waste reduction targets. Allowing existing business that do have the ability to implement organic waste collection be grandfathered into the space waiver would reduce the state's ability to achieve the established organic waste diversion and greenhouse gas reduction targets. Also, there is no requirement to re-inspect on a particular frequency. If the space issue was resolved, then the waiver would be rescinded.

Comment Number	Received From	Question/Comment	Response(s)
3058	Vinatieri, J., City of Whittier	<p>The regulation requiring the jurisdiction or its designee to contact or provide written notice to the generator upon finding prohibited contaminants in a container is not feasible. To determine and identify individual generators that contaminate a route, containers must be checked individually. Our residential curbside program utilizes automated side loading vehicles and covered bins. Adhereing to the proposed legislation would require route drivers to physically examine hundreds of containers on each route on a daily basis and additional staffing resoures to manage the processing of notices. The City recommends at a minimum to exempt residential routes from this requirement.</p>	<p>Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3059	Vinatieri, J., City of Whittier	<p>Infrastructure Capacity: As we have noted, California lacks sufficient capacity today to be able to meet the needs for new organic waste processing. Many cities have expressed concern over an ability to comply with organic waste diversion requirements due to a lack of waste disposal infrastructure. There is an uneven distribution of waste disposal infrastructure, such as bio-digesters, across the state. Moreover, where the infrastructure does exist, capacity is limited. While the regulation provides five years to implement programs, cities are concerned that this is not sufficient time to develop and permit new facilities.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3060	Vinatieri, J., City of Whittier	<p>Funding: Lack of sufficient funds continues to be among the major challenges local governments face in the effort to implement new organic waste diversion programs. The City of Whittier and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade" proceeds can be used to help offset the costs for developing organic recycling infrastructure. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities, such as updating bins and labels, as well as providing education and outreach.</p>	<p>SB 1383 provides statutory authority for jurisdictions to charge fees to offset the cost of complying with the proposed regulations. In addition, CalRecycle is looking into opportunities to direct additional funding to assist in local jurisdiction compliance.</p>
3061	Vinatieri, J., City of Whittier	<p>Enforcement: These regulations allow for Corrective Action Plans and establish extended timelines and milestones for achieving compliance. We appreciate the addition of a pathway to compliance. This is a step in the right direction and we urge careful consideration of the differences among local jurisdictions, as well as the variety</p>	<p>Comment noted, the comment does not recommend a regulatory change.</p>
3062	Vinatieri, J., City of Whittier	<p>Penalties: The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, this regulation puts the cart before the horse by designing penalties before the sticking points and needs of generators are understood. We encourage CalRecycle to continue working through the programmatic scheme before implementing an appropriate set of penalties, particularly since programs have until 2022 to be implemented. We ask that CalRecycle adopt penalties in a second set of regulations to take effect at a future date.</p>	<p>CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate. First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, "No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code." Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)). Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a "tax" under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe "any fees" that may in the future be imposed by the numerous local jurisdictions in California as "likely" to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p>
3063	Vinatieri, J., City of Whittier	<p>Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products targets set by Cal Recycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations. We ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding. The City of Whittier further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1 (e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even if a fee were to survive scrutiny under Prop. 26, it is questionable whether a city would have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.). This latter concern is currently the subject of litigation in the Third District Court of Appeals (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, The City of Whittier requests that the procurement regulations be addressed in a separate regulatory proceeding.</p>	<p>CalRecycle has determined that the procurement requirements are necessary to achieve the organic waste diversion targets in statute by ensuring an end use for processed organic waste. In addition, CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.</p> <p>First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p> <p>Regarding "substantial additional costs," a change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in "substantial additional costs".</p> <p>CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p>
3661	Vu, C., City of Bell Gardens	<p>Section 18984.7 -This section requires that containers at the end of their useful life are replaced with SB 1383 color-compliant containers. This may lead to conflicts with current color schemes, or at a minimum may lead to containers of inconsistent colors throughout a jurisdiction. Inconsistent coloring dispersed throughout jurisdiction makes education and outreach a challenge as customers with different colored containers will require different messaging. Furthermore, this approach does not consider current container inventories that have already been procured to replace containers at the end of their useful life.</p> <p>The City recommends that Ca/Recycle eliminate the need to replace containers at the end of their useful life with SB 1383 co/or-compliant containers, and instead mandate that all containers comply with the color requirements described above by 2032. This will allow jurisdictions to utilize current container inventories and allow for a uniform replacement of new containers and messaging throughout the jurisdiction.</p>	<p>Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036. CalRecycle understands that metal containers are likely to last longer than plastic ones. However, metal containers can be and are repainted occasionally. Repainting large, roll-off metal bins would need to comply with the VOC emission limits of the particular air district where the painting is done. VOC emissions limits in a particular air district depend on several factors, including but not limited to the size (and material) of the container, the type(s) of coating used, and the type of drying process. Based on discussions with the South Coast Air Quality Management District, which has one of the more stringent air quality standards for VOC emissions, there are appropriate paints that could be used to paint roll-offs and metal containers that would adhere to local VOC limits such as SCAQMD Rule 1125 for smaller metal containers and Rule 1107 for metal parts and products.</p> <p>Hauling industry representatives recommend a 10-year period because that is the industry standard that is built into their contracts. Regarding lids on metal containers, the regulations allow a lid to be replaced either at the end of its useful life or by 2036, which provides a less burdensome option than replacing the entire metal container. Nothing prohibits a jurisdiction from painting metal containers and lids at an earlier time. In addition, the regulations already allow containers including their lids to be replaced at the end of their useful life. Jurisdictions may use inventory purchased prior to 2022.</p>

Comment Number	Received From	Question/Comment	Response(s)
3662	Vu, C., City of Bell Gardens	<p>Article 1 - Definitions  Section 18982(a){51} - This section includes "building insulation and panels" in the definition of paper products. Unlike the other materials included in the definition of paper products, building insulation and panels are most frequently not made of paper. In addition, some insulation has a single paper backing to fiberglass layers which is not practically separable from the fiberglass. Since the regulations of "organic waste" includes paper products, the inclusion of building insulation may lead to confusion and potential contamination. The City recommends that "building insulation and panels" be removed from this definition. Alternatively, the definition could be enhanced to specify which types of insulation and panels are included (e.g. compostable insulation).</p>	<p>CalRecycle has revised Section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in Section 18993.3(c)(2) and therefore agrees with the proposed revision.</p>
3663	Vu, C., City of Bell Gardens	<p>Article 3 - Mandatory Organic Waste Collection  Section 18984.l(a){S}{A} - This section states that carpets, non-compostable paper and hazardous wood waste are prohibited from being placed in the green container. This subset is limited in scope and should be expanded. Currently the California Department of Food and Agriculture (COCA) restricts movement of certain organics within quarantine zones and this material should not be included in the green containers. This is addressed elsewhere in the proposed regulation text for non-local entities and at the facility level when measuring organic recovery rates, but not at the point of collection.  The City recommends that Ca/Recycle amend the list of prohibited materials to include "material subject to a quarantine on movement issued by a county agricultural commissioner." Alternatively, the definition of organic waste in Section 18982(0){46} could be amended to state "material subject to a quarantine on movement issued by a county agricultural commissioner is considered incompatible materials rather than organic waste."</p>	<p>Thank you for the comment. CalRecycle added language in Section 18984.13 to address quarantined waste.</p>
3664	Vu, C., City of Bell Gardens	<p>Section 18984.11(a){2} - This subsection allows for jurisdictions to waive organics program requirements due to limited physical space. There are certainly locations around the state that will have trouble finding space to accommodate additional service containers and it seems appropriate and necessary to allow for some waiver. However, those waivers could potentially exempt a significant number of generators in older buildings and in urban areas where parking and rentable space are highly valuable. In addition, in nonexclusive service areas, the ability of the hauler to sign off on the space accommodation waiver may result in a "race to the bottom" with some haulers signing off on those waivers in order to undercut competition, avoid providing organics recycling service, and gain business.  The City recommends that Ca/Recycle clarify what constitutes "evidence demonstrating a lack of adequate space." Implementing standards, a process for allowing potential waivers for space constraints, or minimum documentation requirements will encourage a consistent application of this section across jurisdictions, as opposed to leaving interpretation up to the Local Enforcement Agencies.</p>	<p>CalRecycle has not included implementation standards or minimum documentation requirements to allow jurisdictions set appropriate criteria. Jurisdictions, not haulers, administer the waiver, so the physical space waiver will not result in a race to the bottom in nonexclusive service areas. A hauler, licensed architect, or licensed engineer may provide evidence that a premise has a legitimate space constraint. If a jurisdiction has concerns about haulers in nonexclusive service areas, they can opt not to issue waivers or use a qualified source other than a hauler to demonstrate lack of adequate space for separate organic waste containers.</p>

Comment Number	Received From	Question/Comment	Response(s)
3665	Vu, C., City of Bell Gardens	Section 18986.l(a)(l)(A) - This section states that textiles, carpets, plastic coated paper, and human or pet waste may not be collected in the blue container for non-local entities. This requirement appears to be incongruent with the requirements placed on local entities. The City recommends that Ca/Recycle amend the definition to align with the requirements placed on jurisdictions in Sections 18984.1 and 18984.2.	Thank you for the comment. CalRecycle amended the applicable sections for consistency.
3666	Vu, C., City of Bell Gardens	Section 18985.l(f)- This section requires public education materials in various languages if more than 5% of the jurisdiction's population is identified as a "limited English speaking household," or as "linguistically isolated" by the U.S Census Bureau. This can be burdensome, particularly if a community has several different languages spoken among its population. The City recommends that Ca/Recycle consider increasing the percentage threshold to reduce the cost associated with preparation of public education materials in multiple languages, and/or allow for the compliance to be accomplished with a short statement (in the applicable language) that directs the non-English speaking person to the jurisdiction's website for materials in other languages, or allows for graphic-rich public education materials as a possible substitute.	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
3667	Vu, C., City of Bell Gardens	Section 18985.2(a) - This section requires that each jurisdiction develop a list of edible food recovery services and organizations operating within each jurisdiction and post the information on their website. It seems that many food recovery service providers and organizations work across jurisdictional boundaries including across county boundaries. There may be a significant amount of duplication of effort and dozens of inquiries to the food recovery services and organizations (who are typically short-staffed, understaffed or run by volunteers). The City recommends that Ca/Recycle consider establishing a State-wide database similar to FACIT where food recovery service providers and organizations can register and provide their information once for access to all jurisdictions and generators. This would also allow for a comparable level of information to be requested and provided in these lists (such as what type of food will and will not be accepted). Alternatively, Ca/Recycle may want to consider establishing the generation of the list as a county requirement with the posting of the county-produced list on a jurisdiction's website as a jurisdictional requirement.	Although CalRecycle intends on providing tools and resources prior to 2022 to assist with SB 1383 edible food recovery regulatory compliance, it is critical that jurisdictions develop their own lists of food recovery organizations and food recovery services operating in their area. Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help jurisdictions assess their existing edible food recovery capacity and identify capacity needs that exist. In addition, developing local lists will help commercial edible food generators find organizations and services that are capable of safely handling and distributing recovered food on a regular basis in their area. The list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with, and thereby help ensure that edible food in the jurisdiction is not sent to landfills, but rather put to its highest and best use of helping feed people in need.
3668	Vu, C., City of Bell Gardens	Section 18990.1.l(b)(2) - The provisions of this section appear to prohibit a local agency from reserving available capacity at a facility for generators in that jurisdiction. If a local agency provides the funding and/or assurance of material flow that enables the development of organics processing infrastructure, that agency should, reasonably, have the ability to reserve that infrastructure for the benefit of their constituents and/or ratepayers. Additionally, if a local agency acts as a host for an organics processing facility and accepts the real and perceived negative impacts of such facilities on the community, it seems reasonable that the agency should be entitled to establish "host mitigation fees" on materials originating outside that jurisdiction. These sorts of fees are common in the solid waste industry in California	Read together, section 18990.1 (b) (3) prohibits a local ordinance that restricts flow, and section 18990.1 (c) (4) allows for contractual relationships, which does not restrict the flow of materials. Furthermore, section 18990.1 (c) (1) allows facilities to reject organic waste from outside jurisdictions that does not meet quality standards established by a facility or operation, and section 18990.1 (c) (2) allows a jurisdiction to arrange for reserved capacity at a facility for organic waste from the jurisdiction. A change to the regulatory text is not necessary.

Comment Number	Received From	Question/Comment	Response(s)
		<p>and may tend to reward communities that are willing and able to overcome "NIMBY" concerns.</p> <p>The City recommends eliminating or clarifying the provisions of this subsection. The City would particularly like to see the ability to reserve capacity for facilities partially or fully funded by the jurisdiction.</p>	
3669	Vu, C., City of Bell Gardens	<p>Section 18992.(c)(2)(A) - This section requires that counties, in coordination with their cities, estimate the amount of organics disposed, the amount of verifiably available organics recovery capacity, and the estimated additional capacity needed to comply with state goals, through consultation with the Enforcement Agency, the local task force, haulers, facility operators and owners, and community composting facilities. The City believes that the capacity planning process tasked to counties and cities described in this section is critical to ensuring that California "right sizes" its investment in organics infrastructure and can rely upon the information generated by this process for future planning. The methodology proposed is generally reasonable and the flexibility to use other reasonable methods of estimation, where appropriate, will allow jurisdictions to approach this exercise in different ways based on local needs and conditions. That said, the completeness and accuracy of the data collection is entirely dependent upon the cooperation of and provision of data by the facilities in question. All too often, processing facilities provide incomplete information in response to capacity studies or simply decline to participate at all. If CalRecycle intends to require that public agencies conduct the process described herein, it seems reasonable to require participation and provision of accurate information by the facility operators. While this subsection requires that entities contacted respond to the jurisdictions request, there are no mandatory timeframes or prescribed penalties for their inability or unwillingness to comply.</p> <p>The City recommends establishing a timeframe in which entities must reply to jurisdictions, as well as an enforcement mechanism (perhaps an addition to Article 16). Ideally, Ca/Recycle would handle the enforcement of this since many jurisdictions may be seeking information and capacity outside of their jurisdiction, which impacts their ability to legally enforce any fines levied.</p>	<p>Thank you for the comment. CalRecycle has revised Section 18992.2(b) to create a new subsection and add the same language in this subsection that is also provided in Section 18992.1(b)(1). In addition, CalRecycle has revised Section 18992.2 by adding a new subsection (Section 18992.2(b)(1)) to add a 60-day requirement for edible food recovery organizations to provide the required information to jurisdictions.</p>
3670	Vu, C., City of Bell Gardens	<p>Section 18993.(f) - The provisions of this section require that jurisdictions procure a minimum amount of recycled organic waste products (compost and renewable transportation fuel) annually, or contract with direct service providers to procure these materials. The City believes that the requirement to procure recycled organic waste products is limited in scope as to the types of products that may be procured. The City recommends that CalRecycle add ground cover, mulch, soil amendments, and an allowance for additional recycled organic waste products (as approved by Ca/Recycle) to account for future technological and product developments. Soil amendments are considered a reduction in landfill disposal per Section 18983.(b)(S) and therefore should also be an acceptable form of recovered organic waste for procurement to close the loop. Furthermore, it would be beneficial for Ca/Recycle</p>	<p>Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p> <p>Regarding soil amendments and adding an option for approval of "future technological and product developments", CalRecycle disagrees due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of "soil amendments" and "future technological and product development" raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors. CalRecycle has also added language to clarify that procured</p>

Comment Number	Received From	Question/Comment	Response(s)
		to post a list of approved recycled organic waste products on their website so that other jurisdictions are aware of additional procurement opportunities. Additionally, it may be useful for Ca/Recycle to have a vendor web portal that allows jurisdictions to procure recovered organic waste products from other jurisdictions or companies who output more products than they can currently utilize.	compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. If soil amendments meet that criteria, they may be considered compost. Regarding posting a list of approved products, once the regulations are finalized CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products.
3671	Vu, C., City of Bell Gardens	Section 18982(a)(65) - This section defines a route review as visual inspection of containers along a hauler route for the purpose of determining container contamination. Without specifying a minimum quantity of inspections per route, the regulations may result in a "race to the bottom" where haulers or jurisdictions are inspecting minimal containers per route. Another concern is an inconsistent interpretation or application of the minimum standards by Local Enforcement Agents. The City recommends that Ca/Recycle amend this definition or the corresponding enforcement section {18984.5} to specify a minimum percentage of containers or customers along the route to be inspected. This approach will allow for a consistent application of the regulations across jurisdictions and ensure that the intent of this section is realized.	For clarity, the regulations allow the jurisdictions to determine random selection, which is the least costly and burdensome approach compared to requiring statistically significant sampling.
3672	Vu, C., City of Bell Gardens	General - This article will require a significant expenditure by jurisdictions throughout California to staff the enforcement efforts, including but not limited to: route reviews, compliance reviews, contamination monitoring, follow-up site visits, and the issuing of fines. Some agencies will choose to hire staff or incorporate these responsibilities into the work performed by existing code enforcement officers and/or health inspectors. In some agencies, there may not be a sufficient workload created by these requirements to justify a full time position. In yet other agencies, there may be political objections to funding staffing for this type of enforcement when other critical public health and safety matters are under-enforced. During the enforcement workshop, Cal Recycle suggested the potential for CalRecycle to perform the enforcement on behalf of agencies, similar to how agencies can arrange for Cal Recycle to be the Local Enforcement Agency for regulating solid waste facilities. The City recommends that Ca/Recycle provide an option for jurisdictions to contract with Ca/Recycle to perform the inspection and enforcement procedures.	A change to the regulatory text is not necessary. CalRecycle will not be contracting with jurisdictions to perform inspection and enforcement actions. There are insufficient resources at the state level to contract out for jurisdictions.
3673	Vu, C., City of Bell Gardens	Section 18995.1(a)(1)(A) - This section states that compliance reviews and route reviews shall be conducted to ensure compliance with the generator requirements outlined in Section 18984.9. and 18982(a)(65). Under Section 18984.9(b) it states that commercial businesses shall periodically inspect organic waste containers for contamination and inform employees if containers are contaminated. It is unrealistic to expect that a jurisdictions designee will be monitoring communication	CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.

Comment Number	Received From	Question/Comment	Response(s)
		<p>between businesses and their employees.</p> <p>The City recommends that Section 18995.1(a)(1)(A) be amended to require that compliance reviews and route reviews ensure compliance with the generator requirements set forth in Section 18984.9. This will align the requirements of Section 18995.1(a)(1)(A) with the definitions specified in Article 1.</p>	
3674	Vu, C., City of Bell Gardens	<p>Section 18997.2(d) - This section states that the penalty amount for each violation (subject to range limitations) will be determined through a qualitative process. It is likely that the current process will result in an uneven application of fines across jurisdictions. Furthermore, the consideration of "the ability for a violator to pay" under Section 18997.2(d) seems to bias the amount of fines based on a jurisdiction's financial position.</p> <p>The City recommends that this section be amended to include a quantifiable formula for determination of fines that eliminates subjectivity and the potential for inconsistent application. For example, the severity of a fine within the currently prescribed range could be tied to the population of a jurisdiction. Alternatively, the base tables in Section 18997.2(c) could be changed to singular figures, as opposed to ranges, eliminating the current subjectivity. The fine structure is already progressive for subsequent failures to comply and therefore negates the need to assess the penalties based on the "willfulness of a jurisdiction's misconduct."</p>	<p>A change to the regulatory text is not necessary. Section 18997.3(d) has been changed to 18997.3(c) due to deletion of the penalty tables and the addition of the new penalty structure outlined in section 18997.3(b). The factors listed in Section 18997.3(c) are commonly used when determining a penalty amount. The penalty range may be used to consider aspects such as but limited to, the population of a jurisdiction. CalRecycle will not be including a quantifiable penalty formula in the regulations.</p>
3675	Vu, C., City of Bell Gardens	<p>Section 18997.5(d) - This section states that upon receipt of an accusation of violation, a jurisdiction has 15 days to file a request for a hearing. Additionally, this section prescribes an expedited time frame for imposition of penalties, leaving jurisdictions little time to investigate potential violations and respond thoughtfully. Given that responsibilities may be designated to haulers or other entities, it is even more unlikely that a thoughtful response could be drafted within the mandated timeframes.</p> <p>The City recommends that jurisdictions receive a minimum of 45 days to investigate the accusation and request a hearing.</p>	<p>The 15 day window for requesting a hearing is modeled on the timeline for regulated solid waste facilities in Public Resources Code Section 44310. Provisions were included in Section 18994.1 for jurisdictions to report the primary contact person in the jurisdiction and the agent for service of enforcement process, if different. The purpose of these provisions was to ensure that enforcement process is routed to the proper individual within a jurisdiction. It is incumbent upon that individual to ensure the process material is routed efficiently and appropriately. In addition, the commencement of a penalty proceeding is only allowed to occur following a notice of violation process in which the jurisdiction will be on notice with an opportunity to correct. By the time a penalty accusation is served, a jurisdiction should be aware of a violation and the issues involved and the informational bar for requesting a hearing is set low.</p>
3676	Vu, C., City of Bell Gardens	<p>Section 18997.5(e) - This section states that if a party waives their right to a hearing, there is a potential to enter a settlement agreement. It is unclear how the settlement process could or should be conducted.</p> <p>The City recommends that this section be amended to provide guidance and parameters for settlements, or at a minimum contains a reference to the appropriate document that does provide this information.</p>	<p>A change in the regulatory text is not necessary. It is unclear on what parameters the commenter is suggesting, but in general, adding such parameters to the language may unduly restrict the discretion of the parties in reaching adequate settlement.</p>
3677	Vu, C., City of Bell Gardens	<p>Section 18995.2 - SB 1383 currently requires a voluminous centralized repository for all information related to SB 1383 programs, which entails over 40 units of observations and potentially millions of data points. Subsection 14.2 (c) requires that the jurisdiction shall provide access to the implementation record within one business day of request. The City believes that this timeframe is unreasonable as City staff may have other priorities or scheduled time off, and it is unfair to jurisdictions to expect that they prioritize CalRecycle over other responsibilities,</p>	<p>CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>particularly in rural or smaller jurisdictions that may have limited staff and budget. The City recommends that the timeframe for providing or reviewing the implementation record be changed for consistency with The California Public Records Act, which indicates an agency must provide the records within a reasonable period of time and allows a ten-day period for response. This allows City staff flexibility to tend to their other responsibilities. Alternatively, Ca/Recycle could require an expedited timeframe only for those cities who have been found to be in violation of the implementation record requirements.</p>	
6243	Wade, S., Coalition for Renewable Natural Gas	<p>...we recommend that the Proposed Rule be amended to recognize any procurement of RNG made by a complying jurisdiction, regardless of end-use sector.</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
6244	Wade, S., Coalition for Renewable Natural Gas	<p>We believe adding the flexibility to recognize all RNG end-uses can easily be accomplished by replacing the term “renewable transportation fuel” with the term “renewable natural gas” throughout the rule and making the following line edits:</p>	<p>CalRecycle revised the proposed regulatory definition from “renewable transportation fuel” to “renewable gas” to allow for the expanded use of renewable gas for transportation fuel, electricity, and heating applications. The broader definition is necessary in order to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>Section 18993.1  (g) The following conversion factors shall be used to convert tonnage in the annual recovered organic waste product procurement target for each jurisdiction to equivalent amounts of recovered organic waste products:  (1) One ton of organic waste in a recovered organic waste product procurement target shall constitute:  (A) 19 diesel gallon equivalents, or “DGE,” <del>or 26.89 Therms</del> of renewable <del>transportation fuel</del> <b>natural gas</b>.  (B) 0.58 tons of compost.  (h) If a jurisdiction’s annual recovered organic waste product procurement target exceeds the jurisdiction’s total procurement of <b>natural gas and</b> transportation fuel <del>and (inclusive of any renewable natural gas transportation fuel)</del> from the previous calendar year as determined by the conversion factors in subdivision (g), the jurisdiction is only required to procure recovered organic waste products described in (f) in an amount equal to its total purchase of <b>natural gas and</b> transportation fuel <del>(inclusive of any renewable natural gas) and renewable transportation fuel</del> from the previous year.</p>	
6245	Wade, S., Coalition for Renewable Natural Gas	<p>Section 18993.2(a)(5) -  If a jurisdiction will include <del>transportation fuel</del> <b>renewable natural gas</b> procured from a POTW, a written certification by an authorized representative of the POTW of the tons of landfill-diverted organic waste processed into renewable <b>natural gas</b> provided to the jurisdiction. The certification shall be furnished under penalty of perjury in a form and manner determined by the jurisdiction.</p>	<p>CalRecycle revised the proposed regulatory definition from “renewable transportation fuel” to “renewable gas” to allow for the expanded use of renewable gas for transportation fuel, electricity, and heating applications. The broader definition is necessary in order to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p>
1	Wagner, Emanuel, California Hydrogen Business Council (CHBC)	<p>As currently drafted, the procurement requirement is limited to only two out of potentially hundreds of commodities that can be manufactured from organic waste. We strongly suggest CalRecycle consider not limiting the type of organic commodity to compost and convert to transportation fuel, and instead allow the market to choose the most favorable commodity for each jurisdiction.</p>	<p>CalRecycle has revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.  CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
2	Wagner, Emanuel, California Hydrogen Business Council (CHBC)	<p>The CHBC suggests not restricting the procurement requirements and instead allowing the local government to decide which organic commodity to procure based on the technology available in their jurisdiction.</p>	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Comment Number	Received From	Question/Comment	Response(s)
			<p>“Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis.</p>
3	Wagner, Emanuel, California Hydrogen Business Council (CHBC)	<p>However, if CalRecycle cannot simply allow for the procurement of any available organic commodity, then we recommend CalRecycle design a pathway for local governments to gain approval for the procurement of unlisted organic commodities. The precedent was already set for this method in Article 2 Section 18983.1 where CalRecycle allows for other, unlisted diversion technologies to apply, and qualify for a diversion facility determination by stating:</p> <p>(8) Other operations or facilities with processes that reduce short-lived climate pollutants as determined in accordance with Section 18983.2. Section 18983.2: Verification Determination of Technologies That constitutes a “Reduction in Landfill Disposal”, outlining a procedure for applying for qualification as a diversion facility. If a diversion facility qualifies under this provision of the regulation, then the procurement of commodities manufactured by these facilities should be encouraged by CalRecycle and local governments in the procurement requirements of this regulation.</p>	<p>CalRecycle disagrees. The purpose of the current regulatory language is to be consistent with SB 1383 statute that specifies the adoption of policies that incentivize biomethane derived from solid waste facilities. In-vessel digestion facilities are solid waste facilities, which allows CalRecycle to verify that these facilities are reducing the disposal of organic waste.</p> <p>Regarding allowing an open-ended pathway. CalRecycle disagrees with this approach for procurement. The broad range of potential recovered organic waste products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. As noted above, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>
5026	Watson, B, City of Arcata	<p>We remain concerned about critical points that hinder our ability to implement the proposed regulation. Recently the biomass facilities in our area have either shut down or curtailed accepting material. We have a single contractor who accepts greenwaste currently and they are ramping up their fees for accepting material. In terms of food waste composting operations existing infrastructure is lacking in our area to accept material. Food waste processing facilities need to be in close proximity to populations to minimize hauling costs and associated GHG from transportation. We promote backyard composting for the residential sector and would be interested in a food waste solution such as local in-vessel composters or digesters associated with wastewater treatment facilities where biogas can be used for energy production. The scale of these facilities are challenging in a remote rural area such as northern Humboldt County.</p> <p>Infrastructure Capacity: As we have noted, California lacks sufficient capacity today to be able to meet the needs for new organic waste processing. Many cities have expressed concern over an ability to comply with organic waste diversion requirements due to a lack of waste disposal infrastructure. There is an uneven distribution of waste disposal infrastructure, such as bio-digesters, across the state.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not</p>

Comment Number	Received From	Question/Comment	Response(s)
		Moreover, where the infrastructure does exist, capacity is limited. While the regulation provides five years to implement programs, cities are concerned that this is not sufficient time to develop and permit new facilities.	provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
5027	Watson, B, City of Arcata	Funding: Lack of sufficient funds continues to be among the major challenges local governments face in the effort to implement new organic waste diversion programs. The City of Arcata and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade" proceeds can be used to help offset the costs for developing organic recycling infrastructure. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities, such as updating bins and labels, as well as providing education and outreach.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
5028	Watson, B, City of Arcata	Enforcement: These regulations allow for Corrective Action Plans and establishes extended timelines and milestones for achieving compliance. We appreciate the addition of a pathway to compliance. This is a step in the right direction and we urge careful consideration of the differences among local jurisdictions, as well as the variety of community stakeholders, and infrastructure challenges a local jurisdiction may face. Penalties: The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, this regulation puts the cart before the horse by designing penalties before the sticking points and needs of generators are understood. We encourage CalRecycle to continue working through the programmatic scheme before implementing an appropriate set of penalties, particularly since programs have until 2022 to be implemented. We ask that CalRecycle adopt penalties in a second set of regulations to take effect at a future date.	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for 5053 waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.
5029	Watson, B, City of Arcata	Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products targets set by CalRecycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations.	CalRecycle finds that the procurement requirements are necessary as part of this initial rulemaking to achieve the organic waste diversion goals in statute by providing an end use for processed organic waste. In addition, CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.

Comment Number	Received From	Question/Comment	Response(s)
		<p>We ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding.</p> <p>The City of Arcata further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1 ( e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even were a fee to survive scrutiny under Prop. 26, it is questionable whether a city would not have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.) This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, The City of Arcata requests that the procurement regulations be addressed in a separate regulatory proceeding.</p>	<p>First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p> <p>Regarding "substantial additional costs," a change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in “substantial additional costs”.</p> <p>CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p>
6375	Weatherby, T., Second Harvest	As members of the California Association of Food Banks, we have been closely involved in developing these comments and concur with all of them (below), with	While some commenters requested that the threshold be increased from 6 tons to 12 tons, other stakeholders recommended removing the threshold completely so that any food recovery

Comment Number	Received From	Question/Comment	Response(s)
	Food Bank of San Mateo and Santa Clara Counties	<p>one exception. In Article 10, Section 18991.5 below, we would like to see the limit for record keeping set at 20 tons as this requirement can be onerous for many of our smaller partners.</p> <p>Article 10 Section 18991.5. Edible Food Recovery Services and Organizations  (a) A food recovery organization or service that collects or receives 12 6 tons or more of edible food from edible food generators per year shall maintain a record that includes all of the following.</p>	<p>organization or food recovery service that contracted with, or had a written agreement with a commercial edible food generator would be required to maintain records and report to the jurisdiction.</p> <p>Another commenter further supported the recommendation to eliminate the 6-ton recordkeeping threshold by stating that the primary focus relative to edible food recovery must be the safe handling of food and protection of public health and safety. The commenter further noted that the ability to track the source of a food borne illness outbreak rests on the ability to trace food product throughout the food supply chain. By allowing a food recovery organization to avoid maintaining a record of where the food was obtained, a serious gap in the investigative traceability process is created. The commenter continued their argument by stating that in their many years of experience working as a food recovery organization, food recovery services and food recovery organizations that are not large enough or are incapable of maintaining a record of the source of the donated food are likely incapable of consistently handling and distributing donated food safely.</p> <p>CalRecycle carefully reviewed each comment that requested to increase the threshold and each comment that requested that the threshold be removed. Upon review and evaluation, a determination was made to remove the recordkeeping threshold for the following reasons. It is critical that any food recovery organization or food recovery service that contracts with or has a written agreement with a commercial edible food generator maintain a record of the food they collect or receive from those generators. This is critical for multiple reasons. The first reason is for enforcement purposes. All commercial edible food generators are required to maintain records of the food that is recovered from them. These recordkeeping requirements are specified in the commercial edible food generator recordkeeping section of the regulations. Although all commercial edible food generators are required to maintain records of the food that is recovered from them, in a previous draft of the regulations, not all food recovery organizations and food recovery services were required to maintain records. In a previous draft of the regulations, only food recovery organizations and food recovery services that collected or received 6 tons or more of edible food from commercial edible food generators were required to maintain records of the food they received from commercial edible food generators. The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance.</p> <p>To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold and revised the regulatory text. The regulations now require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>food directly from commercial edible food generators, pursuant to Section 18991.3(b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.</p>
5106	Webb, M. City of Davis	<p>The requirement for black, blue and green-lidded bins. Title 14, Chapter 12, Article 3, Section 18984.1</p> <p>This poses a significant challenge for dual-stream single split-cart recycling systems. Requiring a single color lid (blue) to identify a recycling cart will pose issues for cities like Davis with a dual-stream recycling program where paper is collected separately from other recycling. The dual stream process has kept our paper clean and has resulted in a higher quality recycled product. Given the current recycling markets ( driven by China's restriction on the import of recyclable material), high quality recycled paper is essential.</p> <p>The recycling industry as a whole is taking a closer look at how to achieve cleaner recycling and a dual-stream system is one of the ways to reach this goal. Davis uses a split-recycling cart for curbside recycling service. The top of these carts have two separate lids-a blue lid for containers and a black lid for paper. These two different colored lids allow residents to easily tell which items go in each side of the cart. Under the proposed regulation, both lids would be required to be blue. This would make it much more challenging to easily differentiate the container side of the cart from the paper side of the cart, particularly if the labels were to come off of it. Having different shades of blue for the lids is not as effective as two completely different colors, especially for residents who have a vision impairment, such as color blindness.</p>	<p>The regulations do not preclude a jurisdiction from having split carts, but in the commenter's scenario this would mean the jurisdiction has a 3-container system that meets the requirements of Section 18984.1. Also, Subsections 18984.1(a)(6)(B) and (C) do not require only that light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container.</p> <p>Further language was added clarifying that a jurisdiction could split the recycling portion of a two-container service to further segregate recyclables, however the gray container would still be required to be transported to a high diversion organic waste processing facility. See statement of purpose and necessity for Section 18984.2</p>
5107	Webb, M. City of Davis	<p>Changing out lids to conform to a design standard will be an unnecessary cost burden on jurisdictions. The City is very appreciative that CalRecycle amended the previous draft of the regulation to require only the lid of the trash, recycling and organics cart to be color-compliant. However, the City is still concerned with the cost and waste associated with having to change out all of the cart lids that are currently being used.</p> <p>Unlike other sections of the regulation that will actively increase access to organics and recycling service and can increase waste diversion, the City does not believe that the expense required to change out lids prior to the end of their useful life is outweighed by the consistency of color coding of bins statewide. The recycling and organics carts that we use in Davis do not conform to the colors identified in the draft regulation. In Davis, commercial recycling carts are green, organics carts have</p>	<p>Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036. Sections 18984.1(a)(6)(B) and (C) and 18984.2(d)(1) do not require that only light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container. Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic</p>

5108	Webb, M. City of Davis	The requirement for food scrap carts to be completely yellow. Title 14, Chapter 12, Article 3, Section 18984.1	CalRecycle responded to stakeholders who initially had issues with the container color being yellow because yellow containers will quickly become discolored and unattractive if used for the collection of food waste; and yellow coloration does not hold up well in UV conditions. Therefore,

Comment Number	Received From	Question/Comment	Response(s)
		<p>While the earlier draft text was changed to only requiring the lids of trash, recycling and organics bins to be color-compliant, food scrap carts are still required to be completely yellow.</p> <ul style="list-style-type: none"> <li>o In order to be consistent with the regulations, the City requests that the same modifications be made to this requirement-only the lids should be required to be yellow.</li> </ul>	<p>brown was chosen because brown coloration shows dirt less; and cart manufacturers can use higher percentages of recycled plastic to make brown versus yellow containers and lids, leading to more market demand for recycled plastic. CalRecycle has revised the definitions of the containers to be consistent with each other. The regulations require the lids or the body of the container to be the required color.</p>
5109	Webb, M. City of Davis	<p>The requirement for all collection containers to have a label that specifies what can and what cannot go into the bin. Title 14, Chapter 12, Article 3, Section 18984.8. The City has found that imprinting labels directly onto container lids last on the lid much longer and do not fall off and contribute to litter. Labeling can be done when lids are replaced as is required by Section 18984.7 in order to be color compliant. However, the lids are not required to be color compliant until 2032 but the labels must be in place by 2022. This would mean that temporary labels are required in the interim; labels which could fall off.</p> <ul style="list-style-type: none"> <li>o The City requests that the labeling of outdoor containers be phased-in on the same timeline as Section 18984.7 (at the end of their useful life, or by January 1, 2032).</li> </ul>	<p>This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. Also, for consistency purposes, CalRecycle revised Section 18984.8(c)(1) to mention primary items.</p> <p>In regards to the new technology, CalRecycle is unclear on how that will help educate the generators.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>Nothing prohibits jurisdiction from mailing labels for existing containers, in addition to ensuring that new containers are properly labeled.</p> <p>he current text reflects stakeholder input during the informal rulemaking period that it would be costly to place labels on all containers. CalRecycle determined that this change would provide jurisdictions with flexibility to implement less burdensome education methods (e.g., labels on new containers) that ensure organic waste is collected and recovered, to support the state’s efforts to keep organic waste out of landfills and reduce greenhouse gas emissions. However, nothing in the regulations prohibits a jurisdiction from placing labels on all containers at an earlier time.</p>
5110	Webb, M. City of Davis	<p>The requirement for all businesses to have recycling and organics bins next to each trash container that conform with the containers provided for collection in both color and labeling obligations.</p> <p>Title 14, Chapter 12, Article 3, Section 18984. 9-10</p> <p>It is not immediately clear if these sections apply only to indoor waste bins with lids, or to all indoor waste bins. Depending on how this is interpreted, the regulation as written could require all indoor bins to have lids and to be color compliant with labels that depict what can and cannot go into them.</p> <p>Given that businesses must be compliant with this requirement no later than January 2, 2022, this does not allow bins that are already in use to reach the end of their useful life. Bins in good condition will be discarded simply because they are not a compliant color, or do not have a color compliant lid. In addition, requiring business to have a blue recycling bin and a green organics bin next to every single trash bin can potentially penalize businesses, many of which have already proactively invested in three bin systems that do not conform to the specified colors.</p> <p>o The City also requests that rather than requiring bins or bin lids in businesses to be color compliant, only require the label to be color compliant.</p> <p>OR</p> <p>o If the regulation is not modified to allow just the label color to be changed, instead of requiring the entire bin (or lid) to be color compliant, the City requests that businesses with existing three bin systems in place for waste diversion be grandfathered in and allowed to keep their existing waste sorting systems in place. When the time comes for replacement, then the new bins would have to be color compliant.</p>	<p>CalRecycle revised Section 18984.7(a) in response to this comment to clarify that jurisdictions have to provide containers for the collection service that the jurisdiction implements for organic waste generators, not the indoor bins of businesses. With respect to indoor containers owned by private businesses and not the hauler, the containers may conform with either the container color requirements or the container label requirements.</p> <p>In regards to the interior containers, this was the least costly and burdensome approach and still achieves the necessary organic disposal reduction. Those businesses subject to AB 827 will have to meet that statute’s signage requirements. Nothing in these SB 1383 regulations precludes a jurisdiction from requiring businesses to have signage. Businesses are also allowed to replace the indoor container at the end of its functional life. The regulations provide that a jurisdiction is not required to replace functional containers, including containers purchased prior to January 1, 2022, that do not comply with the color requirements of this article prior to the end of the useful life of those containers, or prior to January 1, 2036, whichever comes first. Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036. Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. The labeling requirements were refined through the informal public rulemaking process to accommodate the various types of labels jurisdictions currently use on their containers. However, nothing in the regulations prohibits a jurisdiction from placing labels on all containers at an earlier time.</p>
5111	Webb, M. City of Davis	<p>All tier 1 and tier 2 commercial edible food generators must keep records of each place they donate food to, all contracts, written agreements or other documents from the food recovery organization(s) they work with, and the quantity of food donated. Article 10, Section 18991.4.</p> <p>Due to many factors, the city anticipates a number of significant challenges in working with restaurants to maintain these records. These factors include high staff turnover, rush hours, language barriers, and hours of operation outside of standard business hours.</p> <p>There is concern that collecting this information on a regular basis may not be feasible, and could create an antagonistic relationship between the city and restaurants should the city have to issue fines for anticipated non-compliance.</p> <p>o If CalRecycle keeps this requirement in the regulations, the City requests that the state maintain an online reporting system that restaurants can use. As most restaurants have a license through the CA Dept. of Alcoholic Beverage Control, the City further requests that the State use their own licensing systems to require edible food generators that have a ABC license to report this information directly to the state, leaving the jurisdictions to manage only the Tier 1 and Tier 2 edible food generators that do not have ABC licenses.</p>	<p>Without the recordkeeping requirements for commercial edible food generators, jurisdictions will not be able to verify if a commercial edible food generator is complying with SB 1383's commercial edible food generator requirements. The recordkeeping requirements are a critical enforcement mechanism. Prior to 2022, CalRecycle does intend on making SB 1383 recordkeeping tools available to commercial edible food generators to assist them with compliance.</p> <p>CalRecycle would also like to note that many well-established food recovery organizations and food recovery services already provide their donors with some kind of receipt of donation that often contains the amount of food that was donated. Many organizations do this to provide their donors with information that will help the donor if they intend on claiming any of the tax incentives offered for food donation.</p> <p>Regarding the comment that the state maintain an online reporting system that restaurants can use, a change to the regulatory text was not necessary. CalRecycle would like to clarify that commercial edible food generators are not required to report any information. Recordkeeping and reporting are different. Commercial edible food generators are however, required to maintain records.</p>

Comment Number	Received From	Question/Comment	Response(s)
5112	Webb, M. City of Davis	<p>Implementation Records and recordkeeping requirements and making records available to CalRecycle within one business day if requested. Article 14, Section 18995.2 (c) There are many items that are required to be included in the implementation record, all of which will require additional time for jurisdictions to compile and to create a new accounting and record system to maintain. These records may compel some jurisdictions, particularly larger ones, to purchase expensive recordkeeping software and database systems, just to ensure compliance.</p> <ul style="list-style-type: none"> <li>o Rather than require each jurisdictions to create their own recordkeeping and data management system in order to maintain compliance with these regulations, the City requests that CalRecycle provide an electronic method for jurisdictions to maintain an Implementation Record. The electronic format may be a formatted Excel Spreadsheet template, a downloadable database software system, or CalRecycle's own online system (such as the CalRecycle online LoGIC system where jurisdictions submit annual reports). An online system hosted by CalRecycle would give CalRecycle continual access to the records.</li> <li>o The requirement that records be made available to CalRecycle within a single business day is not practical. The City requests an allowance of 5 business days to make records available, as five days is much more reasonable and practical. The short turnaround time can serve to penalize smaller jurisdictions with limited staffing.</li> </ul>	<p>Comment noted. CalRecycle may consider streamlined jurisdiction reporting opportunities, such as modifying the Electronic Annual Report process.</p>
5113	Webb, M. City of Davis	<p>Agencies must provide a method for anyone to report a violation of these regulations, and must provide a method for a complainant to find out the results of their complaint.</p> <p>Article 14, Section 18995.3</p> <p>The City is concerned about the privacy of its residents and customers. Should the result of a complaint investigation be an administrative fine, there is no record to release on the incident, other than a general description of the outcome. The City requests that the language of this section be amended to further protect information that is confidential and allow for general descriptions of outcomes, including "Per CalRecycle regulations, the City is investigating the issue" and "the investigation has been completed and any required actions, if needed, have been taken."</p>	<p>CalRecycle revised 18995.3 was amended to clarify that a jurisdiction is only required to notify the complainant of the results of an investigation if the identify and contact information of the complainant is known.</p> <p>Section 18995.3 was revised in response to this comment.</p> <p>Section 18995.3 requires a jurisdiction to have a procedure for the receipt and investigation of written complaints of alleged violations of this Chapter. The complaint may have the name and contact information of the complainant or the complaint may be anonymous. Regarding confidential information, the Public Records Act governs such situations, the regulations were modified to reflect that, and the Department will not include conflicting requirements.</p>
5114	Webb, M. City of Davis	<p>Financial burden of the draft regulations.</p> <p>It is not an understatement to say that the program implementations, extensive requirements for reporting, contamination monitoring, edible food recovery program, program reporting, recordkeeping, violation reporting and monitoring process, etc. will be a significant cost to jurisdictions and ratepayers. While</p>	<p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, "CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code." That section also provides that CalRecycle may "include different levels of requirements for local jurisdictions..."</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>CalRecycle acknowledges that this will be a financial burden, simply anticipating that costs will be passed along to ratepayers in the form of increased solid waste service fees is problematic.</p> <p>The City of Davis is one of many jurisdictions that is required to use the Proposition 218 process to implement solid waste rates. Majority protests from ratepayers rejecting the increases, therefore, could severely limit the ability of these jurisdictions to fulfill the requirements of these new regulations. The City has recently approved a 40% solid waste rate increase that will occur over the next five years, in part to comply with existing (pre- SB 1383) diversion requirements. Placing additional cost burdens on rate payers for unfunded requirements at this time may create a situation where new rates may not be approved per the Prop 218 requirements. Past disputes in the City of Davis over significant water rate increases have resulted in litigation and a citizen referendum to block rate increases, and the City is at risk of similar responses if waste disposal rates again must be increased due to new state mandates.</p> <ul style="list-style-type: none"> <li>o The City requests that CalRecycle provide financial assistance to jurisdictions in the form of grants, payment programs or other methods to assist jurisdictions in complying with these regulations.</li> <li>o Recognizing that in some jurisdictions, solid waste rate increases are required to go through the Proposition 218 process, the City requests that CalRecycle provide options for jurisdictions where this occurs and provide assistance with the 218 process to ensure the success of implementing these mandated programs.</li> </ul>	<p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, "The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code." SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that "[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. '[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . .'. The [administrative agency] is authorized to 'fill up the details'" of the statutory scheme."</p> <p>Administrative Civil Penalty tables, including "Base Table 6," were deleted from the proposed regulations</p> <p>CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.</p> <p>First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, "No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code." Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, <i>County of Fresno v. State of California</i>, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a "tax" under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe "any fees" that may in the future be imposed by the numerous local jurisdictions in California as "likely" to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in <i>Paradise Irrigation Dist. v. Commission on State Mandates</i>, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source</p> <p>Public Resources Code Section 42652.5(a)(1) explicitly contemplates CalRecycle requiring “local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.”</p> <p>Consistent with rules of statutory construction, Public Resources Code Section 42652.5(a)(1) must be read as a whole and interpreted in a way that renders the text as compatible, not contradictory. This section states that the regulations “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.” The first part of this section explicitly contemplates regulatory requirements on entities besides generators as long as they are relevant to meeting the mandates of SB 1383. Thus, the second part of the section regarding penalties must be read harmoniously and as a whole with the first part to permit penalties on the other entities that may be subject to regulatory requirements. Without enforcement penalties on the other entities, the regulatory requirements are not actually requirements but mere suggestions. Bolstering this interpretation is the Assembly Floor Analysis for SB 1383 (August 31, 2016) which stated that the bill, “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and impose penalties for noncompliance.”</p> <p>Regarding the language “authorizing” penalties by local jurisdictions, the clear intent of the legislation was that jurisdictions must penalize non-compliance with SB 1383 requirements. First, the language of Assembly Floor Analysis described above makes this intent clear – CalRecycle may require jurisdictions to impose requirements “and impose penalties for noncompliance.” Second, the Legislature designed the bill to achieve the organic waste reduction goals in part by requiring local jurisdictions to impose requirements. These requirements must be enforceable through penalties or:</p> <p>(a) they will not actually be requirements but suggestions; and (b) there will be no way to ensure compliance by regulated entities and thus achieve the goals of the statute. Given these considerations, CalRecycle has authorized local jurisdictions to impose penalties as long as they meet the conditions described in the regulations regarding categories of violations, requirements to enforce against those violations, and minimum penalty levels.</p> <p>Regarding Section 18995.1(a)(1)(B)(5), CalRecycle notes that the language of this section was amended to simply specify that jurisdictions enforce according the enforcement timetables and compliance extensions in Section 18995.4 and the administrative civil penalty provisions in 18997.2.</p>
5115	Webb, M. City of Davis	<p>In addition to the concerns listed above, the City of Davis requests that as part of these regulations, CalRecycle provide the following resources:</p> <ul style="list-style-type: none"> <li>o Model ordinances. The depth and breadth of what is covered under these new regulations places a particular challenge on jurisdictions to develop language for</li> </ul>	<p>Comment noted. This comment is not specific to any aspect of the regulatory text. CalRecycle intends to provide guidance to jurisdictions throughout 2020 and 2021 prior to the implementation date of the regulatory requirements. CalRecycle will additionally continue to provide regulatory guidance as the regulations take effect.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>enforceable ordinances. Please provide several model ordinances that meet the requirements set forth in these regulations so jurisdictions can choose the ones that work best with the programs already in place.</p> <ul style="list-style-type: none"> <li>o Sample outreach materials. As this regulation provides numerous requirements for specific outreach items, the City requests that the state provide sample outreach pieces in a modifiable form, so that jurisdictions can add their own logo and contact information, distribute the outreach materials and comply with the regulations.</li> <li>o Translated text of all required outreach materials. This translation is particularly needed for topics that cannot be communicated through the use of images and a limited number of words, such as methane reduction benefits of reducing the disposal of organic waste, and the public health and safety and environmental impacts associated with the disposal of organic waste as required in Title 14, Chapter 12, Article 4, Section 18985.1. These translations would need to be listed in multiple languages, including Spanish, Cantonese, Mandarin, Tagalog, Vietnamese, etc., in order for jurisdictions to comply with the translation requirements of this section. As an alternative, the State could offer a free translation service to jurisdictions that need to comply with the regulations.</li> <li>o Compliance training. There are many facets to these regulations which solid waste professionals in California will need training on, including outreach, contamination monitoring, and required reporting. The City requests that CalRecycle provides web-based training via multiple modules to address the different requirements of these regulations.</li> <li>o Training for contamination monitoring. As the regulations require every route to be monitored for contamination every quarter, the City requests that CalRecycle provide web-based training modules on visual contamination estimation, so that waste hauling and solid waste staff can learn to provide an accurate estimation of the percentage of contamination in a bin.</li> <li>o Labels. The requirements to place labels on every single indoor and outdoor bin will require millions of labels. As with all printing projects, bulk purchasing of large quantities is much more cost effective than smaller purchases. Requiring each business to purchase its own labels will be far more expensive than if the State purchases large quantities than offers them for free or at a discounted price. The City requests that CalRecycle provide some method for businesses to order labels for free or at a discounted rate. There is already a precedent set for this as the State offers recycling posters and stickers that can be ordered and shipped in California for free.</li> <li>o Indoor recycling and organics bins. Should the state move forward with the requirement that all single indoor trash bins will be required to have accompanying recycling and organics bins that are color compliant, the City requests that the State create partnerships with bin manufacturers to secure low cost purchasing of color compliant indoor bins for jurisdictions, businesses and schools.</li> </ul>	

Comment Number	Received From	Question/Comment	Response(s)
		<ul style="list-style-type: none"> <li>o Web-based calculation worksheets. In order to identify the tier 1 and 2 edible food generators, as required in Title 14, Chapter 12, Article 10, it would be helpful if CalRecycle could provide a database that can help calculate which businesses are considered Tier 1 and Tier 2 compliant.</li> <li>o Training on Health Code regulations surrounding edible food donation regulations and serving food. The Edible Food Recovery Program described in the regulations is extensive and is outside of the experience of the recycling industry. Requiring professionals within the solid waste industry to manage a food donation program will require a large education campaign for staff and employees. The City requests that CalRecycle provide webinars, online training modules and fact sheets regarding all applicable health code regulations, best management practices, and refrigeration and food storage requirements associated with edible food donations in order for solid waste program staff in jurisdictions to successfully implement these programs.</li> <li>o Postponement of implementation until assistance is provided. Lastly, the City is requesting that CalRecycle postpone the implementation of these regulations until after the assistance requested above has been provided.</li> </ul>	
3249	Wells, K., Sonoma County LTF on IWM	"Department" is not in the definitions but should be. Presumably it means the Department of Resource, Recycling, and Recovery (i.e., CalRecycle)	Per Statute, for the purposes of regulations promulgated by CalRecycle "department" means CalRecycle or the Department of Resources Recycling and Recovery.
3250	Wells, K., Sonoma County LTF on IWM	"Food recovery organization" Should include (D) Animal Feeding Operations. - Feeding Animals is the third tier of EPA's Food Recovery Hierarchy. Animal Feeding Operations (including farms) should be included in the definition section for food recovery organization.	SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. The statute states that 20% of edible food must be recovered for human consumption, not for animal feeding operations. CalRecycle must adopt regulations that include requirements to achieve the specific goal identified in statute. For this reason, animal feeding operations were not added to the definition of "food recovery organization."
3251	Wells, K., Sonoma County LTF on IWM	<p>"Organic Waste" definition is not consistent between SB1383, MORE AB 1826, and AB 901.</p> <ul style="list-style-type: none"> <li>- SB 1383 - (46) "Organic waste" means solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood, paper products, printing and writing paper, manure, biosolids, digestate, and sludges.</li> <li>- MORE AB 1826 - (c) "Organic waste" means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.</li> <li>- AB 901 - (39) "Organics" means material originated from living organisms and their metabolic waste products. This includes, but is not limited to, food, "agricultural material" as defined in section 17852(a)(5) of this subdivision, "agricultural by-product material" as defined in section 17852(a)(4.5) of this subdivision, green material, landscape and pruning waste, nonhazardous lumber and dimensional wood, manure, compostable paper, digestate, biosolids, and biogenic sludges; and</li> </ul>	Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.

Comment Number	Received From	Question/Comment	Response(s)
		<p>any product manufactured or refined from these materials, including compost, and wood chips</p> <p>- Comment: Keep the “Organic Waste” definition consistent with the previously vetted definition as stated in AB 1826 and AB 901. In addition, it is troublesome to list textiles and carpet under this definition as compost facilities do not accept the material and including these materials in the definition is confusing to the general public and industry experts. Lastly, the term “Organic Waste” implies the material is waste and not a resource. It’s suggested that the term be called “Organics” or “Organic Materials” or “Organic Resource”.</p> <p>- Comment: Cannabis waste is considered organic waste if it is not combined with any hazardous or toxic material. The cannabis waste generated by a cultivator is considered agricultural material. Agricultural material, as defined in Title 14 of the California Code of Regulations, Division 7, Chapter 3.1, Section 17852 Definitions, and that meets the definition of “green material” as defined in Section 17852 (a) (21), may be handled as either agricultural material or green material. We want to make sure that cannabis waste is definitely covered in this 1383 definition, since it is an emerging waste stream. I believe it is covered under green material but I just want to be sure. It may be covered under “ ...including but not limited to...” as well.</p> <p>Comment: We propose adding a definition for “Participation” in Section 18982. Participation is calculated as: the number of organic waste generators subscribed to the jurisdiction’s organics program divided by total organic waste generators minus self-haulers.</p> <p>Participation = (# organic generators subscribed to a jurisdiction's organics program) / (total organics generators -- self haulers)</p>	
3252	Wells, K., Sonoma County LTF on IWM	<p>Section 18984 sets minimum standards to reduce contamination.</p> <p>Comment: The following shall not be collected in the green container: Carpets, non-compostable paper, and hazardous wood waste. Will a Jurisdiction be considered out of compliance with subdivision (a) if it allows carpet and textiles to be placed in the black container? It makes more sense to remove these items from the list of “Organic Waste”.</p>	<p>Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.</p> <p>While carpets and textiles may be handled in a different manner, some jurisdictions may allow them to be placed in the gray container. Carpets and textiles are allowed in the gray container regardless of where the contents of the container are subsequently managed i.e. if these are the only organic wastes allowed in the gray container the container does not have to be transported to a high diversion organic waste processing facility.</p>
3253	Wells, K., Sonoma County LTF on IWM	Section 18984.2, Line 21	Thank you for the comment. CalRecycle revised Section 18986.1 to be consistent with other sections.

Comment Number	Received From	Question/Comment	Response(s)
		<p>Comment: Pet and human waste is not on the prohibited list, but in Article 5, Section 18986.1, line 13, it is. Text should be corrected for uniformity.</p>	
3254	Wells, K., Sonoma County LTF on IWM	<p>Section 18984.5. Container Contamination Minimization            Comment: Contamination threshold is not defined. Is one battery or one plastic bag enough prompt warning? It is generally understood that our goal of &lt;3% contamination is very ambitious. It seems this clause would indicate that even under those circumstances you keep on checking, issuing warnings and potentially initiating enforcement/penalties.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3255	Wells, K., Sonoma County LTF on IWM	<p>Section 18984.8, Line 34            Question: Given California's large non-native English-speaking population, can labels include graphics only?</p>	<p>Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.</p>
3256	Wells, K., Sonoma County LTF on IWM	<p>Section 18984.10            Comment: This section implies that multifamily residential buildings will be required to have organics composting for food waste. This is more stringent than AB 1826 where they are only required to compost landscaping waste. Mandating organics for multifamily buildings could be extremely difficult because they already struggle with overall recycling and there are often space constraints. The high turnover rate in both tenants and property managers often causes lapses or inconsistencies in recycling education, and that will no doubt be the same for organics. We recommend making SB 1383 regulations consistent with AB 1826 in exempting multifamily buildings from composting residential food waste.            Comment: We support adding a new Section to Article 3 allowing a jurisdiction to choose an "Alternative" Collection and Compliance System, and a new Section to Article 13 with reporting requirements for these jurisdictions. A jurisdiction</p>	<p>The regulations require organic waste recycling services, including food waste recycling to be provided to multi-family dwellings, including apartments. Also, Article 17 was added to the regulations to allow for performance-based systems.</p>

Comment Number	Received From	Question/Comment	Response(s)
		selecting an "Alternative" would demonstrate high diversion of organics in lieu of being subject to the inspection, enforcement and reporting requirements of Articles 14, 15 and 16. This is not in conflict with the enabling legislation not to impose a minimum diversion requirement on each jurisdiction. It is not a mandate, rather it is just one of the implementation options a jurisdiction can select. This would relieve the State of burdensome oversight of high performing jurisdictions. If a jurisdiction fails to demonstrate compliance through the alternative method by 2025, then that jurisdiction would be required to implement one of the other three collection system options and become subject to all the requirements of the regulations. A similar "dual" compliance system was used by the State Water Resources Control Board in the adoption of its Trash Amendments for the Ocean Plan and the Water Quality Control Plan for Inland Surface Waters. The dual compliance offered by the State's Trash Amendments gave jurisdictions the choice of installing trash full capture devices on inlets throughout the jurisdiction or implementing a trash load reduction program that achieves the equivalent of the State's requirement.	
3257	Wells, K., Sonoma County LTF on IWM	Section 18985.1, Line 50 Comment: Add a line about sending food scraps to feed animals (e.g., pigs) as this is part of organics diversion.	CalRecycle revised Section 18985.1(a)(6) to clarify that donating food waste to feed animals should, if applicable for that jurisdiction, be included in required education.
3258	Wells, K., Sonoma County LTF on IWM	Section 18985.1, Line 53 Comment: Should be rephrased, "...a jurisdiction with an unsegregated single-container collection service program shall provide organic waste generators with the information in subdivisions ..."	A change in the regulatory text is not necessary because the information only is intended to be provided to generators that have a unsegregated single-container collection service.
3259	Wells, K., Sonoma County LTF on IWM	(f) If more than five percent of a jurisdiction's generators are defined as "Limited English-Speaking Households," or "linguistically isolated," as defined by the U.S. Census Bureau, the jurisdiction shall provide the information required by this section in a language or languages that will assure the information is understood by those generators. Question: Would that be for each of the 5% fractions of a non-English language?	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
3260	Wells, K., Sonoma County LTF on IWM	Section 18990.1(b)(3) Organic Waste Recovery Standards and Policies Typographical Comment: (3) Limit the export outside of organics to a facility... the word "outside" should be deleted.	The regulatory language was changed to remove "outside." Thank you.
3261	Wells, K., Sonoma County LTF on IWM	Section 18990.2(b) Edible Food Recovery Standards and Policies. Typographical Comment: (b) A Local Education gency...the word..."gency" should be agency.	Comment noted. CalRecycle has revised section 18990.2 (b) in response to this comment to correct a typographical error.
3262	Wells, K., Sonoma County LTF on IWM	Question: How is the State structuring SB1383 to value the role of non-profit food recovery & distribution organizations, including gleaning, to provide ongoing funding to support diversion of edible food from the landfill? Consider expansion to another level of the US EPA Food Recovery Hierarchy to include animal farmers as a recognized recipient of edible food diverted to food distribution organizations that	With regard to the comment about funding, CalRecycle recognizes that there is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10, Section 18991.1 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. If a jurisdiction decides to fund their edible food recovery program through franchise fees, local assessments, or other

Comment Number	Received From	Question/Comment	Response(s)
		cannot all be utilized to feed people (we have examples of this occurring in Sonoma County).	funding mechanisms, then it is at the discretion of the jurisdiction, not CalRecycle, to determine how the funding will be dispersed. With regard to the comment about the US EPA Food Recovery Hierarchy, a change to the regulatory text was not necessary. A text change was not necessary because SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. The statute states that 20% of edible food must be recovered for human consumption, not for animal feeding operations. CalRecycle must adopt regulations that include requirements to achieve the specific goal identified in statute. For that reason, animal feeding operations were not included in SB 1383's edible food recovery regulations.
3263	Wells, K., Sonoma County LTF on IWM	Section 18991.3 Commercial Edible Food Generators Comment: The proposed regulation should clarify that food sales at large events and large venues that are NOT a part of the venue's direct concession services should be exempt from the food donation requirements. Examples include food trucks located in/at large venues and events, nonregulated food vendors, and persons serving food outside of the event or venue such as tailgating.	CalRecycle would like to clarify that food vendors operating at large events and large venues are not exempt from the edible food recovery regulations. Large event and large venue operators must make arrangements to ensure that the food vendors operating at their event or venue are recovering the maximum amount of their edible food that would otherwise be disposed. In a situation where the food vendors at a large venue or large event are not in compliance with Section 18991.3 of the regulations, the operator of the large event or large venue would be responsible for compliance. CalRecycle would also like to mention in response to this comment, that tailgaters are not subject to this regulation.
3264	Wells, K., Sonoma County LTF on IWM	Section 18991.5 includes a penalty for "A food recovery organization or service that collects or receives 6 tons or more of edible food fails to keep records as prescribed in this section." Comment: We need to create a mutually beneficial environment for support of non-profit food recovery infrastructure. Food recovery organizations are typically non-profit organizations, not commercial enterprises, serving a critical need in the community. There should not be penalties imposed on these organizations; create a model that supports that complete EPA food recovery hierarchy (including animal farmers as in previous comment – look at systems view for food recovery hierarchy).	The only direct recordkeeping requirements for food recovery services and organizations are established in Section 18991.5. This section establishes minimum recordkeeping requirements for food recovery services and organizations that elect to establish a contract or written agreement with a commercial edible food generator (as defined in the regulations). A food recovery service or organization that does not have a contract or written agreement with a commercial edible food generator pursuant to Section 18991.3 (b), is not subject to the recordkeeping requirements. A food recovery service or organization, may wish to consider any costs associated with recordkeeping when deciding whether or not to enter into a contract or written agreement with commercial edible food generator, thus subjecting them to the recordkeeping requirements of the regulations. Furthermore, the timeline for issuing penalties provides ample time for a food recovery organization or service to achieve compliance with the recordkeeping requirements. An entity may have up to seven months to come into compliance with a violation such as recordkeeping. CalRecycle believes this provides sufficient time for an entity acting in good faith to come into compliance with the requirements. With respect to fines issues by CalRecycle; CalRecycle's authority to take enforcement against an entity subject to a jurisdiction's enforcement authority (e.g. food recovery organization) is clarified in Section 18996.3. That section articulates that CalRecycle's enforcement against entities subject to a jurisdiction's authority should occur after a jurisdiction has failed to correct a violation within the timelines established in the regulation. Regarding the comment, "We need to create a mutually beneficial environment for support of non-profit food recovery infrastructure." CalRecycle recognizes that there is a lack of sustainable funding for food rescue infrastructure and capacity in California. To address this, Section 18991.1

Comment Number	Received From	Question/Comment	Response(s)
			<p>in the regulations requires jurisdictions to increase edible food recovery capacity if the jurisdiction does not have sufficient capacity to meet its edible food recovery needs. CalRecycle also included language in section 18991.1. stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. This language was included to encourage jurisdictions to establish a sustainable funding source to help fund their food recovery program, and to help fund food rescue organizations and services operating in the jurisdiction.</p> <p>Regarding the comment, “create a model that supports that complete EPA food recovery hierarchy (including animal farmers as in previous comment – look at systems view for food recovery hierarchy).” A change to the regulatory text was not necessary for the following reason. SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. CalRecycle must adopt regulations that include requirements to achieve the specific goal identified in statute. For this reason, animal feeding operations will not be included in the edible food recovery regulations.</p>
3265	Wells, K., Sonoma County LTF on IWM	Comment: Implementation structure is not identified clearly enough with a phased rollout for implementation of increased edible food recovery.	Comment noted, it is unclear what is meant by “implementation structure.” The comment does not request a regulatory change.
3266	Wells, K., Sonoma County LTF on IWM	Section 18998.2, line 53 Comment: Need direction from CalRecycle how to estimate edible food that’s being disposed.	CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. In addition, CalRecycle also intends on providing other resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.
3267	Wells, K., Sonoma County LTF on IWM	Section 18993.1(a) through (g) Comment: Per capita procurement target = 0.07 tons of organic waste per California resident per year. Translating that to Sonoma County: 500,000 residents X .07 = 35,000 tons to procure. Compost is .5 tons per cubic yard (CY). Mulches are lighter. In compost it would mean 70,000 cubic yards. We would produce only 100,000 CY. Sonoma County will sell all 100,000 CY as we have extensive local market due to being an agricultural community. Why procurement? There are no quality standards associated with procurement. Including procurement paves the way for organic recyclers to produce low quality products that the public otherwise would not want. Landscapers and agriculture depend on this material: 100% of it. How does that interface with the procurement requirement? They use a factor of .58 to get from incoming tons of material to finished product. Based on composting expertise in Sonoma County, it’s believed that number is too generous. The more mature the compost, the lower the conversion factor. Lastly, provide a sample formula or	The proposed regulatory text does not limit jurisdictions to the procurement of recovered organic waste products from “their” organics to satisfy the procurement requirements, nor do the products need to be consumed within the jurisdiction. A jurisdiction may procure from any entity provided the end products meet the Section 18982(60) definition of “recovered organic waste products”, and a jurisdiction may use the end products in a way that best fits local needs. Regarding quality standards, nothing in the draft regulations forces a jurisdiction to accept material that does not meet their quality standards. If a city chooses not to procure compost, they can procure other recovered organic waste products such as mulch or renewable gas energy products. To clarify this point, CalRecycle has added language requiring that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. The definition of renewable gas specifies that it must be processed at a facility that is “permitted or otherwise authorized by Title 14 to recover organic waste.”

Comment Number	Received From	Question/Comment	Response(s)
		<p>calculation to demonstrate the required procurement quantities for a hypothetical jurisdiction with a population of 100,000.</p>	<p>Regarding the compost conversion factor, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors. The 0.58 conversion factor for 1 ton of organic waste to compost is based on the Air Resources Board quantification methodology, "Method for Estimating Greenhouse Gas Emission Reductions from Diversion of Organic Waste from Landfills to Compost Facilities," May 2017. A verified conversion factor is necessary because it would be overly burdensome for jurisdictions and CalRecycle to calculate and verify custom conversion factors for each of the over 400 jurisdictions in California. Note that the per capita procurement target was revised to 0.08 in subsequent drafts based on updated Disposal Reporting System data. A jurisdiction with a hypothetical population of 100,000 would use the following equation to derive their annual procurement target and quantities of recovered organic waste products.</p> <p>Procurement target = 100,000 x 0.08 = 8,000 tons organic waste  If 100% renewable transportation fuel = 8,000 x 21 DGE = 168,000 DGE  If 100% renewable electricity = 8,000 x 242 kWh = 1,936,000 kWh  If 100% renewable heating = 8,000 x 22 therms = 176,000 therms  If 100% biomass conversion electricity = 8,000 * 650 kWh = 5,200,000 kWh  If 100% compost = 8,000 * 0.58 = 4,640 tons  If 100% mulch = 8,000 * 1 = 8,000 tons</p> <p>The above calculations of product totals assume the jurisdiction will fulfill 100% of their procurement target with one single product, however, the procurement requirements are designed to provide flexibility and a jurisdiction could instead choose to procure a mix of products to fulfill 100% of the procurement target.</p>
3268	Wells, K., Sonoma County LTF on IWM	<p>Question: Will each individual jurisdiction need to submit the reports like they did for the AB 1826 MORE plans this year? Or can our regional agency submit a single report on behalf of all our jurisdictions?</p>	<p>A jurisdiction may designate another entity such as a regional agency or JPA to fulfill its duties under this chapter.</p> <p>It is intended that the obligations in this chapter undertaken by a special district or a JPA will be the responsibility of the special district or JPA and those entities would be subject to any enforcement action. For areas of a jurisdiction that are subject to these regulations that are not within the authority of a special district or JPA, compliance with these regulations would remain the ultimate responsibility of the city, county, or city and county.</p>
3269	Wells, K., Sonoma County LTF on IWM	<p>Section 18994.1. Initial Jurisdiction Compliance Report</p> <p>(a) Each jurisdiction shall report to the Department on its implementation and compliance with the requirements of this chapter. Each jurisdiction shall report to the Department by February 1, 2022 the following information:</p> <p>(1) A copy of ordinances adopted pursuant to this chapter.</p> <p>(2) The date that the jurisdiction will ensure that all containers used by generators subject to the jurisdiction's authority will comply with the container color requirements as specified in Section 18984.7.</p> <p>(3) The reporting items identified in Section 18994.2.</p> <p>Comment: Please clarify when the information referenced in Item (3) above is due. This Section (18994.1) states it is due February 1, 2022 and the following Section</p>	<p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the</p>

Comment Number	Received From	Question/Comment	Response(s)
		(18994.2) states a deadline of August 1, 2022 for the initial reporting period of January 1, 2022-June 30, 2022.	prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3270	Wells, K., Sonoma County LTF on IWM	<p>Section 18994.2. Jurisdiction Annual Reporting</p> <p>(a) Commencing August 1, 2022, and annually thereafter, a jurisdiction shall report the information required by this section. The report submitted in 2022 shall cover the period of January 1, 2022–June 30, 2022. Each subsequent report shall cover the entire previous calendar year.</p> <p>Comment: Per the language above, the first report shall be due just one month after the initial reporting period ends. It seems unrealistic to expect a jurisdiction to compile all the required report data called for in this section in such a short timeframe and even more so for regional agencies that plan to submit the reports on behalf of multiple jurisdictions. In subsequent years (2023 on onward) the jurisdiction will have seven months to compile the data required for the annual report, which is consistent with past practice for AB 939 Annual Reporting requirements. Please consider eliminating the first six-month reporting period or extending the due date to 12/31/2022.</p>	<p>A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.</p>
3271	Wells, K., Sonoma County LTF on IWM	<p>Section 18995.1 Jurisdiction Inspection and Enforcement Requirements</p> <p>Question: Is “sufficient” defined by the jurisdiction?</p>	<p>A change to the regulatory text is not necessary. The language in this subsection was worded in such a way to allow the requirement for inspections to be tailored to the unique circumstances of each jurisdiction. This allows the jurisdiction the flexibility to conduct the number of inspections needed to have an overall picture of the compliance of generators under their authority and to ensure their own compliance with the Chapter. Jurisdictions shall have an inspection plan on how they will be conducting their inspections, such as but not limited to, inspecting entities that may be more likely to be out of compliance or focusing on large generators.</p>
3272	Wells, K., Sonoma County LTF on IWM	<p>Section 18995.2 Implementation Record and Recordkeeping Requirements</p> <p>Question: Is the Inspection and Enforcement Program expected to be a distinct written policy? Or just a combination of all the requirements set forth in this section?</p>	<p>A change to the regulatory text is not necessary. Yes, per Section 18995.2(f)(2), the inspection and enforcement program shall be reflected in a written record.</p>
3273	Wells, K., Sonoma County LTF on IWM	<p>Section 18995.2(c)</p> <p>Comment: Jurisdiction must provide access to the implementation records within one business day is unreasonable. The California Public Records Act indicates an agency must provide the records within a reasonable period of time and allows ten-day period for response. Request the text change from one business day to ten days</p>	<p>CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.</p>
3274	Wells, K., Sonoma County LTF on IWM	<p>Since many jurisdictions do not have mandated garbage service, are jurisdictions expected to enact a mandatory service law in order to enforce SB 1383 regulations?</p>	<p>Comment noted. This chapter does include requirements for jurisdictions to adopt and implement organic waste collection services. Jurisdictions shall adopt enforceable ordinances(s), or similarly enforceable mechanisms that are consistent with the requirements of this Chapter, to mandate that organic waste generators, haulers and other entities subject to the requirements of the Chapter and subject to the authority of the jurisdiction comply with the requirements of the Chapter. Section 18984.11 allow a jurisdiction to grant an exemption to a generator of organic waste if it meets certain criteria. Such waivers include: de minimis, physical space and collection frequency. The Department may also grant waivers for areas of low population, rural areas, and high elevation.</p>

Comment Number	Received From	Question/Comment	Response(s)
3275	Wells, K., Sonoma County LTF on IWM	Section 18997.4. Organic Waste Recovery Noncompliance Inventory Question: Jurisdictions can receive severe \$\$\$ penalties for non-compliance but state agencies, state facilities or local education agencies only get placed on a "Non-Compliance Inventory." Where is the equity?	A change to the regulatory text is not necessary. Under 1383, state agencies are treated as generators rather than implementation authorities and SB 1383 did not authorize the Department to issue penalties to state agencies. The Department will not be adding enforcement requirements on state agencies. Section 18996.6 states that the Department will oversee the compliance of state agencies in respect to SB 1383. Currently, state agencies are required to meet waste diversion goals like those required for cities, counties and regional agencies under AB75. State agencies and large state facilities must adopt integrated waste management plans, implement programs to reduce waste disposal and they have their waste diversion performance annually reviewed by the Department.
3276	Wells, K., Sonoma County LTF on IWM	Comment: Should be rephrased, "Upon presentation of proper credentials and a 24-hour written notice..."	A change to the regulatory text is not necessary. A text change is not necessary for the following reason(s): As outlined in Section 18993.1, subdivision (b), the procurement target for recovered organic waste products is calculated by multiplying the per capita procurement target by the jurisdiction population, not number of employees. Regarding "different avenues" for organic waste, CalRecycle has revised section 18993.1 to expand the list of recovered organic waste products to provide jurisdictions more flexibility.
3277	Wells, K., Sonoma County LTF on IWM	Section 17402. Definitions. (a) For the purposes of these articles: (0.5) "Consolidation Sites" means facilities or operations that receive solid waste for the purpose of storing the waste prior to transfer directly from one container to another or from one vehicle to another for transport and which do not conduct processing activities. Consolidation activities include, but are not limited to, limited volume transfer operations, sealed container transfer operations, and direct transfer facilities. Question: Does the definition of "Consolidation Sites" include Large Volume Transfer/Processing Facilities? Comment: If so, please consider adding to the definition.	A change to the regulatory text is not necessary. A facility or operation whose sole purpose is to receive solid waste for storing only and does not conduct any processing is defined as a consolidation site. An operation or facility that meets this definition would be considered a consolidation site, regardless of the amount of solid waste received.
3278	Wells, K., Sonoma County LTF on IWM	Section 17409.5.2 (Measuring Organic Waste Recovered from Mixed Waste Organic Collection Stream) - This section contains several requirements intended to quantify, on at least a daily basis, the amounts of organic waste contained in various process and residual streams. The quantification relies on detailed characterization sorts of one-cubic yard samples. Comment: We understand the goal of gaining better understanding of how much organic waste is in various process and residual streams. Because waste composition does not change rapidly over time and because characterizations are expensive to perform and disruptive to facility operations, it is not necessary to perform a detailed characterize of one-cubic yard sample daily. Additionally, the frequency of sampling as proposed requires excessive mobilization for data that can be collected with less frequency. A daily sampling requirement is time-consuming, cost prohibitive, labor intensive and requires valuable facility space to implement. We strongly recommend that sampling occur one business week a quarter, thereby capturing daily and seasonal fluctuations at a reduced cost to facilities and, ultimately, rate payers.	CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. This is needed to determine the efficiency of the facility in order to make required determinations in Article 3. The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite sample be a random and representative of a typical operating day for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. The sampling frequency 10 consecutive days was based on that 2 consecutive weeks per quarter, yielding 10 samples per quarter and 40 samples per year. This is consistent with ASTM calculation method (Standard Test Method for Determination of the Composition of Unprocessed Municipal Solid Waste; ASTM International; Designation: D-5231-92 (Reapproved 2003)) for estimating the

Comment Number	Received From	Question/Comment	Response(s)
		<p>In contrast, Section 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.7, 17409.5.9 and 17409.5.11 require characterization daily (or more often) of samples one-cubic yard in size. Both the frequency and the sample size are far greater than what is needed to provide insight into organics levels and residue levels in the various material streams. Quarterly sampling is sufficient to capture seasonality. If results are consistent from quarter to quarter and/or year to year, annual sampling frequency would be sufficient. We ask that CalRecycle rework this section with guidance from an expert who specializes in statistical science as it relates to learning useful information from sampling and analysis. We would expect this would lead to much smaller sample sizes and sampling only when needed to adjust for seasonality and trends, not the current, arbitrary, daily sampling requirement.</p>	<p>number of samples required to achieve a pre-determined precision of specific material type. Using data from the “2014 Disposal-Facility- Based Characterization of Solid Waste in California”, the two most abundant “organics” material types found at landfills and/or curbside pick-up collection systems were “Uncoated Corrugated Cardboard” and “Food”. Furthermore, the 2014 study used a confidence interval of 90% for all data calculations (2014 Disposal Facility- Based Characterization of Solid Waste in California, Page 22). Applying this information to the equation outlined in the ASTM publication, of a 200-pound sample and a precision of 10%, yields a required sample number of 49 for “Uncoated Corrugated Cardboard” and 24 for “food”. Since “Organic Waste Recovery Efficiency” is not specific to a material type such as “Uncoated Corrugated Cardboard” or “Food”, rather just “Organic” or “Not Organic”, it is rational to average the 2 numbers (a sample number of 49 for “Uncoated Corrugated Cardboard” and 24 for “food”) and present a more inclusive required sample number. The average of those two numbers is 37 samples.</p> <p>Additionally, after consulting with divisions within CalRecycle, a significant number of jurisdictions use “Every other week” collection for a portion of their waste stream. Many of these jurisdictions use the same facility or facilities for waste processing. A consecutive two-week sampling standard would ensure that jurisdictions with “Every other week” collections streams are reflected in the sampling. Based on the expert data 10 consecutive days was used instead of 14 to help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>The 200 pounds is what was used for the Statewide waste characterization studies performed during the past 5 years by California (CalRecycle), Washington, New York, Georgia and Connecticut have used a sample weight between 200 to 300 pounds. Furthermore, ASTM international (American Society for Testing and Material) also suggests a minimum sample weight of 200 pounds be used in waste characterization related studies.</p>
3279	Wells, K., Sonoma County LTF on IWM	<p>This article contains sections describing the methodology by which a transfer and processing facility will determine if they are meeting the organic waste recovery efficiency expectations of a “high diversion organic waste processing facility” and/or the 10% incompatible material limit in recovered organic waste.</p> <p>Comment: We have several concerns with the described methodology and offer the following recommendations. Please note that these recommendations also apply to Section 17869 (Article 8. Composting Operation and Facility Records) and Section 17896.44.1 (Article 3. Operation Standards for In-Vessel Digestion Operations and Facilities) as it pertains to organic waste residual calculations.</p> <p>There are too many variables and unknowns regarding the proposed organic waste recovery efficiency methodology to include in the regulatory text. The regulations should reference a guidance document that will include a CalRecycle approved methodology that can be more easily altered and updated as we implement these regulations. Flexibility is necessary both for CalRecycle and the reporting entities to ensure we create a workable methodology based on implementation realities. The guidance document could potentially include: a statistically relevant sampling</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. Comment Number	Received From	Question/Comment	Response(s)
		<p>requirement based on the volume of material processed, a non-subjective weight-based sampling approach, inclusion of a confidence interval for meeting the efficiency expectations, a limit on particle size (e.g. 4 inches) when measuring organic waste in residuals, documentation for verification, and – similar to other programs like ground water sampling – a reduced sampling frequency based on meeting the efficiency expectations. This guidance document should be created separately from the current rulemaking with substantial facility stakeholder input that can be beta-tested at facilities prior to adoption. This guidance document would consider the differences in measuring organic waste recovered vs. organic waste in residuals, for both mixed waste collection and source separated collection. Finally, our interpretation is that sampling expectations are for mixed waste collection and source-separated organic collection streams only. This means that material collected in the blue bin of a three-container organic waste collection service is not subject to these requirements, whether the collection be single-stream, dual-stream, tri-stream or otherwise.</p>	<p>Using data from the “2014 Disposal-Facility- Based Characterization of Solid Waste in California”, the two most abundant “organics” material types found at landfills and/or curbside pick-up collection systems were “Uncoated Corrugated Cardboard” and “Food”. Furthermore, ASTM international (American Society for Testing and Material) also suggests a minimum sample weight of 200 pounds be used in waste characterization related studies.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p> <p>Section 17402 (a) (11.5) allows organic waste to be collected in the blue containers. A blue container that collects only dry organic waste, such as paper, would be treated as source separated organic collection stream and not be subject to the recovery efficiency requirements but would be subject to the incompatible materials limit requirements.</p>
3280	Wells, K., Sonoma County LTF on IWM	<p>§20750.1. CalRecycle– Organic Waste Handling.  (a) For new or expanding solid waste landfills:  (1) The operator shall implement organic waste recovery activities, as approved by the EA, organic waste recovery activities shall be confined to specified, clearly identifiable areas of the site and shall be arranged to minimize health and safety hazard, vector harborage, or other hazard or nuisance, and be limited to a volume and storage time as approved by the EA... (c) For the purposes of the section, “expanding” means a solid waste landfill proposing to make a significant change to the design or operation as determined by the EA pursuant to 27 CCR Section 21665.</p>	<p>A change to the regulatory text is not necessary. 27 CCR Section 20750.1(c) defines the term “expanding” which means a solid waste landfill proposing to make a significant change to the design or operation pursuant to 27 CCR 21665.</p> <p>CalRecycle staff will develop tools to assist in the implementation of the regulations.</p> <p>CalRecycle staff will develop tools to assist in the implementation of the regulations.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(1) Changing the hours of operation of a landfill is not considered an expansion pursuant to 14 CCR Section 20750.1(c).  Comment: The determination of “Expanding” outlined seems somewhat subjective. Please consider including additional clarifying examples of what is not considered an expansion similar to the change in hours example.</p>	
3281	Wells, K., Sonoma County LTF on IWM	<p>Title 27 solid waste requirements. The State currently proposes to implement long term intermediate cover requirements from the current 12 inches of soil/earthen material to a mandatory 36 inches where no additional solid waste will be deposited within 30 months to control methane emissions.</p> <p>While there is wide spread support from local government and industry to minimize greenhouse gas emissions, it is respectfully submitted that the current proposal is likely not to have a meaningful impact on emissions as currently drafted. There are reasons to conclude that the proposed changes would create additional impacts resulting in an increased carbon footprint at landfill facilities, decreased site life, and the unnecessary increase of costs to the public with no significant net benefit to the environment noting the following:</p> <p>1) Technical Viability of Proposal</p> <ul style="list-style-type: none"> <li>• Landfill gas migration is influenced by the porosity, permeability and transmissivity of the media through which it travels. While increasing long term cover thickness may increase exposure to bacteria in soil to mitigate CH4, it will not decrease the relative properties of the media as to landfill gas and its transmission through the interim cover material. Whether the cover is 12 inches or 36 inches, and presuming uniform media, the transmission rate of landfill gas consisting of Methane, CO2 and other discreet analytes associated with global warming will be the same.</li> <li>• Depending on the cover material used and based on the locality of the landfill facility performance will vary greatly. For example 36” of soil with high sand and gravel content and minimal clay located in arid regions will perform significantly worse than 12 inches of interim cover with higher clay and silt content in a non-arid coastal landfill in the northern part of the state. Proposed regulations take no position on the viability or placement of the material used to accomplish its intended purpose.</li> </ul> <p>2) Carbon Footprint Impact</p> <ul style="list-style-type: none"> <li>• The placement of additional soil will require additional transport, placement and compaction of material on the landfill surface, all of which will generate additional CO2 emissions.</li> <li>• For landfills that have a soil deficit, carbon impacts will be increased as soil will need to be imported from offsite to facilities.</li> </ul> <p>3) Economic Impact</p> <ul style="list-style-type: none"> <li>• Site Life will likely be Decreased dependent upon how much of the intermediate cover can be re-used once the cell is activated again.</li> <li>• Joint Technical Documents will need to be updated to accommodate financial models and site life estimates</li> </ul>	<p>CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<ul style="list-style-type: none"> <li>• For landfills with soil deficits, the cost of importation will be an added expense</li> <li>• Costs to implement the operational and engineering changes will need to be passed on to consumers.</li> </ul> <p>Given the uncertainty of the costs to implement and the overall environmental benefits of the current proposal, we would encourage CalRecycle in conjunction with local government and industry to pursue a performance based solution to intermediate cover and landfill gas collection, in effect taking a holistic approach to the challenging issue of greenhouse gas emissions. In this regard, a working group could establish performance standards relative to cover performance that gives operators the flexibility to address issues relative to site specific conditions. Such standards could include minimum compaction requirements using 12” of cover material with performance based on the resultant permeability of the overlying material decreasing landfill gas migration to the surface. A list of other accepted statutory methods can also be included such as temporary membranes that would achieve the same performance criteria.</p> <p>While we recognize that CalRecycle has already included a provision for operators to propose equivalent alternatives to the statutory 36” cover, without an associated performance criterion of the statutory requirement, this option becomes meaningless, as there is no standard for comparison. By having pre- specified performance criteria and acceptable alternative methods, such as synthetics to decrease emissions, duplicative effort among all stakeholders (regulatory and industry) can be minimized.</p> <p>It is further recommended that performance criteria be tiered based on the in place waste present at regulated facilities, noting the larger benefit of funds and resources should be utilized where the potential to sequester greenhouse gasses such as methane is greatest.</p>	
3282	Wells, K., Sonoma County LTF on IWM	<p>§21695. CalRecycle—Organic Disposal Reduction Status Impact Report</p> <p>Comment: This section requires a Status Impact Report (SIR) be submitted by landfill operators no later than 180 days from the effective date of the regulation. Since this timing may or may not occur coincidentally with other permit submission requirements such as the 5-Year Review please consider revising the language to: “(d) The SIR shall be submitted to CalRecycle no later than 180 days from the effective date of this regulation or in conjunction with the facility’s next regularly scheduled 5-Year Review, whichever is later.”</p>	<p>CalRecycle has revised Section 21695 in response to comments. The changes to the regulatory text include the requirement that operators identify those areas in the landfill that would remain with intermediate cover and to extend that date for submittal of the Status Impact Report (SIR) from 180 days to one year (365 days) from the effective date of these regulations.</p> <p>The SIR is a site specific, one-time submittal that is prepared by the operator after they have reviewed their landfill operations to determine any potential impacts from the reduction of organic disposal (waste flow) to their landfill. The one-year timeframe established in this regulation for the submittal of the SIR is intended to assist the operator in determining and assessing in the timing of those impacts in order properly implement any changes or modifications to the landfill in a timely manner. Because only the potential impacts associated with the reduction of the amount waste disposed will be reviewed, staff believe that one-year from the effective date of the regulations is an adequate amount of time for the operator to meet the requirements of this section.</p>

Comment Number	Received From	Question/Comment	Response(s)
			In addition, this section provides a list of items to be considered by the operator in order to assist them complete the SIR. This information in items listed is needed in order to adequately evaluate the potential impacts to the landfill resulting from the reduction of organic disposal at landfills. If there will be no changes to a particular item, then a statement to that effect would be adequate.
3283	Wells, K., Sonoma County LTF on IWM	<p>GENERAL COMMENTS</p> <ul style="list-style-type: none"> <li>• Comment: When citing regulatory requirements referenced from Public Resources Code (or other regulations outside this text) please consider providing either a link to the cited section or, at a minimum, a descriptive title of that reference to provide relevance to the citation. (Other than “Authority cited” references)</li> </ul>	Comment noted. The comment is not directed at the regulatory text itself or the APA process but instead requests an internet link when CalRecycle references certain statutory section in posted documents.
3171	White, C., Manett, Phelps & Phillips	<p>Use of the word “disposal” and phrase “landfill disposal” in the proposed regulations.</p> <p>Nowon prepared a word count on the proposed regulations and found that the word “disposal” is used 132 times. However the phrase “landfill disposal” is used only 23 times (i.e., only 17.4 % of the times disposal is used). We believe that these two terms should mean the same thing within the context of Chapter 12. Nowon would not want the word “disposal” within Chapter 12 to mean the broader reference to disposal within the PRC – which includes not only landfill disposal but also transformation.</p> <p>There is one meaning for “disposal” within the framework of the PRC (e.g., landfills and transformation) and another meaning for “landfill disposal” within the framework of the H&amp;SC authorized STCP regulations (e.g., only landfill disposal). Nowon’s concern is that it should be clear that these two terms should have the same meaning within the context of Article 2. Nowon wishes to ensure that, if approved as a Verified Technology pursuant to Article 2, that it is clear that it results in the reduction in landfill disposal – not necessary all disposal as defined in the public resources code. This is because the Nowon technology may produce a fuel product that is still considered as “disposal” within the current meaning of the public resources code (e.g., EMSW) – but not landfill disposal as this term is used within these proposed regulations. We believe that there are at least two possible ways to address this lack of clarity in the proposed regulations:</p> <ol style="list-style-type: none"> <li>1. Change the word “disposal” to “landfill disposal” all 132 times, or</li> <li>2. Add a definition of “disposal” to mean the same as “landfill disposal” within Chapter 12.</li> </ol>	CalRecycle has revised the sections in response to comments. The term “disposal” was revised to “landfill disposal” where appropriate. This change was necessary to be consistent with the intent of SB 1383 mandate to reduce the organic waste disposed in landfills.
3172	White, C., Manett, Phelps & Phillips	<p>1. Information to be submitted to the Department by the Applicant:</p> <p>a. (B) Detailed explanation of each of the processes or technologies proposed by the applicant for use to reduce landfill disposal.</p> <p>In the case of a process that produces a low carbon industrial furnace fuel from residual solid waste, the production of the fuel is generally separate and distinct from the use of the fuel to produce energy in the industrial furnace. In most cases the person operating the fuel production process (e.g., at a solid waste processing facility or MRF) is separate and distinct from the person utilizing the fuel. Which of</p>	A change to the proposed regulation to specify who the applicant for a determination of reduction in landfill disposal for a technology or process must be is not necessary because it would unnecessarily limit who could apply. The purpose of Section 18983.2 of the regulation is to approve technologies and processes that count as a reduction in landfill disposal, not to approve applicants themselves. As long as the applicant has all the information necessary to meet the requirements of Section 18983.2(a), and submits that as part of its application CalRecycle staff, in consultation with CARB staff, will review the application.

Comment Number	Received From	Question/Comment	Response(s)
		<p>these parties is the applicant responsible for providing information about both the fuel production process as well as the fuel utilization process in the industrial furnace? Further, while the owner/operator of the fuel production process may remain unchanged, the use of the fuel may change from time to time for a variety of factors. How is the owner/operator of the fuel production process able to represent all potential future users of the fuel? Each industrial furnace operator may have different specification requirements for the fuel provided to each different furnace. We recommend that the principle applicant under these regulations be the owner/operator of the fuel production unit (Nowon Technology Owner and Operator—O/O). The Nowon O/O would provide specific information about the operation of the fuel production unit as well as known information pertaining to the intended end use of the fuel in cooperation with a proposed known end user or users. Additional generic information about future alternative end users could also be provided. If new end users are added in the future within the constraints of the generic information in accordance with these regulations, no further action would be required – other than to ensure that the end user has separately complied with all appropriate permitting requires (e.g., becoming permitted as an EMSW facility in accordance with CalRecycle regulations).</p>	
3173	White, C., Manett, Phelps & Phillips	<p>b. (C) For each process or technology noted in Section 18983.2(a)(1)(B), the mass in short tons of organic waste, differentiated by type, that will be processed each year. For mixed organic waste, the mass in short tons of the various types of organic waste shall be determined based on an annual waste characterization study. The term “differentiated by type” is not clear. The Waste Classification Material Type listing on CalRecycle’s website contains definitions for material types used in recent CalRecycle waste characterization studies. Waste and diversion streams are divided into 68 distinct material types, grouped into 10 different categories. In general, categories contain types made of the same base material like paper, glass, or organics. However, some organic-based materials are in other categories such as wood waste (Inerts and Other category), and compostable paper (Paper category). We recommend that as much specificity be provided by the applicant based on historical information regarding the waste streams intended for use (e.g. from a particular MRF). However, breaking waste into 93 category types may not be practical. This is particularly true as waste material types can change from time to time based on changes in consumption patterns. On the other hand, broad material categories may not provide sufficient information about the nature of the waste being processed into industrial fuel. The ISOR states that, “This section is necessary because information regarding the amount of organic waste is needed by type to allow ARB and CalRecycle to most accurately estimate the potential greenhouse gas emission reductions from the proposed recovery activity.” Based on this, the Nowon O/O would provide sufficient description of the material types as necessary to “accurately estimate” the potential GHG emission reductions from the proposed</p>	<p>CalRecycle has revised section 18983.2(a)(1)(C) in response to this comment. The changes specify the eleven categories of organic waste type into which applicants differentiate organic waste that will be processed by the proposed process or technology noted in the application. The change is necessary to narrow the number of categories of organics and be specific as to which organics types must be reported.</p> <p>These categories of organic waste are modified from those included in CalRecycle’s Standard List of Material Categories and Types under the heading “Other Organics” as well as some categories listed under the regulation’s definition of “Organic Waste.” CalRecycle chose these categories because they represent major categories of organic waste that are most likely to have different sources and greenhouse gas emission factors. Further categories are not necessary because they would offer no additional information about the estimated greenhouse gas emissions and emission reductions of the technology or process.</p> <p>The commenters also suggest standardizing the characterization of mixed organic waste using CalRecycle’s Uniform Waste Disposal Characterization Method<sup>1</sup> as this standard. However, CalRecycle determined that it was not necessary to require this level of detail and removed the sentence to which the commenters referred.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>recovery activity. This could be more than 10 broad categories, but less than 93 specific material types.</p> <p>The second sentence above discusses mixed organic waste and requires that a waste characterization study be performed annually on the material being processed to produce, in our case, industrial fuel. We support this requirement and suggest that the waste characterization study of the mixed waste to be processed into fuel be conducted in a manner “consistent with” CalRecycle’s Waste Characterization Study as provided at:  <a href="https://www2.calrecycle.ca.gov/WasteCharacterization/General/UniformMethod">https://www2.calrecycle.ca.gov/WasteCharacterization/General/UniformMethod</a></p>	
3174	White, C., Manett, Phelps & Phillips	<p>c. (D) For any residual material produced from the proposed process or technology, a description of each end use or disposal location to which the residual material will be sent. For each end use or disposal location, the applicant must submit the expected mass in short tons and characteristics of the residual material.</p> <p>The term “end use or disposal location” is not clear. The whole purpose of these regulations is to support diversion of solid waste from landfill disposal. If a Nowon O/O produces a fuel from residual solid waste, the fuel is no longer subject to landfill disposal. Rather, it will be sent to an industrial furnace for energy recovery. Further, it may not be known at the time of application pursuant to these SB 1383 regulations all of the specific industrial furnaces or other uses to which the Nowon product may be delivered. We hope that a general description of the “end use” and generic performance attributes will be sufficient. Of course, any known specific end uses can be provided at the time of application. This would be consistent with our comments on paragraph (B) above. As long as any new end use after the original application is consistent with the generic end use and performance characteristics that would be sufficient to allow that new end use under the original application. Any changes or new uses that are outside the original end use would require an amended application.</p> <p>Further, what is the meaning of the term “residual material”? Does this have the same meaning as “residual organic material” as defined in these regulations or is it broader than just organic residual material? Does this mean any residual material produced by the process including product, by-products and waste. Or, does the term refer solely to any waste residuals that require disposal after the process is complete? Further clarification of the meaning of the term “residual” as used here would be helpful.</p>	<p>CalRecycle has revised section 18983.2(a)(1)(D) in response to these comments. The changes remove the word “residual” from this subsection to clarify that the greenhouse gas emissions and emissions reduction potentials calculated pursuant to section 18983.2(A)(1)(E) must include emissions and emissions reductions of all materials produced from the process, whether they be sent to a beneficial use or disposed of. The change is necessary to clarify the scope of emissions and emissions reductions calculations intended in section 18983.2(a)(1)(E).</p> <p>The commenters note that the purpose of reporting on “end use or disposal location” is unclear because “[t]he whole purpose of these regulations is to support diversion of solid waste from landfill disposal.” While staff agree that the purpose of these regulations is to support diversion of solid waste, it is possible and likely that processes and technologies that are designed to reduce organic waste disposal in landfills will result in additional materials that have an end use or require disposal following the proposed process or technology. The greenhouse gas emissions of those materials must be considered to fully evaluate the emissions reduction potential of the process or technology.</p> <p>CalRecycle understands that applicants for determinations of technologies that constitute a reduction in landfill disposal will not know every specific end use and disposal fate of materials for each process or technology, but CalRecycle expects applicants to sufficiently describe expected end uses and disposals such that staff can evaluate the emissions and emissions reduction of the process or technology. The comment is correct that, because the processes and technologies will be evaluated from a lifecycle emission basis, different end uses may lead to different determinations for approval.</p>
3175	White, C., Manett, Phelps & Phillips	<p>d. (E) For each of the processes or technologies described pursuant to Section 18983.2(a)(1)(B), each calculation, assumption, and emission factor used by the applicant to calculate the permanent greenhouse gas emissions reduction potential of the proposed operation. All calculations must be clearly laid out such that the Department and/or the Executive Officer of the California Air Resources Board (CARB) are able to follow and understand the calculation of greenhouse gas emissions reduction potential. Calculations must include quantification of the</p>	<p>CalRecycle added definitions for “greenhouse gas” and “fluorinated greenhouse gas” to clarify what greenhouse gases are considered under the regulation and added a definition for “greenhouse gas emission reduction” to clarify how an emission reduction is calculated. The “greenhouse gas,” “greenhouse gas emission reduction,” and “fluorinated greenhouse gas” definitions are the same as those definitions used in CARB’s Regulation for the Mandatory Reporting of Greenhouse Gas Emissions. The definition for “lifecycle greenhouse gas emission” was modified from a similar definition in CARB’s Low Carbon Fuel Standard Regulation. These definitions are necessary to clarify what information is required for an application for a</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>greenhouse gas emissions produced from the process or technology itself, including those emissions from any residual material.</p> <p>We agree and support the provisions of this paragraph. However, we do have questions about the following phrase in the last sentence: “greenhouse gas emissions produced from the process or technology itself, including those emissions from any residual material.” It would be Nowon’s intent to provide a description of any and all GHG emissions and reductions from any waste material that is introduced into the Nowon process. For example, a complete quantification of all GHG emissions and reductions will be provided for all materials handled by the Nowon process. This will include the Nowon process itself as well as the use of the Nowon fuel to reduce GHG emissions at industrial furnaces as compared to other fuels used by the industrial furnaces. The largely biogenic material will substantially reduce GHG emissions at both landfills from which the organic waste is diverted as well as at the industrial furnaces that have previously used more carbon intensive fossil fuels.</p>	<p>determination of technologies that constitute a reduction in landfill disposal, as well as what greenhouse gas emission and emissions reductions will be considered by CalRecycle in making the determination.</p>
3176	White, C., Manett, Phelps & Phillips	<p>(F) For each emission factor used pursuant to Section 18983.2(a)(1)(E), documentation demonstrating that the emission factor has been peer reviewed or subjected to other scientifically rigorous review methods.</p> <p>Nowon would appreciate receiving confirmation that these regulations not only require accounting of GHG emissions, but also GHG emission reductions. For example, diversion of organics from a landfill will have a landfill methane reduction similar to composting, due to the reduction of methane emissions associated with landfilling. In addition, if the biomass fuel is used to displace the use of higher carbon intensity fossil derived fuels (e.g., coal, tires, etc.) would be allowed to count the emission reduction associated with converting from high emissions fossil derived fuels to lower carbon biomass fuels. The total overall GHG emission reduction will be the combination of both the landfill methane reductions plus the reduction in displaced fossil carbon fuel emissions. In addition, please clarify which other emissions/reductions associated with the overall process would have to be counted as well.</p> <p>Does this include transportation of the fuel from the location of Nowon Technology to the Industrial furnace? Are similar requirements included in the determination of the 0.30 MTCO<sub>2</sub>e/short ton specified elsewhere in this section (e.g., transport of materials to and from the compost from compost site and to the end use site)?</p>	<p>CalRecycle added definitions for “greenhouse gas” and “fluorinated greenhouse gas” to clarify what greenhouse gases are considered under the regulation and added a definition for “greenhouse gas emission reduction” to clarify how an emission reduction is calculated. The “greenhouse gas,” “greenhouse gas emission reduction,” and “fluorinated greenhouse gas” definitions are the same as those definitions used in CARB’s Regulation for the Mandatory Reporting of Greenhouse Gas Emissions. The definition for “lifecycle greenhouse gas emission” was modified from a similar definition in CARB’s Low Carbon Fuel Standard Regulation. These definitions are necessary to clarify what information is required for an application for a determination of technologies that constitute a reduction in landfill disposal, as well as what greenhouse gas emission and emissions reductions will be considered by CalRecycle in making the determination.</p>
3177	White, C., Manett, Phelps & Phillips	<p>e.(2)The Department shall consult with CARB’s Executive Officer to evaluate if the information submitted by the applicant is sufficient to determine the greenhouse gas emissions reduction potential of the proposed operation, and whether or not the proposed operation results in a permanent reduction in greenhouse gas emissions, and therefore counts as a reduction in landfill disposal.</p> <p>A clear interpretation of the following phrase as it relates to the diversion of organic waste from landfill disposal to be used as a source of low carbon fuels is requested, “. . . proposed operation results in a permanent reduction in greenhouse gas</p>	<p>CalRecycle added definitions for “greenhouse gas” and “fluorinated greenhouse gas” to clarify what greenhouse gases are considered under the regulation and added a definition for “greenhouse gas emission reduction” to clarify how an emission reduction is calculated. The “greenhouse gas,” “greenhouse gas emission reduction,” and “fluorinated greenhouse gas” definitions are the same as those definitions used in CARB’s Regulation for the Mandatory Reporting of Greenhouse Gas Emissions. The definition for “lifecycle greenhouse gas emission” was modified from a similar definition in CARB’s Low Carbon Fuel Standard Regulation. These definitions are necessary to clarify what information is required for an application for a</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>emissions, and therefore counts as a reduction in landfill disposal. “ Nowon’s interpretation is that overall GHG reductions (e.g., both anthropogenic methane, anthropogenic CO2, and other GHGs) can be counted und this provision. The would include both: 1) the reduction in methane emissions associated with the diversion of organic solid waste from landfills, and 2) reduction in anthropogenic CO2 due to use of the Nowon fuel to reduce fossil CO2 emissions. Although use of the Nowon fuel to displace use of higher carbon fossil fuel is not directly associated with landfill diversion, it does result in a permanent reduction in GHG emissions in accordance with the above paragraph. Nowon would appreciate confirmation that all GHG reductions associated with a particular operation are considered to “count as a reduction in landfill disposal”. This would include GHG emission directly related to the landfill diversion the waste, but also other beneficial GHG reductions associated with the use of the diverted waste. It is our view that the overall reduction in GHG emissions associated with a particular operation should be counted as diversion from landfill disposal – both the avoided landfill emission as well as emission reduction associated with the use of the products of the operation. It is our view that this is similar to the benefits of composting that consider both the diversion of organics from a landfill resulting in reduced methane emissions as well as reduction in GHG emissions associated with fertilizer production. It is our understanding that this is the basis for the 0.30 MTCO2e/short ton organic waste that is used as a basis of comparison for alternative verified technologies pursuant to these regulations. We would appreciate confirmation of this understanding in the response to comments and the final Statement of Reasons.</p>	<p>determination of technologies that constitute a reduction in landfill disposal, as well as what greenhouse gas emission and emissions reductions will be considered by CalRecycle in making the determination.</p>
3178	White, C., Manett, Phelps & Phillips	<p>(3) To determine if the proposed operation counts as a permanent reduction in landfill disposal, the Department and/or CARB’s Executive Office shall compare the metric tons carbon dioxide equivalent (MTCO2e) per short ton organic waste reduced by the process or technology, with the emissions reduction from composting organic waste (0.30 MTCO2e/short ton organic waste).The Department shall only deem a proposed operation to constitute a reduction in landfill disposal if the process or technology has permanent greenhouse gas emissions reductions equal to or greater than the 0.30 MTCO2e/short ton of mixed organic waste. The numeric factor in the above paragraph is expressed differently 2 times:  0.30 short ton organic waste  0.30 MTCO2e/short ton of mixed organic waste  Can CalRecycle please clarify how these two different expressions are used and are related to each other with the inclusion of the term “mixed waste” in the second, but not in the first?  It is our understanding that the 0.30 MTCO2e/short ton organic waste is based on both the reduction in landfill methane emissions due to diversion of the organice waste as well as the avoided GHG emissions due to the reduced use of manufactured fertilizers to sustain the growth of plants where the compost is</p>	<p>CalRecycle added definitions for “greenhouse gas” and “fluorinated greenhouse gas” to clarify what greenhouse gases are considered under the regulation and added a definition for “greenhouse gas emission reduction” to clarify how an emission reduction is calculated. The “greenhouse gas,” “greenhouse gas emission reduction,” and “fluorinated greenhouse gas” definitions are the same as those definitions used in CARB’s Regulation for the Mandatory Reporting of Greenhouse Gas Emissions. The definition for “lifecycle greenhouse gas emission” was modified from a similar definition in CARB’s Low Carbon Fuel Standard Regulation. These definitions are necessary to clarify what information is required for an application for a determination of technologies that constitute a reduction in landfill disposal, as well as what greenhouse gas emission and emissions reductions will be considered by CalRecycle in making the determination.  CalRecycle has revised section 18983.2(a)(3) in response to this comment. The change removes the word “mixed” from the phrase “mixed organic waste.” This change is necessary to clarify that the assessment is being performed relative to the greenhouse gas emissions per short ton organic waste being processed.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>applied. For purposes of clarity, it would be helpful for the response to comments and the Final SOR to clearly and explicitly show how the 0.30 MTCO<sub>2</sub>e/short ton organic waste factor was derived – showing all the terms that were used to calculate this factor as well as their sources. Unfortunately, such more detailed computations appear to be missing from the ISOR.</p> <p>In addition, the phrase “permanent greenhouse gas emissions reductions equal to or greater than the 0.30 MTCO<sub>2</sub>e/short ton of mixed organic waste” is assumed to include all GHG reductions associated with a particular operation to produce an alternative product from waste diverted from landfill disposal – in a manner consistent on how that factor was derived for the use of organic wastes to produce and use a compost product. These GHG reduction include both those reduction directly associated with reduce landfill methane emissions as well as GHG reductions associated with the beneficial use of a product produced by the process or technology.IDENTICAL 3401</p>	
3022	Williams, J., City of Needles	<p>Infrastructure Capacity and Funding: The proposed regulation does not provide disadvantaged communities enough time to implement a cost effective solution to meet compliance. Needles' median household income is 49% of statewide median, meaning that our residents must bear disproportionately high cost increases. The City lacks sufficient funds to implement new organic waste diversion program and the financial impact on the community of Needles is unbearable. The City requests that you consider the financial impact on disadvantaged isolated rural communities such as Needles with no organic waste infrastructure and no funding.</p>	<p>The regulations provide waivers and exemptions from the regulatory requirements for low-population, rural and high elevation jurisdictions. Needles may qualify for some or any of these.</p>
3023	Williams, J., City of Needles	<p>Procurement: The proposed procurement requirements require Needles to purchase compost or renewable natural gas as well as minimum recycled content and recyclability standards for paper purchases. The City of Needles will have substantial costs added to the already struggling general fund. In addition, the per capita procurement target is a blanket per capita and the City of Needles could not procure enough tons per day to meet the regulations. The City of Needles has completed analysis to determine the amount of generation and the limited commercial accounts generate approximately 100 tons a year of compostable organic material.</p>	<p>A change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in “substantial additional costs”.</p> <p>The proposed regulatory text does not limit jurisdictions to the procurement of recovered organic waste products from “their” generated organics to satisfy the procurement requirements, nor do the products need to be consumed within the jurisdiction. A jurisdiction may procure from any entity provided the end products meet the Section 18982(60) definition of “recovered organic waste products”, and a jurisdiction may use the end products in a way that best fits local needs.</p>
3024	Williams, J., City of Needles	<p>Rural County Exemptions: The draft regulations allow exemptions for cities less than 5,000 population with less than 5,000 tons of waste disposed in 2014. The City of Needles meets that disposal limit, but not population. Since disposal reduction is key to SB 1383, the population limit is unnecessary and arbitrary. The City asks that you consider exemptions recognizing nonurban areas' distance to markets and difficulty accessing processing facilities and markets; small population: cost impacts on local residents and businesses; volume of organic material in the city; seasonal impacts on generation; and feasibility of local alternative processing.</p> <p>The City generates approximately 70 yards of organic waste a week, under Mandatory Organics Recycle (AB 1826) only 5 commercial businesses are subject to</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>the current law. The City's Hauler has provided cost estimates to haul organic material to a third-party located in Arizona. The annual cost of such program is \$78,000/year, a financial impact of \$15,600 per business per year. This cost is a financial burden to the already limited number of businesses in Needles. Under SB 1383 additional costs are added to a program which is not implemented to restrictors.</p> <p>The City asks that CalRecycle considers disadvantage community is isolated locations such as Needles and includes and exemption under SB 1383 and review the impacts of AB 1926.</p>	<p>mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
4012	Wyse, J, Pacific Waste Services	How are organic textiles and carpets going to be identified in comparison to the synthetic textile and carpet materials? Is it practical and proven that these materials will compost or have an alternative recycling use avoiding landfill disposal?	It would initially be up to the generator to identify, based on identification on the materials. It is CalRecycle's understanding that natural fibers will compost.
4013	Wyse, J, Pacific Waste Services	Organic Waste Definition includes: Lumber and wood which are broad terms and without definition or clarification could include pressure treated wood, painted lumber/wood, etc. along with inert materials. Furthermore, such lumber, wood were listed as "Inert" material in the 2014 Waste Characterization Studies and in the CalRecycle "Residential Waste Stream by Material Type"- Clean Dimensional Lumber, Clean Engineered Wood, Clean Pallets and Crates, Other Wood Wastes. As such, these materials SHOULD NOT BE INCLUDED AS ORGANIC WASTES. Such materials observed in older sections of landfills, find them not to readily decompose and have minimal contribution to landfill's methane production.	<p>The regulations already allow organic waste, which can include non-hazardous wood and dry lumber, to be included in the green container. The regulations also already allow for non-hazardous wood and dry lumber to be included in the blue container. Regarding treated hazardous wood waste, CalRecycle revised Section 18984.1 to add a new subsection indicating that this material should not be allowed in the blue container.</p>
4014	Wyse, J, Pacific Waste Services	"based on the 2014 organic waste disposal baseline," from CalRecycle 2014 Waste Characterization Study (per definition 72), which has discrepancy on materials description and listings versus "Organic Waste" definition. Does local jurisdiction have to prove compliance? Who will be the specific jurisdiction on the hook for compliance? Site Specific Jurisdiction? Specific Local Landfill(s)? County IWMA? Multiple sources including waste haulers, recyclers, composters, landfills?	<p>As stated in Initial Statement of Reasons, Article 3... "The legislative intent of SB 1383 precludes CalRecycle from requiring an individual city or county to achieve a performance standard of 75 percent recovery of its generated organic waste. This prevents CalRecycle from setting a recovery rate as a performance standard that jurisdictions must meet and then holding jurisdictions to that standard. The law requires that CalRecycle treat the organic waste disposal reduction targets as statewide targets and not individual targets for each city and county. This requires CalRecycle to prescribe the types of programs that regulated entities must implement in order to achieve the state's targets." There is no requirement in the regulations to submit specific documentation of reduction of landfill disposal as described in the comment.</p> <p>For the purposes of these regulations, the "organics" list is a combination of "Organics" in the CalRecycle's 2014 Waste Characterization Study and other identified material types that can produce GHG's in categories such as "inert" from CalRecycle's 2014 Waste Characterization Study.</p>
4015	Wyse, J, Pacific Waste Services	Who is responsible for providing the documentation which forms the basis for compliance with the statewide target?	The organic waste diversion target in statute is statewide and compliance is not enforced on individual jurisdictions. That said, reporting and recordkeeping requirements applicable to all jurisdictions will be an information source for CalRecycle to determine whether the statewide target is being achieved.
4016	Wyse, J, Pacific Waste Services	The 2014 organic waste disposal baseline uses the total tons of organic waste disposed statewide in 2014, calculated by CalRecycle's 2014 Waste Characterization Study. Are each jurisdiction required to submit documentation of local reductions	Individual jurisdictions are subject to reporting and recordkeeping requirements that will be used to measure compliance with the regulations as well as evaluating overall statewide achievement of the organic waste diversion targets in statute.

Comment Number	Received From	Question/Comment	Response(s)
		given each jurisdiction baseline may be different? Proposed SLCP Regulations definition for "Organic Waste" is different than the material listings in "CalRecycle's 2014 Waste Characterization Study". One example is Clean Dimensional Lumber, Clean Engineered Wood, Clean Pallets and Crates, Other Wood Waste are listed as Inert in the "CalRecycle's 2014 Waste Characterization Study" versus those materials are defined as "Organic Waste" in the Proposed SLCP Regulations.	
4017	Wyse, J, Pacific Waste Services	The description contained in this section appears consistent with historic compliance where the facility provides documentation on proposed activities in the form of an RDSI amendment. CalRecycle reviews, approves and public notices changes. Is this regulation intended to be consistent with the historic compliance?	18983.1(b)(5)(B) allows use of organic material as soil amendment for erosion control, revegetation, slope stabilization, or landscaping at a landfill, when the material is used in a manner that complies with standard practices specified in the Report of Disposal Site Information, as required by 27 CCR, Section 21600(b)(6). If an existing RDSI doesn't have standard practices, an RDSI amendment can be considered.
4018	Wyse, J, Pacific Waste Services	Historical RWQCB/CalRecycle approved mixing of ground wood waste and biosolids to reduce moisture in biosolids and creating a soil amendment for erosion control, revegetation, slope stabilization or landscaping would continue to be an accepted use compliant with 18983.1(b)(5)? If not advise why it is not.	Those materials are organic and if they are used in a manner consistent with 18983.1 and applicable solid waste permitting requirements, it would be allowable.
3285	Yakimow, C., Town of Yucca Valley	1. Definition 36, "Jurisdiction", now includes a special district that provides solid waste handling services as well as a city or county, or a city and county. However the remainder of the definition implies that only a city or county, or a city and county, may utilize a Joint Powers Authority to comply with the requirements of the chapter, and that the individual city, county, or city and county shall remain ultimately responsible for compliance. That clause should be revised to reference "jurisdictions" to include special districts; or by adding special districts to the existing provision.	CalRecycle revised Section 18982(a)(36) in response to this comment. This change is necessary to clarify that special districts are included in the definition of "Jurisdiction" and are subject to the requirements of Chapter 12.
3286	Yakimow, C., Town of Yucca Valley	2. Definition 42, "Non-local entity", includes special districts. This should be revised since special districts providing solid waste handling services are included as "jurisdictions". Special districts that don't provide solid waste handling services would be subject to a jurisdiction's regulations, so the reference is best eliminated.	The term 'special districts,' which is part of the definition of 'non-local entity,' includes county facilities that are considered to be agents of the state and are not subject to local ordinances. Also, to clarify that the definition Section 18982(a)(42) for 'Non-local entity' includes county fairgrounds that are under the authority of the California Department of Food and Agriculture.
3287	Yakimow, C., Town of Yucca Valley	3. Definition 46, "Organic waste" does not address multi-material products that may include "non-organic recyclables" (Definition 43). Please clarify that organic waste items that include non-organic recyclables (or materials) are not "organic waste".	Comment noted. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute. The definition of organic waste clearly identifies materials that are types of organic waste. It is not feasible or necessary to state in the negative every conceivable material that is not an organic waste.

Comment Number	Received From	Question/Comment	Response(s)
3288	Yakimow, C., Town of Yucca Valley	4. Definition 51, "Paper products" has the same multi-material issues as Definition 46. Packaging, and building insulation and panels especially are problematic.	CalRecycle has revised section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in section 18993.3(c)(2) and therefore agrees with the proposed revision. Section 18993.3(c)(2) requires that paper products and printing and writing paper is eligible to be labeled with an unqualified recyclable label as defined by the Federal Trade Commission. Currently, multi-material products (e.g. plastic-lined paper cups and plastic-coated) are not recyclable and are landfilled. The production of nonrecyclable organic materials compromises the state's ability to achieve the organic waste recycling goals. The purpose of this section is to ensure jurisdictions comply with the procurement requirement by purchasing recyclable items, thereby reducing the introduction of nonrecyclable organics into the marketplace. Jurisdictions can comply with this requirement by focusing their procurement on products that can actually be recycled. This limitation therefore alleviates the need to curtail the definition of paper products as suggested.
3289	Yakimow, C., Town of Yucca Valley	5. "Non-compostable paper" is included in Definition 558. Please include a definition of "non-compostable paper" that includes paper not accepted at an organic waste processing facility receiving the jurisdiction's collected organic material.	CalRecycle declines the suggested change. The language at issue, as worded, is an option for capacity demonstration but is not a requirement for demonstration.
3290	Yakimow, C., Town of Yucca Valley	6. Please provide guidance for determining that a "Restaurant" (Definition 64) is primarily engaged in the retail sale of food and drinks for on-premises or immediate consumption. The threshold for "primarily engaged" isn't clear for fast-food businesses with both sit-down and take-out orders.	To clarify, whether the restaurant offers sit-down or take-out orders is irrelevant because fast food is prepared for 'immediate consumption.' If a fast food business is primarily engaged in the retail sale of food and drinks for on-premises or immediate consumption and meets the 250 or more seats or total facility size equal to or greater than 5,000 square feet threshold, then that restaurant must comply with SB 1383's commercial edible food generator requirements.
3291	Yakimow, C., Town of Yucca Valley	7. Section 18984.2 describes "Two-container Organic Waste Collection Services." This section needs to be clarified as it tries to cover both source separation and limited mixed waste (unsegregated) collection. (a) (1) states that "[t]he green container shall be for the collection of organic waste only. The contents of the green container shall be transported to a facility that specifically recovers source separated organic waste". (a)(2) provides that "[t]he blue container shall be for the collection of all non-organic waste" and may be used for specified organic wastes. However (a)(3) allows either container to be used for the collection of both organic waste and non-organic waste, requiring transportation to high diversion organic waste processing. Please add specific language authorizing collection under (a)(3) regardless of the prior provisions. The prohibited materials in (a)(5) also should be allowed in a green container used per (a)(3).	CalRecycle is not aware of a two-container service that represents the description offered in the comment. Further, this comment was discussed at the workshop presentation CalRecycle gave in July. It was discussed that even in these container systems there is still typically non-compostable or non-digestible organic waste (e.g. plastic-coated paper) that would be collected in the gray container.

Comment Number	Received From	Question/Comment	Response(s)
3292	Yakimow, C., Town of Yucca Valley	8. Section 18984.3(e) allows organic waste in bags placed in grey containers. Bags also should be allowed in the two-container option under 18984.2(a)(3).	<p>Bags are allowed in the two-container system. The facility would notify the jurisdiction that it no longer accepts compostable plastics. A facility accepting these materials would typically notify the jurisdiction as part of the facility's normal operating procedures.</p> <p>CalRecycle already revised Sections 18984.1, 18984.2, and 18984.3(e) to provide clarity about when a jurisdiction may allow plastic bags to be placed in containers. The issue of whether to allow bags hinges primarily on whether or not the receiving facility will accept them. Many facilities are not accepting bags because of operational problems and product quality issues. In order to document jurisdiction decisions about the use of bags, CalRecycle also revised Section 18984.4(a) to require that jurisdictions keep information in their records about the facilities to which they send bags.</p> <p>The regulatory language already allows plastic bags to be removed. For any plastic bags, including compostable plastic bags, a facility receiving such material will have to notify the appropriate jurisdiction that compostable plastics will not be recovered at the facility.</p> <p>It would be acceptable for the facility to provide the letter to the hauler and the hauler would provide the letter to the City.</p> <p>Nothing precludes a facility from specifying the type of resins and products the facility will accept. The written notification from the facility is given to the jurisdiction every 12 months after the regulation takes effect. As many stakeholders have noted markets and technology is are dynamic. A solid waste facility needs the ability to determine that accepting plastic bags or compostable plastics is no longer feasible and have the ability to notify a jurisdiction. This may trigger and require behavior change for the collection program in order to improve overall recovery. The notification requirement is intended to foster this. The requirement to annually check with the facility that bags are still allowed is not onerous or burdensome.</p>
3293	Yakimow, C., Town of Yucca Valley	9. Section 18984.5 requires two container system monitoring with no allowance for a container meeting 18984.2(a)(3), which should not be monitored as a source separated container. Please clarify that the container selected in 18984.2(a)(3) is exempt from such monitoring.	The container contamination monitoring is for both containers in a two-container collection service.
3294	Yakimow, C., Town of Yucca Valley	10. Section 18984.S(c) triggers container inspections resulting from prohibited container contaminants at a facility. This provision sufficiently guards against container contamination, and should be used as the threshold for conducting route and container inspections. The 18984.S(b) provision requiring that all routes be monitored quarterly is unnecessarily burdensome and cost-ineffective and should be eliminated in favor of verified route contamination at a facility.	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. CalRecycle also revised the frequency to annual.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. CalRecycle also revised the frequency to annual.</p> <p>These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3295	Yakimow, C., Town of Yucca Valley	<p>11. Businesses should not need to provide organic containers if no organic material is sold or generated in customer areas, and 18984.9 should be revised accordingly. Paper accepted in a community's recycling program should not be considered organic under this provision.</p>	<p>This section is necessary since 40 percent of organic waste is generated at commercial businesses and this section ensure that organic waste recovery options are available in nearly all places that commercial waste is generated. CalRecycle has already included a physical space waiver that addresses legitimate space concerns in business. Nothing in the draft regulations prevents printing and writing paper from achieving its "highest and best use" via recycling. The inclusion of printing and writing paper in the organic waste definition is due to the fundamental fact that paper is an organic material, made from fiber.</p>
3296	Yakimow, C., Town of Yucca Valley	<p>12. The low population waiver, Section 18984.12(a), includes 2014 tonnage as a second threshold. Tonnage is a more appropriate threshold for achieving the regulations goals, and cities should be considered for waivers if their 2014 tonnage is below 5,000 regardless of population.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7)</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-document history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife’s black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383’s organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
3297	Yakimow, C., Town of Yucca Valley	13. Expand the rural area definition in 18984.12(c) to include the existing provisions of Section 14571(A) of the California Beverage Container Recycling & Litter Reduction Act. This would provide flexibility to a rigid population limit, while focusing on low disposal and rural community issues not recognized by the traditional Rural County exemption.	CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially

3298	Yakimow, C., Town of Yucca Valley	<p>14. Include 18984.12 waiver language recognizing the financial impacts on economically disadvantaged communities. California EPA sets its disadvantaged communities designation by using 80% of statewide median as the threshold, which is \$49,454. The cost of compliance with these regulations should not disproportionately burden California's economically disadvantaged communities. CalRecycle's Standardized Regulatory Impact Assessment estimates statewide annual direct impact costs of \$17 per household. Households in communities with 50% of statewide median income should not be expected to incur more than \$8.50 annually.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. 3299	Yakimow, C., Town of Yucca Valley	15. Section 18993.1 sets per capita organic procurement targets, including compost and renewable transportation fuel. That requirement may be limited by prior year's total fuel procurement. Need for jurisdiction compost should also be considered by calculating landscaped and turfed areas and appropriate application rates.	CalRecycle disagrees with the proposed method for basing procurement requirements on a jurisdiction's "landscaped and turfed areas." The term as proposed by stakeholders is undefined and subjective, making it prohibitively burdensome to verify. Allowing a jurisdiction to self-report public landscape areas and then estimate compost use without any reference dataset to back it up will create uneven standards and enforcement. Furthermore, counter to the apparent intent of the commenter this approach might make it less likely for a jurisdiction to reduce their procurement mandate.
3300	Yakimow, C., Town of Yucca Valley	16. Section 18996.2(a)(2)(C) describes extenuating circumstances that a jurisdiction may demonstrate when Cal Recycle considers substantial compliance efforts. Economically disadvantaged communities should be considered for "extenuating	CalRecycle declines the suggested change. Regulatory requirements apply to jurisdictions as opposed to communities so it would be difficult to adequately craft a workable enforcement relief option that may only apply to a portion of a jurisdiction.

Comment Number	Received From	Question/Comment	Response(s)
		<p>circumstances" resulting from disproportionately high compliance costs; and "substantial effort" should reflect such cost considerations.</p>	
6425	Yazdani, County of Yolo	<p>Section 18984.1. Three Container Organic Waste Collection Service  Comments: Implementation of a 3rd cart at a household is estimated to increase residential garbage bills by 40% (approximately \$15 more/month/household). The Division does not feel a majority of our constituents can absorb this type of rate increase and is therefore looking at alternate options to increase organics diversion such as self-haul coupon based programs and at exemptions for some of our rural communities that have a population density of less than 50 people per square mile. The County would like to see language that allows rural jurisdiction to maintain compliance with residential based organics recycling with other methods besides a curbside cart.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p>

6426	Yazdani, County of Yolo	Section 18984.12 Waivers and Exemption Granted by the Department Comments: This section defines that population density of less than 50 people per square mile will be exempt however there has been debate on who will make this determination. The County requests that Cal Recycle develop a database specifically outlining which communities across the state will be exempted instead of putting this task on County staff.	CalRecycle will provide tools and guidance to assist jurisdictions to easily identify which areas qualify.
6427	Yazdani, County of Yolo	Section 18989.1 Cal Green Building Codes Comments: This will increase county staff time needed beyond the current level of staffing to perform site visits to all businesses to document who can be exempted from the requirement of establishing a food waste program due to lack of trash enclosure space. CalRecycle should strike the language that requires past structures to comply and instead focus on new permits pulled after the effective date of this section.	Comment noted. Regarding staff time, CalRecycle acknowledges that compliance with environmental standards may require additional staff time, however with regards to this specific item on waivers, jurisdictions are not required to issue waivers, and therefore not required to invest staff time reviewing waivers if they elect to not provide them. the regulations do not include requirements for "past structures."
6428	Yazdani, County of Yolo	Section 18990.2 Edible Food Recovery Standards and Policies. Comments: While efforts are already underway to work with the Yolo County Food Bank to support food recovery, the mechanism defined in this section to fund the implementation, compliance and enforcement of this program is lacking a direct connection to the waste industry. Food recovery by definition places this food in the category of a product not waste therefore it is not reasonable to ask that landfill tip fees, solid waste haulers or solid waste franchise fees be used to subsidize this program. We request that CalRecycle strike the language that references these funding sources and instead developing an ongoing payment program system for jurisdictions to provide education, outreach and assistance and develop a competitive grant program for applicable businesses to apply for funding to assist with their efforts in gaining compliance.	A change to the regulatory text is not necessary. Section 18990.2 is necessary to clarify that a jurisdiction cannot limit a generator or food recovery organization from recovering edible food. This section is necessary to ensure that there are not significant barriers to expanding food recovery efforts in order to enable the state to meet its food recovery goals and maintain consistency with Public Resources Code section 42652.5(a)(2), which mandates that CalRecycle adopt regulations that "Shall include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed of is recovered for human consumption by 2025." Furthermore, this section contains no discussion on funding mechanisms or funding sources.
6429	Yazdani, County of Yolo	Section 18991.3 Commercial Edible Food Generators Comments: While Tier One commercial edible food generators should have an easier way to comply with this new regulation we foresee it being very difficult for Tier Two commercial edible food generators to comply due to lack of infrastructure. Our recommendation is that alternate language is proposed for this section that clearly upholds the programs if infrastructure is in place but that these businesses be exempted if no infrastructure is available. For example: Tier One generators are large grocery stores such as Nugget Markets who should have little problem getting excess food over to the Food Bank Monday-Friday during normal 8am-5pm operating hours. When Tier Two generators, such as Taber Ranch in the Capay Valley and the Old Sugar Mill in Clarksburg, these are special event venues who host food generating events primarily in the evenings and on weekends when currently there is no type of drop off or pickup service available on evenings or weekends when most special events occur.	Section 18991.1 requires a jurisdiction to implement an edible food recovery program that includes the actions the jurisdiction will take to accomplish increasing edible food recovery capacity if the analysis required by Section 18992.2 indicates that the jurisdiction does not have sufficient capacity to meet its edible food recovery needs. The regulations are structured so that jurisdictions will be required to begin edible food recovery capacity planning in 2022 to ensure that sufficient capacity exists to meet their edible food recovery needs. Tier two commercial edible food generators are required to comply in 2024. That gives the jurisdictions two additional years to build capacity if needed, and tier two generators two years more than the tier one generators to prepare for compliance. To address this comment, and the concerns about insufficient capacity to service commercial edible food generators, CalRecycle has revised Section 18991.3. Specifically, language was added to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. One of the extraordinary circumstances specified is a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity.

Comment Number	Received From	Question/Comment	Response(s)
			Therefore, if a jurisdiction has failed to increase edible food recovery capacity as is required by the edible food recovery capacity planning section of the regulations (Section 18992.2), then commercial edible food generators in that jurisdiction are not required to comply with the requirements of Section 18991.3 as long as they can demonstrate that the jurisdiction has failed to comply with SB 1383's edible food recovery capacity planning requirements. However, the regulations also specify that the burden of proof shall be upon the commercial edible food generator to demonstrate extraordinary circumstances.
6430	Yazdani, County of Yolo	Section 18994.2 Jurisdiction Annual Reporting Comments: Under section (i) Article 12 it requests that the County provide CalRecycle the dollar amount spent on recycled content paper and recycled content products. It seems unnecessary that the state would need to see our financials to prove compliance with recycled content purchases. It is requested that CalRecycle strike Section 18994.2.	CalRecycle has revised the regulatory language to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content. The reporting requirements in Section 18994.2 have also been updated to reflect this change by deleting the requirement for jurisdictions to report on the dollar amounts spent on paper and recycled content paper purchases.
6431	Yazdani, County of Yolo	Section 18993.1 Recovered Organic Waste Product Procurement Target Comments: (1) This requires a shift to renewable transportation fuel by 2022. Yolo County has invested significant resources into the conversion and use of electric vehicles which would not meet compliance with this new regulation. It is requested that CalRecycle include language that allows other alternative fuels to count towards compliance or language that allows for certain vehicle types to use renewable fuels such as heavy equipment from jurisdiction Public Works Departments; (2) It is requested that CalRecycle look at adding language to exempt Special Districts (JPAs, Cemetery Districts, Fire Districts, etc.) that work on behalf of rural jurisdiction in complying with this section; (3) For jurisdiction owning or operating compost facilities, providing an exemption from further having to procure compost.	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>The recovered organic waste product procurement target only applies to cities and counties. Due to overlap between a city's population and the population of a special district, the regulation was narrowed to only apply the procurement targets to cities and counties. Procurement targets will be assigned to each city and county based on population data published by the Department of Finance (DOF). The individual city or county is ultimately responsible for compliance with the procurement requirements, regardless of whether waste collection responsibilities are delegated to another entity. The procurement target is linked to the waste created by the population that resides within the city, not the number of generators provided a collection service. Whether the city or another entity provides the service is irrelevant, the residents of the city are creating waste and the city is responsible for procuring a minimum amount of recovered organic waste products to mitigate the impacts of that waste creation.</p> <p>It is the intent of Article 12 for jurisdictions to work with special districts and similar entities to meet the jurisdiction's procurement targets, which may be accomplished through a contract or agreement, such as a Memorandum of Understanding (MOU).</p> <p>CalRecycle disagrees with the recommended revisions. Jurisdictions owning or operating compost facilities may count the compost produced in those facilities and used or donated by the jurisdiction toward the procurement target. "Procure" does not necessarily mean purchased, and these jurisdictions are not required to further procure compost if they already meet the procurement target.</p>

Comment Number	Received From	Question/Comment	Response(s)
6432	Yazdani, County of Yolo	<p>Section 18993.4 Record Keeping Requirements for Recycled Content Paper Procurement</p> <p>Comments: This requires our Purchasing Department to provide CalRecycle with copies of all invoices and receipts demonstrating that recycled content paper has been purchased per the requirements set above. Suggested language would be that instead of all invoices, receipts and proof of recycled content certification being made available each year, the language reads that a report provides a summary of this data through our office supply vendors.</p>	<p>CalRecycle has revised Section 18993.4(a)(1) to allow proof of purchase other than receipts and invoices to be used.</p>
6433	Yazdani, County of Yolo	<p>Section 18994.2 Jurisdiction Annual Reporting</p> <p>Comments: Section (a) needs clarification</p> <p>We would like clarification on what this means. Our current system of reporting for a “calendar” year is January –December therefore this year (2019) for example we will report the following on our EAR (Jan.1, 2018-Dec. 3, 2018) on August 1, 2019. This allows is 7 months to prepare the report for CalRecycle. In reading the section highlighted in red if in 2022 only we are asked to do the following report Jan. 1-June 30, this would only allow haulers 15 approximately days to get us their data and allow the County approximately 15 days to review that data and compile a report by the August 1st deadline.</p> <p>Could you please verify if our interpretation is correct? In order for the County and its haulers to compile data and review it with accuracy we do not feel 30 days is sufficient. Could the reporting date in 2022 be moved to October 1st?</p>	<p>A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.</p>
6434	Yazdani, County of Yolo	<p>Also, it does not mention whether the normal Jan. 1, 2021-Dec. 31, 2021 data would need to be provided in the year 2022. Is this Jan.-June 2022 report in lieu of the calendar year report or is CalRecycle asking for two reports to be submitted in 2022?</p>	<p>A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.</p>
6435	Yazdani, County of Yolo	<p>Section 18994.2 Jurisdiction Annual Reporting</p> <p>Comments: It is anticipated the level of reporting and preparing for this report will take a significant amount of time and attention on behalf of County Integrated Waste Management staff because we will not only be responsible for unincorporated County reporting, in several program areas, IWM staff will also be responsible for reporting on behalf of the cities (City of Woodland, West Sac, Winters and Davis) and UC Davis which all require outside agency coordination. The current “expectation” from CalRecycle over the past 4 years is that IWM staff provide updates and data throughout the year outside of what is required by law. It has been verbally communicated by the Local Area Market Development (LAMMD) staff at CalRecycle that its intentions are the same under SB1383. County staff would be required to provide updates and data throughout the year however this section only</p>	<p>Comment noted. The commenter is expressing an opinion regarding potential difficulties in implementing the regulations but is not suggesting particular language changes or commenting on the regulatory process itself.</p>

Comment Number	Received From	Question/Comment	Response(s)
		requires it on an annual basis. Challenging the current requests has put County staff in a bad position with the regulator who oversees our compliance. They have agreed that it is not required by law to provide these extra reports but recommends that it is in the best interest of the County to do so, which has created a lot of extra work for staff. We are asking CalRecycle to clearly take a position on this issue and ask that language be added to account for the additional staff time required to compile these reports and data mid-year or as a County we let the language stand and stand firm that no additional reports or data will be provided outside of these written requirements.	
6436	Yazdani, County of Yolo	Section 18995.1 Jurisdiction Inspection and Enforcement Requirements Comments: Funding will need to be created to pay for a code enforcement officer to write citations for rural businesses that do not segregate out their organic food waste or establish a food recovery system through the Food Bank, regardless of economic hardship on the business to establish such programs. County staff is already working with the businesses subjected to AB1826 requirements and have found numerous challenges due to the cost of organics collection and processing. Now that the threshold has narrowed further, we will be working with even smaller rural businesses and farms to comply. SB1383 requires an enforcement mechanism which is not currently in place under AB1826 which we believe will push small business out of state or rather it will be cheaper to pay the fee than to pay for the actual collection services and therefore the penalty will become the norm. We would like CalRecycle to explain what they are doing to help minimize the cost of organics collection.	Comment noted. The commenter is expressing an opinion regarding the potential cost and difficulties in implementing the regulations. The commenter does not suggest particular language changes or commentary on the regulatory process.
6437	Yazdani, County of Yolo	Section 18996.7 Department Enforcement Action Regarding Local Education Agencies Comments: This section asks the County to issue a citation if an educational agency (ex. UC Davis, Knights Landing Charter School, Clarksburg Elementary, etc.), is not in compliance. However, under our solid waste franchise agreements where these program are facilitated, the County nor our haulers (WM and Recology) have jurisdiction over educational agencies as they act independent. We currently report to the state if these educational agencies are in compliance and would continue to do so but do not feel we have the legal authority to impose fines on them and therefore this section should be eliminated.	A change to the regulatory text is not necessary. Article 5, Section 18986.1 and Section 18986.2 described the compliance requirements for non-local entities and local education agencies. For the purposes of these regulations, non-local entities and local education agencies are considered organic waste generators and have specific requirements to comply and are not held to the same standards as jurisdictions. Section 18996.7 does not require local jurisdictions to enforce against local education agencies. This enforcement will be conducted by the Department.
6438	Yazdani, County of Yolo	Section 17896.25.1 Load checking – Contamination in Source Separated Organic Waste Comments: The Yolo County Central Landfill will need to increase organics tip fees to allow for the increased staff time to monitor organics loads coming inbound to our digester and track contamination (trash mixed in with food waste). It is required that 2 load checks be completed each day and records are kept on whether these loads were accepted, rejected, what was in the load, who the hauler was, jurisdiction of origin, etc. and that the full 718 load checks for the year are reported in detail with our electronic annual report. This section also includes annual verification that staff have been trained on load check who monitor the new	CalRecycle has deleted the loadchecking requirements, Section 17896.25.1 in response to comments.

Comment Number	Received From	Question/Comment	Response(s)
		<p>digester at the landfill. This will further increase costs associated with the processing of organics therefore we recommend that the language be modified to do no more than 5 each week for a total of 260 inspections per year.</p>	
3358	Yazdani, R., County of Yolo	<p>Section 18984.1. Three Container Organic Waste Collection Service  Comments: Implementation of a 3rd cart at a household is estimated to increase residential garbage bills by 40% (approximately \$15 more/month/household). The Division does not feel a majority of our constituents can absorb this type of rate increase and is therefore looking at alternate options to increase organics diversion such as self-haul coupon based programs and at exemptions for some of our rural communities that have a population density of less than 50 people per square mile. The County would like to see language that allows rural jurisdiction to maintain compliance with residential based organics recycling with other methods besides a curbside cart.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these</p>

			<p>communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
3359	Yazdani, R., County of Yolo	<p>Section 18984.12 Waivers and Exemption Granted by the Department</p> <p>Comments: This section defines that population density of less than 50 people per square mile will be exempt however there has been debate on who will make this determination. The County requests that Cal Recycle develop a database specifically outlining which communities across the state will be exempted instead of putting this task on County staff.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Per the regulations, an approved waiver should be applicable for 5 years. However, unlike census tracts, census blocks may change in any year in-between censuses. As a result, census blocks can merge/split/change</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>during the course of the waived period, which could result in waived census blocks changing configuration during the waived period. This would require the Department to completely rebuild a database of 710,000 census block data points whenever a waiver request is being reviewed, as opposed to simply updating the population density from the most recent census.</p> <p>Given the fact that census blocks change, CalRecycle would have no way of quantifying the total amount of organic material potentially exempted.</p> <p>In addition, some census blocks are very low, or no, population areas (parks, businesses, etc.), making it difficult to ascertain which census blocks have populations that should be served and which do not. There also could be commercial census blocks in major cities that are large waste generators but technically do not meet the population density threshold.</p> <p>With respect to greenhouse gas emission, CalRecycle is not able to ascertain any method of objectively defining greenhouse gas emissions within census tracts or blocks, further this only addresses one part of the statute, greenhouse gas reduction, and ignores the central organic waste reduction requirement. For example black carbon generation in a census tract is unrelated to organic waste generation.</p>
3360	Yazdani, R., County of Yolo	<p>Section 18989.1 Cal Green Building Codes</p> <p>Comments: This will increase county staff time needed beyond the current level of staffing to perform site visits to all businesses to document who can be exempted from the requirement of establishing a food waste program due to lack of trash enclosure space. CalRecycle should strike the language that requires past structures to comply and instead focus on new permits pulled after the effective date of this section.</p>	<p>Comment noted. Regarding staff time, CalRecycle acknowledges that compliance with environmental standards may require additional staff time, however with regards to this specific item on waivers, jurisdictions are not required to issue waivers, and therefore not required to invest staff time reviewing waivers if they elect to not provide them. the regulations do not include requirements for “past structures.”</p>
3361	Yazdani, R., County of Yolo	<p>Section 18990.2 Edible Food Recovery Standards and Policies.</p> <p>Comments: While efforts are already underway to work with the Yolo County Food Bank to support food recovery, the mechanism defined in this section to fund the implementation, compliance and enforcement of this program is lacking a direct connection to the waste industry. Food recovery by definition places this food in the category of a product not waste therefore it is not reasonable to ask that landfill tip fees, solid waste haulers or solid waste franchise fees be used to subsidize this program. We request that CalRecycle strike the language that references these funding sources and instead developing an ongoing payment program system for jurisdictions to provide education, outreach and assistance and develop a competitive grant program for applicable businesses to apply for funding to assist with their efforts in gaining compliance.</p>	<p>Nothing in SB 1383’s edible food recovery regulations requires jurisdictions to provide funding. The language in the regulations regarding funding is permissive. The language states that a jurisdiction may fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms. The regulatory language uses the word “may” and not “shall.” This language does not require jurisdictions to provide funding. Rather, it allows jurisdictions to provide funding if they would like to do so. Also, SB 1383 provides a broad grant of authority to jurisdictions to “collect fees to recover the local jurisdiction’s costs incurred in complying with the regulations...” The types of fees a jurisdiction may impose are not limited to tip fees or franchise fees. That said, some jurisdictions in California are already successfully using such fees to fund food recovery operations and activities.</p>
3362	Yazdani, R., County of Yolo	<p>Section 18991.3 Commercial Edible Food Generators</p> <p>Comments: While Tier One commercial edible food generators should have an easier way to comply with this new regulation we foresee it being very difficult for Tier Two commercial edible food generators to comply due to lack of infrastructure. Our recommendation is that alternate language is proposed for this section that clearly upholds the programs if infrastructure is in place but that these businesses be exempted if no infrastructure is available. For example: Tier One generators are large grocery stores such as Nugget Markets who should have little problem getting</p>	<p>Section 18991.1 requires a jurisdiction to implement an edible food recovery program that includes the actions the jurisdiction will take to accomplish increasing edible food recovery capacity if the analysis required by Section 18992.2 indicates that the jurisdiction does not have sufficient capacity to meet its edible food recovery needs. The regulations are structured so that jurisdictions will be required to begin edible food recovery capacity planning in 2022 to ensure that sufficient capacity exists to meet their edible food recovery needs. Tier two commercial edible food generators are required to comply in 2024. That gives the jurisdictions two additional</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>excess food over to the Food Bank Monday-Friday during normal 8am-5pm operating hours. When Tier Two generators, such as Taber Ranch in the Capay Valley and the Old Sugar Mill in Clarksburg, these are special event venues who host food generating events primarily in the evenings and on weekends when currently there is no type of drop off or pickup service available on evenings or weekends when most special events occur.</p>	<p>years to build capacity if needed, and tier two generators two years more than the tier one generators to prepare for compliance.</p> <p>To address this comment, and the concerns about insufficient capacity to service commercial edible food generators, CalRecycle has revised Section 18991.3. Specifically, language was added to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. One of the extraordinary circumstances specified is a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity. Therefore, if a jurisdiction has failed to increase edible food recovery capacity as is required by the edible food recovery capacity planning section of the regulations (Section 18992.2), then commercial edible food generators in that jurisdiction are not required to comply with the requirements of Section 18991.3 as long as they can demonstrate that the jurisdiction has failed to comply with SB 1383's edible food recovery capacity planning requirements. However, the regulations also specify that the burden of proof shall be upon the commercial edible food generator to demonstrate extraordinary circumstances.</p>
3363	Yazdani, R., County of Yolo	<p>Section 18994.2 Jurisdiction Annual Reporting  Comments: Under section (i) Article 12 it requests that the County provide CalRecycle the dollar amount spent on recycled content paper and recycled content products. It seems unnecessary that the state would need to see our financials to prove compliance with recycled content purchases. It is requested that CalRecycle strike Section 18994.2.</p>	<p>CalRecycle has revised the regulatory language to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content. The reporting requirements in Section 18994.2 have also been updated to reflect this change by deleting the requirement for jurisdictions to report on the dollar amounts spent on paper and recycled content paper purchases.</p>
3364	Yazdani, R., County of Yolo	<p>Section 18993.1 Recovered Organic Waste Product Procurement Target  Comments: (1) This requires a shift to renewable transportation fuel by 2022. Yolo County has invested significant resources into the conversion and use of electric vehicles which would not meet compliance with this new regulation. It is requested that CalRecycle include language that allows other alternative fuels to count towards compliance or language that allows for certain vehicle types to use renewable fuels such as heavy equipment from jurisdiction Public Works Departments; (2) It is requested that CalRecycle look at adding language to exempt Special Districts (JPAs, Cemetery Districts, Fire Districts, etc.) that work on behalf of rural jurisdiction in complying with this section; (3) For jurisdiction owning or operating compost facilities, providing an exemption from further having to procure compost.</p>	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>The recovered organic waste product procurement target only applies to cities and counties. Due to overlap between a city's population and the population of a special district, the regulation was narrowed to only apply the procurement targets to cities and counties. Procurement targets will be assigned to each city and county based on population data published by the Department of Finance (DOF). The individual city or county is ultimately responsible for compliance with the procurement requirements, regardless of whether waste collection responsibilities are delegated to another entity. The procurement target is linked to the waste created by the population that resides within the city, not the number of generators provided a collection service. Whether the city or another entity provides the service is irrelevant, the residents of the city are creating waste and the city is responsible for procuring a minimum amount of recovered organic waste products to mitigate the impacts of that waste creation.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>It is the intent of Article 12 for jurisdictions to work with special districts and similar entities to meet the jurisdiction’s procurement targets, which may be accomplished through a contract or agreement, such as a Memorandum of Understanding (MOU).</p> <p>CalRecycle disagrees with the recommended revisions. Jurisdictions owning or operating compost facilities may count the compost produced in those facilities and used or donated by the jurisdiction toward the procurement target. “Procure” does not necessarily mean purchased, and these jurisdictions are not required to further procure compost if they already meet the procurement target.</p>
3365	Yazdani, R., County of Yolo	<p>Section 18993.4 Record Keeping Requirements for Recycled Content Paper Procurement</p> <p>Comments: This requires our Purchasing Department to provide CalRecycle with copies of all invoices and receipts demonstrating that recycled content paper has been purchased per the requirements set above. Suggested language would be that instead of all invoices, receipts and proof of recycled content certification being made available each year, the language reads that a report provides a summary of this data through our office supply vendors.</p>	CalRecycle has revised Section 18993.4(a)(1) to allow proof of purchase other than receipts and invoices to be used.
3366	Yazdani, R., County of Yolo	<p>Section 18994.2 Jurisdiction Annual Reporting</p> <p>Comments: Section (a) needs clarification</p> <p>(a) Commencing August 1, 2022, and annually thereafter, a jurisdiction shall report the information required by this section. The report submitted in 2022 shall cover the period of January 1, 2022-June 30, 2022. Each subsequent report shall cover the entire previous calendar We would like clarification on what this means. Our current system of reporting for a “calendar” year is January –December therefore this year (2019) for example we will report the following on our EAR (Jan.1, 2018-Dec. 3, 2018) on August 1, 2019. This allows is 7 months to prepare the report for CalRecycle. In reading the section highlighted in red if in 2022 only we are asked to do the following report Jan. 1-June 30, this would only allow haulers 15 approximately days to get us their data and allow the County approximately 15 days to review that data and compile a report by the August 1st deadline.</p> <p>1. Could you please verify if our interpretation is correct? In order for the County and its haulers to compile data and review it with accuracy we do not feel 30 days is sufficient. Could the reporting date in 2022 be moved to October 1st?</p> <p>2. Also, it does not mention whether the normal Jan. 1, 2021-Dec. 31, 2021 data would need to be provided in the year 2022. Is this Jan.-June 2022 report in lieu of the calendar year report or is CalRecycle asking for two reports to be submitted in 2022?</p>	This section was changed in response to stakeholder comments for improved clarity and adequate reporting time for the first compliance year.
3367	Yazdani, R., County of Yolo	<p>Section 18994.2 Jurisdiction Annual Reporting</p> <p>Comments: It is anticipated the level of reporting and preparing for this report will take a significant amount of time and attention on behalf of County Integrated Waste Management staff because we will not only be responsible for unincorporated</p>	Comment noted. CalRecycle may consider streamlined jurisdiction reporting opportunities, such as modifying the Electronic Annual Report process.

Comment Number	Received From	Question/Comment	Response(s)
		<p>County reporting, in several program areas, IWM staff will also be responsible for reporting on behalf of the cities (City of Woodland, West Sac, Winters and Davis) and UC Davis which all require outside agency coordination. The current “expectation” from CalRecycle over the past 4 years is that IWM staff provide updates and data throughout the year outside of what is required by law. It has been verbally communicated by the Local Area Market Development (LAMD) staff at CalRecycle that its intentions are the same under SB1383. County staff would be required to provide updates and data throughout the year however this section only requires it on an annual basis. Challenging the current requests has put County staff in a bad position with the regulator who oversees our compliance. They have agreed that it is not required by law to provide these extra reports but recommends that it is in the best interest of the County to do so, which has created a lot of extra work for staff. We are asking CalRecycle to clearly take a position on this issue and ask that language be added to account for the additional staff time required to compile these reports and data mid-year or as a County we let the language stand and stand firm that no additional reports or data will be provided outside of these written requirements.</p>	
3368	Yazdani, R., County of Yolo	<p>Section 18995.1 Jurisdiction Inspection and Enforcement Requirements  Comments: Funding will need to be created to pay for a code enforcement officer to write citations for rural businesses that do not segregate out their organic food waste or establish a food recovery system through the Food Bank, regardless of economic hardship on the business to establish such programs. County staff is already working with the businesses subjected to AB1826 requirements and have found numerous challenges due to the cost of organics collection and processing. Now that the threshold has narrowed further, we will be working with even smaller rural businesses and farms to comply. SB1383 requires an enforcement mechanism which is not currently in place under AB1826 which we believe will push small business out of state or rather it will be cheaper to pay the fee than to pay for the actual collection services and therefore the penalty will become the norm. We would like CalRecycle to explain what they are doing to help minimize the cost of organics collection.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3369	Yazdani, R., County of Yolo	<p>. Section 18996.7 Department Enforcement Action Regarding Local Education Agencies  Comments: This section asks the County to issue a citation if an educational agency (ex. UC Davis, Knights Landing Charter School, Clarksburg Elementary, etc.), is not in compliance. However, under our solid waste franchise agreements where these program are facilitated, the County nor our haulers (WM and Recology) have jurisdiction over educational agencies as they act independent. We currently report</p>	<p>A change to the regulatory text is not necessary. Section 18996.5 and Section 18996.7 state that a jurisdiction does not have authority to take enforcement action against entities outside their boundaries or that are not subject to local solid waste control.</p>

Comment Number	Received From	Question/Comment	Response(s)
		to the state if these educational agencies are in compliance and would continue to do so but do not feel we have the legal authority to impose fines on them and therefore this section should be eliminated.	
3370	Yazdani, R., County of Yolo	<p>. Section 17896.25.1 Load checking – Contamination in Source Separated Organic Waste</p> <p>Comments: The Yolo County Central Landfill will need to increase organics tip fees to allow for the increased staff time to monitor organics loads coming inbound to our digester and track contamination (trash mixed in with food waste). It is required that 2 load checks be completed each day and records are kept on whether these loads were accepted, rejected, what was in the load, who the hauler was, jurisdiction of origin, etc. and that the full 718 load checks for the year are reported in detail with our electronic annual report. This section also includes annual verification that staff have been trained on load check who monitor the new digester at the landfill. This will further increase costs associated with the processing of organics therefore we recommend that the language be modified to do no more than 5 each week for a total of 260 inspections per year.</p>	CalRecycle has deleted the loadchecking requirements, Section 17896.25.1 in response to comments.
3371	Yazdani, R., County of Yolo	<p>TITLE 14: NATURAL RESOURCES 4 DIVISION 7. DEPARTMENT OF RESOURCES RECYCLING AND RECOVERY</p> <p>Chapter 3. Minimum Standards for Solid Waste Handling and Disposal</p> <p>Article 6.2 Operating Standards</p> <p>Section 17409.5.2. Measuring Organic Waste Recovered from Mixed Waste Organic Collection Stream.</p> <p>Section 17409.5.3. Measuring Organic Waste in Residuals Removed from Mixed Waste Organic Collection Stream.</p> <p>Section 17409.5.4. Measuring Organic Waste Recovered from Source Separated Organic Waste Collection Stream.</p> <p>Section 17409.5.5. Measuring Organic Waste in Residuals Removed from Source Separated Organic Waste Collection Stream.</p> <p>Chapter 3.2. In-Vessel Digestion Operations and Facilities Regulatory Requirements</p> <p>Article 3. Operating Standards for In-Vessel Digestion Operations and Facilities</p> <p>Section 17896.44.1. Measuring Organic Waste in Residuals</p> <p>These above sections listed contain several requirements intended to quantify, on a daily basis, the amounts of organic waste at various process stages. We appreciate and agree with the goal of gaining better understanding of residue levels after processing, but we are unclear as to how this would result in reduction of SCLP emission. We suggest revising the section to state that the frequency, procedures, and sample sizes used in the testing involved in these sections be developed using scientific methods by the Operators in conjunction with the EA. The methods developed should consider site specific operations, waste streams, and methods of processing. The proscribed method would increase level of staffing and equipment</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. This is needed to determine the efficiency of the facility in order to make required determinations in Article 3.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite sample be a random and representative of a typical operating day for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard.</p> <p>The sampling frequency 10 consecutive days was based on that 2 consecutive weeks per quarter, yielding 10 samples per quarter and 40 samples per year. This is consistent with ASTM calculation method (Standard Test Method for Determination of the Composition of Unprocessed Municipal Solid Waste; ASTM International; Designation: D-5231-92 (Reapproved 2003)) for estimating the number of samples required to achieve a pre-determined precision of specific material type. Using data from the “2014 Disposal-Facility- Based Characterization of Solid Waste in California”, the two most abundant “organics” material types found at landfills and/or curbside pick-up collection systems were “Uncoated Corrugated Cardboard” and “Food”. Furthermore, the 2014 study used a confidence interval of 90% for all data calculations (2014 Disposal Facility- Based Characterization of Solid Waste in California, Page 22). Applying this information to the equation outlined in the ASTM publication, of a 200-pound sample and a precision of 10%, yields a required sample number of 49 for “Uncoated Corrugated Cardboard” and 24 for “food”. Since “Organic Waste Recovery Efficiency” is not specific to a material type such as “Uncoated Corrugated</p>

Comment Number	Received From	Question/Comment	Response(s)
		unnecessarily and results in substantial cost to consumers for the handling of organic wastes.	<p>Cardboard” or “Food”, rather just “Organic” or “Not Organic”, it is rational to average the 2 numbers (a sample number of 49 for “Uncoated Corrugated Cardboard” and 24 for “food”) and present a more inclusive required sample number. The average of those two numbers is 37 samples.</p> <p>Additionally, after consulting with divisions within CalRecycle, a significant number of jurisdictions use “Every other week” collection for a portion of their waste stream. Many of these jurisdictions use the same facility or facilities for waste processing. A consecutive two-week sampling standard would ensure that jurisdictions with “Every other week” collections streams are reflected in the sampling. Based on the expert data 10 consecutive days was used instead of 14 to help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>The 200 pounds is what was used for the Statewide waste characterization studies performed during the past 5 years by California (CalRecycle), Washington, New York, Georgia and Connecticut have used a sample weight between 200 to 300 pounds. Furthermore, ASTM international (American Society for Testing and Material) also suggests a minimum sample weight of 200 pounds be used in waste characterization related studies.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>
3372	Yazdani, R., County of Yolo	<p>TITLE 14: NATURAL RESOURCES 4 DIVISION 7. DEPARTMENT OF RESOURCES RECYCLING AND RECOVERY</p> <p>Chapter 3. Minimum Standards for Solid Waste Handling and Disposal</p> <p>Article 6.2 Operating Standards</p> <p>Section 17409.5.7. Loadchecking – Contamination in Source Separated Organic Waste.</p> <p>Chapter 3.1. Composting Operations Regulatory Requirements</p> <p>Article 5.0. Composting Operation and Facility Siting and Design Standards</p> <p>Section 17867. General Operating Standards.</p> <p>Chapter 3.2. In-Vessel Digestion Operations and Facilities Regulatory Requirements</p> <p>Article 2.0. Siting and Design</p> <p>Section 17896.25.1. Loadchecking – Contamination in Source Separated Organic Waste</p> <p>TITLE 27. ENVIRONMENTAL PROTECTION</p> <p>Division 2. Solid Waste</p> <p>Chapter 3. Criteria for All Waste Management Units, Facilities, and Disposal Sites</p> <p>Subchapter 4. Criteria for Landfills and Disposal Sites</p> <p>Article 4. CIWMB CalRecycle—Controls</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17049.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>§20901. CalRecycle—Loadchecking Contamination in Source Separated Organic Waste.</p> <p>The above sections listed load check requirement of two per day, regardless of volume is excessive. At YCCL we operate 360 days per year, so that would be over 700 formal load checks on organic wastes alone. The load check requirements should be phrased similarly to the existing load check requirements for operators (See Sections 17409.5 and 17896.25.). In addition, the notification requirement should be modified to limit notifications to substantial contamination loads or rejected loads, rather than every load with visible contamination.</p>	
3373	Yazdani, R., County of Yolo	<p>TITLE 27. ENVIRONMENTAL PROTECTION  Division 2. Solid Waste  Chapter 3. Criteria for All Waste Management Units, Facilities, and Disposal Sites  Subchapter 4. Criteria for Landfills and Disposal Sites  Article 2: Alternative Daily Cover Material and Beneficial Reuse  §20700.5. CalRecycle—Long-Term Intermediate Cover.</p> <p>We understand that goal of increasing the thickness of landfill intermediate cover from the current 12 inches to 36 inches is to reduce potential fugitive emissions from SLCP. There are many site specific conditions that can influence these emissions such as type of intermediate cover, soil type, soil moisture, average rainfall, ambient temperature, and landfill gas collection efficiency. Please see publication listed here for additional data collected from various sites in various conditions (C. Douglas Goldsmith Jr., Jeffrey Chanton, Tarek Abichou, Nathan Swan, Roger Green &amp; Gary Hater (2012) Methane emissions from 20 landfills across the United States using vertical radial plume mapping, Journal of the Air &amp; Waste Management Association, 62:2, 183-197).</p> <p>The cover thickness without consideration of these factors does not necessary yield reduction in the SLCP emissions. Requirement to increase the cover thickness should be evaluated together with the above mentioned factors. Increasing the cover thickness in all areas of intermediate cover without looking at other site specific factor could result in hauling more cover soil and increasing the overall SLCP and other climate pollutant emissions from the site. Currently landfill operators already have required monitoring, corrective action, and reporting under the Methane Emissions from Municipal Solid Waste Landfills (Title 17 CCR 95460 to 95476) for surface methane emissions. The first corrective action taken in an area with emissions is to increase gas collection efficiency. Following this, if emissions are not reduced, the operators will adjust the intermediate cover (compaction, moisture conditioning, additional cover material, etc) to reduce SLCP emissions. This has been demonstrated to have the intended effect of reducing fugitive SLCP emissions.</p> <p>Another method to reduce fugitive emissions that has been demonstrated to be effective is the use of biocover material. One such demonstration projects was</p>	<p>CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>funded by CalRecycle in 2011 (“Biocovers at Landfills for Methane Emissions Reduction Demonstration” Link: <a href="https://www2.calrecycle.ca.gov/Publications/Details/1367">https://www2.calrecycle.ca.gov/Publications/Details/1367</a> ) and published in Waste Management Journal in 2015 (Changgen Mei, Ramin Yazdani, Byunghyun Han, Erfan Mostafid, Jeff Chanton, Jean Vander Gheynst, Paul Imhoff (2015) ”Performance of Green Waste Biocovers for Enhancing Methane Oxidation”, Waste Management, 39, 205-215. This method can reduce the need for additional cover soil and maintain ideal condition for cover soil to reduce SLCP emissions. The biocover acts to prevent cracking, and maximize gas collection efficiency as demonstrated in this research study.</p>	
3374	Yazdani, R., County of Yolo	<p>Chapter 4. Documentation and Reporting for Regulatory Tiers, Permits, WDRs, and Plans  Article 3.2. CalRecycle—Other Requirements  §21695. CalRecycle—Organic Disposal Reduction Status Impact Report  The Organic Disposal Reduction Status Impact Report requires operator to prepare and submit a report after 180 days of the effective date of this regulation. YCCL recommends that this report be due two-years after the implementation of the regulation to allow adequate time for collection of supporting data the is required for the analysis under section 21695(c) (13 items listed).</p>	<p>CalRecycle has revised Section 21695 in response to comments. The changes to the regulatory text include the requirement that operators identify those areas in the landfill that would remain with intermediate cover and to extend that date for submittal of the Status Impact Report (SIR) from 180 days to one year (365 days) from the effective date of these regulations.</p> <p>The SIR is a site specific, one-time submittal that is prepared by the operator after they have reviewed their landfill operations to determine any potential impacts from the reduction of organic disposal (waste flow) to their landfill. The one-year timeframe established in this regulation for the submittal of the SIR is intended to assist the operator in determining and assessing in the timing of those impacts in order properly implement any changes or modifications to the landfill in a timely manner. Because only the potential impacts associated with the reduction of the amount waste disposed will be reviewed, staff believe that one-year from the effective date of the regulations is an adequate amount of time for the operator to meet the requirements of this section.</p> <p>In addition, this section provides a list of items to be considered by the operator in order to assist them complete the SIR. This information in items listed is needed in order to adequately evaluate the potential impacts to the landfill resulting from the reduction of organic disposal at landfills. If there will be no changes to a particular item, then a statement to that effect would be adequate.</p>
3101	Young, B., Sacramento Food Bank & Family Services	<p>As we highlighted in our last round of comments, the state and local jurisdictions will only be able to achieve this goal with an appropriate investment in the capacity and physical infrastructure of emergency food recovery organizations to increase the volume of food they receive, store and distribute. To that end, we are grateful to see the January 18 draft regulations include language in Article 10 about jurisdictions being able to fund these activities through avenues such as franchise fees and local assessments, as well as the ability for generators to self-haul and enter into contracts directly with food recovery organizations. We are in strong support of these funding mechanisms, which must be included in the final language, but urge that the capacity planning process in Article 11 be expanded to formally include stakeholders such as emergency food groups, to properly inform jurisdictions about gaps &amp; needs.</p>	<p>Comment is in support of the regulations and suggests the inclusion of stakeholders in the capacity planning process. The regulations do require consultation with food recovery services and organizations as part of that process.</p>

Comment Number	Received From	Question/Comment	Response(s)
3102	Young, B., Sacramento Food Bank & Family Services	Similarly, we thank CalRecycle for the language in Article 9 that reflects the need for food recovery organizations to be able to refuse food donations. Food recovery organizations operate on extremely thin budgets, and often experience staff turnover, funding shocks or other disruptions that may prevent them from participating in an arrangement even if they were otherwise favorable. The final state and local regulations recognize as fundamental to this work that food recovery organizations' participation is voluntary, given the existing strains on the budgets of under-resourced non-profits and largely volunteer labor force engaged in food recovery.	Comment noted. Commenter is in support of the proposed regulations.
3103	Young, B., Sacramento Food Bank & Family Services	Meeting the goals in SB 1383 will create significant burdens on food recovery organizations, as the pressure to take more food will occur with tightening mandatory commercial organics recycling costs requirements from AB 1826 (Chesbro, 2014) that will raise costs for food banks. We urge inclusion, perhaps in Article 13, of an impact assessment on food recovery organizations to understand this issue and provide information to jurisdictions and other stakeholders about how to respond to any challenges raised. For example, food banks will be wondering: Is the additional food recovery estimated from this equal to, less than, or more than the additional cost on food banks to meet the mandated requirements?	The regulations specify in Section 18990.2 that nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible generator. Food recovery organizations and services are not mandated to recover food nor are they mandated to establish contracts or written agreements with commercial edible food generators pursuant to Section 18991.3(b). If the costs to recover additional food are too great, then food recovery organizations and services do not have to recover additional food. Adding a requirement to Article 13 requiring jurisdictions to perform an impact assessment on food recovery organizations and services would be overly burdensome for jurisdictions as they are already required to assess edible food recovery capacity and increase capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs.
3104	Young, B., Sacramento Food Bank & Family Services	We further urge CalRecycle to encourage jurisdictions to develop funding mechanisms that offset higher mandatory commercial organics recycling incurred that emerge in new partnerships due to recovery activities necessary to meet the 20% diversion goal. These include many possibilities, such as: Working with generators that food banks currently do not receive donations that would require de-packaging due to organizational nutrition policies, Working with donors whose offerings have a lower yield of edible food and an accordingly higher percentage of food loss during the recovery process. Funding mechanisms should recognize that 1) a large share of the costs associated with increasing the capacity for food rescue will be for labor and physical infrastructure costs associated with coordinating the additional food, 2). recovery activities pursuant to SB 1383's goal will nearly always augment work already being done with a mixture of existing and new capacity (staff, cold storage, vehicles, fuel and other fixed costs), and therefore funding should not be restricted to incremental pounds of food.	CalRecycle recognizes that there is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10, Section 18991.1 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. This language was included to encourage jurisdictions to establish a sustainable funding source to help cover their program implementation costs. If a jurisdiction decides to fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms, then it is at the discretion of the jurisdiction, not CalRecycle, to determine how the funding will be dispersed. CalRecycle would also like to clarify that nothing in SB 1383's regulations requires a food recovery organization or service to establish a contract or written agreement with a commercial edible food generator. A food recovery organization or service may wish to consider any costs associated with recovering additional food when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator. CalRecycle would also like to note that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing language in their contracts or written agreements with commercial edible food generators. For further clarification please refer to the FSOR.
3105	Young, B., Sacramento Food Bank & Family Services	CalRecycle must define and delineate between 'edible' and 'recoverable' food, in particular to define the latter term and having the diversion mandate key off of recoverable foods - not edible. Making these changes in the definitions provides essential protection and clarity rather than simply listing each food recovery organization's priority foods and nutrition policies in the local 'food donation guides'	In an early draft of the proposed regulations edible food was defined as: "Edible food" means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, "edible food" is not solid waste if it is recovered and not discarded."

Comment Number	Received From	Question/Comment	Response(s)
		<p>as CalRecycle envisions in Article 4. This is a critical distinction - many times edible foods require packing, processing, or other additional work to enable their donation. Who will pay for that? CalRecycle should consider using the nationally established definition of food eligible for donation by the Bill Emerson Good Samaritan Food Donation Act &amp; mirrored in AB 1219 (Eggman, 2017). The term "apparently wholesome food" means food that meets all quality and labeling standards imposed by Federal, State, and local laws and regulations even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. We wish to be on record that if this language is not adopted, not only will there be inconsistency with existing practice, but also some food would require additional labeling to allow recovery and donation, placing an additional burden on food banks to do so. This could significantly raise costs to achieve the diversion goal.</p>	<p>Several commenters made the argument that this definition was too restrictive, because it described "recoverable food" not "edible food." Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters' concerns about the definition of "edible food" being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following:</p> <p>"Edible food" means food intended for human consumption.</p> <p>(A) For the purposes of this chapter, "edible food" is not solid waste if it is recovered and not discarded.</p> <p>(B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code.</p> <p>Although the final definition of "edible food" is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities and eliminated the need to provide a separate definition for "recoverable food."</p>
3106	Young, B., Sacramento Food Bank & Family Services	<p>In addition, it is imperative that CalRecycle and jurisdictions exempt the 'nonprofit charitable organizations' (food banks and their non-profit partners) from fees and penalties related to their own waste incurred during compliance with SB 1383 as long as they are accepting donations with the intention to distribute the food for consumption. As the stream of donations increases, there may be more instances where food is not handled safely or as represented and if the non-profit charitable organizations are to help get this food out, it is important that they not be penalized for attempting to solve the overall problem.</p>	<p>Nothing in SB 1383's regulations requires a food recovery organization or a food recovery service to accept edible food. Section 18990.2 of the regulations states, "(d) Nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible food generator." If a food recovery organization or service cannot safely collect and distribute food because it is at maximum capacity, then it should not be collecting any more food. In addition, nothing in SB 1383's regulations requires food recovery organizations and food recovery services to enter into contracts or written agreements with commercial edible food generators. Food recovery organizations and food recovery services can choose not to participate. If a commercial edible food generator approaches a food recovery organization or a food recovery service requesting a contract or written agreement, then it is at the discretion of the food recovery organization or the food recovery service to determine if they want to enter into such contract or agreement. A food recovery service or organization may wish to consider any costs associated with recovering additional food when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator, thus subjecting them to a potential increase in costs. Please note, nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing specifications in their contracts or written agreements with commercial edible food generators.</p>
3107	Young, B., Sacramento Food Bank & Family Services	<p>Below we ask for a significant overhaul of the role of food recovery organizations in the data reporting regime; reporting requirements must be re-centered on the generators that must comply with the diversion goal. In broader consultation, we have learned that as written the requirements are simply unworkable as they would violate donor confidentiality. Instead, as food recovery groups have this information, jurisdictions should make requests - solely for pounds out of simplicity and consistency with generator donation metrics - and the food recovery group(s) can make as needed should there be cause to verify a generator report.</p>	<p>SB 1383's reporting requirements do not violate donor confidentiality. There is no requirement in SB 1383's regulations for food recovery organizations or food recovery services to report donor names. They are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.</p>

Comment Number	Received From	Question/Comment	Response(s)
3108	Young, B., Sacramento Food Bank & Family Services	Finally, we again caution CalRecycle on the potential for SB 1383 regulations to create unintended consequences that could threaten the ability of food recovery organizations-charity non-profits that feed people experiencing hunger - to access sufficient food and nutrition resources. In both definitions of 'Food Recovery' and 'Food Recovery Service' the draft regulations recognize that there could be activities conducted with payment and for-profit entities. We ask that CalRecycle emphasize the EPA's Food Recovery Hierarchy pyramid, which highlights "Feed Hungry People-Donate extra food to food banks, soup kitchens, and shelters" as the primary strategy after "Source Reduction." Food recovery organizations already occupy niche spaces and rely on the generosity of donors to access a sufficient supply of food. Recovery groups already compete with several secondary markets, from processors to pig farmers, and there are significant concerns with further pressures from revenue-based recovery organizations as the state achieves the goal to reduce the supply of these foods. Therefore we encourage CalRecycle to continue to find ways to minimize the regulatory burden and maximize generator agreement opportunities.	Several commenters explained that food recovery organizations occupy niche spaces and often rely on the generosity of food donors to access a sufficient supply of food. In addition, some food recovery groups compete with several secondary markets, from processors to pig farmers, and there are significant concerns with further pressures from revenue-based recovery organizations as the state achieves the goal to reduce the supply of these foods. CalRecycle would like to clarify that nothing in SB 1383's statute specifies that recovered edible food should first be intended for food banks, soup kitchens, and shelters. The statutory goal is that no less than 20% of currently disposed edible food be recovered for human consumption by 2025. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.
3109	Young, B., Sacramento Food Bank & Family Services	Article 1 (a) Definitions {18), the definition of edible food: We reiterate our request to strike "unserved and unsold" to prevent gaming of the system - not serving food so that it can be dumped instead of donated. We add that the Conference For Food Protection Food Donation guidelines recommend that only unserved food be recovered for donation, even though it is allowable under federal law. Prepared foods in particular that have been served or sold, which customers have access to are not usually donated and would require strict food safety controls. The "back of house" trays that have not been touched are the standard for prepared donations. There are many food safety concerns if donations came from a hot bar, salad bar, or customer return. Nevertheless, we continue to ask the Department & jurisdictions. to be mindful that food could potentially be labeled 'served' in order to avoid compliance with SB 1383.	In an early draft of the proposed regulations edible food was defined as: "Edible food" means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, "edible food" is not solid waste if it is recovered and not discarded." Several commenters made the argument that this definition was too restrictive, because it described "recoverable food" not "edible food." Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters' concerns about the definition of "edible food" being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following: "Edible food" means food intended for human consumption. (A) For the purposes of this chapter, "edible food" is not solid waste if it is recovered and not discarded. (B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code. Although the final definition of "edible food" is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities.
3110	Young, B., Sacramento Food Bank & Family Services	Article 1 {a) Definitions, a new definition of recoverable food should be inserted that: We again ask CalRecycle to restore the language used in the June "Concept" document that reflected our prior input that food recovery organizations like food banks are able to follow internal, established "standards and requirements for	CalRecycle would first like to clarify that SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. The statute does not state that 20% of healthy or nutritious food be recovered. As a result, SB 1383's regulations do not include requirements that only certain types of food be recovered.

Comment Number	Received From	Question/Comment	Response(s)
		<p>acceptance related to nutrition or quality when recovered by those organizations. Nothing in this definition shall preclude such organizations from developing more stringent standards .... "</p>	<p>CalRecycle does however, recognize that a core value of many food recovery organizations and food recovery services is to reduce food insecurity in their communities by rescuing and distributing healthy and nutritious food to help feed people in need. CalRecycle also recognizes that many food recovery organizations and food recovery services have nutrition standards for the food they are willing to accept.</p> <p>To address this, Section 18990.2 Edible Food Recovery Standards and Policies subsection (d) specifies that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from refusing to accept edible food from a commercial edible food generator. Therefore, nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from following their own internal standards and requirements for acceptance related to nutrition or quality of the food when it is recovered.</p>
3111	Young, B., Sacramento Food Bank & Family Services	<p>Article 1 (a) Definitions (24), the definition of food recovery: We are in strong support of this language. We suggest to add that the definition conform to the definition in (25) of a food recovery organization. " ... collect and distribute for human consumption which otherwise be disposed, where recovered food is first intended for no-cost charitable distribution to communities in need."</p>	<p>Nothing in SB 1383's statute specifies that recovered edible food should first be intended for no-cost charitable distribution. The statutory goal is that no less than 20% of currently disposed edible food be recovered for human consumption by 2025. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.</p>
3112	Young, B., Sacramento Food Bank & Family Services	<p>Article 1 (a) Definitions (25), the definition of food recovery organization, and (26), the definition of food recovery service: As we highlighted in our suggestions on the previous page, we remind CalRecycle of the possible unintended consequences of not explicitly stating that recovered food should be distributed for free to the public for consumption, and request this revision. We offer the additional context that if food generators want to take the federal tax deduction for donated food, it must be provided for free to the ill, needy, or children (See IRS code).</p>	<p>Nothing in SB 1383's statute specifies that recovered edible food should first be provided for free to the public for consumption. The statutory goal is that no less than 20% of currently disposed edible food be recovered for human consumption by 2025. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.</p>
3113	Young, B., Sacramento Food Bank & Family Services	<p>Article 1 Definition (76): 'Under no circumstances shall a non-profit charitable organization be considered a 'wholesale food market'.</p>	<p>Several commenters were concerned that a non-profit food recovery organization could potentially be considered a wholesale food vendor and therefore be subject to SB 1383's commercial edible food generator requirements. Language was added to the definition of "commercial edible food generator" to specify that for the purposes of this chapter, food recovery organizations and food recovery services are not commercial edible food generators. Therefore, a non-profit charitable food recovery organization cannot also be considered a wholesale food vendor and is not subject to the commercial edible food generator requirements of SB 1383.</p>
3114	Young, B., Sacramento Food Bank & Family Services	<p>Article 4 (a)(l)(E): Please strike 'Hours of operation.' These should not be required on a website since under no circumstances should food be dropped at a food recovery organization without a prearranged agreement or MOU.</p>	<p>CalRecycle removed "hours of operation" from Section 18985.2 in response to this comment and several other comments raising the same concern. The commenter is concerned that including "hours of operation" could lead to commercial edible food generators dropping off food at a food recovery organization without having permission to do so. This change was necessary to ensure that this activity does not occur, and to help protect food recovery organizations from receiving food that they were not expecting to receive.</p>

Comment Number	Received From	Question/Comment	Response(s)
3115	Young, B., Sacramento Food Bank & Family Services	Article 4 (b)(1UD): Add this line 'Information that makes it clear they must have an agreement or MOU with a food recovery organization prior to any deliveries or drop-offs.'	<p>CalRecycle provided an explanation in the FSOR in response to this comment. The explanation describes how the requirement for commercial edible food generators to have a contract or written agreement with a food recovery organization or a food recovery service, provides greater protections for food recovery organizations and food recovery services than the previous draft language.</p> <p>For context, the commenter is concerned that commercial edible food generators could self-haul edible food to a food recovery organization that they do not have a contract or written agreement with for food recovery. Donation dumping, and unexpected deliveries and drop offs of food donations are serious issues that can create significant hardships for food recovery organizations and food recovery services. Revisions were made to the regulatory text to address this concern. The FSOR clarifies that commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food recovery where the contract specifies that the generator is permitted to self-haul edible food during pre-established delivery or drop off times. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement.</p> <p>If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in the contract or written agreement, the commercial edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. It is at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the exact self-haul provisions to include in their contracts or written agreements.</p> <p>CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. The model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and food recovery services from donation dumping and unexpected donations. The model agreement is a template that is intended to be customized based on the needs of food recovery organizations, food recovery services, and commercial edible food generators.</p>
3116	Young, B., Sacramento Food Bank & Family Services	<p>(a) A jurisdiction shall not implement or enforce an ordinance, policy, or procedure that prohibits the ability of a generator or food recovery organization to recover edible food that could be recovered for human consumption.</p> <p>o With the recent passage of AB 2178 (Limon. 2018), local non-profit charities may be required to register and pay fees to their local Environmental Health Departments in order to continue operating. With that in mind. CalRecycle and jurisdiction should coordinate with EH D's about the new food waste diversion goals that local food recovery organizations will be striving to meet. Perhaps this could be included in Article 13; we are open but ask for a response on how to ensure coordination and prevent duplicate regulation.</p>	<p>A change to the regulatory text was not necessary for the following reasons. Throughout the rulemaking process CalRecycle has worked with local environmental health departments, the Public Health Alliance of Southern California, and the California Conference of Directors of Environmental Health to help educate environmental health officials about the food recovery goal of SB 1383 and the law's food recovery regulations. CalRecycle is actively engaging with these stakeholders on an ongoing basis. In addition, the commenter asked CalRecycle to add requirements to Article 13, but due to the lack of clarity in the comment itself, it is unclear exactly what the commenter would like added to Article 13. For these reasons no changes to the regulatory text were made.</p>

Comment Number	Received From	Question/Comment	Response(s)
3117	Young, B., Sacramento Food Bank & Family Services	<p>(d) Nothing in this chapter prohibits an edible food recovery service or organization from refusing to accept edible food from a generator. In fact, all generators must have agreements in place with food recovery organizations before deliveries or drop-offs and even in that context, any specific delivery can be refused because of quality, condition, lack of space, quality, type, condition, or any other reason.</p> <p>o We appreciate CalRecycle's addition of this language, and again insist that it remain included and broadly interpreted by jurisdictions to give recovery organizations the flexibility they need given the diversity of situations that arise.</p> <p>IDENTICAL 3089</p>	<p>A change to the regulatory text was not necessary because Section 18990.2. (d), already specifies that nothing in this chapter prohibits an edible food recovery service or organization from refusing to accept edible food from a generator. It is not necessary to add language about the reasons why a food recovery organization or service can refuse edible food. The language in section 18990.2. (d) is sufficient to give food recovery organizations and services the authority they seek to refuse edible food.</p> <p>The FSOR also clarifies that commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food recovery where the contract specifies that the generator is permitted to self-haul edible food during pre-established delivery or drop off times. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement.</p> <p>If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in the contract or written agreement, the commercial edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. It is at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the exact self-haul provisions to include in their contracts or written agreements.</p> <p>CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and food recovery services from donation dumping and unexpected donations. The model agreement is a template that is intended to be customized based on the needs of food recovery organizations, food recovery services, and commercial edible food generators.</p>
3118	Young, B., Sacramento Food Bank & Family Services	<p>(b) A jurisdiction may fund the actions taken to comply with this section through franchise fees, local assessments, or other funding mechanisms. Under no circumstances should jurisdictions charge fees or assessments to food banks or other non-profit food recovery organizations.</p> <p>o This language is essential in recognizing the financial and human resource burden that food recovery organizations will face in working to meet the 20% diversion goal, and we are in strong support.</p>	<p>CalRecycle will not identify a specific entity that jurisdictions cannot charge fees to, as this raises an authority issue. However, CalRecycle would like to clarify that the language in Section 18991.1 (b) was included in the regulations to encourage each jurisdiction to establish a sustainable funding source to help fund its food recovery program and food recovery organizations and services operating in the jurisdiction.</p>
3119	Young, B., Sacramento Food Bank & Family Services	<p>Regarding (2), With the passage of AB 2178 (Limon. 2018), local Environmental Health Departments will be required to keep records of what organizations food banks partner with, and documentation directly from non-food bank affiliated non-profit organizations that are serving ready-to-eat food. In an effort to minimize the duplication of record-keeping efforts, we request that local jurisdictions</p>	<p>Regarding the comment about AB 2178, it was unclear what the commenter's concern was regarding duplication of recordkeeping requirements. The commenter did not provide additional information to identify if any of the recordkeeping requirements in SB 1383 are the same as the recordkeeping requirements of AB 2178. "Duplication of recordkeeping efforts" is very vague and additional context needed to be provided before any changes to the regulations could be considered.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>communicate with EH D's to obtain records of the relevant information to avoid duplicate efforts with food banks.</p> <p>Article 10. Section 18991.2{2}: A list of edible food recovery organizations in the jurisdiction and their edible food recovery capacity</p> <p>Add: 'and how to contact them to put in place a contract or agreement for food recovery'</p>	<p>Regarding the comment about the list of food recovery organizations, Section 18985.2 (a)(1) requires jurisdictions to develop a list of food recovery organizations and food recovery services operating within the jurisdiction and maintain the list on the jurisdiction's website. The list must be updated annually. The list must include, at a minimum, the following information about each food recovery organization and each food recovery service that it includes:</p> <p>(A) Name and physical address.</p> <p>(B) Contact information.</p> <p>(C) Collection service area.</p> <p>(D) An indication of types of food the food recovery service or organization can accept for food recovery.</p> <p>The regulations already include the requirement that the list include the contact information for each food recovery organization and service that is included on the list. Adding the commenter's proposed requirement would be redundant, because it is already required that the contact information is listed for each food recovery organization and food recovery service.</p> <p>However, if a jurisdiction is inclined to include 'information on how to contact the food recovery organization to establish contract or written agreement for food recovery' with their list, then they may do so. As stated in Article 9, Section 18990.1 (a), nothing in this chapter is intended to limit the authority of a jurisdiction to adopt standards that are more stringent than the requirements of this chapter, except as provided in Subdivision (b) of Section 18990.1.</p>
3120	Young, B., Sacramento Food Bank & Family Services	<p>{b) (1) Contracting with food recovery services or organizations that will collect their edible food for food recovery, and {2) Self-hauling edible food to a food recovery organization that will accept the edible food for food recovery and with whom the generator has an agreement or MOU.</p> <p>(b)(l) &amp; (2) are critical, and we strongly support their inclusion with the modification of needing an agreement. It is our interpretation that this is permissive of generators and recovery organizations agreeing to contractual terms that would enable recovery groups to charge for their recovery costs - though that would have to be negotiated between the parties. If this is not correct, we urge in the strongest possible terms that language be included that clarify this.</p>	<p>The commenter is concerned that commercial edible food generators could self-haul edible food to a food recovery organization that they do not have a contract or written agreement with for food recovery. Donation dumping, and unexpected food donations are serious issues that can create significant hardships for food recovery organizations and food recovery services. Revisions were made to the regulatory text to address this concern.</p> <p>CalRecycle first revised the regulatory text following the 45-day formal comment period in response to this comment. Specifically, language was added to Section 18991.3 that stated, "food that is self-hauled pursuant to this section shall be done with the consent of the food recovery organization." However, in the subsequent October 2019 draft of regulatory text, this language was removed because it was no longer necessary due to other revisions that were made.</p> <p>Specifically, new revisions were made to Section 18991.3 Commercial Edible Food Generators. The revision added the requirement that commercial edible food generators must comply with the requirements of Section 18991.3 through a contract or written agreement with any or all of the following: (1) Food recovery organizations or services that will collect their edible food for food recovery. (2) Food recovery organizations that will accept the edible food that the commercial edible food generator self-hauls to the food recovery organization for food recovery. Therefore, commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food recovery. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement. If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>the contract or written agreement, the commercial edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. Also, nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing language in their contracts or written agreements with commercial edible food generators. For further clarification please refer to the FSOR.</p> <p>CalRecycle would also like to note that the Department developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, commercial edible food generators, and jurisdictions. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and services from donation dumping and unexpected donations. We again would like to reiterate that this model agreement is only a template and is intended to be customized based on the needs of food recovery groups and commercial edible food generators.</p>
3121	Young, B., Sacramento Food Bank & Family Services	<p>(a) A commercial edible food generator subject to the requirements in this article shall keep a record that includes the following:</p> <ul style="list-style-type: none"> <li>o {3} An edible food generator that complies with the requirements of this article through contracting with a food recovery service or organization as allowed in Section 10.3 shall keep a record of the following for each food recovery organization or service that the edible food generator contracts with: <ul style="list-style-type: none"> <li>• (A) The name, address and contact information of the service or organization.</li> <li>• {B} The types of food that will be collected by or transported to the service or organization.</li> <li>• {C} The established frequency that food will be collected or transported, with the exception of 'on call' or 'one-time' donors.</li> <li>• We request to modify this line. Many donors are on regular schedules, and this regulation will often be consistent with and reinforce those practices. Yet, for infrequent donors, donations can vary greatly based on factors such as inventory, season, weather conditions and consumer demand. Likewise, food recovery organizations are sometimes asked to be "on call," meaning they only pick up when asked. Therefore it can be difficult in some cases to establish a regular frequency, and it is not practical or helpful to track this metric.</li> <li>• (D) The quantity of food collected or transported to a service or organization for food recovery. <ul style="list-style-type: none"> <li>• 1. Quantity shall be measured in pounds recovered per month.</li> <li>• <del>2. An Edible food generator may use an alternative metric provided by the food recovery service or organization to measure the quantity of food recovered.</del></li> </ul> </li> </ul> </li> </ul> <p>We request to strike this line, in order to maintain a single metric - pounds - to avoid the confusion of multiple measures and creating the need to translate/reconcile across different metrics.</p>	<p>A change to the regulatory text was not necessary because it is anticipated that the majority of commercial edible food generators will not be infrequent donors. They will have edible food available for food recovery on a regular basis. Therefore, some kind of frequency for collection or self-haul must be established and documented. CalRecycle would like to clarify that nothing prohibits a food recovery organization and commercial edible food generator from establishing more than one frequency to account for changes in the amount of food available. For example, a local education agency could have one established frequency for collections during the school years, and a different established frequency during the summer months when there is less food to recover. Maintaining a record of the established a frequency that edible food is collected or self-hauled is also important, because this information will help jurisdictions determine if a commercial edible food generator is recovering the maximum amount of edible food that would otherwise be disposed.</p> <p>With regard to the comment about using pounds as the only metric, CalRecycle agrees with this comment and removed the following language from the regulatory text: "2. An edible food generator may use an alternative metric provided by the food recovery service or organization to measure the quantity of food recovered." By removing this language, all commercial edible food generators are now required to track pounds of food recovered. CalRecycle agrees with the commenter that this revision will eliminate confusion of multiple metrics, and also make commercial edible food generator recordkeeping more consistent as they will all be required to track pounds.</p>
3122	Young, B., Sacramento Food	a) A food recovery organization or service that collects or receives 12 6 tons or more of edible food from edible food generators per year shall maintain a record that includes all of the following. Jurisdictions may request to review & audit food	The language referred to in the comment regarding tons was deleted during the rulemaking process.

Comment Number	Received From	Question/Comment	Response(s)
	Bank & Family Services	recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported. In further consultation with member food banks, 6 tons is a low threshold to conform to the small capacity groups the Department seeks to prevent over-regulation. In addition, there are significant restrictions on donation data that would make compliance with the regulations, as written, impossible for food banks and member agencies.	
3123	Young, B., Sacramento Food Bank & Family Services	<del>(4) The total number of meals served per month if applicable.</del> As in 18991.4, we request the simplicity and consistency of pounds. The metric of meals is based on a conversion from pounds, and represents an estimated average. We recommend tracking pounds only, as it will be more consistent and simpler to track across many organizations. It would be burdensome on existing staff to have to report these numbers on a regular basis, and would introduce confusion in matching donated vs. transported vs. recovered meals. Finally, meals can be calculated from pounds and is simply unnecessary to report. IDENTICAL 3095	CalRecycle agrees with this comment and removed the following language from the regulatory text: "An edible food generator may use an alternative metric provided by the food recovery service or organization to measure the quantity of food recovered." By removing this language, all commercial edible food generators will be required to track the pounds of food recovered. This revision will eliminate confusion of multiple metrics, and also make commercial edible food generator recordkeeping more consistent as they will all be required to track pounds.
3124	Young, B., Sacramento Food Bank & Family Services	Section 18992.2 Edible food recovery Capacity In (a), we strongly support the capacity planning process as outlined but urge that counties coordinate not just with cities and regional agencies but also with "all relevant edible food recovery stakeholders, including all of but not limited to food recovery organizations, generators and haulers." Currently, such stakeholder involvement would occur only after the process outlined in (b)(2), suggesting a planning scenario that would exclude the organizations with the expertise necessary for an effective planning process as outlined in (a) & (b).	Section 18992.2 states that in complying with this section the county in coordination with jurisdictions and regional agencies located within the county shall consult with food recovery organizations and food recovery services regarding existing, or proposed new and expanded capacity that could be accessed by the jurisdiction and its commercial edible food generators. It is inherent in the requirements of Section 18992.2 (a)(2)-(4) that counties, in coordination with jurisdictions and regional agencies located within the county, will have to consult with food recovery organizations, food recovery services, and other key food recovery stakeholders to help assess edible food recovery capacity. In addition, nothing in SB 1383's regulations would prohibit a county, jurisdiction, or regional agency from consulting with haulers.
3125	Young, B., Sacramento Food Bank & Family Services	In (b), we strongly support and urge that this language remain in the final regulations. Capacity is essential to achieving the state's goal, and jurisdictions must include implementation schedules that prioritize how to provide revenues that can support the real costs necessary to divert additional food in a food safe manner - the trucking, cold storage, fuel, staffing and administrative costs that food banks and other emergency food organizations struggle to provide already. If a county identifies that new or expanded capacity is needed to recover the amount of edible food identified in (a)(4), then each jurisdiction within that county that lacks capacity shall: A small but important typographical change	Some commenters noted that there was a minor grammar error in Section 18992.2 Edible Food Recovery Capacity (b). A minor grammar edit was made to the regulatory text in response to this comment. This edit was necessary to ensure that the requirement is interpreted accurately. The minor grammar edit that was made can be found below. (b) If a county identifies that new or expanded capacity is needed to recover the amount of edible food identified in (a)(4), then each jurisdiction within that county that lacks capacity shall:
3126	Young, B., Sacramento Food Bank & Family Services	Article 13 Section 18994.2. Jurisdiction Annual Reporting (h) A jurisdiction shall report the following regarding its implementation of the edible food recovery requirements of Article 10. o (1) The number of commercial edible food generators located within the jurisdiction. o (2) The number of food recovery services and organizations located and operating within the jurisdiction that collect or receive more than 12 e tons of food per year. • (A) A Jurisdiction shall require food recovery organizations and services that are located within the jurisdiction and collect or receive 12 i-tons or more of edible food	The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance.

Comment Number	Received From	Question/Comment	Response(s)
		<p>per year to report the amount of edible food recovered by the service or organization in the previous calendar year to the jurisdiction.</p> <ul style="list-style-type: none"> <li>• As with Article 10 Section 18991.5, we recommend doubling the 6 ton threshold.</li> <li>• We also reiterate our position in Article 10 18991.5: 18994.2 must be struck as written, and replaced with language that "jurisdictions may request to review &amp; audit food recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported .. "</li> <li>• Food recovery organizations already track and could make records available upon request by the jurisdiction or State (in order for the jurisdiction or State to reconcile with food generator reporting as part of an audit or compliance review). Moreover, for many food recovery groups this information is tracked but proprietary under existing agreements with generators, which this requirement could disrupt and have the unintended consequence to prevent donations.</li> <li>• We urge that the reporting requirement occur solely with the food generator, not with the food recovery organization, for consistency and ease of regulatory oversight. If reporting flows from the food recovery organization up to the local jurisdiction, then up to the State, reconciliation with the food generators' output will be very difficult.</li> <li>• Food generator reporting would be provided to the State, local jurisdictions and food recovery organizations.</li> </ul>	<p>To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold from the regulatory text. The final regulations require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food directly from commercial edible food generators, pursuant to Section 18991.3 (b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.</p> <p>Regarding the comment that "jurisdictions may request to review &amp; audit food recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported." There are no requirements in the regulations that mandate the reporting of such information. If a public agency does decide to retain copies of commercial edible food generator records or food recovery organization and food recovery service records for enforcement purposes or audit purposes, they would be subject to the Public Records Act as well as any applicable provisions exempting the disclosure of proprietary or trade-secret information.</p> <p>CalRecycle would also like to clarify that SB 1383's reporting requirements do not violate donor confidentiality. There is no requirement in SB 1383's regulations for food recovery organizations or food recovery services to report donor names. They are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.</p> <p>Regarding the comment requesting that the reporting requirement occur solely with the food generator and not with food recovery organizations and services. It is not prudent to require each individual commercial edible food generator to report information to the jurisdiction. Such a revision would require jurisdictions to review and aggregate data from thousands of commercial edible food generators rather than a much smaller number of food recovery organizations and food recovery services. For example, one food bank could work with over a hundred commercial edible food generators. It is far more efficient and feasible for a jurisdiction to review one report from the food bank rather than 100 individual reports from generators that all work with the same food bank.</p>
3127	Young, B., Sacramento Food Bank & Family Services	Article 14, Section 18995.1 Jurisdiction Inspection and Enforcement Requirements (2): Unclear what food recovery organizations would be complying with in this section. Please provide a written answer and we will offer further comment.	To clarify, any food recovery organization or food recovery service that has a contract or written agreement with one or more commercial edible food generators pursuant to Section 18991.3 (b) is required to maintain records and report information to the jurisdiction. Therefore, any food recovery organization or service that has a contract or written agreement pursuant to Section

Comment Number	Received From	Question/Comment	Response(s)
			18991.3 (b) is also subject to inspection by the jurisdiction to verify that they are in compliance with the SB 1383 recordkeeping and reporting requirements that they are subject to.
3128	Young, B., Sacramento Food Bank & Family Services	Article 16. Section 18997, Table 1 (last row): Non-profit food recovery organizations should not be penalized if they are keeping records in good faith.	<p>The only recordkeeping requirements for food recovery services and organizations are established in Section 18991.5. This section establishes minimum recordkeeping requirements for food recovery services and organizations that elect to establish a contract or written agreement with a commercial edible food generator pursuant to Section 18991.3 (b). A food recovery service or organization that does not have a contract or written agreement with a commercial edible food generator pursuant to Section 18991.3 (b) is not subject to the recordkeeping requirements. A food recovery service or organization may wish to consider any costs associated with recordkeeping when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator, thus subjecting them to the recordkeeping requirements of the regulations.</p> <p>Furthermore, the timeline for issuing penalties provides ample time for a food recovery organization or service to achieve compliance with the recordkeeping requirements. An entity may have up to seven months to come into compliance with a violation such as recordkeeping. CalRecycle believes this provides sufficient time for an entity acting in good faith to come into compliance with the requirements.</p>
3465	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	While the City supports the goals of SB 1383, the City will need more flexibility in the regulations and the ability to prioritize funding for program development and capacity building. In the current proposed text, a tremendous amount of effort is placed on Reporting and Enforcement (Sections 13 and 14, respectively), which constrains funds and resources to enforcement, rather than allow development of new organics initiatives and infrastructure. The City recommends that CalRecycle reduce the burden of enforcement and record keeping so that the City may prioritize program development and capacity building. Furthermore, the proposed requirements and penalties imposed on generators, including single and multifamily households, are broad and punitive. The civil penalty structure would disproportionately affect low-income residents and small businesses.	<p>A change to the regulatory text is not necessary. The reporting and recordkeeping requirements are the minimum amount needed to allow CalRecycle to ensure a jurisdiction's compliance with the Chapter. The recordkeeping requirements also assist a jurisdiction in verifying and tracking their own progress and if they are complying with the law.</p> <p>The Chapter allows a jurisdiction to fulfill its oversight role by adopting their own enforceable ordinances that are consistent with the requirements of this chapter and may incorporate their own factors to use when determining a penalty amount, such as, but not limited to, low income residents and/or small businesses ability to pay. The penalty provisions are consistent with the existing penalty limitations in the Government Code Sections 53069.4, 25132 and 36900. The penalty amounts in Section 18997.2 and per day violations are eliminated.</p>
3466	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	On a related note, regarding cannabis waste, although considered organic waste but not explicitly listed in definition of these draft regulations, the City requests the ability for individual jurisdictions to manage this waste as special waste rather than have cannabis waste fall under these regulations and be regulated to be diverted from disposal.	Comment noted. Jurisdictions are allowed to have local ordinances that go beyond the scope of the proposed regulations and may address this matter as they see fit. Note that other state agencies specifically regulate how cannabis waste is managed, such as CDFA and Bureau of Cannabis Control and local jurisdictions should be aware of those requirements.
3467	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Landfill Disposal and Recovery</p> <p>a) Capacity for organics processing continues to be a major challenge for reducing landfill disposal of organic waste. LASAN appreciates that CalRecycle has included small scale composting and community composting as opportunities to reduce landfill disposal. However, LASAN requests that CalRecycle also include efforts to prevent food waste and promote source reduction.</p>	<p>Source reduction continues to be one of the primary fundamentals in CalRecycle's waste reduction hierarchy as defined in Section 40196. To directly support SB 1383's Food Recovery requirement, Section 18991.1 specifies the requirements for a jurisdiction's edible food recovery program. Section 18983.1(d) is to specify that edible food recovered for human consumption is an activity that reduces landfill disposal.</p> <p>Diverting organic waste from landfills to feed people reduces that amount of material that is physically placed in landfills and results in significant greenhouse gas reductions. This supports the state's effort to keep organics waste out of landfills and reduce greenhouse gas emissions and is</p>

Comment Number	Received From	Question/Comment	Response(s)
			therefore considered a recovery activity for the purposes of this regulation. However, per SB 1383, requiring “efforts to prevent food waste and promote source reduction” is outside the purview of these regulations since the statutory language is restricted to recovering edible food that would be otherwise disposed as opposed to being directed at source reduction.
3468	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Landfill Disposal and Recovery b) Currently, dehydrators and liquefiers are not included as an acceptable alternative to landfill disposal. LASAN requests that CalRecycle continue to study the evolving dehydrator and liquefier technologies and create guidelines for best practices of utilizing its byproducts to be an acceptable alternative to landfill disposal.	CalRecycle understands the need to consider all technologies that can help the state achieve both its organic waste recycling goals and greenhouse gas emission reduction goals. For technologies that currently do not have enough supporting data to verify that they can reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO <sub>2</sub> e per short ton organic waste processed, Section 18983.2 provides a pathway for determining if a technology, such as dehydrators and liquefiers, can be deemed to constitute a reduction in landfill disposal for organic wastes. These technologies would need to meet the standards in that section to qualify.
3469	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Landfill Disposal and Recovery c) The proposed regulation ((Section 18983.2 (a)) also require that technologies that are not expressly identified in the regulations undergo a verification process. We appreciate the addition of the emissions reduction for compost for additional reference. However, it is not clear why a technology, if shown to reduce landfill disposal and thus reduce methane emissions as compared to landfilling, will also need to meet or exceed the methane reduction calculations for compost. LASAN recommends that new technologies be compared to landfilling to encourage innovation in the processing of organic waste.	Several commenters suggested using avoided landfill emissions as the benchmark in the determination of processes or technologies that constitute a reduction in landfill disposal. Although this proposal might increase diversion of organics from landfills, it would not achieve the greenhouse gas emissions reductions required to meet the methane reduction target required by SB 1383 or the organics diversion targets specified in the Short-Lived Climate Pollutant Reduction Strategy. The benchmark value of 0.30 MTCO <sub>2</sub> e per short ton organic waste was set to ensure emission reductions for any new process or technology are comparable to the emission reductions necessary to achieve the strategy’s emission reduction goal of 4 MMTCO <sub>2</sub> e for this sector.
3470	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Landfill Disposal and Recovery LASAN recommends that CalRecycle make available to local jurisdictions the adopted tools and methodologies that enable the quantification of the Short Lived Climate Pollutant (SCLP) reductions achieved from diverting each ton of organics ( e.g., food waste, grass clippings, tree trimming, and mixed organics) from landfill disposal to other management options ( e.g., composting, and AD). Such tools will enable jurisdictions to quantify the environmental benefits, including GHG emission reductions associated with their respective solid waste management program. Such tools and methodologies should be robust and applicable to different management options, various distances to the final destinations where the materials are diverted to, and other variables.	Thank you for the comment. CalRecycle is developing compliance tools that it will share with jurisdictions when the proposed regulations are finalized.
3471	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Container Contamination and Jurisdiction Requirements LASAN believes that contamination is inevitable. In the definition, as well as throughout the proposed regulations, there is no mention of a reasonable lower limit for observed contamination. A low cap on contamination percentages in organic waste recycling would lead to unintended consequences. Waste haulers and processors will be quick to reject loads if they are not required to collect and process all organic waste loads. Such that an insignificant amount of contamination	A change to the regulatory text is not necessary. Section 18984.5 states that the jurisdiction may dispose of the container’s contents if it observes visible prohibited container contaminants. Additionally, Section 18981.2(b) allows a jurisdiction to designate to a public or private entity, such as the hauler, to fulfill responsibilities under the Chapter. The regulations allow for a jurisdiction to instruct its hauler(s) to dispose of prohibited container contaminants. It will be up to the jurisdiction to provide direction to its hauler(s) regarding how this should be addressed,

Comment Number	Received From	Question/Comment	Response(s)
		<p>can trigger load rejections by the hauler or facility. This would directly contradict requirements in LAS AN' s recycling contracts, yard trimmings contracts, and recyclLA contracts. A low hard restriction on contamination will lead to more loads being rejected by the processor and thus more materials will reach landfills.</p> <p>Although the regulations call for source separation of materials, contamination will occur, and it is understood that processing costs increase as contamination levels increase. There needs to be a tolerance for contamination, particularly early in the program implementation where the emphasis should be on customer education and outreach. In the City, our Construction and Demolition (C&amp;D) Recycling Ordinance and Program require all Certified C&amp;D facilities to accept and process all loads to avoid rejection of loads.</p> <p>Therefore, LASAN requests that Waste haulers should be required to collect and process source separated material for recycling and beneficial reuse. Facilities should accept loads with up to 50 percent contamination (by weight) and not be selective in order to keep their diversion rates high.</p> <p>In addition, LASAN request that CalRecycle amend any language that allows facilities or haulers from rejecting loads without explicit permission from the jurisdiction or contract language that specifies contamination procedures.</p> <p>LASAN would recommend that loads having up to 50 percent contamination (by weight) be processed to recover recyclable or compostable materials, and residual materials are then disposed. If loads with less than 50% contamination are allowed to be discarded or rejected under state regulations, there will be an immediate increase in organic waste going to the landfill.</p>	<p>e.g., certain parameters the hauler may consider, or the jurisdiction needs to provide pre-approval, etc.</p> <p>In regards to the threshold for contamination in containers: The regulations do not set a minimum amount of prohibited container contaminants for route reviews. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. Moreover, in response to comments received during the 45-day comment period, CalRecycle revised the contamination monitoring provision to rely primarily on the solid waste facility that receives the material, as opposed to requiring jurisdictions to conduct individual route reviews</p> <p>The requirement is if the waste is a mixed waste organic collection stream, then it must meet the recovery efficiency rate for organic waste, and the organic waste sent to a secondary facility (compost/ In-vessel digestion) for recovery needs to be less than 20 percent of incompatible material on and after 2022 and 10% on and after 2024, otherwise, there is limitations on where to send the material. Material with more than the acceptable limit of incompatible material must be sent to a Transfer/processing facility that can meet 17409.5.8 or a compost/ In-vessel digestion facility that disposes of no more than acceptable level of organic material in their residual waste stream.</p>
3472	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Prohibited Container Contaminants</p> <p>a) While LASAN currently does not collect textiles or carpet in the green bin, there should be flexibility to allow these materials to those bins based on facility processing equipment and operation.</p>	<p>Textiles and carpets are not normally accepted by organic waste recycling facilities such as composting or in-vessel facility that takes materials in green containers. However, CalRecycle included this provision allowing textiles in green containers because stakeholders during the informal rulemaking workshops requested such flexibility. CalRecycle is not aware of any compelling reason to prohibit textiles from being placed in green containers.</p>
3473	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Prohibited Container Contaminants</p> <p>b) Section 18984.5 Container Contamination Minimization.(b)(l )Upon findingprohibited container contaminants in a container, the iurisdiction, or its designee, shall contact the generator or provide written notice to the generator. It is not possible to determine individual generators that contaminate a route unless containers are individually checked. This is not feasible in our residential curbside program which utilizes automated side loading vehicles and for which the bins are covered. Route drivers are expected to collect between 800 and 900 containers on each route each day. LASAN recommends at a minimum exempting single-family and small multifamily residential routes from this requirement.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3474	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Prohibited Container Contaminants</p> <p>c) Requires route review on randomly selected containers in all collection routes quarterly (pg 12. line 19-20 of Proposed Regulation Text).</p> <p>LASAN directly services over 2.25 million containers every week. A quarterly route review for all routes in the City is not possible without significant additional staffing and resources. The City has approximately 3,500 residential routes. To review those quarterly, LASAN would have to inspect 58 residential routes per day, with up to 900 containers per route. It is not feasible for City solid waste collection drivers to perform this additional task. Therefore, the City would incur significant additional staffing and resource costs to satisfy this metric. Staffing must be robust enough to cover vacations, holidays and other potential absences.</p> <p>LASAN estimates that this single task would require additional funding of at least \$14 million annually, for the staff and equipment necessary to inspect approximately 20 percent of the selected containers on each route each day. This estimate does not include additional</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. CalRecycle modified the regulations to annual. Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. 3475	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Prohibited Container Contaminants</p> <p>d) (b)(2) If a jurisdiction (or its designee) observes a visible prohibited container contaminant in a generator's green container or blue container. it may dispose of the container's contents.</p> <p>The draft regulations do not define what it means to observe a prohibited container contaminant. There needs to be some minimum level or threshold amount to constitute contamination. Observing a single glass bottle in the green bin or a single</p>	<p>It is infeasible to set a particular contamination level as a threshold for disposal of the container contents. To do so would require emptying each container and doing a waste evaluation. The regulations were thus drafted to provide flexibility to jurisdictions. Jurisdictions may also have more stringent requirements in local implementing ordinances and may consider how to use that authority to limit disposal of contaminated containers.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>banana peel in either the black or the blue bin should not exceed the minimum threshold of contamination.</p> <p>The designee should not be able to self-select disposal of a container's contents based on contamination, which would represent a violation of the City's recycLA requirements. The City has contracts that require processing of materials with a high level of contamination, so that maximum recycling is achieved. The proposed regulation would immediately and directly contribute to an increase in organic waste disposal. The City has not experienced bins having no contamination, and therefore, according to the draft language, over 400,000 tons of green bin materials currently processed and mulched/composted could be rejected and sent to landfill as an unintended consequence.</p>	
3476	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Prohibited Container Contaminants</p> <p>e) (c) If a jurisdiction is informed by a solid waste facility operator that the waste collected by one of its haulers contains prohibited container contaminants while the hauler was servicing the jurisdiction's generators, then the jurisdiction (or its designee) shall: (j) Investigate by physically inspecting containers along the route(s) that the contaminants came from to determine the sources of contamination.</p> <p>As in the previous comment, it is not possible to determine individual generators that contaminate a route unless bins are individually checked prior to collection. This is not feasible in automated vehicles without significant added expense. LASAN recommends at a minimum exempting single-family and small multifamily residential routes from this requirement.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. 3478	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>recycLA Contamination Protocols</p> <p>recycLA is a public-private partnership that provides efficient waste and recycling services to approximately 66,000 commercial, industrial, and large multifamily buildings in the City of Los Angeles. Through exclusive franchise contracts, recycLA service providers (RSP) offer a three-bin system. RSPs may only haul waste and recyclables to facilities that have been certified by the City. These facilities must</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>meet the City's standards for processing and diversion, among other requirements. All RSPs are expected to achieve 65% landfill disposal reduction targets by 2025. It is in the best interest of the City and the RSPs to measure and reduce the contamination within the three waste streams. Below is a description of Waste Assessments.</p> <p>RSPs are contractually required to conduct a waste assessment of all commercial and multifamily properties to determine the optimal level of service at least once every two years. This will determine the appropriate bin size and the appropriate frequency of service; recycLA customers can also request additional waste assessments up to twice per year. The assessments additionally provide a tool to see if there is bin contamination and to educate residents in proper waste sorting.</p> <p>ii. Biannual Waste Characterizations. The recycLA RSPs are also required to conduct biannual Waste Characterizations (WC) of Municipal Solid Waste, commingled recyclables, and green waste routes serviced in each Zone. The number of samples for each WC depends on the number of customers serviced in each Zone per week. The samples are randomly pulled from the RSPs routes and must represent the different types of businesses (including multifamily residences) in the Zone. The WC will determine levels of contamination for each of the RSPs collection routes. The WC will also be used to assess the RSPs' success in reducing landfill disposal. The current WC guidelines are attached.</p> <p>iii. RSPs notice of contamination</p> <p>The RSPs are required to report contamination of bins as a service request in the My LA 311 (Customer Care) System. This reporting includes the customer's address and the service need(s). The recycLA customers are also able to report contamination by submitting a service request through LASAN's MyLA311 Customer Care System. These will create a record of contamination for commercial and large multifamily properties throughout the city. The contract language for contamination is also attached.</p>	<p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3479	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Curbside Residential Contamination Protocols</p> <p>The City has operated a three bin curbside residential program for all single and small multifamily residences since the 1990s. In total, the City services over 2.25 million containers every week with approximately 3,500 residential routes. For each route per day, the driver can collect up to 800 to 900 containers.</p> <p>To efficiently manage these routes, the City has invested in automated-side loading vehicles and bins with flip top lids. The driver does not need to exit the vehicle to load the trash, and is unable to observe contamination in bins because they are usually closed. If there is obvious, protruding-contamination in bins, the driver may exit the vehicle and place a contamination tag on the bin. This tag will instruct the resident on proper disposals of the contaminated materials.</p> <p>After collection, the material is taken either directly to a processing or disposal facility or to a transfer station where loads may be inspected for contamination. If the truck has a large amount of contamination, and the City is notified, the City may</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p>

		<p>send Ambassadors to provide neighborhood-level education to residents about contamination and proper waste sorting.</p> <p>In addition to education and outreach, the City works closely with the processing facilities to ensure that loads are processed and that contamination is removed. Current City contracts require facilities to accept loads with up to 50 percent contamination (by weight). Facilities under City contract may not be selective of loads to keep their diversion rates high. Instead, facilities are required to remove contaminants and process the materials. The facility notifies the City when a load is rejected for contamination that exceeds the designated levels. Information including the date, time, truck, route collected, and a photograph are provided for the contract manager's records and can be contested by the contract manager after review.</p>	<p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3480	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Food Rescue Implementation Requirements</p> <p>LASAN supports SB 1383's goal to recover 20 percent of edible food. However, there are challenges to measure this goal since there is no accurate basis to set a generator baseline for edible food. Such basis cannot be drawn from waste characterizations, and indeed the measurement of what is edible before being disposed in the bin is subjective and changes daily for the generators, depending on what food can be rescued, over which they have no control. The capacity to recover edible food is also difficult to measure as most food recovery depends on a variety of factors from refrigeration space to volunteer availability. In LASAN's opinion, diversion and capacity estimates, because it cannot be verified, cannot be used as a compliance measurement for jurisdiction or generator compliance. Significant penalties associated with all food rescue activities are broad and overly punitive.</p>	<p>Public Resources Code Section 42652.5(a)(1) through (4) grants CalRecycle the authority to impose requirements on jurisdictions and may include requirements to meet the goal that not less than 20% of edible food that is currently disposed is recovered for human consumption by 2025. This evinces an intent on the part of the Legislature to allow for CalRecycle to place requirements on jurisdictions to increase edible food recovery.</p> <p>To help achieve the statewide 20% edible food recovery goal, SB 1383's regulations include edible food recovery capacity planning requirements. In addition, Section 18991.1 (a)(4) includes a requirement that jurisdictions must increase edible food recovery capacity if it is determined that sufficient capacity does not exist. Assessing edible food recovery capacity at the local level is critical for jurisdictions to be able to understand if capacity needs exist, and exactly what their capacity needs are. It is at the discretion of the jurisdiction to determine what jurisdiction entity is best suited to assess edible food recovery capacity and ensure that compliance with this regulatory requirement becomes a part of their scope.</p> <p>CalRecycle would also like to mention that the Department intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. CalRecycle also intends on providing additional resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.</p>
3481	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Food Rescue Implementation Requirements</p> <p>The proposed food rescue data and record keeping requirements are akin to a hazardous waste manifest system, which may have unintended impacts on small non-profits food rescue organizations. There are hundreds of such non-profit organizations, some with few employees and little recordkeeping capabilities, saving edible food from waste disposal at this time. LASAN recommends that CalRecycle provide the basis for the six tons per year for reporting. It is our understanding that most large organizations may process more than six tons of food within one day.</p>	<p>A change to the regulatory text was not necessary because the commenter has misinterpreted the regulations. To clarify, record keeping requirements are not the same as reporting requirements. Commercial edible food generators are not required to report any information to the jurisdiction, and regulated food recovery organizations and services are only required to report the total pounds of edible food recovered in the previous calendar year (from commercial edible food generators) to the jurisdiction where the organization or service's primary address is physically located. For additional clarification on edible food recovery recordkeeping and reporting requirements please refer to the FSOR.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>Reporting and data collection requirements in the proposed regulations are unmanageable for the generators, food rescue organizations, and jurisdictions. The City will have to collect, analyze, and retain millions of data points every year, after developing a data system, and adding additional staff to gather and maintain that data, which does not exist now, and under circumstances that change daily. LASAN recommends simplifying the data collections requirements similar to what is implemented in recycLA.</p>	<p>Regarding the comment, "LASAN recommends that CalRecycle provide the basis for the six tons per year for reporting." The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance.</p> <p>To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold from the regulatory text. The final regulations require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food directly from commercial edible food generators, pursuant to Section 18991.3 (b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.</p>
3482	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Food Rescue Implementation Requirements  Article 10: Jurisdiction Edible Food Recovery Program. Section 18991.1 (a)(4)  Increase edible food recovery capacity if the analysis required by Section 18992.1 indicates that the jurisdiction does not have sufficient capacity to meet its edible food recovery needs.  Edible food recovery is handled by many non-profit organizations. They are not able to 'add capacity' as a facility can. This section is unclear and would be very difficult to comply with.</p>	<p>CalRecycle consulted with many food recovery organizations and services (both large and small-scale operations) in California during the SB 1383 rulemaking process. Nearly all of the food recovery organizations and services that CalRecycle engaged with are either taking actions to increase their own capacity, or they are taking actions to help other food recovery organizations and services recover more food.</p> <p>Food recovery organizations and services are able to add capacity by purchasing refrigeration, purchasing new kitchen equipment, using refrigerated vehicles, using food donation matching software, leveraging partnerships with other food recovery organizations to recover more food and feed more people, hiring staff, hiring drivers, training more volunteers, and using education and outreach to recruit new volunteers and to educate businesses about donating food. In short, food recovery organizations and services are able to add capacity. A jurisdiction could potentially demonstrate compliance with Section 18991.1. (a)(4), by funding these types of activities as a part of their food recovery program. Several jurisdictions in California are already doing this.</p> <p>CalRecycle would also like to note that nothing in SB 1383's regulations requires a food recovery organization or a food recovery service to increase edible food recovery capacity at their facility. Counties, jurisdictions, and regional agencies are required to comply with the capacity planning requirements. Jurisdictions are also required to increase capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs.</p>

Comment Number	Received From	Question/Comment	Response(s)
3483	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Food Rescue Implementation Requirements Section 18991. 2 Recordkeeping Requirements for Jurisdiction.</p> <p>The City may be able to keep a record of all Tier I and Tier II defined edible food generators, but would be unable to track all arrangements with food recovery organizations or services. Food recovery arrangements are often informal and may vary depending on the quantity and nature of the recovered food. The City will not be able to create a comprehensive list of all edible food recovery organizations and their capacity. Further, capacity can greatly vary for many organizations.</p>	<p>Regarding the comment about tracking arrangements, a change to the regulatory text was not necessary because jurisdictions are not required to track the details of each contract or written agreement. To clarify, jurisdictions are required to verify that a contract or written agreement has been established. To help jurisdictions monitor compliance and verify that contracts and written agreements have been established, the regulations include recordkeeping requirements for commercial edible food generators and for food recovery organizations and services. A jurisdiction could use the record to verify that a commercial edible food generator has established a contract or written agreement with a food recovery organization or service by requesting to see the generator's record of their contract or written agreement.</p> <p>Regarding the comment, "The City will not be able to create a comprehensive list of all edible food recovery organizations and their capacity. Further, capacity can greatly vary for many organizations." A change to the regulatory text was not necessary for the following reasons. The requirement does not specify that the jurisdiction shall maintain a list of all food recovery organizations and services operating within the jurisdiction, just that "a list" be created and maintained on the jurisdiction's website. It is at the jurisdiction's discretion to determine the food recovery organizations and services that they feel should be included on the list. Please note that the list is intended to serve as a tool to help generators find appropriate food recovery organizations and services to establish a contract or written agreement with, and thereby help ensure that edible food in the jurisdiction is not disposed, but rather put to its highest and best use of helping to feed people in need. Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help commercial edible food generators find food recovery organizations and services that are capable of safely handling and distributing large amounts of recovered edible food on a regular basis.</p> <p>CalRecycle would also like to note that many cities and counties have already created lists of food recovery organizations and services and included capacity information in their list. LA County for example, has developed an online tool called FoodDrop LA, where generators of excess edible food can locate nearby food recovery organizations that are capable of accepting their food donations.</p>
3484	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Food Rescue Implementation Requirements Section 18991.4 Record Keeping Requirements for Commercial Edible Food Generators Section 18991.5 Edible Food Recovery Services and Organizations.</p> <p>These sections require that commercial entities maintain a manifest of all recovered food. This may be infeasible given the informal nature of many food recovery operations. Food is not always measured by food recovery organizations. Often times food amounts are estimated, based on number of pallets, cases, or other metrics. This will be difficult to track and audit.</p>	<p>A change to the regulatory text was not necessary because the recordkeeping requirements in Sections 18991.4 and 18991.5 do not require that a manifest of all recovered food be maintained. Requiring commercial edible food generators to maintain records is critical to help jurisdictions monitor compliance.</p> <p>CalRecycle has done significant outreach with stakeholders during the rulemaking process to ensure that the recordkeeping requirements are feasible. CalRecycle consulted with food recovery organizations and services throughout the state to learn more about the information they track, and to learn about the information they provide to their donors. The majority of the organizations that the department has met with provide their donors with some kind of receipt of donation. By providing a receipt of donation, donors are able to track the amount of food they have donated over time and can claim their federal enhanced tax deduction.</p>

Comment Number	Received From	Question/Comment	Response(s)
3485	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Food Rescue Implementation Requirements</p> <p>Article 11. Organic Waste Recycling Capacity Planning. Section 18992.2 Edible Food Recovery Capacity.</p> <p>It is not possible to comply with this requirement. Nothing other than a very rough estimate is feasible to measure how much edible food is discarded. Who makes the determination that the food is edible for human consumption? It is the City's opinion that this estimate, because it cannot be verified, cannot be used as a compliance measurement for jurisdiction or generator compliance. In addition, as stated previously, there are hundreds of non-profit organizations, some with few employees and little recordkeeping, saving edible food from waste disposal at this time. A true capacity study cannot be completed for this material, and not with the accuracy that is required for requirements carrying heavy responsibility as well as significant civil penalties.</p> <p>Edible Food Recovery cannot be analyzed using the same methodology as traditional waste infrastructure. Food recovery organizations need to be flexible to connect donated food with those in need. Food recovery organizations are also working with various types of food with different shelf lives. For example, capacity may differ for accepting fresh produce versus non-perishable foods.</p> <p>Edible Food Recovery Organizations are often nonprofit or community organizations. Local jurisdictions and counties can provide resources or support to these organizations, but the expansion would directly depend on that organization's capacity to expand. Different incentive models, tools, and analysis should be used for assessing this market over time, but reliable capacity metrics are not currently possible.</p>	<p>Edible food recovery capacity analyses have already been completed and will continue to be completed in preparation for SB 1383 implementation. CalRecycle intends on providing guidance and resources to help jurisdictions identify existing capacity at food recovery organizations and food recovery services, which may include existing surveys that have been developed specifically to help identify current edible food recovery capacity and capacity needs.</p> <p>During the rulemaking process, CalRecycle worked with many food recovery organizations (both large and small-scale operations) in California. Nearly all of the food recovery organizations and services that CalRecycle engaged with are either taking actions to increase their own capacity, or they are taking actions to help other food recovery organizations and services recover more food. Food Recovery organizations and services are able to add capacity by purchasing refrigeration equipment, purchasing new kitchen equipment, using refrigerated vehicles, using food donation matching software, leveraging partnerships with other food recovery organizations to recover more food and feed more people, hiring staff, hiring drivers, training more volunteers, and using education and outreach to recruit new volunteers and to educate edible food generating businesses about food recovery. In short, food recovery organizations and services have significant capacity needs, which further highlights the critical need for SB 1383's edible food recovery capacity planning requirements.</p>
3486	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Procurement Baseline and Requirements</p> <p>a) Article 12. Procurement of Recovered Organic Waste Products.</p> <p>SB 1383 does not specifically call for the regulation of local jurisdiction procurement policies. The City has a complex procurement policy that requires competitive bidding, as well as an Environmental Purchasing Policy which requires departments to incorporate and prioritize the use of environmentally sustainable products in their day-to-day business activities. LASAN recommends that any procurement policies align with competitive bidding requirements. CalRecycle may wish to use the State's Buy Recycled program as a model for jurisdictions.</p>	<p>The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383, which are unprecedented in their own right. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature.</p> <p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, "The department, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code." That section also provides that CalRecycle may "include different levels of requirements for local jurisdictions..."</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, "The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code." SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>stated that “[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. ‘[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . . .’ The [administrative agency] is authorized to “fill up the details” of the statutory scheme.”</p> <p>Consistent with CalRecycle’s broad rulemaking authority, the proposed procurement requirements are designed to help achieve the organic waste diversion goals in SB 1383 by supporting markets for recovered organic waste products. The regulations have a direct nexus to achieving those organic waste diversion goals by preventing initially diverted organic waste from being disposed due to lack of end uses.</p> <p>Health and Safety Code Section 39730.8, also in SB 1383, refers to CalRecycle considering recommendations in the California Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for the use of biomethane and biogas. The IEPR recommended that “state agencies should consider and, as appropriate, adopt policies and incentives to significantly increase the sustainable production and use of renewable gas.” As such, provisions for the procurement of renewable transportation fuel generated from recovered organic waste.</p> <p>Further, the Air Resources Board’s Short-Lived Climate Pollutant Strategy states, “CalRecycle will continue to work towards strengthening state procurement requirements relative to use of recycled organic products.”</p> <p>The inclusion of compost as an eligible recovered organic waste procurement product aligns with policies and mandates for methane reduction as described in the Air Resources Board’s SLCP Strategy. The Economic Analysis conducted for the SLCP Strategy notes several scenarios that can achieve the needed reductions in short-lived climate pollutants from the waste sector, and every scenario modeled includes new compost facilities. The purpose of a compost procurement requirement is to establish markets for compost, which is a product generated by organics recycling facilities which the SLCP Strategy identified as in need of market development.</p>
3487	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Procurement Baseline and Requirements Section 18993.1 Recovered Organic Waste Product Procurement Target. For part (t) of this section, Recovered Organic Waste Products should include mulch, electricity generated from renewable natural gas, as well as a significant compost giveaway program to our residents. Please also confirm if our understanding, that "compost" includes compost made with biosolids, is correct.</p> <p>The City currently converts 7 .5 million cubic feet of digester gas produced at the Hyperion Water Reclamation Plant to generate electricity to operate the plant. This should be included towards the product procurement goal. Additionally, the City is working to electrify its City fleet. Many of the current light-duty vehicle purchases are electric and LASAN has begun studying the use of heavy-duty electric collection vehicles as well. This will decrease the City's need to procure renewable natural gas for transportation fuel.</p> <p>SB 13 83 calls on CalRecycle to report on the status of markets, including cost-effective electrical interconnection. Therefore, CalRecycle should include electricity</p>	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p> <p>Regarding biosolids compost, the current draft regulatory text considers compost an eligible recovered organic waste product as long as the final product meets the definition of compost, per Section 17896.2(a)(4), and is produced either at a compost operation or facility or large volume in-vessel digestion facility that composts on-site (refer to Section 18993.1(f)(1)(A) and (B).</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>within this target. LASAN would request clarification on how biomethane would be counted if procured through public utilities that may also have biomethane procurement targets?</p>	<p>Biosolids and/or digestate that do not meet the compost definition will not count towards the procurement target.</p> <p>The procurement requirements do not mandate a jurisdiction to prove “additionality” to any other mandatory or voluntary programs. For example, there are no restrictions on a jurisdiction counting biomethane procured from a utility regardless of whether that utility has to meet separate procurement standards.</p>
3488	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Procurement Baseline and Requirements Sections 18993.2. 18993.3 and 18994.4 Recordkeeping and Procurement Requirements.</p> <p>LASAN would need additional staff to compile this information and improve the City's data collection process, resulting in additional cost to our customers. LASAN recommends changing this requirement to focus on updating City ordinances to comply with recycled content targets over requiring annual reports on paper product purchases. CalRecycle may also focus recycled content targets on the three to five paper products purchased in the greatest volume (units) or as measured by dollars spent, which typically would include copy paper, janitorial paper, and printing paper.</p>	<p>The language has already been changed in the previous draft to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content. CalRecycle disagrees with narrowing the definition of “paper products”. Paper is an organic material, and as such is subject to the ambitious organic waste diversion targets required by SB 1383. Therefore, it is within the purview of this regulation to build markets for recycled content procurement of all paper products, not just a select few paper products. It should also be noted that the broad range of products is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. There is no requirement to purchase all of the paper products listed.</p>
3489	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Biosolids Management Requirements Article 1. Definitions. Section 18982 (62) "Renewable Transportation Fuels".</p> <p>In relation to the procurement of natural gas, we request the definition as listed in Article 1 be expanded to include renewable natural gas transportation fuel, which is derived from sewage sludge anaerobic digestion alone without co-digestion. Anaerobically digested sewage sludge, land application of the resultant biosolids, and producing low carbon transportation fuel is consistent with the intent of SB 1383. Therefore, we request the following change to Article 1 Section (a)(62) to read "Renewable transportation fuel" means fuel derived from renewable gas from organic waste that has been diverted from a landfill and processed at in an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 or Title 23 to recycle organic waste."</p>	<p>CalRecycle disagrees with the commenter’s argument to allow renewable gas derived solely from sewage sludge to be eligible for procurement. The regulations clarify that only renewable gas derived from organic waste received at a POTW from solid waste facilities may count towards a jurisdiction’s procurement target. Other materials digested at a POTW, such as sewage sludge, are ineligible. Renewable gas derived solely from sewage sludge is ineligible for procurement because a POTW is not a solid waste facility and therefore not in the scope of the legislative intent of SB 1383. Sewage sludge is also not typically destined for a landfill, so its use does not help achieve SB 1383’s landfill diversion goals. For the reasons noted above, gas generated from the inflows of a sewer system and not from organic waste diverted from the solid waste stream cannot logically be considered a recovered organic waste product. It is inconsistent with the requirements of SB 1383 to incentivize or mandate activities that do not contribute to landfill diversion of organic waste.</p> <p>However, POTWs that accept food waste can technically do so without a solid waste facility permit, they are explicitly authorized to do so per Title 14, making it functionally similar to incentivizing biomethane from a solid waste facility. Therefore it is justifiable to allow the portion of renewable gas resulting from the digestion of food waste that is recovered at POTWs that accept food waste from a facility or operation identified in Section 18993.1(h)(1)(A)-(C) to count toward the procurement targets.</p>
3490	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Biosolids Management Requirements Article 2. Landfill Disposal and Reductions in Landfill Disposal. Section 18983.1 (6)(B) Biosolids shall O) have undergone anaerobic digetstion or composting; one of the</p>	<p>CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2</sub>e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>processes as defined in Part 503. Title 40 of the Code of Federal Regulations. Appendix B.</p> <p>In this section, the activities considered "recovery" and thus a reduction in landfill disposal are outlined. In relation to biosolids land application, this section of the draft regulatory text only specifies anaerobic digestion and compost as recovery activities. However, Appendix B of the federal part 503 regulations stipulates a number of suitable options for processing wastewater to meet pathogen reduction requirements. The multiple other viable technologies for treating both classes should be deemed acceptable for "recovery" since according to Appendix B they are considered equivalent to anaerobic digestion and compost and none of these technologies generate methane. Although LASAN currently uses anaerobic digestion, operational concerns may arise requiring use of a different treatment option as listed in Appendix B. The greenhouse gas reduction value of land application rather than landfilling is universally equal regardless of the technology used for pathogen reduction, thus, other technologies that are currently used or may be used in the future should not be penalized. Therefore, LASAN recommends CalRecycle to replace the words "... anaerobic digestion or composting ..." with "... one of the processes ...".</p>	<p>only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383.</p> <p>However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste.</p> <p>Please refer to Section 18983.2 for more information.</p>
3491	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Biosolids Management Requirements</p> <p>c) Article 6. Biosolids Generated at a POTW. Section 18987.2(a)(I) Biosolids and Sewage Sludge Handling at a POTW</p> <p>Currently, this section indicates that biosolids shall be "transported only to a solid waste facility or operation for additional processing, composting, in-vessel digestion, or other recovery as specified in Section 18983.1(b) of this division". We suggest that CalRecycle update that language to include technologies approved under Section 18983.2 (Determination of Technologies That Constitute a Reduction in Landfill Disposal). This would allow new innovative technologies to be implemented to reduce landfill disposal of biosolids. For example, it would allow LASAN to continue to use the Terminal Island Renewable Energy Project (TIRE), which is a demonstration project that is working to convert biosolids into a renewable clean energy through deep well injection, as a diversion method for biosolids.</p>	<p>Comment noted. Section 18987.2 was removed from the regulations. The regulations do not ban any organic waste stream from landfills. This is prohibited in statute and it is therefore unnecessary to explicitly articulate this.</p>
3492	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Jurisdiction Inspection and Enforcement</p> <p>In the proposed regulations, an annual compliance review is required for all commercial businesses generating more than two cubic yards/week of solid waste. The City has over 66,000 commercial waste accounts. Completing an annual compliance review of all solid resources accounts with more than two cubic yards/week of solid waste would be a high regulatory requirement. This requirement is in addition to the quarterly bin checks on every route. This requirement would add a substantial cost to the City's commercial customers and require an amendment to the recycLA contract. In the City's recycLA contracts, recycLA service providers are required to perform a waste assessment at each</p>	<p>A change to the regulatory text is not necessary. Section 18995.1 states the jurisdiction shall generate a record for compliance reviews conducted that includes a list of accounts reviewed. A compliance review shall be conducted for all solid waste collection accounts for commercial businesses that are subject to its authority and generate two cubic yards or more per week of solid waste, including organic waste. If a jurisdiction is conducting compliance review on its residential generators to comply with organic waste generator requirements set forth in Section 18984.9(a), this record would include residential generators.</p> <p>Comment noted. SB 1383 allows a local jurisdiction to charge and collect fees to recover the costs incurred in complying with the regulations.</p>

Comment Number	Received From	Question/Comment	Response(s)
		customer account every two years. LASAN recommends changing compliance review to every other year.	
3493	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Jurisdiction Inspection and Enforcement Section 18995.1 (a)(2) Conduct inspections of Tier One commercial edible food generators and food recovery organizations for compliance with this chapter. Please delete this requirement. LASAN cannot undertake a compliance records audit with thousands of customers and hundreds of food rescue partners each year. The scope and scale of this requirement cannot be met. CalRecycle should revisit what records are necessary, and the realistic potential of jurisdiction control and oversight of this sector.	A change to the regulatory text is not necessary. Section 18995.1 is necessary to verify if the commercial edible food generators have arrangements to recover edible food and are not intentionally spoiling edible food. The legislation requires actions that will reduce poverty-induced hunger by redirecting 20 percent of edible food that is currently disposed, in addition to avoiding methane emissions and feeding millions of food insecure Californians. Section 18995.1 requires a jurisdiction to inspect Tier One commercial edible food generators and food recovery organizations annually, but there is no requirement for the amount of inspections. A jurisdiction shall conduct a sufficient number of inspections of entities to ensure overall compliance with this chapter.
3494	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Jurisdiction Inspection and Enforcement Section 18995.1 (b) A jurisdiction shall conduct a sufficient number of compliance reviews, route reviews and inspections to ensure compliance with this chapter. A jurisdiction shall inspect entities that it determines are more likely to be out of compliance. CalRecycle must define a "sufficient number of reviews" or allow jurisdictions to develop their own review schedules subject to CalRecycle approval. In this proposed regulation, CalRecycle is requiring annual compliance review for commercial businesses and quarterly route reviews for both commercial and residential review. This will be a substantial increase in reviews and will not allow for additional strategic review.	A change to the regulatory text is not necessary. The language in this subsection was worded in such a way to allow the requirement for inspections to be tailored to the unique circumstances of each jurisdiction. This allows the jurisdiction the flexibility to conduct the number of inspections needed to have an overall picture of the compliance of generators under their authority and to ensure their own compliance with the Chapter. Jurisdictions shall have an inspection plan on how they will be conducting their inspections, such as but not limited to, inspecting entities that may be more likely to be out of compliance or focusing on large generators.  In addition, quarterly route reviews are not required in the regulatory language.
3495	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Jurisdiction Inspection and Enforcement Section 18995.1 (c) & (d). Route review requirements are unnecessary and onerous. CalRecycle is requiring written records for a massive amount of data from the City each year, as well as detailed information from all other contacts and responses. In addition, it is unclear where and how CalRecycle would maintain and store this information, how CalRecycle would analyze all of this information, and how all the data will be used.	A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.
3496	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Jurisdiction Inspection and Enforcement Section 18995.2 Implementation Record and Recordkeeping Requirements. (c) Upon request by the Department, the jurisdiction shall provide access to the Implementation Record within one business day (d) All records and information from each reporting period shall be included in the Implementation Record within 30 days of the last day of the reporting period. This requirement is not realistic. There may be impediments or backlogs that prevent the provision of up-to-date records within one business day. There may also be human errors or delays that would cause slower turnaround. In addition, the reporting period needs to be defined.	CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.
3497	Zaldivar, E., City of Los Angeles Bureau	Jurisdiction Inspection and Enforcement Section 18995.3 Jurisdiction Investigation of Complaints of Alleged Violations.	CalRecycle has revised section 18995.3 in response to this comment. The section was revised to allow a jurisdiction 90 days from the receipt of the complaint to begin an investigation. The

Comment Number	Received From	Question/Comment	Response(s)
	of Sanitation (LASAN)	It may not be feasible to investigate a complaint within 90 days depending on LASAN staffing or the nature of the complaint.	jurisdiction may decline to investigate a complaint if, in its judgment, investigation is unwarranted because the allegations are contrary to facts known to the jurisdiction.
3498	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Jurisdiction Inspection and Enforcement Section 18995.4 Enforcement by a Jurisdiction. CalRecycle should review timelines for violation notices to allow for more time for compliance.	A change to the regulatory text is not necessary. A jurisdiction has two years between 2022-2024 to perform outreach and educate the generators on the requirements of the Chapter. As described in section 18995.4, a jurisdiction can notice a generator found to be non-compliant. The generator has a maximum of 210 days to remedy the situation before a jurisdiction shall impose penalties. Moreover, 18995.4 includes provisions to allow compliance extensions for extenuating circumstances or limitations in jurisdictional infrastructure.
3499	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Jurisdiction Inspection and Enforcement Article 15. Enforcement Oversight by the Department {pg 33}. Section 18996.1 (c)- Department Evaluation of Jurisdiction Compliance. "The Department shall notify the jurisdiction prior to conducting an evaluation" For AB 939 compliance, the City is on a 4-year review cycle and includes annual conference calls and site visits as part of the evaluation. This section simply states that "the department shall notify the jurisdiction prior to conducting an evaluation," which implies that it could be done at random. The City recommends that as CalRecycle deems necessary, evaluations be included with the annual AB 939 site visits.	A change to the regulatory text is not necessary. Section 18996.1 states the Department shall evaluate a jurisdiction's compliance with this Chapter, this includes the review of the jurisdiction's Implementation Record and may include inspections, compliance reviews, and route reviews. The regulations do not set a specific schedule or timeframe for the compliance evaluations, yet a jurisdiction is expected to be in compliance on an ongoing basis. Section 18995.2 does state, upon request by the Department, that the jurisdiction shall provide access to the Implementation Record within ten business days.
3500	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Jurisdiction Inspection and Enforcement Section 18996.1 (e) Department Evaluation of Jurisdiction Compliance. "If the Department determines at any time that an ordinance adopted by a jurisdiction is inconsistent with or does not meet the requirements set forth in this Chapter. the Department shall notify the jurisdiction and provide an explanation of the deficiencies. The jurisdiction shall have 90 days from that notice to correct the deficiencies. If the jurisdiction does not. the Department may commence enforcement actions as set forth in Section 15. 2 of this Chapter" If an ordinance needs to be revised, the City will require longer than 90 days to process and implement changes. Amending or changing an ordinance requires time for the City Attorney, Board of Public Works, City Council and Mayor to schedule, review, consider and approve any changes.	CalRecycle has revised section 18996.1(e) in response to this comment. The change increases the relevant timeline to 180 days.
3501	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	Jurisdiction Inspection and Enforcement CalRecycle should provide guidance on updating and renewing the Corrective Action Plan (CAP). If a CAP is necessary due to the lack of capacity and infrastructure for organic waste, a 24 month timeframe for corrective action may not be adequate to reach diversion targets. Infrastructure projects usually are multi-year efforts, some taking up to 5 years, and require time for funding, environmental review, design, and construction.	A change in the regulatory text is not necessary. The regulations are effective in 2022, allowing for ample time for planning for lack of capacity or infrastructure deficiencies. Currently, it is 2020 and jurisdictions have until 2022 to address any capacity deficiencies and if necessary, they can be placed on a Correction Action Plan that allows for an extended timeframe to come into compliance. The regulations allow up to three years to come in to compliance on a CAP (in total this is effectively equivalent to the request five years).
3502	Zaldivar, E., City of Los Angeles Bureau	Administrative Civil Penalties and Environmental Justice Issues SB 1383 mandates that organic waste generators who do not comply with applicable local requirements for the collection and recovery of organic waste shall	A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and

Comment Number	Received From	Question/Comment	Response(s)
	of Sanitation (LASAN)	be subject to penalties. Organic waste generators include single family households, multifamily accounts, and commercial entities. These penalties escalate based on the number of violations and are not based on the size of the generator nor amount of waste generated. CalRecycle should consider a fee structure that takes into account volume and impact.	authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.
3503	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Administrative Civil Penalties and Environmental Justice Issues  Article 16. Administrative Civil Penalties for Violations of requirements of This Chapter (pg 38)</p> <p>The violation ranges in Article 16 are extremely large, overlapping and unnecessarily burdensome. Level 1 violations start at \$50 per violation and Level 6 violations can be as high as \$10,000 per day. It does not appear that CalRecycle has analyzed how these fees would impact Californians.</p>	<p>A change to the regulatory text is not necessary. The penalty fines listed in Section 18997.2 Base Table 1 are the minimum penalty thresholds imposed by a jurisdiction. The severity levels allow a jurisdiction the discretion to penalize smaller businesses at the minimum penalty and levy a more substantial penalty against larger businesses that may be contributing more to the organic waste stream. These penalties are consistent with the limitations on fine levels for local agencies in the Government Code. The penalty fines listed in section 18997.3 Base Table 1-10 are minimum penalty threshold to be imposed by the Department and are specifically contemplated in the language of SB 1383 as being up to \$10,000 per day. These penalties are reserved for the jurisdictions and for entities when the jurisdiction has failed to enforce. In most programs with a progressive enforcement process, generators or operators have ample time to comply, resulting in very few fines. For example, Section 18995.4 explains the minimum timeframe for the process of issuing a Notice of Violation to an entity if they are found non-compliant. A jurisdiction has 60 days from the date of inspection to issue a NOV. This allows time for the entity to remedy the situation before the jurisdiction has to issue a NOV. If an NOV is issued, the entity has up to 150 days to come into compliance before the jurisdiction must commence action to impose a penalty. This allows an entity up to 210 days to remedy a violation before a penalty is imposed. Additional extensions are available due to extenuating circumstances or infrastructure deficiencies.</p>
3504	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Administrative Civil Penalties and Environmental Justice Issues</p> <p>Per day penalties should be reserved for the most critical enforcement actions. In this proposed language, all jurisdiction/county fines are on a per day basis for violations. This includes minor offenses such as not labeling bins correctly as well as violations for not submitting compliance and implementation reports.</p>	<p>CalRecycle has revised the penalty amounts in Section 18997.2 from per day violations to per violation. The penalty provisions are consistent with the existing penalty limitations in the Government Code Sections 53069.4,25132 and 36900. Entities in violation are given ample time through the Notice of Violation process to comply and avoid penalties.</p> <p>A change to the regulatory text is not necessary. The penalty fines listed in Section 18997.2 Base Table 1 are the minimum penalty thresholds imposed by a jurisdiction. If an NOV is issued, the entity has up to 150 days to come into compliance before the jurisdiction must commence action to impose a penalty. This allows an entity up to 210 days to remedy a violation before a penalty is imposed. Additional extensions are available due to extenuating circumstances or infrastructure deficiencies.</p>
3507	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Administrative Civil Penalties and Environmental Justice Issues  Organic Waste Generators Penalties (Residential Customers)  Article 16 also lists penalties for organic waste generators in Table 1 and Table 8, with Table 8 mandating high per day fees. These fees would apply to all organic waste generators that do not comply with applicable local requirements for the collection and recovery of organic waste. This is an extremely vague violation, and as such, should not be tied to rigid fee structures.  Organic waste generators include single family, multifamily and commercial entities. CalRecycle should not include residential customers in the same penalty structure as other entities. The City's households living in single family or small multi-family dwellings pay under \$40 per month for a three bin collection service. At the lowest end one violation will almost double a residence's expenses for waste.  CalRecycle should create separate guidance for residential communities with a different fee structure. Fees should be based on the amount of organic waste and on the severity of the violation. Residential properties should not be subject to any per day fees and there should be a cap for any residential fees.</p>	<p>A change to the regulatory text is not necessary. Section 18984.4 states that organic waste generators, which includes residential generators, shall comply with the applicable local requirements adopted pursuant to Article 3 for the collection and recovery of organic waste by subscribing to collection service and if not subscribing to service, self-hauling organic waste in a manner that complies with the requirements of Article 7 of this Chapter. Section 18984.4 requires a jurisdiction to monitor generators using a three-container or two-container organic waste collection service to minimize prohibited container contaminants. If a jurisdiction observes prohibited container contaminants in a generator's containers on more than three consecutive occasions, the jurisdiction may impose additional contamination processing fee on the generator and may impose penalties. It is within the jurisdiction's discretion through its enforceable ordinance(s) on how to enforce non-compliant residential generators beyond what is required in the Chapter.  CalRecycle has revised the penalty amounts in Section 18997.2 from per day violations to per violation. The penalty provisions are consistent with the existing penalty limitations in the Government Code Sections 53069.4, 25132 and 36900. Entities in violation are given ample time through the Notice of Violation process to comply and avoid penalties. Jurisdictions have the discretion to develop their own factors to be considered when determining a penalty amount, such as but not limited to, the impact on a disadvantaged community or the ability to pay, similar to the factors used by the Department listed in section 18997.3(d).</p> <p>A change to the regulatory text is not necessary. 0	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Prohibited Container Contaminants f) Section 18984. 6 Recordkeeping Requirements for Container Contamination Minimization. To comply with this subsection, the City would manage and analyze a massive amount of data, cross-referenced to activities that are handled by many divisions. LASAN does not currently have such a data system, and would have to expend significant funding to develop and implement such a system, as well as fund staff to input, analyze and maintain the data system.</p>	Comment noted. Comment is not recommending a regulatory text change.
0	Zaldivar, E., City of Los Angeles Bureau of Sanitation (LASAN)	<p>Prohibited Container Contaminants g) LA SAN' s would like to take this opportunity to also briefly describe LAS AN' s recycLA contamination protocols as well as residential curbside program protocols. recycLA is a major milestone towards achieving the City's Zero Waste goals. The contracts were carefully negotiated and the City has worked closely with the RSPs in implementation this past year. As this program matures, the City will see a reduction in landfill disposal. We request that CalRecycle incorporate language from recycLA so that this landmark program can remain compliant with the SB 1383 regulations. Furthermore, due to the scale of LAS AN' s residential and commercial programs, it is important for CalRecycle to truly assess the benefit and costs of any changes made to deter contamination. LASAN requests that CalRecycle clarify what suffices as a review and to reduce the frequency of reviews. Additionally, if the City's contracted facilities are required to report heavily contaminated and rejected loads with route level information, CalRecycle should allow this to suffice as an option in-lieu of performing a route review of bins. LASAN looks forward to working with CalRecycle to design contamination compliance options that meets CalRecycle's objectives while maintaining affordable costs of service to both our residents and businesses while maximizing diversion.</p>	<p>Comment noted, also, CalRecycle has revised section 18995.1 in response to this comment. Section 18995.1 was revised to include the option of conducting route reviews or waste composition studies to meet the container contamination minimization requirements. If the jurisdiction chooses to conduct waste composition studies and contaminants exceed the allowed 25 percent, the jurisdiction shall notify all generators on the sampled hauler route or perform a targeted route review. This allows the jurisdiction flexibility if jurisdiction finds it difficult to have precise tracking for route reviews if hauler change, the facilities should stay consistent. Route reviews are to be conducted annually to verify compliance with Section 18984.9(a) that organic waste generators are subscribing to and complying with organic waste collection services or self-hauling organic waste. A jurisdiction shall conduct a sufficient number of route reviews of entities to adequately determine overall compliance. Section 18994.2 was revised to remove the reporting requirements related to self-haulers, such as the number of self-haulers approved and the amount of source separated organic waste self-hauled.</p>
3384	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>General Flexibility The LTF appreciates CalRecycle staffs efforts to meet with stakeholders and consider comments on these complex proposed regulations. The SWANA LTF and our members participated in the pre-rulemaking workshops and provided written comments on past drafts. Our organization and members have repeatedly echoed one major theme throughout this process, and that is the need for jurisdictional</p>	<p>Comment noted. Commenter is expressing an opinion on the overall regulatory scope and model. CalRecycle is using the model in the proposed regulations due to the ambitious organic waste diversion mandates from the Legislature that were required on a very short timeline and thus requirements must be more stringent than those used, for example, in AB 939 that allowed a substantially longer period to achieve diversion targets.</p>

Comment Number	Received From	Question/Comment	Response(s)
		flexibility. Our strong preference, and we think the far more effective approach to securing emission reductions, would be for the department to adopt a performance-based approach to these regulations. The proposed regulations continue down a very prescriptive path.	
3385	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Loadchecking Requirements</p> <p>There are five activities that require loadchecking. Most requirements between type are identically or very consistent. Some comments that apply to all loadchecking requirements are discussed here and apply to:</p> <ul style="list-style-type: none"> <li>• Article 6.2 Operating Standards., Section 17409.5.7. Loadchecking - Contamination in Source Separated Organic Waste</li> <li>• Section 17409.5.11. Remnant Organic Material in the Gray Container Collection Stream</li> <li>• Article 5.0. Composting Operation and Facility Siting and Design Standards</li> <li>• Article 2.0. Siting and Design, Section 17896.25.1. Loadchecking - Contamination in Source Separated Organic Waste</li> <li>• Article 4. CalRecycle-Controls. §20901. CalRecycle-Loadchecking Contamination in Source Separated Organic Waste</li> </ul> <p>General comments applicable to all types are:</p> <ul style="list-style-type: none"> <li>• Will This proposed language requires one loadcheck for every 500 tons but two loadchecks if less than 500 tons are received. This is confusing since a facility with 499 tons or less is required to conduct two loadchecks but if 500 to 999 tons are received only one loadcheck is required.</li> <li>• The allowance for an EA to approve an alternative frequency for loadchecking includes a requirement for the EA to determine that the incoming material from the source separated organic waste collection stream does not contain any remnant organic material. "Any remnant organic material" is an impossible threshold. One thimble full of organics would disqualify an alternative. The standard should be changed throughout all loadchecking requirements to a quantifiable number.</li> <li>• Similarly, attempting to identify the amount of visible remnants organic materials lacks specific criteria. This standard should also be changed to a quantifiable number</li> <li>• There are several inconsistent loadcheck requirements between the types and are included in the table below: ....</li> <li>• In-vessel, landfills and disposal sites only need one random load check per each source sector; whereas, the others are daily. It is not clear why these are different.</li> <li>• Landfills and disposal site are required to keep records of loads with contamination that exceeds 10% whereas other types are required to keep records of any visual contamination. The 10% threshold should be used of all loadcheck records so that every gum wrapper is not reported.</li> <li>• Section 17409.54.11 requires the loadcheck for visible remnant organic matter.</li> </ul>	A jurisdiction's designee can place labels on the containers.

Comment Number	Received From	Question/Comment	Response(s)
		<ul style="list-style-type: none"> <li>It is not clear why Section 17409.5.11 loadchecks are not required to be conducted in the presence of the EA when requested.</li> </ul> Additional comments specific to each type are presented further down.	
3386	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Section 17409.5.11. Remnant Organic Material in the Gray Container Collection Stream This section does not require "The operator shall conduct a loadcheck in the presence of the EA when requested" as required of the other types of activities requiring loadchecks.	The regulations already apply to all containers provided by a hauler, including temporary dumpsters. The regulations specify that all containers provided by a hauler must meet both the container color and container label requirements by 2036. However, the regulations do allow for either the lid or the body to meet the color requirement.
3387	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Article 5.0. Composting Operation and Facility Siting and Design Standards Section 17867. General Operating Standards. (a)(4)(E)(2) The allowance for an EA to approve an alternative frequency for loadchecking includes a requirement for the EA to determine that the incoming material from the source separated organic waste collection stream does not contain any remnant organic material. "Any remnant organic material" is an impossible threshold. One thimble full of organics would disqualify an alternative. The standard should be changed to less than one percent (used in existing composting requirements) or a more reasonable number.	With respect to compactors owned by private businesses and not the hauler, the containers may conform with either the container color requirements or the container label requirements.
3388	Zetz, E., SWANA -- CA Chapters Legislative Task Force	The SWANA LTF supports the application of consistent terminology across the statutory and regulatory paradigms impacting our operations, and we would respectfully urge CalRecycle to maintain consistency in the legal definitions for terms used in the various regulations. Having different legal meanings for important operational terms, such as "organic waste", will be quite confusing for our members on an operational level.	Comment noted. Commenter requests consistent terminology across various programs. CalRecycle notes that regulatory terms may need to be slightly different from program to program to accommodate the differences in various programs and the manner in which certain terms are applied. This may obstruct the ability to always have consistent definitions from program to program.
3389	Zetz, E., SWANA -- CA Chapters Legislative Task Force	(36) "Jurisdiction" -The definition includes "special districts that provide solid waste handling services". There is no definition of "solid waste handling services" contained in the proposed regulations; however, this phrase is defined in two sections of the Public Resources Code: PRC 40195 - "the collection, transportation, storage, transfer, or processing of solid wastes" PRC 49505 - "the collection, transportation, storage, transfer, or processing of solid waste for residential, commercial, institutional, or industrial users or customers." The problem is that some special districts provide some of those services but not all of them. Some special districts do not provide collection services to the public (either directly or via contract or franchise). Because of this we request that the proposed regulations be modified to only apply the requirements intended for jurisdictions to those special districts that provide services that a "jurisdiction" (as defined in the PRC Section 40145) otherwise provides. In conclusion, we recommend that the definition of jurisdiction be harmonized with Public Resources Code Section 40195. We would again urge the department to consistently define terms to avoid confusion in implementation of the department's various rules and regulations.	Thank you for the comment. CalRecycle revised the definition of 'jurisdiction' in Section 18982(a)(36) because the original term "handling" as used in the definition is overly broad. This change is necessary to provide clarity.

Comment Number	Received From	Question/Comment	Response(s)
3390	Zetz, E., SWANA -- CA Chapters Legislative Task Force	42) "Non-local entity" - We believe that special districts are "under the control of local jurisdiction regulations related to solid waste", and we do not believe that it is necessary to include special districts in this definition. In our last comment letter dated My 16, 2018 we noted that it would be positive to add "public universities and community colleges" back into this definition, so we support the addition of "public universities" in the proposed regulations but think "community colleges" should be specifically listed as well.	<p>In response to this comment, CalRecycle defined a "special district" as having the same meaning as Section 41821.2 of the Public Resources Code.</p> <p>Special districts can be jurisdictions or non-local entities depending on the nature of the district and its activities. There are special districts that oversee waste collection services. Accordingly, the definition of jurisdiction was amended to note that a "special district that provides solid waste collection services" is a jurisdiction.</p> <p>Additionally, a special district could be a non-local entity. Non-local entities are specifically defined as entities that are organic waste generators but are not subject to the control of a jurisdiction's regulations related to solid waste. The definition of "non-local entity," lists special districts as an example of a type of entity that could be a "non-local entity" but it does not definitively state that all special districts are non-local entities. Any special district that is a "jurisdiction" and also a "non-local entity" generator would be subject to enforcement by the Department for violations of generator requirements in Chapter 12 unless requirements are waived under Section 18986.3. CalRecycle revised the definition of 'jurisdiction' in Section 18982(a)(36) because the original term "handling" as used in the definition is overly broad. This change is necessary to provide clarity. The definition for non-local entities includes public universities and community colleges.</p>
3391	Zetz, E., SWANA -- CA Chapters Legislative Task Force	(46) "Organic waste" -We again reiterate the operational important of having consistently applied terms, especially a term as important and commonly used as "organic waste". The proposed regulations advance a definition that is both impractical and inconsistent with existing definitions of the same term. As stated during the pre-rulemaking workshops and comments, the SWANA LTF strong believes that the definition of "organic waste" should be consistent to reduce operational confusion. We do not believe the definition should include items like organic textiles and carpets, biosolids, digestate, and sludges. Carpet, for example, can be made of many different materials and the general public is not going to accurately differentiate between various types of carpet for purposes of compliance with these rules.	<p>Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.</p> <p>The definition of organic waste employed in these regulations is specific to the purpose and necessity of this regulation. Regulations adopted by other agencies or codified in other portions of statute, can employ a different definition for a different purpose.</p>
3392	Zetz, E., SWANA -- CA Chapters Legislative Task Force	(55) "Prohibited container contaminants" -This definition contains unnecessary items like carpet, hazardous wood, and non-compostable paper that could just be excluded from the definition of organic waste instead of included in this definition. It is also unclear what facilities should do with textiles.	Comment noted. Simply excluding these terms from the "organic waste" definition will not sufficiently address the need to define terms that are used in the regulations. Since "prohibited container contaminants" is a regulatory term, it requires definition.
3393	Zetz, E., SWANA -- CA Chapters Legislative Task Force	(66) "Self-hauler" -The purpose of creating this definition is unclear, particular considering how the term is used in Article 13. As defined, "Self-hauler" is so broad that could describe nearly every resident, business, government facility or other entity in California. For example, it would include a person who transported their own empty beverage containers by foot, bicycle or auto to a CRV redemption center. We ask that CalRecycle consider whether this definition is even needed. If	The "back-haul" definition is intended simply to clarify a portion of the definition of "self hauler" and the definition itself is not the appropriate mechanism to place specific requirements on how self-hauling or back-hauling is conducted. Furthermore, Public Resources Code Section 40059(a)(1) specifically places aspects of solid waste handling which are of local concern, such as means of collection and transportation, within the local control of counties, cities, districts, or other local governmental agencies. In addition, SB 1383 (in Public Resources Code Section 42654) specifically states that nothing in these regulations abrogates or limits the authority of local

Comment Number	Received From	Question/Comment	Response(s)
		so, please revise the definition and how it is used in Article 13 to clarify the state's interest in gathering information on self-haulers.	jurisdictions to enforce local waste transportation requirements. Commenters asked CalRecycle to consider whether the definition of self-hauler is needed since it is so broad. If it is needed, the definition needs to be revised and it needs to be clarified on how the Department will be getting information from jurisdictions about the self-haulers. Section 18994.2(f)(4) regarding reporting on the number of self-haulers by the jurisdiction was deleted. However, the definition in Section 18982(a)(66) is still needed.
3394	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Article 2. Landfill Disposal and Reductions in Landfill Disposal We are supportive of changes that we asked for in our prior communications, namely the allowance of approved Material Recovery Fines as Alternative Daily Cover (ADC) or Alternative Intermediate Cover (AIC). As stated in our prior comments, these materials have no reuse market and should therefore not be counted as disposal when being put to a beneficial use.	The language regarding Material Recovery Facility fines was removed in later regulatory drafts.
3395	Zetz, E., SWANA -- CA Chapters Legislative Task Force	(B) Detailed explanation of each of the processes or technologies proposed by the applicant for use to reduce landfill disposal -In the case of a process that produces a low carbon energy, fuels or chemicals from residual solid waste, the production of the product is generally separate and distinct from the end use of the energy, fuels or chemicals to produce energy. In most cases the person operating the fuel production process is separate and distinct from the person utilizing the fuel. Which of these parties is the applicant and is the applicant responsible for providing information about both the fuel production process as well as the fuel utilization process in the industrial furnace? Further, while the owner/operator of the fuel production process may remain unchanged, the use of the fuel may change from time to time for a variety of factors. How is the owner/operator of the technology process able to represent all potential future users of the product from the technology? For example, each industrial furnace operator may have different specification requirements for the fuel provided to each different furnace. We recommend that the principle applicant under these regulations be the owner/operator of the fuel production unit that would likely, but not necessarily, located at a permitted solid waste facility. The O/O would provide specific information about the operation of the fuel production unit as well as known information pertaining to the intended end use of the fuel in cooperation with a proposed known end user or users. Additional generic information about future alternative end users could also be provided. If new end users are added in the future within the constraints of the generic information in accordance with these regulations, no further action would be required - other than to ensure that the end user has separately complied with all appropriate permitting requires (e.g., becoming permitted as an EMSW facility in accordance with CalRecycle regulations).	A change to the proposed regulation to specify who the applicant for a determination of reduction in landfill disposal for a technology or process must be is not necessary because it would unnecessarily limit who could apply. The purpose of Section 18983.2 of the regulation is to approve technologies and processes that count as a reduction in landfill disposal, not to approve applicants themselves. As long as the applicant has all the information necessary to meet the requirements of Section 18983.2(a), and submits that as part of its application CalRecycle staff, in consultation with CARB staff, will review the application.
3396	Zetz, E., SWANA -- CA Chapters Legislative Task Force	(C) For each process or technology noted in Section 18983.2(a)(1)(B), the mass in short tons of organic waste, differentiated by type, that will be processed each year. For mixed organic waste, the mass in short tons of the various types of organic waste shall be determined based on an annual waste characterization study - The term "differentiated by type" is not clear. The Waste Classification Material type	CalRecycle has revised section 18983.2(a)(1)(C) in response to this comment. The changes specify the eleven categories of organic waste type into which applicants differentiate organic waste that will be processed by the proposed process or technology noted in the application. The change is necessary to narrow the number of categories of organics and be specific as to which organics types must be reported.

Comment Number	Received From	Question/Comment	Response(s)
		<p>listing on CalRecycle1s website contains definitions for material types used in recent CalRecycle waste characterization studies. Waste and diversion streams are divided into 68 distinct material types, grouped into 10 different categories. In general, categories contain types made of the same base material like paper, glass, or organics. However, some organic-based materials are in other categories such as wood waste {Inerts and Other category), and compostable paper (Paper category). We recommend that as much specificity be provided by the applicant based on historical information regarding the waste streams intended for use (e.g. from a particular MRF). However, breaking waste into 93 category types may not be practical. This is particularly true as waste material types can changed from time to time based on changes in consumption patterns. On the other hand, broad material categories may not provide sufficient information about the nature of the waste being processed into industrial fuel. The ISOR states that, "This section is necessary because information regarding the amount of organic waste is needed by type to allow ARB and CalRecycle to most accurately estimate the potential greenhouse gas emission reductions from the proposed recovery activity.11 Based on this, the 0/0 of the technology would provide sufficient description of the material types as necessary to "accurately calculate11 the potential GHG emission reductions from the proposed recovery activity. This could be more than 10 broad categories, but less than 93 specific material types.</p> <p>The second sentence discusses mixed organic waste and requires that a waste characterization study be performed annually on the material being processed to produce energy, fuels or chemicals. We support this requirement and suggest that the waste characterization study of the mixed waste to be processes into energy, fuels and chemicals be conducted in a manner "consistent with" CalRecycle1s Waste Characterization Study as provided at:  <a href="https://www2.calrecycle.ca.gov/WasteCharacterization/General/UniformMethod">https://www2.calrecycle.ca.gov/WasteCharacterization/General/UniformMethod</a></p>	<p>These categories of organic waste are modified from those included in CalRecycle’s Standard List of Material Categories and Types under the heading “Other Organics” as well as some categories listed under the regulation’s definition of “Organic Waste.” CalRecycle chose these categories because they represent major categories of organic waste that are most likely to have different sources and greenhouse gas emission factors. Further categories are not necessary because they would offer no additional information about the estimated greenhouse gas emissions and emission reductions of the technology or process.</p> <p>The commenters also suggest standardizing the characterization of mixed organic waste using CalRecycle’s Uniform Waste Disposal Characterization Method1 as this standard. However, CalRecycle determined that it was not necessary to require this level of detail and removed the sentence to which the commenters referred.</p>
3397	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>(D) For any residual material produced from the proposed process or technology, a description of each end use or disposal location to which the residual material will be sent. For each end use or disposal location, the applicant must submit the expected mass in short tons and characteristics of the residual material - The term "end use or disposal location" is not clear. The whole purpose of these regulations is to support diversion of solid waste from landfill disposal. If energy, fuels and chemicals are produced from residual solid waste, the fuel is no longer subject to landfill disposal. Rather it will be send to an end user for that energy, fuel or chemical. Further, it may not be known at the time of application pursuant to these SB 1383 regulations all of the specific end uses to which the product may be delivered. We hope that a general description of the "end use" and generic performance attributes will be sufficient. Of course, any known specific end uses can be provided at the time of application. This would be consistent with our comments on paragraph (B) above. As long as any new end use after the original application is consistent with the generic end use and performance characteristics</p>	<p>CalRecycle has revised section 18983.2(a)(1)(D) in response to these comments. The changes remove the word “residual” from this subsection to clarify that the greenhouse gas emissions and emissions reduction potentials calculated pursuant to section 18983.2(A)(1)(E) must include emissions and emissions reductions of all materials produced from the process, whether they be send to a beneficial use or disposed of. The change is necessary to clarify the scope of emissions and emissions reductions calculations intended in section 18983.2(a)(1)(E).</p> <p>The commenters note that the purpose of reporting on “end use or disposal location” is unclear because “[t]he whole purpose of these regulations is to support diversion of solid waste from landfill disposal.” While staff agree that the purpose of these regulations is to support diversion of solid waste, it is possible and likely that processes and technologies that are designed to reduce organic waste disposal in landfills will result in additional materials that have an end use or require disposal following the proposed process or technology. The greenhouse gas emissions of those materials must be considered to fully evaluate the emissions reduction potential of the process or technology.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>that would be sufficient to allow that new end use under the original application. Any changes or new uses that are outside the original end use would require an amended application.</p> <p>Further, what is the meaning of the term "residual material"? Does this have the same meaning as "residual organic material" as defined in these regulations or is it broader than just organic residual material? Does this mean any residual material produced by the process that may include product, by-products and waste. Or, does the term refer to any waste residuals that require disposal after the process is complete? Further clarification of the meaning of the term "residual" as used here would be helpful.</p>	<p>CalRecycle understands that applicants for determinations of technologies that constitute a reduction in landfill disposal will not know every specific end use and disposal fate of materials for each process or technology, but CalRecycle expects applicants to sufficiently describe expected end uses and disposals such that staff can evaluate the emissions and emissions reduction of the process or technology. The comment is correct that, because the processes and technologies will be evaluated from a lifecycle emission basis, different end uses may lead to different determinations for approval.</p>
3398	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>E) For each of the processes or technologies described pursuant to Section 18983.2(a)(1)(B), each calculation, assumption, and emission factor used by the applicant to calculate the permanent greenhouse gas emissions reduction potential of the proposed operation. All calculations must be clearly laid out such that the Department and/or the Executive Officer of the California Air Resources Board (CARB) are able to follow and understand the calculation of greenhouse gas emissions reduction potential. Calculations must include quantification of the greenhouse gas emissions produced from the process or technology itself, including those emissions from any residual material-We agree and support the provisions of this paragraph. However, we do request further confirmation of our understanding of the following phrase in the last sentence:</p> <p>"greenhouse gas emissions produced from the process or technology itself, including those emissions from any residual material." It would be the intent to provide a description of any and all GHG emissions and reductions from any waste material that is introduced into the energy, fuel or chemical production process. Further, it would be the intent to fully describe any and all GHG emissions and reductions that occur due to the use of the energy, fuels or chemicals produced by the technology- as well as from any residuals or by products. In essence, a lifecycle GHG assessment would be required for the full process and end use of any products, by-products or waste materials. This could occur at the location at which the technology is located as well as at separate locations that separately utilize the produced energy, fuels or chemicals. The largely biogenic material will substantially reduce GHG emissions at both the landfills from which the biogenic waste is diverted as well as at the end use location that have previously used more carbon intensive energy, fuels or chemicals. Your confirmation of this understanding in the response to comments and the FSOR would be greatly appreciated.</p>	<p>CalRecycle added definitions for "greenhouse gas" and "fluorinated greenhouse gas" to clarify what greenhouse gases are considered under the regulation and added a definition for "greenhouse gas emission reduction" to clarify how an emission reduction is calculated. The "greenhouse gas," "greenhouse gas emission reduction," and "fluorinated greenhouse gas" definitions are the same as those definitions used in CARB's Regulation for the Mandatory Reporting of Greenhouse Gas Emissions. The definition for "lifecycle greenhouse gas emission" was modified from a similar definition in CARB's Low Carbon Fuel Standard Regulation. These definitions are necessary to clarify what information is required for an application for a determination of technologies that constitute a reduction in landfill disposal, as well as what greenhouse gas emission and emissions reductions will be considered by CalRecycle in making the determination.</p>
3399	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>(F) For each emission factor used pursuant to Section 18983.2(a)(1)(E), documentation demonstrating that the emission factor has been peer reviewed or subjected to other scientifically rigorous review methods.</p> <p>SWANA would appreciate receiving confirmation that these regulations not only require accounting of GHG emissions, but also GHG emission reductions. For example, diversion of organics from a landfill will have a landfill methane reduction</p>	<p>CalRecycle added definitions for "greenhouse gas" and "fluorinated greenhouse gas" to clarify what greenhouse gases are considered under the regulation and added a definition for "greenhouse gas emission reduction" to clarify how an emission reduction is calculated. The "greenhouse gas," "greenhouse gas emission reduction," and "fluorinated greenhouse gas" definitions are the same as those definitions used in CARB's Regulation for the Mandatory Reporting of Greenhouse Gas Emissions. The definition for "lifecycle greenhouse gas emission"</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>similar to composting, due to the reduction of methane emissions associated with landfilling. In addition, if the largely biomass produced energy, fuels and chemicals is used to displace the use of higher carbon intensity fossil derived energy, fuels and chemicals (e.g., coal, tires, etc.) would be allowed to count the emission reduction associated with converting from high GHG emission fossil products to lower carbon products. The GHG emission reduction will be the combination of both the landfill methane reductions plus the reduction in displaced fossil carbon fuel emissions. Of course other emissions/reductions associated with the overall process and product use would have to be counted as well.</p>	<p>was modified from a similar definition in CARB's Low Carbon Fuel Standard Regulation. These definitions are necessary to clarify what information is required for an application for a determination of technologies that constitute a reduction in landfill disposal, as well as what greenhouse gas emission and emissions reductions will be considered by CalRecycle in making the determination.</p>
3400	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>{2}The Department shall consult with CARB's Executive Officer to evaluate if the information submitted by the applicant is sufficient to determine the greenhouse gas emissions reduction potential of the proposed operation, and whether or not the proposed operation results in a permanent reduction in greenhouse gas emissions, and therefore counts as a reduction in landfill disposal -A clear interpretation of the following phrase as it relates to the diversion of organic waste from landfill disposal to be used as a source of low carbon fuels is requested, " ... proposed operation results in a permanent reduction in greenhouse gas emissions, and therefore counts as a reduction in landfill disposal." SWANA's interpretation is that overall GHG reductions (e.g., both anthropogenic methane, anthropogenic CO2, and other GHGs) can be counted under this provision. The would include both: 1) the reduction in methane emissions associated with the diversion of organic solid waste from landfills, and 2) reduction in anthropogenic CO2 due to use of the produced energy, fuel and chemicals to reduce fossil CO2 emissions. Although use of the technology product to displace use of higher carbon fossil products is not directly associated with landfill diversion, it does result in a permanent reduction in GHG emissions in accordance with the above paragraph. SWANA would appreciate confirmation that all GHG reductions associated with a particular operation are considered to "count as a reduction in landfill disposal". This would include GHG emission directly related to the landfill diversion the waste, but also other beneficial GHG reductions associated with the use of the diverted waste product. It is our view that the overall reduction in GHG emissions associated with a particular operation should be counted as diversion from landfill disposal - both the avoided landfill emission as well as emission reduction associated with the use of the products of the operation. It is our view that this is similar to the benefits of composting that consider both the diversion of organics from a landfill resulting in reduced methane emissions as well as reduction in GHG emissions associated with fertilizer production. It is our understanding that this is the basis for the 0.30 MTCO2e/short ton organic waste that is used for comparison with alternative verified technologies pursuant to these regulations. SWANA would appreciate confirmation of this understanding in the response to comments and the final Statement of Reasons.</p>	<p>CalRecycle added definitions for "greenhouse gas" and "fluorinated greenhouse gas" to clarify what greenhouse gases are considered under the regulation and added a definition for "greenhouse gas emission reduction" to clarify how an emission reduction is calculated. The "greenhouse gas," "greenhouse gas emission reduction," and "fluorinated greenhouse gas" definitions are the same as those definitions used in CARB's Regulation for the Mandatory Reporting of Greenhouse Gas Emissions. The definition for "lifecycle greenhouse gas emission" was modified from a similar definition in CARB's Low Carbon Fuel Standard Regulation. These definitions are necessary to clarify what information is required for an application for a determination of technologies that constitute a reduction in landfill disposal, as well as what greenhouse gas emission and emissions reductions will be considered by CalRecycle in making the determination.</p>

Comment Number	Received From	Question/Comment	Response(s)
3401	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>(3) To determine if the proposed operation counts as a permanent reduction in landfill disposal, the Department and/or CARB's Executive Office shall compare the metric tons carbon dioxide equivalent {MTCO2e} per short ton organic waste reduced by the process or technology, with the emissions reduction from composting organic waste (0.30 MTCO2e/short ton organic waste). The Department shall only deem a proposed operation to constitute a reduction in landfill disposal if the process or technology has permanent greenhouse gas emissions reductions equal to or greater than the 0.30 MTCO2e/short ton of mixed organic waste -The numeric factor in the above paragraph is expressed differently in 2 different locations in the above paragraph: 0.30 MTCO2e/short ton organic waste 0.30 MTCO2e/short ton of mixed organic waste</p> <p>SWANA would appreciate it if CalRecycle can clarify how these two different expressions are used and are related to each other with the inclusion of the term "mixed waste" in the second, but not in the first.</p> <p>It is our understanding that the 0.30 MTCO2e/short ton organic waste is based on both the reduction in landfill methane emission as well as the avoided GHG emissions due to the reduced use of manufactured fertilizers to sustain the growth of plants. For purposes of clarity, it would be helpful for the response to comments and the Final SOR to clearly show how the 0.30 MTCO2e/short ton organic waste factor was derived - showing all the terms that were used to calculate this factor as well as their sources. Unfortunately, such more detailed computations appear to be missing from the ISOR.</p> <p>In addition, the phrase "permanent greenhouse gas emissions reductions equal to or greater than the 0.30 MTCO2e/short ton of mixed organic waste" is assumed to include all GHG reductions associated with a particular operation to produce and use an alternative product from waste diverted from landfill disposal. These GHG reductions include both those reduction directly associated with reduced landfill methane emissions as well as GHG reductions associated with the beneficial use of a product (energy, fuels or chemicals) produced by the process or technology.</p> <p>In Section 18983.2(a)(3), approval of a proposed process or technology depends entirely on a pass/fail conclusion that the process or technology results in GHG emissions reductions equal to or greater than 0.30 MTCO2e per ton. This methodology may block the use of valuable technologies that targeted the most problematic items--those that do not compost well. For example, a technology that targeted diversion of source-separated organic carpet or lumber, items with lower potential to emit carbon but which we still want to divert from disposal, could easily fail to pass the 0.30 MTCO2e hurdle. This would discourage use of otherwise valuable diversion methods and make it harder to meet the SB 1383 organics diversion goals. We suggest revising this section to provide the CalRecycle Director discretion in approval of processes and technologies. IDENTICAL 3178</p>	<p>CalRecycle has revised section 18983.2(a)(3) in response to this comment. The change removes the word "mixed" from the phrase "mixed organic waste." This change is necessary to clarify that the assessment is being performed relative to the greenhouse gas emissions per short ton organic waste being processed.</p> <p>Several commenters suggested using avoided landfill emissions as the benchmark in the determination of processes or technologies that constitute a reduction in landfill disposal. Although this proposal might increase diversion of organics from landfills, it would not achieve the greenhouse gas emissions reductions required to meet the methane reduction target required by SB 1383 or the organics diversion targets specified in the Short-Lived Climate Pollutant Reduction Strategy. The benchmark value of 0.30 MTCO2e per short ton organic waste was set to ensure emission reductions for any new process or technology are comparable to the emission reductions necessary to achieve the strategy's emission reduction goal of 4 MMTCO2e for this sector.</p> <p>CalRecycle added definitions for "greenhouse gas" and "fluorinated greenhouse gas" to clarify what greenhouse gases are considered under the regulation and added a definition for "greenhouse gas emission reduction" to clarify how an emission reduction is calculated. The "greenhouse gas," "greenhouse gas emission reduction," and "fluorinated greenhouse gas" definitions are the same as those definitions used in CARB's Regulation for the Mandatory Reporting of Greenhouse Gas Emissions. The definition for "lifecycle greenhouse gas emission" was modified from a similar definition in CARB's Low Carbon Fuel Standard Regulation. These definitions are necessary to clarify what information is required for an application for a determination of technologies that constitute a reduction in landfill disposal, as well as what greenhouse gas emission and emissions reductions will be considered by CalRecycle in making the determination.</p> <p>Several stakeholders submitted comments that indicate confusion about how the 0.30 number was calculated. To provide greater clarity, staff provide a detailed description about the calculation of this number in the guidance doc included in the record</p>

Comment Number	Received From	Question/Comment	Response(s)
3402	Zetz, E., SWANA -- CA Chapters Legislative Task Force	We again stress the concept of flexibility for jurisdictions. The regulations are extraordinarily prescriptive and take a "command and control" type of approach. Jurisdictions are going to need flexibility, and we would recommend that the department take a more performance-based approach to the regulations. For example, "Alternative 4" that would allow jurisdictions to take a more performance-based approach could be supported by SWANA	Comment noted, CalRecycle amended the draft regulatory text to include a performance-based source separated organic waste collection service provision.
3403	Zetz, E., SWANA -- CA Chapters Legislative Task Force	One issue that is not addressed in the regulations is inclusion of food waste in containers where there is a known issue with bears. This is a very real issue that should be addressed in terms of a waiver for collection of food waste.	CalRecycle added Section 18984.12(d) in response to this comment. The changes will allow jurisdictions located at or above 4,500 feet apply for a waiver from the food and food soiled paper organic waste collection requirements. Jurisdictions would also be waived from providing containers to their generators. This waiver would apply for residential and small commercial generators that are not regulated by AB 1826. As the commenter noted, jurisdictions 4,500 feet and above face specific waste collection challenges as high-elevation, forested areas that include bear and other wild animal habitat. Food waste collection can attract vectors, including bears, to populated areas creating collection and public safety issues. This change is necessary to prevent a public safety issue that food waste separation and recycling can pose. Generators in high-elevation jurisdictions will be able to continue to use customer provided containers that fit in their locked bear boxes. Jurisdictions that qualify for this waiver, however, will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. This comment argued that the limited space of locked bear boxes, which this commenter's jurisdiction uses to secure garbage bins, creates a capacity issue. Although CalRecycle recognizes the threat that vectors, like bears, pose from the collection of food waste, nothing prevents the jurisdiction from providing smaller containers that could fit inside bear boxes.
3404	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Section 18984.12(a) Low population waivers - Section (a)(1) allows rural jurisdictions that were exempt under AB 1826 additional time to implement these proposed regulations since it would be impossible for these exempt jurisdictions to implement these SB 1383 regulations immediately after their AB 1826 exemption expires. This allowance is appreciated. Section (a)(2) allows low population areas in unincorporated portions of the county to be eligible for a waiver. The use of census tracts in unincorporated areas seems to work for rural areas although the proposed requirement should reference a time reference and source for the density determination. Although this population density by census tract does work for many areas, there needs to also be an allowance to add additional low population areas that are less than the SO people per square mile but are still within a census tract that is larger than SO. Many census tracts are established along natural features like rivers and artificial structures like roads. There are many census tracts where the population is located on the fringe of the census tract but most of the census tract is under the SO-population density. These low population areas may not even have contracted collection services and the roads are not designed to withstand vehicle traffic. This waiver process should also allow for inclusion of other low population areas that are not included in the census tract designations.	CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers. CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state. Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4)

Comment Number	Received From	Question/Comment	Response(s)
			<p>jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>

Comment Number	Received From	Question/Comment	Response(s)
3405	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Section (b) only allows the waiver for a period of two years. This is an extremely short period of time given the time needed to determine the efforts to implement organics programs in that area and submit an application for a waiver. CalRecycle has 90 days to review and approve the waiver. A two-year time limit will essentially require a jurisdiction to spend effort to start the application for an additional waiver upon approval of the waiver. It is unlikely that circumstance in these low population areas will change within two years. We recommend a five-year cycle for renewal of these waivers.	CalRecycle agrees that most low-population areas that are granted a waiver by CalRecycle are likely to remain as qualifying low-population areas for longer periods of time; allowing a waiver to be operational for a longer period of time is warranted and will reduce the costs of compliance. CalRecycle has made a language change in response to this comment. After the change was made, commenters were in support that low population waivers are good for five years instead of two.
3406	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Section 18984.8 Container Labelling Requirements - We support the changes from prior versions of the regulations, which would have required existing containers to be labelled. Per our prior comments, we believed that requirement to be excessively expensive and unworkable on a practical level. The proposed regulations only require labelling of new containers, and we support this change.	Thank you for the comment. The comment is in support of the current language.
3407	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Section 18984.7 Container Color Requirements - The new language on container colors is still very prescriptive, but more reasonable. Color of the lid, not the cart body is stressed, and the deadline for statewide conformance is pushed out to 2032.	CalRecycle has revised the definitions of the containers to be consistent with each other. Also, thank you for the comment related to the increased flexibility regarding the color and hardware of the containers. Also, the deadline was revised to Jan. 1, 2036.
3408	Zetz, E., SWANA -- CA Chapters Legislative Task Force	For dual stream programs specify different colors for containers and paper, not just "blue" for recycling	CalRecycle revised Section 18984.7(a) in response to this comment to clarify that jurisdictions have to provide containers for the collection service that the jurisdiction implements for organic waste generators, not the indoor bins of businesses. Sections 18984.1(a)(6)(B) and (C) and 18984.2(d)(1) do not require that only light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container. Additionally, if the color is an issue in this circumstance, the business can use labels instead. CalRecycle will clarify in the FSOR that Section 18984.9(b), which allows a commercial business to provide containers that comply with either the color or the labeling requirements, applies to Section 18986.1 and Section 18986.2.
3409	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Yellow is the color for food scraps, but we find that residents prefer brown lids because they show less dirt.	CalRecycle responded to stakeholders who initially had issues with the container color being yellow because yellow containers will quickly become discolored and unattractive if used for the collection of food waste; and yellow coloration does not hold up well in UV conditions. Therefore, brown was chosen because brown coloration shows dirt less; and cart manufacturers can use higher percentages of recycled plastic to make brown versus yellow containers and lids, leading to more market demand for recycled plastic. The jurisdiction would be able to continue to use the brown containers for manure until they reach the end of their useful life or until 2036, whichever comes first.
3410	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Article 6 - Biosolids Generated at a Publicly Owned Treatment Works (POTW) Section 18987.2(a)(2) speaks to sewage sludge and biosolids "not suitable for additional processing or recovery". We would respectfully request that you clarify the regulations to provide guidance on what this means for purposes of compliance. As proposed, Section 18987.2 could be interpreted as a general ban on landfilling biosolids. If this is not the intended result, we would recommend the changes below. If a landfill ban on biosolids is the intent of the regulations then we believe	CalRecycle has deleted Section 18987.2 in response to comments.

Comment Number	Received From	Question/Comment	Response(s)
		<p>the FSOR should provide specific statutory authority for such an action.</p> <p>(a) Biosolids generated at a POTW shall be considered a reduction of landfill disposal if:</p> <p>(1) <del>Transported only to a solid waste facility or operation for additional processing, composting or in-vessel digestion, or other recovery</del> <b>Managed using one of the recovery processes or facilities, either on-site or off-site</b>, as specified in Section 20.1(b) of this Division;</p> <p>(2) Notwithstanding subdivision (a)(1), sewage sludge and biosolids not suitable for additional processing or recovery may be sent for disposal to a permitted facility that can receive that sewage sludge and biosolids and has obtained the applicable approvals by the regional, state, and federal agencies having appropriate jurisdiction.</p>	
3411	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Article 7. Regulation of Haulers</p> <p>Our prior comments on this portion of the regulations took the position that local jurisdictions should not be put in the position of enforcing this statute against residents that self-haul their organic waste. Unfortunately, the regulations were clarified precisely in the direction that we advocated against. To be clear, those of us implementing these regulations are not clear how we would even accurately identify all the residential self-haulers. Even if we could, we have no reason to believe that they would comply with the record-keeping requirements outlined in the proposed regulations.</p> <p>We would respectfully request that the department take the same approach that it did in the AB 901 regulations and only apply the provisions to commercial self-haulers. Local jurisdictions are not going to be able to enforce this requirement without this change.</p>	<p>Jurisdictions are not required to identify every self-hauler. They are required to adopt an ordinance that requires compliance and provide general education about self-hauler requirements.</p> <p>Many comments noted that it would be difficult to identify and provide education information to all self-haulers, such as landscape companies, because jurisdictions do not have business license information on these entities; dedicating additional resources to identifying and educating all self-haulers would be burdensome and costly. Some jurisdictions do require businesses that self-haul, back-haul, share service, or use a third-party independent recycler to submit a Certification of Recycling Service form with information about where they are taking the recyclables or organics. CalRecycle modified deleted the requirements that jurisdictions separately identify and provide education to all self-haulers, along with associated reporting requirements. CalRecycle added a new Section 18985.1(a)(7) to require jurisdictions to include educational material on self-hauling requirements in the educational material that the jurisdictions already are required to provide to all generators. CalRecycle revised Section 18985.1(c) to include all education requirements for single unsegregated collection systems.</p>
3412	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Article 9. Locally Adopted Standards and Policies</p> <p>As proposed, Section 18990.1(b)(2) prohibits a jurisdiction from adopting or enforcing an ordinance, policy, permit condition, etc. that would prohibit organic waste coming from outside the jurisdiction. We strongly object to any regulatory construct that usurps local decision-making authority and forces a jurisdiction to utilize local capacity paid for by local ratepayers for organic waste coming from outside of that jurisdiction. This type of blanket prohibition takes away the ability of local jurisdictions to ensure that their own processing capacity is maintained.</p>	<p>CalRecycle added clarifying language to this section to indicate that Article 9 section 189901 (c) (3) provides that this section does not prohibit a jurisdiction from superseding or otherwise affecting the land use authority of a jurisdiction, including, but not limited to, planning, zoning, and permitting, or an ordinance lawfully adopted pursuant to that land use authority consistent with this section.</p>
3413	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Article 11. Organic Waste Recycling Capacity Planning</p> <p>We would respectfully request that Section 18892.1(c)(2)(A) be amended to include a 60-day timeframe for entities to respond to a jurisdiction. Some timeframe needs to be included for clarity. We would also observe that the reporting timeframes in Section 18992.3 overlap in several cases. It is unclear to us why we would be required to plan and report twice with respect to the same period. Considering the</p>	<p>Thank you for the comment. CalRecycle has revised Section 18992.2(b) to create a new subsection and add the same language in this subsection that is also provided in Section 18992.1(b)(1). In addition, CalRecycle has revised Section 18992.2 by adding a new subsection (Section 18992.2(b)(1)) to add a 60-day requirement for edible food recovery organizations to provide the required information to jurisdictions. CalRecycle also revised the reporting periods such that there is no overlap nor are jurisdictions required to plan and report twice with respect to the same period.</p>

Comment Number	Received From	Question/Comment	Response(s)
		totality of the regulatory requirements, we would appreciate the opportunity to avoid doing the same thing twice unless it's necessary.	
3414	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Article 12. Procurement of Recovered Organic Waste Products</p> <p>While we recognize and support the importance of market development, such efforts must be mandated by legislative authority with associated funding to assist local jurisdictions. There are no provisions in the State statute granting such an authority to CalRecycle, and would respectfully request that the requirement for local jurisdictions to procure recovered organic waste products be eliminated from the proposed regulations.</p>	The SB 1383 statutory language contains a broad grant of regulatory authority to place requirements on jurisdictions to achieve the organic waste diversion targets. CalRecycle determined that the procurement requirements were necessary to achieve these targets by providing end uses for processed organic waste.
3415	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<ul style="list-style-type: none"> <li>For the purpose of this Article, the discussion and the procurement targets need to be expanded to include appropriate provisions for compliance by "non-local entities" (such as state agencies, public universities, etc) and "local education agencies" (such as school districts, community colleges, etc) as further defined in Sections 18982 (a) (42) &amp; (40), respectively.</li> </ul>	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor's office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to "develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state." These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>Regarding "nonlocal entities", it is important to clarify that the populations in, for example, local education agencies and special districts are already included in a jurisdiction's population-based procurement target; the population data published by the Department of Finance (DOF) includes universities, community colleges, and other local education agencies. The populations inherent in these entities are built into the procurement target calculation, and jurisdictions are encouraged to work with these entities to meet their procurement targets, which may be accomplished through a contract or agreement, such as a Memorandum of Understanding (MOU). Applying procurement targets to these entities, especially population-based procurement targets, would result in double counting individuals contributing to the procurement requirements.</p>
3416	Zetz, E., SWANA -- CA Chapters	<ul style="list-style-type: none"> <li>The prescriptive nature of the requirements of this Article is of great concern. As currently written, a jurisdiction would be required to purchase material from itself to meet the requirements of this Article. We believe a better approach would be to</li> </ul>	The proposed regulatory text does not limit jurisdictions to the procurement of recovered organic waste products from "their" organics to satisfy the procurement requirements, nor do the products need to be consumed within the jurisdiction. The commenter states, "We believe a

Comment Number	Received From	Question/Comment	Response(s)
	Legislative Task Force	require a jurisdiction to use a certain amount of these types of materials. This would increase incentive for the jurisdictions to produce such products from their own waste stream and would allow for jurisdictions to make use of their own products.	better approach would be to require a jurisdiction to use a certain amount of these types of materials.” This is essentially exactly what the procurement requirements do. A jurisdiction may procure from any entity provided the end products meet the Section 18982(60) definition of “recovered organic waste products”, and a jurisdiction may use the end products in a way that best fits local needs.
3417	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<ul style="list-style-type: none"> <li>• , electricity, and other recycled organic waste products as may be approved by CalRecycle. We believe that CalRecycle position should be focused on promoting, rather than limiting the use of organic waste products, including those that may be produced by non-combustion conversion technologies.</li> </ul>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
3418	Zetz, E., SWANA -- CA Chapters Legislative Task Force	CalRecycle should phase any procurement requirements in (as well as allow for jurisdictions to apply for annual waivers "for cause"), as the availability of these products may be limited in the first few years of program implementation and jurisdictions should not be penalized if they are unable to procure the required amounts of these products.	<p>CalRecycle disagrees with the suggestion to phase-in procurement or to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p> <p>However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities</p>

Comment Number	Received From	Question/Comment	Response(s)
			approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.
3419	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Article 13. Reporting</p> <p>We would respectfully request that all reporting be wrapped into the annual report already required for each jurisdiction while excluding reporting activities by "non-local entities" and "local education agencies". This would be more efficient than creating an entirely new reporting requirement and process just for the purposes of these regulations.</p>	Comment noted. CalRecycle may consider streamlined jurisdiction reporting opportunities, such as modifying the Electronic Annual Report process.
3420	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Article 14. Enforcement Requirements</p> <p>For the purpose of this Article, we recommend that a section be included to stipulate appropriate provisions to identify and specify the entity that would be responsible to measure and insure compliance by "non local entities" and "local education agencies" with appropriate requirements of this chapter, including but not limited to, conduct inspection(s), monitor recordkeeping, verify procurements of products made from recycled organic waste, take enforcement action, and possible imposition of penalties similar to those listed in the Article 16 of this chapter.</p>	<p>Regarding the per capita procurement target, CalRecycle calculated the number using government's share of the statewide gross domestic product (GDP) and the projections of state population and organic waste diversion needed in 2025. In order to meet the 2025 organic waste diversion target mandated by SB 1383, jurisdictions will be required to procure a percentage of the diverted organic waste in the form of recovered organic waste products. As procurement will require local governments to create markets for these products, CalRecycle determined it would be appropriate to utilize the percentage of government's share of the statewide GDP, which has averaged 13% over the most recent 10 years of data from the United States Bureau of Economic Analysis, as the amount of diverted organic waste that must be procured by jurisdictions in the form of recovered organic waste products. Although higher procurement of recovered organic waste products by jurisdictions beyond the required per capita procurement target is encouraged, CalRecycle does not find it appropriate to increase this requirement beyond government's share of the GDP.</p> <p>CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants.</p> <p>However, CalRecycle disagrees with adding the specific terms listed in the comment due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of potential products made from "bioresources" raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors</p>
3421	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Additionally, we are concerned with provision of Section 18995.1 (c) which for the purpose of measuring compliance mandates jurisdictions to generate a written report for each inspection, route review, and the name or account name of each person or entity. Some information from haulers to a jurisdiction are confidential and cannot be released to Cal Recycle. We recommend jurisdiction be required to only provide Cal Recycle with (a) A general description of the route location, (b) A</p>	<p>The comment refers to recordkeeping requirements for jurisdictions to retain. This information is not required to be reported publicly. To the extent that documents required to be retained in a jurisdiction's Implementation Record contains truly proprietary or trade secret information, there are existing protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow public agencies to withhold such information from public disclosure.</p> <p>The proposed regulations were amended to provide for this.</p>

Comment Number	Received From	Question/Comment	Response(s)
		general description of account reviewed, and (c) A list of account holders determined by the jurisdiction to be subject to enforcement actions.	
3422	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Article 14. Implementation Records and Recordkeeping Requirements The requirement to provide access to records within one business day, contained in Section 18995.2(c) is unreasonable. There are a host of legitimate reasons that may prevent this standard from being met, including employee workload and absences due to vacation and illness. We ask that this requirement be revised to be consistent with the Public Records Act, which provides 10 days, consistent with this document's reference to the PRA in 18995.2(g).	CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.
3423	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Article 15. Enforcement Oversight By The Department, Sections 18996.2 & 18996.3 Pursuant§ 42653 (a) of the PRC, Cal Recycle and CARB (not local jurisdictions) are responsible for identifying the barriers to organic waste recycling, the status of new organics recycling infrastructure development, the commitment of state funding to support infrastructure expansion, the progress in reducing regulatory barriers to the siting of organics recycling facilities, the timing and effectiveness of policies that will facilitate the permitting of organics recycling infrastructure, and the status of markets for the products generated by organics recycling facilities. Therefore, we would respectfully request that the regulatory language include allowances for jurisdictions and other entities that demonstrate a substantial effort to comply with the regulations but are unable to do so due to factors outside of their control.	The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3424	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Furthermore, we are disappointed that the proposed regulations fails to incorporate provisions for a jurisdictions demonstrating a "good faith effort" to comply with SB 1383 organic waste landfill reduction mandates. Specifically, SB 1383 {Public Resources Code § 42652.5 (a) (4)} states, "The department shall base its determination of progress on relevant factors, including, but not limited to, reviews conducted pursuant to Section 41825, the amount of organic waste disposed compared to the 2014 level, per capita disposal rates, the review required by Section 42653, and other relevant information provided by a jurisdiction" (em13hasis aeleled). PRC Section 41825 establishes the process to be used by CalRecycle in evaluating a jurisdiction compliance with State mandated recycling goals. The process requires Cal Recycle to consider "good faith efforts" by the jurisdiction in making its determination of the jurisdiction progress (emphasis added). Furthermore, as stated in PRC Section 41850 (b), CalRecycle is required to make a determination as to whether a jurisdiction has made a good faith efforts to comply with the recycling mandates before imposition of any administrative penalties on the jurisdiction (emphasis added) ... We therefore request to the proposed regulation be expanded to include provision for Cal Recycle to consider the "good faith effort" of a jurisdiction to comply with organic waste landfill reduction mandates.	The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3425	Zetz, E., SWANA -- CA Chapters	Alternatively, we request that CalRecycle revise the definition of "substantial effort", "extenuating circumstances", and "critical milestones" as define Section	Consistency with the suggested PRC provisions is inappropriate. Note that the definition of "critical milestones" was deleted from the regulations.

Comment Number	Received From	Question/Comment	Response(s)
	Legislative Task Force	18996.2 (a) to be consistent with provisions of PRC Sections 41821, 41825 4 and 41850.	The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3426	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Additionally, we are greatly concern with the proposed definition of "critical milestones" as written in Section 18996.2 (a) (2) (D) which reads "For the purpose of this section, "critical milestones" means all actions necessary for a jurisdiction to comply, including, but not limited to, receiving all approval by decision-making bodies, permit application submittals and obtaining approvals, and tasks associated with local contract approvals} (emphasis added). This is an impossible task and a local government or any state agency cannot guarantee that they can receive "all decision-making bodies" approval and need to be deleted.	A change to the regulatory text is not necessary. This exclusion of the circumstance where a decision-making body of a jurisdiction has not taken action as "substantial effort" was to prevent delayed enforcement action due to a jurisdiction failing to take adequate steps to comply with the Chapter. The success of the Short-lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. This strict timeframe does not allow for a multi-year and multi-step process for achieving compliance or a "good faith effort" as with AB 939. Enforcement by the Department allows a jurisdiction extended timeframes to come into compliance through extensions and the Correction Action Plan (CAP). Absolving the jurisdiction of their responsibility to comply with the regulations due to the failure of a decision-making body would render the state incapable of achieving the SB 1383 targets. The jurisdiction is ultimately responsible for their compliance with the Chapter and shall be subject to penalties for noncompliance and the decision-making body will need consider the possibility of penalties if it fails to take the necessary steps to comply. By adopting the SB 1383 regulations as early as possible, impacted stakeholders will be provided the maximum amount of time to prepare and budget for implementation and compliance.  The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a CAP. This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3427	Zetz, E., SWANA -- CA Chapters	Article 16. Penalty Amounts We struggle to identify the statutory authority for CalRecycle to require local jurisdictions to impose penalties on generators for noncompliance. Section	Public Resources Code Section 42652.5(a)(1) explicitly contemplates CalRecycle requiring "local jurisdictions to impose requirements on generators or other relevant entities within their

Comment Number	Received From	Question/Comment	Response(s)
	Legislative Task Force	<p>42652.5(a)(l) is clear, we believe, that the department "may authorize" jurisdictions to impose penalties but it does not provide authority to the department to mandate that jurisdictions impose penalties, and certainly does not provide authority for such prescriptive regulations. This portion of the statute provides many different areas of authority to the department, and it is incredibly precise in its phrasing, using "may require", "may authorize", "shall include", and "may include", among others to describe the precise authority being granted to the department. Again, we would respectfully point out that the statute seems to authorize the department to "authorize" penalties, but not mandate them.</p>	<p>jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance."</p> <p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, "CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code." That section also provides that CalRecycle may "include different levels of requirements for local jurisdictions..."</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, "The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code." SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that "[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. '[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . . .' The [administrative agency] is authorized to 'fill up the details' of the statutory scheme."</p> <p>Consistent with rules of statutory construction, Public Resources Code Section 42652.5(a)(1) must be read as a whole and interpreted in a way that renders the text as compatible, not contradictory. This section states that the regulations "May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." The first part of this section explicitly contemplates regulatory requirements on entities besides generators as long as they are relevant to meeting the mandates of SB 1383. Thus, the second part of the section regarding penalties must be read harmoniously and as a whole with the first part to permit penalties on the other entities that may be subject to regulatory requirements. Without enforcement penalties on the other entities, the regulatory requirements are not actually requirements but mere suggestions. Bolstering this interpretation is the Assembly Floor Analysis for SB 1383 (August 31, 2016) which stated that the bill, "May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and impose penalties for noncompliance."</p> <p>Regarding the language "authorizing" penalties by local jurisdictions, the clear intent of the legislation was that jurisdictions must penalize non-compliance with SB 1383 requirements. First, the language of Assembly Floor Analysis described above makes this intent clear – CalRecycle may require jurisdictions to impose requirements "and impose penalties for noncompliance." Second, the Legislature designed the bill to achieve the organic waste reduction goals in part by requiring</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>local jurisdictions to impose requirements. These requirements must be enforceable through penalties or:</p> <p>(a) they will not actually be requirements but suggestions; and (b) there will be no way to ensure compliance by regulated entities and thus achieve the goals of the statute. Given these considerations, CalRecycle has authorized local jurisdictions to impose penalties as long as they meet the conditions described in the regulations regarding categories of violations, requirements to enforce against those violations, and minimum penalty levels.</p> <p>Regarding Section 18995.1(a)(1)(B)(5), CalRecycle notes that the language of this section was amended to simply specify that jurisdictions enforce according the enforcement timetables and compliance extensions in Section 18995.4 and the administrative civil penalty provisions in 18997.2.</p>
3428	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Article 6.2. Operating Standards (Page 70)</p> <p>Section 17402(a)(0.5) "Consolidation sites" -This definition is helpful, and these facilities are provided exemption from some requirements later in the proposed regulations. However, provisions in Article 3 Organic Waste Collection Services require organics and recyclables to be taken only to facilities that require processing. These earlier requirements should be modified to allow these consolidation sites to function as intended.</p>	<p>A change to the regulatory text is not necessary. The definition is necessary to distinguish sites that conduct processing from those that do not. Processing is defined in existing text and not part of this rulemaking process. The intent is not to add a new type of operation or facility but to clarify which existing type of facilities and operations are not subject to the facilities measurement or record keeping requirements.</p>
3429	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Section 17409.5 Loadchecking</p> <p>This section requires the implementation of a loadchecking program to prevent the acceptance of prohibited waste The program described is onerous for operators, and in many processing facilities, difficult or impossible to achieve. Sections 17409.5.1 through 17409.5. require daily one cubic yard samples from each organic waste type or stream separated, while Section 17409.5.7 requires a potential of multiple load checks per day for inspection of contamination.</p> <p>The number of samples that must be sorted through to accomplish the objectives of Section 17409.5 on a daily basis would require large physical areas at processing facilities and a significant amount of additional staff to accomplish what is required, without even accounting for recordkeeping and reporting requirements. Many facilities, especially the larger ones, are very tight on space given all the activities that are simultaneously going on to effectively sortthrough the incoming solid waste streams. These physical restrictions will become even greater when processing facilities ramp up to handle greater volumes of organic waste.</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The methodology was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days per quarter instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>Regarding the loadchecking:</p> <p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site</p>
3430	Zetz, E., SWANA -- CA Chapters	<p>Section 17409.5.9 allows alternative measurement protocols, but it is not at all clear what will be allowed and how long it will take to approve such protocols. To make</p>	<p>CalRecycle staff has noted the comment. Section 17409.5, loadchecking for prohibited waste is an existing regulation and CalRecycle is not proposing a revision to this standard. This is not within the scope of this rulemaking.</p>

Comment Number	Received From	Question/Comment	Response(s)
	Legislative Task Force	<p>the overall proposed loadchecking program more workable, it is recommended that CalRecycle take the following approach:  Section 17409.5. Loadchecking-Prohibited Wastes.  (a) The operator of an attended operation or facility shall implement a <b>random</b> loadchecking program to prevent the acceptance of waste which is prohibited by this Article. This program must include at a minimum:  (1) the number of random loadchecks to be performed <b>based upon the selection of one random week every quarter;</b>  (2) a location for the storage of prohibited wastes removed during the loadchecking process that is separately secured or isolated, <b>or an alternative that is consistent with the physical constraints of the facility;</b>  (3) records of loadchecks and the training of personnel in the recognition, proper handling, and disposition of prohibited waste. <b>In lieu of the use of the facility's personnel to conduct loadchecks, contract inspection staff may be utilized that have been certified in training for these applications.</b> A copy of the loadchecking program and copies of the loadchecking records for the last year shall be maintained in the operating record and be available for review by the appropriate regulatory agencies.</p> <p>The remaining section changes would flow from the concept detailed here. The core precept of this proposal is that over time, the facility will receive fairly consistent types of waste for similar sources. The goal is to ensure that the facility is performing as a "high organics diversion facility." Statistically, it is not necessary to do the checks every day, and the checks are of the facility's ability to properly sort and manage the mixed organic wastestream, which won't necessarily change on a daily basis. If over time that data indicates problems, then other loadcheck frequencies may be more appropriate. In addition, this concept recognizes that loadchecking may be contracted out, if the facility does not have personnel capable of performing these tasks.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
3431	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Section 17409.5.2. Measuring Organic Waste Recovered from Mixed Waste Organic Collection Stream -The daily sampling requirement for each separate organic waste type is excessive. It would require significant space and is not related to the amount of waste accepted. Operators should have flexibility on how to implement sampling for contamination. In addition, facilities located in jurisdictions that have waivers should not be required to conduct sampling.</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. For statewide consistency, it is necessary to specify how a facility is to measure recovery efficiency to determine if it meets the definition of a high diversion organic waste processing facility.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p> <p>Regarding jurisdictions located in jurisdiction with waivers: A change to the regulatory text is not necessary. Waivers would provide certain jurisdictions a waiver from organic waste collection service, education, and enforcement if the jurisdictions meet the requirements of the waiver. A jurisdiction that is granted a waiver would not be collecting waste, so there would be no waste to send to a facility. In addition, a facility or operation located in a jurisdiction that was granted a waiver is not exempt from complying with measurement requirements.</p>
3432	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Section 17409.5.3. Measuring Organic Waste in Residuals Removed from Mixed Waste Organic Collection Stream -The comments above apply to this section also.	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. This is needed to determine the efficiency of the facility in order to make required determinations in Article 3. For statewide consistency, it is necessary to specify how a facility is to measure recovery efficiency to determine if it meets the definition of a high diversion organic waste processing facility.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p> <p>Regarding jurisdictions located in jurisdiction with waivers: A change to the regulatory text is not necessary. Comment Number	Received From	Question/Comment	Response(s)
			in a jurisdiction that was granted a waiver is not exempt from complying with measurement requirements.
3433	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Section 17409.5.4. Measuring Organic Waste Recovered from Source Separated Organic Waste Collection Stream -The comments above apply to this section also.	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. This is needed to determine the efficiency of the facility in order to make required determinations in Article 3. For statewide consistency, it is necessary to specify how a facility is to measure recovery efficiency to determine if it meets the definition of a high diversion organic waste processing facility.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p> <p>Regarding jurisdictions located in jurisdiction with waivers: A change to the regulatory text is not necessary. Waivers would provide certain jurisdictions a waiver from organic waste collection service, education, and enforcement if the jurisdictions meet the requirements of the waiver. A jurisdiction that is granted a waiver would not be collecting waste, so there would be no waste to send to a facility. In addition, a facility or operation located in a jurisdiction that was granted a waiver is not exempt from complying with measurement requirements.</p>
3434	Zetz, E., SWANA -- CA Chapters Legislative Task Force	Section 17409.5.7 requires that the "Operator inform the hauler or jurisdiction of origin of received loads with visible contamination." This requirement would have the facility continually having to inform the haulers or jurisdiction, because based upon our experience, most blue bins have contamination. This requirement should only be triggered if there are unusually high levels of visible contamination in received loads.	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid

Comment Number	Received From	Question/Comment	Response(s)
			waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
3435	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Section 17409.5.6 requires that source-separated organics waste processing be kept separate from other solid waste streams. This is not practical, especially in facilities that may also combine organic streams for further on-site processing. The following changes are recommended to this section:</p> <p><b>(a) Source-separated organics waste handling processing</b> shall be kept separate from other solid waste <b>streams</b>.</p> <p>(1) The facility operator shall be allowed to combine recovered materials for operational efficiency from any source or sector that meets their end user's specifications if the operator can verify that the combined materials are maintained in compliance with their Facility Plan or Transfer/Processing Report</p> <p><b>(b) Source-separated organic waste and organic waste removed from a mixed waste organic collection service for recovery shall be:</b></p> <p><b>(1) stored for operational efficiency and away from other activity areas in designated and specified, clearly identifiable areas as described in the Facility Plan or Transfer/Processing Report: and,</b></p> <p><b>(2) removed</b> Removed from the site consistent with section 17410.1 and either:</p> <p><b>(A) transported only to another solid waste facility, POTW, or operation for additional processing, composting, in-vessel digestion, or other recycling recovery</b> as specified in section <del>(xx20.1)</del> <b>of this Division;</b> or,</p> <p><b>(B) used in a manner approved by local, state, and federal agencies having appropriate jurisdiction;</b> or,</p> <p><b>(C) sent for disposal.</b></p>	A change to the regulatory text is not necessary. Source separated organics can be processed with other solid waste streams after sampling has occurred for each waste streams. Until then, waste streams must be processed and kept separate. Otherwise, it would be hard to accurately determine the percentage of actual organic content recovered from each waste stream in order to determine if a facility is meeting the efficiency recovery requirement.
3436	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Chapter 3.2. In-Vessel Digestion Operations and Facilities Regulatory Requirements</p> <p>For facilities that receive pre-processed waste, the loadchecking requirements are completely unnecessary. Facilities that perform the processing will likely have met the requirements for processing facilities, and it is likely that contracts will specify contamination requirements that are more rigorous than those contained with the proposed regulations.</p> <p>Furthermore, if the facility accepts pre-processed waste from a third party, or other facility, it will likely perform its OM1checking programs to ensure the integrity of the digester operation. But the requirements in the regulations are unnecessarily onerous in terms of frequency and quantities.</p>	CalRecycle has deleted the loadchecking requirements at In-Vessel Digestion operations and facilities in response to comments.
3437	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>§20700.5 CalRecycle - Long Term Intermediate Cover</p> <p>The proposed amendment is not necessary for two reasons; the definition of intermediate cover already exists in 27 CCR and the control of landfill methane emissions is already regulated via 17 CCR.</p> <p>CalRecycle has created a new definition "Long Term Intermediate Cover" that is not necessary as Intermediate Cover is already defined in existing regulation 27 CCR section 20700 as " ... all surfaces of the fill where no additional waste will be deposited within 180 days ... ". Additionally, methane emission</p>	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.

		<p>control is already regulated via CCR 17 section 95460 et. seq. The purpose of existing regulation 17 CCR Division 3, Chapter 1, Subchapter 10, Article 4, Subarticle 6 is to reduce methane emissions from municipal solid waste (MSW) landfills pursuant to the California Global Warming Solutions Act of 2006 (Health &amp; Safety Code, Sections 38500 et. seq.). Provisions of this regulation establish surface emission testing criteria, methane emission thresholds and regulatory requirements to meet the established thresholds.</p> <p>There has been no scientific or engineering justification for increasing the long-term intermediate cover from the current 18 inches to 36 inches. Methane emissions are already regulated at landfills and are enforced with monitoring requirements. If the rationale for this increase is to control methane, there has been no indication that the current 18 inches is not sufficient and, in addition, Health and Safety Code 39730.6 states that "the state board shall not adopt, prior to January 1, 2025, requirements to control methane emissions associated with the disposal of organic waste in landfills other than through landfill methane emissions control regulations." Doubling the amount of cover is a diversion of funds from program implementation with no added benefit. This provision should revert to the current 18 inches.</p>	
3438	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Section 20750.1 CalRecycle - Organic Waste Handling</p> <p>The proposed amendment effectually forces landfills to construct material recovery facilities (MRF) to recover organic materials or improve an existing MRF every time the landfill proposes to make a significant change to the design or operation as defined in 27 CCR §21665. This action places a mandated financial burden of constructing or improving a MRF for organic recovery on landfill operators rather than improving organic recovery at existing MRF's.</p> <p>This proposed section would also require all landfills to implement organic waste recovery activities even if the jurisdiction has received a waiver from the organics management programs.</p>	<p>A change to the regulatory text is not necessary. This section is necessary to ensure that new or expanding landfills implement an organic recovery activity in efforts to keep organic waste out of the landfill. Landfills that do not have available land or the finance to implement an organic waste recovery activity on-site have the option to transport the waste off-site to another facility where a recovery activity can take place.</p> <p>A waiver granted to a jurisdiction would exempt a jurisdiction from complying with the requirements of the organic waste collection service, education, and enforcement depending on the waiver. Therefore, a jurisdiction that is granted a waiver from the organic waste collection service would not be collecting waste so they would not be sending waste to a landfill. In addition, a solid waste facility is not exempt from complying with this section or any of the other requirements for the solid waste facilities because it is located in a jurisdiction that was granted a waiver.</p>
3439	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Section 20901. CalRecycle-Loadchecking Contamination in Source Separated Organic Waste.</p> <p>Like Sections 17409.5.II(b)(I) and 17867(4)(A), this section states that "One loadcheck shall be conducted for every 500 tons of [gray container/source separated organic] waste received per operating day. If the operator receives less than 500 tons for the operating day, a minimum of two (2) loadchecks shall be performed for that operating day."</p> <p>Is the word "less" in the second sentence (in bold text above) instead meant to be "more"? As written, the requirement seems to require a minimum of two loadchecks per day, regardless of how little waste is received at the facility. For example, a 25-ton per day facility would still need to perform two loadchecks.</p>	CalRecycle has deleted the loadchecking requirements, Section 20901 in response to comments.

3440	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>Section 21695. CalRecycle-Organic Disposal Reduction Status Impact Report</p> <p>The Status Impact Report (SIR) is required of all landfill operators within 180 days of the effective date of the regulations. The practical purpose of this costly requirement is not evident and is not explained in the ISOR. The disposal reductions created by increased diversion of organics will not have yet occurred. Sources and flows of disposed waste are complex and operators are likely to be unable to predict with any accuracy how future quantities will change as a result of the regulations, in terms of either mass or volume. This means that each analysis and report will be based primarily on speculation by the engineer or certified engineering geologist who prepares the report. The complexity of primary and secondary flows of diverted organics may result in disposal decreases at some sites and increases at other sites that (for example) specialize in receiving residues from organics processing.</p> <p>We recommend that CalRecycle either:</p> <ol style="list-style-type: none"> <li>1. Delete Section 21695 entirely, or</li> <li>2. If gaining useful information on changes to landfill flows, closure dates, etc. resulting from disposal flow changes caused by SB 1383 is a priority, delay by 3-5 years the date on which these reports are due, and make the requirement conditional on actual, observed changes in flow to a particular landfill that exceed a specified threshold (e.g. an increase or decrease of more than 10% from 2018 tonnages).</li> </ol>	<p>CalRecycle has revised Section 21695 in response to comments. The changes to the regulatory text include the requirement that operators identify those areas in the landfill that would remain with intermediate cover and to extend that date for submittal of the Status Impact Report (SIR) from 180 days to one year (365 days) from the effective date of these regulations.</p> <p>The SIR is a site specific, one-time submittal that is prepared by the operator after they have reviewed their landfill operations to determine any potential impacts from the reduction of organic disposal (waste flow) to their landfill. The one-year timeframe established in this regulation for the submittal of the SIR is intended to assist the operator in determining and assessing in the timing of those impacts in order properly implement any changes or modifications to the landfill in a timely manner. Because only the potential impacts associated with the reduction of the amount waste disposed will be reviewed, staff believe that one-year from the effective date of the regulations is an adequate amount of time for the operator to meet the requirements of this section.</p> <p>In addition, this section provides a list of items to be considered by the operator in order to assist them complete the SIR. This information in items listed is needed in order to adequately evaluate the potential impacts to the landfill resulting from the reduction of organic disposal at landfills. If there will be no changes to a particular item, then a statement to that effect would be adequate.</p>
3441	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>§21570. CalRecycle-Filing Requirements</p> <p>(f)(13) CalRecycle provided no clarity on why there would be a public meeting <b>prior</b> to submittal of a permit application package when a similar requirement for an informational meeting already exists after submittal. Currently, operators are required to submit a permit application 180 days prior to getting approval for the change. Imposing an additional 180 days before the submittal would result in starting the process for new or expanded solid waste facility one year prior to the change. Given that other requirements in the proposed regulations will mandate changes to permits and some implementation deadlines happen in 2022, there will be little time to start permit changes in time.</p> <p>The requirements under existing Section 21660.2 already impose an informal meeting for New and Revised permits after submittal. Changes to this section also require identifying disadvantaged communities, the proposed requirement in 21570 (f)(13) should be removed and included in section 21660.2.</p>	<p>CalRecycle has revised this section in response to comments. The section was modified to clarify that the operators of a new or expanded facility hold a public meeting with any affected disadvantage communities 180 days of submitting a permit application package. This change in this section is necessary to clarify that the 180 days is not an extension to the already established time in regulations for a permit application package but part of it. The purpose of this section is to ensure that if there are any affected disadvantage communities, they are provided an opportunity to attend the meeting and comment on the project.</p> <p>Section 21660.2 is an Enforcement Agency's (EA) requirement. EA's are required to hold informational meetings for new and revised Solid Waste Facility Permits. This is different than the operator's requirements under Section 21570(f)(13), which has been renumbered to Subdivision (g).</p>
3442	Zetz, E., SWANA -- CA Chapters Legislative Task Force	<p>In addition, Section 21570 (f)(13) requires including "any affected group" in the public meeting, That term has no definition and has no limit as to how far from the facility the affected group is located. The term "affected group" should be removed.</p>	<p>CalRecycle has revised this section in response to comments. The section was revised to delete the term "groups" from "affected groups" and change the term "disadvantage communities" to "affected disadvantage communities" and define the term "affected disadvantage communities." This was necessary to better clarify the term to let operators know who would be represented in this group so that they are notified and are provided an adequate opportunity to attend and provide comments on the project. The section was also renumbered to Section 21570(g).</p>
