2005	Gilbert, Jennifer; City of Davis Public Works	The proposed regulations require all businesses to have recycling and organics bins next to each trash container that "conform with the containers provided for collection in both color and labeling obligations". (Title 14, Chapter 12, Article 3, Section 18984.9-10) Is each trash bin within a business required to have a color coded recycling and organics bins next to it or only trash bins with lids? The color coding regulations specifies that only the lids need to be color complaint, so what about indoor bins without lids?	With respect to containers owned by private businesses and not the hauler, the containers may conform with either the container color requirements or the container label requirements. With respect to containers owned by private businesses, if there is no lid, then the body can be the applicable color or it can be labeled. In regards to the interior containers, this was the least costly and burdensome approach and still achieves the necessary organic disposal reduction. Those businesses subject to AB 827 will have to meet that statute's signage requirements. Nothing in these SB 1383 regulations precludes a jurisdiction from requiring businesses to have signage.
2006	Gilbert, Jennifer; City of Davis Public Works	Can you please clarify how the regulations plan to manage landscape companies that haul yard trimmings away from their commercial and/or residential customers? Are they required to report to jurisdictions? How would a jurisdiction know about these self-haulers (many of which do not have business licenses and operate under the radar) and how can we regulate this?	Jurisdictions are not required to identify every self-hauler. They are required to adopt an ordinance that requires compliance and provide general education about self-hauler requirements. Many comments noted that it would be difficult to identify and provide education information to all self-haulers, such as landscape companies, because jurisdictions do not have business license information on these entities; dedicating additional resources to identifying and educating all self-haulers would be burdensome and costly. Some jurisdictions do require businesses that self-haul, back-haul, share service, or use a third-party independent recycler to submit a Certification of Recycling Service form with information about where they are taking the recyclables or organics. CalRecycle modified deleted the requirements that jurisdictions separately identify and provide education to all self-haulers, along with associated reporting requirements. CalRecycle added a new Section 18985.1(a)(7) to require jurisdictions to include educational material on self-hauling

Comment Number	Received From	Question/Comment	Response(s)
			requirements in the educational material that the jurisdictions already are required to provide to all generators. CalRecycle revised Section 18985.1(b) to include all education requirements for single unsegregated collection systems.
6062	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	...we are grateful to see the January 18 draft regulations include language in Article 10 about jurisdictions being able to fund these activities through avenues such as franchise fees and local assessments, as well as the ability for generators to self-haul and enter into contracts directly with food recovery organizations. We are in strong support of these funding mechanisms, which must be included in the final language, but urge that the capacity planning process in Article 11 be expanded to formally include stakeholders such as emergency food groups, to properly inform jurisdictions about gaps & needs.	A change to the regulatory text was not necessary because it is inherent in the requirements of Section 18992.2 (a)(2)-(4) that counties, in coordination with jurisdictions and regional agencies located within the county, will have to consult with food recovery organizations which will likely include emergency food groups. Section 18992.2 also states that in complying with this section the county in coordination with jurisdictions and regional agencies located within the county shall consult with food recovery organizations and food recovery services regarding existing, or proposed new and expanded capacity that could be accessed by the jurisdiction and its commercial edible food generators.
6063	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	...we thank CalRecycle for the language in Article 9 that reflects the need for foodrecovery organizations to be able to refuse food donations. Food recovery organizationsoperate on extremely thin budgets, and often experience staff turnover, funding shocks orother disruptions that may prevent them from participating in an arrangement even if they were otherwise favorable. The final state and local regulations recognize as fundamental tothis work that food recovery organizations’ participation is voluntary, given the existing strains on the budgets of under-resourced non-profits and largely volunteer labor force engaged in food recovery.	A change to the regulatory text was not necessary because this comment is in support of language that was included in Article 9, Section 18990.2. Edible Food Recovery Standards and Policies.
6064	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding	We urge inclusion, perhaps in Article 13, of an impact assessment on food recovery organizations to understand this issue and provide information to jurisdictions and other stakeholders about how to respond to any challenges raised. For example, food banks will be wondering: Is the additional food recovery estimated from this equal to, less than, or morethan the additional cost on food banks to meet the mandated requirements?	The regulations specify in Section 18990.2 that nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible generator. Food recovery organizations and services are not mandated to recover food nor are they mandated to establish contracts or written agreements with commercial edible food generators pursuant to Section 18991.3(b). If the costs to recover additional food are too great, then food recovery organizations and services do not have to recover additional food. Adding a requirement to Article 13 requiring jurisdictions to perform an impact assessment on food recovery

Comment Number	Received From	Question/Comment	Response(s)
	San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S		organizations and services would be overly burdensome for jurisdictions as they are already required to assess edible food recovery capacity and increase capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs.
6065	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	<p>We further urge CalRecycle to encourage jurisdictions to develop funding mechanisms that offset higher mandatory commercial organics recycling incurred that emerge in new partnerships due to recovery activities necessary to meet the 20% diversion goal. These include many possibilities, such as:</p> <p>Working with generators that food banks currently do not receive donations that would require de-packaging due to organizational nutrition policies, Working with donors whose offerings have a lower yield of edible food and an accordingly higher percentage of food loss during the recovery process.</p>	<p>CalRecycle recognizes that there is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10, Section 18991.1 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. If a jurisdiction decides to fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms, then it is at the discretion of the jurisdiction, not CalRecycle, to determine how the funding will be dispersed.</p> <p>CalRecycle would also like to clarify that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing specifications in their contracts or written agreements with commercial edible food generators. For further clarification, please refer to the FSOR.</p>
6066	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	<p>Funding mechanisms should recognize that</p> <ol style="list-style-type: none"> <li>1. a large share of the costs associated with increasing the capacity for food rescue will be for labor and physical infrastructure costs associated with coordinating the additional food,</li> <li>2. recovery activities pursuant to SB 1383's goal will nearly always augment work already being done with a mixture of existing and new capacity (staff, cold storage, vehicles, fuel and other fixed costs), and therefore funding should not be restricted to incremental pounds of food.</li> </ol>	<p>CalRecycle recognizes that there is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10, Section 18991.1 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. This language was included in the section to encourage jurisdictions to establish a sustainable funding source to help cover their program implementation costs. If a jurisdiction decides to fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms, then it is at the discretion of the jurisdiction, not CalRecycle, to determine how the funding will be dispersed.</p> <p>CalRecycle would also like to clarify that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing language in their contracts or written agreements with commercial edible food generators. For further clarification please refer to the FSOR.</p>

Comment Number	Received From	Question/Comment	Response(s)
6067	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	<p>CalRecycle must define and delineate between ‘edible’ and ‘recoverable’ food, in particular to define the latter term and having the diversion mandate key off of recoverable foods – not edible. Making these changes in the definitions provides essential protection and clarity rather than simply listing each food recovery organization’s priority foods and nutrition policies in the local ‘food donation guides’ as CalRecycle envisions in Article 4. This is a critical distinction – many times edible foods require packing, processing, or other additional work to enable their donation. Who will pay for that? CalRecycle should consider using the nationally established definition of food eligible for donation by the Bill Emerson Good Samaritan Food Donation Act; mirrored in AB 1219 (Eggman, 2017).</p> <p>The term “apparently wholesome food” means food that meets all quality and labeling standards imposed by Federal, State, and local laws and regulations even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions.</p> <p>We wish to be on record that if this language is not adopted, not only will there be inconsistency with existing practice, but also some food would require additional labeling to allow recovery and donation, placing an additional burden on food banks to do so. This could significantly raise costs to achieve the diversion goal.</p>	<p>In an early draft of the proposed regulations edible food was defined as: “Edible food” means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, “edible food” is not solid waste if it is recovered and not discarded.”</p> <p>Several commenters made the argument that this definition was too restrictive, because it described “recoverable food” not “edible food.” Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters’ concerns about the definition of “edible food” being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following:</p> <p>“Edible food” means food intended for human consumption.</p> <p>(A) For the purposes of this chapter, “edible food” is not solid waste if it is recovered and not discarded.</p> <p>(B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code.</p> <p>Although the final definition of “edible food” is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities and eliminated the need to provide a separate definition for “recoverable food.”</p>
6068	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	<p>In addition, it is imperative that CalRecycle and jurisdictions exempt the ‘nonprofit charitable organizations’ (food banks and their non-profit partners) from fees and penalties related to their own waste incurred during compliance with SB 1383 as long as they are accepting donations with the intention to distribute the food for consumption. As the stream of donations increases, there may be more instances where food is not handled safely or as represented and if the non-profit charitable organizations are to help get this food out, it is important that they not be penalized for attempting to solve the overall problem.</p>	<p>Nothing in SB 1383’s regulations requires a food recovery organization or a food recovery service to recover edible food. Section 18990.2 of the regulations states, “Nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible food generator.” If a food recovery organization or service cannot safely collect and distribute food because it is at maximum capacity, then it should not be collecting any more food. In addition, nothing in SB 1383’s regulations requires a food recovery organization or service to establish a contract or written agreement with a commercial edible food generator. A food recovery organization or service, may wish to consider any costs associated with managing residual food waste when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator.</p>
6069	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest	<p>Below we ask for a significant overhaul of the role of food recovery organizations in the data reporting regime; reporting requirements must be re-centered on the generators that must comply with the diversion goal. In broader consultation, we have learned that as written the requirements are simply unworkable as they would</p>	<p>It is not prudent to require each individual commercial edible food generator to report information to the jurisdiction. Such a revision would require jurisdictions to review and aggregate data from thousands of commercial edible food generators rather than a much smaller number of food recovery organizations and food recovery services. For example, one food bank</p>

Comment Number	Received From	Question/Comment	Response(s)
	Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	violate donor confidentiality. Instead, as food recovery groups have this information, jurisdictions should make requests – solely for pounds out of simplicity and consistency with generator donation metrics – and the food recovery group(s) can make as needed should there be cause to verify a generator report.	could work with over a hundred commercial edible food generators. It is far more efficient and feasible for a jurisdiction to review one report from the food bank rather than 100 individual reports from generators that all work with the same food bank. Regarding the comment about donor confidentiality, SB 1383’s reporting requirements do not violate donor confidentiality. There is no requirement in SB 1383’s regulations for food recovery organizations or food recovery services to report donor names. They are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.
6070	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	In both definitions of ‘Food Recovery’ and ‘Food Recovery Service’ the draft regulations recognize that there could be activities conducted with payment and for-profit entities. We ask that CalRecycle emphasize the EPA’s Food Recovery Hierarchy pyramid, which highlights “Feed Hungry People – Donate extra food to food banks, soup kitchens, and shelters” as the primary strategy after “Source Reduction.” Food recovery organizations already occupy niche spaces and rely on the generosity of donors to access a sufficient supply of food. Recovery groups already compete with several secondary markets, from processors to pig farmers, and there are significant concerns with further pressures from revenue-based recovery organizations as the state achieves the goal to reduce the supply of these foods. Therefore we encourage CalRecycle to continue to find ways to minimize the regulatory burden and maximize generator agreement opportunities.	A change to the regulatory text was not necessary for the following reasons. The first reason is that the U.S. EPA Food Recovery Hierarchy identifies food waste diversion practices that extend beyond the scope of SB 1383’s edible food recovery statutory goal. Specifically, the U.S. EPA Food Recovery Hierarchy identifies source reduction of food waste as the most preferred diversion strategy and feeding animals as a key food waste diversion practice as well. Both source reduction of food waste and diverting food waste to feed animals extend beyond the scope of SB 1383’s edible food recovery statutory goal and therefore it would not be appropriate to reference the U.S. EPA Food Recovery Hierarchy in SB 1383’s edible food recovery regulations. In addition, most food banks, soup kitchens, and shelters in California are non-profit food recovery organizations. SB 1383’s statute does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.
6071	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second	Definitions (Section 18982): Article 1 (a) Definitions (18), the definition of edible food: We reiterate our request to strike “unserved and unsold” to prevent gaming of the system – not serving food so that it can be dumped instead of donated. We add that the Conference For Food Protection Food Donation guidelines recommend that only unserved food be recovered for donation, even though it is allowable under federal law. Prepared foods in particular that have been served or sold, which customers have access to are not usually donated and would require strict food safety controls. The “back of house” trays that have not been touched are the standard for prepared donations. There are many food safety concerns if donations came from a hot bar, salad bar, or customer return. Nevertheless, we continue to ask the Department & jurisdictions. to be mindful that food could potentially be labeled ‘served’ in order to avoid compliance with SB 1383.	In an early draft of the proposed regulations edible food was defined as: “Edible food” means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, “edible food” is not solid waste if it is recovered and not discarded.” Several commenters made the argument that this definition was too restrictive, because it described “recoverable food” not “edible food.” Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters’ concerns about the definition of “edible food” being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following: “Edible food” means food intended for human consumption.

Comment Number	Received From	Question/Comment	Response(s)
	Harvest San Mateo/S		<p>(A) For the purposes of this chapter, “edible food” is not solid waste if it is recovered and not discarded.</p> <p>(B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code.</p> <p>Although the final definition of “edible food” is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities.</p>
6072	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	<p>Article 1 (a) Definitions, a new definition of recoverable food should be inserted that:</p> <p>- We again ask CalRecycle to restore the language used in the June “Concept” document that reflected our prior input that food recovery organizations like food banks are able to follow internal, established “standards and requirements for acceptance related to nutrition or quality when recovered by those organizations. Nothing in this definition shall preclude such organizations from developing more stringent standards....”</p>	<p>CalRecycle would first like to clarify that SB 1383’s statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. The statute does not state that 20% of healthy or nutritious food be recovered. As a result, SB 1383’s regulations do not include requirements that only certain types of food be recovered.</p> <p>CalRecycle does however recognize that a core value of many food recovery organizations and food recovery services is to reduce food insecurity in their communities by rescuing and distributing healthy and nutritious food to help feed people in need. CalRecycle also recognizes that many food recovery organizations and food recovery services have nutrition standards for the food they are willing to accept. To address this, Section 18990.2 Edible Food Recovery Standards and Policies subsection (d) specifies that nothing in SB 1383’s regulations prohibits a food recovery organization or a food recovery service from refusing to accept edible food from a commercial edible food generator. Therefore, nothing in SB 1383’s regulations prohibits a food recovery organization or a food recovery service from following their own internal standards and requirements for acceptance related to nutrition or quality of the food when it is recovered.</p>
6073	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	<p>Article 1 (a) Definitions (24), the definition of food recovery:</p> <p>- We are in strong support of this language.</p> <p>- We suggest to add that the definition conform to the definition in (25) of a food recovery organization: “...collect and distribute for human consumption which otherwise be disposed, where recovered food is first intended for no-cost charitable distribution to communities in need.”</p>	<p>Nothing in SB 1383's statute specifies that recovered edible food shall first be intended for no-cost charitable distribution to communities in need. SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. Adding the commenter’s suggested language to the definition of food recovery would not serve a regulatory function in helping California achieve its 20% edible food recovery goal. Rather, adding the commenter’s suggested language could create barriers toward achieving the 20% edible food recovery goal of SB 1383. SB 1383’s statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.</p>
6074	Goodwin, A., Redwood Empire	<p>Article 1 (a) Definitions (25), the definition of food recovery organization, and (26), the definition of food recovery service:</p>	<p>Nothing in SB 1383’s statute specifies that recovered edible food should first be provided for free to the public for consumption. The statutory goal is that no less than 20% of currently disposed</p>

Comment Number	Received From	Question/Comment	Response(s)
	Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	- As we highlighted in our suggestions on the previous page, we remind CalRecycle of the possible unintended consequences of not explicitly stating that recovered food should be distributed for free to the public for consumption, and request this revision. We offer the additional context that if food generators want to take the federal tax deduction for donated food, it must be provided for free to the ill, needy, or children (See IRS code). Article 1 Definition (76): 'Under no circumstances shall a non-profit charitable organization be considered a 'wholesale food market'.	edible food be recovered for human consumption by 2025. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383. Regarding the comment about the wholesale food market definition, a change to the regulatory text was made in response to this comment. Language was added to the regulations to specify that food recovery organizations and food recovery services are not commercial edible food generators. Therefore, food recovery organizations and food recovery services are NOT subject to SB 1383's commercial edible food generator requirements.
6075	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	Article 4 (a)(1)(E) : Please strike 'Hours of operation.' These should not be required on a website since under no circumstances should food be dropped at a food recovery organization without a prearranged agreement or MOU.	CalRecycle removed "hours of operation" from Section 18985.2 in response to this comment and several other comments raising the same concern. The commenter is concerned that including "hours of operation" could lead to commercial edible food generators dropping off food at a food recovery organization without having permission to do so. This change was necessary to ensure that this activity does not occur, and to help protect food recovery organizations from receiving food that they were not expecting to receive.
6076	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA	Article 4 (b)(1)(D): Add this line 'Information that makes it clear they must have an agreement or MOU with a food recovery organization prior to any deliveries or drop-offs.'	CalRecycle provided an explanation in the FSOR in response to this comment. The explanation describes how the requirement for commercial edible food generators to have a contract or written agreement with a food recovery organization or a food recovery service, provides greater protections for food recovery organizations and food recovery services than the previous draft language. For context, the commenter is concerned that commercial edible food generators could self-haul edible food to a food recovery organization that they do not have a contract or written agreement with for food recovery. Donation dumping, and unexpected deliveries and drop offs of food donations are serious issues that can create significant hardships for food recovery organizations and food recovery services. Revisions were made to the regulatory text to address this concern. The FSOR clarifies that commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food

Comment Number	Received From	Question/Comment	Response(s)
	Assn of Food Banks; Weatherby, Second Harvest San Mateo/S		<p>recovery where the contract specifies that the generator is permitted to self-haul edible food during pre-established delivery or drop off times. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement.</p> <p>If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in the contract or written agreement, the commercial edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. It is at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the exact self-haul provisions to include in their contracts or written agreements.</p> <p>CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. The model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and food recovery services from donation dumping and unexpected donations. The model agreement is a template that is intended to be customized based on the needs of food recovery organizations, food recovery services, and commercial edible food generators.</p>
6077	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	<p>Article 9 Section 18990.2 Edible Food Recovery Standards and Policies</p> <p>- (a) A jurisdiction shall not implement or enforce an ordinance, policy, or procedure that prohibits the ability of a generator or food recovery organization to recover edible food that could be recovered for human consumption.</p> <p>o With the recent passage of AB 2178 (Limon, 2018), local non-profit charities may be required to register and pay fees to their local Environmental Health Departments in order to continue operating. With that in mind, CalRecycle and jurisdiction should coordinate with EHD's about the new food waste diversion goals that local food recovery organizations will be striving to meet. Perhaps this could be included in Article 13; we are open but ask for a response on how to ensure coordination and prevent duplicate regulation.</p>	<p>A change to the regulatory text was not necessary for the following reasons. First, it was unclear what the commenter's concern was regarding duplicate regulation when AB 2178 and SB 1383 have separate and distinct requirements. In addition, the commenter wrote that CalRecycle should "coordinate with environmental health departments about the new waste diversion goals." Throughout the rulemaking process CalRecycle has worked with environmental health departments, the Public Health Alliance of Southern California, and the California Conference of Directors of Environmental Health to help educate environmental health officials about the food recovery goal of SB 1383 and the law's food recovery regulations. CalRecycle is actively engaging with these stakeholders on an ongoing basis. The commenter also requested that CalRecycle add requirements to Article 13, but due to the lack of clarity in the comment itself, it was unclear exactly what the commenter was requesting to be added to Article 13. For these reasons no changes to the regulatory text were made.</p>
6078	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County;	<p>(d) Nothing in this chapter prohibits an edible food recovery service or organization from refusing to accept edible food from a generator. In fact, all generators must have agreements in place with food recovery organizations before deliveries or drop-offs and even in that context, any specific delivery can be refused because of quality, condition, lack of space, quality, type, condition, or any other reason.</p>	<p>A change to the regulatory text was not necessary because Section 18990.2. (d), already specifies that nothing in this chapter prohibits an edible food recovery service or organization from refusing to accept edible food from a generator. It is not necessary to add language about the reasons why a food recovery organization or service can refuse edible food. The language in section 18990.2. (d) is sufficient to give food recovery organizations and services the authority they seek to refuse edible food.</p>

Comment Number	Received From	Question/Comment	Response(s)
	Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	We appreciate CalRecycle’s addition of this language, and again insist that it remain included and broadly interpreted by jurisdictions to give recovery organizations the flexibility they need given the diversity of situations that arise.	<p>The FSOR also clarifies that commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food recovery where the contract specifies that the generator is permitted to self-haul edible food during pre-established delivery or drop off times. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement.</p> <p>If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in the contract or written agreement, the commercial edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. It is at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the exact self-haul provisions to include in their contracts or written agreements.</p> <p>CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and food recovery services from donation dumping and unexpected donations. The model agreement is a template that is intended to be customized based on the needs of food recovery organizations, food recovery services, and commercial edible food generators.</p>
6079	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	<p>Article 10 Section 18991.1. Jurisdiction Edible Food Recovery Program</p> <p>- (b) A jurisdiction may fund the actions taken to comply with this section through franchise fees, local assessments, or other funding mechanisms. Under no circumstances should jurisdictions charge fees or assessments to food banks or other non-profit food recovery organizations.</p> <p>o This language is essential in recognizing the financial and human resource burden that food recovery organizations will face in working to meet the 20% diversion goal, and we are in strong support.</p>	CalRecycle will not identify a specific entity that jurisdictions cannot charge fees to, as this raises an authority issue. However, CalRecycle would like to clarify that the language in Section 18991.1 (b) was included in the regulations to encourage each jurisdiction to establish a sustainable funding source to help fund its food recovery program and food recovery organizations and services operating in the jurisdiction.
8000	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest	<p>Article 10 Section 18991.2. Record keeping Requirements for Jurisdiction Edible Food Recovery Program</p> <p>- Regarding (2), With the passage of AB 2178 (Limon, 2018), local Environmental Health Departments will be required to keep records of what organizations food</p>	A change to the regulatory text was not necessary for the following reasons. First, it was unclear what the commenter’s concern was regarding duplicate regulation. The commenter did not provide additional information to identify if any of the regulations in SB 1383 are the same as the

	Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	banks partner with, and documentation directly from non-food bank affiliated non-profit organizations that are serving ready-to-eat food. In an effort to minimize the duplication of record-keeping efforts, we request that local jurisdictions communicate with EHD's to obtain records of the relevant information to avoid duplicate efforts with food banks.	requirements of AB 2178. Additional context needed to be provided before any changes to the regulations could be considered. Regarding the comment about jurisdictions communicating with local environmental health departments, nothing in SB 1383's regulations prohibits a jurisdiction from doing this. In addition, CalRecycle has worked with local environmental health departments, the Public Health Alliance of Southern California, and the California Conference of Directors of Environmental Health to help educate environmental health officials and food inspectors about the food recovery goal of SB 1383 and the law's food recovery regulations. CalRecycle is actively engaging with these stakeholders on an ongoing basis.
8001	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	Article 10. Section 18991.2(2): A list of edible food recovery organizations in the jurisdiction and their edible food recovery capacity o Add: 'and how to contact them to put in place a contract or agreement for food recovery'	This comment pertains to Section 18985.2 Edible Food Recovery Education and Outreach (a)(1)(B). Section 18985.2 (a)(1) requires jurisdictions to develop a list of food recovery organizations and food recovery services operating within the jurisdiction and maintain the list on the jurisdiction's website. The list must be updated annually. The list must include, at a minimum, the following information about each food recovery organization and each food recovery service that it includes: (A) Name and physical address. (B) Contact information. (C) Collection service area. (D) An indication of types of food the food recovery service or organization can accept for food recovery. The regulations already include the requirement that the list include the contact information for each food recovery organization and service that is included on the list. Adding the commenter's proposed requirement would be redundant, because it is already required that the contact information is listed for each food recovery organization and food recovery service. However, if a jurisdiction is inclined to include 'information on how to contact the food recovery organization to establish contract or written agreement for food recovery' with their list, then they may do so. As stated in Article 9, Section 18990.1 (a), nothing in this chapter is intended to limit the authority of a jurisdiction to adopt standards that are more stringent than the requirements of this chapter, except as provided in Subdivision (b) of Section 18990.1.
8002	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional	Article 10 Section 18991.3. Commercial Edible Food generators: o (b)(1) and (2) are critical, and we strongly support their inclusion with the modification of needing an agreement. It is our interpretation that this is permissive of generators and recovery organizations agreeing to contractual terms that would enable recovery groups to charge for their recovery costs – though that would have to be negotiated between the parties. If this is not correct, we urge in the strongest possible terms that language be included that clarify this.	To clarify, it is at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the specific provisions to include in their contracts and written agreements for food recovery. Nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing language in their contracts or written agreements with commercial edible food generators. For further clarification please refer to the FSOR.

8003	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	Article 10 Section 18991.4. Record Keeping Requirements For Commercial Edible Food Generators: regarding (a) (3) (C) -- We request to modify this line. Many donors are on regular schedules, and this regulation will often be consistent with and reinforce those practices. Yet, for infrequent donors, donations can vary greatly based on factors such as inventory, season, weather conditions and consumer demand. Likewise, food recovery organizations are sometimes asked to be "on call," meaning they only pick up when asked. Therefore it can be difficult in some cases to establish a regular frequency, and it is not practical or helpful to track this metric.	Some commenters requested that additional language be added to the regulations to address 'on-call' or 'one-time' donors. No commercial edible food generators will be one-time donors. If they only donate once, then they will very likely not be in compliance with SB 1383's commercial edible food generator requirements. In addition, it is anticipated that the majority of commercial edible food generators will not be infrequent donors. They will have edible food to donate on a regular basis. Therefore, some kind of frequency for collection or self-haul must be established and documented. Maintaining a record of the established a frequency that edible food is collected or self-hauled is necessary because this information can be used to help jurisdictions determine if a commercial edible food generator is recovering the maximum amount of edible food that would otherwise be disposed. CalRecycle would like to clarify that nothing prohibits a food recovery organization or a food recovery service and a commercial edible food generator from establishing more than one frequency to account for changes in the amount of edible food available. For example, a local education agency could have one established frequency for collections during the school year, and a different established frequency during the summer months when school is not in session and there is less food to recover.
8004	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	Article 10 Section 18991.4. Record Keeping Requirements For Commercial Edible Food Generators: regarding (a) (3) (D) --We request to strike this line, in order to maintain a single metric – pounds – to avoid the confusion of multiple measures and creating the need to translate/reconcile across different metrics.	CalRecycle agrees with this comment and removed the following language from the regulatory text: "2. An edible food generator may use an alternative metric provided by the food recovery service or organization to measure the quantity of food recovered." By removing this language, all commercial edible food generators will be required to track pounds of food recovered. This revision will eliminate confusion of multiple metrics, and also make commercial edible food generator recordkeeping more consistent as they will all be required to track pounds.
8005	Goodwin, A., Redwood Empire Food Bank; Coffaro,	Article 10 Section 18991.5. Edible Food Recovery Services and Organizations: regarding (a) -- - In further consultation with member food banks, 6 tons is a low threshold to conform to the small capacity groups the Department seeks to prevent	The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial

	D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	over-regulation. In addition, there are significant restrictions on donation data that would make compliance with the regulations, as written, impossible for food banks and member agencies.	<p>edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance.</p> <p>To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold from the regulatory text. The final regulations require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food directly from commercial edible food generators, pursuant to Section 18991.3 (b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.</p> <p>Regarding the comment about restrictions on donation data, CalRecycle would like to clarify that SB 1383's reporting requirements do not violate donor confidentiality. There is no requirement in SB 1383's regulations for food recovery organizations or food recovery services to report donor names. They are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.</p>
8006	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second	Article 10 Section 18991.5. Edible Food Recovery Services and Organizations: regarding (a) (4) -- we request the simplicity and consistency of pounds. The metric of meals is based on a conversion from pounds, and represents an estimated average. We recommend tracking pounds only, as it will be more consistent and simpler to track across many organizations. It would be burdensome on existing staff to have to report these numbers on a regular basis, and would introduce confusion in matching donated vs. transported vs. recovered meals. Finally, meals can be calculated from pounds and is simply unnecessary to report.	CalRecycle agrees with this comment and removed the following language from the regulatory text: "2. An edible food generator may use an alternative metric provided by the food recovery service or organization to measure the quantity of food recovered." By removing this language, all commercial edible food generators will be required to track pounds of food recovered. This revision will eliminate confusion of multiple metrics, and also make commercial edible food generator recordkeeping more consistent as they will all be required to track pounds.

8007	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	Article 11: Section 18992.2 Edible food recovery Capacity: regarding (a) -- In (a), we strongly support the capacity planning process as outlined but urge that counties coordinate not just with cities and regional agencies but also with “all relevant edible food recovery stakeholders, including all of but not limited to food recovery organizations, generators and haulers. Currently, such stakeholder involvement would occur only after the process outlined in (b) (2), suggesting a planning scenario that would exclude the organizations with the expertise necessary for an effective planning process as outlined.	A change to the regulatory text was not necessary because it is inherent in the requirements of Section 18992.2 (a)(2)-(4) that counties, in coordination with jurisdictions and regional agencies located within the county, will have to consult with food recovery organizations and food recovery services. Section 18992.2 states that in complying with this section the county in coordination with jurisdictions and regional agencies located within the county shall consult with food recovery organizations and food recovery services regarding existing, or proposed new and expanded capacity that could be accessed by the jurisdiction and its commercial edible food generators. These are the key stakeholder groups that must be consulted with in order for effective capacity planning to occur. However, nothing in the regulations would prohibit a county from also consulting with other relevant entities such as commercial edible food generators and haulers to help them assess their edible food recovery capacity.
8008	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	In (b), we strongly support and urge that this language remain in the final regulations. Capacity is essential to achieving the state’s goal, and jurisdictions must include implementation schedules that prioritize how to provide revenues that can support the real costs necessary to divert additional food in a food safe manner – the trucking, cold storage, fuel, staffing and administrative costs that food banks and other emergency food organizations struggle to provide already.	This comment is in support of language that was added to Section 18991.1 Jurisdiction Edible Food Recovery Program. The language specifies that a jurisdiction may fund the actions taken to comply with Section 18991.1 through franchise fees, local assessments, or other funding mechanisms.
8009	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood,	If a county identifies that new or expanded capacity is needed to recover the amount of edible food identified in (a)(4), then each jurisdiction within that county that lacks capacity shall.: o A small but important typographical change.	Some commenters noted that there was a minor grammar error in Section 18992.2 Edible Food Recovery Capacity (b). A minor grammar edit was made to the regulatory text in response to this comment. This edit was necessary to ensure that the requirement is interpreted accurately. The minor grammar edit that was made can be found below. (b) If a county identifies that new or expanded capacity is needed to recover the amount of edible food identified in (a)(4), then each jurisdiction within that county that lacks capacity shall:

	M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S		
8010	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	Article 13 Section 18994.2. Jurisdiction Annual Reporting: As with Article 10 Section 18991.5, we recommend doubling the 6 ton threshold.	<p>While some commenters requested that the threshold be increased from 6 tons to 12 tons, other stakeholders recommended removing the threshold completely so that any food recovery organization or food recovery service that contracted with, or had a written agreement with a commercial edible food generator would be required to maintain records and report to the jurisdiction.</p> <p>Another commenter further supported the recommendation to eliminate the 6-ton recordkeeping threshold by stating that the primary focus relative to edible food recovery must be the safe handling of food and protection of public health and safety. The commenter further noted that the ability to track the source of a food borne illness outbreak rests on the ability to trace food product throughout the food supply chain. By allowing a food recovery organization to avoid maintaining a record of where the food was obtained, a serious gap in the investigative traceability process is created. The commenter continued their argument by stating that in their many years of experience working as a food recovery organization, food recovery services and food recovery organizations that are not large enough or are incapable of maintaining a record of the source of the donated food are likely incapable of consistently handling and distributing donated food safely.</p> <p>CalRecycle carefully reviewed each comment that requested to increase the threshold and each comment that requested that the threshold be removed. Upon review and evaluation, a determination was made to remove the recordkeeping threshold for the following reasons. It is critical that any food recovery organization or food recovery service that contracts with or has a written agreement with a commercial edible food generator maintain a record of the food they collect or receive from those generators. This is critical for multiple reasons. The first reason is for enforcement purposes. All commercial edible food generators are required to maintain records of the food that is recovered from them. These recordkeeping requirements are specified in the commercial edible food generator recordkeeping section of the regulations.</p> <p>Although all commercial edible food generators are required to maintain records of the food that is recovered from them, in a previous draft of the regulations, not all food recovery organizations and food recovery services were required to maintain records. In a previous draft of the regulations, only food recovery organizations and food recovery services that collected or received 6 tons or more of edible food from commercial edible food generators were required to maintain records of the food they received from commercial edible food generators.</p> <p>The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance.</p> <p>To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold and revised the regulatory text. The regulations now require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food directly from commercial edible food generators, pursuant to Section 18991.3(b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.</p>
8011	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	18994.2 must be struck as written, and replaced with language that "jurisdictions may request to review and audit food recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported.." Food recovery organizations already track and could make records available upon request by the jurisdiction or State (in order for the jurisdiction or State to reconcile with food generator reporting as part of an audit or compliance review). Moreover, for many food recovery groups this information is tracked but proprietary under existing agreements with generators, which this requirement could disrupt and have the unintended consequence to prevent donations. We urge that the reporting requirement occur solely with the food generator, not with the food recovery organization, for consistency and ease of regulatory oversight. If reporting flows from the food recovery organization up to the local jurisdiction, then up to the State, reconciliation with the food generators' output will be very difficult. Food generator reporting would be provided to the State, local jurisdictions and food recovery organizations.	<p>Regarding the comment, "jurisdictions may request to review and audit food recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported." CalRecycle would like to clarify that there are no requirements in the regulations that mandate the reporting of such information. If a public agency does decide to retain copies of commercial edible food generator records or food recovery organization and food recovery service records for enforcement purposes or audit purposes, they would be subject to the Public Records Act as well as any applicable provisions exempting the disclosure of proprietary or trade-secret information.</p> <p>Regarding the comment requesting that commercial edible food generators be required to report, a change to the regulatory text was not necessary. A text change was not necessary because it is not prudent to require each individual commercial edible food generator to report information to the jurisdiction. Such a revision would require jurisdictions to review and aggregate data from thousands of commercial edible food generators rather than a much smaller number of food recovery organizations and food recovery services. For example, one food bank could work with over a hundred commercial edible food generators. It is far more efficient and feasible for a jurisdiction to review one report from the food bank rather than 100 individual reports from generators that all work with the same food bank.</p>
8012	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County;	Article 14, Section 18995.1 Jurisdiction Inspection and Enforcement Requirements (2): Unclear what food recovery organizations would be complying with in this section.	To clarify, any food recovery organization or food recovery service that has a contract or written agreement with one or more commercial edible food generators pursuant to Section 18991.3 (b) is required to maintain records and report information to the jurisdiction. Therefore, any food recovery organization or service that has a contract or written agreement pursuant to Section 18991.3 (b) is also subject to inspection by the jurisdiction to verify that they are in compliance with the SB 1383 recordkeeping and reporting requirements that they are subject to.

Comment Number	Received From	Question/Comment	Response(s)
	Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S		CalRecycle would also like to clarify that the regulations specify that food recovery organizations and services are subject to inspection, and since an “inspection” is defined in Section 18982 to include the review of applicable records, food recovery organizations and services must provide jurisdictions with access to the records required under this section upon request by the jurisdiction. A failure to provide such access may be considered a failure to maintain records. Maintenance of and access to the records described in this section is critical for jurisdictions to monitor food recovery services’ and organizations’ compliance with Section 18991.5.
8013	Goodwin, A., Redwood Empire Food Bank; Coffaro, D., Second Harvest Food Bank of Orange County; Hall, V., Feeding San Diego; Flood, M., LA Regional Food Bank; Floros, San Diego Food Bank; Cheyne, CA Assn of Food Banks; Weatherby, Second Harvest San Mateo/S	Article 16. Section 18997, Table 1 (last row): Non-profit food recovery organizations should not be penalized if they are keeping records in good faith	The only recordkeeping requirements for food recovery services and organizations are established in Section 18991.5. This section establishes minimum recordkeeping requirements for food recovery services and organizations that elect to establish a contract or written agreement with a commercial edible food generator pursuant to Section 18991.3 (b). A food recovery service or organization that does not have a contract or written agreement with a commercial edible food generator pursuant to Section 18991.3 (b) is not subject to the recordkeeping requirements. A food recovery service or organization may wish to consider any costs associated with recordkeeping when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator, thus subjecting them to the recordkeeping requirements of the regulations. Furthermore, the timeline for issuing penalties provides ample time for a food recovery organization or service to achieve compliance with the recordkeeping requirements. An entity may have up to seven months to come into compliance with a violation such as recordkeeping. CalRecycle believes this provides sufficient time for an entity acting in good faith to come into compliance with the requirements.
2053	Gunder, Dana; NextCourse	(18) Edible food: The definition of “unsold or unserved food” is in fact a definition of recoverable food, not edible. Under no dictionary is the term edible as restrictive as in this draft. It is an incorrect interpretation of the law to define edible only as what’s recoverable. The regulations should create two definitions. Edible food would set the larger number, from which 20% needs to be recovered. Recoverable food would be what is actually required to be recovered throughout the rest of the regulation: o Edible Food: The Food Loss and Waste Protocol uses this definition for food, which could be used for Edible Food: “Any substance—whether processed, semi-processed, or raw—that is intended for human consumption. “Food” includes drink, and any substance that has been used in the manufacture, preparation, or treatment of food. “Food” also includes material that has spoiled and is therefore no longer fit for human consumption. It does not include cosmetics, tobacco, or substances used only as drugs. It does not include processing agents used along the food supply chain, for example, water to clean or cook raw materials in factories or at home.”	In an early draft of the proposed regulations edible food was defined as: “Edible food” means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, “edible food” is not solid waste if it is recovered and not discarded.” Several commenters made the argument that this definition was too restrictive, because it described “recoverable food” not “edible food.” Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters’ concerns about the definition of “edible food” being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following: “Edible food” means food intended for human consumption. (A) For the purposes of this chapter, “edible food” is not solid waste if it is recovered and not discarded.

Comment Number	Received From	Question/Comment	Response(s)
		<ul style="list-style-type: none"> <li>o Recoverable Food: The current definition of “edible food” could work for this: “Unsold or unserved food that is fit for human consumption...”</li> </ul>	<p>(B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code. Although the final definition of “edible food” is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities.</p>
2054	Gunder, Dana; NextCourse	(25) Food recovery organization: I recommend removing the word “primarily” as I worry this would exclude organizations such as shelters, which are a common destination for food donations but their primary purposes is to provide shelter.	CalRecycle agrees with this comment and revised the regulatory text. The term “primarily” was removed from the definition of "food recovery organization" to help ensure that organizations that are common destinations for food donations but their primary purposes is to provide some other service (e.g. homeless shelters, faith based organizations that serve meals), are not excluded from the definition.
2055	Gunder, Dana; NextCourse	(27) Food service distributor: This definition is confusing as what is described is primarily a food service provider. Distributors play a different function in the supply chain. I recommend calling this food service provider, and creating a separate definition for food distributors.	<p>In a previous draft of the regulations, food service providers and food distributors were included under one definition. The term used to identify these entities was “food service distributor.” Due to this definition lacking clarity, a commenter asked CalRecycle to provide examples of "food service distributor." Another commenter recommended that the term "food service distributor" be removed from the regulations and that separate definitions for "food distributor" and "food service provider" be used instead.</p> <p>CalRecycle revised the regulatory text in response to these comments. Recognizing that food distributors and food service providers have different functions in the food supply chain and often perform very different roles, the term "food service distributor" was removed and replaced with two separate definitions; one definition for "food distributor," and a separate definition for "food service provider." The final definitions are below:</p> <p>“Food distributor means a company that distributes food to entities including, but not limited to, supermarkets and grocery stores.”</p> <p>“Food service provider means an entity primarily engaged in providing food services to institutional, governmental, commercial, or industrial locations of others based on contractual arrangements with these types of organizations.”</p>
2056	Gunder, Dana; NextCourse	<p>(73) Tier One and (74) Tier Two: I support a phased roll out, but believe the two lists here could be improved. Recommend:</p> <ul style="list-style-type: none"> <li>o Tier One: Supermarket, Grocery store, Food Service Provider (per note above), Distribution Centers, Food Preparatory Facilities (to include commissaries, fresh-cut processors, and ready-to-eat food processors), and Hotels (particularly if they are chains with many hotels across the state)</li> <li>o Tier Two: All others</li> </ul>	<p>The regulations are structured to place direct requirements on entities that dispose large quantities of edible food that could be recovered for human consumption. These entities are identified in the regulations as tier one and tier two commercial edible food generators. Placing direct requirements on these entities should be sufficient for California to achieve the 20% edible food recovery goal. Food facilities and food service establishments that are not tier one or tier two commercial edible food generators are exempt from SB 1383’s regulations because they typically have smaller amounts of edible food available for food recovery. As a result, additional generators were not added to the regulations.</p> <p>Regarding the recommendation to move hotels to tier one. Hotels remained in tier two due to the larger amounts of prepared foods that hotels typically have available for food recovery. Prepared foods can be difficult to recover and capacity to be able to handle this food is lacking throughout the state. As a result, a determination was made that hotels should remain in tier two.</p>
2057	Gunder, Dana; NextCourse	Source Reduction: This section misses an opportunity to reward or incentivize source reduction. Given the EPA’s Food Recovery Hierarchy, businesses that have	SB 1383’s statutory requirement is to recover 20% of currently disposed edible food for human consumption by 2025. The statute does not include any requirement for California to achieve a

Comment Number	Received From	Question/Comment	Response(s)
		<p>focused and succeeded in achieving significant source reduction should be rewarded by having donation be optional. For smaller businesses in particular, if they've achieved a great deal of efficiency, the quantities they have available may not warrant the logistics required to donate it. In order to include this component in the regulations, I recommend a "De Minimus" clause that puts the burden on the generator to demonstrate that they have reached a significantly lower food waste generation level than a common benchmark for their industry. Over time, the state will have increasingly better benchmarks from reporting requirements. Therefore, it could be structured that benchmarks are created through the initial waste characterization study, and then updated sometime in 2023-2025 after records are collected.</p>	<p>food waste prevention target. As a result, CalRecycle will not require commercial edible food generators or jurisdictions to prevent or source reduce the amount of edible food they generate. CalRecycle does however recognize that some commercial edible food generators could have types of edible food available for food recovery that are not desired by food recovery organizations or services. One example would be a generator having food available that does not meet the nutrition standards of food recovery organizations or food recovery services. To help address this issue, CalRecycle added language to the edible food recovery education and outreach section to require jurisdictions to annually provide commercial edible food generators with information about the actions that commercial edible food generators can take to prevent the creation of food waste.</p> <p>To clarify, this is not a requirement for commercial edible food generators or jurisdictions to source reduce the amount of surplus edible food they generate. This is an education requirement intended to help generators learn how they can prevent the creation of food waste. Providing this education is critical to help generators that struggle to find outlets for their currently disposed edible food, because these generators are still required to comply with SB 1383's commercial edible food generator requirements.</p> <p>Adding a section for commercial edible food generator exemptions and de-minimis waivers to the regulatory text was not necessary because the regulations are already structured so that many food facilities and food service establishments are exempt from compliance due to the smaller amounts of edible food they typically dispose. Only the entities identified as tier one and tier two commercial edible food generators are required to comply. Every other food facility or food service establishment that is not a tier one or tier two commercial edible food generator is exempt from SB 1383's edible food recovery regulations.</p> <p>CalRecycle recognizes however, that some commercial edible food generators could experience extraordinary circumstances that could make compliance impracticable. To address this, CalRecycle revised Section 18991.3. Specifically, language was added to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. For the purposes of Section 18991.3 extraordinary circumstances are specified as (1) a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity. And (2) Acts of God such as earthquakes, wildfires, flooding, and other emergencies or natural disasters.</p>
2058	Gunder, Dana; NextCourse	<p>State record collection and reporting: It is not clear from this regulation that records will in fact be collected and reported on. Adding a clause to document a requirement for this will ensure both jurisdictions and the state will indeed report on progress.</p>	<p>The regulations specify that food recovery organizations and services are subject to inspection, and since an "inspection" is defined in Section 18982 to include the review of applicable records, food recovery organizations and services must provide jurisdictions with access to the records required under this section upon request by the jurisdiction. A failure to provide such access may be considered a failure to maintain records. Maintenance of and access to the records described in this section is critical for jurisdictions to be able to report specific information to CalRecycle and also critical for jurisdictions to be able to monitor food recovery services' and organizations' compliance with Section 18991.5.</p> <p>In addition, Section 18994.2 Jurisdiction Annual Reporting mandates that a jurisdiction shall report information regarding its implementation of the edible food recovery requirements of</p>

Comment Number	Received From	Question/Comment	Response(s)
			Article 10 to CalRecycle. In response to this comment CalRecycle would like to clarify that jurisdictions are required to report the total pounds of edible food recovered by food recovery organizations and services pursuant to Section 18994.2 Subdivision (h)(2)(A). CalRecycle will then collect and analyze the data reported from jurisdictions to measure the state's progress toward achieving the 20% edible food recovery goal.
2059	Gunder, Dana; NextCourse	18991.3 (b): Recommend this say "...generators shall arrange to recover the maximum amount of recoverable food that...."	CalRecycle revised the regulatory text in response to this comment. The regulatory text was revised to the following: "Commercial edible food generators shall arrange to recover the maximum amount of edible food that would otherwise be disposed." If Section 18991.3(b)'s 'maximum amount' language was not included in the regulations there would be a loophole where commercial edible food generators could for example, recover 1% of their edible food that would otherwise be disposed and still be in compliance. The 'maximum amount' language was added to the regulations to eliminate this loophole for non-compliance and to ensure that commercial edible food generators arrange to recover the maximum amount of their edible food that would otherwise be disposed, which will be critical for helping the state achieve SB 1383's 20% edible food recovery goal.
2060	Gunder, Dana; NextCourse	Supply and Demand: As of now, we have no way to know if there is enough demand for food donation of all the food that would be required to be donated as part of this law. Therefore I encourage you to ensure that there be nothing to prohibit sale of the recovered food, as that is another outlet to provide it for human consumption.	A change to the regulatory text was not necessary because nothing in SB 1383's edible food recovery regulations prohibits the sale of recovered food.
2028	Haas-Wajdowicz, Julie; Antioch	The following is the written comments to back up my verbal comments at the hearing today. For those jurisdictions, such as Antioch, that don't already offer food waste diversion in our franchised service, the timeline for implementation once the formal rule-making process is complete is impossibly tight. As I also mentioned during the informal rule-making comment period, our franchise agreement term does not end until 2025. This new regulation will require us to negotiate a contract extension at a time when we should be focusing our energies on going out to bid for services. Instead, we will be forced to negotiate new rates and extend the existing franchise agreement potentially another 10 years. Not being able to go through a competitive bid process makes it hard to justify the 40-50% rate increase facing our community to implement this program.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
2029	Haas-Wajdowicz, Julie; Antioch	I am requesting that you consider alternative programs for interim implementation and good faith efforts/extended deadlines when evaluating compliance and	The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB

Comment Number	Received From	Question/Comment	Response(s)
		developing corrective action plans that will allow jurisdictions to increase organic waste reduction/diversion within realistic timelines for local governments.	1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
4019	Haller, A, Environmental Diversion Solutions	The fact that CalRecycle is still using data almost 10 years old to make the case for organic waste processing is shameful. With the amount of tax dollars poured into CalRecycle we can't get more up to date data? New or crossover technologies that provide real solutions that work in concert with Mother Nature are coming to market all the time and yet none are ever considered or even have a path to become an option with state diversion credits available which holds CA tax payers hostage to paying for over millions for AD plants when much more economical options are available that actually provide long term benefits to healing our climate!	Comment noted. The commenter is expressing an opinion on issues outside of the regulatory language or regulatory process that CalRecycle has undertaken.
4020	Haller, A, Environmental Diversion Solutions	It's fact that pyrolysis along with 6 other technologies are proven to be carbon negative! Not reduced carbon, non carbon neutral, CARBON NEGATIVE! The IPCC's recent Special Report listed biochar and pyrogenic carbon capture & storage (PyCCS) as one of only six negative emissions technologies (NET) that may be capable of re-balancing carbon. Anaerobic digestion cannot say that. The toxic digestate left over from anaerobic digestion processes should NOT be put in landfills anymore than any other toxic waste whether there is methane gas attached to it or not! All we're gonna do is exchange one poisonous material for another with a whole new set of problems. What are we really doing here? Pyrolysis technologies take organic waste material and reduce it by a 90% in a matter of hours which is huge for congested cities and super small mountain towns that are logistically challenged because this pyrolysis systems can be small or large. Instead of toxic AD digestate, pyrolysis system provide valuable biochar output. Biochar has been repeatedly proven to be the best substance known to man to sequester carbon. Though it's been around for centuries, we've only come to rediscover the benefits. It helps to heal soils, reduce water consumption, offset nutrient pollution, provides healthier animal bedding and so much more. Currently we have projects with systems that are processing upwards of 150 tons of organic waste per day. Again, those 150 tons are reduced by 90% in a matter of hours not weeks or months. The manufacturer is paying clients that purchase these systems \$100.00 per ton for their biochar output made from their organic waste. Organic waste has just turned into organic revenue. The same organic waste that was costing them millions to get rid of is now making them money. It's a closed loop design. This is a cross over technology used in the farming industry for years to help	CalRecycle concurs that maintaining flexibility for other recovery processes, not specifically identified in section 18983.1(b), which may still constitute a reduction of disposal of organic waste and can achieve equivalent greenhouse house gas reduction that meets or exceeds the baseline of 0.30 MTCO2e per short ton. Therefore, the proposed regulations include Section 18983.2 Determination of Technologies That Constitute a Reduction in Landfill Disposal as a pathway for including additional activities and technologies.

Comment Number	Received From	Question/Comment	Response(s)
		<p>reduce animal manure and it easily fits into the organic waste industry for municipalities! The systems fit neatly within most waste hauling transfer stations or large generator factories to handle all the organic waste on site or at the local transfer station or MRF. 90% material reduction in hours.</p> <p>We are trying to reinvent the wheel with organic waste processing when we've had solutions all along. We've just been looking in the wrong places. Farmers have much more experience handling organic waste than waste hauling companies. Waste hauling companies make enough money and I don't feel the people of California need to support fueling their fleets with the very materials they charge us to take away when those same materials could be used for helping to off set climate change in a real way that has long term value to future generations. AD cannot do that. It's these types of options that are going to truly help us off set climate change with a domino affect of benefits. If we can reduce our organic waste by 90% within our franchised waste transfer stations, we reduce long hauling traffic, GHG's and AD cannot say that. The output from pyrolysis systems helps heal soils and reduce water consumption; AD cannot say that. Pyrolysis systems have nothing that needs to go back to landfill but AD cannot say that. Pyrolysis systems can also clean up the toxic sludge left over from AD plants and keep it out of landfills and AD definitely cannot say that.</p> <p>I understand that the waste hauling industry is now heavily leveraged into methane gas AD technologies so in some ways we're kind of stuck but why would continue to build on this idea and expand it when it's not a true solution to helping us solve climate change. All AD is doing is exchanging one problem for a different problem. How can I be the only one who sees this? Municipalities and waste water treatment plants are being held hostage and forced to pay over \$100 million for anaerobic digestion plants when they don't want them but it's the only way CalRecycle will allow diversion credits that are required by state mandate when pyrolysis technologies range in the \$10-\$20 million dollar range do a better job of processing the same materials and actually work to stop climate change and have nothing that needs to go to landfill. Please stop this madness.</p> <p>Finally, the current recycling market that is struggling so hard can also be helped by pyrolysis technologies because all paper, cardboard, waxed cardboard, etc that has no recycle value and yet needs to be diverted from landfill can be processed through pyrolysis systems and made into valuable biochar that can benefit the communities where the organic waste was originally generated or sold to market. What a concept right? The problem is it's not a concept, it's being done in the mid west and abroad and California has it's head in AD sludge because if you keep this up, there won't be anymore sand. We're losing our forests, our farming, when are state agencies gonna wake up and actually see the forest from the trees and do something to stop this insanity. If you can't get rid of anaerobic digestion facilities then at least offer a path for other options that work so municipalities and jurisdictions can get the diversion credit they need to be compliant opposed to</p>	

Comment Number	Received From	Question/Comment	Response(s)
		being held hostage to AD or compost because not all are the same and we need options badly!	
5084	Hansen, K. California Restaurant Association	This legislation set out to achieve the very important goal of eliminating short-lived climate pollutants. The CRA understands and respects this goal. The inclusion of repurposed food from restaurants, however, is not aligned with the bill's intent and not a tenable proposition for restaurants. Whether food is repurposed for consumption or recycled achieves the same result in terms of methane reduction, which is clearly the goal of SB 1383 (Lara) as evident in the bill's declarations and findings.	Requiring commercial edible food generators to recover their edible food that would otherwise be disposed is in direct alignment with SB 1383's edible food recovery goal. SB 1383 mandates that CalRecycle adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. Regarding the commenter's argument, "whether food is repurposed for consumption or recycled achieves the same result in terms of methane reduction," this argument is incorrect. The methane emissions reductions achieved through food recovery in most cases are greater than the emissions reductions achieved through other food waste diversion strategies such as sending food waste to composting operations and anaerobic digestion facilities. If edible food can be recovered to help feed people in need then it should be, especially when one out of every eight Californians is food insecure, and one out of every five children in California is food insecure. Furthermore, when edible food is not consumed all of the resources that went into growing, harvesting, manufacturing, transporting, distributing, and storing the food are also wasted.
5085	Hansen, K. California Restaurant Association	There are several additional challenges with this aspect of the regulation as well. There is no existing infrastructure to effectuate this for the more than 90,000 food service establishments that exist in the state. While the final draft of the Short-Lived Climate Pollutants regulations does outline a process for local jurisdictions to establish the necessary infrastructure to recover organic waste and edible food recovery programs, our concern remains that the amount of time required for the build out of these facilities and programs is not adequately provided for in the regulations. Not to mention, there are numerous public health challenges with repurposing food for consumption and	To help achieve the statewide 20% edible food recovery goal, SB 1383's regulations include edible food recovery capacity planning requirements. In addition, Section 18991.1 (a)(4) includes a requirement that jurisdictions must increase edible food recovery capacity if it is determined that sufficient capacity does not exist. Assessing edible food recovery capacity at the local level is critical for jurisdictions to be able to understand if capacity needs exist, and exactly what their capacity needs are. It is at the discretion of the jurisdiction to determine what jurisdiction entity is best suited to assess edible food recovery capacity and ensure that compliance with this regulatory requirement becomes a part of their scope. Regarding the comment that there are more than 90,000 food service establishments in California, CalRecycle would like to clarify that only the entities identified as tier one and tier two commercial edible food generators are required to comply. Every other food facility or food service establishment that is not a tier one or a tier two commercial edible food generator is exempt from SB 1383's regulations. CalRecycle would also like to clarify that only restaurants with 250 or more seats or a total facility size equal to or greater than 5,000 square feet are subject to SB 1383's commercial edible food generator requirements, and they are not required to comply until January 1, 2024. CalRecycle does recognize however, that some commercial edible food generators could experience extraordinary circumstances that could make compliance impracticable. To address this issue, CalRecycle added language to Section 18991.3 to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. For the purposes of Section 18991.3, extraordinary circumstances are specified as (1) a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity. And (2) Acts of God such as earthquakes, wildfires, flooding, and other emergencies or natural disasters.

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle would also like to mention that as a state agency we are heavily focused on increasing edible food recovery infrastructure and capacity in California. CalRecycle’s Food Waste Prevention and Rescue Grant Program funds food waste prevention and food rescue projects across the state. To date, CalRecycle has awarded \$20 million dollars to over 60 grantees.</p>
5086	Hansen, K. California Restaurant Association	<p>Article 1 – Definitions  The “Tier two commercial edible food generator” is defined as a commercial edible food generator that is a restaurant with 250 or more seats, or a total facility size equal to or greater than 5,000 square feet. Defining a size of a restaurant by the total number of seats is arbitrary and in cases of bench seating it can be a subjective determination. Additionally, seats in a restaurant are subject to change and do not reflect the accurate amount of organic waste generated by a restaurant. We would encourage Cal Recycle to consider revising the definition to remove the reference to seating and instead use occupancy numbers. The fire marshal determines the occupancy standard for restaurants and this is an acceptable way to define the size of a restaurant for the purposes of this regulation.</p>	<p>The threshold specified for restaurants was developed through in-depth analysis of restaurant food waste data, researching restaurants that already have robust food donation programs in place, consultations with food recovery organizations and services in California that recover food from restaurants, consultations with local health departments, and input from the California Department of Public Health. Upon review of data and feedback from stakeholders, CalRecycle established the threshold in an effort to be consistent with environmental health inspection metrics that are used. Using square footage and seating as the threshold could serve to help jurisdictions identify restaurants that meet the threshold by looking at their food facility permit records. Changing the threshold to occupancy could make it very difficult for jurisdictions to identify restaurants that must comply with SB 1383. Furthermore, food recovery and food waste disposal rate data for California restaurants based on the occupancy of a facility was not available to support the proposed change.</p> <p>CalRecycle would also like to mention that a different commenter requested making the restaurant threshold more stringent. In response to that comment CalRecycle clarified that placing direct requirements on tier one and tier two commercial edible food generators should be sufficient for California to achieve the 20% edible food recovery goal. Restaurants that do not meet the 250 or more seats or a total facility size equal to or greater than 5,000 square feet threshold are exempt from SB 1383’s commercial edible food generator requirements because they typically have smaller amounts of edible food that would otherwise be disposed available for food recovery. As a result, the threshold for restaurants was not revised to include smaller restaurants with fewer seats and a reduced square footage.</p>
5087	Hansen, K. California Restaurant Association	<p>Article 3 – Mandatory Organic Waste Collection Services  Thank you for providing for the provision to allow jurisdictions to grant de minimis waivers and exemptions. As we have previously stated, restaurants are judicious with the food that they use and strive to limit the amount of food waste. The de minimis waiver provision takes this fact into account and provides a waiver from these requirements for a restaurant that has less than two cubic yards of waste and less than 20 gallons of organic waste per week. Restaurants are often in leased space in older commercial buildings and may not have the physical space necessary to accommodate the required containers in this regulation. We appreciate the inclusion of a physical space waiver to address this concern. Additionally, restaurants in rural settings may not have the frequency of collection services available to them as restaurants in urban cities. The language in this section providing for a collection frequency waiver addresses this concern.</p> <p>We are concerned with our members ability to comply with Section 18984.9 (b)(1) given the space limitations restaurants have. Restaurants have a limited amount of physical space and extremely little, if any, is not already being utilized in the kitchen or for customer dining. There would be a cost impact, possible construction needs,</p>	

Comment Number	Received From	Question/Comment	Response(s)
		and logistical hurdles upon our members to redesign their individual waste receptacle systems to comply with this regulation. We urge Cal Recycle to remove this section of the regulation.	
5088	Hansen, K. California Restaurant Association	<p>Article 4 – Education and Outreach</p> <p>The Short-Lived Climate Pollutants regulation is going to dramatically change the way organic waste is recycled and edible food is recovered in California. This regulation will require a lot of education and outreach on behalf of local jurisdictions to ensure all businesses are properly informed. Section 18985.1 (d) should require jurisdictions to provide educational information through both print and electronic media and by making direct contact with organic waste generators through workshops, meetings and on-site visits.</p>	
5089	Hansen, K. California Restaurant Association	<p>Article 9 – Locally Adopted Standards and Policies</p> <p>The goals of this legislation are substantial and will require great effort by local governments, haulers, and generators to meet them. Having a uniform, statewide regulatory scheme is critical to ensure the necessary level of compliance is achieved to hit those goals. The draft regulation should not allow local governments to enact their own regulations that deviate from the stringent standards in the current draft.</p>	A change to the regulatory text is not necessary. Public Resources Code Section 42654 mandates that “this chapter shall not limit the authority of a local jurisdiction to adopt, implement, or enforce requirements in addition to those set forth in the regulations adopted pursuant to this chapter.” The statute added by SB 1383 requires that this section is necessary to include in the regulations.
5090	Hansen, K. California Restaurant Association	We are extremely concerned with the limited number of food recovery organizations currently in the market place and their capacity to accept and properly hold the edible food that this regulation requires to now be recovered. The provision in Section 18990.2 (d) which allows for an edible food recovery service or organization to refuse to accept edible food from a generator does not adequately address the lack of these organizations in a way that is fair to restaurants. In Base Table 10, the SCLP regulations establish a series of fines for Tier Two commercial edible food generators who fail to arrange to recover edible food. It is not sound public policy to fine Tier Two commercial edible food generators for failing to arrange to recover edible food when Section 18990.2 (d) allows edible food recovery services to refuse to accept edible food. Section 18990.2 (d) is problematic and needs to be removed from the final regulation.	A change to the regulatory text is not necessary. A text change is not needed because SB 1383 requires jurisdictions to implement edible food recovery programs, which includes the requirement that a jurisdiction shall increase edible food recovery capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs. The regulations are structured so that jurisdictions will be required to begin edible food recovery capacity planning in 2022. Restaurants with 250 or more seats, or a total facility size equal to or greater than 5,000 square feet, are tier two commercial edible food generators and will not be required to comply until 2024. That gives the jurisdictions two years to build capacity (if needed) from 2022-2024, and tier two commercial edible food generators an additional two years to prepare for compliance. For these reasons, no changes to the regulations will be made. Regarding the comment concerning section 18990.2 (d), a change to the regulatory text is not necessary. Tier two commercial edible food generators must arrange to recover edible food. Whether a particular edible food recovery service refuses to accept the edible food is irrelevant to the tier two commercial edible food generator’s obligation to find a recovery service that will accept the food.
5091	Hansen, K. California Restaurant Association	<p>Article 10 – Food Generators and Food Recovery</p> <p>We urge Cal Recycle to revise Article 10 to include a provision to allow jurisdictions to grant de-minimis waivers and exemptions for edible food donations. Cal Recycle has already acknowledged the need for a de-minimis waiver for businesses that generate less than two cubic yards of waste and less than 20 gallons of organic waste per week in Article 3 of the regulation. As we previously stated, restaurants do not have surplus food on hand. Any restaurant with a small amount of food left over from their meal service such as a half a loaf of bread and a few vegetables</p>	Adding a section for commercial edible food generator exemptions and de-minimis waivers to the regulatory text was not necessary because the regulations are already structured so that many food facilities and food service establishments are exempt from compliance due to the smaller amounts of edible food they typically dispose. Only the entities identified as tier one and tier two commercial edible food generators are required to comply. Every other food facility or food service establishment that is not a tier one or tier two commercial edible food generator is exempt from SB 1383’s commercial edible food generator regulations.

Comment Number	Received From	Question/Comment	Response(s)
		<p>would be required to take on the costs to contract with a food recovery service. A de-minimis waiver would adequately address these concerns.</p>	<p>CalRecycle recognizes however, that some commercial edible food generators could experience extraordinary circumstances that could make compliance impracticable. To address this issue and the concern raised in this comment, CalRecycle revised Section 18991.3. Specifically, language was added to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. For the purposes of Section 18991.3 extraordinary circumstances are specified as (1) a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity. (2) Acts of God such as earthquakes, wildfires, flooding, and other emergencies or natural disasters.</p> <p>Regarding the comment that “restaurants do not have surplus food on hand.” CalRecycle’s generator-based waste characterization data is in direct conflict with this statement. The Department’s waste characterization data shows that restaurants in California collectively dispose of significant amounts of food waste annually. Some of this food could have potentially been recovered for human consumption. In addition, CalRecycle has a Food Waste Prevention and Rescue Grant Program that has awarded 20 million dollars to over 60 grant projects across the state. Most of the grantees are food recovery organizations that report information about the pounds of food they recover, and where the food was recovered from. Through our grant program reporting we have seen many restaurants donating their surplus food to help feed people in their communities. Based on the information we have received from food recovery organizations, there are restaurants in California that have surplus edible food to donate, and many restaurants in California are already doing great work donating their surplus edible food to support their local community.</p>
5092	Hansen, K. California Restaurant Association	<p>Section 18991.3 (b) (1-2) mandates a cost increase to restaurants to comply with this regulation. Contracting with a food recovery service to collect edible food donations will come at a cost to restaurants. We are concerned that any possible tax offset from the donation will be negated by the cost to purchase the food and the cost to contract with a food recovery service to collect any edible food to be in compliance with this regulation.</p> <p>Secondly, it is not feasible for restaurants to self-haul edible food donations to a food recovery organization. It would be an impractical mandate and another cost to restaurants to provide for transportation, pay employees to deliver the edible food donations, and maintain proper health and safety requirements for that food. Once again, any favorable tax treatment that could come from the donated edible food will not be enough to cover these new costs- nor address the impractical logistical hurdles to succeed.</p>	<p>Regarding the comment, “we are concerned that any possible tax offset from the donation will be negated by the cost to purchase the food and the cost to contract with a food recovery service to collect any edible food to be in compliance with this regulation,” a restaurant’s cost to purchase food is a business cost, not a cost incurred to comply with the regulations. In addition, contracting with a food recovery organization or service should not increase costs for restaurants unless the restaurant chooses to contract with a for-profit food recovery organization or service.</p> <p>Regarding the comment, “Secondly, it is not feasible for restaurants to self-haul edible food donations to a food recovery organization,” commercial edible food generators are not required to self-haul their food to a food recovery organization. Self-haul is an option for compliance. However, if self-hauling edible food is not feasible, then the food can be collected by a food recovery organization or service that the generator has a contract or written agreement with for food recovery.</p>
5093	Hansen, K. California Restaurant Association	<p>The SCLP regulation does not address the quality standards for edible food donations from a restaurant. Absent an objective standard to determine the quality of edible food donations, it will be easy for local jurisdiction officials to determine what their own standards are for spoiled food. A restaurant could be fined thousands of dollars for an innocent mistake that a local jurisdiction official</p>	<p>The definition of “edible food” was revised to specify that, “Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code.” This provision provides an objective standard familiar to regulated entities.</p>

Comment Number	Received From	Question/Comment	Response(s)
		determined as intentionally spoiling edible food. We respectfully request Section 18991.3 (c) be removed from the final regulations.	
5094	Hansen, K. California Restaurant Association	The SCLP regulation is silent on the set of standards by which food recovery organizations should hold or maintain edible food donations. We are concerned that the regulation only focuses on the commercial food generators and does not speak to the standards that a food recovery organization must meet to receive and store edible food donations.	CalRecycle would first like to clarify that the definition of "edible food" in SB 1383's regulations specifies that nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code. However, specific food safety requirements are not included in SB 1383's regulations because food safety requirements are established by the California Health and Safety Code and enforced by local environmental health departments and the California Department of Public Health. If a commercial edible food generator, food recovery organization, or food recovery service does not safely handle recovered food, then environmental health could potentially take enforcement action depending on the circumstances.
5095	Hansen, K. California Restaurant Association	<p>Article 11 – Organic Waste Recycling Capacity Planning</p> <p>The SLCP Regulation is going to require new facilities and infrastructure to service the increased collection of organic waste and recovery of edible food. New compost and in-vessel digestion facilities will need to be funded, located and built. Since, SB 1383 did not dedicate funding to the construction of these new facilities the burden of funding the required infrastructure will fall on local jurisdictions. We are concerned that local jurisdictions will assess a user fee on organic waste generators to pay for the construction of these new facilities. Additionally, we are concerned that the planning, funding, approval and construction of these new facilities will take a significant period of time. It is only rational to include a waiver in the SLCP regulation for organic waste generators in jurisdictions that do not have the necessary infrastructure to recover organic waste by January 1, 2022.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
5096	Hansen, K. California Restaurant Association	Additionally, we are concerned about the ability of local jurisdictions to ensure enough capacity for edible food recovery by January 1, 2024. We recommend the inclusion of a waiver in the SLCP regulation for tier two commercial edible food generators in jurisdictions that do not have the necessary edible food recovery infrastructure and capacity to accept edible food donations by January 1, 2024.	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. 			CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
5097	Hansen, K. California Restaurant Association	Article 16 – Administrative Civil Penalties for Violations of Requirements of this Chapter The proposed fines are completely out of line with the revenues generated by restaurants. The vast majority of restaurants couldn't withstand a \$10,000 fine in one year much less per day. It is imperative to consider lowering the fine amounts to a more reasonable amount. We recommend in Table 10 for restaurants, Tier Two organic food generators, to be fined at Level 1 for the 1st violation, Level 2 for the 2nd violation and Level 3 for the 3rd and subsequent violation.	CalRecycle has revised sections 18997.2 and 18997.3 due to comments. The penalty tables have been removed. A jurisdiction shall impose penalties for violations consistent with the graduated penalty amounts authorized in Sections 53069.4, 25132 and 36900 of the Government Code which is outlined in Section 18997.2(a). The Department will impose penalties as described in 18997.3 according to a minor/moderate/major model as modified by various factors in that section to allow flexibility on a case-by-case basis as equity may require.
5098	Hansen, K. California Restaurant Association	Thank you for revising the penalty severity levels in Table 1 and Table 10, restaurants, Tier Two commercial edible food generators should not be fined at a higher level than grocery stores (Tier One commercial edible food generators). Grocery stores are going to produce a higher volume of organic waste and edible food donations, it is not appropriate to fine them at a lower rate than a restaurant which will produce a much smaller amount of organic waste and edible food donations.	Comment noted For clarity, Section 18997.2 outlines the penalty amounts imposed by the jurisdiction on regulated entities. These penalties are significantly lower than those listed in Section 18997.3. The penalty amounts listed in Section 18997.3 are imposed by the Department on jurisdictions for non-compliance with the Chapter and on various entities otherwise regulated by jurisdictions when the jurisdiction fails to enforce or lacks the authority to enforce this Chapter.
5099	Hansen, K. California Restaurant Association	Additionally, to achieve the stated goals, maximize compliance, and stay in-line with the spirit of SB 1383 we recommend the inclusion of an educational and outreach program to take place over the course of at least one year before jurisdictions can assess fines.	Comment noted. Section 18995.1 (a) (4) states requires a jurisdiction to provide education and outreach between January 1, 2022 through January 1, 2024. Beginning in 2024, jurisdictions are required to impose penalties on entities not in compliance with the Chapter.
3509	Harrington, P., City of Berkeley	General: As drafted, the regulations are overly prescriptive and onerous for cities. We urge CalRecycle to develop a performance-based pathway to compliance, which would be especially beneficial to those jurisdictions, such as Berkeley, that have led the state in organics recycling by developing their own programs.	Comment noted, CalRecycle amended the draft regulatory text to include a performance-based source separated organic waste collection service provision.
3510	Harrington, P., City of Berkeley	Berkeley Container Lid Colors: Berkeley is committed to a dual-stream recycling program, which reduces residuals and keeps recyclables cleaner and more marketable. Berkeley is the only jurisdiction in Alameda County with a dual-stream recycling program. Our residential dual-stream recycling program utilizes a split cart. The cart itself is blue and the lid on the containers (bottles/cans/plastic containers) recycling compartment is blue; however, the lid on the fiber (cardboard/paper) compartment is brown. Commercial fiber stickers are also brown. Staff is concerned that the regulations as drafted will prohibit the City's dual-stream recycling program from utilizing the brown lid, which helps residents differentiate between the two material streams. If both compartment lids and stickers are blue, staff believe it could lead to cross contamination of our recycling program, which currently has a residual rate of less than 5%.	Sections 18984.1(a)(6)(B) and (C) and 18984.2(d)(1) do not require that only light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container. The regulations do not preclude a jurisdiction from having split carts, but in the commenter's scenario this would mean the jurisdiction has a 3-container system that meets the requirements of Section 18984.1. Also, Subsections 18984.1(a)(6)(B) and (C) do not require only that light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container. Further language was added clarifying that a jurisdiction could split the recycling portion of a two-container service to further segregate recyclables, however the gray container would still be required to be transported to a high diversion organic waste processing facility. See statement of purpose and necessity for Section 18984.2

Comment Number	Received From	Question/Comment	Response(s)
3511	Harrington, P., City of Berkeley	<p>Enforcement: The current SB1383 regulations codify much of StopWaste's internal enforcement protocol, which is continually being refined for efficiency and effectiveness. Codifying internal processes makes them much harder to change and adapt based on what is learned from implementation in the field. Jurisdictions are expected to enforce very specific requirements, such as whether the bins inside a business are properly color coded, labeled and located in all customer areas that, in StopWaste's experience, are unrealistic to enforce due to the difficulty of gaining access and the cost that would be needed to spend extensive time for each inspection. Inspecting at the hauler-serviced bins, often outside in a publicly accessible area, is where the rubber meets the road in showing the results of employee sorting behavior. A generator successfully sorting organics as demonstrated at the hauler-serviced bin should not be penalized for not complying with color and labeling requirements for bins inside the business.</p>	<p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p>
3512	Harrington, P., City of Berkeley	<p>Food Waste Prevention: Moving upstream to prevent food from going to waste avoids GHG emissions across the food cycle from production to consumption, in addition to avoiding landfill emissions when food goes to waste. Collective research shows that food waste prevention is the most impactful and least resource intensive strategy to reduce GHG emissions from food. For example, the EPA's Waste Reduction Model (WARM) demonstrates that source-reducing wasted food prevents 3.66 MTCO2E per ton of food. Bay Area Air Quality Management District's consumption-based emissions inventory shows an average two tons of CO2e avoided per ton of food waste prevented. We recommend that CalRecycle provide an exemption from food donation that recognizes and rewards the upstream efforts of generators implementing food waste prevention practices.</p>	<p>SB 1383's statutory requirement is to recover 20% of currently disposed edible food for human consumption by 2025. The statute does not include any requirement for California to achieve a food waste prevention target. As a result, CalRecycle will not require commercial edible food generators or jurisdictions to prevent or source reduce the amount of edible food they generate. CalRecycle does however recognize that some commercial edible food generators could have types of edible food available for food recovery that are not desired by food recovery organizations or services. One example would be a generator having significant quantities of food that does not meet the nutrition standards of food recovery organizations or food recovery services. To address this issue, CalRecycle added language to the edible food recovery education and outreach section to require jurisdictions to annually provide commercial edible food generators with information about the actions that commercial edible food generators can take to prevent the creation of food waste.</p> <p>To clarify, this is not a requirement for commercial edible food generators or jurisdictions to source reduce the amount of surplus edible food they generate. This is an education requirement intended to help generators learn how they can prevent the creation of food waste. Providing this education is critical to help generators that struggle to find outlets for their currently disposed edible food comply with SB 1383's commercial edible food generator requirements, as all tier one and tier two commercial edible food generators are still required to comply.</p> <p>Regarding the comment that CalRecycle provide an exemption from food donation that recognizes and rewards the upstream efforts of generators implementing food waste prevention practices. Adding a section for commercial edible food generator exemptions and de-minimis waivers to the regulatory text was not necessary. Adding a section for exemptions and de-minimis waivers was not necessary because the regulations are already structured so that many food facilities and food service establishments are exempt from compliance due to the smaller amounts of edible food they typically dispose. Only the entities identified as tier one and tier two commercial edible food generators are required to comply. Every other food facility or food service establishment that is not a tier one or tier two commercial edible food generator is exempt from SB 1383's regulations.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle recognizes however, that some commercial edible food generators could experience extraordinary circumstances that could make compliance impracticable. To address this issue, CalRecycle revised Section 18991.3. Specifically, language was added to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. For the purposes of Section 18991.3 extraordinary circumstances are specified as (1) a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity. And (2) Acts of God such as earthquakes, wildfires, flooding, and other emergencies or natural disasters.</p>
3513	Harrington, P., City of Berkeley	<p>Edible Food Recovery: We urge Cal Recycle to more directly address the issue of "donation dumping" by generators on food recovery organizations. Although the proposed regulations allow food recovery organizations to reject certain types of food, in practice organizations are unlikely to reject donations out of concern that that they will not receive future donations. In addition, if an organization is accepting large quantities of food in one delivery, it is not possible to review the contents and reject part of the load. Adding types of food accepted to the list of food recovery organizations, as well as tracking the types of food received by food recovery organizations would reduce the potential for donation dumping. In addition, providing a statewide platform for generators and food recovery organizations to report directly to the state would reduce the reporting burden on jurisdictions.</p>	<p>Regarding the comment about donation dumping, CalRecycle recognizes that donation dumping occurs. The regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or a food recovery service. If a food recovery organization or service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383's regulations prohibiting a food recovery organization or service from terminating their relationship with that particular generator.</p> <p>In addition, CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, commercial edible food generators, and jurisdictions. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and services from donation dumping and unexpected donations. We again would like to reiterate that the model food recovery agreement is only a template and is intended to be customized based on the needs of food recovery groups and commercial edible food generators.</p> <p>Regarding the commenter's suggestion to add the types of food accepted to the list of food recovery organizations. CalRecycle has added a requirement to section 18985.2 in response to this comment and other comments that raised a similar concern. The new language requires the following to also be included with the list of food recovery organizations and food recovery services that the jurisdiction develops and maintains - "an indication of the types of food that the food recovery service or organization can accept for food recovery."</p> <p>The list of food recovery organizations and services is intended to serve as a tool to help generators find appropriate food recovery organizations and services to have a contract or written agreement with for food recovery. This addition was necessary to help make the list a more useful tool for commercial edible food generators. Listing the types of food the organization can accept will help generators determine what food recovery organizations or services they could potentially establish a contract or written agreement with. This addition to the regulatory text was also necessary to help protect food recovery organizations and food recovery services from receiving food that they are not equipped to handle.</p> <p>Regarding the comment about providing a platform where generators could report directly to CalRecycle, CalRecycle would like to clarify that commercial edible food generators do not have any reporting requirements. Commercial edible food generators have recordkeeping</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>requirements. Therefore, a statewide reporting platform for commercial edible food generators to report directly to that state is not necessary. In addition, a statewide reporting platform where food recovery services and organizations would report directly to the state rather than to jurisdictions would severely reduce each jurisdiction's ability to assess the effectiveness of their food recovery program and identify if improvements need to be made. Furthermore, the data that is reported directly to the jurisdiction is critical for helping the jurisdiction better understand the food recovery organizations and services making the greatest impact in their jurisdiction. This data can be used to help jurisdictions make decisions about food recovery organizations and services to promote and potentially direct funds to.</p>
3514	Harrington, P., City of Berkeley	<p>Procurement: While we support the need to build urban compost markets throughout the state, it would be more effective to base procurement targets on the potential for compost use in a jurisdiction to build healthy soil, not a statewide estimate of organics generated per capita or current transportation fuel use. Procuring the amount of compost proposed in the regulations would result in more compost than could be used, and put an undue financial burden on cities. A more effective and easily enforced market-building tool is to require jurisdictions to enforce the Water Efficient Landscape Ordinance, which requires compost use in landscape construction. Compliance can be enforced through existing required permit documentation and jurisdictions' reports to the CA Department of Water Resources. This would be similar to the approach in Article 8: CALGreen Building Standards, which directs jurisdictions to require compliance with relevant measures in CALGreen, and could easily approximate the procurement targets set in the current draft.</p> <p>Berkeley Compost Procurement: The City of Berkeley currently procures approximately 1,650 tons of compost annually. This compost is provided to residents for free at monthly compost giveaways and is donated to Berkeley's community gardens and school gardens. As currently drafted, the procurement requirements would require Berkeley to procure a total of 4,900 tons of compost annually. To meet this procurement amount, the additional compost material would cost the City an estimated \$203,125. This amount does not include transportation or handling costs. We support the League of California Cities' recommendation to address procurement and work to develop markets for these materials in a second regulatory proceeding.</p> <p>Berkeley Paper Product Procurement: Procurement of paper products in Berkeley is decentralized. Paper product purchases are managed by different individuals in each City Division/Department and these purchases may include other office supplies as part of a larger purchase order. Tracking all paper product purchases city-wide will require a substantial amount of staff time.</p>	<p>The purpose for the procurement target methodology is to create a transparent method for local governments to create markets for products generated by organics recycling facilities that is proportional to the number of residents in a jurisdiction. California has over 400 diverse jurisdictions and it would be overly burdensome to account for potential for compost use to build healthy soil, and to develop a procurement target and enforcement policy for each one. The current approach already accounts for jurisdiction-specific need by providing flexibility to procure products that fit local needs.</p> <p>CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p> <p>However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p> <p>Regarding decentralized purchasing, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them by early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p>
3515	Harrington, P., City of Berkeley	<p>Infrastructure Capacity Planning: This information should be gathered at the state level by interviewing composting facilities throughout the state. Counties do not have access to the information required by SB 1383 (or AB 876). It is impossible for a</p>	<p>The purpose of this section is to require counties, in coordination with cities and regional agencies located within the county, to comply with provisions referenced in the following sections, and to provide CalRecycle with the ability to ensure that counties, cities, and regional agencies are</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>county to know of all the other counties that are sending material to the same composting facility. Moreover, counties do not have contracts directly with facilities; more commonly this is done through haulers that have contracts with cities. Those agreements rarely specify a particular composting facility.</p>	<p>cooperating on their overall organic waste capacity planning. The purpose of this section is to require that counties, and other local entities within their boundaries, work in conjunction with each other when compiling information related to estimating their organic waste tonnage, identifying existing organic waste recycling capacity, and estimating organic waste recycling capacity that will be needed. The capacity planning required by this section is necessary to ensure local jurisdictions are aware of and can address their capacity shortfalls and secure access to facilities that recovery organic waste. This will help increase organic waste recovery in California.</p>
3516	Harrington, P., City of Berkeley	<p>Reporting: The amount of staff time that would be required to document all the detailed aspects of the Implementation Record take away from jurisdiction resources that could be used to educate and enforce the generator and hauler requirements. We recommend that Cal Recycle reduce the number of reporting requirements and types of information required to what is necessary to determine compliance.</p> <p>Berkeley Comment on Reporting: The requirement to provide the Implementation Record within one business day is not reasonable. All disposal reporting for the City is currently handled by one staff person. If that staff person is out of the office or unavailable, it will not be possible to provide the requested Implementation Records within one day. Also, our jurisdiction coordinates outreach and enforcement efforts with StopWaste and subcontractors; we may not be able to receive the necessary data from these entities within one day.</p>	<p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record to allow the Department to ensure jurisdictional compliance with the chapter.</p> <p>CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.</p>
3517	Harrington, P., City of Berkeley	<p>Berkeley Comment on Waivers: This comment is already included in the attached table; however, City of Berkeley staff would like to reiterate that managing waivers is time consuming, and the requirement in section 18984.II(B) for jurisdictions to annually verify businesses with de minimus and physical space waivers annually is an overly onerous requirement that focuses staff time on the smallest organics generators at the expense of focusing time on larger organics generators or focusing efforts on other, more impactful, waste reduction programs.</p>	<p>CalRecycle has revised the verification period to five years in response to this comment.</p>
3518	Harrington, P., City of Berkeley	<p>Funding: As stated in a letter submitted by the League of California Cities, lack of sufficient funds continues to be among the major challenges local governments face in the effort to implement new organic waste diversion programs. The City of Berkeley and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade" proceeds can be used to help offset the costs for developing organic recycling infrastructure. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities, such as quarterly collection route reviews, investigating contamination by inspecting containers along routes, as well as providing education and outreach. Berkeley Comment on Funding: The City of Berkeley operates curbside trash, recycling, and compost collection for all businesses in Berkeley. The City also collects all residential curbside trash and compost. We estimate that at least one additional FTE position will be needed to fulfill all of the SB1383 jurisdiction and hauler requirements,</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in</p>

Comment Number	Received From	Question/Comment	Response(s)
		including the quarterly route reviews, contamination identification and follow up, outreach and education, issuing and tracking waivers, edible food recovery requirements, paper procurement tracking, and other reporting requirements. We support the recommendations outlined in the attached table to reduce the staff time required for enforcement and reporting.	a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
3073	Hatfield, Z., Yolo Food Bank	As we highlighted in our last round of comments, the state and local jurisdictions will only be able to achieve this goal with an appropriate investment in the capacity and physical infrastructure of emergency food recovery organizations to increase the volume of food they receive, store and distribute. To that end, we are grateful to see the January 18 draft regulations include language in Article 10 about jurisdictions being able to fund these activities through avenues such as franchise fees and local assessments, as well as the ability for generators to self-haul and enter into contracts directly with food recovery organizations. We are in strong support of these funding mechanisms, which must be included in the final language, but urge that the capacity planning process in Article 11 be expanded to formally include stakeholders such as emergency food groups, to properly inform jurisdictions about gaps & needs.	This comment is in support of SB 1383's edible food recovery capacity planning process and requirements specified in Article 11 and language that was included in Article 10, Section 18991.1. Regarding the comment that the capacity planning process in Article 11 be expanded to formally include stakeholders such as emergency food groups, to properly inform jurisdictions about gaps and needs. Section 18992.2 states that in complying with this section the county in coordination with jurisdictions and regional agencies located within the county shall consult with food recovery organizations and food recovery services regarding existing, or proposed new and expanded capacity that could be accessed by the jurisdiction and its commercial edible food generators. It is inherent in the requirements of Section 18992.2 (a)(2)-(4) that counties, in coordination with jurisdictions and regional agencies located within the county, will have to consult with food recovery organizations and services which will likely include emergency food groups.
3074	Hatfield, Z., Yolo Food Bank	Similarly, we thank CalRecycle for the language in Article 9 that reflects the need for food recovery organizations to be able to refuse food donations. Food recovery organizations operate on extremely thin budgets, and often experience staff turnover, funding shocks or other disruptions that may prevent them from participating in an arrangement even if they were otherwise favorable. The final state and local regulations recognize as fundamental to this work that food recovery organizations' participation is voluntary, given the existing strains on the budgets of under-resourced non-profits and largely volunteer labor force engaged in food recovery.	Comment noted. A change to the regulatory text is not necessary.
3075	Hatfield, Z., Yolo Food Bank	Meeting the goals in SB 1383 will create significant burdens on food recovery organizations, as the pressure to take more food will occur with tightening mandatory commercial organics recycling costs requirements from AB 1826 (Chesbro, 2014) that will raise costs for food banks. We urge inclusion, perhaps in Article 13, of an impact assessment on food recovery organizations to understand this issue and provide information to jurisdictions and other stakeholders about how to respond to any challenges raised. For example, food banks will be wondering: Is the additional food recovery estimated from this equal to, less than, or more than the additional cost on food banks to meet the mandated requirements?	The regulations specify in Section 18990.2 that nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible generator. Food recovery organizations and services are not mandated to recover food nor are they mandated to establish contracts or written agreements with commercial edible food generators pursuant to Section 18991.3(b). If the costs to recover additional food are too great, then food recovery organizations and services do not have to recover additional food. Adding a requirement to Article 13 requiring jurisdictions to perform an impact assessment on food recovery organizations and services would be overly burdensome for jurisdictions as they are already required to assess edible food recovery capacity and increase capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs.
3076	Hatfield, Z., Yolo Food Bank	We further urge CalRecycle to encourage jurisdictions to develop funding mechanisms that offset higher mandatory commercial organics recycling incurred that emerge in new partnerships due to recovery activities necessary to meet the 20% diversion goal. These include many possibilities, such as: Working with generators that food banks currently do not receive donations that	CalRecycle recognizes that there is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10, Section 18991.1 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. This language was included to encourage jurisdictions to establish a

Comment Number	Received From	Question/Comment	Response(s)
		<p>would require de-packaging due to organizational nutrition policies, Working with donors whose offerings have a lower yield of edible food and an accordingly higher percentage of food loss during the recovery process. Funding mechanisms should recognize that 1) a large share of the costs associated with increasing the capacity for food rescue will be for labor and physical infrastructure costs associated with coordinating the additional food, 2). recovery activities pursuant to SB 1383's goal will nearly always augment work already being done with a mixture of existing and new capacity (staff, cold storage, vehicles, fuel and other fixed costs), and therefore funding should not be restricted to incremental pounds of food.</p>	<p>sustainable funding source to help cover their program implementation costs. If a jurisdiction decides to fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms, then it is at the discretion of the jurisdiction, not CalRecycle, to determine how the funding will be dispersed. CalRecycle would also like to clarify that nothing in SB 1383's regulations requires a food recovery organization or service to establish a contract or written agreement with a commercial edible food generator. A food recovery organization or service may wish to consider any costs associated with recovering additional food when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator. CalRecycle would also like to note that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing language in their contracts or written agreements with commercial edible food generators. For further clarification please refer to the FSOR.</p>
3077	Hatfield, Z., Yolo Food Bank	<p>CalRecycle must define and delineate between 'edible' and 'recoverable' food, in particular to define the latter term and having the diversion mandate key off of recoverable foods - not edible. Making these changes in the definitions provides essential protection and clarity rather than simply listing each food recovery organization's priority foods and nutrition policies in the local 'food donation guides' as CalRecycle envisions in Article 4.</p> <p>This is a critical distinction - many times edible foods require packing, processing, or other additional work to enable their donation. Who will pay for that? CalRecycle should consider using the nationally established definition of food eligible for donation by the Bill Emerson Good Samaritan Food Donation Act &amp; mirrored in AB 1219 (Eggman, 2017).</p> <p>The term "apparently wholesome food" means food that meets all quality and labeling standards imposed by Federal, State, and local laws and regulations even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. We wish to be on record that if this language is not adopted, not only will there be inconsistency with existing practice, but also some food would require additional labeling to allow recovery and donation, placing an additional burden on food banks to do so. This could significantly raise costs to achieve the diversion goal.</p>	<p>In an early draft of the proposed regulations edible food was defined as: "Edible food" means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, "edible food" is not solid waste if it is recovered and not discarded."</p> <p>Several commenters made the argument that this definition was too restrictive, because it described "recoverable food" not "edible food." Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters' concerns about the definition of "edible food" being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following:</p> <p>"Edible food" means food intended for human consumption.</p> <p>(A) For the purposes of this chapter, "edible food" is not solid waste if it is recovered and not discarded.</p> <p>(B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code.</p> <p>Although the final definition of "edible food" is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities and eliminated the need to provide a separate definition for "recoverable food."</p>
3078	Hatfield, Z., Yolo Food Bank	<p>In addition, it is imperative that CalRecycle and jurisdictions exempt the 'nonprofit charitable organizations' (food banks and their non-profit partners) from fees and penalties related to their own waste incurred during compliance with SB 1383 as long as they are accepting donations with the intention to distribute the food for consumption. As the stream of donations increases, there may be more instances where food is not handled safely or as represented and if the non-profit charitable organizations are to help get this food out, it is important that they not be penalized for attempting to solve the overall problem.</p>	<p>Nothing in SB 1383's regulations requires a food recovery organization or a food recovery service to accept edible food. Section 18990.2 of the regulations states, "(d) Nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible food generator." If a food recovery organization or service cannot safely collect and distribute food because it is at maximum capacity, then it should not be collecting any more food. In addition, nothing in SB 1383's regulations requires food recovery organizations and food recovery services to enter into contracts or written agreements with commercial edible food generators. Food recovery organizations and food recovery services can choose not to participate.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>If a commercial edible food generator approaches a food recovery organization or a food recovery service requesting a contract or written agreement, then it is at the discretion of the food recovery organization or the food recovery service to determine if they want to enter into such contract or agreement. A food recovery service or organization may wish to consider any costs associated with recovering additional food when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator, thus subjecting them to a potential increase in costs. Please note, nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from including cost-sharing specifications in their contracts or written agreements with commercial edible food generators.</p>
3079	Hatfield, Z., Yolo Food Bank	<p>Below we ask for a significant overhaul of the role of food recovery organizations in the data reporting regime; reporting requirements must be re-centered on the generators that must comply with the diversion goal. In broader consultation, we have learned that as written the requirements are simply unworkable as they would violate donor confidentiality. Instead, as food recovery groups have this information, jurisdictions should make requests - solely for pounds out of simplicity and consistency with generator donation metrics - and the food recovery group(s) can make as needed should there be cause to verify a generator report.</p>	<p>SB 1383's reporting requirements do not violate donor confidentiality. There is no requirement in SB 1383's regulations for food recovery organizations or food recovery services to report donor names. They are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.</p> <p>With regard to the comment about requiring commercial edible food generators to report, it is not prudent to require each individual commercial edible food generator to report information to the jurisdiction. Such a revision would require jurisdictions to review and aggregate data from thousands of commercial edible food generators rather than a much smaller number of food recovery organizations and food recovery services. For example, one food bank could work with over a hundred commercial edible food generators. It is far more efficient and feasible for a jurisdiction to review one report from the food bank rather than 100 individual reports from generators that all work with the same food bank.</p>
3080	Hatfield, Z., Yolo Food Bank	<p>Finally, we again caution CalRecycle on the potential for SB 1383 regulations to create unintended consequences that could threaten the ability of food recovery organizations-charity non-profits that feed people experiencing hunger - to access sufficient food and nutrition resources. In both definitions of 'Food Recovery' and 'Food Recovery Service' the draft regulations recognize that there could be activities conducted with payment and for-profit entities. We ask that CalRecycle emphasize the EPA's Food Recovery Hierarchy pyramid, which highlights "Feed Hungry People-Donate extra food to food banks, soup kitchens, and shelters" as the primary strategy after "Source Reduction." Food recovery organizations already occupy niche spaces and rely on the generosity of donors to access a sufficient supply of food. Recovery groups already compete with several secondary markets, from processors to pig farmers, and there are significant concerns with further pressures from revenue-based recovery organizations as the state achieves the goal to reduce the supply of these foods. Therefore we encourage CalRecycle to continue to find ways to minimize the regulatory burden and maximize generator agreement opportunities.</p>	<p>Several commenters explained that food recovery organizations occupy niche spaces and often rely on the generosity of food donors to access a sufficient supply of food. In addition, some food recovery groups compete with several secondary markets, from processors to pig farmers, and there are significant concerns with further pressures from revenue-based recovery organizations as the state achieves the goal to reduce the supply of these foods.</p> <p>CalRecycle would like to clarify that nothing in SB 1383's statute specifies that recovered edible food should first be intended for food banks, soup kitchens, and shelters. The statutory goal is that no less than 20% of currently disposed edible food be recovered for human consumption by 2025. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.</p>

Comment Number	Received From	Question/Comment	Response(s)
3081	Hatfield, Z., Yolo Food Bank	<p>Article 1 (a) Definitions {18), the definition of edible food:            We reiterate our request to strike "unserved and unsold" to prevent gaming of the system - not serving food so that it can be dumped instead of donated.            We add that the Conference For Food Protection Food Donation guidelines recommend that only unserved food be recovered for donation, even though it is allowable under federal law. Prepared foods in particular that have been served or sold, which customers have access to are not usually donated and would require strict food safety controls. The "back of house" trays that have not been touched are the standard for prepared donations. There are many food safety concerns if donations came from a hot bar, salad bar, or customer return. Nevertheless, we continue to ask the Department &amp; jurisdictions. to be mindful that food could potentially be labeled 'served' in order to avoid compliance with SB 1383.</p>	<p>In an early draft of the proposed regulations edible food was defined as:            "Edible food" means unsold or unserved food that is fit for human consumption, even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions. For the purposes of these regulations, "edible food" is not solid waste if it is recovered and not discarded."            Several commenters made the argument that this definition was too restrictive, because it described "recoverable food" not "edible food." Commenters also raised concerns that keeping this definition would make the edible food baseline much smaller than it would be with a broader definition, and would potentially discourage donations of foods that were still safe for human consumption. To address commenters' concerns about the definition of "edible food" being too restrictive, CalRecycle revised the definition. In the final regulations, edible food is defined as the following:            "Edible food" means food intended for human consumption.            (A) For the purposes of this chapter, "edible food" is not solid waste if it is recovered and not discarded.            (B) Nothing in this chapter requires or authorizes the recovery of edible food that does not meet the food safety requirements of the California Retail Food Code.            Although the final definition of "edible food" is broader than the previous draft definitions, the final definition includes language to clarify that all edible food that is recovered under SB 1383 must still meet the food safety requirements of the California Retail Food Code. This provision provides an objective standard familiar to regulated entities.</p>
3082	Hatfield, Z., Yolo Food Bank	<p>Article 1 {a) Definitions, a new definition of recoverable food should be inserted that:            We again ask CalRecycle to restore the language used in the June "Concept" document that reflected our prior input that food recovery organizations like food banks are able to follow internal, established "standards and requirements for acceptance related to nutrition or quality when recovered by those organizations. Nothing in this definition shall preclude such organizations from developing more stringent standards .... "</p>	<p>CalRecycle would first like to clarify that SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. The statute does not state that 20% of healthy or nutritious food be recovered. As a result, SB 1383's regulations do not include requirements that only certain types of food be recovered. CalRecycle does however, recognize that a core value of many food recovery organizations and food recovery services is to reduce food insecurity in their communities by rescuing and distributing healthy and nutritious food to help feed people in need. CalRecycle also recognizes that many food recovery organizations and food recovery services have nutrition standards for the food they are willing to accept.            To address this, Section 18990.2 Edible Food Recovery Standards and Policies subsection (d) specifies that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from refusing to accept edible food from a commercial edible food generator. Therefore, nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from following their own internal standards and requirements for acceptance related to nutrition or quality of the food when it is recovered.</p>
3083	Hatfield, Z., Yolo Food Bank	<p>Article 1 (a) Definitions (24), the definition of food recovery:            We are in strong support of this language.            We suggest to add that the definition conform to the definition in (25) of a food recovery organization. " ... collect and distribute for human consumption which</p>	<p>Nothing in SB 1383's statute specifies that recovered edible food should first be intended for no-cost charitable distribution. The statutory goal is that no less than 20% of currently disposed edible food be recovered for human consumption by 2025. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery</p>

Comment Number	Received From	Question/Comment	Response(s)
		otherwise be disposed, where recovered food is first intended for no-cost charitable distribution to communities in need."	entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.
3084	Hatfield, Z., Yolo Food Bank	<p>Article 1 (a) Definitions (25), the definition of food recovery organization, and (26), the definition of food recovery service:</p> <p>As we highlighted in our suggestions on the previous page, we remind CalRecycle of the possible unintended consequences of not explicitly stating that recovered food should be distributed for free to the public for consumption, and request this revision.</p> <p>We offer the additional context that if food generators want to take the federal tax deduction for donated food, it must be provided for free to the ill, needy, or children (See IRS code).</p>	Nothing in SB 1383's statute specifies that recovered edible food must first be distributed for free, or that recovered edible food shall first be intended for no-cost charitable distribution to communities in need. SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. Adding the commenter's suggested language to the definition of food recovery would not serve a regulatory function in helping California achieve its 20% edible food recovery goal. Rather, adding the commenter's suggested language could create barriers toward achieving the 20% edible food recovery goal. SB 1383's statute also does not specify that non-profit food recovery organizations should be prioritized over for-profit food recovery entities. Both non-profit and for-profit food recovery organizations and food recovery services are needed to help California achieve the 20% edible food recovery goal established by SB 1383.
3085	Hatfield, Z., Yolo Food Bank	Article 1 Definition (76): 'Under no circumstances shall a non-profit charitable organization be considered a 'wholesale food market'.	Several commenters were concerned that a non-profit food recovery organization could potentially be considered a wholesale food vendor and therefore be subject to SB 1383's commercial edible food generator requirements. Language was added to the definition of "commercial edible food generator" to specify that for the purposes of this chapter, food recovery organizations and food recovery services are not commercial edible food generators. Therefore, a non-profit charitable food recovery organization cannot also be considered a wholesale food vendor and is not subject to the commercial edible food generator requirements of SB 1383.
3086	Hatfield, Z., Yolo Food Bank	Article 4 (a)(l)(E): Please strike 'Hours of operation.' These should not be required on a website since under no circumstances should food be dropped at a food recovery organization without a prearranged agreement or MOU.	CalRecycle removed "hours of operation" from Section 18985.2 in response to this comment and several other comments raising the same concern. The commenter is concerned that including "hours of operation" could lead to commercial edible food generators dropping off food at a food recovery organization without having permission to do so. This change was necessary to ensure that this activity does not occur, and to help protect food recovery organizations from receiving food that they were not expecting to receive.
3087	Hatfield, Z., Yolo Food Bank	Article 4 (b)(1UD): Add this line 'Information that makes it clear they must have an agreement or MOU with a food recovery organization prior to any deliveries or drop-offs.'	<p>For context, the commenter is concerned that commercial edible food generators could self-haul edible food to a food recovery organization that they do not have a contract or written agreement with for food recovery. Donation dumping, and unexpected deliveries and drop offs of food donations are serious issues that can create significant hardships for food recovery organizations and food recovery services.</p> <p>CalRecycle included information in the FSOR to clarify that commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food recovery where the contract specifies that the generator is permitted to self-haul edible food during pre-established delivery or drop off times. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement.</p> <p>If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in the contract or written agreement, the commercial</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. It is at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the exact self-haul provisions to include in their contracts or written agreements.</p> <p>CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model food recovery agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and food recovery services from donation dumping and unexpected donations. The model food recovery agreement is a template that is intended to be customized based on the needs of food recovery organizations, food recovery services, and commercial edible food generators.</p>
3088	Hatfield, Z., Yolo Food Bank	<p>(a) A jurisdiction shall not implement or enforce an ordinance, policy, or procedure that prohibits the ability of a generator or food recovery organization to recover edible food that could be recovered for human consumption.</p> <ul style="list-style-type: none"> <li>o With the recent passage of AB 2178 (Limon. 2018), local non-profit charities may be required to register and pay fees to their local Environmental Health Departments in order to continue operating. With that in mind. CalRecycle and jurisdiction should coordinate with EH D's about the new food waste diversion goals that local food recovery organizations will be striving to meet. Perhaps this could be included in Article 13; we are open but ask for a response on how to ensure coordination and prevent duplicate regulation.</li> </ul>	<p>It was unclear what the commenter's concern was regarding duplication of recordkeeping requirements. The commenter did not provide additional information to identify if any of the recordkeeping requirements in SB 1383 are the same as the recordkeeping requirements of AB 2178. "Duplication of recordkeeping efforts" is very vague and additional context needed to be provided before any changes to the regulations could be considered.</p>
3089	Hatfield, Z., Yolo Food Bank	<p>(d) Nothing in this chapter prohibits an edible food recovery service or organization from refusing to accept edible food from a generator. In fact, all generators must have agreements in place with food recovery organizations before deliveries or drop-offs and even in that context, any specific delivery can be refused because of quality, condition, lack of space, quality, type, condition, or any other reason.</p> <ul style="list-style-type: none"> <li>o We appreciate CalRecycle's addition of this language, and again insist that it remain included and broadly interpreted by jurisdictions to give recovery organizations the flexibility they need given the diversity of situations that arise.</li> </ul>	<p>A change to the regulatory text was not necessary because Section 18990.2. (d), already specifies that nothing in this chapter prohibits an edible food recovery service or organization from refusing to accept edible food from a generator. It is not necessary to add language about the reasons why a food recovery organization or service can refuse edible food. The language in section 18990.2. (d) is sufficient to give food recovery organizations and services the authority they seek to refuse edible food.</p> <p>The FSOR also clarifies that commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food recovery where the contract specifies that the generator is permitted to self-haul edible food during pre-established delivery or drop off times. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement.</p> <p>If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in the contract or written agreement, the commercial edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. It is at the discretion of food recovery organizations, food recovery</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>services, and commercial edible food generators to determine the exact self-haul provisions to include in their contracts or written agreements.</p> <p>CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and food recovery services from donation dumping and unexpected donations. The model agreement is a template that is intended to be customized based on the needs of food recovery organizations, food recovery services, and commercial edible food generators.</p>
3090	Hatfield, Z., Yolo Food Bank	<p>(b) A jurisdiction may fund the actions taken to comply with this section through franchise fees, local assessments, or other funding mechanisms. Under no circumstances should jurisdictions charge fees or assessments to food banks or other non-profit food recovery organizations.</p> <p>o This language is essential in recognizing the financial and human resource burden that food recovery organizations will face in working to meet the 20% diversion goal, and we are in strong support.</p>	<p>CalRecycle will not identify a specific entity that jurisdictions cannot charge fees to, as this raises an authority issue.</p>
3091	Hatfield, Z., Yolo Food Bank	<p>Regarding (2), With the passage of AB 2178 (Limon. 2018), local Environmental Health Departments will be required to keep records of what organizations food banks partner with, and documentation directly from non-food bank affiliated non-profit organizations that are serving ready-to-eat food. In an effort to minimize the duplication of record-keeping efforts, we request that local jurisdictions communicate with EH D's to obtain records of the relevant information to avoid duplicate efforts with food banks.</p> <p>Article 10. Section 18991.2{2}: A list of edible food recovery organizations in the jurisdiction and their edible food recovery capacity</p> <p>Add: 'and how to contact them to put in place a contract or agreement for food recovery'</p>	<p>Regarding the comment about AB 2178, it was unclear what the commenter's concern was regarding duplication of recordkeeping requirements. The commenter did not provide additional information to identify if any of the recordkeeping requirements in SB 1383 are the same as the recordkeeping requirements of AB 2178. "Duplication of recordkeeping efforts" is very vague and additional context needed to be provided before any changes to the regulations could be considered.</p> <p>Regarding the comment about the list of food recovery organizations, Section 18985.2 (a)(1) requires jurisdictions to develop a list of food recovery organizations and food recovery services operating within the jurisdiction and maintain the list on the jurisdiction's website. The list must be updated annually. The list must include, at a minimum, the following information about each food recovery organization and each food recovery service that it includes:</p> <ul style="list-style-type: none"> <li>(A) Name and physical address.</li> <li>(B) Contact information.</li> <li>(C) Collection service area.</li> <li>(D) An indication of types of food the food recovery service or organization can accept for food recovery.</li> </ul> <p>The regulations already include the requirement that the list include the contact information for each food recovery organization and service that is included on the list. Adding the commenter's proposed requirement would be redundant, because it is already required that the contact information is listed for each food recovery organization and food recovery service.</p> <p>However, if a jurisdiction is inclined to include 'information on how to contact the food recovery organization to establish contract or written agreement for food recovery' with their list, then they may do so. As stated in Article 9, Section 18990.1 (a), nothing in this chapter is intended to limit the authority of a jurisdiction to adopt standards that are more stringent than the requirements of this chapter, except as provided in Subdivision (b) of Section 18990.1.</p>

Comment Number	Received From	Question/Comment	Response(s)
3092	Hatfield, Z., Yolo Food Bank	<p>{b) (1) Contracting with food recovery services or organizations that will collect their edible food for food recovery, and {2) Self-hauling edible food to a food recovery organization that will accept the edible food for food recovery and with whom the generator has an agreement or MOU. (b)(l) &amp; (2) are critical, and we strongly support their inclusion with the modification of needing an agreement. It is our interpretation that this is permissive of generators and recovery organizations agreeing to contractual terms that would enable recovery groups to charge for their recovery costs - though that would have to be negotiated between the parties. If this is not correct, we urge in the strongest possible terms that language be included that clarify this.</p>	<p>The commenter is concerned that commercial edible food generators could self-haul edible food to a food recovery organization that they do not have a contract or written agreement with for food recovery. Donation dumping, and unexpected food donations are serious issues that can create significant hardships for food recovery organizations and food recovery services. Revisions were made to the regulatory text to address this concern.</p> <p>CalRecycle first revised the regulatory text following the 45-day formal comment period in response to this comment. Specifically, language was added to Section 18991.3 that stated, “food that is self-hauled pursuant to this section shall be done with the consent of the food recovery organization.” However, in the subsequent October 2019 draft of regulatory text, this language was removed because it was no longer necessary due to other revisions that were made. Specifically, new revisions were made to Section 18991.3 Commercial Edible Food Generators. The revision added the requirement that commercial edible food generators must comply with the requirements of Section 18991.3 through a contract or written agreement with any or all of the following: (1) Food recovery organizations or services that will collect their edible food for food recovery. (2) Food recovery organizations that will accept the edible food that the commercial edible food generator self-hauls to the food recovery organization for food recovery. Therefore, commercial edible food generators can only self-haul edible food to a food recovery organization that they have established a contract or written agreement with for food recovery. It is at the discretion of the food recovery organization and the commercial edible food generator to include provisions in their contracts or written agreements regarding what the outcome will be if a commercial edible food generator self-hauls edible food outside the designated delivery or drop off times specified in the contract or written agreement. If edible food is self-hauled without the consent of the food recovery organization or does not meet the self-haul provisions included in the contract or written agreement, the commercial edible food generator could potentially be at risk of their contract being terminated by the food recovery organization. Also, nothing in SB 1383’s regulations prohibits a food recovery organization or a food recovery service from including cost-sharing language in their contracts or written agreements with commercial edible food generators. For further clarification please refer to the FSOR.</p> <p>CalRecycle would also like to note that the Department developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, commercial edible food generators, and jurisdictions. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and services from donation dumping and unexpected donations. We again would like to reiterate that this model agreement is only a template and is intended to be customized based on the needs of food recovery groups and commercial edible food generators.</p>
3093	Hatfield, Z., Yolo Food Bank	<p>(a) A commercial edible food generator subject to the requirements in this article shall keep a record that includes the following:  o {3) An edible food generator that complies with the requirements of this article through contracting with a food recovery service or organization as allowed in Section 10.3 shall keep a record of the following for each food recovery organization or service that the edible food generator contracts with:</p>	<p>A change to the regulatory text was not necessary because it is anticipated that the majority of commercial edible food generators will not be infrequent donors. They will have edible food available for food recovery on a regular basis. Therefore, some kind of frequency for collection or self-haul must be established and documented. CalRecycle would like to clarify that nothing prohibits a food recovery organization and commercial edible food generator from establishing more than one frequency to account for changes in the amount of food available. For example, a</p>

Comment Number	Received From	Question/Comment	Response(s)
		<ul style="list-style-type: none"> <li>• (A) The name, address and contact information of the service or organization.</li> <li>• (B) The types of food that will be collected by or transported to the service or organization.</li> <li>• (C) The established frequency that food will be collected or transported, <b>with the exception of 'on call' or 'one-time' donors.</b></li> <li>• We request to modify this line. Many donors are on regular schedules, and this regulation will often be consistent with and reinforce those practices. Yet, for infrequent donors, donations can vary greatly based on factors such as inventory, season, weather conditions and consumer demand. Likewise, food recovery organizations are sometimes asked to be "on call," meaning they only pick up when asked. Therefore it can be difficult in some cases to establish a regular frequency, and it is not practical or helpful to track this metric.</li> <li>• (D) The quantity of food collected or transported to a service or organization for food recovery. <ul style="list-style-type: none"> <li>• 1. Quantity shall be measured in pounds recovered per month.</li> <li>• <del>2. An Edible food generator may use an alternative metric provided by the food recovery service or organization to measure the quantity of food recovered.</del></li> </ul> </li> </ul> <p>We request to strike this line, in order to maintain a single metric - pounds - to avoid the confusion of multiple measures and creating the need to translate/reconcile across different metrics. IDENTICAL 3121</p>	<p>local education agency could have one established frequency for collections during the school years, and a different established frequency during the summer months when there is less food to recover. Maintaining a record of the established a frequency that edible food is collected or self-hauled is also important, because this information will help jurisdictions determine if a commercial edible food generator is recovering the maximum amount of edible food that would otherwise be disposed.</p> <p>With regard to the comment about using pounds as the only metric, CalRecycle agrees with this comment and removed the following language from the regulatory text: "2. An edible food generator may use an alternative metric provided by the food recovery service or organization to measure the quantity of food recovered." By removing this language, all commercial edible food generators are now required to track pounds of food recovered. CalRecycle agrees with the commenter that this revision will eliminate confusion of multiple metrics, and also make commercial edible food generator recordkeeping more consistent as they will all be required to track pounds.</p>
3094	Hatfield, Z., Yolo Food Bank	<p>a) A food recovery organization or service that collects or receives <del>12</del> 6 tons or more of edible food from edible food generators per year shall maintain a record that includes all of the following. <b>Jurisdictions may request to review &amp; audit food recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported.</b></p> <p>In further consultation with member food banks, 6 tons is a low threshold to conform to the small capacity groups the Department seeks to prevent over-regulation. In addition, there are significant restrictions on donation data that would make compliance with the regulations, as written, impossible for food banks and member agencies.</p>	<p>The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance.</p> <p>To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold from the regulatory text. The final regulations require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food directly from commercial edible food generators, pursuant to Section 18991.3 (b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>Regarding the comment that "jurisdictions may request to review &amp; audit food recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported." There are no requirements in the regulations that mandate the reporting of such information. If a public agency does decide to retain copies of commercial edible food generator records or food recovery organization and food recovery service records for enforcement purposes or audit purposes, they would be subject to the Public Records Act as well as any applicable provisions exempting the disclosure of proprietary or trade-secret information.</p> <p>Regarding the comment about restrictions on donation data, CalRecycle would like to clarify that SB 1383's reporting requirements do not violate donor confidentiality. There is no requirement in SB 1383's regulations for food recovery organizations or food recovery services to report donor names. They are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.</p>
3095	Hatfield, Z., Yolo Food Bank	<p><del>(4) The total number of meals served per month if applicable.</del>  As in 18991.4, we request the simplicity and consistency of pounds. The metric of meals is based on a conversion from pounds, and represents an estimated average. We recommend tracking pounds only, as it will be more consistent and simpler to track across many organizations. It would be burdensome on existing staff to have to report these numbers on a regular basis, and would introduce confusion in matching donated vs. transported vs. recovered meals. Finally, meals can be calculated from pounds and is simply unnecessary to report. IDENTICAL 3123</p>	<p>CalRecycle agrees with this comment and removed the following language from the regulatory text: "An edible food generator may use an alternative metric provided by the food recovery service or organization to measure the quantity of food recovered." By removing this language, all commercial edible food generators will be required to track pounds of food recovered. This revision will eliminate confusion of multiple metrics, and also make commercial edible food generator recordkeeping more consistent as they will all be required to track pounds.</p>
3096	Hatfield, Z., Yolo Food Bank	<p>Section 18992.2 Edible food recovery Capacity  In (a), we strongly support the capacity planning process as outlined but urge that counties coordinate not just with cities and regional agencies but also with "all relevant edible food recovery stakeholders, including all of but not limited to food recovery organizations, generators and haulers."  Currently, such stakeholder involvement would occur only after the process outlined in (b)(2), suggesting a planning scenario that would exclude the organizations with the expertise necessary for an effective planning process as outlined in (a) &amp; (b).</p>	<p>A change to the regulatory text was not necessary because it is inherent in the requirements of Section 18992.2 (a)(2)-(4) that counties, in coordination with jurisdictions and regional agencies located within the county, will have to consult with food recovery organizations and services to assess their capacity. Food recovery organizations and services have the expertise necessary for providing information about their current capacity and capacity needs.  Section 18992.2 also states that in complying with this section the county in coordination with jurisdictions and regional agencies located within the county shall consult with food recovery organizations and food recovery services regarding existing, or proposed new and expanded capacity that could be accessed by the jurisdiction and its commercial edible food generators. CalRecycle would like to clarify that nothing in SB 1383's regulations prohibits a county, jurisdiction, or regional agency from also consulting with other relevant stakeholders such as haulers and generators.</p>
3097	Hatfield, Z., Yolo Food Bank	<p>In (b), we strongly support and urge that this language remain in the final regulations. Capacity is essential to achieving the state's goal, and jurisdictions must include implementation schedules that prioritize how to provide revenues that can support the real costs necessary to divert additional food in a food safe manner - the trucking, cold storage, fuel, staffing and administrative costs that food banks</p>	<p>Some commenters noted that there was a minor grammar error in Section 18992.2 Edible Food Recovery Capacity (b). A minor grammar edit was made to the regulatory text in response to this comment. This edit was necessary to ensure that the requirement is interpreted accurately. The minor grammar edit that was made can be found below.</p>

		<p>and other emergency food organizations struggle to provide already.            If a county identifies that new or expanded capacity is needed to recover the amount of edible food identified in (a)(4), then each jurisdiction within that county that lacks capacity shall: A small but important typographical change</p>	<p>(b) If a county identifies that new or expanded capacity is needed to recover the amount of edible food identified in (a)(4), then each jurisdiction within that county that lacks capacity shall:</p>
3098	Hatfield, Z., Yolo Food Bank	<p>Article 13 Section 18994.2. Jurisdiction Annual Reporting            (h) A jurisdiction shall report the following regarding its implementation of the edible food recovery requirements of Article 10.</p> <ul style="list-style-type: none"> <li>o (1) The number of commercial edible food generators located within the jurisdiction.</li> <li>o (2) The number of food recovery services and organizations located and operating within the jurisdiction that collect or receive more than 12 e tons of food per year.               <ul style="list-style-type: none"> <li>• (A) A Jurisdiction shall require food recovery organizations and services that are located within the jurisdiction and collect or receive 12 i-tons or more of edible food per year to report the amount of edible food recovered by the service or organization in the previous calendar year to the jurisdiction.</li> <li>• As with Article 10 Section 18991 5, we recommend doubling the 6 ton threshold.</li> <li>• We also reiterate our position in Article 10 18991.5: 18994.2 must be struck as written, and replaced with language that "jurisdictions may request to review &amp; audit food recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported .. "</li> <li>• Food recovery organizations already track and could make records available upon request by the jurisdiction or State (in order for the jurisdiction or State to reconcile with food generator reporting as part of an audit or compliance review). Moreover, for many food recovery groups this information is tracked but proprietary under existing agreements with generators, which this requirement could disrupt and have the unintended consequence to prevent donations.</li> <li>• We urge that the reporting requirement occur solely with the food generator, not with the food recovery organization, for consistency and ease of regulatory oversight If reporting flows from the food recovery organization up to the local jurisdiction, then up to the State, reconciliation with the food generators' output will be very difficult.</li> <li>• Food generator reporting would be provided to the State, local jurisdictions and food recovery organizations.</li> </ul> </li> </ul>	<p>The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance.</p> <p>To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold from the regulatory text. The final regulations require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food directly from commercial edible food generators, pursuant to Section 18991.3 (b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.</p> <p>Regarding the comment that "jurisdictions may request to review &amp; audit food recovery donation records if there is need to verify generator data, but in no circumstances are proprietary food recovery data to be publicly reported." There are no requirements in the regulations that mandate the reporting of such information. If a public agency does decide to retain copies of commercial edible food generator records or food recovery organization and food recovery service records for enforcement purposes or audit purposes, they would be subject to the Public Records Act as well as any applicable provisions exempting the disclosure of proprietary or trade-secret information.</p> <p>CalRecycle would also like to clarify that SB 1383's reporting requirements do not violate donor confidentiality. There is no requirement in SB 1383's regulations for food recovery organizations or food recovery services to report donor names. They are only required to report (to the jurisdiction that they are located in) the total pounds collected in the previous calendar year from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Reporting the total pounds collected is critical for measuring progress and to help jurisdictions and CalRecycle identify if more capacity building needs to occur.</p>

Comment Number	Received From	Question/Comment	Response(s)
			Regarding the comment requesting that the reporting requirement occur solely with the food generator and not with food recovery organizations and services. It is not prudent to require each individual commercial edible food generator to report information to the jurisdiction. Such a revision would require jurisdictions to review and aggregate data from thousands of commercial edible food generators rather than a much smaller number of food recovery organizations and food recovery services. For example, one food bank could work with over a hundred commercial edible food generators. It is far more efficient and feasible for a jurisdiction to review one report from the food bank rather than 100 individual reports from generators that all work with the same food bank.
3099	Hatfield, Z., Yolo Food Bank	Article 14, Section 18995.1 Jurisdiction Inspection and Enforcement Requirements (2): Unclear what food recovery organizations would be complying with in this section. Please provide a written answer and we will offer further comment.	To clarify, any food recovery organization or food recovery service that has a contract or written agreement with one or more commercial edible food generators pursuant to Section 18991.3 (b) is required to maintain records and report information to the jurisdiction. Therefore, any food recovery organization or service that has a contract or written agreement pursuant to Section 18991.3 (b) is also subject to inspection by the jurisdiction to verify that they are in compliance with the SB 1383 recordkeeping and reporting requirements that they are subject to.
3100	Hatfield, Z., Yolo Food Bank	Article 16. Section 18997, Table 1 (last row): Non-profit food recovery organizations should not be penalized if they are keeping records in good faith.	The only recordkeeping requirements for food recovery services and organizations are established in Section 18991.5. This section establishes minimum recordkeeping requirements for food recovery services and organizations that elect to establish a contract or written agreement with a commercial edible food generator pursuant to Section 18991.3 (b). A food recovery service or organization that does not have a contract or written agreement with a commercial edible food generator pursuant to Section 18991.3 (b) is not subject to the recordkeeping requirements. A food recovery service or organization may wish to consider any costs associated with recordkeeping when deciding whether or not to enter into a contract or written agreement with a commercial edible food generator, thus subjecting them to the recordkeeping requirements of the regulations. Furthermore, the timeline for issuing penalties provides ample time for a food recovery organization or service to achieve compliance with the recordkeeping requirements. An entity may have up to seven months to come into compliance with a violation such as recordkeeping. CalRecycle believes this provides sufficient time for an entity acting in good faith to come into compliance with the requirements.
4439	Heaton, S. Rural County Representatives of California	Waivers and exemptions As stated earlier, RCRC is most appreciative of the proposed waivers and exemptions provided for rural jurisdictions, low-population areas, and emergency circumstances. Section 30.12 (c), Rural Exemptions, specifies that Rural Jurisdictions meeting the definition in Section 42649.8 of the Public Resources Code are exempt from the organic waste collection requirements until 2025. While this is most helpful to our jurisdictions, we request reconsideration that these counties be exempted from the entire Chapter. It is economically infeasible for these counties to be mandated to participate in an organics program for the small percentage of benefits received. It also seems difficult to justify the state spending any of their valuable resources ensuring compliance within one-third (19) of the state's counties	CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers. CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount

Comment Number	Received From	Question/Comment	Response(s)
		<p>for such a small fraction (4%) of the organic waste stream. At a minimum, the provisions should be reviewed closely to eliminate those that are economically unjustified or do not provide a direct impact (i.e. planning capacity, implementation for edible food recovery, and processing infrastructure).</p>	<p>of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-document history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
4440	Heaton, S. Rural County Representatives of California	<p>RCRC and Placer County staff has had discussions with CalRecycle staff regarding an additional specific waiver for small food waste generators in bear territory in the Tahoe Basin, where food waste collection is a public safety issue. Food waste collection for the larger businesses (AB 1826 phase I and II) can be collected in secure, locking bins. However, for the smaller businesses (AB 1826 phase III) and residences food waste collection is problematic, as described in more detail in Attachment B, Information to Support Bear Waiver Request.</p>	<p>CalRecycle added Section 18984.12(d) in response to this comment. The changes will allow jurisdictions located at or above 4,500 feet apply for a waiver from the food and food soiled paper organic waste collection requirements. Jurisdictions would also be waived from providing containers to their generators. This waiver would apply for residential and small commercial generators that are not regulated by AB 1826.</p> <p>As the commenter noted, jurisdictions 4,500 feet and above face specific waste collection challenges as high-elevation, forested areas that include bear and other wild animal habitat. Food waste collection can attract vectors, including bears, to populated areas creating collection and public safety issues. This change is necessary to prevent a public safety issue that food waste separation and recycling can pose. Generators in high-elevation jurisdictions will be able to continue to use customer provided containers that fit in their locked bear boxes.</p> <p>Jurisdictions that qualify for this waiver, however, will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. This comment argued that the limited space of locked bear boxes, which this commenter's jurisdiction uses to secure garbage bins, creates a capacity issue. Although CalRecycle recognizes the threat that vectors, like bears, pose from the collection of food waste, nothing prevents the jurisdiction from providing smaller containers that could fit inside bear boxes.</p>
4441	Heaton, S. Rural County Representatives of California	<p>RCRC also still believes it is appropriate to allow a local jurisdiction to request a waiver from CalRecycle for a proposed area based upon the local circumstances and conditions. Local jurisdictions need to have the ability to appeal to CalRecycle when lack of easily accessible organics facilities, the greenhouse gas impact tradeoffs, or other unique situations occur that are beyond the reasonable ability of the jurisdiction.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. Comment Number	Received From	Question/Comment	Response(s)
4442	Heaton, S. Rural County Representatives of California	<p><b>Capacity Planning</b>  The Proposed SLCP Regulations capacity planning for edible food recovery and processing facility infrastructure includes a requirement that jurisdictions that lack sufficient capacity shall submit an implementation schedule to CalRecycle that demonstrates how it will ensure there is enough new or expanded capacity to recover the organic waste currently disposed of by its generators. This is beyond the ability of local jurisdictions to achieve.</p> <p>It is common knowledge that California does not have sufficient infrastructure capacity today to handle the amount of organics to be diverted from landfills to meet the goals of AB 1826 and SB 1383. In addition to being costly, the facilities are difficult to site and usually take five to ten years to get through the permitting process. Placing the responsibility of providing sufficient capacity on local jurisdictions is not realistic. This effort will necessitate all stakeholders, including the state, local jurisdictions, private industry, and the residents of the state to participate in this endeavor.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4443	Heaton, S. Rural County Representatives of California	<p><b>Procurement Program</b>  Market development is a crucial component of the success of meeting our organics diversion goals, of which state and local governments procurement requirements is an important piece. However, RCRC does not think that the SLCP Regulations should be the vehicle to address this issue. We believe local procurement mandates are not authorized by SB 1383. We suggest that procurement be removed from the proposed regulations and that it be an all-encompassing (state and local government) effort. We believe this procurement mandate was not authorized by SB 1383 and is inconsistent with other statutes, constitutes an unfunded mandate, and causes potentially significant environmental impacts requiring California Environmental Quality Act (CEQA) review.</p>	<p>SB 1383 provided a broad grant of rulemaking authority to place requirements on jurisdictions to achieve the statutory requirements. CalRecycle determined that procurement requirements are necessary to achieve the organic waste diversion goals in statute by providing end uses for processed organic waste. CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate. First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383. According to the October 1,</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>2018 decision in <i>Paradise Irrigation Dist. v. Commission on State Mandates</i>, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p> <p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, “CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code.” That section also provides that CalRecycle may “include different levels of requirements for local jurisdictions...”</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, “The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code.” SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that “[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. ‘[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . .’ The [administrative agency] is authorized to ‘fill up the details’ of the statutory scheme.”</p> <p>Consistent with CalRecycle’s broad rulemaking authority, the proposed procurement requirements are designed to help achieve the organic waste diversion goals in SB 1383 by supporting markets for recovered organic waste products. The regulations have a direct nexus to achieving those organic waste diversion goals by preventing initially diverted organic waste from being disposed due to lack of end uses.</p> <p>Health and Safety Code Section 39730.8, also in SB 1383, refers to CalRecycle considering recommendations in the California Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for the use of biomethane and biogas. The IEPR recommended that “state agencies should consider and, as appropriate, adopt policies and incentives to significantly increase the sustainable production and use of renewable gas.” As such, provisions for the procurement of renewable transportation fuel generated from recovered organic waste.</p> <p>The Air Resources Board’s Short Lived Climate Pollutant Strategy states, “CalRecycle will continue to work towards strengthening state procurement requirements relative to use of recycled organic products.”</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>The inclusion of compost as an eligible recovered organic waste procurement product aligns with policies and mandates for methane reduction as described in the Air Resources Board’s SLCP Strategy. The Economic Analysis conducted for the SLCP Strategy notes several scenarios that can achieve the needed reductions in short-lived climate pollutants from the waste sector, and every scenario modeled includes new compost facilities. The purpose of a compost procurement requirement is to establish markets for compost, which is a product generated by organics recycling facilities which the SLCP Strategy identified as in need of market development.</p> <p>Regarding paper procurement requirements, CalRecycle’s 2014 Waste Characterization Study found that paper accounts for 17.4 percent of the disposed waste stream.</p> <p>Requirements on jurisdictions to meet the recycled content paper procurement requirements will help grow markets for recycled content paper. Given the prevalence of paper in the disposal stream, increased procurement of recycled paper is needed to grow the market for recycled paper in order to achieve the organic waste reduction goals. This is necessary to help achieve the organic waste diversion goals in SB 1383 by ensuring an end use for diverted organic waste.</p> <p>Regarding funding, SB 1383 (Public Resources Code Section 42652.5(b)) provides that, “A local jurisdiction may charge and collect fees to recover the local jurisdiction’s costs incurred in complying with the regulations adopted pursuant to this section.”</p> <p>CalRecycle prepared an Environmental Impact Report (EIR) under CEQA to analyze potentially significant effects on the environment that may be the reasonably foreseeable result of this rulemaking effort.</p>
4444	Heaton, S. Rural County Representatives of California	<p>Monitoring, Compliance, and Enforcement</p> <p>The requirement of the property and business owner responsibilities to provide organic waste collection services and annual notification about organic waste recovery requirement and proper sorting is duplicative for residential tenants and will be difficult for jurisdictions to monitor. The local jurisdiction is already required to do public education and outreach that should already cover the individual residence, whether rented or owner occupied.</p>	<p>CalRecycle revised Section 18984.10 in response to this comment to clarify that requirements on commercial business owners do not pertain to single family residences. Also note, in the current language, CalRecycle removed ‘property owners’ from this section.</p>
4445	Heaton, S. Rural County Representatives of California	<p>RCRC appreciates the inclusion of a mechanism to allow consideration of a jurisdiction’s efforts for compliance. The “Corrective Action Plans” (CAPs) allows extended timelines and milestones for achieving compliance, if the jurisdiction has demonstrated that it has made a “substantial effort” to comply and there are extenuating circumstances that have prevented it from complying. Substantial effort is then defined to mean that a jurisdiction has taken all practicable action to comply. However, it further clarifies that substantial effort does not include circumstances where a decision-making body of a jurisdiction has not taken the necessary steps to comply with the Chapter, including but not limited to, a failure to provide staff resources or sufficient funding to assure compliance. We believe this to be too severe of a requirement for determining compliance. There are many factors for a decision-making body to consider when establishing programs that are reasonable and economically feasible.</p>	<p>A change to the regulatory text is not necessary. This exclusion of the circumstance where a decision-making body of a jurisdiction has not taken action as “substantial effort” was to prevent delayed enforcement action due to a jurisdiction failing to take adequate steps to comply with the Chapter. The success of the Short-lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. This strict timeframe does not allow for a multi-year and multi-step process for achieving compliance or a “good faith effort” as with AB 939. Enforcement by the Department allows a jurisdiction extended timeframes to come into compliance through extensions and the Correction Action Plan (CAP). Absolving the jurisdiction of their responsibility to comply with the regulations due to the failure of a decision-making body would render the state incapable of achieving the SB 1383 targets. The jurisdiction is ultimately responsible for their compliance with the Chapter and shall be subject to penalties for noncompliance and the decision-making body will need consider the possibility of penalties if it fails to take the necessary steps to comply. By adopting the SB 1383 regulations as early as</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>possible, impacted stakeholders will be provided the maximum amount of time to prepare and budget for implementation and compliance.</p> <p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a CAP. This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p>
4446	Heaton, S. Rural County Representatives of California	<p>Penalties. The Proposed SLCP Regulations includes a very specific and extensive penalty table that RCRC believes is contrary to the express language of SB 1383 and inconsistent with the Government Code provisions regulating local penalties. Please refer to Attachment C for a more detailed discussion. We also believe the penalty section is premature and should be considered in a separate set of regulations. This regulation is complicated on all fronts and will be difficult to implement and administer. All stakeholders need to begin working through responsibilities and requirements to determine appropriate levels of fines for the various infractions. Jurisdictions have until 2022 to implement the programs so there is ample time to consider appropriate levels of penalties after implementation of these regulations.</p>	<p>A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.</p> <p>The penalty table for penalties imposed by the jurisdiction has been removed. A jurisdiction shall impose penalties for violations consistent with the graduated penalty amounts authorized in Sections 53069.4, 25132 and 36900 of the Government Code which is outlined in Section 18997.2(a).</p> <p>A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies</p>

Comment Number	Received From	Question/Comment	Response(s)
			may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.
4447	Heaton, S. Rural County Representatives of California	It is also very difficult to justify such a prescriptive set of penalties onto our residents, industry partners, and local jurisdictions when the State entities, federal agencies, and schools, who are large contributors to the organic waste stream, get put on a "list-of-shame" for non-compliance.	A change to the regulatory text is not necessary. Under 1383, state agencies are treated as generators rather than implementation authorities and SB 1383 did not authorize the Department to issue penalties to state agencies. The Department will not be adding enforcement requirements on state agencies. Section 18996.6 states that the Department will oversee the compliance of state agencies in respect to SB 1383. Currently, state agencies are required to meet waste diversion goals like those required for cities, counties and regional agencies under AB75. State agencies and large state facilities must adopt integrated waste management plans, implement programs to reduce waste disposal and they have their waste diversion performance annually reviewed by the Department.
4448	Heaton, S. Rural County Representatives of California	Sampling and Loadchecking. The proposed requirements for sampling and loadchecking are excessive and costly especially along with implementation of new programs. Rather than daily sampling, we recommend sampling occur within a one-week period on a quarterly basis and reporting on a quarterly basis rather than monthly. The standards for loadchecking between different requirements have several inconsistencies that are not explained or justified. The frequency and timing of the required number of load checks could prolong the operating day at an operation or facility until the loadcheck is complete.	CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The methodology was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days per quarter instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data. Regarding loadchecking: CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site. Also, note that Section 17409.5.9 allows the EA, with concurrence from CalRecycle the flexibility to approve an alternative measurement as long as the method proposed by the operator is as accurate as the prescribed protocol.
4449	Heaton, S. Rural County Representatives of California	Section 18981.2 Implementation Requirement on Jurisdictions (b) CalRecycle should allow more flexibility and options for the allowed designations and not just contracts and agreements. Other mechanisms such as ordinances or permits could be used to provide some of the services required in the Chapter. This would allow a jurisdiction to pass on requirements to other providers, contractors, and others to meet requirements. For example, it is common for a jurisdiction to require the use	Comment noted. CalRecycle is declining to add ordinances to the manner of designation as it finds at this time that a negotiated agreement may be more effective at ensuring that all parties understand their obligations.

Comment Number	Received From	Question/Comment	Response(s)
		of recycled-content paper in written reports and that action should be included in a jurisdiction's procurement requirements.	
4450	Heaton, S. Rural County Representatives of California	Section 18981.2 Implementation Requirement on Jurisdictions (b)(3) other jurisdiction actions including ordinances or permits can be used	Comment noted. CalRecycle is declining to add ordinances to the manner of designation as it finds at this time that a negotiated agreement may be more effective at ensuring that all parties understand their obligations.
4451	Heaton, S. Rural County Representatives of California	Article 1 Definitions (30) "Grocery store" – It is understandable to not include any "areas that is separately owned," but this will create issues during enforcement especially since the same waste to recycling containers may be used. This situation should be addressed in the later sections.	To clarify, if a privately owned business within a grocery store meets any of the commercial edible food generator definitions and their associated thresholds, then the business would be required to comply with the commercial edible food generator requirements specified in Section 18991.3 of the regulations. If the privately owned business does not independently meet the commercial edible food generator definitions or thresholds, it is not required to comply with SB 1383's commercial edible food generator requirements. Regarding the comment "this will create issues during enforcement especially since the same waste to recycling containers may be used." The regulations do not include penalties for contamination, and they do not require jurisdictions to levy penalties for contamination of containers. However, nothing in the regulations prevents a jurisdiction from imposing processing fees or penalties in an effort to reduce contamination.
4452	Heaton, S. Rural County Representatives of California	Article 1 Definitions (33) "High diversion organics waste processing facility" – It is likely that some high diversion facilities may not meet the required standards, or their compliance will fluctuate, during operations. Jurisdictions should not be held accountable for arranging the required delivery of organics to the high diversion facility that might not meet the high diversion standards at the time of delivery. This situation should be addressed in the later sections.	The regulations provide that the diversion percentage is determined on a timing schedule that allows for incidental fluctuations that would not disqualify the facility.
4453	Heaton, S. Rural County Representatives of California	Article 1 Definitions (36) "Jurisdiction" – This definition should include Regional Agencies and multi-county regional agencies such as the Regional Waste Management Authority established in Yuba and Sutter Counties. These regional agencies act on behalf of multiple jurisdictions to ease the burden of requirements on individual jurisdictions.	Regional agencies are defined in Public Resources Code Section 40181. Per Public Resources Code Section 40100, that definition extends to regulations adopted under Division 30 of the Public Resources Code.
4454	Heaton, S. Rural County Representatives of California	Article 1 Definitions (42) "Non-local entity" – the listed entities are not subject to the control of a jurisdiction's regulations related to solid waste, but this section does not exclude a jurisdiction from being accountable for tonnages of organics generated by these entities. This definition should include language that the jurisdiction is not accountable for the lack of compliance from these entities.	Other sections in the regulations make clear that CalRecycle directly enforces non-compliance from such entities. Jurisdictions are not responsible for enforcing non-compliance by non-local entities.
4455	Heaton, S. Rural County Representatives of California	Article 1 Definitions (46) "Organic waste" – This definition is overly broad and inconsistent with other definitions used in requirements such as the Mandatory Organics Recycling requirements and the soon to adopted Recycling and Disposal Facility Reporting. Inconsistent definitions cause excessive burden on jurisdictions and create confusion for customers. There is even a different limit on organics proposed in Section 18992.1 (e). The various definitions are listed below: SB 1383 (46) "Organic waste" means solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited	Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated

Comment Number	Received From	Question/Comment	Response(s)
		<p>to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood, paper products, printing and writing paper, manure, biosolids, digestate, and sludges.</p> <p>MORe AB 1826 Public Resources Code Section 42649.8 (c) "Organic waste" means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.</p> <p>AB 901 Proposed Title 14 Section 18815.2 (a) (39) "Organics" means material originated from living organisms and their metabolic waste products. This includes, but is not limited to, food, "agricultural material" as defined in section 17852(a)(5) of this subdivision, "agricultural by-product material" as defined in section 17852(a)(4.5) of this subdivision, green material, landscape and pruning waste, nonhazardous lumber and dimensional wood, manure, compostable paper, digestate, biosolids, and biogenic sludges; and any product manufactured or refined from these materials, including compost, and wood chips.</p>	<p>by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.</p>
4456	Heaton, S. Rural County Representatives of California	<p>Article 1 Definitions (46) Organic Waste In addition, the term "material originated from living organisms and their metabolic waste products" is vague and could even include plastics which are derived from petroleum eons ago. This definition could also include non-organic material contaminated with a small quantity of organics.</p>	<p>Comment noted. The definition of organic waste clearly identifies materials that are types of organic waste. It is not feasible or necessary to state in the negative every conceivable material that is not an organic waste.</p>
4457	Heaton, S. Rural County Representatives of California	<p>Article 2 18983.1 Landfill Disposal and Recovery (b)(5) added revegetation and slope stabilization to erosion control or landscaping as accepted uses as a soil amendment at a landfill. This section should allow a process for allowing alternatives and a process for getting approval for certain organic wastes that are sent to a landfill and deemed to be a reduction of landfill disposal. New situations arise and there should be allowance.</p>	<p>CalRecycle concurs that maintaining flexibility for other recovery processes not specifically identified in Section 18983.1(b) that may still constitute a reduction of disposal of organic waste and can achieve equivalent greenhouse house gas reduction that meets or exceeds the baseline of 0.30 MTCO2e per short ton. Therefore, the proposed regulations include Section 18983.2, Determination of Technologies That Constitute a Reduction in Landfill Disposal as a pathway for including additional activities and technologies.</p>
4458	Heaton, S. Rural County Representatives of California	<p>Article 2 18983.1 (b)(5) (C) specifies the soil amendment material applied at landfills is never more than 12 inches. However, (B) (1) states it is restricted to organic wastes appropriate for the specific use and in accordance with engineering, industry guidelines or other standard practices specified in the RDSI. (B) (2) Restricts it to quantities of solid wastes no more than necessary to meet the minimum of (1). Don't these sections conflict?</p>	<p>Existing research demonstrates that organic waste suitable for use as a soil amendment reduces net emissions if the depth does not exceed 12 inches. If it exceeds 12 inches, it can lead to anaerobic conditions, which leads to the generation of greenhouse gases. Subsections (b)(5)(B)(1) and (2) should be read in concert with (b)(5)(B)(3) in such a way as to be restricted to a maximum depth of 12 inches.</p>
4459	Heaton, S. Rural County Representatives of California	<p>Article 3 18984.1 Three-container Waste Collection Services (b) A jurisdiction may transport the gray container to a facility that processes and recovers organic waste. The jurisdiction will not be considered out of compliance with subdivision (a) if it allows carpet and textiles in the gray container. Is this only if it takes it to a facility that recovers organic waste?</p>	<p>While carpets and textiles may be handled in a different manner, some jurisdictions may allow them to be placed in the gray container. Carpets and textiles are allowed in the gray container regardless of where the contents of the container are subsequently managed i.e. if these are the only organic wastes allowed in the gray container the container does not have to be transported to a high diversion organic waste processing facility.</p>
4460	Heaton, S. Rural County Representatives of California	<p>Article 3 18984.2 Two-container Waste Collection Services (a) Why is it a blue container instead of gray? Isn't it sending the wrong message to allow the collection of non-organic/recyclable materials in a blue "recycling" container? If a jurisdiction choses to upgrade to a three-container collection in the future, extensive public re-</p>	<p>Thank you for the comment. Section 18984.2 was revised to require either a green and gray container or a blue and gray container.</p>

Comment Number	Received From	Question/Comment	Response(s)
4461	Heaton, S. Rural County Representatives of California	<p>education will be required to not contaminate the blue cart rather than the positive message of adding additional service.</p> <p>Article 3 18984.3 Unsegregated Single-Container Collection Services (b) If a high diversion organic waste processing facility has an annual average mixed waste organic content recovery rate that is lower than the required for two consecutive quarters or three quarters within three years, the facility shall no longer qualify. The three quarters within three years seems disproportionate. We recommend three quarters within two years to be more appropriate.</p>	<p>Comment noted. The rolling quarterly efficiency was specifically designed to account for seasonality. At any given time, each season is accounted for in the recovery efficiency measurement. Further if a facility does not meet the recovery efficiency levels in one quarter, it has an entire additional quarter to improve its levels before it would not be considered a high diversion organic waste processing facility. Finally, if a facility falls below the levels, a jurisdiction that had been using the facility to comply with the correction service requirements of Article 3 would have an additional 90 to 180 days to come in to compliance (e.g. the facility improves its recovery efficiency), or if extenuating circumstances persist the jurisdiction could be placed on a corrective action plan, providing yet more time for the facility to improve its recovery efficiency.</p> <p>The purpose of that section is to ensure that a facility has an opportunity to improve its organic content recovery rate and maintain its status as. This ensures that a single quarter with lower than average recovery rates does not automatically disqualify the facility from its status as a high diversion organic waste processing facility. This further provides a jurisdiction sufficient time to become aware of failures and cure the failure prior to needing to establish a program that complies with Article 3 instead</p> <p>CalRecycle will inform jurisdictions implementing a service that is required to use a high diversion organic waste processing facility if the facility they select is no longer an eligible. Jurisdictions that contract with facilities are encouraged to maintain an awareness of the recovery efficiency of the facility that they select to receive their organic waste</p>
4462	Heaton, S. Rural County Representatives of California	<p>Article 3 The requirement that the contents of the single grey container must be transported to a high diversion organic waste processing facility would require all qualifying rural areas to develop high diversion facilities at their local solid waste facilities that do not current exist or transport the collected wastes significant distances. This requirement is expensive and not feasible for qualifying rural areas.</p>	<p>Comment noted. The commenter argues that the regulations must be structured in a way that protects the existing investments of their members. Specifically, the commenter is referring to collection services and material recovery facilities that were established to process mixed waste. CalRecycle has sought to address this concern in a manner that is also in compliance with the statutory targets and requirements. As noted in the Initial Statement of Reasons, which was released for public review in January of 2019:</p> <p>“The draft regulations originally prohibited jurisdictions from implementing new mixed waste processing systems after 2022, and required all new services to implement source-separated curbside collection as a means of ensuring that collected organic waste would be clean and recoverable. In response to stakeholder feedback, CalRecycle eliminated the prohibition on new mixed waste processing systems provided that the receiving facilities demonstrate they are capable of recovering 75 percent of the organic content received from the mixed waste stream on an annual basis. The performance standard addresses stakeholder concerns about limiting flexibility, without compromising the goal for the regulations to achieve the statutory requirements.”</p> <p>The ISOR goes on to note that CalRecycle crafted regulations to allow for mixed waste collection provided that these collection services transport collected material to a facility that recovers 50 percent of the organic content it received by 2022 and 75 percent by 2025:</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>“With very few exceptions, unique materials can only be processed and recovered when they are kept separate from other materials. This is primarily due to the fact that distinct materials are recovered through separate processes that are specifically designed to handle only that type of material. For example, metals, paper, and plastics are remanufactured through distinct processes (e.g. metal is smelted, paper is pulped and washed). Largely because of this, while material may be valuable as a homogenous commodity, it can become difficult or impossible to recycle when it is contaminated with other materials (e.g. many materials lose their value when they are commingled with other materials.) This principle holds true, and is perhaps more of a factor in the recovery of organic waste. Required source-separation of organic waste helps ensure that organics are kept clean, separate and recoverable.</p> <p>However; throughout the informal regulatory engagement process stakeholders raised concerns about potential costs associated with providing commercial and residential generators with a third container to source separate organic waste.</p> <p>Stakeholders also noted that several cities and counties implement single container collection services and process all the collected material for recovery. Stakeholders argued that allowing the use of a single-container collection system is a viable and cost-effective alternative that can help the state meet that statutory organic waste recovery targets.</p> <p>To respond to stakeholder requests for additionally flexibility CalRecycle crafted this section and Section 18984.2. These sections allow alternatives to providing a three-container source-separated organic waste collection service. Under these section jurisdictions are allowed to require their generators to use a service that does not provide the generators the opportunity to separate their organic waste for recovery at the curb. In order to ensure that the state can achieve the statutory organic waste reduction targets, these collections services are required to transport the containers that include organic waste to high diversion organic waste processing facilities that meet minimum organic content recovery rates (content recovery rates are specified in Subdivision (b) of this section)...”</p> <p>The commenter has stated in each comment period, that they believe the requirement to recover 75 percent of the organic content collected in these mixed waste collection services is unrealistic and infeasible. In turn CalRecycle staff repeatedly communicated to the commenter that the recovery targets cannot be lowered without compromising the integrity of the regulations. This was further documented for this commenter and the public in the ISOR:</p> <p>“These minimum recovery rates are necessary because when the opportunity to recover material through source separation is lost, the state must ensure that minimum recovery levels are met at processing facilities. While this section provides additional flexibility to jurisdictions, CalRecycle must consider its obligation to ensure that the regulations are designed to achieve the statutory targets. If 100 percent of jurisdictions employed this collection option in 2022 the state could not meet the mandatory recovery target of 50 percent unless at least 50 percent of the organic waste collected from these services is recovered.</p> <p>Similarly, if 100 percent of jurisdictions employed this collection option in 2025 the state could not meet the mandatory recovery target of 75 percent unless 75 percent of the organic waste collected from these services is recovered.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>Therefore, in order to meet the recovery targets specified in statute and the state’s ultimate climate goals the recovery standards included in this section are the minimum standards necessary.</p> <p>As generation of organic waste increases with population growth, these minimum recovery rates may need to be revisited. As stated previously the organic waste reduction targets are linked to a 2014 baseline of 23 million tons. This requires the state to dispose of no more than 5.7 million tons by 2025. If, as CalRecycle projects, generation increases to 26 million tons of organic waste by 2025, recovering 75 percent of 25 million tons will only reduce disposal to slightly more than 6 million tons, resulting in the state missing its organic waste recovery targets. The need for this rate increase could be mitigated if higher recovery rates are achieved through source separation, or if efforts to increase source reduction through food recovery and other methods are successful. However, the recovery rates established in this regulation should be considered an absolute minimum.”</p> <p>CalRecycle has, prior to and during this rulemaking, communicated that the recovery efficiency requirements established in the regulation is the minimum level that the statute can tolerate. The commenter suggests existing infrastructure that cannot meet this standard should be “protected” or provided a “safe-harbor.” The commenter requests changes in the proposed regulations that cannot be reconciled with the statutory targets because CalRecycle finds that it cannot propose a regulation consistent with a statutory 2025 target that permits an unknown portion of the state from implementing the requirements necessary to achieve that target.</p> <p>CalRecycle acknowledges the role of existing infrastructure and acknowledges that previous investments in infrastructure were consciously made to achieve targets that were established prior to the adoption of SB 1383. However, the legislative direction in SB 1383 is unmistakably clear. The Legislature required CalRecycle to adopt regulations to achieve mandatory organic waste reduction levels. Nothing in the regulations prevents facility operators or jurisdictions from investing in facility upgrades or adapting existing facilities to process waste in a manner that meets the minimum regulatory requirements.</p> <p>Comment noted. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4463	Heaton, S. Rural County Representatives of California	17409.5.10 consolidation sites Article 3 In addition, (d) allows the contents of containers may be initially transported to a consolidation site and (e) allows for organic waste to be placed in bags and then placed in the grey container. However, the provisions of the 17409.5.10 (c) requires that “Consolidation sites shall keep source separated organic waste streams separate from other solid waste streams.” This could imply	A change to the regulatory text is not necessary. There is no restriction for the type of containers that are sent to consolidation sites only that it is there for storage and that no processing will be conducted at these sites. Sections 18984.1, 18984.2, and 18984.3 allow for containers with bagged organics to be sent to a consolidation site to be stored without processing. The bagged organic waste in the containers will remain in the containers until transported to a facility that will comply with the organic recovery efficiency requirements.

Comment Number	Received From	Question/Comment	Response(s)
		that the consolidation site will be required to remove the bags of organics at the consolidation site to ensure the separation from other solid wastes. If the bagged organics option is utilized by a jurisdiction, the consolidation site should be allowed to maintain the bagged organics in with other solid wastes.	
4464	Heaton, S. Rural County Representatives of California	Article 3 18984.8 Container Labeling Requirements. (a) A jurisdiction shall place and maintain a label on each “new” container or lid provided to generators, consistent with the applicable container collection requirements and limitations, specifying what materials are allowed to be in each container. What about old containers?	<p>This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. The labeling requirements were refined through the informal public rulemaking process to accommodate the various types of labels jurisdictions currently use on their containers. Stakeholders indicated that these types of labels are effective and durable. Correctly-colored labels may be applied to existing bins or lids until the containers are replaced at the end of their useful life.</p> <p>Labeling requirements, commencing January 1, 2022, only apply to new containers or lids. Thus, imprinting of labels would be directly onto new containers, either at the end of old containers’ useful life or by 2036.</p> <p>A jurisdiction’s designee can place labels on the containers.</p> <p>The regulations already apply to all containers provided by a hauler, including temporary dumpsters. The regulations specify that all containers provided by a hauler must meet both the container color and container label requirements by 2036. However, the regulations do allow for either the lid or the body to meet the color requirement.</p> <p>With respect to compactors owned by private businesses and not the hauler, the containers may conform with either the container color requirements or the container label requirements.</p> <p>In regards to the interior containers, this was the least costly and burdensome approach and still achieves the necessary organic disposal reduction. Those businesses subject to AB 827 will have to meet that statute’s signage requirements. Nothing in these SB 1383 regulations precludes a jurisdiction from requiring businesses to have signage.</p> <p>In regards to the lid comment, a change was made to allow for the exposed portion of lid or body to be required color and to allow the required color to be on either the lid or the body, not just the lid. The change is necessary because this approach is the least costly and burdensome one that still achieves the organics disposal reductions.</p> <p>For the text and graphics, this section references that primary materials must be included. If there is a change in the primary materials, then the information would need to be updated as containers are replaced. The regulations are allowing flexibility on size of the label (text and graphics), the requirement is only for primary materials, and all containers need labels. However, this includes all containers and residential/non-residential. Also, for consistency purposes, CalRecycle revised Section 18984.8(c)(1) to mention primary items.</p> <p>In regards to the new technology, CalRecycle is unclear on how that will help educate the generators.</p> <p>Nothing prohibits jurisdiction from mailing labels for existing containers, in addition to ensuring that new containers are properly labeled.</p>

Comment Number	Received From	Question/Comment	Response(s)
			The current text reflects stakeholder input during the informal rulemaking period that it would be costly to place labels on all containers. CalRecycle determined that this change would provide jurisdictions with flexibility to implement less burdensome education methods (e.g., labels on new containers) that ensure organic waste is collected and recovered, to support the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions. However, nothing in the regulations prohibits a jurisdiction from placing labels on all containers at an earlier time.
4465	Heaton, S. Rural County Representatives of California	Article 3 18984.9 Organic Waste Generator Requirements. Organic Waste Generators shall subscribe to the organic waste collection service provided by the jurisdiction or self-haul organic waste to a to a facility that processes source separated organic waste. Can a generator self-compost? Self-compost will result in a greater reduction in emission since no additional transportation is involved.	On-site management is allowed; however, it is not required. This recommendation would not achieve the necessary statewide organic waste disposal reductions. It is not realistic to expect that all organic waste can be composted at family homes, particularly in dense urban environments. A separate on-site composting waiver is not necessary. A jurisdiction already can waive some or all aspects of the organic waste collection requirements under the de minimis waiver.
4466	Heaton, S. Rural County Representatives of California	Article 3 18984.11 Waivers and Exemptions Granted by a Jurisdiction. The jurisdictions only have the ability to grant waivers. Should "exemptions" be deleted from the title?	CalRecycle has revised the title of Section 18984.11 to remove the word 'exemption' from the title as this section did not include any exemptions granted by the jurisdiction.
4467	Heaton, S. Rural County Representatives of California	Article 3 18984.12 Waivers and Exemptions Granted by the Department. (a) and (b) Low population waivers: A city or county may apply to the Department for a two-year waiver if (1) the city disposed of less than 5,000 tons of solid waste in 2014 and has a total population of less than 5,000 people or (2) a county for census tracts located in unincorporated portions of the county that have a population density of less than 50 persons per square mile. Can a jurisdiction reapply for subsequent 2-year waivers?	CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers. CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state. Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations > 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.

Comment Number	Received From	Question/Comment	Response(s)
			<p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
4468	Heaton, S. Rural County Representatives of California	Article 3 Additionally, census tracts have physical boundaries, most commonly roads. Many times, in rural areas the concentration of the population at the edge of a town may exceed the 50 persons per square mile, but the tract can then encompass miles of territory with less than the 50 persons per square mile. RCRC would like to see a provision that a jurisdiction could apply to CalRecycle for a waiver of a portion of a census tract under these circumstances.	CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
4469	Heaton, S. Rural County Representatives of California	<p>Article 3 (c) Rural exemptions: Rural jurisdictions (located within a rural county) and rural counties (population of less than 70,000 persons) may apply to the Department for an exemption from the organics waste collection requirement until 2025 or until 5 years after the department makes a determination pursuant to Section 42649.82 (a)(2)(D), whichever is later. This section states that on or after January 1, 2020, if the department determines that statewide disposal of organic waste has not been reduced to 50% of the 2014 level, all exemptions authorized by this paragraph shall terminate unless the department determines that applying this chapter to rural jurisdictions will not result in significant additional reductions of disposal of organic waste, meaning that they can extend the exemption. CalRecycle has interpreted "whichever is later" to mean from the date the determination is made whether it is January 1, 2020 or a later date. RCRC's intent was to have the new SB 1383 requirements begin implementation 5 years after AB 1826 requirements are required, to allow the same phase-in opportunities the larger jurisdictions were afforded.</p>	<p>A change to the regulatory text is not necessary because the text already says either 2026 or 5 years after determination, whichever is later. Also note, in the current language the date was changed to December 31, 2026.</p>
4470	Heaton, S. Rural County Representatives of California	<p>Article 4 18985.1 Organic Waste Recovery Education and Outreach. (e) A jurisdiction may comply with the requirements of (a) (for the 3 and 2 container systems) through its haulers. Shouldn't (c) for unsegregated single containers be included?</p>	<p>CalRecycle revised Section 18985.1(d) to provide consistency in required education and outreach requirements for the three different container service options.</p>
4471	Heaton, S. Rural County Representatives of California	<p>Article 5 18986.2 Local Education Agencies Requirements. Was it deliberate to omit "prohibit employees from contamination and periodically inspect containers for contamination and inform employees if contaminated from the local agency requirements," as is required for non-local entities?</p>	<p>CalRecycle has revised Section 18986.2 to reflect that local education agencies shall prohibit their employees from placing organic waste in the incorrect container.</p>
4472	Heaton, S. Rural County Representatives of California	<p>Article 5 18986.3 Waivers for Non-Local entities and Local Education Agencies. The Department shall waive a non-local entity's or local education agency's obligation to comply with organic waste collection service requirements if it meets the de minimis or space waiver specifications of 18984.11 or it is located in a jurisdiction that has been granted a department waiver pursuant to 18984.12. Shouldn't this include the 18984.12 (c) rural exemption?</p>	<p>Waivers for non-local entities already references exemptions under Section 18984.12 that include rural jurisdictions waivers.</p>

Comment Number	Received From	Question/Comment	Response(s)
4473	Heaton, S. Rural County Representatives of California	Article 6 18987.1 Biosolids Generation a Publicly Owned Treatment Works (POTW) (b) Material received at a POTW that it is not allowed to accept shall be deemed to constitute landfill disposal. I do not understand what this means. Is it more appropriate to reference or be consistent with the language in Section 17896.6 9A0 (1)(A) "Any separated material at the POTW that is not suitable for anaerobic digestion and has no beneficial use shall be further managed as a solid waste?"	A change to the regulatory text is not necessary. The intent of this section is to clarify that waste received at a POTW that does not meet the requirements of Section 17896.6(a)(1)(C) would be considered waste sent for disposal. Therefore, facilities or jurisdictions sending such waste to a POTW would count as sent for disposal.
4474	Heaton, S. Rural County Representatives of California	Article 6 Why is it necessary to have the biosolids Article in these regulations? What is it actually regulated any differently?	A change to the regulatory text is not necessary. The purpose of Article 6 is to specify biosolids generation and handling requirements at a Publicly Owned Treatment Works (POTW). This required its own Article as these specific requirements would not fall directly under the existing Transfer/Processing, Composting, or In-Vessel sections of the Title 14, California Code of Regulations.
4475	Heaton, S. Rural County Representatives of California	Article 7 Section 18988.3. Self-haulers of Organics Waste (b)(5) The exemptions for residential organic waste generator that self-hauls in this section should be broadened to include sections (a), (b)(1), and (b)(2). Some rural residents self-haul their wastes to remote limited-volume transfer stations (e.g. a debris box or compacter). These remote operations are not equipped to have separate containers for organics. Adding additional containers would greatly increase the costs for these remote sites. In addition, subdivision (b)(2) requires hauling to a site that "processes or recovers source-separated organic wastes". Rural landfills and transfer stations may not be equipped to process or recover organics directly at that site and may plan to send mixed materials to another site. This section should allow for subsequent transfer.	A change is not necessary as Article 3 allows the contents of containers to be initially transported to a consolidation site. Additionally, a generator that is located in a jurisdiction or area that received a waiver under Section 18984.12 of this division and is not a business subject to the requirements of Section 42649.81 of the Public Resources Code is not required to comply with the requirements of this section.
4476	Heaton, S. Rural County Representatives of California	Article 9 Section 18990.1 Legal cases have limited a jurisdiction from restricting import of wastes to a private facility, but that limitation is not appropriate for publicly owned facilities as indicated in our attachment.	A change to the regulatory text is not necessary. This section will not conflict with market conditions. Potential market shifts will impact all facilities. This section is necessary because the statute is intended to increase organics recycling, not decrease organics recycling. This provision is simply designed to prohibit a jurisdiction from requiring a generator to send its material to a facility that will recycle less of it than one they are currently sending it to A change to the regulatory text is not necessary. CalRecycle disagrees. A limitation for publicly owned facilities is appropriate in order to regulate organic waste at public and private facilities in order to meet the diversion goals of the statute.
4477	Heaton, S. Rural County Representatives of California	Article 9 Section 18990.1 CEQA may impose limitations on standards that cannot be limited by these proposed regulations	The comment is vague. To the extent it is suggesting that CEQA overrides aspects of SB 1383 and these implementing regulations or limits the ability of local jurisdictions to comply with both CEQA and SB 1383 and these regulations, the commenter is incorrect. CEQA is clear that it does not provide any independent authority to mitigate or avoid significant effects on the environment and that a public agency must use discretionary powers outside of CEQA for such purposes (Public Resources Code Section 21004, CEQA Guidelines Section 15040). A local agency may not use discretionary powers outside of CEQA for purposes of avoiding or mitigating significant environmental effects to the extent those powers rely on laws or ordinances that would be preempted by SB 1383 or associated regulations.
4478	Heaton, S. Rural County	Article 9 Section 18990.1 (2) Since some sites charge additional fees on out-of-area wastes, this section should "limit" a jurisdiction's ability to charge fees especially	A change to the regulatory text is not necessary. Article 9 section 18990.1 (b)(2) does not prohibit differential costs but does prohibit a fee designed to prevent material from out of the jurisdiction.

Comment Number	Received From	Question/Comment	Response(s)
	Representatives of California	when any gate fees are supplemental to the actual costs of operating the site. For example, some jurisdiction's use a parcel fee to fund the majority or all of their solid waste program. Waste from out-of-the-area would not contribute to that base costs and fees should be allowed. The use of the word "limit" could not allow a differential fee. This issue can be addressed by allowing additional criteria in (c).	This section would not prohibit reasonable fees intended to recoup additional processing or screening costs. Differential fees must be tied to actual costs.
4479	Heaton, S. Rural County Representatives of California	Article 11 18992.1 Organic Waste Recycling Capacity Planning. (a) Counties, in coordination with cities and regional agencies shall (1) estimate the amount of all organic waste (OW) in tons that will be disposed by the county and cities, (2) identify the amount in tons of existing OW recycling infrastructure capacity both in county and outside of the county that is verifiably available to the county and jurisdiction within the county, and (3) estimate the amount of new or expanded OW facility capacity that will be needed to process the OW identified in (1) in addition to the existing capacity identified in (2). Should this not specify that is 75% of the total amount of OW in tons?	A change to the regulatory text is not necessary because the proposed change would entail placing a numerical limit on a jurisdiction, which is not allowed by the statute.
4480	Heaton, S. Rural County Representatives of California	Article 11 18992.1 (e) This requirement imposes an additional definition of organics even if only for this section on Capacity Planning. Some other organics may be difficult to quantify separate from other organics, e.g. sludge from digestates and biosolids.	CalRecycle has revised Section 18992.1(f) in response to this comment. The change adds another information source that can be used for this requirement. The change is necessary because statewide or local characterization studies typically do not characterize digestate/biosolid, as they are not a part of the commercial and residential waste stream. However, this information should be limited to using a published report or another form of data generated by the appropriate solid waste management entities within the county that provides organic waste disposal tonnages or percentages for digestate/biosolids. This data would be used in addition to either statewide or local characterization studies. The RDRS system will have some reporting of the disposal and other end destinations for some digestate and biosolids (if the reporting entity is over the tonnage thresholds and is not just sending it to another POTW or if they are using it onsite). Since this data will include large generators, CalRecycle will include this data in the capacity planning tool.
4481	Heaton, S. Rural County Representatives of California	Article 12 18993.1 Recovered Organic Waste Product Procurement Target. (a) A jurisdiction shall annually procure a quantity of organic waste products that meets or exceeds its current annual recovered organic waste product procurement target as determined by the Department. The use of the word "target" conflicts with the "requirement to meet or exceed." In addition to products purchased directly by a jurisdiction, recovered organics waste products procurement by others through a jurisdiction's action should also be included. A jurisdiction may require contractors to procure materials as part of their services. Many procurement transactions can occur without direct involvement with the transaction.	The commonly understood definition of "target" is a "goal to be achieved" or "an objective or result toward which efforts are directed." Irrespective of the use of the word "target," it is clear from the context of the regulations that the jurisdiction is permitted to exceed the procurement target, goal or objective.
4482	Heaton, S. Rural County Representatives of California	Article 12 Section 18993.1 (d) The timing of these procurement mandates is conflicting. Provisions (a) requires jurisdictions to annually procure organics that meet to exceed current annual recovered organics but CalRecycle does not inform the jurisdiction of the procurement target beginning January 1, 2022 (d), the same day Jurisdiction should have a least one year to meet the procurement target.	CalRecycle has revised the draft regulatory text so that all the necessary details for a jurisdiction to calculate its own procurement target are publicly available. There is nothing in the regulations to prevent a jurisdiction from calculating their own target prior to CalRecycle notification and preparing to be in compliance by January 1, 2022. In fact, that is why the regulatory process began so far in advance. The regulations will be finalized in early 2020, allowing jurisdictions approximately two years to plan and implement programs to be in compliance by January 1, 2022.

Comment Number	Received From	Question/Comment	Response(s)
4483	Heaton, S. Rural County Representatives of California	Article 12 (e) This language limits the options for procurement credit. Many jurisdictions do not have formal “contracts” with providers but use “agreements” or other provisions for jurisdiction services. This section should be expanded with a (3) to allow for other jurisdiction actions. In addition, there is no definition of “direct service provider”.	CalRecycle has revised the regulatory text in Section 18982(17) to amend the definition of “direct service provider” to clarify that a contract or other written agreement, for example a Memorandum of Understanding (MOU), could be used to prove the direct service provider relationship.
4484	Heaton, S. Rural County Representatives of California	Article 12 (f) This language limits the eligible materials to only compost and renewable transportation fuel. Given the lack of compost facilities and the expense and time to obtain vehicles that use renewable fuel, procurement of mulch, wood chips, and other products should be allowed. Renewable fuels might also applicable for energy production and not just fuel.	CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
4485	Heaton, S. Rural County Representatives of California	Article 13 18994.1 Initial Jurisdiction Compliance Report. Each jurisdiction shall report to the Department by February1, 2022 on its implementation and compliance with the requirements of this chapter including a copy of ordinances adopted to implement the requirements and the date the jurisdiction will ensure that all containers used by generators will be in compliance with the container color requirements. Shouldn’t ordinances also include or “other enforceable mechanisms”? Also why require a jurisdiction state when the container color requirements will be in compliance? They have until 2032.	CalRecycle has revised section 18994.1 in response to this comment. Section 18994.1 was revised to include language that a jurisdiction shall report to the Department a copy of ordinances or other enforceable mechanisms adopted pursuant to this chapter. The requirement to report the date a jurisdiction will ensure that all containers will be in compliance with the container color requirements as specified in Section 18984.7 has been deleted. The Department understands that it may be difficult to speculate the date that all containers will be in compliance with the regulations.
4486	Heaton, S. Rural County Representatives of California	Article 13 18994.2 Jurisdiction Annual Reporting. (d)(5) Relative to implementation of waivers: the number of generators “waived” by the department from the requirements of organic waste collection service. Does this exclude the rural exemptions?”	Comment noted. A change to the regulatory text is not necessary. Rural exemptions are not excluded from reporting the number of generators waived.
4487	Heaton, S. Rural County Representatives of California	Article 13 Jurisdictions are already required to report Integrated Waste Management Plan compliance in the Electronic Annual Report (EAR) due August 1st every year. All Jurisdiction reporting under the SB1383 should be included in EAR and not create an entirely new reporting requirement. In addition, the SB 1383 organics reporting time period should be adjusted to be consistent with the EAR calendar year reporting. Otherwise, jurisdictions are subject to significantly increased reporting with overlapping information for different time periods. This could also lead to conflicting reporting of information. Implementation of this proposal will be difficult enough without significantly increasing jurisdictions reporting requirements.	Comment noted. CalRecycle may consider streamlined jurisdiction reporting opportunities, such as modifying the Electronic Annual Report process.
4488	Heaton, S. Rural County Representatives of California	Article 14. Enforcement Requirements 18995.4 Enforcement by a Jurisdiction. (a) If an entity has been found in violation, the jurisdiction shall take enforcement action. What is the definition of entity?	CalRecycle did not include a definition for “entity” because it is using the term in the regulations consistent with the commonly understood dictionary definition of the word as opposed to a specialized term requiring regulatory clarification. The term “entity” is used thousands of times in various state statutes without definition for the same reason.

Comment Number	Received From	Question/Comment	Response(s)
			<p>Regarding commenter’s concern regarding use of the phrase “...and other entities,” this phrase appears almost exclusively in the “General Provisions” portion of the regulations at Sections 18981.1 and 18981.2 and is intended to be a catch-all term for entities that are subject to explicit regulation under this rulemaking (eg. food recovery services and organizations) that are not otherwise listed in those sections. In Section 18981.2, the phrase is further limited to other entities “subject to the jurisdiction’s authority...” This is intended to exclude certain entities like state agencies, federal facilities, special agencies and other such entities that are not subject to a local jurisdiction’s regulatory authority. See the definition of “non-local entity” in Section 18982(a)(42).</p> <p>CalRecycle agrees that any inspections are subject to Fourth Amendment requirements. CalRecycle agrees that a jurisdiction is not obligated to undertake inspections or other enforcement action against entities outside of their regulatory jurisdiction. Inspection and enforcement against a “non-local entity,” as appropriate, would be undertaken by CalRecycle</p>
4489	Heaton, S. Rural County Representatives of California	<p>Article 15 18996.2 Department Enforcement Action Over Jurisdictions. (a) If the Department finds that a jurisdiction is violating any provisions, the Department may take the following actions:</p> <p>(2) The Department may extend the timeframe for a jurisdiction to comply beyond the 180 days by issuance a Corrective Action Plan (CAP) for up to 24 months if there are extenuating circumstances and the jurisdiction has made substantial effort to comply. A jurisdiction shall submit a written request for the extension at least 30 days prior to the NOV final compliance date with documentation demonstrating its substantial effort to comply. Substantial effort does not include circumstanced where a decision-making body of a jurisdiction has not taken the necessary steps to comply including failure to provide staff resources, a failure to provide sufficient funding to assure compliance, or a failure to adopt required ordinances.</p> <p>(3) The CAP shall be issued for no longer than 24 months. If there is lack of infrastructure, the process to permit new facilities is much longer than two years.</p>	<p>Comment noted . This comment is not suggesting a regulatory text change or commenting on the regulatory process followed by CalRecycle.</p>
4490	Heaton, S. Rural County Representatives of California	<p>Article 15 18996. Access for Inspection by the Department. (b) This subdivision is not intended to permit an employee or agent of the Department to enter residential property. Does “intended” mean that they can? This subdivision should clearly state that it “shall not” apply to residential property and not just “intended”. Does it include multifamily residential? It is not clear what are considered “proper credentials”. In addition, some entities have specific safety requirements that must be complied with and those requirements should be included.</p>	<p>This section, and Section 18984.10 is intended to function as guidance that CalRecycle will need access to perform its inspection duties and is intended to be subject to the Fourth Amendment to the U.S. Constitution.</p>
4491	Heaton, S. Rural County Representatives of California	<p>Article 15 18996.6 Department Inspections and Compliance Reviews of State Agencies and Facilities. If the Department finds that a state agency or facility is violating these provisions, the Department may issue a NoV requiring compliance within 90 days and may grant an additional 180-day extension if evidence is provided that additional time is needed. Why do the state agencies receive a 180-day extension and jurisdiction generators only receive a 90-day extension? And why do the local education agencies not get any extension?</p>	<p>A change to the regulatory text is not necessary. Pursuant to 18996.6, the Department has oversight and enforcement over state agencies and facilities. Enforcement actions against these entities is fundamentally different in nature from enforcement action against other regulated entities. Pursuant to section 18996.2 Department Enforcement Action Over Jurisdictions, if a jurisdiction is issued a Notice of Violation, it has 90 days to comply. If it cannot comply within that timeframe, it may request an additional 90-day extension. If the Department finds that the jurisdiction has made substantial effort to comply and there are extenuating circumstances that</p>

Comment Number	Received From	Question/Comment	Response(s)
			have prevented it from complying, it may be placed on a Corrective Action Plan (CAP) for an additional 24 months.
4492	Heaton, S. Rural County Representatives of California	Article 15 18996.6 (4) If the Department finds a state agency or state facility fails to comply with the NoV, the Department may take the following enforcement actions: list the state agency or facility on the OW Recovery Noncompliance Inventory, request that the Department of General Service (DGS) conduct an audit, notify the Governor, and notify the legislature. Why aren't the state agencies and facilities not required to do a CAP and be subject to the same penalty structure as the local jurisdictions?	A change to the regulatory text is not necessary. Under 1383, state agencies are treated as generators rather than implementation authorities and SB 1383 did not authorize the Department to issue penalties to state agencies. The Department will not be adding enforcement requirements on state agencies. Section 18996.6 states that the Department will oversee the compliance of state agencies in respect to SB 1383. Currently, state agencies are required to meet waste diversion goals like those required for cities, counties and regional agencies under AB75. State agencies and large state facilities must adopt integrated waste management plans, implement programs to reduce waste disposal and they have their waste diversion performance annually reviewed by the Department.
4493	Heaton, S. Rural County Representatives of California	Title 14 Article 6.0 17402. Definitions (7.5) "Incompatible material" or "incompatibles," – This definition seems incomplete. What about inert material that are natural like boulders? Why is it limited to "human-made"?	A change to the regulatory text is not necessary. The intent of this section is to identify items that would be considered a contaminant. The term "human-made" is used to identify material that are potentially a threat to public and safety and the environment (e.g. glass, shards vs glass bottles). The naturally occurring items, such as bolder, do not possess that same level of threat to the public health and safety and the environment as the "human-made" material.
4494	Heaton, S. Rural County Representatives of California	Title 14 Article 6.0 (11.5) "Mixed Waste Organic Collection Stream" – Why the reference to Section 18984.1 since three-cart collection already has a separate green organics container?	CalRecycle has revised this section in response to comments. The change deleted the different containers colors listed to "containers." The change is necessary to make Section 17402 consistent with the requirements of Sections 18984.1, 18984.2, and 18984.3.
4495	Heaton, S. Rural County Representatives of California	Title 14 Article 6.0 (23.5) "Remnant organic material" means the organic material that is collected in a gray container that is part of the gray container collection stream." As used in the loadchecking section this is an impossible threshold. One thimble full of organics would qualify as a remnant. The definition should be changed to a quantifiable threshold similar to one established for recycling centers and other standards.	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17049.5.7. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
4496	Heaton, S. Rural County Representatives of California	Title 14 Article 6.0 17402.5. Definitions and Related Provisions Regarding Activities That Are Not Subject to the Transfer/Processing Regulatory Requirements. (c)(7) "Rendering activities" – Rendering activities usually have some pre-sorting activities to remove incidental, unacceptable items from the feedstock prior to the rendering process. This definition requires all collected feedstock to undergo manufacturing or rendering. This definition should be adjusted.	A change to the regulatory text is not necessary. This section is consistent with the definition used in the in-vessel digestions regulations. The intent of the definition is to clarify the type of activity that is not subject to the requirements of the transfer/processing operation or facility. It further clarifies that the handling of any solid waste that bypasses the manufacturing or rendering process is subject to the transfer/processing regulatory requirements and may require a solid waste facilities permit.
4498	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 17409.5.1. Organic Waste Recovery Efficiency (a) "This section applies to transfer and processing facilities and operations that conduct processing activities." This implies that the requirements in 17409.5.1 apply to all transfer and processing facilities that conduct processing regardless of managing organics.	Comment noted. Yes, your understanding is correct. In order to achieve these targets, the measurement protocol is necessary to determine the level of efficiency of a facility or operation to separate organic material for recycling.

Comment Number	Received From	Question/Comment	Response(s)
4499	Heaton, S. Rural County Representatives of California	<p>Title 14 Article 6.2 17409.5.2. Measuring Organic Waste Recovered from Mixed Waste Organic Collection Stream</p> <p>(a)The requirement for daily sampling is excessive, costly, and overly burdensome to operations and facilities. Especially to smaller sites. This entire requirement should be restructured to more a reasonable schedule. This section should allow for volume measurements and not weight for operations or facilities that do not have scales. Some rural sites do not even have access to power for scales. Under the pending AB 901 Recycling and Disposal Reporting regulations, rural areas are exempt from having a scale for weighing loads. This exemption should continue under these proposed regulations.</p> <p>Measuring the amount of organics on that operating day would require the measurement to take place at the end of the operating day. Given the comprehensive requirements for this sampling requirement, that sampling effort and recording will take considerable time, especially for larger sites. The time to conduct this sampling and recording could easily result in staff exceeding their scheduled operating hours. After the sampling is complete, the organics may need to be securely stored will take additional time at the end of the operating day.</p>	<p>CalRecycle has revised Sections 17409.5.9(b) in response to comments. The change will allow the EA, with concurrence by the Department, to approve an alternative method described under Section 1855.1.9(g) if scales are not accessible. This change will align with the adopted AB 901 regulations (RDRS).</p> <p>Regarding the methodology: CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. This is needed to determine the efficiency of the facility in order to make required determinations in Article 3. The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite sample be a random and representative of a typical operating day for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data. In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>
4500	Heaton, S. Rural County Representatives of California	<p>Title 14 Article 6.2 17409.5.2 (b)(2) This section requires determining the weight of each sample of each organic type. There is no clear definition of organic waste type. If the requirement is to track each material listed in the Section 18982 (a)(46), the effort needed to conduct this sampling increases significantly. How will a sampler determine mixed organics such as drywall nailed to lumber, or carpet stapled to wood strips? Will disassembly be required? The requirement for measuring organic waste type is not required in Sections 17409.5.3, 17409.5.4, or 17409.5.5 There is also no ability to apply for a lesser frequency of sampling which would be especially helpful to small tonnage sites</p>	<p>Comment noted. The organic waste types required to be measured would include each material type listed in Section 18982 (a)(46). The purpose of these regulations is not to describe the means and methods for which to remove all contamination effectively in a source separated or mixed waste collection system, but to measure how efficient the facility is at recovering organic waste from these waste streams. Section 17409.5.4 requires a sample of each organic waste type separated after recovery or further process be taken for the measurement, please see Section 17409.5.4 ((b)(1). Whereas, Sections 17409.5.3 and 17409.5.5 are intended to measure the organic waste in the material send to disposal not waste type. In addition, the sections allow the operator to propose an alternative sampling protocol for approval by the EA and concurrence from CalRecycle.</p>
4501	Heaton, S. Rural County Representatives of California	<p>Title 14 Article 6.2 17409.5.3. Measuring Organic Waste in Residuals Removed from Mixed Waste Organic Collection Stream The comments above under Section 17409.5.2 also apply here. The following text in italics was copied from Section 17409.5.2 by this CalRecycle processor - This section requires determining the weight of each sample of each organic type. There is no clear definition of organic waste type. If the requirement is to track each material listed in the Section 18982 (a)(46), the effort needed to conduct this sampling increases significantly. How will a sampler determine mixed organics such as drywall nailed to lumber, or carpet stapled to wood strips? Will disassembly be required? The requirement for measuring organic waste type is not required in Sections 17409.5.3, 17409.5.4, or</p>	<p>Comment noted. The organic waste types required to be measured would include each material type listed in Section 18982 (a)(46). The purpose of these regulations is not to describe the means and methods for which to remove all contamination effectively in a source separated or mixed waste collection system, but to measure how efficient the facility is at recovering organic waste from these waste streams. Comment Number	Received From	Question/Comment	Response(s)
		17409.5.5 There is also no ability to apply for a lesser frequency of sampling which would be especially helpful to small tonnage sites	
4502	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 17409.5.4. Measuring Organic Waste Recovered from Source Separated Organic Waste Collection Stream The comments above under Section 17409.5.2 also apply here. The following text in italics was copied from Section 17409.5.2 by this CalRecycle processor -This section requires determining the weight of each sample of each organic type. There is no clear definition of organic waste type. If the requirement is to track each material listed in the Section 18982 (a)(46), the effort needed to conduct this sampling increases significantly. How will a sampler determine mixed organics such as drywall nailed to lumber, or carpet stapled to wood strips? Will disassembly be required? The requirement for measuring organic waste type is not required in Sections 17409.5.3, 17409.5.4, or 17409.5.5 There is also no ability to apply for a lesser frequency of sampling which would be especially helpful to small tonnage sites	Comment noted. The organic waste types required to be measured would include each material type listed in Section 18982 (a)(46). The purpose of these regulations is not to describe the means and methods for which to remove all contamination effectively in a source separated or mixed waste collection system, but to measure how efficient the facility is at recovering organic waste from these waste streams. Section 17409.5.4 requires a sample of each organic waste type separated after recovery or further process be taken for the measurement, please see Section 17409.5.4 ((b)(1). Whereas, Sections 17409.5.3 and 17409.5.5 are intended to measure the organic waste in the material sent to disposal not waste type. In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.
4504	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 17409.5.6. Source Separated Organic Waste Handling (b) The requirement for having clearly identifiable areas for managing organics described in the Facility Plan or Transfer/Processing Report will require every operation or facility in the state to undergo a permit change. This is an expensive and time-consuming process. Organics activities can occur within already identified areas without requiring a permit change simply to add an area on a map. Many operations and facilities already have ability to handle organics without undergoing a permit change.	Comment noted. Depending on the type of operational change and the type of tiered permit, a specific permit action might be warranted (RFI Amendment, Permit Revision, etc.). If the permit allows for this type of activity, an RFI Amendment may only be required. If the permit prohibits this type of activity, then some type of permit action may be required. Operators should consult with the Local Enforcement Agency and CalRecycle's Permitting and Assistance Branch's Point of Contact to determine what type of permit action is required for this of change.
4505	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 7409.5.7. Loadchecking – Contamination in Source Separated Organic Waste This section and other proposed loadchecking sections are discussed later.	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
4506	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 17409.5.8. Incompatible Materials Limit in Recovered Organic Waste (a) this language implies that recovered organic waste to be “sent” to another facility each operating day. This implication would increase management and transportation costs for handling organics significantly.	A change to the regulatory text is not necessary. The requirement is to sample the waste that is intended to be sent out that day. Once sampled the waste can be stored until the next day but cannot be comingled with any waste that has not yet been sampled.
4507	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 17409.5.9. Alternatives to Measurement Protocols. The EA approval for alternatives should also apply to Section 17409.5.6.	A change to the regulatory text is not necessary. This section has no measurement protocols. Therefore, there would be no alternative to the measurement protocols for the EA to approve.

Comment Number	Received From	Question/Comment	Response(s)
4508	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 17409.5.10. Solid Waste Handling at Consolidation Sites. (c) Consolidated sites are small. Requiring source separated organics to be kept separate from other solid waste streams is not feasible. Some consolidated sites do not have an attendant and thus no one to monitor the public's usage. The small size and scope of these consolidation sites do not lend them to be a location to feasibly maintain the source separation.	A change to the regulatory text is not necessary. The definition is necessary to distinguish sites that conduct processing from those that do not. Processing is defined in existing text and not part of this rulemaking process. The intent is not to add a new type of operation or facility but to clarify which existing type of facilities and operations are not subject to facilities measurement or record keeping requirements.
4509	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 17409.5.10. Solid Waste Handling at Consolidation Sites. In addition, direct transfer facilities are prohibited by their operating standards from sorting materials. In order to comply with this requirement, an additional direct transfer vehicle would be needed. Subsection (c) should be removed.	A change to the regulatory text is not necessary. The definition is necessary to distinguish sites that conduct processing from those that do not. Processing is defined in existing text and not part of this rulemaking process. The intent is not to add a new type of operation or facility but to clarify which existing type of facilities and operations are not subject to facilities measurement or record keeping requirements.
4510	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 Section 18984.3.(d) allows for collection of bagged organics in the single-container service to be delivered to the consolidation site. However, Section 17409.5.10 requires that consolidation sites "shall keep source separated organic waste streams separate from other solid waste streams." The allowance to use the bagged organics service should be allowed to continue at the consolidation site and beyond until the mixed load reaches a facility that can remove and process the bagged wastes.	A change to the regulatory text is not necessary. There is no restriction for the type of containers that are sent to consolidation sites only that it is there for storage and that no processing will be conducted at these sites. Sections 18984.1, 18984.2, and 18984.3 allow for containers with bagged organics to be sent to a consolidation site to be stored without processing. The bagged organic waste in the containers will remain in the containers until transported to a facility that will comply with the organic recovery efficiency requirements.
4511	Heaton, S. Rural County Representatives of California	Title 14 Article 6.2 17409.5.11. Remnant Organic Material in the Gray Container Collection Stream This section and other proposed loadchecking sections are discussed later.	Comment noted. Comment is not commenting on the regulatory language.
4512	Heaton, S. Rural County Representatives of California	Title 14 Article 6.3 17414.2. Recordkeeping and Reporting Requirements for Mixed Waste Organic Waste and Source Separated Organic Waste. As indicated earlier from the pending AB 901 Recycling and Disposal Reporting regulations, rural sites are not required to have scales for weighing anything. Maintaining records with weights is in conflict and should be revised to reflect the pending requirements in Section 18809.2 and 18810.2.	CalRecycle has revised Sections 17409.5.9 and 17414.2 in response to comments. Section 17409.5.9 was revised to allow the EA, with concurrence by the Department, to approve an alternative method described under Section 1855.1.9(g) if scales are not accessible. Section 17414.2 was revised to require records be accessible for five years. These changes will align with the adopted AB 901 regulations (RDRS).
4513	Heaton, S. Rural County Representatives of California	Title 14 Article 6.3 Loadchecking requirements There are five activities that require loadchecking. Most requirements between types are identically or very consistent. Some comments that apply to all loadchecking requirements are discussed here and apply to: <ul style="list-style-type: none"> <li>• Article 6.2 Operating Standards., Section 17409.5.7. Loadchecking – Contamination in Source Separated Organic Waste</li> <li>• Section 17409.5.11. Remnant Organic Material in the Gray Container Collection Stream</li> <li>• Article 5.0. Composting Operation and Facility Siting and Design Standards</li> <li>• Article 2.0. Siting and Design, Section 17896.25.1. Loadchecking – Contamination in Source Separated Organic Waste</li> <li>• Article 4. CalRecycle—Controls, §20901. CalRecycle—Loadchecking Contamination in Source Separated Organic Waste</li> </ul>	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.

Comment Number	Received From	Question/Comment	Response(s)
4514	Heaton, S. Rural County Representatives of California	<p>Title 14 Article 6.3 General comments applicable to all types are:</p> <ul style="list-style-type: none"> <li>• (a)(1) This proposed language requires one loadcheck for every 500 tons but two loadchecks if less than 500 tons are received. This is confusing since a facility with 499 tons or less is required to conduct two loadchecks but if 500 to 999 tons are received only one loadcheck is required.</li> </ul>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
4515	Heaton, S. Rural County Representatives of California	<p>Title 14 Article 6.3 The allowance for an EA to approve an alternative frequency for loadchecking includes a requirement for the EA to determine that the incoming material from the source separated organic waste collection stream does not contain any remnant organic material. "Any remnant organic material" is an impossible threshold. One thimble full of organics would disqualify an alternative. The standard should be changed throughout all loadchecking requirements to a quantifiable number.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
4516	Heaton, S. Rural County Representatives of California	<p>Title 14 Article 6.3 Similarly, attempting to identify the amount of visible remnants organic materials lacks specific criteria. This standard should also be changed to a quantifiable number.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
4517	Heaton, S. Rural County Representatives of California	<p>Title 14 Article 6.3 There are several inconsistent loadcheck requirements between the types and are included in the table below: The referenced table could not be included in this comment matrix. The reader must refer to the original letter to see this table.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. 			solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
4518	Heaton, S. Rural County Representatives of California	Title 14 Article 6.3 In-vessel, landfills and disposal sites only need one random load check per each source sector; whereas, the others are daily. It is not clear why these are different.	CalRecycle has deleted the loadchecking requirements at In-Vessel digestion operations and facilities and landfills/disposal in response to comments.
4519	Heaton, S. Rural County Representatives of California	Title 14 Article 6.3 Landfills and disposal site are required to keep records of loads with contamination that exceeds 10% whereas other types are required to keep records of any visual contamination. The 10% threshold should be used of all loadcheck records so that every gum wrapper is not reported.	CalRecycle has deleted the loadchecking requirements at landfills in response to comments.
4520	Heaton, S. Rural County Representatives of California	Title 14 Article 6.3 • Section 17409.54.11 requires the loadcheck for visible remnant organic matter. It is not clear why Section 17409.5.11 loadchecks are not required to be conducted in the presence of the EA when requested.	CalRecycle has deleted the loadchecking requirement Section 17409.5.11 in response to comments.
4521	Heaton, S. Rural County Representatives of California	Title 14 Article 6.3 17409.5.11. Remnant Organic Material in the Gray Container Collection Stream This section does not require “The operator shall conduct a loadcheck in the presence of the EA when requested” as required of the other types of activities requiring loadchecks.	CalRecycle has deleted the loadchecking requirement Section 17409.5.11 in response to comments.
4522	Heaton, S. Rural County Representatives of California	Article 5 Article 5.0. Composting Operation and Facility Siting and Design Standards Section 17867. General Operating Standards (a)(4)(E)(2) The allowance for an EA to approve an alternative frequency for loadchecking includes a requirement for the EA to determine that the incoming material from the source separated organic waste collection stream does not contain any remnant organic material. “Any remnant organic material” is an impossible threshold. One thimble full of organics would disqualify an alternative. The standard should be changed to less than one percent (used in existing composting requirements) or a more reasonable number.	CalRecycle has deleted the loadchecking requirements in Section 17867 in response to comments.
4523	Heaton, S. Rural County Representatives of California	Subchapter 4. Criteria for Landfills and Disposal Sites Article 4. CalRecycle—Controls 20901. CalRecycle—Loadchecking Contamination in Source Separated Organic Waste (a)(3) This proposed language requires “At least one loadcheck per quarter from each service area”. There is no definition of service area. It is not clear if this additional loadcheck can be included in other loadchecks for the same location. Depending upon the definition of service area, this could require one to a dozen or more loadchecks each quarter. There are already sufficient loadchecks required so this additional loadcheck is not necessary and should be removed.	CalRecycle has deleted the loadchecking requirements, Section 20901 in response to comments.
4524	Heaton, S. Rural County Representatives of California	Chapter 3. Article 2. 20700.5. CalRecycle—Long-Term Intermediate Cover (a) CalRecycle has provided no basis for the requirement to use at least 36 inches of compacted earthen material for long-term intermediate cover. Cover material provides protection from gas migration through the cover, controls vectors, and prevents fires. Simply doubling the current standard is without sufficient merit and will result in a significant additional expense to landfills. In order to achieve the	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments.

Comment Number	Received From	Question/Comment	Response(s)
		compacted requirement, significantly more soil will be needed than just applying 36 inches to allow for compaction. Using a more is better approach is not scientific. That expense is better spent addressing other requirements in the proposed regulations.	
4525	Heaton, S. Rural County Representatives of California	Chapter 3. Article 2. Additionally, methane emissions are already regulated at landfills including monitoring requirements. In addition, Health and Safety Code 39730.6 states that “the state board shall not adopt, prior to January 1, 2025, requirements to control methane emissions associated with the disposal of organic waste in landfills other than through landfill methane emissions control regulations.” Doubling the amount of cover diverts funds from program implementation with no added benefit. This provision should revert to the current 18 inches.	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments.
4526	Heaton, S. Rural County Representatives of California	Chapter 3. Article 3. 20750.1. CalRecycle– Organic Waste Handling. Similar to concerns expressed in comments on Section 17409.5.6., the requirement for having clearly identifiable areas for managing organics will require every facility in the state to undergo a permit change. This is an expensive and time-consuming process. Organics activities can occur within already identified areas without requiring a permit change simplify to add an area on a map. Many operations and facilities already have ability to handle organics without undergoing a permit change.	Comment noted. Depending on the type of operational change and the type of tiered permit, a specific permit action might be warranted (RFI Amendment, Permit Revision, etc.). If the permit allows for this type of activity, an RFI Amendment may only be required. If the permit prohibits this type of activity, then some type of permit action may be required. Operators should consult with the Local Enforcement Agency and Department’s Permitting and Assistance Branch’s Point of Contact to determine what type of permit action is required for this of change.
4527	Heaton, S. Rural County Representatives of California	21570. CalRecycle—Filing Requirements (f)(13) CalRecycle provided no clarity on why there would be a public meeting prior to submittal of a permit application package when a similar requirement for an informational meeting already exists after submittal. Currently, operators are required to submit a permit application 180 days prior to getting approval for the change. Imposing an additional 180 days before the submittal would result in starting the process for new or expanded solid waste facility one year prior to the change. Given that othe requirements in the proposed regulations will mandate changes to permits and some implementation deadlines happen in 2022, there will be little time to start permit changes in time. Furthermore, to the extent that additional timelines and meeting requirements extend the permitting process, this could also push back the opening date of a proposed facility and similarly delay achievement of the state’s organic waste recycling targets.	CalRecycle has revised this section in response to comments. The section was modified to clarify that the operators of a new or expanded facility hold a public meeting with any affected disadvantage communities 180 days of submitting a permit application package. This change in this section is necessary to clarify that the 180 days is not an extension to the already established time in regulations for a permit application package but part of it. The purpose of this section is to ensure that if there are any affected disadvantage communities, they are provided an opportunity to attend the meeting and comment on the project.
4528	Heaton, S. Rural County Representatives of California	Subchapter 3. Article 2.The requirements under existing Section 21660.2 already impose an informal meeting for New and Revised permits after submittal. Changes to this section also require identifying disadvantaged communities, the proposed requirement in 21570 (f)(13) should be removed and included in section 21660.2. In addition, Section 21570 (f)(13) requires including “any affected group” in the public meeting, That term has no definition and has no limit as to how far from the facility the affected group is located. The term “affected group” should be removed.	<p>CalRecycle has revised this section in response to comments. The section was revised to delete the term “groups” from “affected groups” and change the term “disadvantage communities” to “affected disadvantage communities” and define the term “affected disadvantage communities.” This was necessary to better clarify the term to let operators know who would be represented in this group so that they are notified and are provided an adequate opportunity to attend and provide comments on the project. The section was also renumbered to Section 21570(g).</p> <p>Section 21660.2 is an Enforcement Agency’s (EA) requirement. EA’s are required to hold informational meetings for new and revised Solid Waste Facility Permits. This is different than the operator’s requirements for Section 21570(f)(13), which has been renumbered to Subdivision (g).</p>

Comment Number	Received From	Question/Comment	Response(s)
4529	Heaton, S. Rural County Representatives of California	<p>Article 3.2 21695. CalRecycle—Organic Disposal Reduction Status Impact Report (c) a number of the listed factors are unaffected by the reduction of organics from disposal and should be eliminated from the reporting requirement, including:</p> <ul style="list-style-type: none"> <li>• (4) volumetric capacity – the capacity of the landfill will not change. It will fill up slower but a box is still a box</li> <li>• (5) Waste handling methods will likely have minimal change</li> <li>• (8) closure cell design will not change</li> <li>• (9) final grading plans will not change</li> <li>• (12) cost estimates for closure will not change, postclosure may have minimal impacts from less organics</li> <li>• (13) financial assurance mechanisms will not change. The amount required may change but the actual mechanism will not change. If more funds are required, ore funds may be needed.</li> </ul>	<p>CalRecycle has revised Section 21695 in response to comments. The changes to the regulatory text include the requirement that operators identify those areas in the landfill that would remain with intermediate cover and to extend that date for submittal of the Status Impact Report (SIR) from 180 days to one year (365 days) from the effective date of these regulations. The SIR is a site specific, one-time submittal that is prepared by the operator after they have reviewed their landfill operations to determine any potential impacts from the reduction of organic disposal (waste flow) to their landfill. The one-year timeframe established in this regulation for the submittal of the SIR is necessary to assist the operator in determining and assessing in the timing of those impacts to properly implement any changes or modifications in a timely manner. In addition, this section provides a list of items to be considered by the operator in order to assist them complete the SIR. This information in items listed is needed in order to adequately evaluate the potential impacts to the landfill resulting from the reduction of organic disposal at landfills. If there will be no changes to a particular item, then a statement to that effect would be adequate.</p>
4530	Heaton, S. Rural County Representatives of California	<p>This comment number was used for "Attachment B Bear Waiver Justification" in its entirety. The reader must refer to the original letter to see Attachment B.</p>	<p>CalRecycle added Section 18984.12(d) in response to this comment. The changes will allow jurisdictions located at or above 4,500 feet apply for a waiver from the food and food soiled paper organic waste collection requirements. Jurisdictions would also be waived from providing containers to their generators. This waiver would apply for residential and small commercial generators that are not regulated by AB 1826. As the commenter noted, jurisdictions 4,500 feet and above face specific waste collection challenges as high-elevation, forested areas that include bear and other wild animal habitat. Food waste collection can attract vectors, including bears, to populated areas creating collection and public safety issues. This change is necessary to prevent a public safety issue that food waste separation and recycling can pose. Generators in high-elevation jurisdictions will be able to continue to use customer provided containers that fit in their locked bear boxes. Jurisdictions that qualify for this waiver, however, will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. This comment argued that the limited space of locked bear boxes, which this commenter’s jurisdiction uses to secure garbage bins, creates a capacity issue. Although CalRecycle recognizes the threat that vectors, like bears, pose from the collection of food waste, nothing prevents the jurisdiction from providing smaller containers that could fit inside bear boxes.</p>
4531	Heaton, S. Rural County Representatives of California	<p>As indicated in the ISOR, many of the proposed regulatory provisions proceed from the apparent assumption that SB 1383 granted CalRecycle potentially unlimited authority to control any conceivable aspect of human behavior that it deems relevant to "achiev[ing] the organic waste reduction goals" set forth in the statute. No grant of regulatory authority is - or constitutionally could be - that overbroad. (See Clean Air Constituency v. State Air Resources Bd. (1974) 11 Cal.3d 801.) Rather, CalRecycle's authorizing statute (PRC 46252.5) must be read in light of SB 1383 as a whole and its legislative history, which clearly indicate - and delimit - the types of regulations the Legislature intended to authorize and the roles to be played by state</p>	<p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, "CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code." That section also provides that CalRecycle may "include different levels of requirements for local jurisdictions..." Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, "The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code." SB 1383 is included within Division 30.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>and local agencies. Proposed regulatory provisions clearly beyond the Legislature's contemplation are consequently legally suspect, particularly where they purport to substantially alter the balance of authority between state and local governments carefully established by the Legislature under the Integrated Waste Management Act or where they ignore the split between state and local responsibilities outlined in SB 1383.</p>	<p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that “[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. ‘[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . .’ The [administrative agency] is authorized to “fill up the details” of the statutory scheme.”</p> <p>Consistent with CalRecycle’s broad rulemaking authority, the proposed procurement requirements are designed to help achieve the organic waste diversion goals in SB 1383 by supporting markets for recovered organic waste products. The regulations have a direct nexus to achieving those organic waste diversion goals by preventing initially diverted organic waste from being disposed due to lack of end uses.</p> <p>Health and Safety Code Section 39730.8, also in SB 1383, refers to CalRecycle considering recommendations in the California Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for the use of biomethane and biogas. The IEPR recommended that “state agencies should consider and, as appropriate, adopt policies and incentives to significantly increase the sustainable production and use of renewable gas.” As such, provisions for the procurement of renewable transportation fuel generated from recovered organic waste.</p> <p>The Air Resources Board’s Short Lived Climate Pollutant Strategy states, “CalRecycle will continue to work towards strengthening state procurement requirements relative to use of recycled organic products.”</p> <p>The inclusion of compost as an eligible recovered organic waste procurement product aligns with policies and mandates for methane reduction as described in the Air Resources Board’s SLCP Strategy. The Economic Analysis conducted for the SLCP Strategy notes several scenarios that can achieve the needed reductions in short-lived climate pollutants from the waste sector, and every scenario modeled includes new compost facilities. The purpose of a compost procurement requirement is to establish markets for compost, which is a product generated by organics recycling facilities which the SLCP Strategy identified as in need of market development.</p> <p>Regarding paper procurement requirements, CalRecycle’s 2014 Waste Characterization Study found that paper accounts for 17.4 percent of the disposed waste stream. Requirements on jurisdictions to meet the recycled content paper procurement requirements will help grow markets for recycled content paper. Given the prevalence of paper in the disposal stream, increased procurement of recycled paper is needed to grow the market for recycled paper in order to achieve the organic waste reduction goals. This is necessary to help achieve the organic waste diversion goals in SB 1383 by ensuring an end use for diverted organic waste.</p> <p>Regarding funding, SB 1383 (Public Resources Code Section 42652.5(b)) provides that, “A local jurisdiction may charge and collect fees to recover the local jurisdiction’s costs incurred in complying with the regulations adopted pursuant to this section.”</p> <p>PRC Section 42652.5 provides a broad grant of rulemaking authority to CalRecycle that includes the authority to institute “requirements for local jurisdictions” and “penalties to be imposed by CalRecycle for noncompliance.” The proposed regulations do not strip local jurisdictions of discretion in enforcing purely local ordinances. The regulations instead are requiring local</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>jurisdictions to enforce the ordinances that they are required to adopt, under 14 CCR Section 18981.2, pursuant to a statewide, rather than purely local, regulatory program subject to Department oversight. The Legislature set ambitious organic waste diversion mandates on a short timeline and robust enforcement of regulatory requirements is essential to meeting those mandates.</p> <p>Public Resources Code Section 42652.5(a)(1) explicitly contemplates CalRecycle requiring “local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.”</p> <p>Consistent with rules of statutory construction, Public Resources Code Section 42652.5(a)(1) must be read as a whole and interpreted in a way that renders the text as compatible, not contradictory. This section states that the regulations “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.” The first part of this section explicitly contemplates regulatory requirements on entities besides generators as long as they are relevant to meeting the mandates of SB 1383. Thus, the second part of the section regarding penalties must be read harmoniously and as a whole with the first part to permit penalties on the other entities that may be subject to regulatory requirements. Without enforcement penalties on the other entities, the regulatory requirements are not actually requirements but mere suggestions. Bolstering this interpretation is the Assembly Floor Analysis for SB 1383 (August 31, 2016) which stated that the bill, “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and impose penalties for noncompliance.”</p> <p>Regarding the language “authorizing” penalties by local jurisdictions, the clear intent of the legislation was that jurisdictions must penalize non-compliance with SB 1383 requirements. First, the language of Assembly Floor Analysis described above makes this intent clear – CalRecycle may require jurisdictions to impose requirements “and impose penalties for noncompliance.” Second, the Legislature designed the bill to achieve the organic waste reduction goals in part by requiring local jurisdictions to impose requirements. These requirements must be enforceable through penalties or: they will not actually be requirements but suggestions; and (b) there will be no way to ensure compliance by regulated entities and thus achieve the goals of the statute. Given these considerations, CalRecycle has authorized local jurisdictions to impose penalties as long as they meet the conditions described in the regulations regarding categories of violations, requirements to enforce against those violations, and minimum penalty levels.</p> <p>Regarding Section 18995.1(a)(1)(B)(5), CalRecycle notes that the language of this section was amended to simply specify that jurisdictions enforce according the enforcement timetables and compliance extensions in Section 18995.4 and the administrative civil penalty provisions in 18997.2.</p> <p>The initial language in Section 18997.2 regarding administrative civil penalties imposed by local jurisdictions was revised to be consistent with Government Code Sections 25132, 36900, and 53069.4 in response to comments.</p>

Comment Number	Received From	Question/Comment	Response(s)
4532	Heaton, S. Rural County Representatives of California	Moreover, the proposed regulations ignore numerous provisions of law affirming local government authority or limiting that of CalRecycle in various areas. While the ISOR selectively cites provisions of the Integrated Waste Management Act that it contends support certain regulations, it overlooks others granting decision-making authority to local governments, rather than CalRecycle (e.g., PRC 40051(b); 40059(a)(1), 41851, etc.) - and pays virtually no attention to limitations contained in other statutes or constitutional provisions	<p>Regarding Public Resources Code Section 40051(b), this section is irrelevant to local decision-making authority and is instead a directive to both CalRecycle and local agencies to maximize source reduction, recycling and composting options to reduce solid waste disposal. Regarding Public Resources Code Section 41851, this section is specific to the existing authority of counties and cities regarding land use decisions (eg. zoning, use permits). Nothing in these proposed regulations infringes on local land use authority per the specific directive on this subject in proposed Section 18990.1(c)(3).</p> <p>Regarding Public Resources Code Section 40059(a)(1),</p> <p>Regarding Public Resources Code Section 40059, there are two phrases that must be taken into account in its application to SB 1383.</p> <p>First, Public Resources Code Section 40059 applies to aspects of solid waste handling “which are of local concern.” The organic waste diversion mandates in SB 1383 are of statewide application and statewide concern. As described in other responses to comments, CalRecycle was granted broad statutory authority by the Legislature to create rules designed to implement these statewide mandates and ensure the statutory organic waste diversion requirements are met. To the extent there are provisions in the rulemaking that touch on aspects of local solid waste handling, these are regarding matters of statewide concern that have been determined by CalRecycle to be necessary to achieve the goals of SB 1383.</p> <p>Second, Public Resources Code Section 40059 contains the introductory phrase, “Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine...aspects of solid waste handling which are of local concern...” This phrase contemplates that other laws exist that may affect local solid waste handling and that the mere existence of those laws does not automatically preempt local governments from regulating the enumerated subject areas. It was designed to make clear that the state was not preempting the entire field of solid waste handling and that local jurisdictions were still allowed to regulate in certain areas.</p> <p>As such, Public Resources Code 40059 is not a limitation on CalRecycle from regulating aspects of solid waste handling to the extent they are of statewide concern.</p>
4533	Heaton, S. Rural County Representatives of California	Certain specific aspects of this flawed approach are discussed in greater detail later; however, the impacts of CalRecycle's misinterpretation pervasively affect many portions of the regulatory process and expose these regulations as a whole to legal challenge. CalRecycle is urged to reexamine the legal basis for the proposed regulations carefully - as the regulations may be unenforceable and thus ineffective in their current form.	<p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, “CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code.” That section also provides that CalRecycle may “include different levels of requirements for local jurisdictions...”</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, “The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code.” SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that “[a]n administrative agency is not limited to the exact provisions of a statute in</p>

4534	Heaton, S. Rural County Representatives of California	<p>Local Procurement Mandates are Not Authorized by SB 1383 and are Inconsistent with Other Statutes. Local procurement mandates are not authorized by SB 1383. CalRecycle’s authorizing statute (Public Resources Code (PRC) 42652.5) clearly contemplates regulation of organics generators and other relevant entities, not consumers. SB 1383 also prohibits establishment of specific limits and targets for individual jurisdictions. While the prohibition is framed in terms of disposal targets, that is because procurement targets were not contemplated.</p>	<p>The procurement requirements are within CalRecycle's rulemaking authority. SB 1383 provides a broad grant of regulatory authority to the Department in Public Resources Code Section 42652.5, “The department, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code.” That section also provides that the Department may “include different levels of requirements for local jurisdictions...”</p> <p>Furthermore, the Department also maintains broad, general rulemaking authority in Public Resources Code Section 40502, “The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code.” SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where the Department successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that “[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. ‘[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . . .’ The [administrative agency] is authorized to “fill up the details” of the statutory scheme.”</p> <p>Consistent with CalRecycle’s broad rulemaking authority, the proposed procurement requirements are designed to help achieve the organic waste diversion goals in SB 1383 by supporting markets for recovered organic waste products. The regulations have a direct nexus to achieving those organic waste diversion goals by preventing initially diverted organic waste from being disposed due to lack of end uses.</p> <p>Health and Safety Code Section 39730.8, also in SB 1383, refers to CalRecycle considering recommendations in the California Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for the use of biomethane and biogas. The IEPR recommended that “state agencies should consider and, as appropriate, adopt policies and incentives to significantly increase the sustainable production and use of renewable gas.” As such, provisions for the procurement of renewable transportation fuel generated from recovered organic waste.</p> <p>The Air Resources Board’s Short Lived Climate Pollutant Strategy states, “CalRecycle will continue to work towards strengthening state procurement requirements relative to use of recycled organic products.”</p> <p>The inclusion of compost as an eligible recovered organic waste procurement product aligns with policies and mandates for methane reduction as described in the Air Resources Board’s SLCP Strategy. The Economic Analysis conducted for the SLCP Strategy notes several scenarios that can achieve the needed reductions in short-lived climate pollutants from the waste sector, and every scenario modeled includes new compost facilities. The purpose of a compost procurement requirement is to establish markets for compost, which is a product generated by organics recycling facilities which the SLCP Strategy identified as in need of market development.</p> <p>Regarding paper procurement requirements, CalRecycle’s 2014 Waste Characterization Study found that paper accounts for 17.4 percent of the disposed waste stream. Requirements on jurisdictions to meet the recycled content paper procurement requirements will help grow</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>markets for recycled content paper. Given the prevalence of paper in the disposal stream, increased procurement of recycled paper is needed to grow the market for recycled paper in order to achieve the organic waste reduction goals. This is necessary to help achieve the organic waste diversion goals in SB 1383 by ensuring an end use for diverted organic waste.</p> <p>Regarding funding, SB 1383 (Public Resources Code Section 42652.5(b)) provides that, "A local jurisdiction may charge and collect fees to recover the local jurisdiction's costs incurred in complying with the regulations adopted pursuant to this section."</p>
4535	Heaton, S. Rural County Representatives of California	<p>Local Procurement Mandates are Not Authorized by SB 1383 and are Inconsistent with Other Statutes. The proposed local procurement mandates are also inconsistent with other statutes. Just as CalRecycle responded in the April 16th meeting that CalRecycle did not have the authority to mandate state agency procurement as it was covered in other statutes, local procurement requirements for recycled materials are already regulated by statute in Public Contract Code (PCC) 22150 et seq. The Legislature designed these regulations with sensitivity to local procurement processes, and local costs - requiring that recycled materials be purchased only when "recycled products are available at the same or a lesser total cost than nonrecycled items" - among other limitations. The proposed mandate to purchase "recovered organic waste products" without acknowledging increased cost (or any of the other statutory limitations) disregards the policy choices made by the Legislature. The extent to which the paper purchasing provisions of the State Agency Buy Recycled Campaign apply to local agencies (as proposed by CalRecycle) is specifically addressed in PCC 22153, and RCRC believes CalRecycle lacks authority to expand this statutory provision.</p>	<p>The described statutory sections are informational requirements rather than specific purchasing requirements and there is no conflict with the proposed regulations. Nor is there any explicit Legislative intent expressed in these sections to limit other measures to achieve viable end use markets for recycled material. These statutory sections, if anything, evidence the Legislature's recognition that procurement of recycled material is critical in increasing end use markets.</p> <p>PRC 41074, 41204, 41374, and 41404 are not conflicting procurement mandates or an explicit provision for local authority over procurement but are instead informational requirements to be included in various elements of Countywide Integrated Waste Management Plans (CIWMP). What these portions of the CIWMP elements do is to require a descriptive narrative of methods, if any, which will be used to increase markets for recycled materials. Nothing in these sections are specific to the exact types of materials included in the proposed procurement requirements in the proposed SB 1383 regulations nor do they place any conflicting requirements on levels of procurement.</p> <p>PRC Section 40913 requires CalRecycle to develop a program to assist local agencies in the identification of markets for materials diverted from disposal through source reduction, recycling and composting. It is not a specific procurement requirement, but rather a general informational requirement placed on CalRecycle to assist local government in finding end use markets for materials diverted from disposal. The requirement is not specific to any particular type of recycled material and there is no limitation evidenced in the statute that restricts other types of requirements for end use markets for recycled material.</p> <p>PRC Section 42600 requires CalRecycle to develop a statewide public information and education program to encourage participation by the general public, business, government, and industry in all aspects of integrated waste management. One component of this program is to "[e]ncourage local government procurement of products containing recycled materials..." Again, this is a general informational requirement rather than a procurement requirement, is not specific to any particular type of material, and evinces no intent by the Legislature to limit or restrict other measures to develop end use markets for recycled material.</p> <p>CalRecycle made changes to the regulatory language in Section 18993.1(f)(1) and 18993.3(a) to make the procurement requirements consistent with Public Contract Code requirements.</p>
4536	Heaton, S. Rural County Representatives of California	<p>Local Procurement Mandates are Not Authorized by SB 1383 and are Inconsistent with Other Statutes. AB 939 specifically addresses methods "to increase the markets" for recycled and composted material, including local procurement preferences for cities and counties in PRC 41074, 41204, 41374, and 41404. These</p>	<p>The described statutory sections are informational requirements rather than specific purchasing requirements and there is no conflict with the proposed regulations. Nor is there any explicit Legislative intent expressed in these sections to limit other measures</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>statutes expressly leave the determination of whether and how to establish such programs to cities and counties. CalRecycle's efforts to override these provisions and establish such mandates at the state level are contrary to these other statutes. AB 939 also specifically addresses the role of CalRecycle in local procurement programs in PRC 40913 and 42600 - repeatedly limiting that role to "assistance" and "encouragement." RCRC believes these statutes, and the statutory scheme as a whole, do not authorize or contemplate that CalRecycle will attempt to establish such a mandatory program.</p>	<p>to achieve viable end use markets for recycled material. These statutory sections, if anything, evidence the Legislature's recognition that procurement of recycled material is critical in increasing end use markets.</p> <p>PRC 41074, 41204, 41374, and 41404 are not conflicting procurement mandates or an explicit provision for local authority over procurement but are instead informational requirements to be included in various elements of Countywide Integrated Waste Management Plans (CIWMP). What these portions of the CIWMP elements do is to require a descriptive narrative of methods, if any, which will be used to increase markets for recycled materials. Nothing in these sections are specific to the exact types of materials included in the proposed procurement requirements in the proposed SB 1383 regulations nor do they place any conflicting requirements on levels of procurement.</p> <p>PRC Section 40913 requires CalRecycle to develop a program to assist local agencies in the identification of markets for materials diverted from disposal through source reduction, recycling and composting. It is not a specific procurement requirement, but rather a general informational requirement placed on CalRecycle to assist local government in finding end use markets for materials diverted from disposal. 4537	Heaton, S. Rural County Representatives of California	<p>The Provisions to Preempt "Locally Adopted Standards and Policies" Are Both Unclear and Legally Invalid Article 9 purports to preempt a wide array of local regulations addressing everything from flow control to land use. To begin with, the language and intended effect of many of these provisions are unclear. Section 18990.1(b)(1) would preclude a local government from "prohibit[ing]" many types of organic waste processing. However, it's not clear whether this was intended to preempt any ordinance "prohibiting" even a single person from undertaking some organic waste processing endeavor they desire, or rather only complete bans upon organic waste processing anywhere in the jurisdiction (as suggested by the example noted in the ISOR). Similarly, by preempting ordinances "limit[ing]" acceptance of imported organic waste (§ 18990.1(b)(2)), did CalRecycle intend to preempt only direct import bans, or also ancillary "limits," such as differential fees? If so, how would that be consistent with PRC 41903, which expressly authorizes such fees? These ambiguities invite litigation, which will delay and undermine any benefit CalRecycle hopes to achieve with this regulatory package.</p>	<p>Article 9 section 18990.1 (b)(1) prohibits complete bans on organic waste processing anywhere in the jurisdiction. Public Resources Code section 41903 authorizes "special fees of a reasonable amount" on imported waste. This section does not authorize fees that would act as a ban on import, but simply allows reasonable fees to cover additional costs for imported waste.</p> <p>A change to the regulatory text is not necessary. United Haulers Association Inc., et al. v. Oneida-Herkimer Solid Waste Management Authority et al. states that an ordinance requiring waste go to a public facility does not violate the flow control restrictions of the Interstate Commerce Clause, does not authorize or require that municipalities be allowed to do so under the U.S. Constitution, nor does it prohibit a state from prohibiting such restrictions.</p> <p>State law explicitly promotes the free movement of material under the Integrated Waste Management Act, Public Resources Code Sections 40001 and 40002, and this restriction is designed to ensure that.</p> <p>Section 18990.1 (c) (4) simply notes that this section does not prohibit a jurisdiction from arranging through a contract or franchise for a hauler to transport organic waste to a particular solid waste facility or operation for processing or recovery. This section does not state what the regulations are requiring, but rather what the regulations do not do. Thus, United Haulers Association Inc., et al. v. Oneida-Herkimer Solid Waste Management Authority et al. is irrelevant.</p>

Comment Number	Received From	Question/Comment	Response(s)
			Read together, section 18990.1 (b) (3) prohibits a local ordinance that restricts flow, and section 18990.1 (c) (4) allows for contractual relationships, which does not restrict the flow of materials.
4538	Heaton, S. Rural County Representatives of California	The Provisions to Preempt "Locally Adopted Standards and Policies" Are Both Unclear and Legally Invalid More fundamentally, these provisions appear to derive from the same flawed approach toward CalRecycle's regulatory authority noted above, which is especially problematic here. The provisions cited in the ISOR do not come close to authorizing the broad preemption attempted by these regulations. The general provisions of PRC 40002 and 40053, and a single unpublished trial court decision involving a complete ban upon one particular "widely used, widely accepted, comprehensively regulated method" of organic waste disposal, do not support CalRecycle's wideranging effort to preempt local regulation of every method of organic waste processing - including any possible future method CalRecycle may specify. The Integrated Waste Management Act does not - and CalRecycle cannot - thus "obliterate[] all vestiges of local power as to a subject where municipalities have traditionally enjoyed a broad measure of autonomy." (Waste Resource Technologies, supra, 23 Cal.App.4th at p. 306.)	CalRecycle disagrees. This section consistently notes protections of flow control that already exist. The commenter should also review the LA v Kern County Measure E decision expressly noting that the Integrated Waste Management Act preempts local flow restrictions (starting at p. 21 of the decision).
4539	Heaton, S. Rural County Representatives of California	The Provisions to Preempt "Locally Adopted Standards and Policies" Are Both Unclear and Legally Invalid The effort to preempt local solid waste import and export regulations is even more clearly flawed. The language of PRC 40002 cited in the ISOR to support this regulation was added by Senate Bill 845 of 2012. That bill also added PRC 40059.3, which clearly specifies that these provisions apply only to privately owned or operated solid waste facilities. That limitation was not accidental, as the bill originally covered publicly owned facilities as well, and counties removed their opposition to the legislation only upon the deletion of those provisions. CalRecycle cannot add provisions to the Act that the legislature has explicitly rejected. The regulations' attempt to prohibit import restrictions at publicly owned solid waste facilities - and their similar effort to broadly preempt export and flow control regulations beyond the requirements of the Commerce Clause - are contrary to statute and impermissible.	A change to the regulatory text is not necessary. CalRecycle disagrees. This section consistently notes protections of flow control that already exist. The commenter should also review the LA v Kern County measure E decision expressly noting that the Integrated Waste Management Act preempts local flow restrictions (starting at p. 21). The authority to prohibit flow restrictions is not solely based upon SB 845.
4540	Heaton, S. Rural County Representatives of California	The Complainant Confidentiality Requirements Are Both Unlawful and Detrimental to Effective Enforcement Section 18995.3 would require local agencies to "[u]pon request, ensure that the name and contact information of a complainant remain confidential" – without exception. Keeping complainant identities confidential is obviously a good general practice; however, this cannot legally be assured in all cases – and such assurances would be highly imprudent in any event. Under the California Public Records Act, records of complaints to government agencies (outside the criminal process) are presumptively subject to public disclosure – unless it is determined, on a case-by-case basis, that "the public interest served by not making the record public clearly outweighs the public interest served by disclosure of the record." Under this standard, an agency is often justified in withholding the identities of complainants - but the authorities have emphasized	Section 18995.3 was substantially amended during the rulemaking process and the requirement to maintain confidentiality is no longer in the regulatory language.

Comment Number	Received From	Question/Comment	Response(s)
		<p>that this is a fact-specific determination, and not a foregone conclusion in all cases. (City of San Jose v. Superior Court (1999) 74 Cal.App.4th 1008, 1022; 78 Ops.Cal.Atty.Gen. 103 (1995).)</p> <p>While the name of an individual who complained about their neighbor would likely be exempt from disclosure in most cases, the legal analysis for disclosing complaints by one corporate competitor against another might be quite different. CalRecycle cannot override the Public Records Act and dictate a particular result for this case-by-case analysis in all circumstances. (This extends to civil discovery as well, where CalRecycle cannot create privileges against production by regulation, nor dictate the outcome of the fact-specific official information privilege under Evidence Code section 1040.)</p>	
4541	Heaton, S. Rural County Representatives of California	<p>The Complainant Confidentiality Requirements Are Both Unlawful and Detrimental to Effective Enforcement Further, even if confidentiality could legally be ensured in all cases, doing so would seriously undermine enforcement in some cases. The local jurisdiction may need to reveal the source of a complaint - or information that could lead to identification of the source - in order to pursue an enforcement case, especially if the violation is contested. While enforcing agencies typically endeavor to keep this information confidential where possible, mandating that they do so in all instances will, inevitably, result in enforcement cases that must be abandoned, or are lost in administrative or judicial proceedings. CalRecycle is urged to incorporate some necessary flexibility into this portion of the regulations.</p>	<p>Section 18995.3 was substantially amended during the rulemaking process and the requirement to maintain confidentiality is no longer in the regulatory language.</p>
4542	Heaton, S. Rural County Representatives of California	<p>The Business Inspection Provisions Violate the Fourth AmendmentSection 18996.4 provides that "an authorized Department employee or agent shall be allowed to enter an entity's premises during normal working hours to conduct inspections and investigations..." (See also § 18984.10.) The term "entity" is undefined, but it appears to include all organic waste generators, except for residential properties (i.e., any business that creates organic waste). Failure to allow such an inspection is subject to significant penalties of up to \$5,000 for the first violation. (§ 18997.3.) This is plainly unconstitutional. Even business premises are protected by the Fourth Amendment's prohibition upon unreasonable searches. Certain "closely regulated" industries may be inspected without a warrant; however, "[a]dministrative searches conducted pursuant to statutes of general applicability require search warrants." (V-1 Oil Co. v. Wyoming, Dep't of Environment Quality (10th Cir. 1990) 902 F.2d 1482, 1487; Marshall v. Barlow's, Inc. (1978) 436 U.S. 307, 313-14.) The range of businesses that generate organic waste includes everything from restaurants to lawn mowing services, and plainly does not fit within the narrow scope of "closely regulated" industries identified by the Supreme Court. Further, "even when the closely-regulated-industry exception dispenses with the warrant requirement, the Fourth Amendment still requires that the government's intrusion into the property be reasonable." (People v. Potter (2005) 128 Cal.App.4th 611, 619.) The caselaw articulates a variety of requirements in order for such a warrantless search to be reasonable (ibid.; City of Los Angeles v. Patel (2010) 135 S.Ct. 2443) - none of which</p>	<p>This section, and Section 18984.10 is intended to function as guidance that CalRecycle will need access to perform its inspection duties and is intended to be subject to the Fourth Amendment to the U.S. Constitution.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>are satisfied in the proposed regulations. The regulations should be revised to eliminate any suggestion that CalRecycle may - or local agencies should - conduct warrantless inspections of any subject "entity."</p>	
4543	Heaton, S. Rural County Representatives of California	<p>The Local Penalty Provisions Are Contrary to the Express Language of SB 1383 and Inconsistent with the Government Code Provisions Regulating Local Penalties. Section 18977.2 requires local jurisdictions to impose specific penalties for a first, second, or third violation of the regulations. The ISOR notes that “the department set minimum penalty thresholds to discourage jurisdictions from not complying with the requirements of the chapter.” Unfortunately, this ignores the express language of SB 1383. The Legislature deliberately crafted Public Resources Code Section 42652.5(a)(1) so that CalRecycle’s regulations “may require local jurisdiction to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance” (emphases added). It is important to note where the Legislature used different language within the same sentence. While CalRecycle’s regulations can “require” locals to impose requirements on generators, the statute is clear that the regulations can only “authorize” jurisdictions to impose penalties. Statutes should be read to “accord[]significance, if possible, to every word, phrase and sentence in pursuance of the legislative purpose,” and avoid interpretations that make some words surplusage. (Dyna-Med, Inc. v. Fair Employment &amp; Housing Com. (1987) 43 Cal.3d 1379, 1387.) If the Legislature did not want jurisdictions to have discretion in imposing penalties, it could have simply eliminated the words “may authorize local jurisdictions”; however, their inclusion forces CalRecycle to give meaning to them. As such, CalRecycle’s attempt to require local jurisdictions to impose penalties for noncompliance is at odds with the statute it seeks to implement.</p>	<p>Public Resources Code Section 42652.5(a)(1) explicitly contemplates CalRecycle requiring “local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.”</p> <p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, “CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code.” That section also provides that CalRecycle may “include different levels of requirements for local jurisdictions...”</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, “The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code.” SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that “[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. ‘[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . .’ The [administrative agency] is authorized to “fill up the details” of the statutory scheme.”</p> <p>Consistent with rules of statutory construction, Public Resources Code Section 42652.5(a)(1) must be read as a whole and interpreted in a way that renders the text as compatible, not contradictory. This section states that the regulations “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.” The first part of this section explicitly contemplates regulatory requirements on entities besides generators as long as they are relevant to meeting the mandates of SB 1383. Thus, the second part of the section regarding penalties must be read harmoniously and as a whole with the first part to permit penalties on the other entities that may be subject to regulatory requirements. Without enforcement penalties on the other entities, the regulatory requirements are not actually requirements but mere suggestions. Bolstering this interpretation is the Assembly Floor Analysis for SB 1383 (August 31, 2016) which stated that the bill, “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and impose penalties for noncompliance.”</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>Regarding the language “authorizing” penalties by local jurisdictions, the clear intent of the legislation was that jurisdictions must penalize non-compliance with SB 1383 requirements. First, the language of Assembly Floor Analysis described above makes this intent clear – CalRecycle may require jurisdictions to impose requirements “and impose penalties for noncompliance.” Second, the Legislature designed the bill to achieve the organic waste reduction goals in part by requiring local jurisdictions to impose requirements. These requirements must be enforceable through penalties or:</p> <p>(a) they will not actually be requirements but suggestions; and (b) there will be no way to ensure compliance by regulated entities and thus achieve the goals of the statute. Given these considerations, CalRecycle has authorized local jurisdictions to impose penalties as long as they meet the conditions described in the regulations regarding categories of violations, requirements to enforce against those violations, and minimum penalty levels.</p> <p>Regarding Section 18995.1(a)(1)(B)(5), CalRecycle notes that the language of this section was amended to simply specify that jurisdictions enforce according the enforcement timetables and compliance extensions in Section 18995.4 and the administrative civil penalty provisions in 18997.2.</p>
4544	Heaton, S. Rural County Representatives of California	<p>The Local Penalty Provisions Are Contrary to the Express Language of SB 1383 and Inconsistent with the Government Code Provisions Regulating Local Penalties. Furthermore, Section 18997.2 purports to require local jurisdictions to impose penalties according to a scheme that is inconsistent with Government Code Sections 25132 and 53069.4. The ISOR’s assertion that the proposed penalty “range is consistent with the amounts specified in Government Code Section 53069, 25132 and 36900” is incorrect. Government Code Section 53069.4(a)(1) provides that violations of local ordinances that are infractions shall not exceed the maximum amounts set forth in Section 25132 (for county ordinances) and Section 36900 (for city ordinances). The Government Code provides that a fine of up to \$100 can be imposed for a first violation, \$200 for a second violation of the same ordinance within one year of the first violation, or \$500 for each additional violation of the same ordinance within one year of the first violation. As the ISOR notes, CalRecycle “set minimum penalty thresholds to discourage jurisdictions from not complying with the requirements of the chapter.” While the maximum amount per violation is the same as included in the Government Code, the proposal is inconsistent with respect to the minimum penalty that can be imposed (\$50, \$100, and \$200 for a first, second, or third violation). In practice, the amounts proposed in Section 18997.2 may significantly exceed the Government Code limits because CalRecycle failed to include the temporal language requiring a second or subsequent violation to occur within one year of the first violation in order to trigger higher maximum penalties. Finally, the penalty scheme proposed is inconsistent with the Government Code because it fails to allow jurisdictions to grant a hardship waiver as afforded in Government Code Section 25132(d) and 36900(d). This inconsistency cannot be assumed to be an oversight given the language in the ISOR and the fact that a</p>	<p>The regulatory language was revised for consistency with Government Code limitations on local penalties.</p>

Comment Number	Received From	Question/Comment	Response(s)
		related relief mechanism is proposed for penalties imposed by CalRecycle under proposed Section 18997.3(d). Taken as a whole, these penalty provisions are both inconsistent with the underlying statute they seek to implement and are inconsistent with the penalties that cities and counties are allowed to impose for infractions under the Government Code.	
4545	Heaton, S. Rural County Representatives of California	The Standardized Regulatory Impact Analysis is Inadequate as an Informational Document For major regulations, such as those proposed here, the agency must "assess the potential for adverse economic impact on California business enterprises and individuals" through a "standardized regulatory impact analysis" addressing, among other things "[t]he competitive advantages or disadvantages for businesses currently doing business within the state." (Gov. Code, § 11346.3.) The purpose of this analysis is to "inform the agencies and the public of the economic consequences of regulatory choices." (Ibid.) "Although we do not understand this requirement to impose a heavy burden on the agency, we cannot deem it satisfied by an opaque calculation unsupported by any facts or other evidence explaining its validity as a reasonable estimate." (Western States Petroleum Assn. v. Board of Equalization (2013) 57 Cal.4th 401, 431.)	<p>Comment noted. In response to this comment, CalRecycle prepared a broader evaluation of the competitive advantage and disadvantages that will be faced by all businesses, not only businesses engaged in recycling and edible food recovery. The Appendix to the ISOR concludes that certain businesses in California may gain a competitive advantage over other California businesses, and certain businesses may lose an advantage or be placed at a disadvantage. This Appendix notes that this will depend on a variety of factors including the business' location, type and size. The Appendix to the ISOR additionally addresses the ability of California businesses to compete with out of state businesses:</p> <p>"This analysis reveals that certain businesses in the state may enjoy a competitive advantage over other businesses, while others may face a competitive disadvantage, or have a previous advantage reduced... Finally, as noted above CalRecycle revised economic modeling to assume that the costs associated with the regulation will partially absorbed by businesses (rather than all costs being passed through to consumers), which would result in higher operating costs. Higher operating costs serve to make these firms less competitive, driving down exports and overall sales, all else being held equal.</p> <p>This effect is modeled with the production cost policy variable in the REMI model, and 50 percent of all costs were modeled with the production cost policy variables."</p> <p>See pages 24-28 of the Appendix to the ISOR.</p>
4546	Heaton, S. Rural County Representatives of California	The Standardized Regulatory Impact Analysis is Inadequate as an Informational Document The SRIA assumes that regulatory costs borne by all businesses in the aggregate may be offset by the economic benefits derived by all businesses in the aggregate - thus failing to acknowledge or evaluate any potential that the costs or benefits might be unevenly distributed amongst different industries, or competitors within the same industry. For example, the costs for edible food recovery will be typically be paid by all businesses through waste collection rates, but the benefits will be retained almost exclusively within the food industry. Similarly, although the SRIA acknowledges that some costs may vary between localities, it makes no effort to determine how regional differences in costs and rates might create competitive disadvantages for some businesses. Will higher transportation costs and lack of recycling facilities in rural areas put those businesses at a disadvantage vis-a-vis urban competitors? The SRIA should answer these questions but it doesn't, and therefore fails the informational role mandated by the Legislature.	<p>Comment noted. CalRecycle presented a revised estimate of costs and benefits in the Appendix to the ISOR which was released for public comment in November of 2019. Tables 15-A and 15-B show a range of potential costs by business based on the size of the business. This was included in the Appendix to the ISOR to address the concern that potential costs and benefits may be unevenly distributed. CalRecycle additionally presented a regional analysis in the Appendix to the ISOR to disclose potential differences in costs incurred by various regions. While it is speculative to project exact costs each individual business will bear, the tables provided in the Appendix, show that costs for businesses that generate less waste will be less than businesses generating more waste.</p> <p>Comment noted. It is unclear what is meant that the benefits will be retained exclusively by the food industry. Many of the actions associated with recovering edible food will occur through requirements placed directly on the food industry; however, it is speculative to assume where the benefits will be distributed. The comment appears to intimate that food service providers such as restaurants will receive retain all of the benefits from the food recovery requirements. The food recovery requirements will result in the recovery of edible food that the restaurant would have disposed. The regulations require that restaurants and other entities make arrangements with food recovery services and organizations that can distribute edible food to people. The direct beneficiaries of these requirements will be the Californians receiving this edible food through the food recovery networks. This will further create societal benefits as it can reduce hunger, further</p>

			<p>recovering food that would otherwise be disposed in a landfill will reduce greenhouse gas emissions. The benefits of reducing greenhouse gas emissions are not retained with any specific business.</p> <p>CalRecycle agrees that it is likely that the costs of food recovery will be incorporated in waste collection rates paid by all businesses. In response to this comment, CalRecycle additionally prepared an estimate of the food recovery per and isolated those costs to businesses to show how this cost could be concentrated on businesses. See Page 26- 27 of the Appendix to the ISOR. Comment noted. CalRecycle disagrees with the commenter’s interpretation of the requirements for conducting a SRIA. A regional cost differential is not a direct statutory requirement for a SRIA. CalRecycle notes that the externalities involved make any attempt to compare how a regulation will impact a donut store in Tulare to an office park in San Jose in 2030, for example, is speculative and beyond the scope of reason.</p> <p>However; in response to this comment, CalRecycle prepared two estimates of regional variation in the Appendix to the ISOR. See pages 29-32 of the Appendix to the ISOR. Of note, as this comment suggests the regulation will impose disproportionate impacts on rural communities which have higher costs due to market distance and the lack of economies of scale, the regional variation analysis includes a specific estimate of the costs for rural communities. CalRecycle amended the regulations to ease the burden on rural communities. The analysis in the Appendix to the ISOR notes:</p> <p>“Minus the inclusion of the rural waivers, rural areas would incur a disproportional level of costs. On a per capita basis, rural residents would incur \$5.83 per month, more than double the estimated statewide average per capita rate. This does show a potential regional impact in rural areas that is greater than the impact that would be felt in the rest of the state. However, once the costs that are linked to the waived requirements are accounted for, the impact in rural areas is reduced to \$0.57 per month. Once waiver provisions of the regulations are accounted for, the financial impact to rural areas, as defined here, is projected to be less on per capita basis than other areas of the state. It is important to emphasize that these numbers represent an estimated statewide average and costs experienced in individual jurisdictions may vary.”</p>
4547	Heaton, S. Rural County Representatives of California	The Standardized Regulatory Impact Analysis is Inadequate as an Informational Document The SRIA suffers from evidentiary and methodological flaws. As a threshold matter, the calculation, even of direct costs, is indiscernible. It is entirely unclear how the central "net" figure of \$330 million dollars over 11 years (or the gross figures upon which it is based, \$20.9 billion in cost offset by \$17 billion in "direct economic benefit") was derived from the amounts set forth in the various individual cost categories (many of which use different timeframes). Which costs are included in the final figure, over what period, and which offsets, cannot be ascertained from the information provided. A reasonable public observer has no way to determine how the final estimate of \$662 per business annually actually relates to the costs set forth in the SRIA, and whether it is reasonable. For this reason alone, the SRIA fails that "modest requirement of rationality and	<p>As noted in the SRIA, costs and benefits were projected over a 12-year period. The projected net cost over 12 years is \$3.9 billion, or \$330 million per year for 12 years. The estimated annual cost per business is the result of applying half of the annual projected cost of implementation to the estimated 380,000 businesses. With regard to the cost per business, this is explained on page 14 of the SRIA which states:</p> <p>“Based on this analysis, the average net cost per year is approximately \$330 million. Ultimately, the costs of implementing these regulations will be passed on to ratepayers, both commercial businesses and households. To avoid double- counting, CalRecycle allocated the cost 50/50 between businesses and households based on the waste stream distribution between commercial and residential. As a result, 50 percent of the costs would be distributed among businesses and 50 percent would be distributed among households. Approximately 380,000 businesses that would be regulated, the majority of which are small businesses, the average cost per business would be</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>transparency" imposed by the APA. (Western States Petroleum Assn., supra, 57 Cal.4th at p. 431.)</p>	<p>approximately \$662 annually. Assuming the other half of these costs would be passed on to households, the average increased cost per household would be approximately \$17 per year." The estimated cost per business was revised in the Appendix to the ISOR to reflect changes to the regulation and revised estimates of business numbers.</p> <p>The information relied upon to produce the SRIA was noted in the SRIA. The SRIA, and the subsequent Appendix to the ISOR, disclosed CalRecycle's findings regarding the estimated cost. The rulemaking record, including all information relied upon for the rulemaking, has been available to the public for review throughout the rulemaking process. CalRecycle's announcement of comment periods disclosed this fact.</p> <p>Comment noted. The methodology for calculating collection costs are fully disclosed in the Appendix to the ISOR. Regarding how collection costs were calculated, the Appendix to the ISOR includes the following text:</p> <p>"As noted in the SRIA, CalRecycle used a modified version of the Cost Study on Commercial Recycling to estimate the cost of collection and processing of organic waste. CalRecycle adjusted the model to reflect updated projections of tonnage and material types used in the Draft EIR. As noted above, CalRecycle additionally adjusted costs to reflect inflation for the year 2019 using the Consumer Price Index. The inflation adjusted values are shown in Table 7..."</p> <p>The costs are applied on a per ton basis to residential, multifamily, and the commercial and industrial sectors. The costs for collection are specific to the economic costs associated with collecting one ton of material. The direct costs shown in Table 1 of the Appendix to the ISOR, disclose the direct costs of collection required by the regulation (e.g. waste sampling, contamination monitoring and reporting). The regulations do not require a jurisdiction to pursue a specific collection mechanism, it would be highly speculative to project which compliance model jurisdictions may employ.</p> <p>The information relied upon to produce the SRIA, was noted in the SRIA. The SRIA, and the subsequent Appendix to the ISOR, disclosed CalRecycle's findings regarding the estimated cost. The rulemaking record includes all information relied upon for the rulemaking has been available to the public review throughout the rulemaking process. CalRecycle's announcement of comment periods disclosed this fact.</p>
4548	Heaton, S. Rural County Representatives of California	<p>The Standardized Regulatory Impact Analysis is Inadequate as an Informational Document This failure is compounded by the fact that some of the supposed individual costs and offsets are plainly unsupported by substantial evidence. For example, the SRIA appears to conclude that the edible food collection regulations will have a "net economic benefit" of over \$1.2 billion per year. (SRIA, p. 21.) This is derived entirely by loose extrapolation from a 2016 "Roadmap Report" prepared by an advocacy group - which the SRIA (and CARB's economic analysis on which it is based) seems to have misunderstood. To begin with the \$18 billion dollar "investment" cited in the report (extrapolated to \$1.8 billion in California) appears to have been a fundraising target, rather than an evidence-based calculation of actual costs. (Roadmap Report, pp. 69-71.) Further, the cited "investment" and offsetting "business profit potential" set forth in the report encompass a wide array of activities and offsetting revenues wholly irrelevant to the edible food collection</p>	<p>Comment noted. CalRecycle disagrees that the SRIA was not based on substantial evidence. With respect to the specific comment on the deficiency of the evidence relied upon to estimate the cost of the edible food collection requirements in the SRIA, CalRecycle revised the methodology for estimating these costs and updated the estimates in the Appendix to the ISOR. The Appendix to the ISOR notes:</p> <p>"The SRIA relied upon studies cited in the Short-lived Climate Pollutant (SCLP) Strategy to determine the potential costs and benefits of achieving the edible food recovery targets. In response to stakeholder issues with this approach, and their concerns with the findings in the studies cited in the SLCP, CalRecycle revised the methodology for analyzing the potential economic impacts of food recovery in several ways. The revised edible food recovery costs and the revised methodology for calculating those costs are discussed in Costs Associated with Infrastructure Collection and Processing: Edible Food Recovery."</p>

Comment Number	Received From	Question/Comment	Response(s)
		program mandated by these regulations. (Also, contrary to the assumptions in the SRIA, the report makes clear that these costs and offsetting revenue are not evenly distributed but are experienced differently by different types of businesses.)	The revised methodology to estimate the cost of food recovery is disclosed on page 21 of the Appendix to the ISOR.
4549	Heaton, S. Rural County Representatives of California	The Standardized Regulatory Impact Analysis is Inadequate as an Informational Document The SRIA exacerbates this error by offsetting all of the edible food collection program costs by a supposed \$1.2 billion in annual "household savings" - which appears to refer to California's share of the "\$100 billion in societal economic value" postulated in the report. "Societal economic value" is not the same thing as cost savings to all or any group of "households" or businesses - and one cannot accurately assess the real cost impact to businesses (large or small) if those costs are offset by nebulous "societal economic value" figures. It is thus impossible to ascertain any meaningful information about the actual cost impact of the food recovery requirements from the SRIA. (Moreover, it appears that these constructed "societal economic value" and "net economic benefit" figures were further used to improperly offset the real costs imposed by other parts of the proposed regulatory package, further undermining the informational value of the final figures set forth in the SRIA.) Such speculative information is not sufficient to fulfill CalRecycle's obligations under the APA. (California Assn. of Medical Products Suppliers v. Maxwell-Jolly (2011) 199 Cal.App.4th 286,305-306.)	<p>Comment noted. In the SRIA and the Appendix to the ISOR, CalRecycle calculated the direct economic costs and the direct economic benefits in consultation with the California Department of Finance. Additionally, CalRecycle, in consultation with the California Air Resources Board, calculated the social, and public health benefits associated with avoided pollutants and greenhouse gas emissions. These benefits, while significant, were not used to offset the direct economic costs. Only tangible financial benefits were used to offset tangible finance costs. For example, the value of recovered paper (though greatly reduced) partially offsets the cost of recovering paper. The estimated economic benefit of reduced pollution, which is monetized in the form of avoided hospitalization, though significant, is not used to offset direct economic costs such as collection costs.</p> <p>The commenter noted that the data relied upon to estimate the costs of food recovery calculated in the SRIA offset costs with societal benefits. As noted above, CalRecycle revised the estimates of the food recovery costs in the Appendix to the ISOR. To the extent the data relied upon in the SRIA improperly offset costs with societal benefits, this was corrected in the revised calculations released for public comment in the Appendix to the ISOR.</p>
4550	Heaton, S. Rural County Representatives of California	The Standardized Regulatory Impact Analysis is Inadequate as an Informational Document Perhaps more importantly, the SRIA also utilizes improper methodology throughout - making some of the very same mistakes identified in John R. Lawson Rock & Oil, Inc. v. State Air Resources Bd. (2018) 20 Cal.App.5th 77. The SRIA appears to assume that it need only evaluate the "competitive disadvantage to the recycling and edible food recovery industry" (SRIA, p. 41), which is entirely mistaken. The APA requires that agencies "must look at each type of business subject to the relevant proposals and consider whether those proposals will advantage or disadvantage that particular type..." (Ibid.) The impact of these regulations falls upon a much wider range of businesses than "the recycling and edible food recovery industry," and the SRIA makes no effort whatsoever to categorize these business by size, industry, or region, and assess the relative impacts on each.	<p>Comment noted. In response to this comment, CalRecycle prepared a broader evaluation of the competitive advantage and disadvantages that will be faced by all businesses, not only businesses engaged in recycling and edible food recovery. The Appendix to the ISOR concludes that certain businesses in California may gain a competitive advantage over other California businesses, and certain businesses may lose an advantage or be placed at a disadvantage. This Appendix notes that this will depend on a variety of factors including the business' location, type and size. The Appendix to the ISOR additionally addresses the ability of California businesses to compete with out of state businesses:</p> <p>"This analysis reveals that certain businesses in the state may enjoy a competitive advantage over other businesses, while others may face a competitive disadvantage, or have a previous advantage reduced... Finally, as noted above CalRecycle revised economic modeling to assume that the costs associated with the regulation will partially absorbed by businesses (rather than all costs being passed through to consumers), which would result in higher operating costs. Higher operating costs serve to make these firms less competitive, driving down exports and overall sales, all else being held equal.</p> <p>This effect is modeled with the production cost policy variable in the REMI model, and 50 percent of all costs were modeled with the production cost policy variables."</p> <p>See pages 24-28 of the Appendix to the ISOR.</p>
4551	Heaton, S. Rural County	The Standardized Regulatory Impact Analysis is Inadequate as an Informational Document This failure is critical, because the central purpose of these APA provisions is to induce "a consideration of how [] small businesses are impacted by	Comment noted. In response to this comment, in the revised cost estimated included in The Appendix to the ISOR, CalRecycle estimated a range of business costs. Notably in response to this

Comment Number	Received From	Question/Comment	Response(s)
	Representatives of California	regulations relative to larger in-state businesses that will not feel the impact of such regulations at the same scale." (Ibid.) The SRIA endeavors to avoid this by assuming that the impacts upon all businesses will be uniform (\$662 annually); however, even if that assumption was supported by substantial evidence, this ignores the central purpose of these statutory provisions. \$662 per year is meaningless to a big box store, but potentially devastating to the sole proprietor of a small cottage food business - a differential impact that the SRIA does not even attempt to evaluate.	comment, the analysis includes an estimate of business costs based on the size of the business and their relative waste generation. Comment noted. In response to this comment, CalRecycle prepared a broader evaluation of the competitive advantage and disadvantages that will be faced by all businesses, not only businesses engaged in recycling and edible food recovery. The Appendix to the ISOR concludes that certain businesses in California may gain a competitive advantage over other California businesses, and certain businesses may lose an advantage or be placed at a disadvantage. This Appendix notes that this will depend on a variety of factors including the business' location, type and size. The Appendix to the ISOR additionally addresses the ability of California businesses to compete with out of state businesses: "This analysis reveals that certain businesses in the state may enjoy a competitive advantage over other businesses, while others may face a competitive disadvantage, or have a previous advantage reduced... Finally, as noted above CalRecycle revised economic modeling to assume that the costs associated with the regulation will partially absorbed by businesses (rather than all costs being passed through to consumers), which would result in higher operating costs. Higher operating costs serve to make these firms less competitive, driving down exports and overall sales, all else being held equal. This effect is modeled with the production cost policy variable in the REMI model, and 50 percent of all costs were modeled with the production cost policy variables." See pages 24-28 of the Appendix to the ISOR.
4552	Heaton, S. Rural County Representatives of California	Jurisdiction Edible Food Recovery Program (Section 18991.1) As partners in achieving the edible food recovery goal, it may be rational to include an education and outreach component to the food recovery program and to assist in providing access to the organizations and services available to the generators. While monitoring compliance adds significant staff time and cost, we understand the necessity to be able to measure achievements. However, RCRC believes it is beyond the scope and capacity of our solid waste managers to increase and fund the edible food recovery capacity.	It is written in the law of SB 1383 that the Department must adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. To help achieve the statewide 20% edible food recovery goal, SB 1383's regulations require jurisdictions to implement edible food recovery programs, which includes the requirement that a jurisdiction shall increase edible food recovery capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs. Assessing edible food recovery capacity at the local level is critical for jurisdictions to be able to understand if capacity needs exist, and exactly what their capacity needs are. If sufficient capacity does not exist, then significant amounts of edible food will continue to be disposed rather than being put to its highest and best use of helping feed Californians in need. In addition, if the capacity planning requirements were removed the state would be at risk of not achieving its 20% edible food recovery goal. It is at the discretion of the jurisdiction to determine what jurisdiction entity is best suited to assess edible food recovery capacity and ensure that compliance with this regulatory requirement becomes a part of their scope. Regarding the comment about funding edible food recovery capacity. To clarify, the language in the regulations regarding funding is permissive. The language states that a jurisdiction may fund their edible food recovery program through franchise fees, local assessments, or other funding mechanisms. The regulatory language uses the word "may" and not "shall." This language does not require jurisdictions to provide funding. Rather, it allows jurisdictions to provide funding if they would like to do so. If a jurisdiction does decide to fund their edible food recovery program

Comment Number	Received From	Question/Comment	Response(s)
			<p>through franchise fees, local assessments, or other funding mechanisms, then it is at the discretion of the jurisdiction to determine how the funding will be dispersed.</p> <p>CalRecycle would also like to note that SB 1383 provides a broad grant of authority to jurisdictions to “collect fees to recover the local jurisdiction’s costs incurred in complying with the regulations...” The types of fees a jurisdiction may impose are not limited to tip fees or franchise fees. That said, some jurisdictions in California are already successfully using such fees to fund food recovery operations and activities.</p>
4553	Heaton, S. Rural County Representatives of California	<p>Department Evaluation of Jurisdiction Compliance (Section 18996.1) This section requires the Department to evaluate a jurisdictions' compliance and notify the jurisdiction in writing of its findings. However, it only provides the jurisdiction the ability to correct deficiencies of an ordinance ( and no other compliance issue) prior to commencing enforcement actions set forth in section 18996.2. RCRC would recommend including language such as "prior to initiating any enforcement proceeding, the Department shall notify a jurisdiction in writing of any alleged failure to comply with this article", similar to that found in the recently adopted AB 901 Reporting requirements in section 18815. 10 (b ).</p>	<p>A change to the regulatory text is not necessary Section 18996.2 outlines the process in which the Department will notice a jurisdiction of any alleged failure to comply. The jurisdiction will be noticed and given 90 days to comply. The Department may grant an extension for 90 days, if additional time is needed to comply. If the jurisdiction has made substantial effort to meet the maximum compliance deadline but there are extenuating circumstances beyond the control of the jurisdiction, the Department may issue a Corrective Action Plan and extend the deadline for no more than 24 months beyond the date of the original Notice of Violation. Section 18996.1 outlines the process for noticing a jurisdiction for a deficient ordinance. The jurisdiction shall have 180 days to correct deficiencies. If not, the department may commence enforcement action. A violation due to a deficient ordinance is not eligible for placement on a Corrective Action Plan. An ordinance adopted by a jurisdiction that is inconsistent with or does not meet the requirements set forth in this chapter is not upholding the tenets of the chapter and must be corrected in a much shorter timeline.</p>
4554	Heaton, S. Rural County Representatives of California	<p>Department Evaluation of Jurisdiction Compliance (Section 18996.1) With respect to an inconsistent ordinance, if the Department determines a jurisdiction has adopted an ordinance that is inconsistent with or does not meet the requirements of this regulation, depending on the severity of the deficiencies and taking into consideration the drafting of the ordinance, counsel review, and public hearing requirements, 90 days may not be sufficient time to enact an ordinance.</p>	<p>CalRecycle has revised section 18996.1(e) in response to this comment. The change increases the relevant timeline to 180 days.</p>
23	Helget, C, Republic Services	<p>At the outset, we want to note that while we support a reasonable goal of reducing Short Lived Climate Pollutants (SLCPs) and the disposal of organics, we believe that these goals cannot be achieved without all of the following:</p> <ul style="list-style-type: none"> <li>• A dramatic increase in markets for compost and renewable fuels;</li> <li>• Substantial solid waste and recycling rate increases or other sources of funding;</li> </ul> <p>and</p> <ul style="list-style-type: none"> <li>• Significant revisions to existing state requirements for siting and permitting solid waste infrastructure including CEQA.</li> </ul>	<p>Thank you for the comment. Commenter is expressing an opinion about elements that will affect the success of reducing Short-Lived Climate Pollutants. Market development is addressed in procurement requirements and the SB 1383 statute provides authority for jurisdictions to charge fees to offset costs of implementing the program.</p>
24	Helget, C, Republic Services	<p>As we now enter the formal regulatory process, we believe that the funding requirements of the SB 1383 regulations can no longer be ignored. Given the magnitude of the estimated cost of implementing these regulations and the ever-rising infrastructure costs associated with SB 1383, what are CalRecycle's recommendations for funding this program? Recommendation: CalRecycle should plan at least one workshop specifically dedicated to discussing funding</p>	<p>CalRecycle will be providing guidance and training to regulated entities. The SB 1383 statute provides authority for jurisdictions to charge fees to offset the costs of implementing the program.</p>

Comment Number	Received From	Question/Comment	Response(s)
		recommendations and to allow stakeholders adequate time to provide feedback and recommendations.	
25	Helget, C, Republic Services	<p>If CalRecycle through a public process can show that markets are developing for organic materials contained in the expanded SB 1383 definition, only then should the regulations be amended. Including non-compostable and non-recyclable organics in the definition of organics will increase contamination in truly compostable and recyclable organics further inflating costs for processing.</p> <p>Recommendation: Delete the current definition on Page 5 and insert: "Organic waste" means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.</p>	Organic waste that breaks down in a landfill and creates methane must be included in the regulatory definition. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute. The statute requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy.
26	Helget, C, Republic Services	<p>Not allowing those same activities at landfills is inconsistent particularly when one considers that, unlike all other construction sites, we regularly monitor our sites for ambient emissions. We still object to the 12" restriction and believe that this restriction has not been justified.</p> <p>Recommendation: We recognize that this limit is meant to eliminate abuse, but at the same time we believe that there should be more flexibility if a facility can show that a greater thickness reduces methane emissions or can be justified to better control storm water runoff or is supported by other engineering requirements. The 12" limit should be eliminated since applications for beneficial reuse are already regulated by the LEA based on appropriate engineering standards and practices.</p>	CalRecycle appreciates the acknowledgment of including all forms of beneficial reuse of organic soil amendments at a landfill. The requirement to restrict the application of soil amendments to not exceed a depth of 12 inches is specifically used to reflect existing research that demonstrates that soil amendments greater than a depth of 12 inches can breakdown anaerobically and generate methane. Therefore, the 12 inch application requirement is needed to ensure that organic waste used as a soil amendment at a landfill remains consistent with the state goals established in SB 1383.
27	Helget, C, Republic Services	<p>The revised draft regulations also now include the following language on Page 8 that will limit application of soil amendments, erosion control, revegetation, and slope stabilization:</p> <p>(D)The material applied is never commingled with solid waste and incorporated into the landfill for final deposition.</p> <p>This provision, particularly the new language is vague. If a landfill operator applies material for revegetation and the area grows cover grass but eventually that area is placed into final closure. Is that material that may have been added years ago count as final deposition? Also, there is a certain amount of contamination allowed in green material. The term "never comingled with solid waste" would possibly require any of organic material used for slope stabilization, landscaping, revegetation and erosion control would need to be 100% free of contamination.</p> <p>Recommendation: Please clarify the term incorporation or eliminate the term.</p>	Comment noted. The language at issue was modified during the rulemaking process to remove the terms the commenter was concerned with.
28	Helget, C, Republic Services	<p>Please clarify whether compost overs are limited to the 10% organics content requirement and whether compost overs when used as beneficial reuse or alternative daily cover are disposal or nondisposal.</p> <p>Recommendation: As an alternative to 10% organics content, we would recommend a 35% upper limit (as an annual percentage of inbound volume for a given facility) of what could be sent as overs for use as beneficial reuse from a compost facility. For example, if 100,000 tpy was delivered to a compost facility then only 35,000 tpy (35%) of overs could go as ADC or beneficial reuse and count as diversion or</p>	Comment noted. The organic content limit is not a limit on how much organic waste can be disposed before it is considered disposal but rather if you dispose of organic waste it would count as disposal, unless it is used in a way that meets the requirements of Section 18983.1((b). The percentage is calculated using the measurement protocols described in Section 17867(a)(16). Article 2, Section 18983.1(a) identifies the activities that would constitute landfill disposal. Section 18983.1(b) identifies those activities that would be considered a reduction of landfill disposal. In your example, if the use of the compost overs meets the requirement of activities pursuant to 18983.1(b), such as land application or erosion control, then it would be considered a reduction of

Comment Number	Received From	Question/Comment	Response(s)
		<p>nondisposal. That limit could be reduced over time to allow facilities to adjust processing standards and until adequate markets evolve.</p>	<p>disposal. However, the use of organics (compost overs) as an alternative daily cover would be considered disposal pursuant to Section 18983.1(a).</p>
29	Helget, C, Republic Services	<p>Section 20700.5 Landfills already comply with the methane early action measure and we are not aware of any cost/benefit analysis that was completed for this requirement. We believe the benefits will be minimal and possibly harmful for our gas and leachate collection and will be very costly. Replacing this surface with an additional 24" of soil will likely require importing soil resulting in additional truck miles and emissions at a significant cost. We estimate that covering one acre with an additional 24" of soil will require 200 truckloads of soil.</p> <p>This language was added in May 2018 as a "Minor Policy Change" without further justification or clarification. The Initial Statement of Reason (ISOR) simply states: "This section is necessary to limit greenhouse gas emissions from landfills. This supports the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions by allowing for greater landfill gas collection and biogenesis."</p> <p>We have searched the regulatory documents and can find no further explanation of how 36" of additional soil will reduce methane emissions and produce greater landfill gas collection and "biogenesis".</p> <p>The proposed regulation is not supported with technical or cost/benefit analyses. There are significant concerns that it may be counter to the reduction of landfill methane surface emissions and would have other unintended potential adverse environmental impacts associated with odors, leachate control, groundwater contamination, and soil excavation, importation, and placement. The regulation would also result in significant design changes, potential CEQA and permitting conflicts, and significantly reduce planned landfill capacity. These issues would likely result in substantial added costs to ratepayers without a benefit of significantly reducing greenhouse gas emissions.</p>	<p>CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.</p>
30	Helget, C, Republic Services	<p>Section 20700.5 Thick soil cover layers left in place within the refuse fill, as would occur with this regulation, may create the buildup of isolated pockets of pressure and impair the efficiency of collection and control of landfill gas and leachate. This issue is a concern set forth by the LEA for the Sunshine Canyon Landfill (SCL) relating to odor control (September 2015 SCL LEA Compilation of Potential Mitigation Practices and Programs). Additionally, CalRecycle's rulemaking files for Alternative Daily Cover (ADC) Regulations (1997-98) based the regulations in part on the potential benefits of permeable alternative covers as compared with soil for control of landfill gas and leachate. Have these documents been included in CalRecycle's estimate of the cost and benefits of this intermediate cover proposal?</p>	<p>CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.</p>
31	Helget, C, Republic Services	<p>The added cover thickness would result in significant design review and changes for landfill cell sequencing, drainage, grading, stability, landfill gas collection, excavation, and onsite and import of soil material. These changes will result require</p>	<p>CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. 		significant time to implement and cost, in addition to CEQA review and permit revision. Have these documents been included in CalRecycle's estimate of the cost and benefits of this intermediate cover proposal and in the timelines to implement this proposal?	that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.
32	Helget, C, Republic Services	Thick soil covers are a potential concern regarding ground water contamination. Research conducted in Southern California on arid landfills in the 1990's indicated that thick covers over unlined areas may drive landfill gas down and out and contaminate ground water with volatile organic chemicals. As a result, landfill final cover systems in applicable areas were reduced from the thicker systems initially envisioned. Has Cal Recycle staff considered this possible side-effect and if so, how will this concern be addressed when implementing this proposal?	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.
33	Helget, C, Republic Services	Section 20700.5 ARB's Landfill Methane Capture regulations and EPA NSPS requirements are effectively controlling landfill methane emissions from landfills. Current Monitoring programs implement a corrective action plan and retesting requirement to verify that current cover systems are effective. If emissions are detected, either instantaneous or thru integrated sampling, the site is required to remedy, with additional cover, well field adjustments or addition of increased collection systems. Most detections of methane emissions are typically associated from penetrations into the landfill (e.g. extraction wells or collection header piping) and are corrected with compaction of the cover soils around the penetration. To require the placement of an additional 24" of cover is not supported by the surface test results and the loss of space would not be a good steward of the State's permitted disposal capacity. Has Cal Recycle completed any analysis that would effectively counter this data?	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.
34	Helget, C, Republic Services	Recommendation: This provision should be deleted and CalRecycle should initiate a comprehensive and scientifically-based analysis of intermediate cover and closure requirements. Any regulatory changes in those requirements should be accomplished in a focused work group setting to ensure that all impacts are properly considered.	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.
35	Helget, C, Republic Services	Section 17409.5.8 Recommendations: We recommend sampling occur within a one-week period on a quarterly basis and reporting on a quarterly basis rather than monthly. Operators can apply the percentages to daily outbound loads of processed organics and residuals to provide a reasonable estimate of the quantity of organic material that is recovered and disposed. This is particularly applicable to Source Separated Organics (SSO) since SSO loads will be significantly cleaner than mixed waste loads. Periodic sampling will be much more cost effective and will provide similar data to daily sampling, without the additional labor, space and time burdens.	CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. The operator will now be taking composite samples for 10 consecutive days per reporting period, which is on a quarterly basis. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.

Comment Number	Received From	Question/Comment	Response(s)
			<p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>
36	Helget, C, Republic Services	<p>Section 17409.5.7 – loadchecking  Recommendation: We recommend that random monthly load checks of each collection route will provide an adequate review for contamination.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
37	Helget, C, Republic Services	<p>Section 17409.5.7 – loadchecking  Recommendation: As we understand the regulations, a facility handling SSO must maintain a record of all loads with contamination that exceeds 10%. If the intent of these regulations is to encourage SSO, we believe that this threshold is unreasonable and unenforceable and should be deleted.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
38	Helget, C, Republic Services	<p>Section 17406.5.8  The 10% limit on incompatible materials and on the organic component of residual is very confusing. First, the definition of incompatible materials was introduced in the 2nd Draft and we are still unable to understand the impact of this threshold. Imposing a 10% limit on incompatible material and residuals appears to be a 90% organics reduction requirement and not the 50% and 75% organics reduction targets contained in SB 1383. Further, these 10% requirements are impossible to achieve before the regulations take effect in 2022, even with the best possible education efforts and with the addition of costly processing equipment.</p>	<p>CalRecycle has revised this section to phase in the acceptable level. The change phased in the acceptable levels of incompatible material and the acceptable levels of organic waste in the material sent to disposal from 10 percent by 2022 to 20 percent on and after 2022 and 10 percent on and after 2024. This change was necessary to allow entities time to plan and make necessary adjustments to their operations. The 50% and 75% are statewide targets. In order to achieve these targets, regulatory limitations for processing organic waste must be implemented.</p> <p>The incompatible material limit only applies when organics are being sent from a solid waste facility or operation to a secondary facility or operation for further processing. This is not a final recovery target. The incompatible material limit is to ensure the “cleanliness” of the organic waste separated from the source separated organic waste stream and mixed organic waste stream in order to ensure that the bulk of material sent from the facility will be largely compatible with the type of facility that will be accepting it for further processing.</p>

Comment Number	Received From	Question/Comment	Response(s)
39	Helget, C, Republic Services	Recommendation: We strongly recommend that Cal Recycle distribute a flow chart of both 10% requirements so that stakeholders understand the operational aspects of these requirements and the enforcement implications.	CalRecycle staff has noted the comment. CalRecycle staff will develop tools to assist in the implementation of the regulations.
40	Helget, C, Republic Services	10% limit on incompatible material and the organic component of residual. Recommendation: We recommend that this threshold be replaced with the 50% in 2022 and 25% in 2025 which will be consistent with the thresholds established by SB 1383 or at least phase-in the contamination and residual standards through 2025 to allow facilities to adjust processing standards over time and until adequate markets evolve.	CalRecycle has revised these sections in response to comments. The section was revised to phase in the acceptable levels of incompatible material and the acceptable levels of organic waste in the material sent to disposal. The phase in will allow entities time to plan and make any adjustments in order to comply with the revised acceptable limits of 20% on and after 2022 and 10% on and after 2024. SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. In order to achieve these targets, regulatory limitations for processing organic waste must be implemented.
41	Helget, C, Republic Services	As the current container supply is rotated from service any requirement to replace single containers with the SB 1383 Regulations container requirements will produce generator confusion and color combinations that will be erratic in a service area. We believe that the hauler and local jurisdiction should be allowed to work out a reasonable container replacement plan as long as the containers meet the SB 1383 regulatory requirements by 2032. Question: Please clarify if such local container replacement plans will be allowed.	Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036.
42	Helget, C, Republic Services	The reporting requirements that we currently comply with under AB 1826 have significant crossover or overlap with the SB 1383 regulations repon:ing scheme. When SB 1383 becomes effective, will the SB 1383 reporting requirements supersede the AB 1826 requirements?? Recommendation: Clarify the relationship between both reporting schemes and eliminate AB 1826 conflicts as SB 1383 requirements are phased-in.	The respective reporting requirements do not supersede one another. They are separate rules. CalRecycle will be providing education and outreach as part of implementation and will assist in clarifying reporting requirements.
43	Helget, C, Republic Services	Section 18987.2 requires that biosolids be transported to composting or Anaerobic Digestion (AD), unless the "biosolids are not suitable for additional processing or recovery". Biosolids can currently be disposed or used for beneficial reuse. We are not sure what "suii::able for additional processing" means. In any case, we believe that the nondisposal option for landfilling or beneficial reuse of biosolids should be allowed, particularly during winter months when other recycling or land application options are limited. Recommendation: This section should be deleted or at least define what suitability means and revised to reflect that use for beneficial reuse is not disposal.	CalRecycle has deleted Section 18987.2 in response to comments.
44	Helget, C, Republic Services	Section 20750.1 requires new and expanded landfills to have segregated organic waste recovery activities which are described as "activities that divert organic waste". This provision is very broad. Question: Is a Construction and Demolition (C&D) operation sufficient? Or would this require some sort of processing of gray bin material at a landfill. As mentioned above, do the additional costs warrant an activity designed to capture a small amount of organics that may well not be recyclable.	Comment noted. Organic waste recovery activities include composting facilities or operations, in-vessel digestion facilities or operations, and other activities listed under Section 18983.1(b) that divert organic waste from disposal to constitute a reduction of landfill. The purpose of this section is to require new or expanding landfills to add organic waste recovery activities in order to reduce organic waste disposal. Also, landfills that do not have available land or the finance to implement an organic waste recovery activity on-site have the option to transport the waste off-site to another facility where a recovery activity can take place.

Comment Number	Received From	Question/Comment	Response(s)
			CalRecycle staff will develop tools to assist in the implementation of the regulations.
45	Helget, C, Republic Services	<p>Section 21695 requires that six months after the effective date of the regulations, landfills submit a detailed Status Impact Report prepared by a registered engineer. This report, according to the ISOR, is needed to determine potential impacts to the landfill from organics reduction. If necessary, the Joint Technical Document (JTD) must be updated. This additional report seems to duplicate the current permitting and JTD process. This Status Impact Report will be costly to prepare and we are very unclear as to the need and purpose of this report.</p> <p>Recommendation: This section should be deleted and this information can be updated when the facility JTD is updated to comply with these regulations or during a 5-Year Permit Review.</p>	<p>CalRecycle has revised Section 21695 in response to comments. The changes to the regulatory text include the requirement that operators identify those areas in the landfill that would remain with intermediate cover and to extend that date for submittal of the Status Impact Report (SIR) from 180 days to one year (365 days) from the effective date of these regulations. This standard is not duplicative of a five-year review. The purpose of the SIR is to assist operators better understand the potential impact the proposed regulations could have on their landfill which is different than the five-year review. A five-year review is completed by the EA every five years from the last review and evaluates (among other things) the information provided in the application for the proposed facility to determine whether or not the facility will be able to operate in accordance with state minimum standards and permit terms and conditions.</p> <p>Whereas, the SIR is a site specific, one-time submittal that is prepared by the operator after they have reviewed their landfill operations to determine any potential impacts from the reduction of organic disposal (waste flow) to their landfill. The one-year timeframe established in this regulation for the submittal of the SIR is necessary to assist the operator in determining and assessing in the timing of those impacts to properly implement any changes or modifications in a timely manner. Because only the potential impacts associated with the reduction of the amount waste disposed will be reviewed, staff believe that one-year from the effective date of the regulations is an adequate amount of time for the operator to meet the requirements of this section.</p> <p>In addition, this section provides a list of items to be considered by the operator in order to assist them complete the SIR. This information in items listed is needed in order to adequately evaluate the potential impacts to the landfill resulting from the reduction of organic disposal at landfills. If there will be no changes to a particular item, then a statement to that effect would be adequate.</p>
1000	Herl, Emily, Copia	<p>1383 is so important in motivating companies to send their food to feed the massive need our nonprofits have (we have at least four times more shelters, organizations, and programs asking us for food than we have companies donating). Unfortunately, doing the right thing for the environment and the community is not always a strong enough motivator to get our donors to commit the time, energy, and costs of donating their food waste. This requirement is truly a win-win, and legally backs up our plan to use one critical issue (hunger) to tackle another (food waste).</p>	<p>A change to the regulatory text was not necessary because this comment is in support of SB 1383's edible food recovery component.</p>
9145	Hilton, R., HF&H Consultants	<p>Section 0.1.2- The provisions of this section require that jurisdictions implement an SB 1383 compliant program by January 1, 2022. The regulations are clear that this timeline will not be altered by the inability of a jurisdiction to negotiate service agreements or implement rate changes. We are concerned that the requirement to implement programs at any cost is unreasonable and should be mitigated by placing controls on profiteering. The majority of agencies around the state have franchise agreements that last beyond this implementation date and assure the existing</p>	<p>A change in the regulatory text is not necessary. The regulations are effective in 2022, allowing for ample time for planning for lack of capacity or infrastructure deficiencies. Currently, it is 2020 and jurisdictions have until 2022 to address any capacity deficiencies and if necessary, they can be placed on a Correction Action Plan that allows for an extended timeframe to come into compliance. The regulations allow up to three years to come in to compliance on a CAP (in total this is effectively equivalent to the request five years).</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>service provider that their proposal for SB 1383 implementation will not be tested competitively through an RFP. Given the exclusive nature of most franchise agreements and the penalties for non compliance, private service providers have tremendous leverage over ratepayers in this situation. We have already seen this unfold as we negotiate organics rates to comply with AB 1826; communities are often receiving proposals for stand alone organics rates at 200% 300% of the price of equivalent trash service, despite the fact there is no demonstrable basis for these multiples. In some cases, the service providers have told jurisdictions that they are unwilling to provide supporting documentation for how they arrive at those costs. By comparison, in competitive procurement processes or negotiations where the contract was not assured beyond the compliance date, we have been very successful negotiating agreements in good faith. HF&amp;H supports the goals of SB 1383 and we respect that CalRecycle cannot forgive implementation requirements solely on the basis that agencies do not want to increase rates. However, as a public agency, CalRecycle has a responsibility to ensure that these regulations do not write a ""blank check"" to the private sector providers of these services. HF&amp;H recommends that CalRecycle provide a mechanism to mitigate the ability of private service providers to take advantage of jurisdictions seeking to comply with the regulations in good faith. While there is no perfect solution to this dilemma, we have a few potential mitigation options:</p> <ol style="list-style-type: none"> <li>1. Require private service providers to supply local jurisdictions with any supporting documentation, including all information about current costs of service and operations in their community, during any inducement into a public contract.</li> <li>2. Create a process for jurisdictions to appeal to CalRecycle or an independent third party to review and make determinations about whether rates are reasonable or reflect excessive profit generation. In cases where they do, jurisdictions should be: <ol style="list-style-type: none"> <li>1) permitted to terminate their agreements, subject to certain notice, without penalty;</li> <li>2) granted a two year compliance waiver, specific to the compliance elements that are subject to the scope of the franchise agreement; and/or,</li> <li>3) required to take those responsibilities in house with the jurisdiction or competitively solicit proposals for the required services.</li> </ol> </li> <li>3. CalRecycle could regulate the renegotiation process and determine what is considered an appropriate and reasonable rate. CalRecycle may consider modeling this regulatory process after the CPUC rate regulation process for water and energy utilities.</li> </ol>	
9146	Hilton, R., HF&H Consultants	<p>This section appears to prohibit a local agency from reserving available capacity at a facility for generators in that jurisdiction. If a local agency provides the funding and/or assurance of material flow that enables the development of organics processing infrastructure, that agency should have the ability to reserve that infrastructure for the benefit of its constituents and/or ratepayers. Private sector developers of processing infrastructure will limit access to their capacity based on a</p>	<p>A change to the regulatory text is not necessary. Section 189901 (c) (4) provides that this section does not prohibit a jurisdiction from arranging through a contract or franchise for a hauler to transport organic waste to a particular solid waste facility or operation for processing or recovery. Nothing in the regulations prohibits facilities from contracting with various parties, including jurisdictions, for capacity within their facility. What the regulations do prohibit is a jurisdiction adopting an ordinance or similar restriction to legally prohibit material from other jurisdictions</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>number of self interested business decisions, the most obvious of which is to create competitive advantage. In order to effectively stimulate both private and public investment into the necessary infrastructure, it is critical that the public sector not be saddled with any more competitive disadvantages than already exist. Additionally, if a local agency acts as a host for an organics processing facility and accepts negative impacts associated with hosting such a processing facility, it seems reasonable that the agency should be entitled to establish "host mitigation fees" on materials originating outside that jurisdiction. These arrangements are often made through conditional use permits, which may be interpreted as "policies". These sorts of fees are common in the solid waste industry in California and may incentivize jurisdictions to invest in building new organics processing facilities. HF&amp;H recommends eliminating or clarifying the provisions of this subsection to ensure equitable and consistent requirements for publicly owned facilities. HF&amp;H would particularly like to see the ability for jurisdictions to reserve ongoing capacity for facilities partially or fully funded by the jurisdiction.</p>	<p>from going to facilities within its boundaries simply because of where the material originated. This is consistent with existing case-law. Nothing in the regulatory text would limit the application of appropriate standards to imported waste. Section 18990.1(c)(1) provides that this section does not require a solid waste facility or operation to accept organic waste that does not meet the quality standards established by the solid waste facility or operation.</p>
9147	Hilton, R., HF&H Consultants	<p>CalRecycle has frequently described these regulations as a shared responsibility between a number of stakeholders in the solid waste management system in California. Local agencies have been encouraged by the promise of this transition from a jurisdiction focused compliance program to one where all of the stakeholders are accountable. Unfortunately, Article 13 and several other reporting and record keeping subsections of the agreement appear to revert to a jurisdiction focused compliance program, ultimately requiring each jurisdiction to gather and report data to CalRecycle and placing nearly all of the penalties on local agencies for failure to comply. Given the cross jurisdictional nature of hauling and processing facilities, it is easy and very common for private providers to play "shell games" with diversion, reporting the same diversion to multiple agencies. HF&amp;H requests that CalRecycle establish a direct reporting requirement to CalRecycle for haulers and processors, including but not limited to specifying data by jurisdiction and material type and balancing inputs and outputs. Unlike AB 901, we request that all data submitted through this process be fully transparent to the public, or at least to the jurisdiction(s) that are the subject of the reports. CalRecycle should then utilize these reports to reconcile the data provided by the jurisdictions. Furthermore, we recommend that the current requirements on jurisdictions be placed directly on haulers and processors (public or private) for contamination monitoring, outreach, and recordkeeping/reporting. We believe this approach will better align with the ""shared responsibility"" intention of SB 1383 and may result in more actual organics diversion rather than reported diversion.</p>	<p>A change to the regulatory text is not necessary. The Department will not be implementing a reporting requirement for haulers other than what is already required under AB 901. SB 1383 allows jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and specifies jurisdictions oversee the day-to-day compliance of entities (generators and haulers) under their authority and requires the Department to oversee the jurisdiction's compliance with the regulatory requirements.</p>
9148	Hilton, R., HF&H Consultants	<p>""Route review"" is defined as ""a visual inspection of containers along a hauler route for the purpose of determining container contamination and may include mechanical inspection methods such as the use of cameras."" While the regulations</p>	<p>Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>require route reviews to be conducted on randomly selected containers so that all collection routes are reviewed quarterly, no minimum quantity of container inspections per route is specified. This may result in haulers or jurisdictions inspecting minimal containers during route reviews. Another concern is an inconsistent interpretation or application of the minimum standards by Local Enforcement Agents. HF&amp;H recommends that CalRecycle amend this definition or the corresponding container contamination section (18984.5) to specify a minimum percentage of containers or number of customers along the route to be inspected. This approach will allow for a consistent application of the regulations across jurisdictions and ensure that the intent of this section is realized.</p>	<p>on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction.</p>
9149	Hilton, R., HF&H Consultants	<p>This section details organic waste dispositions that constitute a reduction of landfill disposal, but it does not include edible food recovered for human consumption. HF&amp;H suggests amending this section to include edible food recovered for human consumption as a reduction of landfill disposal.</p>	<p>CalRecycle appreciates the desire to include recovered edible food in Section 18983.1(b), but this section specifically addresses organic waste. "Edible Food" is not an organic waste. As defined in Section 18983(a)(18) "edible food" is not solid waste if it is recovered and not discarded.</p>
9150	Hilton, R., HF&H Consultants	<p>This section describes the requirement to identify the amount of capacity at edible food recovery organizations that is needed to recover 20% of edible food that is estimated to be disposed. However, it is unclear how the 20% is to be quantified. HF&amp;H suggests that CalRecycle consider and clarify the following questions: 1. Is this 20% of the edible food that the Tier 1/2 generators are estimated to dispose or 20% of all commercial edible food estimated to be disposed? 2. Does the 20% include residential edible food estimated to be disposed? 3. Can CalRecycle provide benchmarks for total edible food recovery volumes and volumes by type of business?</p>	<p>SB 1383's baseline for currently disposed edible food has not yet been established. CalRecycle's 2018 disposal-based and generator-based waste characterization studies sorted food waste into eight separate categories. The data collected from these studies will be used to help inform how CalRecycle measures the edible food baseline for SB 1383.</p> <p>Also, CalRecycle does intend on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of the edible food recovery capacity planning section.</p>
9151	Hilton, R., HF&H Consultants	<p>This subsection allows jurisdictions to waive organics program requirements due to physical space limitations. While it seems appropriate and necessary to allow for some limited space waivers, those waivers could potentially exempt a significant number of generators in older buildings and in urban areas where parking and rentable space are highly valuable. In addition, in non exclusive service areas, the ability of the hauler to sign off on the space accommodation waiver may create unintended consequences that allow haulers to sign off on those waivers to undercut competition, and/or avoid providing recycling service. HF&amp;H recommends that CalRecycle clarify what constitutes "'evidence demonstrating a lack of adequate space.'" Implementing standards, a process for allowing potential waivers for space constraints, or minimum documentation standards will encourage a consistent application of this section across jurisdictions, as opposed to leaving interpretation up to the Local Enforcement Agents.</p>	<p>Since it is a jurisdiction provided waiver, a jurisdiction can set more stringent criteria in administering the physical space waiver. CalRecycle rejects the assumption that a significant number of generators could demonstrate legitimate physical space constraints. According to jurisdictions with similar space constraints waivers, very few businesses can demonstrate the existences of space constraints that cannot be addressed. There are few instances where a business's existing waste collection space could not accommodate an additional organic waste recycling container if the existing containers are downsized (e.g. two 90-gallon bins could be replaced with three 60-gallon bins and occupy the same space). This waiver intends to allow flexibility for businesses with legitimate and cost-prohibitive space constraints without compromising the state's ability to achieve the organic waste reduction targets.</p> <p>In regards to levying fees jurisdictions should consult their city our county counsel on how to appropriately structure fees.</p> <p>CalRecycle has not included implementation standards or minimum documentation requirements to allow jurisdictions set appropriate criteria. Jurisdictions, not haulers, administer the waiver, so the physical space waiver will not result in a race to the bottom in nonexclusive service areas. A hauler, licensed architect, engineer, or similarly qualify source may provide evidence that a premise has a legitimate space constraint. If a jurisdiction has concerns about haulers in</p>

Comment Number	Received From	Question/Comment	Response(s)
			nonexclusive service areas, they can opt not to issue waivers or use a qualified source other than a hauler to demonstrate lack of adequate space for separate organic waste containers.
9152	Hilton, R., HF&H Consultants	<p>This section requires that each jurisdiction develop a list of edible food recovery services and organizations operating within each jurisdiction and post the information on their website. It seems that many food recovery service providers and organizations work across jurisdictional boundaries including across county boundaries. There may be a significant amount of duplication of effort and dozens of inquiries to the food recovery services and organizations (who are typically shortstaffed, understaffed, or run by volunteers). HF&amp;H recommends that CalRecycle consider establishing a State wide database similar to FACIT where food recovery service providers and organizations can register and provide their information once for access to all jurisdictions and generators. This would also allow for a comparable level of information to be requested and provided in these lists (such as what type of food will and will not be accepted). Alternatively, CalRecycle may want to consider establishing the generation of the list as a county requirement with the posting of the county produced list on a jurisdiction’s website as a jurisdictional requirement.</p>	<p>Although CalRecycle intends to provide tools and resources prior to 2022 to assist with SB 1383 edible food recovery regulatory compliance, it is critical that jurisdictions develop their own lists of food recovery organizations and services operating in their area. Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help jurisdictions assess their edible food recovery capacity and identify capacity needs that exist. In addition, developing local lists will help commercial edible food generators find organizations and services that are capable of safely handling and distributing recovered food on a regular basis in their area. The list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with, and thereby help ensure that edible food in the jurisdiction is not sent to landfills, but rather put to its highest and best use of helping to feed people in need.</p>
9153	Hilton, R., HF&H Consultants	<p>The requirement for food recovery organizations and services to collect and maintain records is an important way to verify donation records submitted by generators. However, it should be recognized that this reporting requirement places an increased burden on food recovery organizations and services, many of which are under staffed, volunteer run, and/or operating on donations. While it appears that the intent of the six ton minimum is to target larger food recovery organizations and services, it is important to note that small food recovery organizations fall into this category as well as they are typically able to recover more than six tons of edible food per year. HF&amp;H recommends that CalRecycle consider increasing the six ton threshold for reporting requirements. This reporting information could also be integrated into State wide database of information similar to FACIT, as suggested above. Additionally, HF&amp;H recommends CalRecycle provide funding to support these organizations’ food recovery services.</p>	<p>The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383’s regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance. To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold from the regulatory text. The final regulations require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food directly from commercial edible food generators, pursuant to Section 18991.3 (b) to maintain records of the food they receive from those generators. Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state’s progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators. Regarding the comment, “HF&amp;H recommends CalRecycle provide funding to support these organizations food recovery services.” CalRecycle has awarded 20 million dollars to over 60</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>grantees through its Food Waste Prevention and Rescue Grant Program to fund food recovery organizations, food recovery services, and food waste prevention projects in California. Regarding the comment about creating a statewide reporting database, a change to the regulatory text was not necessary. Requiring regulated food recovery services and organizations to report directly to the state rather than to jurisdictions, would severely reduce each jurisdiction's ability to assess the effectiveness of their food recovery program and identify if improvements need to be made. Furthermore, the data that is reported directly to the jurisdiction is critical for helping the jurisdiction better understand the food recovery organizations and services making the greatest impact in their jurisdiction. This data can be used to help jurisdictions make decisions about food recovery organizations and services to promote and potentially direct funding to.</p>
9154	Hilton, R., HF&H Consultants	<p>This section requires edible food generators to maintain copies of contracts, written agreements, and other documents between the generator and the contracted food recovery organizations. However, many food recovery organizations serve a significant number of different food generators, including one time donors, and typically do not operate under contracts. The time to write, review, and mutually approve these contracts places an increased burden on food recovery organizations as well as generators; this burden may be magnified considering the time sensitive nature of recovering perishable edible food.</p> <p>HF&amp;H requests that CalRecycle clarify what documents comply with these requirements, and provide guidance for food recovery organizations and services on this contracting process. Additionally, the tonnage minimum for food recovery reporting requirements described in Section 18991.5(a) could also be used to specify which organizations are required to operate using formal contracts.</p>	<p>A change to the regulatory text was not necessary for the following reasons. First, having a contract or written agreement with supporting documentation of the contract or written agreement is critical for enforcement purposes and to ensure that edible food is recovered in a safe, professional, and reliable manner. Contracts and written agreements add a layer of food safety, professionalism, and reliability into food recovery and also can serve as a mechanism to help to protect food recovery organizations and food recovery services from donation dumping. CalRecycle and HF&amp;H developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, commercial edible food generators, and jurisdictions. The model food recovery agreement is only a template and is intended to be customized based on the needs of food recovery entities and commercial edible food generators. Second, no commercial edible food generators will be one-time donors. If they only donate once, then they will very likely not be in compliance with SB 1383's edible food recovery regulations. In addition, commercial edible food generators should not be infrequent donors because these industry groups typically have large amounts of recoverable edible food that they otherwise would dispose.</p>
9155	Hilton, R., HF&H Consultants	<p>This article will require a significant expenditure by jurisdictions throughout California to staff the enforcement efforts, including but not limited to: route reviews, compliance reviews, contamination monitoring, follow up site visits, and the issuing of fines. Some agencies will choose to hire staff or incorporate these responsibilities into the work performed by existing code enforcement officers and/or health inspectors. In some agencies, there may not be a sufficient workload created by these requirements to justify a full time position. In other agencies, there may be political objections to funding staff positions for this type of enforcement when other critical public health and safety matters are under enforced. During the enforcement workshop, CalRecycle suggested the potential for CalRecycle to perform the enforcement on behalf of agencies, similar to how agencies can arrange for CalRecycle to be the Local Enforcement Agency for regulating solid waste facilities.</p> <p>HF&amp;H recommends that CalRecycle provide an option for jurisdictions to contract with CalRecycle to perform the inspection and enforcement procedures.</p>	<p>A change to the regulatory text is not necessary. CalRecycle will not be contracting with jurisdictions to perform inspection and enforcement actions. There are insufficient resources at the state level to contract out for jurisdictions.</p>

Comment Number	Received From	Question/Comment	Response(s)
9156	Hilton, R., HF&H Consultants	<p>Base Table 1. Section 18984.5(b) This section of the table states that a fine may be issued if a jurisdiction fails to conduct route reviews on randomly selected containers for at least one collection route on each collection day. However, Section 18984.5 does not specify this requirement; they are only required to inspect randomly such that all routes are inspected quarterly.</p> <p>HF&amp;H recommends that CalRecycle update the base table to match the requirements outlined in Section 18984.5.</p>	<p>CalRecycle has revised sections 18984.5 and 18997.3 in response to comments. Section 18984.5 has been changed to reflect that a jurisdiction shall conduct a route review for prohibited container contaminants that results in all hauler routes being reviewed annually, instead of quarterly. The penalty tables in Section 18997.3 were removed and replaced with a new penalty structure.</p>
9157	Hilton, R., HF&H Consultants	<p>Section 18982 – Article 9 Section 18990.2(c)(2) references “a person, gleaner, or food facility,” but no definition of “gleaner” is provided in Article 1 Section 18982. HF&amp;H recommends including a definition of the word “gleaner” as defined by AB 1219 The California Good Samaritan Food Donation Act: “Gleaner” means a person who harvests for free distribution to the needy, or for donation to a nonprofit organization for ultimate distribution to the needy, an agricultural crop that has been donated by the owner.”</p>	<p>The term “gleaner” is used when referencing the Health and Safety Code in Article 9 Section 18990.2(c)(2). One commenter recommended that a definition for the term “gleaner” should be included in the regulations. A definition for “gleaner” was not added because regulatory provision is references Section 114432 of the Health and Safety Code. Section 114432 of the Health and Safety Code provides the definition of “gleaner.”</p>
9158	Hilton, R., HF&H Consultants	<p>The regulations seem to require jurisdictions to have some accountability for collection and landfill disposal reduction of organic textiles and carpets; although it is not clear to what extent. This does not seem practical for several reasons such as the difficulty in differentiating between organic and non organic textile and carpet and the limitations of single, two , and three container collection programs to collect and process these materials.</p> <p>Given that these materials are traditionally handled outside the single, two, and threecontainer collection programs, that the carpet CARE program is addressing carpet recycling statewide, and many thrift organizations are handling textiles, HF&amp;H recommends that the regulations exclude these materials from the definition of organics for the purposes of establishing program requirements for residents, businesses, and jurisdictions.</p>	<p>Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.</p> <p>Textiles and carpets are not normally accepted by organic waste recycling facilities such as composting or in-vessel facility that takes materials in green containers. However, CalRecycle included this provision allowing textiles in green containers because stakeholders during the informal rulemaking workshops requested such flexibility. CalRecycle is not aware of any compelling reason to prohibit textiles from being placed in green containers.</p>
9159	Hilton, R., HF&H Consultants	<p>This section describes prohibited container contaminants as a zero tolerance definition. This becomes costly for jurisdictions or their designees to tag, notice, document, and report when conducting container inspections.</p> <p>HF&amp;H request that CalRecycle please consider providing some allowance for minimal or insignificant levels of prohibited container contaminants in order to minimize costs and increase compliance for jurisdictions.</p>	<p>Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
9160	Hilton, R., HF&H Consultants	Some local programs allow for textiles to be collected with blue container materials. HF&H recommends modifying the regulations to allow for textiles to be placed with blue container materials if the textiles are separated for the purposes of diversion.	Sections 18984.1 and 18984.2 specifically state that textiles are allowed in the blue container.
9161	Hilton, R., HF&H Consultants	HF&H recommends that textiles be included as a prohibited container contaminant in green containers as most organics facilities do not accept textiles for processing.	Textiles and carpets are not normally accepted by organic waste recycling facilities such as composting or in-vessel facility that takes materials in green containers. However, CalRecycle included this provision allowing textiles in green containers because stakeholders during the informal rulemaking workshops requested such flexibility. CalRecycle is not aware of any compelling reason to prohibit textiles from being placed in green containers.
9162	Hilton, R., HF&H Consultants	This language requires wood and dry lumber to be placed in the Blue Cart. HF&H suggests allowing for wood and dry lumber to be placed in the blue or green containers based on the jurisdiction's processing programs.	CalRecycle agrees with the comment that allowing for wood and dry lumber to be placed in the blue or green containers should be based on the jurisdictions processing programs. The regulations already allow organic waste, which can include non-hazardous wood and dry lumber, to be included in the green container. The regulations also already allow for non-hazardous wood and dry lumber to be included in the blue container. <p>Regarding treated hazardous wood waste, CalRecycle revised Section 18984.1 to add a new subsection indicating that this material should not be allowed in the blue container.</p>
9163	Hilton, R., HF&H Consultants	If it is correct to interpret that the regulations require that materials collected in blue containers be delivered to high diversion organic waste facilities, this seems to be an unrealistic requirement for all recyclable materials.	Blue containers do not need to be transported to high diversion organic waste processing facilities.

Comment Number	Received From	Question/Comment	Response(s)
		HF&H requests that CalRecycle clarify if the regulations allow for recyclable materials collected in the blue carts to be delivered to a transfer/processing facility provided that the materials are processed for 50% and then 75% recovery of the organic portion (e.g., papers are targeted for recovery).	
9164	Hilton, R., HF&H Consultants	HF&H requests that CalRecycle clarify if chipping and grinding activities are considered allowable landfill reduction activities, and if so, please amend this section to include this.	Chipping and Grinding activities are included as a reduction of landfill disposal per section 18983.1(b) of these regulations. Subdivision (b)(2) specifies that organic waste sent to a Compostable Material Handling Operation or Facility as defined in Section 17852(a)(12) is a reduction of landfill disposal. Section 17852(a)(12) is defined to included chipping and grinding operations and facilities.
9165	Hilton, R., HF&H Consultants	This section states that carpets, non compostable paper, and hazardous wood waste are prohibited from being placed in the green container. Currently the CDCFA restricts movement of certain organics within quarantine zones. This is addressed elsewhere in the proposed regulation text for non local entities and at the facility level when measuring organic recovery rates, but not at the point of collection. HF&H Recommends that CalRecycle amend the list of prohibited materials to include ""material subject to a quarantine on movement issued by a county agricultural commissioner."" Alternatively, the definition of organic waste in Section 18982(a)(46) could be amended to state ""material subject to a quarantine on movement issued by a county agricultural commissioner is considered incompatible materials rather than organic waste."	Thank you for the comment. CalRecycle revised Section 18984.13 regarding quarantine. These materials may be disposed without counting against a jurisdiction as they comprise a minimal portion of the organic waste stream and/or are uniquely difficult or problematic to recover from a health and safety perspective. Also, the measurement standards in Section 18984.5 that apply to performance-based source separated organic waste collection systems was amended to state: "For the purposes of demonstrating compliance with 18998.1, organic waste that is textiles, carpet, hazardous wood waste, human waste, pet waste, or material subject to a quarantine on movement issued by a county agricultural commissioner, is not required to be measured as organic waste."
9166	Hilton, R., HF&H Consultants	Section 18984.1(a)(1) This section states that green containers will be provided for the collection of organic waste. For jurisdictions where organics service is not currently provided or where customers provide their own containers, this would incur significant costs. HF&H requests that CalRecycle consider and clarify the following questions: Can jurisdictions allow for use of customer provided containers for collection rather than be required to provide containers? Can bags be used for collection of yard trimmings, pine needles, and pine cones? If generators can use their own containers, do the containers need to meet the color and labeling requirements? Can generators use bags?	No, container colors and requirements are standardized and required to be provided by the jurisdiction. CalRecycle already revised Sections 18984.1, 18984.2, and 18984.3(e) to provide clarity about when a jurisdiction may allow plastic bags to be placed in containers. The issue of whether to allow bags hinges primarily on whether or not the receiving facility will accept them. Many facilities are not accepting bags because of operational problems and product quality issues. In order to document jurisdiction decisions about the use of bags, CalRecycle also revised Section 18984.4(a) to require that jurisdictions keep information in their records about the facilities to which they send bags.
9167	Hilton, R., HF&H Consultants	This section states that textiles, carpets, plastic coated paper, and human or pet waste may not be collected in the blue container for non local entities. This requirement appears to be incongruent with the requirements placed on local entities. HF&H recommends that CalRecycle amend the definition to align with the requirements placed on jurisdictions in Sections 18984.1 and 18984.2.	Thank you for the comment. CalRecycle amended the applicable sections for consistency.

Comment Number	Received From	Question/Comment	Response(s)
9168	Hilton, R., HF&H Consultants	HF&H requests that the regulations specify the minimum frequency of collection for blue containers. Is every other week acceptable to reduce costs to rate payers?	A change to the regulatory text is not necessary because every other week collection for blue containers is already allowed and many jurisdictions already offer this as part of their program.
9169	Hilton, R., HF&H Consultants	<p>This section requires that containers at the end of their useful life are replaced with SB 1383 color compliant containers. This may lead to conflicts with current color schemes, or at a minimum may lead to containers of inconsistent colors throughout a jurisdiction. Inconsistent coloring dispersed throughout jurisdiction makes education and outreach a challenge as customers with different colored containers will require different messaging. Furthermore, this approach does not consider current container inventories that have already been procured to replace containers at the end of their useful life.</p> <p>HF&amp;H recommends that CalRecycle eliminate the need to replace containers at the end of their useful life with SB 1383 color compliant containers, and instead mandate that all containers comply with the color requirements described above by 2032. This will allow jurisdictions to utilize current container inventories and allow for a uniform replacement of new containers and messaging throughout the jurisdiction.</p>	<p>The regulations provide that a jurisdiction is not required to replace functional containers, including containers purchased prior to January 1, 2022, that do not comply with the color requirements of this article prior to the end of the useful life of those containers, or prior to January 1, 2036, whichever comes first. Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036. Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. The labeling requirements were refined through the informal public rulemaking process to accommodate the various types of labels jurisdictions currently use on their containers. Stakeholders indicated that these types of labels are effective and durable. Correctly-colored labels may be applied to existing bins or lids until the containers are replaced at the end of their useful life.</p> <p>Labeling requirements, commencing January 1, 2022, only apply to new containers or lids. Thus, imprinting of labels would be directly onto new containers, either at the end of old containers' useful life or by 2036.</p> <p>A jurisdiction's designee can place labels on the containers.</p> <p>The regulations already apply to all containers provided by a hauler, including temporary dumpsters. The regulations specify that all containers provided by a hauler must meet both the container color and container label requirements by 2036. However, the regulations do allow for either the lid or the body to meet the color requirement.</p> <p>A change was made to allow for the exposed portion of lid or body to be required color and to allow the required color to be on either the lid or the body, not just the lid. The change is necessary because this approach is the least costly and burdensome one that still achieves the organics disposal reductions.</p> <p>For the text and graphics, this section references that primary materials must be included. If there is a change in the primary materials, then the information would need to be updated as containers are replaced. The regulations are allowing flexibility on size of the label (text and graphics), the requirement is only for primary materials, and all containers need labels. However, this includes all containers and residential/non-residential. Also, for consistency purposes, CalRecycle revised Section 18984.8(c)(1) to mention primary items.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>Nothing prohibits jurisdiction from mailing labels for existing containers, in addition to ensuring that new containers are properly labeled.</p> <p>The current text reflects stakeholder input during the informal rulemaking period that it would be costly to place labels on all containers. CalRecycle determined that this change would provide jurisdictions with flexibility to implement less burdensome education methods (e.g., labels on new containers) that ensure organic waste is collected and recovered, to support the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions. However, nothing in the regulations prohibits a jurisdiction from placing labels on all containers at an earlier time. Jurisdictions may also use inventory that was purchased prior to 2022.</p>
9170	Hilton, R., HF&H Consultants	<p>Jurisdictions with high elevation areas face unique challenges in meeting SB1383's requirements. The necessary use of bear boxes presents significant capacity and siting issues for bins in this area. This limitation is exacerbated by winter snow conditions that create access and space challenges for bins.</p> <p>HF&amp;H suggests including a 5,000 foot elevation exemption in this section in order to address the specific environmental needs of high elevation communities.</p>	<p>CalRecycle added Section 18984.12(d) in response to this comment. The changes will allow jurisdictions located at or above 4,500 feet apply for a waiver from the food and food soiled paper organic waste collection requirements. Jurisdictions would also be waived from providing containers to their generators. This waiver would apply for residential and small commercial generators that are not regulated by AB 1826.</p> <p>As the commenter noted, jurisdictions 4,500 feet and above face specific waste collection challenges as high-elevation, forested areas that include bear and other wild animal habitat. Food waste collection can attract vectors, including bears, to populated areas creating collection and public safety issues. This change is necessary to prevent a public safety issue that food waste separation and recycling can pose. Generators in high-elevation jurisdictions will be able to continue to use customer provided containers that fit in their locked bear boxes.</p> <p>Jurisdictions that qualify for this waiver, however, will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. This comment argued that the limited space of locked bear boxes, which this commenter's jurisdiction uses to secure garbage bins, creates a capacity issue. Although CalRecycle recognizes the threat that vectors, like bears, pose from the collection of food waste, nothing prevents the jurisdiction from providing smaller containers that could fit inside bear boxes.</p>
9171	Hilton, R., HF&H Consultants	<p>If containers need to be replaced at the end of their useful life to meet the prescribed color scheme, a jurisdiction could have a variety of colors in service as some containers will fail and be replaced before other containers. This will be confusing for customers and will make jurisdictions' education efforts challenging. Furthermore, haulers have invested in container inventories of existing containers and it will benefit the rate payers to deplete these inventories before rolling out new colors.</p> <p>HF&amp;H request that Cal Recycle amend this section to state that the jurisdiction is not required to replace functional containers "until such time the jurisdiction, or its designee, distributes new containers to all customers in the jurisdiction, or before January 1, 2032, whichever occurs first?"</p>	<p>Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036.</p>
9172	Hilton, R., HF&H Consultants	<p>In some communities, customers provide their own containers, and distributing new containers will be costly. HF&amp;H requests that CalRecycle clarify if the regulations allow for continued use of customer provided containers.</p>	<p>Jurisdictions are required to provide customer's containers; however, the regulations allow for a phasing in by Jan. 1, 2036. CalRecycle has determined that the mandatory collection service requirements and container color and labeling provisions are necessary to maintain consistent standards throughout the state to reduce contamination of organic waste and ensure that collected organic waste is clean and recoverable in order to meet the aforementioned diversion</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>goals. Furthermore, the regulations provide that jurisdictions do not have to replace functional containers to comply with color requirements for any containers purchased prior to January 1, 2022, until 2036. Considering that the regulations will be adopted in 2019 and do not go into effect until 2022, jurisdictions will have 17 years advance notice of the color requirements which is plenty of time to arrange for appropriate color-compliant containers. The collection container uniformity required by this and subsequent sections is necessary to respond to stakeholder feedback, enhance consumer education about organic waste recycling, reduce contamination, and maintain the highest degree of recoverability for source separated organic wastes. This will enhance the education of generators regardless of their location in California. This requirement was recommended by various stakeholders to create consistency and reduce generators' confusion about which container to place organic waste into and thus will result in less contamination and maximize organic waste recovery. See statement of purpose and necessity for Article 3 and for Section 18984.1 -18984.7. Article 1, Section 18981.2 allows for jurisdictions to designate responsibility for providing containers to its hauler.</p>
9173	Hilton, R., HF&H Consultants	<p>This section appears to be focused on multi family and commercial property owners. HF&amp;H requests that the regulation states that property owners of single family residential premises are excluded.</p>	<p>CalRecycle revised Section 18984.10 in response to this comment to clarify that requirements on commercial business owners do not pertain to single family residences. Also note, in the current language, CalRecycle removed 'property owners' from this section.</p>
9174	Hilton, R., HF&H Consultants	<p>Many jurisdictions allow residents and businesses conducting on site composting to opt out of organics collection services. A similar waiver could be included in the regulations. HF&amp;H suggests amending the collection frequency waiver to also allow a jurisdiction to apply for the waiver for all or some of its service area and not have to administer individual collection frequency waivers for each customer. This is particularly important in terms of managing cost impacts for rate payers.</p>	<p>The regulatory language is written generally enough to provide some discretion in how a jurisdiction would implement collection frequency waivers and could consider a method of doing this by service area rather than by an individual generator request.</p>
9175	Hilton, R., HF&H Consultants	<p>China's National Sword has presented difficult market conditions for paper. HF&amp;H asks if any waivers can be provided to address lack of markets?</p>	<p>The regulations allow for a corrective action plan where there are circumstances outside of a jurisdiction's control and when the jurisdiction has demonstrated substantial effort.</p>
9176	Hilton, R., HF&H Consultants	<p>This section requires public education materials in various languages if more than 5% of the jurisdiction's population is identified as a "limited English speaking household," or as "linguistically isolated" by the U.S Census Bureau. This can be burdensome particularly if a community has several different languages spoken among its population. HF&amp;H recommends that CalRecycle consider increasing the percentage threshold to reduce the cost associated with preparation of public education materials in multiple languages, and/or allow for the compliance to be accomplished with a short statement (in the applicable language) that directs the non English speaking person to the jurisdiction's website for materials in other languages, or allows for graphic rich public education materials as a possible substitute.</p>	<p>Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.</p>

Comment Number	Received From	Question/Comment	Response(s)
9177	Hilton, R., HF&H Consultants	HF&H recommends that the edible food recovery education requirements be phased in with a focus on Tier One by February 1, 2022 and then Tier Two by February 1, 2024.	The regulations are structured so that tier two commercial edible food generators have an additional two years to prepare for compliance. They have been given an additional two years to prepare because many tier two generators do not have existing food donation practices in place, and they often have hot prepared foods to donate, which can be more challenging to recover than other types of non-prepared foods. These generators need to be educated early so that they are aware of their requirements, and so that they have ample time to prepare for compliance. Receiving education early is critical for helping ensure a higher rate of compliance among tier two commercial edible food generators, and therefore critical for helping California achieve its 20% edible food recovery goal. For these reasons, tier two commercial edible food generators must receive education at the same time as the tier one commercial edible food generators.
9178	Hilton, R., HF&H Consultants	In order to maintain consistency with Section 18988.3(b)(5), HF&H suggests amending this statement to exclude any requirements for self hauler and back hauling related to single family generators.	Jurisdictions are not required to identify every self-hauler. They are required to adopt an ordinance that requires compliance and provide general education about self-hauler requirements. Many comments noted that it would be difficult to identify and provide education information to all self-haulers, such as landscape companies, because jurisdictions do not have business license information on these entities; dedicating additional resources to identifying and educating all self-haulers would be burdensome and costly. Some jurisdictions do require businesses that self-haul, back-haul, share service, or use a third-party independent recycler to submit a Certification of Recycling Service form with information about where they are taking the recyclables or organics. CalRecycle modified deleted the requirements that jurisdictions separately identify and provide education to all self-haulers, along with associated reporting requirements. CalRecycle added a new Section 18985.1(a)(7) to require jurisdictions to include educational material on self-hauling requirements in the educational material that the jurisdictions already are required to provide to all generators. CalRecycle revised Section 18985.1(b) to include all education requirements for single unsegregated collection systems.
9179	Hilton, R., HF&H Consultants	This section requires that counties, in coordination with their cities, estimate the amount of organics disposed, the amount of verifiably available organics recovery capacity, and the estimated additional capacity needed to comply with state goals, through consultation with the Local Enforcement Agency, the local task force, haulers, facility operators and owners, and community composting facilities. The completeness and accuracy of the data collection is entirely dependent upon the cooperation of and provision of data by the facilities in question. All too often, processing facilities provide incomplete information in response to capacity studies or simply decline to participate at all. If CalRecycle intends to require that public agencies conduct the process described herein, it seems reasonable to require participation and provision of accurate information by the facility operators. While this subsection requires that entities contacted respond to the jurisdictions request, there are no mandatory timeframes or prescribed penalties for their inability or unwillingness to comply. HF&H recommends establishing a timeframe in which entities must reply to jurisdictions, as well as an enforcement mechanism (perhaps an addition to Article 16). Ideally, CalRecycle would handle the enforcement of this since many	Thank you for the comment. Article 11 was revised to specify a timeframe in which entities must reply to jurisdictions. CalRecycle may consider enforcement of these timeframes.

Comment Number	Received From	Question/Comment	Response(s)
		jurisdictions may be seeking information and capacity outside of their jurisdiction, which impacts their ability to legally enforce any fines levied.	
9180	Hilton, R., HF&H Consultants	In preparing edible food recovery capacity estimates described here, jurisdictions will need data on the percentage of food waste disposed that is edible food. HF&H asks CalRecycle to clarify if they can provide a benchmark for this edible food disposal percentage.	CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. In addition, CalRecycle also intends on providing other resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.
9181	Hilton, R., HF&H Consultants	The provisions of this section require that jurisdictions procure a minimum amount of recycled organic waste products (compost and renewable transportation fuel) annually, or contract with direct service providers to procure these materials. HF&H believes that the requirement to procure recycled organic waste products is limited in scope as to the types of products that may be procured. HF&H recommends that CalRecycle add ground cover, mulch, soil amendments, and an allowance for additional recycled organic waste products (as approved by CalRecycle) to account for future technological and product developments. Soil amendments are considered a reduction in landfill disposal per Section 18983.1(b)(5) and therefore should also be an acceptable form of recovered organic waste for procurement to close the loop. Furthermore, it would be beneficial for CalRecycle to post a list of approved recycled organic waste products on their website so that other jurisdictions are aware of additional procurement opportunities. Additionally, it may be useful for CalRecycle to have a vendor web portal that allows jurisdictions to procure recovered organic waste products from other jurisdictions or companies who output more products than they can currently utilize.	Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards. Regarding soil amendments and adding an option for approval of “future technological and product developments”, CalRecycle disagrees due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of “soil amendments” and “future technological and product development” raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors. CalRecycle has also added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. If soil amendments meet that criteria, they may be considered compost. Regarding posting a list of approved products, once the regulations are finalized CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products.
9182	Hilton, R., HF&H Consultants	This section details the requirement for an initial compliance report on February 1, 2022 and then a first annual report on August 1, 2022, including data through June 30, 2022. It is unrealistic for jurisdictions to be able to receive the necessary hauler reports with June data in order to compile this information in time for an August 1 submittal. HF&H requests that CalRecycle please reconsider and modify these dates in order to provide a more realistic timeline for submission of high quality and accurate reports	A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.
9183	Hilton, R., HF&H Consultants	This section states that compliance reviews and route reviews shall be conducted to ensure compliance with the generator requirements outlined in Section 18984.9. It	CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the

Comment Number	Received From	Question/Comment	Response(s)
		<p>appears that this section is requiring the compliance reviews and route review to entail more than what the definition of these terms require in Sections 18982(a)(9) and 18982(a)(65). Under Section 18984.9(b) it states that commercial businesses shall periodically inspect organic waste containers for contamination and inform employees if containers are contaminated. It is unrealistic to expect that a jurisdictions designee will be monitoring communication between businesses and their employees.</p> <p>HF&amp;H recommends that Section 18995.1(a)(1)(A) be amended to require that compliance reviews and route reviews ensure compliance with the generator requirements set forth in Section 18984.9(a). This will align the requirements of Section 18995.1(a)(1)(A) with the definitions specified in Article 1.</p>	<p>organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p>
9184	Hilton, R., HF&H Consultants	<p>If the intent of this section is a desktop compliance review, then compliance with Section 18984.9(b) cannot be verified because Section 18984.9(b) will require site visits and inspection of internal operations of businesses.</p> <p>HF&amp;H recommends that the language be modified to exclude annual review of compliance with Section 18984.9(b).</p>	<p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p>
9185	Hilton, R., HF&H Consultants	<p>HF&amp;H requests that CalRecycle specify the proposed frequency of the compliance evaluation.</p>	<p>A change to the regulatory text is not necessary. Section 18996.1 does not set the frequency of compliance audits, yet the Department will notify the jurisdiction prior to conducting an evaluation.</p>
9186	Hilton, R., HF&H Consultants	<p>HF&amp;H requests that CalRecycle please clarify which reporting period(s) is to be included in this section.</p>	<p>CalRecycle has revised section 18995.2(d) in response to comments. The section was changed to clarify that all records and information shall be included in the Implementation Record within 60 days and the reference to the reporting period(s) is deleted.</p>
9187	Hilton, R., HF&H Consultants	<p>The 1st, 2nd, and 3rd violations layered with Level 1 through 6 penalty levels may be overly complex for this purpose.</p> <p>HF&amp;H suggests simplifying these violation tables and penalty levels to eliminate some of this complexity and possible confusion.</p>	<p>CalRecycle has revised sections 18997.2 and 18997.3 due to comments. The penalty tables have been removed. A jurisdiction shall impose penalties for violations consistent with the graduated penalty amounts authorized in Sections 53069.4, 25132 and 36900 of the Government Code which is outlined in Section 18997.2(a). The Department will impose penalties as described in 18997.3 according to a minor/moderate/major model as modified by various factors in that section to allow flexibility on a case-by-case basis as equity may require.</p>
9188	Hilton, R., HF&H Consultants	<p>For source separated organic materials that go to a transfer station and a composting facility, HF&amp;H requests that CalRecycle please clarify and confirm whether or not load checking is required at both.</p>	<p>CalRecycle has deleted the loadchecking requirements for source separated organic materials and at composting facilities and operations in response to comments.</p>
9189	Hilton, R., HF&H Consultants	<p>17409.5.7 This section sets the load checking requirement at ""visible"" contamination. This is likely to result in nearly all samples being flagged for load checking, which will be time consuming and costly. HF&amp;H requests that CalRecycle consider setting a quantifiable threshold to manage the cost impact of the load checking requirements.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change</p>

Comment Number	Received From	Question/Comment	Response(s)
			will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
6347	Holler, D., Town of Mammoth Lakes	e are requesting that Cal Recycle incorporate additional applications within the regulations. This includes the use of dehydration. This technology is readily available and in use by private businesses as a means of recycling organic materials in a matter of hours allowing for regional solutions. Water is pulled from the material and can be put in the sanitary sewer or on a larger scale can be treated for other non-potable purposes. Overall, less water usage compared to Anaerobic Digestion, which requires 24/7 operation; another hurdle that curtails smaller community needs. Dehydration is a batched process and has no residue that requires landfilling.	CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO2e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383. However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste. Please refer to Section 18983.2 for more information.
6348	Holler, D., Town of Mammoth Lakes	The proposed regulations include the use of Biomass Conversion. The conversion process would be much stronger if these types of gasification processes are specifically included or clearly stated to be part of the currently allowed process such as pyrolysis as a gasification process. The process is used to manage biomass materials to generate biochar, an allowed soil amendment. Technologies used in other states incorporate the wide range of organics outlined in the regulations. These systems also process forest wood waste, contaminated paper and cardboard (can address the very low market values as well), non-recyclable paper and sewer sludge. Systems may also generate electricity based on available feedstock supply. Specifically, gasification technologies allow for more cost effective organic diversion, supports economical processing of forest fuels reducing the threat of wildfires, processes other green waste and additional organic materials, all of which assist in addressing climate change. The options outlined here will be more cost effective for rural communities like Mammoth Lakes. We have a vested interest in addressing each area noted herein based on location and economy. Technologies that we have reviewed are also under review to address the remains from anaerobic digestion, added costs and duplicative efforts to achieve the same goals. These systems eliminate the need for land application of AD digestates that do not promote healthy soil and after years of land applying will create an unhealthy "load" factor of these toxic materials in our soils. Other processes also appear to be more cost effective. The process is enclosed allowing for operations on a smaller foot print during winter months, which for Mammoth Lakes can be massive and severely limit normal solid waste collection and processing systems.	CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO2e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383. However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste. Please refer to Section 18983.2 for more information.
6349	Holler, D., Town of Mammoth Lakes	While the regulation provides five years to implement programs, cities are concerned that this is not sufficient time to develop and permit new facilities.	CalRecycle has noted the comment. The statutory language of SB 1383 establishes the dates upon which the regulations are required to be effective.

Comment Number	Received From	Question/Comment	Response(s)
		Adding technologies that can be supported by the private sector with limited or no additional "fees" to local residents and businesses must be considered. The technologies addressed above may be put in place at lower costs and achieve multiple complementary goals.	
6350	Holler, D., Town of Mammoth Lakes	The added cost of trash collection in smaller rural communities is an added strain on housing costs. Adding several hundred dollars to multi-unit developments for trash services has a direct impact on affordability. In a tourist driven economy with a substantial number of second home owners, residents, home owners and visitors in the Town of Mammoth Lakes will be paying twice for the same services with wide disparity of organics being generated due to our seasonal economy.	A change to the regulatory text is not necessary. The regulations will likely result in additional costs for ratepayers, but the City should be planning now for that increase.
6351	Holler, D., Town of Mammoth Lakes	This will be an added cost to the local agencies that will be passed on to our customers.	SB 1383 provides a broad grant of regulatory authority to CalRecycle to impose requirements on jurisdictions in order to achieve the organic waste diversion goals of a 50-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2025. This authority includes creation of rules designed to implement these statewide mandates and ensure that the statewide organic requirements are met. CalRecycle has determined that the mandatory collection service requirements and container color and labeling provisions are necessary to maintain consistent standards throughout the state to reduce contamination of organic waste and ensure that collected organic waste is clean and recoverable in order to meet the aforementioned diversion goals.
6352	Holler, D., Town of Mammoth Lakes	At a minimum, we would request that the process to implement pilot projects in rural communities be allowed, streamlined and focus on the use of expanded, integrated technologies. This will provide data, create flexible options, reduce costs, and create a positive incentive for communities currently exempt from the regulations to still be a part in meeting State goals for diversion of organic materials, while addressing number of other major State initiatives.	A change to the regulatory text is not necessary. Section 18984.12(c) provides more time for rural jurisdictions to come into compliance, so during that time jurisdictions could try pilot programs.
1038	Holloway, Paul Placer County LEA; Huang, Jianmin, Yolo County LEA	Proposed 14 CCR 21660.2(c)- This requirement places the LEA in jeopardy of legal challenges that the LEA failed to properly "identify disadvantaged communities in a manner that meets or exceeds the methods of the identification tools developed by the California Environmental Protection Agency". This should be removed from the regulatory text or revised.	<p>A change to the regulatory text is not necessary. The operable standard in this section is determining an appropriate meeting public meeting location, not the identification of disadvantaged communities. This provision is necessary so LEA's are aware of the tools available to them to identify potentially affected disadvantaged communities near solid waste facilities in order to meet the meeting location standard.</p> <p>CalRecycle has revised this section in response to comments. This section was revised to define the term "affected disadvantaged communities." This is necessary to clarify and assist the LEAs better identify who would be covered under this term so that they are notified and are provided an adequate opportunity to attend and provide comments on the project.</p>
1031	Holloway, Paul, Placer County Health and Human	Proposed 14 CCR 18083(c) - The requirement of the LEA or EA to oversee a minimum of one measurement of organic wastes is burdensome to the operators and the LEA's	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the

Comment Number	Received From	Question/Comment	Response(s)
	Services Department		operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
1032	Holloway, Paul, Placer County Health and Human Services Department	In order to comply with 14 CCR 18083(b), an LEA would require an operator to provide a measurement in the LEA's presence. This could be a redundant action on the part of operators who may have already taken samples at an earlier time within the appropriate regulatory timeframes.	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
1036	Holloway, Paul, Placer County Health and Human Services Department	2) Proposed 14 CCR 20700.5- The proposed "Long-Term Intermediate Cover" requirement of 36 inches of compacted earthen material is a burden to sites which have limited soils present.	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments.
1037	Holloway, Paul, Placer County Health and Human Services Department	Section 20700.5 The additional earthmoving equipment required to close and open these surfaces could increase greenhouse gas (GHG) emissions for these operations.	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments.
1034	Holloway, Paul, Placer County Health and Human Services Department; Huang, Jianmin, Yolo County Department of County Services, Environmental Health Division	Proposed 14 CCR 18083(c) -Additional inspections could cost operators more money due to some LEA's billing for inspection time and would be increasing inspection time per quarter for the LEA.	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
1035	Holloway, Paul, Placer County Health and Human Services Department; Huang, Jianmin, Yolo County Department of County Services,	Proposed 14 CCR 18083(c) -This regulation language should be amended as follows or it should be stricken completely: " <del>At least once per quarter, the</del> <b>The EA shall may</b> oversee a <del>minimum of one (1)</del> measurement as described in ... "	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.

Comment Number	Received From	Question/Comment	Response(s)
	Environmental Health Division		
1033	Holloway, Paul, Placer County Health and Human Services Department; Huang, Jianmin, Yolo County Department of County Services, Environmental Health Division; Jahnke, Keith, Tulare County Health and Human Services Agency, Environmental Health Division	Proposed 14 CCR 18083(c) -To be accommodating, an LEA could request and schedule an inspection per quarter to coincide with the operators routine measurement activities. This would have to be a "focused" inspection since the process of scheduling would be in conflict with 14 CCR 18077(a)(12) which requires inspections be random and unannounced	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
6452	Hornback, California Assisted Living Association	Some residents, especially those with dementia or cognitive impairment, may find choosing between multiple waste bins confusing, or they may refuse to follow new requirements.	A change to the regulatory text is not necessary. CalRecycle recognizes the issues raised in Comments 6452-6455. Section 18984.5(b) does require businesses to educate employees and tenants, but it provides flexibility to design programs that work for their situation, for example by relying more on employees rather than residents to handle waste collection.
6453	Hornback, California Assisted Living Association	It would be difficult for Assisted Living staff to monitor what resident's visitors do with their waste in a resident's apartment.	A change to the regulatory text is not necessary. CalRecycle recognizes the issues raised in Comments 6452-6455. Section 18984.5(b) does require businesses to educate employees and tenants, but it provides flexibility to design programs that work for their situation, for example by relying more on employees rather than residents to handle waste collection.
6454	Hornback, California Assisted Living Association	Some communities may have space issues when trying to fit multiple waste bins in an apartment to accommodate different types of waste.	A change to the regulatory text is not necessary. CalRecycle recognizes the issues raised in Comments 6452-6455. Section 18984.5(b) does require businesses to educate employees and tenants, but it provides flexibility to design programs that work for their situation, for example by relying more on employees rather than residents to handle waste collection.
6455	Hornback, California Assisted Living Association	Assisted Living providers would appreciate flexibility in working to meet the requirements of SB 1383 as it applies to individual residents living in Assisted Living communities.	A change to the regulatory text is not necessary. CalRecycle recognizes the issues raised in Comments 6452-6455. Section 18984.5(b) does require businesses to educate employees and tenants, but it provides flexibility to design programs that work for their situation, for example by relying more on employees rather than residents to handle waste collection.
6026	Huang, C., Citizen and Community Organizer - Berkeley	Community engagement is the most powerful way to change behavior to lower contaminants and increase diversion	Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.

Comment Number	Received From	Question/Comment	Response(s)
6027	Huang, C., Citizen and Community Organizer - Berkeley	Allowins of composting will not only reduce carbon footprint of our diversion and increase diversion, but it will also get people engaged to reduce contaminants.	Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.
1013	Huang, Jianmin, Yolo County Department of County Services, Environmental Health Division	Section 21660.2 (c )(1)(A) suggested revision for consideration: LEA suggests deferring this task to Calrecycle to ensure DACs be identified correctly and consistently throughout the state.	CalRecycle has revised this section in response to comments. This section was revised to define the term “affected disadvantaged communities.” This is necessary to clarify and assist the LEAs better identify who would be covered under this term so that they are notified and are provided an adequate opportunity to attend and provide comments on the project.
1011	Huang, Jianmin, Yolo County Department of County Services, Environmental Health Division; Sloan, Lisa, Santa Barbara County Public Health Department, Environmental Health Services	section 21660.2 (c ) (a) Methodology used to identify Disadvantaged Communities (DACs) in Section 39111 of the Health and Safety Code is broad and vague. For example, the Section states that the DACs shall be identified based on geographic, socioeconomic, public health, and environmental hazard criteria. While it says that low income, high unemployment, low levels of homeownership, high rent burden etc. can be used as criteria, it does not define what the thresholds for those criteria are.	CalRecycle has revised this section in response to comments. This section was revised to define the term “affected disadvantaged communities.” This is necessary to clarify and assist the LEAs better identify who would be covered under this term so that they are notified and are provided an adequate opportunity to attend and provide comments on the project.
1012	Huang, Jianmin, Yolo County Department of County Services, Environmental Health Division; Sloan, Lisa, Santa Barbara County Public Health Department, Environmental Health Services	Section 21660.2 (c )(1)(A) LEA is not tasked to identify DACs in its current set of duties/responsibilities; therefore, LEA is not trained nor does it have the tools to make this determination.	CalRecycle has revised this section in response to comments. This section was revised to define the term “affected disadvantaged communities.” This is necessary to clarify and assist the LEAs better identify who would be covered under this term so that they are notified and are provided an adequate opportunity to attend and provide comments on the project.  CalRecycle staff will develop tools to assist in the implementation of the regulations.
6362	Huffaker, M., City of Watsonville	Financial Burden: The cost to implement this new program is estimated to be nearly \$900,000 per year for our community. This represents a significant rate increase for an Economically Disadvantaged Community. We remain concerned about critical points that hinder our ability to implement the proposed regulation. The City of Watsonville has been implementing an organic waste diversion program for our larger generators since 2017. This organic program currently has 100 customers (we	Comment noted. Commenter is expressing an opinion regarding the cost of implementing the program. The comment is not suggesting changes to the regulatory language or commenting on the regulatory process.

Comment Number	Received From	Question/Comment	Response(s)
		<p>added an additional 60 customers in 2019), which require collection twice a week. With each organic customer, the City of Watsonville uses community outreach personnel to educate and inform them on diversion and an auditor to monitor the contamination of the waste stream.</p> <p>The implementation of the SB1383 regulation impacts the efficiency and financial budget of the City of Watsonville's solid waste program. To sustain the program, additional personnel are required to maintain effective community outreach and auditing of the customer waste streams. The City of Watsonville's collection fleet will require a modification to minimize leakage to the environment and to maintain service, the purchase of 2-trucks at \$400,000 each to handle organics collection for the city's 55,000 residents. 2,000 additional yellow carts, along with resident compost containers must be also ordered and dispersed to comply with the new regulation. This will impact the City of Watsonville budget by another \$50,000.</p>	
6363	Huffaker, M., City of Watsonville	<p>The City of Watsonville has very narrow streets to navigate the large collection trucks and is already currently impacted with lack of cart spacing to safely collect trash, yard waste and recycling. Adding another additional 2,000 carts on the present system will add to the operational impacts that already hinder safe collection on the street. Add the parked cars and there is increased environmental and safety risk for the collection vehicles.</p> <p>Along with the additional 2 trucks on the City of Watsonville streets, pollution from noise and fuel are increasing hazards to the community. Consulting costs to gain compliance which includes waste characterization of the city's recycling and solid waste has added \$150,000 to the financial burden.</p>	Comment noted. The commenter is expressing an opinion regarding cost and difficulties in implementation. The comment is not suggesting changes to the regulatory language or commenting on the regulatory process.
6364	Huffaker, M., City of Watsonville	<p>Other Key Concerns: The City of Watsonville key concerns are as follows: Printing and dispersing of SB1383 educational material for outreach, equipment required to sustain organic handling, spacing/placement of carts and containers in the street, consulting fees, variety of disposal facilities and economical disposal options, and cost controls of the overall SB1383 program.</p>	Comment noted. The commenter is expressing an opinion regarding cost and difficulties in implementation. The comment is not suggesting changes to the regulatory language or commenting on the regulatory process.
5100	Ignatius, A. San Bernardino County Dept. of Public Works	<p>Section 18982(a)(36). The definition of a "jurisdiction" was revised to include a special district that provides solid waste handling services. Clarify if this will require Community Service Districts that have solid waste authority to report compliance efforts directly to CalRecycle.</p>	A community services district is a special district and special districts are jurisdictions that are subject to the proposed regulations.
5101	Ignatius, A. San Bernardino County Dept. of Public Works	<p>Section 18984.5(c)(1). This requirement would be labor intensive and expensive for jurisdictions while having only a limited ability to identify the original source of contamination since the containers would be inspected after the contaminated containers were already collected. Additionally, there is a concern that some solid waste facility operators may be a subsidiary company of the jurisdiction's waste hauler and may not be inclined to inform the jurisdiction of prohibited container contaminants as it may create additional work for the waste hauler that may be conducting the container inspections as designated by the jurisdiction.</p>	

Comment Number	Received From	Question/Comment	Response(s)
5102	Ignatius, A. San Bernardino County Dept. of Public Works	Section 18984.12(b ). Since census tract data is published every 10 years, it is unclear why low population waivers granted to counties are only good for a period of two years. It is suggested that the regulations stipulate that low population waivers granted to counties are good until one year after subsequent census tract data is available; after that time period, a county would have to submit a new request to the Department based upon current census tract data.	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
5103	Ignatius, A. San Bernardino County Dept. of Public Works	Section 18992.2(b). Similar language to that used in section 18992.1(d) should be used to stipulate that "the county shall notify the jurisdiction or jurisdictions" that lack sufficient edible food capacity of the jurisdiction's reporting requirements to the Department.	CalRecycle add a new Section 18992.2(d) in response to this comment. CalRecycle agrees that language similar to that used in Section 18992.1 should be used to stipulate that the county needs to notify the jurisdiction or jurisdictions that lack sufficient edible food capacity of the jurisdiction's reporting requirements to the Department.
5104	Ignatius, A. San Bernardino County Dept. of Public Works	Section 17 409.5.11 (b ). Clarify if this requirement will pertain to landfills accepting material from the gray container collection stream.	CalRecycle has deleted the loadchecking requirement Section 17409.5.11 in response to comments.
5105	Ignatius, A. San Bernardino County Dept. of Public Works	Section 20700.5(a). The additional requirements for Long Term-Intermediate Cover "Compacted earthen material at least 36 inches shall be ... " should revert back to previous draft "Compacted earthen material at least 12 inches shall be ... ". The additional requirement to add 24 inches of cover on all slopes would be an extreme financial burden	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.
3067	Israel, M., Amador County	<p>Proposed language for article 9, section 18990.1 (b), could be interpreted to tie the hands of local governments, preventing them from denying proposals for land applications of green waste, biosolids, or digestate that are consistent with article 2, section 18983.1(b)(6).</p> <p>18990.1 (b) A jurisdiction shall not implement or enforce an ordinance, policy, procedure, permit condition, or initiative that includes provisions that do any of the following:</p> <p>(1) Prohibit the lawful processing and recovery of organic waste through a method identified in Article 2 of this chapter,</p>	<p>CalRecycle added clarifying language to this section to indicate that Article 9 section 189901 (c) (3) provides that this section does not prohibit a jurisdiction from superseding or otherwise affecting the land use authority of a jurisdiction, including, but not limited to, planning, zoning, and permitting, or an ordinance lawfully adopted pursuant to that land use authority consistent with this section.</p> <p>A. The requested changes to the regulatory text are not necessary. However, CalRecycle is adding additional language to Section 18990.1(b)(1) to further clarify its meaning in light of comments received regarding it. Article 9, Sections 18990.1 (a) and (b) are not contradictory. 18990.1 (a) clarifies that it does not limit a jurisdiction in adopting more stringent standards than</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(2) Limit a particular solid waste facility, operation, property, or activity from accepting organic waste imported from outside of the jurisdiction for processing or recovery.</p> <p>(3) Limit the export outside of organic waste to a facility, operation, property or activity outside of the jurisdiction that recovers the organic waste through a method identified in Article 2 of this chapter,</p> <p>(4) Require a generator or a hauler to transport organic waste to a solid waste facility or operation that does not process or recover organic waste.</p> <p>(5) Require a generator to use an organic waste collection service or combination of services that do not recover at least the same types of organic waste recovered by a service the generator previously had in place.</p> <p>18983.1(b)(6) Land application, as defined in Section 17852(a)(24.5) of this division subject to the following conditions:</p> <p>(A) Green waste or green material shall meet the definition of Section 17852(a)(21) and shall have been processed at a solid waste facility, as defined by Section 40194 of the Public Resources Code.</p> <p>(B) Biosolids shall:</p> <ol style="list-style-type: none"> <li>1. Have undergone anaerobic digestion or composting, as defined in Part 503, Title 40 of the Code of 21 Federal Regulations, Appendix B, and,</li> <li>2. Meet the requirements in Section 17852(a)(24.5)(B)(6) of this division for beneficial reuse of biosolids.</li> </ol> <p>(C) Digestate shall:</p> <ol style="list-style-type: none"> <li>1. Have been anaerobically digested at an in-vessel digestion operation or facility, as described in Sections 17896.8 through 17896.13; and,</li> <li>2. Meet the land application requirements described in Section 17852(a)(24.5)(A).</li> <li>3. Have obtained applicable approvals from the State and/or Regional Water Quality Control Board requirements.</li> </ol> <p>If this revision of regulations is intended to constrain local governments ability to make land use decisions, we must object. If it is not intended to infringe upon local land use decisions, please clarify.</p>	<p>the ones outlined in this chapter. The purpose of the specific limitations set forth in paragraphs 1-5 of 18990.1 (b) are to ensure that jurisdictions do not impose restrictions on the movement and handling of waste and waste-derived recyclables that would interfere with or prevent meeting the organic waste recovery targets established in SB 1383.</p> <p>B. Article 2, Section 18983.1 (b)(6)(b) clarifies that land application of biosolids constitutes a reduction in landfill disposal provided that the application complies with minimum standards. This section specifies that to be considered a reduction in landfill disposal for the purposes of this regulation, land application of biosolids must comply with existing regulatory requirements and have undergone composting or anaerobic digestion. While this regulation defines land application as recovery, this regulation does not allow land application of biosolids be done in a manner that conflicts with existing public health and safety regulations and requirements. Land application of composted or digested biosolids prevents the landfill disposal of this material and reduces greenhouse gas emissions. This supports the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions and is therefore considered a recovery activity for the purposes of this regulation. The additional language will ensure that such restrictions can be reviewed on a case-by-case basis to determine if they are actually necessary and tailored to protect the public health and safety, or if they are actually unnecessary and overbroad restrictions.</p>
5012	Israel, Michael. Amador County	We were approached today by Layne Baroldi, a representative for Synagro, regarding a potential client in our county who would like to apply biosolids. We've had a couple of onetime applications at permitted wastewater facilities that I'm aware of over the last 30 years but this would be the first application for continuous application at an ag site. Mr. Baroldi cited rule making to implement SB 1383, a waste reduction bill passed in 2016, as proscribing local ordinances that would ban biosolids application. He mentioned Hank Brady at CalRecycle as a contact. Do you know if this would be the best person to talk to about this?	Comment noted. A change to the regulatory text is not necessary.
1171	Jahnke, Keith, Tulare County Health and Human	18083 -The requirement to observe sampling has nothing to do with the intent of SB 1383 which is to reduce short lived climate pollutants or to reduce organic waste in landfills?	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards

Comment Number	Received From	Question/Comment	Response(s)
	Services Agency, Environmental Health Division		the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
1172	Jahnke, Keith, Tulare County Health and Human Services Agency, Environmental Health Division	18083 - The initial statement of reasons for performing this task is vague. The sampling could be on occasion with an appointment and could also be confirmed by a records check such as is done with pathogen, heavy metal and tonnage.	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
1039	James, Michael City of Shafter - Public Works	The regulations assume that facilities to accept and process diverted or recovered organics are either operational or dictate that they should be developed. In the case of Kern County, these facilities do not exist or are not adequately equipped to handle the projected volumes of material. Therefore, our residents and businesses are dependent on new facilities being developed, and this simply cannot happen before the targeted compliance year of 2020 and even 2025.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
1040	James, Michael City of Shafter - Public Works	Unreasonably Aggressive Timeline for Compliance The timelines to achieve targeted compliance by 2020 and 2025 are simply unreasonable, particularly for regions of the State that lack access to facilities that can handle organics that must be eliminated from the waste stream.	Comment noted. The organic waste reduction goals of 2020 and 2025 are established by Public Resources Code Section 42653 and Section 39730.6 of the Health and Safety Code.
1041	James, Michael City of Shafter - Public Works	Suggested alternatives to the schedule being proposed are as follows: • Apply the current compliance targets to generators such as schools, grocery stores, and restaurants, who should have resources for handling food waste and extend the residential and general commercial compliance targets to 2030.	The regulations include requirements on local education agencies, grocery stores and restaurants for edible food recovery. Delaying compliance to 2030 would be inconsistent with statutory requirements.
1042	James, Michael City of Shafter - Public Works	Suggested alternatives to the schedule being proposed are as follows: • Offer time extensions or even waivers for local agencies and haulers that serve economically disadvantaged communities.	CalRecycle has provided waivers under certain circumstances such as for rural and high elevation areas, but has chosen not to provide a waiver for disadvantaged communities due to concerns in achieving the organic waste diversion goals in statute.

Comment Number	Received From	Question/Comment	Response(s)
1043	James, Michael City of Shafter - Public Works	Suggested alternatives to the schedule being proposed are as follows: Start the compliance clock after the effective date, currently projected for January 1, 2022, rather than expect to have targets reached beforehand in 2020.	A change to the regulatory text is not necessary. Comment noted. The organic waste reduction goals of 2020 and 2025 are established by Public Resources Code Section 42653 and Section 39730.6 of the Health and Safety Code.
1044	James, Michael City of Shafter - Public Works	The basic objective of SB 1383 is to improve the State's air quality but requiring new curbside organics collections for every generator will no doubt require that fleets of new trucks be put into service, which will certainly increase air pollutant emissions. CalRecycle should at least address this concern and, preferably, explain how the implementation of the regulations, as drafted, will be a net positive result for our air quality after factoring in the addition of new trucks for the collections and transportation of organics.	Comment noted. CalRecycle prepared an Environmental Impact Report to analyze potential environmental impacts.
1045	James, Michael City of Shafter - Public Works	The proposed regulations, as well as the enforcement and public outreach policies dictated, read like a "one size fits all" solution that does not consider the diverse populations, economic issues, demographics, and resources of the State's many regions. Expecting cities like Shafter, with no funding or other resources in place for these programs, to manage all the expectations exactly like a much larger and more metropolitan area like the City of Bakersfield is shortsighted and unreasonable.	The regulations do provide flexibility in certain areas, such as in choosing the type of collection service that will be implemented to achieve the diversion goals of the program. There are also waivers from compliance under certain circumstances. The statute provides authorization for jurisdictions to impose fees to offset the costs of implementation.
1046	James, Michael City of Shafter - Public Works	CalRecycle should consider modeling enforcement similarly to what is being offered through the State's implementation of the Sustainable Groundwater Management Act (SGMA). In the case of SGMA, counties are allowed to develop a local compliance plan that is coordinated amongst cities and other stakeholders. These plans can factor in local resources, limitations and other considerations but will still be reviewed by the State to verify that regulatory objectives have been met.	Commenter is expressing an opinion regarding the overall compliance model for the regulations, but is not providing specific language recommendations. CalRecycle has determined that the model used in the regulations is the most appropriate alternative that will achieve the organic waste diversion goals in statute.
2018	Johnson, Jack; San Meteo County Office of Sustainability	A contract between a food bank/food recovery organization and a generator is the most important aspect of the 1383 edible food recovery legislation. Only with a contract will a food recovery org be able to set the terms by which they can reliably, efficiently, and cost effectively obtain food for human consumption. Food banks, etc. need to be able to set the times of pickup, condition of the food, and other considerations necessary to get food in a timely manner and suitable condition for consumption. Food banks and others need a strong legal footing to be able to make this work for themselves and actually get the food eaten. This is key.	A change to the regulatory text was not necessary because this comment is in support of the requirement for commercial edible food generators to establish contracts or written agreements with food recovery organizations and services. CalRecycle would like to clarify that although a contract or written agreement for food recovery must be established, it is at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the exact provisions to include in their contracts or written agreements. For example, some food recovery organizations may include provisions in their contracts to protect their operation from receiving food that they are not able or willing to accept. Other food recovery organizations or food recovery services could include cost sharing provisions as part of their contracts or written agreements with commercial edible food generators. CalRecycle would like to clarify that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from negotiating cost sharing as part of their contracts or written agreements with commercial edible food generators.
3166	Jones, C., City of Taft	Infrastructure Capacity: As we have noted, California lacks sufficient capacity today to be able to meet the needs for new organic waste processing. Many cities have expressed concern over an ability to comply with organic waste diversion requirements due to a lack of waste disposal infrastructure. There is an uneven distribution of waste disposal infrastructure, such as bio-digesters, across the state.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic

Comment Number	Received From	Question/Comment	Response(s)
		<p>Moreover, where the infrastructure does exist, capacity is limited. While the regulation provides five years to implement programs, cities are concerned that this is not sufficient time to develop and permit new facilities.</p>	<p>waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3167	Jones, C., City of Taft	<p>Funding: Lack of sufficient funds continues to be among the major challenges local governments face in the effort to implement new organic waste diversion programs. The City of Taft and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade" proceeds can be used to help offset the costs for developing organic recycling infrastructure. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities, such as updating bins and labels, as well as providing education and outreach.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3168	Jones, C., City of Taft	<p>Enforcement: These regulations allow for Corrective Action Plans and establish extended timelines and milestones for achieving compliance. We appreciate the addition of a pathway to compliance. This is a step in the right direction and we urge careful consideration of the differences among local jurisdictions, as well as the variety of community stakeholders, and infrastructure challenges a local jurisdiction may face.</p>	<p>Comment noted, the comment does not recommend a regulatory change.</p>
3169	Jones, C., City of Taft	<p>Penalties: The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, this regulation puts the cart before the horse by designing penalties before the sticking points and needs of generators are understood. We encourage CalRecycle to continue working through the programmatic scheme before implementing an</p>	<p>A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>appropriate set of penalties, particularly since programs have until 2022 to be implemented. We ask that CalRecycle adopt penalties in a second set of regulations to take effect at a future date.</p>	<p>to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.</p>
3170	Jones, C., City of Taft	<p>Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products targets set by Cal Recycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations. We ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding. The City of Taft further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1 (e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even if a fee were to survive scrutiny under Prop. 26, it is questionable whether a city would have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.). This latter concern is currently the subject of litigation in the Third District Court of Appeals (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, The City of Taft requests that the procurement regulations be addressed in a separate regulatory proceeding.</p>	<p>CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate. First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, "No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code." Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)). Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a "tax" under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe "any fees" that may in the future be imposed by the numerous local jurisdictions in California as "likely" to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383. According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate. Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source. CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to</p>

Comment Number	Received From	Question/Comment	Response(s)
			delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.
6014	Juhler, M., Yolo County Central Landfill	Re section 18994.2/jurisdiction reporting: (a) Commencing August 1, 2022, and annually thereafter, a jurisdiction shall report the information required by this section. The report submitted in 2022 shall cover the period of January 1, 2022-June 30, 2022. Each subsequent report shall cover the entire previous calendar year. We would like clarification on what this means. Our current system of reporting for a “calendar” year is January –December therefore this year (2019) for example we will report the following on our EAR (Jan.1, 2018-Dec. 3, 2018) on August 1, 2019. This allows is 7 months to prepare the report for CalRecycle.	A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.
6015	Juhler, M., Yolo County Central Landfill	In reading the section highlighted in red if in 2022 only we are asked to do the following report Jan. 1-June 30, this would only allow haulers 15 approximately days to get us their data and allow the County approximately 15 days to review that data and compile a report by the August 1st deadline. 1. Could you please verify if our interpretation is correct? In order for the County and its haulers to compile data and review it with accuracy we do not feel 30 days is sufficient. Could the reporting date in 2022 be moved to October 1st?	A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.
6016	Juhler, M., Yolo County Central Landfill	Also, it does not mention whether the normal Jan. 1, 2021-Dec. 31, 2021 data would need to be provided in the year 2022. Is this Jan.-June 2022 report in lieu of the calendar year report or is CalRecycle asking for two reports to be submitted in 2022?	A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.
6012	Kawar, F., Santa Monica College	Any home with enough area for large amounts of landscape can also find space to compost on the property. Promoting grasscycling, xeriscaping, and mulching will go a long way to reducing the need for hauling the material away.	Thank you for the comment. The regulations allow for waste prevention and on-site management of organic waste.
6013	Kawar, F., Santa Monica College	Continuing to count on the same system of centralized compost facilities that are sited many miles away is outdated, expensive and causes too much road congestion and pollution. I hope CalRecycle looks at decentralized solutions that keep the valuable material in our communities where it’s needed to build soils and retain water on properties. Santa Monica College is also training students, through the Recycling and Resource Management Certificate program, to manage mid-size compost systems like the one we have been using for 17 years. We hope the haulers	Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.

Comment Number	Received From	Question/Comment	Response(s)
		and generators of organic materials will begin to take notice and starting thinking of smaller, distributed solutions like this so our students can find jobs managing the compost programs.	
3344	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 1 Section 18982, Definitions</p> <p>The definition of "renewable transportation fuel" without any justifiable reason and/or scientifically supported analysis, limits it to fuel derived from renewable gas through in-vessel digestion of organic waste only. The regulations should expand the definition of "renewable transportation fuel" to include fuel derived from renewable gas from other technologies, including thermal conversion technologies such as gasification and pyrolysis, as well methane gas generated from municipal solid waste landfills since it is biogenic in origin.</p>	<p>The definition of "renewable transportation fuel" has been revised to "renewable gas". CalRecycle disagrees with the interpretation that there is no "justifiable reason" for the definition of "renewable transportation fuel", or now "renewable gas" to be limited to in-vessel digestion. The purpose is to be consistent with SB 1383 language that specifies the adoption of policies that incentivize biomethane derived from solid waste facilities. In-vessel digestion facilities are solid waste facilities which allows the department to verify that these facilities are reducing the disposal of organic waste.</p> <p>CalRecycle has revised the proposed regulatory text to allow for the use of electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>Regarding landfill gas, the SB 1383 mandate is to recover organic waste that would be disposed; therefore it is inconsistent with statute to incentivize or mandate activities that do not reduce landfill disposal.</p>
3345	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 3 Section 18984.12 Waivers and Exemptions Granted by the Department</p> <p>As the regulations are written, it does not allow for good faith effort. Given the realities of lengthy environmental review and permitting for new facilities or expanding existing facilities to include food waste, and other unavoidable impediments to implementation of the regulations, provisions should be made for Good Faith Effort.</p> <p>The good faith effort model is outlined in Public Resource Code 41825 with respect to a jurisdiction's source reduction and recycling element and is appropriate to consider in implementing SB1383. Specifically, PRC Section 42652.5 (a)(4) directs the department to base its review of a jurisdiction's compliance on a variety of factors, including PRC 41825.</p> <p>Section 18984.12 should have a subsection (e) stating that "Waivers and extensions may be granted to any generator, hauler, or jurisdiction that has made a good faith effort to comply with these requirements but has been unable to identify a facility with sufficient capacity to process the materials."</p>	<p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p>
3346	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 7 Section 18988.3 Self..haulers of Organic Waste</p> <p>The current language requires all self-haulers to report annually to their jurisdiction the amount of organic waste and the address of the disposition of the waste. This requirement should clarify that it is for business self-haulers, and not residential self-haulers. This</p>	<p>Language was ultimately changed to remove the annual reporting to jurisdictions for all self-haulers.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>requirement is excessive for residential self-haulers, would be time consuming for jurisdictions to track, and the likelihood for compliance from residential self-haulers would be low. It would be nearly impossible for a jurisdiction to be able to track each residential self-hauler. It is recommended that Section 19899 .3( c) be modified as follows: the text clarify the distinction business and residential self-haulers. "A generator that is located in a jurisdiction or area that received a waiver under Section 18984.12 of this 15 division and/or is not a business subject to the requirements of Section 42649.81 of the Public Resources Code is not required to comply with the requirements of this section."</p>	
3347	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 9 Section 18990.1 (b)(2) Organic Waste Recovery Standards and Policies As proposed, this section would prohibit facilities from preventing or limiting organic waste coming from outside of the jurisdiction. It is imperative that facilities be able to control the source of materials and ensure processing capacity for the host jurisdiction or county. We request that Section 18990.1 (b )(2) be removed in its entirety.</p>	<p>Section 18990.1(c)(4) provides that this section does not prohibit a jurisdiction from arranging through a contract or franchise for a hauler to transport organic waste to a particular solid waste facility or operation for processing or recovery. Nothing in the regulations prohibits facilities from contracting with various parties, including jurisdictions, for capacity within their facility. What the regulations do prohibit is a jurisdiction adopting an ordinance or similar restriction to legally prohibit material from other jurisdictions from going to facilities within its boundaries simply because of where the material originated. This is consistent with existing case-law.</p>
3348	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 9. Section 18990.1 (b)(3) Organic Waste Recovery Standards and Policies As proposed, this section contradicts the decision in UNITED HAULERS ASSOCIATION, INC., ET AL. V. ONEIDA-HERKIMER SOLID WASTE MANAGEMENT AUTHORITY ET AL., preventing jurisdictions to utilize flow control. We request that Section 18990.1 (b )(3) be removed in its entirety.</p>	<p>A change to the regulatory text is not necessary. United Haulers Association Inc., et al. v. Oneida-Herkimer Solid Waste Management Authority et al. states that an ordinance requiring waste go to a public facility does not violate the flow control restrictions of the Interstate Commerce Clause, does not authorize or require that municipalities be allowed to do so under the U.S. Constitution, nor does it prohibit a state from prohibiting such restrictions. State law explicitly promotes the free movement of material under the Integrated Waste Management Act, Public Resources Code Sections 40001 and 40002, and this restriction is designed to ensure that. Section 18990.1 (b)(3) prohibits the limitation of exports outside the jurisdiction, which is necessary to address the need for regional collaboration and to ensure the highest diversion rates are achieved to meet the statute's goals. A change to the regulatory text is not necessary. Section 189901 (c) (4) provides that this section does not prohibit a jurisdiction from arranging through a contract or franchise for a hauler to transport organic waste to a particular solid waste facility or operation for processing or recovery. Nothing in the regulations prohibits facilities from contracting with various parties, including jurisdictions, for capacity within their facility. What the regulations do prohibit is a jurisdiction adopting an ordinance or similar restriction to legally prohibit material from other jurisdictions from going to facilities within its boundaries simply because of where the material originated. This is consistent with existing case-law.</p>
3349	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 11 Section 18992.1 (c)(2)(A) Organic Waste Recycling Capacity Planning A timeframe should be required for entities to respond to county's requests for information. In addition, the regulations state that haulers and owners of facilities, operations, and activities that recover organic waste shall respond to the</p>	<p>Thank you for the comment. CalRecycle revised the text based upon the comment.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>jurisdiction regarding potential new or expanded capacity at their facilities; however, it does not include "existing capacity".</p> <p>"Entities contacted by a jurisdiction shall respond to the jurisdiction <b>within 60 days of receiving the request from the county</b> regarding <b>existing and</b> potential new or expanded capacity at their facilities, operations, and activities, including information about throughput and permitted capacity necessary for planning purposes"</p>	
3350	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 11 Section 1899 2.1 (c)(3) Organic Waste Recycling Capacity Planning</p> <p>The regulations state that the county shall conduct community outreach regarding locations being considered for new or expanded facilities, in- or outside the county. We recommend that this responsibility be the role of the jurisdiction (host city or host county for unincorporated area) in which the new or expanded facility is being proposed, and not solely the role of the county regardless of the location of the new or expanded facility. Additionally, if the County is required to conduct such outreach, the regulations should clarify if this outreach must be done throughout an entire city where a new or expanded facility is being considered or within a radius of a certain number of miles from the address at which the facility is being proposed.</p>	<p>The community outreach required in Section 18992.1(c)(3) is intended for the facilities or activities located within the county. Counties can work in coordination with cities to provide this outreach. Nothing precludes cities from providing outreach.</p>
3351	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 11 Section 18992.1 (d) Organic Waste Recycling Capacity Planning</p> <p>According to SB 1383, CalRecycle, in consultation with CARB, shall adopt regulations that achieve the specified targets for reducing organic waste in landfills (i.e., a 50-percent reduction by 2020 and a 75-percent reduction by 2025). The current draft of the regulations state that a jurisdiction that lacks sufficient capacity shall "demonstrate how it will ensure there is enough new or expanded capacity to recover the organic waste currently disposed by generators within their jurisdiction by the end of the report period." The way it is currently written, it appears that the regulations are requiring that all organic waste that is currently disposed be recovered ( or planned for recovery) by the end of the report period.</p> <p><b>Proposed Regulatory Text and Recommended Changes/Revisions:</b></p> <p>(d)If a county determines that organic waste recycling capacity, in addition to the existing and proposed capacity identified pursuant to subsection (a), is needed within that county, the county shall notify the jurisdiction or jurisdictions that lack sufficient capacity that each jurisdiction is required to:</p> <p>(1)Submit an implementation schedule to the Department that demonstrates how it will ensure there is enough new or expanded capacity to recover an amount of the organic waste <b>that is equivalent to a 50-percent reduction in 2014 organic waste disposal levels by 2020, and a 75- percent reduction by 2025 currently disposed by generators within their jurisdiction by the end of the report period set forth in Section 18992.3 of this article.</b></p>	<p>A change to the regulatory text is not necessary because the proposed change would entail placing a numerical limit on a jurisdiction, which is not allowed by the statute.</p>
3352	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 11 Section 1899 2.1 (d) Organic Waste Recycling Capacity Planning</p> <p>This section requires an implementation schedule that demonstrates how jurisdictions will ensure there is enough new or expanded capacity to recover the organic waste currently disposed of by generators within their jurisdiction by the</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>end of the report period. This includes a schedule for obtaining funding for recycling infrastructure, identification of facilities, etc.</p> <p>This is a challenging requirement for all jurisdictions as it is likely the current infrastructure is not sufficient for the amount of organic waste currently produced and the hurdles in order to site a facility, let alone fund and permit new facilities. Assistance from CalRecycle in working with other agencies in permitting new facilities is necessary to advance the organics recycling infrastructure.</p>	<p>waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3353	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 11 Section 18992.2 Edible Food Recovery Capacity</p> <p>This section requires an implementation schedule that demonstrates how the county will ensure there is enough new or expanded capacity to recover the edible food currently disposed of by generators within their jurisdiction by the end of the report period. This includes a schedule for obtaining funding for recycling infrastructure, identification of facilities, etc. In general, edible food recovery is managed by non-profits and is independent from city or county oversight or involvement in their funding, operations, etc. Under the proposed regulations, the county is responsible for estimating the amount of edible food that will be disposed by commercial operators. Currently, there are no tools to quantify the amount of edible food in the disposal stream. Therefore, we recommend that CalRecycle provide Counties with a methodology to estimate the amount of edible food within the disposal stream.</p>	<p>CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. In addition, CalRecycle also intends on providing other resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.</p>
3354	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 13. Section 18994.2 Jurisdiction Annual Reporting</p> <p>The RCDWR suggests the following edit:          "(a) Commencing August 1, 2022 2023, and annually thereafter, a jurisdiction shall report the information required by this section. The report <del>submitted in 2022 shall cover the period of January 1, 2022 June 30, 2022. Each subsequent report shall cover the entire previous calendar year.</del>"</p> <p>This edit would allow a jurisdiction adequate time to collect the information required in regulations. The required information must be gathered from numerous entities within a jurisdiction as well as its hauler(s) and one month to compile that information as suggested by the draft language is not adequate.</p>	<p>A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.</p>
3355	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 14. Section 1899 5.1 Jurisdiction Inspection and Enforcement Requirements</p> <p>"(a) By January 1, 2022, a jurisdiction shall have an inspection and enforcement program that ensures compliance with this chapter and that at a minimum, includes the following requirements:"</p> <p>There is no consideration for the funding of implementation and enforcement of these regulations. This is an unfunded mandate. While RCDWR recognizes the need</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. Comment Number	Received From	Question/Comment	Response(s)
		to minimize the amount of organics landfilled, these regulations are vast and will take time and funding to implement, including the funding and hiring of additional staff.	approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
3356	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>Article 15, Section 18996. 3 Department Enforcement When Jurisdiction Fails to Enforce</p> <p>A subsection ( c) should be added to section 18996.3 stating, "Notwithstanding the preceding, if a jurisdiction demonstrates good faith effort at complying with these requirements, the department shall not seek administrative penalties."</p> <p>A subsection ( d) should be added to section 18996.3 stating, "No penalties shall be assessed on a jurisdiction for failure of State, federal, or other entity's failure to comply with the requirements of these regulations if the local government has no method of providing legal authority over the actions of the entity."</p> <p>These additions are based on Section 18996.6 which specifies that while a State agency may receive a notice of violation, and various bodies may be notified of this, there is a provision for "substantial effort," and there is no provision for administrative penalties. Local governments cannot compel a State (or federal) agency to comply with the requirements, and yet is responsible for the resultant waste. Clearly failure of State or federal agencies to fully comply with all requirements would constitute a potential factor in not complying with the requirements, and the jurisdiction should not be held responsible for their failure to comply.</p>	<p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p> <p>A change to the regulatory text is not necessary. Pursuant to 18996.6, the Department has oversight and enforcement over state agencies and facilities. Local jurisdictions do not authority to enforce against these entities. Enforcement actions against these entities is fundamentally different in nature from enforcement action against other regulated entities.</p>
3357	Kernkamp, H., Riverside County Dept. of Waste Resources	<p>California Code of Regulations (CCR) Title 27 {20700.5 Ca/Recycle-Long-Term Intermediate Cover</p> <p>"(a) Compacted earthen material at least 36 inches shall be placed on all surfaces of the fill where no additional solid waste will be deposited within 30 months to control methane emissions."</p> <p>The RCDWR requests that §20700.5 be removed in its entirety. Modern landfills are currently regulated by CCR Title 27, Chapter 3, Subchapter 4, Article 6: Gas Monitoring and Control and Active and Closed Disposal Sites. The current regulations require landfill operators to monitor and control landfill gas, including methane emissions. The proposed requirement of 36 inches of compacted earthen material is an additional burden on landfills that is not necessary to control landfill gas and will likely generate more emissions through the placement and removal</p>	<p>CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>process (landfill operators will not leave intermediate cover in place when coming back into those areas, equiring extra heavy equipment cycles for the additional 2 feet of material). There has been no scientific or engineering justification for increasing the long-term intermediate cover depth, in fact, additional emissions would be generated if the soil for the additional cover is not available onsite and needs to be imported. Methane emissions are already regulated at landfills and are enforced with existing, stringent monitoring requirements.</p>	
3162	Kester, G., CA Association of Sanitation Agencies , McIntyre, D., Dublin San Ramon Services District	<p>Article 6 Section 18987.2(a)(1) – The language requires all biosolids produced at any wastewater treatment plant to be treated via anaerobic digestion and/or composting and sent for land application. In addition to other treatment technologies as mentioned in comment 1 above, there are also other end uses employed which would be disallowed under this requirement. California has two incinerators and roughly five surface disposal sites located at wastewater treatment plants. None of the sludge produced at those facilities would ever be transported off-site and would neither be landfilled or land applied and thus would seem beyond the purview of these regulations. It would be cost prohibitive to require these facilities to change technology and management practices. Similarly, it is imperative that all treatment options in 40 CFR part 503 Appendix B (Class A and Class B) be allowed and viewed as “recovery” (not just anaerobic digestion and composting). Treatment technologies are themselves dynamic and emerging resulting in alternative treatment and final disposition of biosolids. For example, thermal processes can produce energy and biochar. These technologies should be encouraged, not excluded as the language in this section appears to do. Dried biosolids have long been used effectively as alternative fuel at cement kilns in place of fossil-based fuels. We recommend all treatment technologies specified in Appendix B of 40 CFR part 503 which result in land application or land reclamation should be counted as a reduction in landfill disposal. Existing biosolids management practices whereby biosolids do not leave the site should be excluded from these regulations. And emerging technology which may result in energy production (thermal) or avoid fossil-based fuels (cement kilns), but which do not send any biosolids to a landfill should be encouraged. Additionally, our understanding is that CalRecycle does not intend (and lacks the authority) to ban any organic waste stream from landfills. Rather, future use was to be negotiated between a wastewater plant and their jurisdiction of origin. We request that these regulations be revised to explicitly articulate that approach. We recommend the following revisions to this section: Section 18987.2. Biosolids and Sewage Sludge Handling at a POTW <b>(a) Biosolids generated at a POTW shall be:</b> <b>(1) Treated and managed in accordance with the Land Application, Incineration, or Surface Disposal requirements specified in 40 CFR part 503,</b></p>	<p>CalRecycle has determined that the suggested revisions are not necessary or consistent with the SB 1383 legislative intent. The overall goal of SB 1383 is to reduce methane emissions and the options in Section 18987.2 reflect uses that reduce methane. CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2</sub>e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383. However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste. Please refer to Section 18983.2 for more information.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p><b>(2)</b> Transported to a solid waste facility or operation for additional processing, composting, in-vessel digestion, or other recovery as specified in Section 18983.1(b) of this division,</p> <p><b>(3) Be treated and managed in other approved manners, approved by the regional, state, or federal agencies having appropriate jurisdiction.</b></p> <p><b>(4)</b> Notwithstanding subdivision (a)(1-3), sewage sludge and biosolids <b>when it is not possible for them to be adequately treated and sent</b> for additional processing or recovery may be sent for disposal to a permitted facility that can receive that sewage sludge and biosolids and has obtained the applicable approvals by the regional, state, and federal agencies having appropriate jurisdiction.</p>	
3163	Kester, G., CA Association of Sanitation Agencies , McIntyre, D., Dublin San Ramon Services District	Article 9 Section 18990.1(c)(3) seems inconsistent with the language added to s. 18990.1(a & b) which restricts local ordinances such that they may not impede organics recycling. Sub (c)(3) seems to supersede that restriction. Clarity or revision of this language is requested to ensure an open market across California for organics recycling	There is no conflict between these provisions. Subsection (c )(3) is simply designed as a catch-all provision to make clear that the requirements of (a) and (b) should not be considered as overriding general planning, zoning, permitting or ordinance authority that does not fall within the provisions of (a) and (b).
3161	Kester, G., CA Association of Sanitation Agencies ; McIntyre, D., Dublin San Ramon Services District	Article 2 section 18983.1(c ) – Includes “...or any other disposal of waste as defined by Section 40192(c ) of the Public Resources Code.”, in the definition of Landfill. This is a very broad definition and seems to limit the disposition to organic waste deposited on land. We believe this is an overly restrictive definition, and will create confusion because of the inclusion of technologies other than landfilling in the definition of landfill (by virtue of the cross-reference to PRC Section 40192(c)). We request that CalRecycle clarify the scope of this definition. (see comment 3 below as well).	It is unclear from the comment what “technologies” the commenter is referring to or what clarity they are seeking as to the scope of this section. To the extent the comment is addressing land application of compostable material, that activity is specifically identified as a reduction in landfill disposal if it meets the conditions of the section. To the extent the comment is addressing surface disposal sites at wastewater treatment plants, that would be considered landfill disposal under this section unless it meets the requirements of land application of biosolids under this section or qualifies as an alternative technology that constitutes a reduction in landfill disposal under Section 18983.2.
3164	Kester, G., CA Association of Sanitation Agencies McIntyre, D., Dublin San Ramon Services District	<p>Article 12 Section 18993.1(f) defines eligible recovered organic waste products which satisfy the procurement requirements of s. 18993.1(e).</p> <p>a. Sub (f)(1) stipulates that compost is an eligible product. We assume this includes biosolids compost but request explicit confirmation of that. Furthermore, there are many other biosolids products which should be considered as eligible recovered organic waste products. A jurisdiction should be given broad latitude in meeting this requirement and all biosolids products meeting the land application requirements of 40 CFR part 503 should be eligible.</p> <p>b. Sub (f)(2) stipulates that renewable transportation fuel is also an eligible recovered organic waste product. While we support the intent of this requirement to help create end markets, we question the definition of Renewable Transportation Fuel in Article 1 18982(a)(62), which requires the fuel be derived “...from organic waste diverted from a landfill and processed at an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 to recycle organic waste.” Does this exclude renewable transportation fuel which is derived from sewage sludge anaerobic digestion alone, without codigestion? We trust that is not the intent, since anaerobically digesting sewage sludge, land applying the resultant biosolids, and producing low carbon transportation fuel is certainly consistent with the</p>	<p>The current draft regulatory text considers compost an eligible recovered organic waste product as long as the final product meets the definition of compost, per Section 17896.2(a)(4), and is produced either at a compost operation or facility or large volume in-vessel digestion facility that composts on-site (refer to Section 18993.1(f)(1)(A) and (B). Biosolids and/or digestate that do not meet the compost definition will not count towards the procurement target. However, CalRecycle disagrees with adding “other biosolids products”. The broad range of potential products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p> <p>CalRecycle disagrees with the commenter’s argument to allow renewable gas derived solely from sewage sludge to be eligible for procurement. The regulations clarify that only renewable gas derived from organic waste received at a POTW from solid waste facilities may count towards a jurisdiction’s procurement target. Other materials digested at a POTW, such as sewage sludge, are ineligible. Renewable gas derived solely from sewage sludge is ineligible for procurement because a POTW is not a solid waste facility and therefore not in the scope of the legislative intent of SB 1383. Sewage sludge is also not typically destined for a landfill, so its use does not help achieve SB 1383’s landfill diversion goals. For the reasons noted above, gas generated from the inflows of a</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>requirements of SB 1383 and these regulations. All sewage sludge which is anaerobically digested could be considered to be diverted from landfills. Please clarify whether the intent of the language is to include all sewage sludge and co-digested materials under this eligibility requirement. Alternatively, we respectfully request this definition be amended to read: "...gas derived from organic waste processed in an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 or Title 23."</p> <p>c. Sub(f)(2) – We also request that any other beneficial uses of methane be deemed eligible to qualify as fulfilling the procurement obligations. This includes pipeline injection, on-site power production and exported electricity, as well as the production of renewable transportation fuel. All should be deemed to be recovered organic waste products and eligible to satisfy the procurement requirements.</p>	<p>sewer system and not from organic waste diverted from the solid waste stream cannot logically be considered a recovered organic waste product. It is inconsistent with the requirements of SB 1383 to incentivize or mandate activities that do not contribute to landfill diversion of organic waste.</p> <p>Regarding "other beneficial uses of methane", CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction's procurement target.</p>
3165	Kester, G., CA Association of Sanitation Agencies McIntyre, D., Dublin San Ramon Services District	2014 Waste Characterization Table – Please confirm that this Table has been updated to include biosolids data from 2014, since this serves as the baseline upon which compliance with the draft regulations is based.	The comment is not addressed to the regulatory text or the regulatory process but instead relates to a study undertaken separately from the proposed regulations.
3160	Kester, G., CA Association of Sanitation Agencies, McIntyre, D., Dublin San Ramon Services District	<p>Article 2 section 18983.1(c) – Includes "...or any other disposal of waste as defined by Section 40192(c) of the Public Resources Code.", in the definition of Landfill. This is a very broad definition and seems to limit the disposition to organic waste deposited on land. We believe this is an overly restrictive definition, and will create confusion because of the inclusion of technologies other than landfilling in the definition of landfill (by virtue of the cross-reference to PRC Section 40192(c)). We request that CalRecycle clarify the scope of this definition. (see comment 3 below as well).</p> <p>None of the treatment processes delineated in Appendix B would generate methane. The greenhouse gas reduction achieved via land application rather than landfilling is the same regardless of the technology employed to meet the pathogen reduction and vector attraction reduction criteria. The ethane reduction is realized in the avoidance of landfilling not by the process utilized to treat the biosolids. While it is true that most biosolids in California undergo either anaerobic digestion and/or composting, other compliant technologies are also utilized and entities should not be penalized for using them.</p>	<p>CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2</sub>e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383.</p> <p>However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste.</p> <p>Please refer to Section 18983.2 for more information.</p> <p>Subdivision (c) The purpose of this section is to specify that the use of the term landfill within this section is not limited to permitted landfills, but also includes landfills that require permits but may not have them, the out-of-state export of waste, and other activities outlined in Section 40192(c) of the PRC. Organic waste managed in an unpermitted landfill or exported out-of-state results in</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>CASA strongly urges CalRecycle to replace the words “.... anaerobic digestion or composting....” With “..... one of the processes, ....”. In support of this argument, please refer to the BEAM model at this link: <a href="https://casaweb.org/wpcontent/uploads/2015/12/1-BrownetalEST-GHGCalculator10.pdf">https://casaweb.org/wpcontent/uploads/2015/12/1-BrownetalEST-GHGCalculator10.pdf</a> which has been adopted by the Canadian Ministries of the Environment as a means to quantify the climate change mitigation benefits of biosolids land application.</p>	<p>the deposition of organic waste in landfills. This waste falls out of CalRecycle’s oversight, and thus the greenhouse gas emissions or reduction potential cannot be verified. This section is necessary to make clear that this activity does not constitute a reduction in landfill disposal.</p>
6296	Klein, L., City of Sunnyvale	<p>While we recognize and appreciate CalRecycle's efforts to provide for a variety of collection strategies, the "three-container/two-container/single-container" options are overly prescriptive, inflexible, and fail to take into account legitimate variations in how organics are collected, processed and marketed. To maximize the suitability for recycling of the materials we collect, Sunnyvale uses a "five-container" system that provides residents a yard trimmings cart, a dual stream recycling cart ( split between paper and containers), and a dual-stream garbage cart ( split between food scraps and garbage).</p> <p>Many jurisdictions, including Sunnyvale, are already pursuing Zero Waste goals in ways that also promote 70% and 75% organics diversion. Thus, we support the creation of an "Alternativ " 4" that allows cities and counties to opt out of the prescriptive measures in Article 3, the enforcement requirements of Articles 14, 15 and 16 and reporting requirements in Article 13 that pertain to Articles 14, 15 and 16, thereby allowing those jurisdictions to focus their efforts on diversion, not checklists, citations and fines.</p>	<p>Comment noted. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.</p>
6297	Klein, L., City of Sunnyvale	<p>The proposed per capita purchase requirements for recovered organic waste products would force the City to procure amounts of compost that are an order of magnitude larger than what we currently use. The alternative of purchasing a biogas-derived fuel product, for which no local or regional vendor exists, if the fuel was available, would require annual vehicle use equivalent to over four million miles of driving.</p> <p>If a procurement requirement is retained, we ask that it:</p> <ul style="list-style-type: none"> <li>• Use calculation factors that result in required amounts bearing some resemblance to what a jurisdiction is capable of consuming</li> <li>• Use calculation factors that adjust annually based on how much organic material is being diverted during that year, not on a theoretical calculation that assumes 75% diversion is achieved immediately</li> <li>• Allow biogas uses other than transportation fuel ( e.g. electricity generation, pipeline injection) to qualify</li> <li>• Allow not just compost, but mulch and similar waste-derived materials to qualify.</li> </ul>	<p>Regarding calculations for “what a jurisdiction is capable of consuming”, it is important to note that the procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products to provide jurisdictions with even more flexibility to choose product that fit local needs. Moreover, the comment lacks specific language for quantifying such an approach for each jurisdiction. Even if the commenter recommended a quantifiable way to determine “what a jurisdiction is capable of consuming”, California has over 400 diverse jurisdictions and it would be overly burdensome to account for each jurisdiction’s custom needs and to develop a procurement target and enforcement policy for each one. Regarding the commenter’s proposal for an alternative calculation factor based on organic waste diversion to determine the per capita procurement target, CalRecycle disagrees with this approach. Legislative language in SB 1383 does not allow CalRecycle to impose the statewide 50% and 75% organic waste reduction targets on individual jurisdictions. Therefore, the per capita procurement target also cannot be individually imposed on each jurisdiction, it must be on a statewide basis. The purpose is to create a transparent method to establish the requirement for jurisdictions to create markets for recovered organic waste products. The current approach</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>already accounts for statewide organic waste diversion and for jurisdiction-specific need by providing flexibility to procure a variety of products that fit local needs.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction's procurement target.</p> <p>Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
6298	Klein, L., City of Sunnyvale	<p>The proposed regulations appear to exceed the statutory authority granted by the SB 1383 statute. Most notably, the statute says (in Section 42652.5(a)(1)), "The regulations ... may authorize local jurisdictions to impose penalties on generators for noncompliance." But the regulations say (in Section 18995.4(a)(1))- Enforcement by a Jurisdiction), "The jurisdiction shall issue a Notice of Violation to any entity found in violation ... "</p> <p>If the regulations continue to take the current, overly detailed and prescriptive approach in which the City must enforce on our residents and businesses 18 state-required actions, we ask that Article 14 be revised to conform to the statutory language-that jurisdictions may, not shall, take enforcement action.</p>	<p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, "CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code." That section also provides that CalRecycle may "include different levels of requirements for local jurisdictions..."</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, "The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code." SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that "[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. '[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . . .' The [administrative agency] is authorized to "'fill up the details'" of the statutory scheme."</p> <p>Consistent with rules of statutory construction, Public Resources Code Section 42652.5(a)(1) must be read as a whole and interpreted in a way that renders the text as compatible, not contradictory. This section states that the regulations "May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." The first part of this section explicitly contemplates regulatory requirements on entities besides generators as long as they are relevant to meeting the mandates of SB 1383. Thus, the second part of the section</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>regarding penalties must be read harmoniously and as a whole with the first part to permit penalties on the other entities that may be subject to regulatory requirements. Without enforcement penalties on the other entities, the regulatory requirements are not actually requirements but mere suggestions. Bolstering this interpretation is the Assembly Floor Analysis for SB 1383 (August 31, 2016) which stated that the bill, “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and impose penalties for noncompliance.”</p> <p>Regarding the language “authorizing” penalties by local jurisdictions, the clear intent of the legislation was that jurisdictions must penalize non-compliance with SB 1383 requirements. First, the language of Assembly Floor Analysis described above makes this intent clear – CalRecycle may require jurisdictions to impose requirements “and impose penalties for noncompliance.” Second, the Legislature designed the bill to achieve the organic waste reduction goals in part by requiring local jurisdictions to impose requirements. These requirements must be enforceable through penalties or:</p> <p>(a) they will not actually be requirements but suggestions; and (b) there will be no way to ensure compliance by regulated entities and thus achieve the goals of the statute. Given these considerations, CalRecycle has authorized local jurisdictions to impose penalties as long as they meet the conditions described in the regulations regarding categories of violations, requirements to enforce against those violations, and minimum penalty levels.</p> <p>Regarding Section 18995.1(a)(1)(B)(5), CalRecycle notes that the language of this section was amended to simply specify that jurisdictions enforce according the enforcement timetables and compliance extensions in Section 18995.4 and the administrative civil penalty provisions in 18997.2.</p> <p>In addition, the language in Section 18995.4(a)(1) was changed to state, “The jurisdiction shall issue a Notice of Violation within 60 days of a determination that a violation has occurred.” This subsection does not mandate penalties but instead mandates that respondents determined to be in violation of the requirements of the chapter are put on notice of a violation.</p>
6299	Klein, L., City of Sunnyvale	<p>The regulations propose to amend Division 7 of Title 14 of the California Code of Regulations to require operators of facilities that process organics to capture, at least daily, very large (one cubic yard) samples from various process streams and perform detailed waste characterization sorts to document levels of organics and contaminants.</p> <p>These requirements are:</p> <ul style="list-style-type: none"> <li>• not based on statistical science</li> <li>• will generate no more useful data than could be obtained with less costly and intrusive sampling methods</li> <li>• will consume vast amounts of time, labor, money and physical space that will be in excess of the value of information gained.</li> </ul> <p>Equivalent performance tracking information can be obtained with sampling events conducted quarterly that use multiple small samples and thus improve the validity of the data.</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. The sampling frequency 10 consecutive days was based on that 2 consecutive weeks per quarter, yielding 10 samples per quarter and 40 samples per year. This is consistent with ASTM calculation method (Standard Test Method for Determination of the Composition of Unprocessed Municipal Solid Waste; ASTM International; Designation: D-5231-92 (Reapproved 2003)) for estimating the number of samples required to achieve a pre-determined precision of specific material type.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>We ask that CalRecycle engage experts in scientific sampling and statistics to recast Article 6.2, sections 17409.5.1 through 17409.5.5 so that valid information can be obtained in a more reasonable manner. Sunnyvale uses such sampling in management of the Sunnyvale Materials Recovery and Transfer Station (SMaRT Station®) and staff would be happy to provide examples of the detailed protocols used at the SMaRT Station to determine the composition of various process streams.</p>	<p>Using data from the “2014 Disposal-Facility- Based Characterization of Solid Waste in California”, the two most abundant “organics” material types found at landfills and/or curbside pick-up collection systems were “Uncoated Corrugated Cardboard” and “Food”. Furthermore, the 2014 study used a confidence interval of 90% for all data calculations (2014 Disposal Facility- Based Characterization of Solid Waste in California, Page 22). Applying this information to the equation outlined in the ASTM publication, of a 200-pound sample and a precision of 10%, yields a required sample number of 49 for “Uncoated Corrugated Cardboard” and 24 for “food”. Since “Organic Waste Recovery Efficiency” is not specific to a material type such as “Uncoated Corrugated Cardboard” or “Food”, rather just “Organic” or “Not Organic”, it is rational to average the 2 numbers (a sample number of 49 for “Uncoated Corrugated Cardboard” and 24 for “food”) and present a more inclusive required sample number. The average of those two numbers is 37 samples.</p> <p>Additionally, after consulting with divisions within CalRecycle, a significant number of jurisdictions use “Every other week” collection for a portion of their waste stream. Many of these jurisdictions use the same facility or facilities for waste processing. A consecutive two-week sampling standard would ensure that jurisdictions with “Every other week” collections streams are reflected in the sampling. Based on the expert data 10 consecutive days was used instead of 14 to help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>The 200 pounds is what was used for the Statewide waste characterization studies performed during the past 5 years by California (CalRecycle), Washington, New York, Georgia and Connecticut have used a sample weight between 200 to 300 pounds. Furthermore, ASTM international (American Society for Testing and Material) also suggests a minimum sample weight of 200 pounds be used in waste characterization related studies.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>
6300	Klein, L., City of Sunnyvale	<p>The organics diversion goals of SB 1383 will not be met without a substantial state-led effort to site, fund and permit dozens of new facilities. These facilities are needed to receive, transfer, convert to usable products, compost and anaerobically digest organics and market the resulting products. These topics are not addressed in the regulations.</p> <p>We ask that CalRecycle use the regulatory process to smooth siting, funding, and regulatory pathways to speed the development of the necessary facilities. We agree with the urgency and importance of increasing diversion of organics. We remain concerned that the very prescriptive and process-oriented approach taken in the regulations does not fully support achievement of the goal.</p>	<p>Comment noted. This comment is not specific to any aspect of the regulatory text. CalRecycle intends to provide guidance to jurisdictions throughout 2020 and 2021 prior to the implementation date of the regulatory requirements. CalRecycle will additionally continue to provide regulatory guidance as the regulations take effect.</p>

Comment Number	Received From	Question/Comment	Response(s)
6091	La Mariana, J., RethinkWaste	<p>In the recently revised regulatory language, the Department grandfathered existing carts on the proposed labeling requirements in Section 18984.8. RethinkWaste strongly supports this change. Due to the composition of our containers, labels do not stick to the sides or the lids and are embedded to the lids of the carts. Relabeling them to comply with the requirements of this section would have forced our waste contractor to replace containers for all of our customers, incurring significant costs that would have resulted in residential rate increases.</p>	<p>Thank you for the comment. The comment is in support of the current language.</p>
6092	La Mariana, J., RethinkWaste	<p>It is critical that the Department provide as much support and guidance to local governments as possible on how to best comply with various aspects of the proposed regulation, including: Providing a sample ordinance that cities and counties can adopt, pursuant to Section 18981.2;</p> <ul style="list-style-type: none"> <li>• Developing a system to do sampled route reviews pursuant to Article 3, Section 18984.5;</li> <li>• Fulfilling recordkeeping requirements pursuant to Article 3, Section 18984.6 to ensure consistent and reliable reporting to the Department, and;</li> <li>• Calculating jurisdictions’ edible food recovery capacity, pursuant to Article 11, Section 18992.2., and;</li> <li>• Calculating jurisdictions’ recovered organic waste procurement targets, pursuant to Article 12, Section 18993.1.</li> </ul>	<p>Comment noted. This comment is not specific to any aspect of the regulatory text. CalRecycle intends to provide guidance to jurisdictions throughout 2020 and 2021 prior to the implementation date of the regulatory requirements. CalRecycle will additionally continue to provide regulatory guidance as the regulations take effect.</p>
6093	La Mariana, J., RethinkWaste	<p>In the three-cart system summarized in Article 3, section 18984.1 a local jurisdiction can choose to collect food waste in the green-bin or the black-bin. Food waste collection in the black-bin requires processing at a “high diversion organics facility” that demonstrates 75-percent organic waste diversion. However, food waste collection in the green-bin does not have this same quantitative requirement. We fear this inconsistency could lead to weak implementation of green-bin programs – by simply distributing green-bins, a jurisdiction would be considered in compliance with the regulations. We respectfully request the Department to clarify the regulations to hold local jurisdictions to the same 75-percent capture/diversion standard for organic waste collected via green binprograms. This clarification will ensure strong implementation and capture/diversion of organics through green-bin collection programs as well as through high-diversion organics facilities.</p>	<p>Section 18984.5 already requires all types of containers to be monitored. Instead of setting a performance standard on green containers, CalRecycle established container monitoring requirements and facility checking/monitoring. However organic waste recovery efficiency will be measured at facilities receiving source separated organic waste.</p>
6094	La Mariana, J., RethinkWaste	<p>Article 12, Section 18993.1 requires local jurisdictions to procure organic waste products either as compost or renewable transportation fuel. While we support these end uses for organic waste, we strongly believe that renewable electricity should also qualify as an end use for biogas. Expanding the list of end uses provides proper flexibility to local jurisdictions to use the biogas in a manner consistent with their needs. Because every city is different, some may have electricity needs that the biogas could help meet rather than vehicle fuel needs, and vice versa. We believe that allowing local jurisdictions to use biogas for renewable electricity is consistent with the goals of SB 1383 and California’s overarching climate goals, given the net greenhouse gas emission reduction benefits it will still achieve.</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
6095	La Mariana, J., RethinkWaste	<p>Article 14, Section 18995.4 requires local officials to issue notices of violation within 60-days after determining a violation has occurred, as well as prescribes specific time periods to conduct follow-up inspections. Many local governments, especially smaller ones, lack the resources and capacity to meet the prescribed time frames. Local governments have only a handful of inspection officers to inspect thousands of locations across their jurisdiction.</p> <p>Therefore, they will have to increase their inspection team sizes significantly to meet potential enforcement and inspection requirements pursuant to this Section. Therefore, we respectfully request extending these time frames by an additional 30-days and allow for a window for compliance. For example, instead of prescribing a 60-day time frame to issue a notice of violation, allowing for a 60 to 90-day window would provide ample flexibility to local inspection officers to follow-up in an efficient and effective manner.</p>	<p>A change to the regulatory text is not necessary. Section 18995.4 explains the minimum timeframe for the process of issuing a Notice of Violation to an entity if there are found non-compliant. A jurisdiction has 60 days from the date of inspection to issue a NOV. This allows time for the entity to remedy the situation before the jurisdiction issues a NOV. Extending this time frame would allow the entity to be non-compliant an additional 30 days. Once the jurisdiction issues a NOV, it must follow up within 90 days. This subsection conforms to the Departments general procedure of written notices of potential failure and a reasonable timeframe for remedy.</p>
3306	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	<p>The current draft deprives cities and counties of local control for their diversion programs. In fact, many jurisdictions have long demonstrated a serious commitment to reducing landfill disposal; including early adoption of citywide organics and food scraps programs. These programs have been carefully researched, designed, piloted, implemented and enhanced for over a decade. If it can demonstrate that these programs meet the overall organics diversion goal of SB 1383, we believe that jurisdictions should be allowed to build on the programs established in pursuit of their landfill diversion commitments in a manner that works best for their</p>	<p>Comment noted. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.</p>

Comment Number	Received From	Question/Comment	Response(s)
		community. These jurisdictions should not be burdened with the overly prescriptive requirements of SB 1383 regulations which may ignore or diminish existing successful efforts.	
3307	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	The current draft establishes procurement targets for the purchase of organic waste products. While we understand the need for promoting markets for recovered waste products, the current proposal, which relies heavily on the purchase of renewable transportation fuel, seems dramatically misaligned with the availability of renewable transportation fuels and each jurisdiction's ability to pay for them.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
3308	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	We continue to be concerned that the punitive approach to residents and businesses dissuades customers from making the behavior changes needed to reach the very ambitious goals set by SB 1383 and damages the historic relationship between local government and ratepayers.	A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies

Comment Number	Received From	Question/Comment	Response(s)
			may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.
3309	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	Forcing jurisdictions to procure specified amounts of recycled organic waste products and the calculation for quantifying the amount required is flawed. A better approach would be to simply require that jurisdictions' purchases of landscape materials include recycled content.	CalRecycle disagrees with revising the procurement approach to rely solely on jurisdictions' voluntary purchases of recycled content products. This approach would be insufficient to drive demand for recovered organic waste products on the scale necessary to help meet the ambitious targets required by SB 1383.
3310	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	There needs to be a formula to calculate the ratio of residents per land area. Requiring a jurisdiction to use the number of residents to calculate the recovered organic waste products required does not address large multifamily complexes that would generate large quantities of organic waste but will not have the landscape areas to place the recovered products. There needs to be a method for calculating residents per parcel and the quantity of available land for recovered products. Conversely, large, open farm land with one or two residents on 10's of acres needs a different method for calculations.	CalRecycle disagrees with the proposal for revising the procurement target to account for "ratio of residents per land area". The current approach relies on publicly available population data from the Department of Finance (DOF) to calculate a jurisdiction's annual recovered organic waste product procurement target. The comment provides no methodology by which a "ratio of residents per land area" would be calculated, therefore this approach would be subject to interpretation, and would not be based on a public database. The comment also focuses on "land areas to place recovered products", which seems to suggest the assumption that spreading compost on jurisdiction lands is the only option, which is not the case. CalRecycle has also revised Section 18993.1 to expand the list of eligible recovered organic waste products to provide more flexibility to jurisdictions. If a jurisdiction does not have the land area to spread compost, they can procure energy products or mulch, for example. However, CalRecycle recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction's need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use
3311	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	With the goal of reducing short-lived climate pollutants, having electric vehicles would better reach the goals than requiring use of renewable fuels. Additionally, with the goal of creating markets, then purchasing electricity generated from those sources would also be aligned.	The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements.

			<p>The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
3312	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	<p>Section 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.7, 17409.5.9 and 17409.5.11</p> <p>Requiring daily waste characterization of one-cubic yard samples is expensive, labor intensive and occupies valuable space needed for operations. Some jurisdictions may have more than one facility which would then multiply the resources needed. A smaller sample size and lesser frequency could provide statistically equivalent results.</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>
3313	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	<p>The Proposed Regulation should clarify that food sales at large events and large venues that are not a part of the venue's direct concession services should be exempt from the food donation requirements. These are often outside the sphere of control of a jurisdiction.</p>	<p>CalRecycle would like to clarify that food vendors operating at large events and large venues are not exempt from the edible food recovery regulations. Large event and large venue operators must make arrangements to ensure that the food vendors operating at their event or venue are recovering the maximum amount of their edible food that would otherwise be disposed. In a situation where the food vendors at a large venue or large event are not in compliance with Section 18991.3 of the regulations, the operator of the large event or large venue would be responsible for compliance.</p>
3314	Landry, S., Recycling and Waste Reduction	<p>Requiring the jurisdiction to provide access to the implementation records within one business day seems unreasonable. We would prefer to see record requests synchronized to standard California Public Records Act requirements where each of our participating cities has existing policies and pathways established.</p>	<p>CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.</p>

Comment Number	Received From	Question/Comment	Response(s)
	Commission of Santa Clara County		
3315	Landry, S., Recycling and Waste Reduction Commission of Santa Clara County	There should be coordination between SB 1383 regulations and other State Regulations that deal with soil management, such as the MWELo regulations which require landscape projects to provide a 'Soil Management Plan.' By adding requirement to use a percentage of the recovered organic waste in their Soil Management Plan will assist the local jurisdiction in meeting their procurement quantities	The proposed regulations were revised in to include a requirement that jurisdictions shall adopt ordinances or other enforceable mechanisms to requirement compliance with MWELo. Section 18989.2 will require jurisdictions to adopt an ordinance or other enforceable requirement requiring compliance with the MWELo, Title 23, Division 2, Chapter 2.7 of the California Code of Regulations. However, compost and mulch used under MWELo does not automatically count towards procurement. CalRecycle's approach of a procurement target is necessary for jurisdictions to measure compliance with Article 12, which in turn is necessary to achieve the ambitious diversion targets required by SB 1383. Further, this approach recognizes the diverse number of jurisdictions across the state, and allows flexibility for jurisdictions to use any combination of recovered organic waste products, rather a one-size-fits-all mandate requiring public and private landscape construction to use compost and mulch, which is already addressed in MWELo provisions in the California Code of Regulations. Regarding coordination with other state regulations, CalRecycle participated in development and implementation of the Healthy Soils Initiative (HSI) and assisted the California Department of Food and Agriculture (CDFA) in developing reimbursable compost application rates, estimating nitrate loads following compost application, developing the HSI grant application, and including compost application as an eligible soil management practice. While CalRecycle appreciates the ability to provide input, the HSI is ultimately under the regulatory authority of CDFA, not CalRecycle.
3144	Laurel, A., City of West Sacramento	<ul style="list-style-type: none"> <li>• Article 1. Definitions, Section 18982 (a)(S) "Blue Container", (a)(28) "Gray container", (a)(29) "Green container" The City appreciates that CalRecycle now specifies that cart hardware may differ in color from the cart lid color requirement. However, the City is concerned that the container body color is not addressed in these new container color definitions. <ul style="list-style-type: none"> <li>o Please amend the regulations to specify that the cart body may differ in color from the required lid color.</li> </ul> </li> </ul>	CalRecycle has revised the definitions of the containers to be consistent with each other. Also, thank you for the comment related to the increased flexibility regarding the color and hardware of the containers.
3145	Laurel, A., City of West Sacramento	<ul style="list-style-type: none"> <li>• Article 3. Organic Waste collection Services. This article specifies the minimum standards for organic waste collection services provided by jurisdictions. California currently lacks the necessary infrastructure to meet the proposed requirements. The City has concerns over our ability to comply with the organic waste diversion requirements given this limited capacity. While the regulation provides five years to implement programs, the City is concerned that this is not enough time to develop and permit new facilities. <ul style="list-style-type: none"> <li>o Consider local government exemptions for meeting the diversion requirements when existing infrastructure capacity prevents regulation compliance.</li> </ul> </li> </ul>	A change in the regulatory text is not necessary. The regulations are effective in 2022, allowing for ample time for planning for lack of capacity or infrastructure deficiencies. Currently, it is 2020 and jurisdictions have until 2022 to address any capacity deficiencies and if necessary, they can be placed on a Correction Action Plan that allows for an extended timeframe to come into compliance. The regulations allow up to three years to come in to compliance on a CAP (in total this is effectively equivalent to the request five years).
3146	Laurel, A., City of West Sacramento	<ul style="list-style-type: none"> <li>• Article 4. Section 18985.1 (f) Translation requirement for outreach materials in any language that is spoken by more than 5% of a population. <ul style="list-style-type: none"> <li>o Allow images of waste stream materials to be used in place of translated text, and/or</li> </ul> </li> </ul>	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.

Comment Number	Received From	Question/Comment	Response(s)
		<ul style="list-style-type: none"> <li>o Provide translated outreach materials in all necessary languages for the City to use to meet this requirement.</li> </ul>	
3147	Laurel, A., City of West Sacramento	<p>Article 10. Section 18991.1 Jurisdiction Edible Food Recovery Program (a)(2) requires jurisdictions to increase food generator access to food recovery organizations and (a)(4) requires jurisdictions to increase edible food recovery capacity if enough capacity does not exist. These requirements are beyond the scope and expertise of the City's existing jurisdictional authority.</p> <ul style="list-style-type: none"> <li>o Rather than putting the City in the position of food recovery coordinator, consider working directly with food recovery organizations to help them increase their accessibility to food generators and their capacity to recover edible food.</li> <li>o Provide grant funding opportunities to Food Recovery Organizations to help them improve the efficiency of their operations. Most food recovery organizations are non-profits operating on minimal budgets. Providing funding opportunities directly to these organizations will allow them to make knowledgeable decisions on how best to use the funding to increase their accessibility and capacity.</li> </ul>	<p>With regard to the comment suggesting that these “requirements are beyond the scope and expertise of the city’s existing jurisdictional authority,” please refer to the Public Resources Code Section 42652.5 (a) (1)-(4) which grants CalRecycle the authority to impose requirements on jurisdictions and may include requirements to meet the goal that not less than 20% of edible food that is currently disposed is recovered for human consumption by 2025. This evinces an intent on the part of the Legislature to allow for CalRecycle to place requirements on jurisdictions to increase edible food recovery. In addition, assessing edible food recovery capacity at the local level is critical for jurisdictions to be able to understand if capacity needs exist, and exactly what their capacity needs are. It is at the discretion of the jurisdiction to determine what jurisdiction entity is best suited to assess edible food recovery capacity and ensure that compliance with this regulatory requirement becomes a part of their scope.</p> <p>Regarding the comment, “Rather than putting the City in the position of food recovery coordinator, consider working directly with food recovery organizations to help them increase their accessibility to food generators and their capacity to recover edible food.” SB 1383 does not require jurisdictions to act as food recovery coordinators. A food recovery coordinator typically acts as a liaison between food donors and food recovery organizations and food recovery services to ensure that food is recovered and distributed to the organization and services with the greatest need for the food. SB 1383 does not require jurisdictions to do this.</p> <p>SB 1383 requires jurisdictions to implement edible food recovery programs, which includes the requirement that a jurisdiction shall increase edible food recovery capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs. Assessing edible food recovery capacity at the local level is critical for jurisdictions to be able to understand if capacity needs exist, and exactly what their capacity needs are. If sufficient capacity does not exist, then significant amounts of edible food will continue to be disposed rather than being put to its highest and best use of helping feed Californians in need, and could jeopardize the state’s ability to achieve its 20% edible food recovery goal.</p> <p>Regarding the comment that CalRecycle should consider working directly with food recovery organizations to help them increase their capacity, CalRecycle does work directly with food recovery organizations and services across the state through CalRecycle’s Food Waste Prevention and Rescue Grant Program. CalRecycle’s Food Waste Prevention and Rescue Grant Program has given the Department insight into the significant differences in edible food recovery capacity needs that exist in cities, counties, and regions across California. These significant differences in capacity needs highlight the critical need for jurisdictions to perform their own local capacity needs assessments. The California Association of Food Banks has 41-member food banks and approximately 6,000 recipient agencies that they work with. The capacity needs of these organizations and food distribution agencies can vary widely from jurisdiction to jurisdiction. For a jurisdiction to implement an effective edible food recovery program it is critical that they are familiar with the food recovery organizations and services that operate in their area and the current capacity that exists.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>With regard to the comment about grant funding, CalRecycle has a food waste prevention and rescue grant program that funds food waste prevention and food rescue projects in California. CalRecycle has awarded 20 million dollars to over 60 grantees; the majority of the grantees are food recovery organizations and food recovery services. However, CalRecycle does recognize that there currently is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. This language was included in the regulations to encourage jurisdictions to establish a sustainable funding source to help fund their food recovery program.</p>
3148	Laurel, A., City of West Sacramento	<ul style="list-style-type: none"> <li>Article 12. Section 18993.1 Recovered Organic Waste Product Procurement Targets. New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products at targets set by CalRecycle. We anticipate these requirements will result in substantial additional costs to the City, over and above the costs anticipated to comply with the extensive programmatic requirements of the proposed regulations. <ul style="list-style-type: none"> <li>Consider working to develop markets for such materials in a second regulatory proceeding.</li> </ul> </li> </ul>	<p>A change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in “substantial additional costs”.</p> <p>CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p> <p>However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p>
3149	Laurel, A., City of West Sacramento	<p>Financial Burden of Proposed Regulation. The extensive programmatic requirements to, among other requirements, implement enforceable ordinance(s), manage increased reporting requirements, conduct site visits and route audits, track and report on contamination issues, and issue, track and follow up on violations, will add a significant burden on City staff. The City may likely need to significantly increase customer rates as it is anticipated that additional staff will be hired to implement these programs. As required by State Law, any utility rate increase is subject to the Proposition 218 process. If rate increases are not approved, the City may not be able to fulfill the requirements of these new regulations.</p>	<p>Comment noted. Commenter is noting potential complications with funding the costs of implementing the regulations.</p>
3150	Laurel, A., City of West Sacramento	<p>Furthermore, these regulations will result in new financial burdens for local businesses who will be faced with increased service rates to implement a mandatory organic recycling program, increased local taxes to pay for the associated jurisdictional oversight and potential penalties for non-compliance. Considering the potential significant financial burden of the proposed regulations, the City requests that CalRecycle:</p>	<p>Comment noted. This comment is not specific to any aspect of the regulatory text. CalRecycle intends to provide guidance to jurisdictions throughout 2020 and 2021 prior to the implementation date of the regulatory requirements. CalRecycle will additionally continue to provide regulatory guidance as the regulations take effect.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<ul style="list-style-type: none"> <li>o Provide grants, payment programs or other financial assistance to help the City and its businesses comply with the regulations.</li> <li>o Provide sample outreach materials, web-based calculation worksheets, webinar training, and other materials that jurisdictions can use to achieve and maintain compliance.</li> <li>o Provide jurisdictions assistance with the Proposition 218 process to help jurisdictions secure the rate increases necessary to comply with the regulations.</li> <li>o Consider options for jurisdictions when rate increases are not approved by tax payers to fund meeting the procurement requirements.</li> <li>o Consider the Good Faith Effort of the jurisdiction, when the jurisdiction does not have the funding resources necessary to comply with the regulations.</li> </ul>	
2008	Learakos, Mike; Waste Not OC Coalition	<p>We strongly urge either the addition of a third tier that includes any entity that is permitted to produce, manufacture, process, store, distribute or sell food OR alter Tier Two to include this definition for the following reasons. 1. Increasingly, the square footage and seating capacity of food facilities has little correlation to the amount of food waste generated. As leading food facility designers will confirm, the food industry in California is trending towards reducing their ‘footprint’ in order to mitigate rising costs. The fastest growing segment of retail food service industry today is the fast casual concept which typically falls below the Tier Two threshold but can easily produce as much or more food waste as a larger Tier Two facility with greater seating capacity. Likewise, catering and ‘in-plant’ feeders that operate within high occupancy office buildings would also be excluded under the current Tier Two definition. To illustrate, a 5,000 sq ft family owned independent restaurant with back of the house kitchen space of 1,400 square ft and a seating capacity of 140 that primarily serves ‘dine-in’ guests likely produces less food waste than a 4,000 sq. ft. facility with seating capacity for 75 guests and back of the house kitchen space exceeding 2,800 sq. ft. that relies more heavily on catering, take-out and home meal replacement (delivery).</p>	<p>The regulations are structured to place direct requirements on entities that dispose large quantities of edible food that could be recovered for human consumption. These entities are identified in the regulations as tier one and tier two commercial edible food generators. Placing direct requirements on these entities should be sufficient for California to achieve the 20% edible food recovery goal. Food facilities and food service establishments that are not tier one or tier two commercial edible food generators are exempt from SB 1383’s edible food recovery regulations because they typically have smaller amounts of edible food available for food recovery. As a result, additional generators were not added to the regulations.</p>
2009	Learakos, Mike; Waste Not OC Coalition	<p>We strongly urge either the addition of a third tier that includes any entity that is permitted to produce, manufacture, process, store, distribute or sell food OR alter Tier Two to include this definition for the following reasons. 2. Adoption of the current criteria for Tier Two generators will have an adverse effect in that it will actually weaken SB1383. The intent of the law is to reduce food waste and encourage donation of edible excess food before it becomes inedible waste. The current Tier Two definition not only provides an uneven playing field for food waste generators but contradicts the intent of the law. One benefit of food donation to an operator is the inevitable reduction of total food waste through operational changes and adjustments. Elimination of generators not meeting tier two criteria will limit the opportunity for those generators to source reduce food waste. Additionally, the food industry will see the exclusion of these operators not meeting the current Tier Two threshold as a ‘carve out’ meant to exclude the large fast food and coffee house chains while independent restaurants will be forced to participate. The</p>	<p>The regulations are structured to place direct requirements on entities that dispose large quantities of edible food that could be recovered for human consumption. These entities are identified in the regulations as tier one and tier two commercial edible food generators. Placing direct requirements on these entities should be sufficient for California to achieve the 20% edible food recovery goal. Food facilities and food service establishments that are not tier one or tier two commercial edible food generators are exempt from SB 1383’s edible food recovery regulations because they typically have smaller amounts of edible food available for food recovery. As a result, additional generators were not added to the regulations.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>industry will view this as the state trying to discourage the recovery of 'fast food' generally thought to be 'unhealthy'. Therefore, inclusion of all permitted food waste generators allows the market for excess food to determine which food will be recovered and consumed.</p> <p>If there is not a sufficient demand or market for a specific type of excess food product (ie; fried foods or bakery items), food recovery entities will simply not accept that product meaning the generator will have to divert the product at their expense leading to voluntary production changes. By removing these operations from Tier Two, there will be a reduced impetus for generators to make production changes.</p>	
2010	Learakos, Mike; Waste Not OC Coalition	<p>We strongly urge either the addition of a third tier that includes any entity that is permitted to produce, manufacture, process, store, distribute or sell food OR alter Tier Two to include this definition for the following reasons. 3. Starbucks locations in Orange County alone (few of which would qualify as Tier Two generators based on the current criteria) have donated well over 1.5 million pounds of excess edible (primarily packaged food) since the start of their 'Food Share' program. Starbucks started the program and provided funding for trucks and drivers because they correctly identified the financial benefit of participating in the donation of excess edible food. There are universal financial benefits to excess edible food donation for any operator regardless of facility size or seating capacity. Removing the fastest growing segment of the food service industry will not only have a negative impact on the amount of food recovered but will have a profoundly negative effect both now and in the future on the amount of food waste that can be source reduced.</p>	<p>The regulations are structured to place direct requirements on entities that dispose large quantities of edible food that could be recovered for human consumption. These entities are identified in the regulations as tier one and tier two commercial edible food generators. Placing direct requirements on these entities should be sufficient for California to achieve the 20% edible food recovery goal. Food facilities and food service establishments that are not tier one or tier two commercial edible food generators are exempt from SB 1383's edible food recovery regulations because they typically have smaller amounts of edible food available for food recovery. As a result, additional generators were not added to the regulations.</p>
2011	Learakos, Mike; Waste Not OC Coalition	<p>We are concerned that Section 18985.2 (a)(1) might force jurisdictions to list a food recovery organization that is unable or incapable of handling and distributing food safely or one that fails to follow food industry standards for food safety.</p>	<p>To clarify, the requirement does not specify that the jurisdiction shall maintain a list of all food recovery organizations and food recovery services operating within the jurisdiction, just that a list be created, maintained on the jurisdiction's website, and updated annually. It is at the discretion of the jurisdiction to determine the food recovery organizations and services that they feel should be included on the list.</p> <p>The list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with pursuant to Section 18991.3 (b), and thereby help ensure that edible food in the jurisdiction is not sent to landfills, but rather put to its highest and best use of helping feed people in need. Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help commercial edible food generators find food recovery organizations and services that are capable of safely handling and distributing edible food on a regular basis.</p>
2012	Learakos, Mike; Waste Not OC Coalition	<p>Waste Not OC strongly recommends that the primary focus relative to edible food recovery must be the safe handling of food and protection of public health and safety. The ability to track the source of a food borne illness outbreak rests on the ability to 'trace food product throughout the food supply chain. This critical investigative component is an essential step followed by the Center For Disease Control, US Department of Agriculture and every state in the country. By allowing a</p>	<p>While some commenters requested that the threshold be increased from 6 tons to 12 tons, other stakeholders recommended removing the threshold completely so that any food recovery organization or food recovery service that contracted with, or had a written agreement with a commercial edible food generator would be required to maintain records and report to the jurisdiction.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>food recovery organization to avoid maintaining a record of where the food was obtained, a gaping hole in the investigative process is created. It is our experience that Food recovery services or organizations that are not large enough or are incapable of maintaining a record of the source of the donated food are likely incapable of consistently handling and distributing donated food safely.</p>	<p>Another commenter further supported the recommendation to eliminate the 6-ton recordkeeping threshold by stating that the primary focus relative to edible food recovery must be the safe handling of food and protection of public health and safety. The commenter further noted that the ability to track the source of a food borne illness outbreak rests on the ability to trace food product throughout the food supply chain. By allowing a food recovery organization to avoid maintaining a record of where the food was obtained, a serious gap in the investigative traceability process is created. The commenter continued their argument by stating that in their many years of experience working as a food recovery organization, food recovery services and food recovery organizations that are not large enough or are incapable of maintaining a record of the source of the donated food are likely incapable of consistently handling and distributing donated food safely.</p> <p>CalRecycle carefully reviewed each comment that requested to increase the threshold and each comment that requested that the threshold be removed. Upon review and evaluation, a determination was made to remove the recordkeeping threshold for the following reasons. It is critical that any food recovery organization or food recovery service that contracts with or has a written agreement with a commercial edible food generator maintain a record of the food they collect or receive from those generators. This is critical for multiple reasons. The first reason is for enforcement purposes. All commercial edible food generators are required to maintain records of the food that is recovered from them. These recordkeeping requirements are specified in the commercial edible food generator recordkeeping section of the regulations.</p> <p>Although all commercial edible food generators are required to maintain records of the food that is recovered from them, in a previous draft of the regulations, not all food recovery organizations and food recovery services were required to maintain records. In a previous draft of the regulations, only food recovery organizations and food recovery services that collected or received 6 tons or more of edible food from commercial edible food generators were required to maintain records of the food they received from commercial edible food generators.</p> <p>The 6-ton threshold was removed because it created an enforcement issue for jurisdictions. Specifically, jurisdictions are required by SB 1383's regulations to monitor commercial edible food generator compliance. If the 6-ton threshold remained in the regulations, then a commercial edible food generator could claim that they have a contract with a food recovery organization that collects less than 6 tons per year, and also claim that they donate the maximum amount of their edible food that would otherwise be disposed to that food recovery organization. Because the food recovery organization that the generator claims they contract with recovers less than 6 tons of food per year, the jurisdiction would not be able to verify if the commercial edible food generator was in compliance.</p> <p>To eliminate this potential enforcement issue, CalRecycle removed the 6-ton threshold and revised the regulatory text. The regulations now require a food recovery organization or a food recovery service that has established a contract or written agreement to collect or receive edible food directly from commercial edible food generators, pursuant to Section 18991.3(b) to maintain records of the food they receive from those generators.</p> <p>Removing the 6-ton threshold was also critical for measurement purposes. If the 6-ton threshold remained in the regulations, jurisdictions would not receive a complete data set of the total</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>pounds recovered from commercial edible food generators in the previous calendar year. A complete data set is critical in order for jurisdictions to report accurate data to CalRecycle so that CalRecycle can measure the state's progress toward achieving the 20% edible food recovery goal. In addition, a complete data set can be used by jurisdictions to help them assess the impact of their food recovery programs and identify the food recovery organizations and food recovery services in their area that are recovering the most food from commercial edible food generators.</p>
2013	Learakos, Mike; Waste Not OC Coalition	<p>Additionally, the state of California has provided grant funding specifically for the development of food waste reduction and food donation programs. One key component of an effective food recovery program is the ability to conduct effective outreach to food waste generators. Without knowing exactly which generators are donating food, the outreach efforts will be more difficult and more expensive.</p>	<p>Jurisdictions are required to identify the commercial edible food generators in their jurisdiction, monitor commercial edible food generator compliance, and also provide commercial edible food generators with education and outreach. As a result, the jurisdiction will already know who the generators are, and they will know how much food they have donated from the records that generators and food recovery organizations and food recovery services are required to maintain.</p>
2014	Learakos, Mike; Waste Not OC Coalition	<p>Finally, without an accurate record of donated food including the name of the donor, type of food and the weight of the food donated, we lose the ability to ever verify the accuracy of the data leaving data provided by the donor as the sole source. Mandatory record keeping by any and all food recovery organizations provides a 'check and balance' when needed.</p>	<p>While some commenters requested that the threshold be increased from 6 tons to 12 tons, other stakeholders recommended removing the threshold completely so that any food recovery organization or food recovery service that contracted with, or had a written agreement with a commercial edible food generator would be required to maintain records and report to the jurisdiction.</p> <p>Another commenter further supported the recommendation to eliminate the 6-ton recordkeeping threshold by stating that the primary focus relative to edible food recovery must be the safe handling of food and protection of public health and safety. 9060	Levin, J., Bioenergy Assoc. of California	BAC strongly suggests the inclusion of biomethane procurement in the proposed regulations, but urges CalRecycle not to limit eligible procurement to compost and transportation fuel only. In addition, BAC urges CalRecycle not to limit eligible diversion technologies to compost and anaerobic digestion, which excludes the majority of the organic landfill waste stream.	CalRecycle has revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
9061	Levin, J., Bioenergy Assoc. of California	The regulations should not limit bioenergy procurement to vehicle fuel use alone.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. 			<p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
9062	Levin, J., Bioenergy Assoc. of California	The regulations should include eligible conversion technologies rather than limiting procurement to anaerobic digestion and compost.	CalRecycle disagrees with expanding the definition of renewable gas to include conversion technologies other than anaerobic digestion. The purpose of the current regulatory language is to be consistent with SB 1383 statute that specifies the adoption of policies that incentivize biomethane derived from solid waste facilities. In-vessel digestion facilities are solid waste facilities, which allows CalRecycle to verify that these facilities are reducing the disposal of organic waste. These alternative conversion methods are not yet in practice on a commercial scale in California and lack the necessary conversion factors to include in Article 12. For the current regulatory proposal, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products using publicly available pathways and conversion factors.
9063	Levin, J., Bioenergy Assoc. of California	The regulations should explicitly incentivize projects that produce both bioenergy and compost as those projects will provide far greater methane reductions than either bioenergy or compost alone.	CalRecycle generally agrees that projects that maximize production of recovered organic waste products are extremely beneficial in achieving the goals required by SB 1383.
9064	Levin, J., Bioenergy Assoc. of California	The regulations should include state procurement as well as local government procurement.	Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor’s office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.

Comment Number	Received From	Question/Comment	Response(s)
			<p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to “develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state.” These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p>
9065	Levin, J., Bioenergy Assoc. of California	The regulations should clarify that diverted organic waste projects built prior to adoption of the regulations will qualify for diversion credit.	CalRecycle finds that grandfathering pre-existing projects as technologies that constitute a reduction in landfill disposal may not ensure methane reduction, which is the object of diversion from landfills.
9066	Levin, J., Bioenergy Assoc. of California	While BAC strongly supports the inclusion of RNG in the SB 1383 regulations, we urge CalRecycle not to limit its application to vehicle fuels. Biomethane and biogas can also be used to produce electricity, combined heat and power, renewable hydrogen for fuel cells, pipeline biogas, heating, cooling, industrial purposes, and other end uses. There is no reason to restrict the permissible end use of biomethane and biogas to vehicle fuels when individual projects' locations, access to pipelines or transmission lines, proximity to vehicle fleets, and other factors will determine what is the most beneficial and cost-effective end use of the RNG.	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. Comment Number	Received From	Question/Comment	Response(s)
			<p>The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
9067	Levin, J., Bioenergy Assoc. of California	<p>In other words, biomethane use is equally beneficial from a climate standpoint, whether it is used for vehicle fuel or to generate power or other energy end uses. There is no justification in science or in statute, therefore, to limit its procurement under SB 1383 to vehicle fuel use only. And, in fact, it may be more expensive and less cost-effective in some locations where use onsite for electricity, combined heat and power, or pipeline injection may be preferable.</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle has revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction’s procurement target. SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
9072	Levin, J., Bioenergy Assoc. of California	<p>In several places, the proposed regulations limit eligible conversion technologies to compost and anaerobic digestion, which excludes the conversion of wood and other cellulosic waste that comprises the majority of the organic waste going to landfills. There is no legal or scientific justification for this, and very good policy reasons to broaden the definitions of eligible conversion technologies. As CalRecycle's own data shows, significant portion-likely the majority- organic landfill waste is wood and construction waste that is not digestible, meaning it is not well suited to anaerobic digestion or compost. In fact, many of the materials included in the proposed definition of "organic waste" (proposed definition 46) are non-digestible. That cellulosic waste is, however, eligible for diversion credit under Public Resource Code section 40106 if it is converted using combustion or non-combustion thermal technologies. There is no justification under state law to exclude a diversion method that is currently authorized by statute to convert the cellulosic portion of the organic waste stream.</p>	<p>CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2</sub>e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383. However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste. Please refer to Section 18983.2 for more information.</p>
9073	Levin, J., Bioenergy Assoc. of California	<p>The proposed regulations themselves recognize the eligibility of biomass conversion in Article 2, section 18983.1 which defines what constitutes landfill diversion and includes PRC section 40106. It is internally inconsistent, therefore, to recognize biomass conversion is an eligible diversion technology, but not to allow procurement of biogas from that biomass conversion to qualify.</p>	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p>
9074	Levin, J., Bioenergy Assoc. of California	<p>"Renewable transportation fuel" means fuels derived from renewable gas from organic waste that has been diverted from a landfill and processed at <b>either (a)</b> an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 to recycle organic waste, <b>or (b) converted pursuant to Public Resources Code section 40106.</b></p>	<p>Note that “renewable transportation fuel” has been revised to “renewable gas” in the draft regulatory text. Regarding expanding “renewable gas” to include gas from biomass conversion, CalRecycle has revised the text to allow electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. However, for thermal and noncombustion thermal conversion technology, CalRecycle disagrees with this approach. These technologies are not yet in practice on a commercial scale in California and lack the necessary conversion factors to include in Article 12. For the current regulatory proposal, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products using publicly available pathways and conversion factors.</p>
9075	Levin, J., Bioenergy Assoc. of California	<p>Have undergone anaerobic digestion or composting, as defined in Part 503, Title 40 of the Code of Federal Regulations, Appendix B, <b>or biomass conversion pursuant to Public Resource Code section 40106</b></p>	<p>CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2</sub>e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can</p>

9077	Levin, J., Bioenergy Assoc. of California	The purpose of SB 1383 is to reduce short lived climate pollutant (SLCP) emissions, including methane from organic waste. BAC urges CalRecycle, therefore, to encourage projects that produce both energy and compost as they will provide far greater SLCP reductions than compost alone. The science is clear that converting diverted organic waste to bioenergy and compost provides the greatest greenhouse gas reductions of any end use. (...) CalReycle should encourage projects that prodcue bioenergy and then compost the remainder, in order to maximize SLCP reductions from diverted organic waste, which is the best way to meet the requirements of Health and Safety Code 39730.6	CalRecycle has noted the comment. This is not within the scope of the rulemaking.
9078	Levin, J., Bioenergy Assoc. of California	BAC supports the comments of other parties that recommend the proposed regulations be broadened to include state procurement and other procurement in addition to local governments. This will help achieve the requirements of SB 1383 in the most expeditious and cost-effective manner.	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor's office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to “develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state.” These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p>
9079	Levin, J., Bioenergy Assoc. of California	<p>To avoid ambiguity, the proposed regulation should explicitly grandfather eligible bioenergy and compost projects constructed prior to adoption of the regulations. The proposed regulations do not explicitly do so now and it is important to ensure that early adopters of organic waste diversion projects are not penalized.</p>	<p>CalRecycle finds that grandfathering existing projects as technologies that constitute a reduction in landfill disposal may not ensure methane reduction, which is the object of diversion from landfills.</p>
3031	Lima, T., City of Artesia	<p>It is not feasible to determine and identify individual generators that contaminate a route unless containers are checked individually. Our residential curbside program utilizes automated side loading vehicles and covered bins. Adhering to the proposed legislation would require route drivers to physically examine hundreds of containers on each route on a daily basis and additional staffing resources to issue notices and deal with upset residents. The City recommends exempting residential routes from the requirement.</p>	<p>Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3032	Lima, T., City of Artesia	<p>Despite covering a smaller geographic area than its neighboring cities, the City's franchised hauler services tens of thousands of containers every week. A quarterly route review for all routes in the City is not possible without the addition of significant staffing and funding. It is not feasible for the collection truck operators to perform this task, and complete their service routes in a timely manner. The required additional work will directly impact our franchise hauler. As a result, the City will likely see a significant price increase upon contract renewal. The City recommends to exempt residential routes from this requirement.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. CalRecycle modified the regulations to allow for annual instead of quarterly.</p> <p>These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. 3033	Lima, T., City of Artesia	<p>As in the previous comment, it is a significant administrative burden to determine individual generators that contaminate a route. Routes would need to be interrupted to inspect individual bins stop by stop, resulting in slower service levels and increased costs. The City recommends exempting single-family and multi-family residential routes from this requirement.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. 			<p>reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3034	Lima, T., City of Artesia	<p>This is a significant administrative, training, and logistical burden for small businesses to manage its excess edible food, if it generates any, until it can be retrieved by a food recovery organization. The burden on the City to monitor and enforce the proposed rules related to edible food generators and food recovery creates an adversarial and punitive tone to a program that intends positive and beneficial outcomes for those going hungry in our community. The City recommends allowing greater local control in developing programs to address food recovery for community benefit.</p>	<p>Regarding the comment about local control, SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. In order to meet this goal, SB 1383's regulations include requirements that jurisdictions shall implement edible food recovery programs that include critical requirements such as educating commercial edible food generators about their requirements under SB 1383, monitoring commercial edible food generator compliance, and expanding edible food recovery capacity if additional capacity is needed in the jurisdiction. These key requirements are critical to help ensure that millions of pounds of edible food stay out of landfills and to help the state achieve its 20% edible food recovery goal. For these reasons, a change to the regulatory text was not necessary.</p> <p>In addition, if the commercial edible food generator requirements were removed from the regulations, and the jurisdiction requirement to monitor commercial edible food generator compliance was also removed, then the regulations would not include any mandates for food to be recovered. Removing these critical requirements would make food recovery voluntary, which is the current situation in California. We have seen that when food recovery is voluntary millions of pounds of edible food are disposed rather than being put to the highest and best use of helping feed people in need.</p>
3035	Lima, T., City of Artesia	<p>In the current draft, a tremendous amount of effort is placed on the Enforcement and Recordkeeping sections, which will require the City to divert scarce funds and resources away from initiatives to an enforcement-based system. The City recommends reducing the burden of enforcement and record keeping so that the City may prioritize program development.</p>	<p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.</p>
3323	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>First, we believe the regulations as currently drafted are overly prescriptive and potentially detrimental to current and future programs and infrastructure development. The "regulatory approach" identified assumes that a one-size-fits-all scenario will achieve the organic recycling goals outlined in SB 1383. We challenge that assumption and encourage CalRecycle staff to consider a regulatory framework with measurable performance targets based on actual capacity and available markets within given jurisdictions and communities.</p>	<p>Regarding authority to impose requirements on jurisdictions, SB 1383, in Public Resources Code Section 42652.5(a)(4) and (5), specifically allows the proposed regulations to "include different levels of requirements for local jurisdictions..." and may "include penalties to be imposed by the Department for noncompliance." Regarding necessity, please refer to the Final Statement of Reasons.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>This will require a comprehensive 2018 Waste Characterization Study, to provide an accurate baseline upon which jurisdictions can project future targets, as well as a more refined mapping tool from CalRecycle moving forward. This framework concept would allow jurisdictions, as done through AB 939, to develop their own program for organics collection and processing that is designed for their regional needs and variances.</p>	
3324	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Second, we understand that contamination is a significant hurdle in properly managing organics collection. How a jurisdiction and collection program manage this issue should be flexible and adjustable based on local needs. We believe a robust education and outreach program, supported by CalRecycle, is the best means of achieving reduced contamination in our programs. As mentioned in a previous letter, education should occur long before the customer is placing their organics in the appropriate container. The inflexible proposed regulatory language regarding how a hauler should inspect and report contamination at the curb is problematic and puts the hauler in the position of policing customers. Jurisdictions may choose to employ comparable methods in their own agreements, but this should not be mandated at the State level. Flexibility in program design will be key to meeting the goals of SB 1383. Educational outreach should commence well before the formal implementation occurs, and we would encourage the state to reconcile the various implementation challenges and dates that might be inconsistent with the timelines anticipated in SB 1383.</p> <p>Additionally, the proposed language regarding labelling requirements is short-sighted and potentially disruptive to current and future programs. The proposed requirements do not consider different container types, sizes or even new technologies (such as barcodes for scanning). Furthermore, labelling in such a manner would cost approximately \$2 more per container, which is considerable cost for program compliance. What if images need to be altered due to market shifts or programmatic changes? The prescriptive nature of the proposed language does not guarantee that we will meet programmatic goals. Jurisdictions need the flexibility to adjust their programs based on actual capacity, infrastructure, collection methods, processing methods, and market conditions.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization. This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. The labeling requirements were refined through the informal public rulemaking process to accommodate the various types of labels jurisdictions currently use on their containers. Stakeholders indicated that these types of labels are effective and durable. Correctly-colored labels may be applied to existing bins or lids until the containers are replaced at the end of their useful life.</p> <p>Labeling requirements, commencing January 1, 2022, only apply to new containers or lids. Thus, imprinting of labels would be directly onto new containers, either at the end of old containers’ useful life or by 2036.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>A jurisdiction's designee can place labels on the containers.</p> <p>The regulations already apply to all containers provided by a hauler, including temporary dumpsters. The regulations specify that all containers provided by a hauler must meet both the container color and container label requirements by 2036. However, the regulations do allow for either the lid or the body to meet the color requirement.</p> <p>With respect to compactors owned by private businesses and not the hauler, the containers may conform with either the container color requirements or the container label requirements.</p> <p>In regards to the interior containers, this was the least costly and burdensome approach and still achieves the necessary organic disposal reduction. Those businesses subject to AB 827 will have to meet that statute's signage requirements. Nothing in these SB 1383 regulations precludes a jurisdiction from requiring businesses to have signage.</p> <p>In regards to the lid comment, a change was made to allow for the exposed portion of lid or body to be required color and to allow the required color to be on either the lid or the body, not just the lid. The change is necessary because this approach is the least costly and burdensome one that still achieves the organics disposal reductions.</p> <p>For the text and graphics, this section references that primary materials must be included. If there is a change in the primary materials, then the information would need to be updated as containers are replaced. The regulations are allowing flexibility on size of the label (text and graphics), the requirement is only for primary materials, and all containers need labels. However, this includes all containers and residential/non-residential. Also, for consistency purposes, CalRecycle revised Section 18984.8(c)(1) to mention primary items.</p> <p>In regards to the new technology, CalRecycle is unclear on how that will help educate the generators.</p> <p>Nothing prohibits jurisdiction from mailing labels for existing containers, in addition to ensuring that new containers are properly labeled.</p> <p>The current text reflects stakeholder input during the informal rulemaking period that it would be costly to place labels on all containers. CalRecycle determined that this change would provide jurisdictions with flexibility to implement less burdensome education methods (e.g., labels on new containers) that ensure organic waste is collected and recovered, to support the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions. However, nothing in the regulations prohibits a jurisdiction from placing labels on all containers at an earlier time.</p>
3325	Lynch, K., and Pardo, V., California Refuse Recycling Council	Third, funding and incentives are crucial to building successful organics management programs at the local level, especially considering the education and oversight necessary to engage with regulated entities and the general infrastructure needed. Given the scarcity of facilities available to manage our organic waste stream, we will not be able to meet our 2020 diversion goal. For that reason, we must design a regulatory scheme that is supportive and supplements current infrastructure, not a punitive system that constrains the industry from achieving more. More financial support from the State is necessary.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that

Comment Number	Received From	Question/Comment	Response(s)
			<p>was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3326	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Finally, it is essential that these regulations serve to strengthen and empower collection programs if we are to achieve our ambitious diversion targets. There is no assurance that the prescriptive language proposed will get us to our goals. The language is short-sighted and fails to capture future innovations in processing technology. In fact, some facilities currently managing organics do not fall under the identified approved facility list. Essentially, as written, these regulations would cause some facilities to no longer be a viable management option, further harming the little infrastructure currently available.</p>	<p>Comment noted. The commenter is expressing an opinion on the overall scope and model of the regulations. CalRecycle has determined the regulatory model used is necessary to achieve the ambitious organic waste diversion goals in the statute that were mandated on a very short timeline.</p>
3327	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>However, we feel strongly that the proposed language does more harm than good in its restrictive nature and failure to see beyond the current paradigm. Jurisdictions need the flexibility to design programs based on specific needs. We urge CalRecycle to initiate this program with a "good faith effort" approach to foster participation and outreach and build on a familiar and successful framework. This regulatory process must be supported by an accurate baseline, based on the 2018 Waste Characterization Study, in order to appropriately analyze the purpose of SB 1383 in reducing methane emission and not build the framework on a flawed data base and one that does not accurately measure the results of the anticipated regulatory system.</p>	<p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p>
3328	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 4, lines 50-52  We remain concerned that the definition of Organic Waste is too broad and that not all organic feedstocks are created equal and have varying management techniques. Textiles, for example, cannot be readily accepted and processed at compost facilities. We also question the inclusion of fiber and request a more detailed definition of fiber. Does this include soiled-paper? How does fiber differentiate from traditional paper recyclables? What about the inclusion of manure and biosolids, two material types that have traditionally been managed by land application? This definition fails to capture the real-life management differences required for these varying materials. Feedstocks also have varying methane generating potential. Overall, we are concerned that the Organic Waste definition is confusing to the public who will believe their collection system should accept all these materials in one bin. Infrastructure managing certain material feedstocks, such as food scraps,</p>	<p>Comment noted. CalRecycle disagrees that the definition of organic waste is too broad. The statute requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.</p> <p>Comment noted. The regulatory text is specifically designed to prioritize or deprioritize certain types of organic waste for specific requirements. For example, organic textiles and carpet, are not subject to the same collection requirements as other types of organic waste. The prioritization reflects the portion of organic waste these materials constitute, which is small, and therefore their total methane generation potential is smaller.</p>

Comment Number	Received From	Question/Comment	Response(s)
		requires more stringent regulatory obligations and should be incorporated into capacity planning for local jurisdictions.	
3329	Lynch, K., and Pardo, V., California Refuse Recycling Council	Page 4, lines 43-46 There is no definition for "high diversion mixed waste processing facility". This facility needs to be defined.	A change to the regulatory text is not necessary. "The term" high diversion mixed waste processing facility" is not used in the proposed regulations. The term "high diversion organic waste processing facility," which is used and defined in Section 18982(a)(33). The term "High Diversion Organic Waste Processing Facility" refers to transfer/processing facilities that meet the 50% by 2022 or 75% by 2025 organic waste recovery efficiency standard for a mixed waste organic (MO) collection stream. The 50/75% refers to recovery of organic waste after processing of material from the MO collection stream.
3330	Lynch, K., and Pardo, V., California Refuse Recycling Council	Page 5, lines 7-8 What do you mean by, "has been processed by landfill disposal" as part of the definition for "residual organic waste"? How would residual material containing organics from other facilities be defined?	The comment is not relevant for the following reason: The commenter has incorrectly quoted the definition for "Residual organic waste". Below is the actual definition from the proposed regulation text. In this regard, the second question in the comment is irrelevant. (63) "Residual organic waste" means waste that remains after organic waste has been processed which is then sent to landfill disposal.
3331	Lynch, K., and Pardo, V., California Refuse Recycling Council	Page 5, lines 26-29 Commencing January 1, 2020, the use of green material as alternative daily cover does not constitute diversion through recycling per AB 1594. We note that the regulation language expands on this law and proposes that any organic waste used as ADC, AIC, or beneficial reuse will no longer count toward diversion. We question whether these regulations should be used to redefine the definition of disposal. We believe that organic waste used for beneficial reuse at the landfill, such as slope stabilization or revegetation, is a viable diversion strategy. In fact, beneficial reuse in this fashion is akin to Caltrans using this material for a similar purpose.	SLCP proposed regulations is not expanding on AB 1594 or redefining the definition of disposal for purposes of that law. The proposed regulations allow for organic waste used at a landfill as a soil amendment for erosion control, revegetation, slope stabilization, or landscaping if the material is used in a manner that complies with Section 18983.1(b)(5).
3332	Lynch, K., and Pardo, V., California Refuse Recycling Council	Page 5, lines 31-42 It is important to note that land application is not defined as a "reduction of landfill disposal," despite it being a primary management technique for biosolids, manure and compostable materials. Nor is land application defined as "landfill disposal" in the section above. This issue must be resolved moving forward. Furthermore, the facilities listed do not capture all the methods used today in managing organics. In fact, operations that qualify as "recycling centers rarely, if at all, manage organic material. Most of these facilities are buyback centers managing BCRP containers. This language is restrictive and does not consider present and future facilities process material for animal feed, as one example. End of the day, these regulations should encourage more development, not shutter facilities currently diverting and managing organics.	CalRecycle concurs that maintaining flexibility for other recovery processes, not specifically identified in section 18983.1(b), which may constitute a reduction of disposal of organic waste and can achieve equivalent greenhouse house gas reduction that meets or exceeds the baseline of 0.30 MTCO2e per short ton, the proposed regulations include Section 18983.2 which provides this pathway. In response to stakeholder comments, Section 18983.1(b)(6) was added to clarify when the land application of organic materials counts as a reduction in landfill disposal. More specifically, section 18983.1(b)(6)(A) address the requirements for green waste applied to land, Section 18983.1(b)(6)(B) addresses biosolids applied to land, and Section 18983.1(b)(6)(C) addresses digestate applied to land. Section 18983.1 (b)(1) – (b)(7) clarifies what type of various activities and technologies count as a reduction in landfill disposal. Subdivision (b)(7) specifies that the lawful use of organic waste as animal feed constitutes a reduction in landfill disposal since it directly supports the state's effort to keep organic waste out of landfills and reduce greenhouse gas emissions, and is therefore considered a recovery activity for the purposes of this regulation. Additionally, Section 18983.2 provides a pathway for determining if a technologies not specifically listed within these

Comment Number	Received From	Question/Comment	Response(s)
			regulations can be deemed to constitute a reduction in landfill disposal of organic wastes to ensure flexibility and to not restrict any viable options.
3333	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 6-7, Source-separated Organic Waste Collection Service</p> <p>We take issue with this entire section in its prescriptive and restrictive nature. How a jurisdictional program collects material and labels collection containers should be determined at the local level. Some communities, for example, have already invested in split-carts to collect organic waste. This is not a one-size fits all scenario. This section alone could incur significant costs and negatively impact collection programs already in place. We suggest CalRecycle offer recommended guidelines to jurisdictions that can be used to inform program development.</p>	<p>SB 1383 provides a broad grant of regulatory authority to CalRecycle to impose requirements on jurisdictions in order to achieve the organic waste diversion goals of a 50-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2025. This authority includes creation of rules designed to implement these statewide mandates and ensure that the statewide organic requirements are met. CalRecycle has determined that the mandatory collection service requirements and container color and labeling provisions are necessary to maintain consistent standards throughout the state to reduce contamination of organic waste and ensure that collected organic waste is clean and recoverable in order to meet the aforementioned diversion goals.</p>
3334	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 7-8, Contamination of Source-Separated Organic Waste</p> <p>We believe jurisdictions should have flexibility in program design to address contamination management and enforcement. A command and control regulatory approach is misguided, especially given the subjective nature of the proposed language. Last year a Seattle judge ruled a new ordinance that allowed garbage collectors to look through customers' bins, to make sure food scraps were not going into the garbage, as "unconstitutional and void." The judge wrote in her decision that "the city could not explain how inspectors can compute the 10 percent limit without searching through a resident's garbage bags." We understand proposed regulatory language is for the organics bin, not garbage, but the language forces haulers to share personal customer information to jurisdictions if contaminated waste is found, which includes residential information. We are concerned about privacy violations and the State forcing haulers to police customers. Also, this methodology is also not statistically valid and will not necessarily lead to reduced contamination. This could also pose a health and safety risk to drivers if they are expected to touch waste material. To address contamination issues, CalRecycle should be supporting a comprehensive statewide education and outreach plan to apprise the public of this important change in law.</p>	<p>Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p>

			<p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization. CalRecycle is providing educational materials to local jurisdictions and conducting a statewide educational campaign.</p>
3335	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 8, Mixed Waste Organic Collection Services</p> <p>CRRC members across the State already engaged in organics collection employ several processing methods, including mixed-waste processing. In some cases, both source-separated materials and mixed-waste materials are managed in the same facility, supporting even higher diversion percentages than if source-separated material alone was managed. We are very concerned about the language that prohibits mixed-waste processing infrastructure to be built post 2020 with no proper analysis or explanation. This regulatory package should not be a vehicle for the CalRecycle to pick winner and loser technologies, especially when the future of these technologies is unknown. We support programs built on clear diversion targets for jurisdictions based on their feedstocks, processing capacity, and market access.</p>	<p>Stakeholder comments regarding mixed waste processing facilities span a wide spectrum -- from allowing existing facilities to continue to operate even if they do not meet higher diversion standards, to establishing a waiver process for allowing such facilities to continue to operate for 10 to 15 years beyond the target dates in statute or the effective date of the regulations respectively. As currently written, the regulations allow some time for a non-compliant facility to come into compliance; i.e., at a minimum, it will be over 6 months after the regulations are in effect before sufficient information is available to determine whether a facility has been out of compliance for two consecutive quarters. When this is the case, then a NOV would be issued to the jurisdiction(s) using that facility, requiring compliance within 90 days. The department may extend this period to a total of 180 days, after which it may issue a Corrective Action Plan for up to 24 months. This means that it will be at least 2 and possibly 3 years after the effective date of the regulations before the jurisdiction is not allowed to use a non-compliant facility. This would give facility operators several years in which to make necessary operational changes to come into compliance.</p> <p>During the informal rulemaking period, CalRecycle responded to many stakeholder requests for additional flexibility to allow these mixed waste facilities to continue operating beyond the effective date of the regulations. As noted in the ISOR, Sections 18984.2 and 18984.3 allow alternatives to providing a three-container source-separated organic waste collection service. Under these sections, jurisdictions are allowed to require their generators to use a service that does not provide generators with the opportunity to separate their organic waste for recovery at the curb. To ensure that the state can achieve the statutory organic waste reduction targets, these collection services are required to transport the containers that include organic waste to high diversion organic waste processing facilities that meet minimum organic content recovery rates (content recovery rates that are specified in Section 17409.5.1. While there is a lack of data demonstrating that organics can be effectively separated from other materials and still be recovered at a rate necessary to meet the statutory targets, a significant portion of stakeholders argued that such technologies are in development and should not be stymied by this regulation. To respond to stakeholders, Sections 18984.2 and 18984.3 provide the flexibility requested and lay out minimum standards for two-container and unsegregated single-container organic waste collection services.</p> <p>Regarding the proposed exemption for one facility, CalRecycle disagrees in principle with the concept of carving out exemptions for specific facilities or specific jurisdictions on the basis of regulatory criteria that only fit that situation. If CalRecycle allowed this for one facility or one jurisdiction, then there would be no justification for not allowing similar proposals. This effectively invalidates the ability to create an even playing field with a single statewide regulation designed to achieve a statutory target. This could result in an unknown but conceivably large number of facilities and jurisdictions being exempted, with associated negative impacts on the ability to reach the mandated statewide organics disposal reduction goals.</p>

Comment Number	Received From	Question/Comment	Response(s)
3336	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 8, Waivers</p> <p>We would like to see self-executing language whereby if a jurisdiction finds that any type of organic waste cannot feasibly be recycled, it may temporarily go to the landfill. This is important for health and safety reasons as the organic waste must go to the landfill if it has no other safe and viable alternative. Also, there is no information regarding the timeline or process for such a waiver, nor why a waiver may be disapproved by Cal Recycle.</p>	<p>CalRecycle has revised Section 18984.12(b)(2) and Section 18984.12(d)(6) in response to this comment to clarify that the department shall approve or deny a request within 90 days. Section 18996.2 includes all circumstances outside of a jurisdiction's control, including the inability to identify a facility with sufficient capacity to process the materials. The regulations require a jurisdiction to demonstrate that extenuating circumstances exist and that it has made a "substantial effort" which means that it has taken all practicable actions to comply.</p>
3337	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 9, Organic Waste Recycling and Education Outreach</p> <p>Education and outreach is a critical component to meeting our statewide diversion goals. We support education and outreach and conveying a statewide message about the law and why we are working to divert more organics from CA landfills. While we support the environmental benefits associated with this effort, siting and permitting of compost facilities has significant challenges in terms of air emissions, especially for those located in Federal nonattainment air districts. Relating the public health, safety and environmental impacts associated with the disposal of organic waste fails to address comparable issues we face in building organics management infrastructure. A Statewide public education and outreach initiative could help foster support for these facilities.</p>	<p>CalRecycle is providing educational materials to local jurisdictions and conducting a statewide educational campaign.</p>
3338	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 10-11, State Entities and State Facilities</p> <p>We are pleased to see language including State entities and facilities in these regulations. Walking the walk will be crucial in promoting statewide acceptance of organics diversion.</p>	<p>The comment is in support of the proposed regulations, which require non-local entities to comply with SB 1383.</p>
3339	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 12, Organic Waste Recycling Standards and Policies</p> <p>There are circumstances where a facility may no longer be able to accept organic material, therefore forcing a generator to take their material to another facility. The lower recovery rate language is confusing and does not account for extenuating circumstances where a facility may be unable to accept organic waste. This might inadvertently send more organic matter to the landfill if a facility is considered to have a lower recovery rate than the unavailable facility. We recommend this language be removed.</p>	<p>A change to the regulatory text is not necessary. The language referenced was included in a previous version of the regulatory text and has since been revised.</p>
3340	Lynch, K., and Pardo, V., California Refuse Recycling Council	<p>Page 14, Planning by Cities and Counties</p> <p>We feel strongly that without accurate baseline information, city and counties will have a difficult time planning for organics development. We believe planning should be based off the 2018 Waste Characterization Study as the 2014 study was flawed and does not provide enough feedstock detail for jurisdictions. We also encourage CalRecycle to consider that many local government staff have never sited or permitted a solid waste facility in their lifetime. Support and guidance from the State is critical in getting the additional 200 facilities needed in place by 2025.</p>	<p>2014 was selected because the organic waste diversion targets in SB 1383 are based on a statutory 2014 baseline. 2018 will not provide proper baseline information.</p>
3341	Lynch, K., and Pardo, V., California	<p>Page 16-17, Jurisdiction Inspection and Enforcement Requirements</p> <p>We note that regulated entities include all organic waste generators and that this section proposes a list of all regulated entities. Per the definition, this would include</p>	<p>A change to the regulatory text is not necessary. Section 18995.1 states the jurisdiction shall generate a record for compliance reviews conducted that includes a list of accounts reviewed. A compliance review shall be conducted for all solid waste collection accounts for commercial</p>

	Refuse Recycling Council	the residential sector. Is that your intent? Also, what resources will jurisdictions get to enforce and inspect thousands of businesses? This will be a continual and substantial cost for communities moving forward.	businesses that are subject to its authority and generate two cubic yards or more per week of solid waste, including organic waste. If a jurisdiction is conducting compliance review on its residential generators to comply with organic waste generator requirements set forth in Section 18984.9(a), this record would include residential generators.
3342	Lynch, K., and Pardo, V., California Refuse Recycling Council	Page 19-22, Enforcement and Penalties There is general confusion around CalRecycle's role in enforcement for the purposes of this regulation. According to the proposed language, the Department can notice all "regulated entities" and possibly administer penalties for noncompliance. As previously indicated, the proposed regulations include subjective contamination tracking with no statistical reliability. We challenge the assumption that this methodology is sound and enforceable. We also question why enforcement at the local level is being diluted by State oversight. It was our understanding that CalRecycle would have enforcement authority over jurisdictions, and that jurisdictions would have enforcement over regulated entities in their programs.	A change to regulatory text is not necessary. The California legislature has recognized the need for the Department to have oversight and enforcement authority over jurisdictions who have a role in carrying out organic recycling requirements to meet the states mandates. This approach mirrors CalRecycle's delegated enforcement approach for waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Also, it is necessary that all entities that are regulated under this Chapter comply with the minimum standards to meet the state mandates. If a jurisdiction is not fulfilling its obligation to enforce the requirements, the Department may intervene and take enforcement action.
3343	Lynch, K., and Pardo, V., California Refuse Recycling Council	Conclusion This concludes our addendum comments regarding the proposed regulatory text for SB 1383. We are not ready to comment on specific methodology for contamination testing as CRRC members are still reviewing the language. We believe that contamination should be dealt with at the local level through their own processing agreements.	Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels. CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change

			<p>would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
1127	Macy, Jack San Francisco Department of the Environment	we are concerned that the reporting requirements are more burdensome for source separation, with the three-container compliance efforts greater than for two-container, which is more than for just a one-container programs.	<p>A change to the regulatory text is not necessary. The reporting requirements listed in Section 18994.1 for Article 3 requires a jurisdiction conducting contamination monitoring to report information related to route review, notices, violations, education and results of waste characterizations studies related to contamination found. This reported information is used to verify that the jurisdiction is implementing the contamination monitoring requirements. Jurisdiction using a one-container collection service only have to report the Recycling and Disposal Reporting System number for each high diversion organic waste processing facility it utilizes. Thought the three/two container collection services has more items to be reported, the one-container collection service has to meet high standards of a high diversion organic waste processing facility as outlined in Section 18982(33). The amount of reporting is irrelevant as the requirement for the services are different.</p> <p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.</p>
1128	Macy, Jack San Francisco Department of the Environment	This concern about incentivizing mixed waste processing over source separation also comes from the removal of a sunset date for mixed waste processing. We believe mixed waste processing should only be allowed if the jurisdiction has implemented mandatory source separation and that any exemptions to this rule should only be on a case-by-case basis reviewed by CalRecycle.	<p>Stakeholder comments regarding mixed waste processing facilities span a wide spectrum -- from allowing existing facilities to continue to operate even if they do not meet higher diversion standards, to establishing a waiver process for allowing such facilities to continue to operate for 10 to 15 years beyond the target dates in statute or the effective date of the regulations respectively. As currently written, the regulations allow some time for a non-compliant facility to come into compliance; i.e., at a minimum, it will be over 6 months after the regulations are in effect before sufficient information is available to determine whether a facility has been out of compliance for two consecutive quarters. 			<p>the curb. To ensure that the state can achieve the statutory organic waste reduction targets, these collection services are required to transport the containers that include organic waste to high diversion organic waste processing facilities that meet minimum organic content recovery rates (content recovery rates that are specified in Section 17409.5.1. While there is a lack of data demonstrating that organics can be effectively separated from other materials and still be recovered at a rate necessary to meet the statutory targets, a significant portion of stakeholders argued that such technologies are in development and should not be stymied by this regulation. To respond to stakeholders, Sections 18984.2 and 18984.3 provide the flexibility requested and lay out minimum standards for two-container and unsegregated single-container organic waste collection services.</p> <p>Regarding the proposed exemption for one facility, CalRecycle disagrees in principle with the concept of carving out exemptions for specific facilities or specific jurisdictions on the basis of regulatory criteria that only fit that situation. If CalRecycle allowed this for one facility or one jurisdiction, then there would be no justification for not allowing similar proposals. This effectively invalidates the ability to create an even playing field with a single statewide regulation designed to achieve a statutory target. This could result in an unknown but conceivably large number of facilities and jurisdictions being exempted, with associated negative impacts on the ability to reach the mandated statewide organics disposal reduction goals.</p>
1129	Macy, Jack San Francisco Department of the Environment	Section 18981.2 (a) Implementation Requirement for Jurisdictions Allow situations like CCSF where we have an exclusive permitted hauler that is not under contract or MOU, but is regulated by city through rate setting process and would be the city's designee to share in the responsibilities of these regulations.	Comment noted. The regulations allow for jurisdictions to designate a public or private entity to fulfill certain of its responsibilities.
1130	Macy, Jack San Francisco Department of the Environment	18982 (a) (48) The organic waste generator definition should clearly allow for a collection service account or customer to be considered a generator and not have every individual within a business or residential account be considered separate generators. Without this clarification, much of the education and reporting requirements would be or seem prohibitively impractical and onerous.	A change to the definition is unnecessary. To clarify, the education requirements in Section 18982(a)(48) allow for jurisdictions to generally target generators but contains no obligation to contact each and every generator within a jurisdiction. For example, a jurisdiction could comply through print media such as magazine or newspaper advertising, social media postings, flyers on collection containers or other means designed to reach generators in the jurisdiction. Supporting this intent are the recordkeeping provisions in Section 18985.3(a), which states the jurisdiction shall include all relevant documents supporting its compliance with the requirements of the chapter, including flyers, brochures, newsletters, invoice messaging, and website and, social media postings and recognizes mass distributions such as bill inserts and mailings.
1132	Macy, Jack San Francisco Department of the Environment	18984.1(b) Only allow black or mixed waste container material to be processed to meet organics recovery requirements if an existing green container service that accepts exclusively a majority of organics including food (given that generates methane more rapidly in a landfill than other organics) is mandated with reasonable compliance efforts by the jurisdiction, unless a case-by-case waiver has been given by CalRecycle. Otherwise, a jurisdiction could have a nominal source separated organics collection with low recovery resulting in most organics being allowed and/or ending up into the black container for mixed waste processing.	CalRecycle has determined that this is not necessary. All organic waste collection service options for jurisdictions are premised on jurisdictions enforcing prohibited container contaminants requirements to ensure that organic waste ends up in the correct container for purposes of diversion in order to avoid low recovery.
1133	Macy, Jack	18984.1 Having most of the organics recovered from a mixed waste container will have the potential for higher contamination and greater negative impact on soil, water, markets and potentially more organics being disposed that with mandated	A change to the regulatory text is not necessary. The regulations are designed to ensure that any combination of collection systems and technologies achieves sufficiently high diversion to enable the state to meet the 75% mandate. CalRecycle acknowledges that when organic waste is mixed

Comment Number	Received From	Question/Comment	Response(s)
	San Francisco Department of the Environment	source separated collection of organics. Source separation needs to be prioritized to facilitate higher levels of organics recovery and quality of organic products for maximum climate and environment benefit/protects and sustainable markets.	<p>with non-organic waste the recoverability of both materials is compromised, recovery options become increasingly limited and the value of at least one material can be lost (e.g., broken glass mixed in with food waste can render each material exceedingly more expensive and technically challenging to recover).</p> <p>While there is a lack of data demonstrating that organics can be effectively separated from other materials and still be recovered at a rate necessary to meet the statutory targets, a significant portion of stakeholders argued that such technologies are in development and should not be stymied by this regulation. To respond to stakeholders, allowing for mixed waste processing with performance metrics provides the flexibility requested and lays out minimum standards for an unsegregated single-container organic waste collection service.</p> <p>The regulations clarify the standards that a receiving facility must meet in order to be considered a high-diversion organic waste processing facility that a jurisdiction providing an unsegregated single-container collection service could transport gray container waste to.</p>
1134	Macy, Jack San Francisco Department of the Environment	1894.3 (a) We are concerned about removal of sunset date for mixed waste processing. As noted above for Section 18984, mixed waste processing of unsegregated single-container collection should only be allowed if the jurisdiction has implemented mandatory source separation or any exemptions or waivers to this rule should only be on a case by case basis reviewed by CalRecycle. Otherwise, this section undermines the need to prioritize source separation and recovering higher organics for reduced potential impacts on the environment and sustainable markets. W	<p>Stakeholder comments regarding mixed waste processing facilities span a wide spectrum -- from allowing existing facilities to continue to operate even if they do not meet higher diversion standards, to establishing a waiver process for allowing such facilities to continue to operate for 10 to 15 years beyond the target dates in statute or the effective date of the regulations respectively. This effectively invalidates the ability to create an even playing field with a single statewide regulation designed to achieve a statutory target. This could result in an unknown but conceivably large number of facilities and jurisdictions being exempted, with associated negative impacts on the ability to reach the mandated statewide organics disposal reduction goals.</p>
1135	Macy, Jack San Francisco Department of the Environment	Section 18984.3 (a) We recommend adding that a jurisdiction may comply with the requirements only if a mixed solid waste collection system was in place on or before September 19, 2016 to allow those that have already invested in the infrastructure to continue using it to meet mandated diversion rates.	CalRecycle considered this concept in the initial draft regulatory text but rather than setting an earlier deadline instead established performance metrics for high-diversion facilities. Further the regulations cannot take effect prior to 2022, establishing an earlier cutoff would be in conflict with the intent of the statute.
1136	Macy, Jack San Francisco Department of the Environment	Section 18984.5 - While we strive to have all route bins regularly visually inspected on the surface and tagged for contamination as needed by drivers during collection, however, to do a more thorough inspection for contamination even for randomly selected bins as this section requires would be involve significant additional dedicated staff time. Doing this quarterly for all routes is very burdensome and unnecessary, even yearly for all routes would be significant additional staff time, but more reasonable depending on number of containers inspected.	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. CalRecycle modified the requirement to annual.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
1137	Macy, Jack San Francisco Department of the Environment	Section 18984.5 (b) - Additionally, CalRecycle must allow for more flexibility and discretion for jurisdictions to enforce contaminant restrictions. The current language could require jurisdictions to spend significant staff time enforcing strict standards on minimal contamination events or illegally dumped contaminants.	Comment noted. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a

Comment Number	Received From	Question/Comment	Response(s)
			<p>jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. 1138	Macy, Jack San Francisco Department of the Environment	Section 18984.5 (c )Even more onerous is having to report this detailed information for each container each time contamination has been found, especially on residential routes of hundreds of customers per day. This could create a disincentive for a collector to identify contamination, notify customers, report to the jurisdiction or implement three or two container collection programs vs single container program. A more reasonable and less onerous approach would be to report the number of contamination notices given and possibly if a customer has received 3 or more notices in a row to provide the address of that violator and action taken	A change to the regulatory text is not necessary. Section 18984.5(c) is deleted in the latest version.
1139	Macy, Jack San Francisco Department of the Environment	Section 18984.5 (c )Allow higher-level summary information and remove the requirement to provide records of each contact.	A change to the regulatory text is not necessary. Section 18984.5(c) is deleted in the latest version.

Comment Number	Received From	Question/Comment	Response(s)
1140	Macy, Jack San Francisco Department of the Environment	Section 18984.1 Property and Business Owner Responsibilities (b)(1) Clarify the timeframe during which property owners shall provide information to new tenants. Allow more flexibility to provide before move-in or within 14 days.	CalRecycle revised Section 18984.10(b)(1) in response to this comment. This change is necessary to specify the time frame for providing information, recognizing that the actual date of occupancy can vary.
1141	Macy, Jack San Francisco Department of the Environment	Section 18984.11 Waivers and Exemptions Granted by a Jurisdiction (a)(1)(B) Annual verification of service levels for businesses granted waivers is not a good use of enforcement energy given that the business has already been identified to generate a small amount of organic material. Revise to be at least every five years.	CalRecycle has revised the verification period to five years in response to this comment. Thank you for the support comment. This comment is in support of the current language.
1142	Macy, Jack San Francisco Department of the Environment	Section 18984.6 Recordkeeping Requirements for Container Contamination Minimization This level of record keeping for all written notices, even for just tags left on containers, is very onerous and burdensome requiring additional staff time and data management systems that jurisdictions may not have and may create a disincentive to implement three or even two container source separation collection programs if a mixed waste organics processing facility becomes available.	A change to the regulatory text is not necessary. The purpose of conducting route reviews is to identify, educate and discourage generators for container contamination. Tracking the notices/tags left on containers is essential and allows the jurisdiction to identify repeat offenders. The Department requires this level of recordkeeping to verify that the jurisdiction is conducting the route reviews and proactively minimizing contamination.
1143	Macy, Jack San Francisco Department of the Environment	Section 18984.8 Container Labeling Requirements (c) For labels, change to require "... which type of materials are accepted in that container", as it is impractical to list or show all materials accepted or prohibited, and even showing all types of materials prohibited can make for a hard to read and less effective label.	<p>This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. The labeling requirements were refined through the informal public rulemaking process to accommodate the various types of labels jurisdictions currently use on their containers. Stakeholders indicated that these types of labels are effective and durable. Correctly-colored labels may be applied to existing bins or lids until the containers are replaced at the end of their useful life.</p> <p>In regards to the interior containers, this was the least costly and burdensome approach and still achieves the necessary organic disposal reduction. Those businesses subject to AB 827 will have to meet that statute's signage requirements. Nothing in these SB 1383 regulations precludes a jurisdiction from requiring businesses to have signage.</p> <p>For the text and graphics, this section references that primary materials must be included. If there is a change in the primary materials, then the information would need to be updated as containers are replaced. The regulations are allowing flexibility on size of the label (text and graphics), the requirement is only for primary materials, and all containers need labels. However, this includes all containers and residential/non-residential. Also, for consistency purposes, CalRecycle revised Section 18984.8(c)(1) to mention primary items.</p> <p>The current text reflects stakeholder input during the informal rulemaking period that it would be costly to place labels on all containers. CalRecycle determined that this change would provide jurisdictions with flexibility to implement less burdensome education methods (e.g., labels on new containers) that ensure organic waste is collected and recovered, to support the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions. However, nothing in the regulations prohibits a jurisdiction from placing labels on all containers at an earlier time.</p>

Comment Number	Received From	Question/Comment	Response(s)
1144	Macy, Jack San Francisco Department of the Environment	Section 18984.9 Organic Waste Generator Requirements (b) (1) Given that used paper towels are accepted in San Francisco's composting program, businesses are encouraged to offer a receptacle for paper towels in restrooms. Typically, public restrooms also have small receptacles for other discards in each individual stall. We recommend removing the exclusion of restrooms from the requirements of organic waste generators.	Section 18984.9(b)(1) requires placement of containers in all areas except restrooms but does not prohibit a jurisdiction from also placing in containers in restrooms. Section 18990.1(a) already indicates that a jurisdiction can implement more stringent requirements. Therefore, if a jurisdiction's programs support composting certain types of materials discarded in restrooms, the jurisdiction is free to add these to its program.
1145	Macy, Jack San Francisco Department of the Environment	Section 18984.14. Recordkeeping Requirements for Waivers and Exemptions (a) Include the option to provide information for generators or account holders. Mixed use or shared service situations make identifying the specific generators difficult. The account holder will be the waiver holder in this case.	To clarify, the education requirements generally allow for jurisdictions to target generators but contains no obligation to contact each and every generator within a jurisdiction. For example, a jurisdiction could comply through print media such as magazine or newspaper advertising, social media postings, flyers on collection containers or other means designed to reach generators in the jurisdiction. Supporting this intent are the recordkeeping provisions in Section 18985.3(a), which states the jurisdiction shall include all relevant documents supporting its compliance with the requirements of the chapter, including flyers, brochures, newsletters, invoice messaging, and website and, social media postings and recognizes mass distributions such as bill inserts and mailings.
1146	Macy, Jack San Francisco Department of the Environment	Section 18985.1 (a) It is unnecessarily onerous to provide direct information to all generators every year. For a jurisdiction like ours with over 165,000 generator accounts that could cost upwards of \$250,000 a year. We recommend that detailed information provided to all generators be required every 3 years.	This provision is necessary as written so that generators understand the purpose behind the law, how to recycle, and the impacts of disposal. This information does not have to be included on every educational piece, but rather must be provided once per year. In addition, CalRecycle added Article 17 to provide that a jurisdiction will be waived from specified articles and sections in the regulations if they can meet performance requirements specified in this new article.
1147	Macy, Jack San Francisco Department of the Environment	Section 18985.1 This information, at least items (2) through (6), should be also be required for one-container collection as it would be beneficial and offer opportunities to reduce emissions, and if it is not required then it could create a disincentive for jurisdictions to pursue three or two-container service and instead pursue one-container collection to avoid cost of this education.	CalRecycle revised Section 18985.1(d) to provide consistency in required education and outreach requirements for the three different container service options.
1148	Macy, Jack San Francisco Department of the Environment	Section 18985.1 Items 3, 4, and 5 should be optional pieces of information. Information overload is a real factor in communicating requirements, and this sort of information may be more effectively shared in other avenues than an annual notice to generators.	This provision is necessary as written so that generators understand the purpose behind the law, how to recycle, and the impacts of disposal. This information does not have to be included on every educational piece, but rather must be provided once per year. In addition, CalRecycle added Article 17 to provide that a jurisdiction will be waived from specified articles and sections in the regulations if they can meet performance requirements specified in this new article.
1149	Macy, Jack San Francisco Department of the Environment	Section 18985.1 (b) We don't currently nor have a way to identify self-haulers. Include language "to the extent that a jurisdiction has information about self-haulers."	Jurisdictions are not required to identify every self-hauler. They are required to adopt an ordinance that requires compliance and provide general education about self-hauler requirements. Many comments noted that it would be difficult to identify and provide education information to all self-haulers, such as landscape companies, because jurisdictions do not have business license information on these entities; dedicating additional resources to identifying and educating all self-haulers would be burdensome and costly. Some jurisdictions do require businesses that self-haul, back-haul, share service, or use a third-party independent recycler to submit a Certification of Recycling Service form with information about where they are taking the recyclables or organics.

Comment Number	Received From	Question/Comment	Response(s)
			CalRecycle modified deleted the requirements that jurisdictions separately identify and provide education to all self-haulers, along with associated reporting requirements. CalRecycle added a new Section 18985.1(a)(7) to require jurisdictions to include educational material on self-hauling requirements in the educational material that the jurisdictions already are required to provide to all generators. CalRecycle revised Section 18985.1(b) to include all education requirements for single unsegregated collection systems.
1150	Macy, Jack San Francisco Department of the Environment	Section 18985.1 (f) It will be hard to identify all the individual generators who would qualify as a “Limited English Speaking Household” or “linguistically isolated” to directly provide them educational information translated to them. We do have materials translated on our website in the languages that 6% or more of the population speak at home and can provide a website links to that translated information as part of the education to all generators. Our communications rely heavily on images. Amend language to read “shall provide the information required by this section in a language or languages and/or graphics...”	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
1151	Macy, Jack San Francisco Department of the Environment	Section 18985.3 Recordkeeping Requirements for a Jurisdiction’s Compliance with Education and Outreach Requirements (a) (2)-(3) This level of record keeping, especially of every direct contact and copies of all electronic communication, including all social media posts and by all dates, of what was given to every generator is very onerous and costly and unnecessary to show reasonable compliance efforts. Jurisdictions should be able to summarize education and outreach efforts, showing copies of education materials with possibly some samples of social media, and not have to show a detailed record by date.	CalRecycle has determined the level of recordkeeping requirements are necessary to measure compliance with the regulations.
1152	Macy, Jack San Francisco Department of the Environment	Section 18986.1 Non-Local Entities Requirements (c)(1) The restrictions on items in the green and blue containers should be separated. The following shall not need to be collected in the green container: textiles, carpets, plastic coated paper, and human or pet waste. The following shall not need to be collected in the blue container: textiles, carpets, and human or pet waste. San Francisco is among several communities that recover plastic coated paper in the blue recycling container.	Thank you for this comment. The language in Section 18986.1 was revised to be parallel with Section 18984.1 and 18984.2. CalRecycle clarified in the regulations that plastic coated paper could be collected for diversion.
1153	Macy, Jack San Francisco Department of the Environment	Section 18989.1 (a) Compliance with CalGreen is likely to not be sufficient to sustain let alone increase the diversion of wood from landfills and CalRecycle should consider requiring jurisdictions to find ways to incentivize and/or require deconstruction for higher value recovery and reuse of wood.	Comment noted. CalGreen is not the only requirement relative to recovery and reuse of wood in the regulation.
1154	Macy, Jack San Francisco Department of the Environment	Section 18991.2 Recordkeeping Requirements for Jurisdiction Edible Food Recovery Program (a)(1) It will be onerous for our city to keep track of and document activities with all individual edible food generators, with nearly 5,000 food establishments that is more per capita than any US city, especially it they have arrangements with edible recovery organizations.	A change to the regulatory text was not necessary because without the recordkeeping requirements for jurisdictions, CalRecycle will not be able to verify if a jurisdiction is complying with SB 1383’s Jurisdiction Edible Food Recovery Program requirements. The recordkeeping requirements are a critical enforcement mechanism. For that reason, they were not removed from the regulatory text. CalRecycle would also like to clarify that not all food establishments are subject to SB 1383’s commercial edible food generator requirements. Only the entities identified as tier one and tier two commercial edible food generators are required to comply.

Comment Number	Received From	Question/Comment	Response(s)
1155	Macy, Jack San Francisco Department of the Environment	Section 18991.4 Record Keeping Requirements for Commercial Edible Food Generators (a)(3)(D) This level of quantification and recording will be very burdensome to generators and could be a disincentive for them to redistribute edible food, unless a relatively simple method is used to estimate quantities based on average volumes and types of food donated. This comment also applies to Edible Food Recovery Services in Section 18991.5.	A change to the regulatory text was not necessary because without the recordkeeping requirements for commercial edible food generators, jurisdictions will not be able to verify if a commercial edible food generator is complying with SB 1383's commercial edible food generator requirements. The recordkeeping requirements are a critical enforcement mechanism. For that reason, they were not removed from the regulatory text.
1156	Macy, Jack San Francisco Department of the Environment	Section 18992.1 Organic Waste Recycling Capacity Planning (a)(1) Change to (A) or (B) to avoid an unnecessary burden.	A change to the regulatory text is not necessary because the regulations already provide a choice between subsections A or B.
1157	Macy, Jack San Francisco Department of the Environment	Section 18992.1 (b)(3) I assume this requirement is only for locations within the county.	A change to the regulatory text is not necessary because it appears that this comment pertains to (a)(3), as there is no (b)(3). If the comment is for (a)(3), no change is necessary because CalRecycle does intend that this include locations outside the county if warranted.
1158	Macy, Jack San Francisco Department of the Environment	Section 18992.2 Estimating the amount of edible food disposed will be challenging and onerous if detailed assessments or audits at each or samples generator is required. Being able to use a standard CalRecycle characterization of % of edible food by generator and multiplying that by number of generators minus estimates of recovered food from recovery organizations would be more practical.	CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. CalRecycle also intends on providing additional resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.
1159	Macy, Jack San Francisco Department of the Environment	Section 18992.2 Estimating the amount of edible food disposed will be challenging and onerous if detailed assessments or audits at each or samples generator is required. Being able to use a standard CalRecycle characterization of % of edible food by gene	CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. CalRecycle also intends on providing additional resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.
1160	Macy, Jack San Francisco Department of the Environment	Section 18993.1 Instead of requiring jurisdictions meet a specific goal and report on procurements annually, require that all public and private landscape construction use compost and recycled mulch. CalRecycle could support with template specifications for recovered organic waste products. San Francisco does not have the capacity to use the estimated goal of compost, fuel or mulch products. Our municipal fleet is transition from renewable diesel to all-electric.	CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. CalRecycle has also revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.

Comment Number	Received From	Question/Comment	Response(s)
			<p>Regarding renewable diesel, CalRecycle disagrees. Eligible recovered organic waste products are limited to materials that are derived from recycling feedstock at, or derived from, solid waste facilities. This is necessary to ensure that the use of the product actually helps reduce disposal of organic waste. While renewable sources of energy and gas are of course preferable to fossil sources from a climate perspective, there is not necessarily a link between the material produced and reduction of organic waste that is disposed in landfills. For example fuel derived from corn-based ethanol or diesel may be eligible for federal RIN credits and is derived from organic material (typically corn grown in Iowa), but it lacks a demonstrable link to the organic waste reduction targets the draft regulations are designed to achieve. The comment lacks information for a process to create renewable diesel that is demonstrably linked to reductions in disposal of organic waste in California landfills. Acceptable fuels are fuels derived from renewable gas produced from recycling California, landfill-diverted organic waste.</p> <p>Regarding biochar, CalRecycle disagrees due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>
1161	Macy, Jack San Francisco Department of the Environment	<p>Section 18994.2 Jurisdiction Annual Reporting Overall the level of detail of this reporting is burdensome and would require a lot of staff time and some data can be very difficult collect or only estimates may be possible, especially for the detail in fe), (j) and fk). Reducing the level of detail will help jurisdiction better comply by not diverting so much staff time to data collection.</p>	<p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.</p>
1162	Macy, Jack San Francisco Department of the Environment	<p>Section 18994.2 - the proposed reporting timeframe would require significant effort over just a month (July 2022) to report on activity Jan-June 2022.</p>	<p>A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.</p>
1163	Macy, Jack San Francisco Department of the Environment	<p>Section 18994.2 (j) Considering all the other reporting, this level of detail on which entities came into compliance during the calendar year would require access to archived hauler data that would be difficult to summarize. We recommend removing this requirement and focusing on the entities that are not in compliance and other enforcement action reporting.</p>	<p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.</p>
1164	Macy, Jack San Francisco Department of the Environment	<p>Section 18995.1 The level of compliance review, as well as the record keeping and reporting in Sections 18995.2 and 18995.3, is very onerous and does not seem feasible, especially for a jurisdiction, like San Francisco, with thousands of commercial accounts that generate 2+ cubic yards per week and hundreds of routes, to be able to do a compliance review of all accounts and routes every year.</p>	<p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter. The Department wanted to ensure a fair playing field for all</p>

Comment Number	Received From	Question/Comment	Response(s)
		Even with potential increased staffing, it is not conceivable to be able to do so in less than 3 years. More flexibility in ensuring adequate and reasonable compliance is needed and for many jurisdictions implementing new mandatory programs even flexibility is needed in the early years as programs ramp up.	entities and to identify that jurisdictions have the primary responsibility in monitoring compliance and taking enforcement on entities failing to comply with the chapter. A compliance review is intended to be a “desk audit” to verify that all solid waste accounts for commercial businesses, that generate two cubic yards or more per week of solid waste, are subscribing to service or self-hauling organic waste to a facility that processes source separated organic waste or to a high diversion organic waste processing facility, whichever if applicable. The regulations allow the jurisdiction flexibility when conducting a “sufficient number of route reviews and inspections.” Jurisdiction may prioritize route reviews and inspections to large generators or entities it determines to be more likely out of compliance. If an entity is found to be noncompliant between January 1, 2020 through December 30, 2023, jurisdictions are required to provide educational material describing the applicable requirements of this Chapter.
1165	Macy, Jack San Francisco Department of the Environment	Section 18995.2. (b) Proprietary/trade secret-protected service level data should be protected against disclosure in the Public Records Request Act.	Written records are to be maintained in the files of the local jurisdiction. To the extent that such information is valid confidential, proprietary, or trade secret information, there are protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow the appropriate withholding of such information from public disclosure by the jurisdiction.
1166	Macy, Jack San Francisco Department of the Environment	Section 18995.2. (c ) One business day is too quick. Extend to at least fifteen work days.	CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.
1167	Macy, Jack San Francisco Department of the Environment	Section 18997.2. Penalty Amounts Table 1 Modify for some flexibility in the case that there is not enough capacity and/or the edible food is not accepted at a food recovery organization.	CalRecycle has revised section 18991.3 in response to this comment. Section 18991.3 allows for a commercial edible food generator to demonstrate the existence of extraordinary circumstances beyond its control that make compliance impractical. This was necessary to provide relief from enforcement if the edible food generator has proved the jurisdiction failed to increase edible food recovery capacity as required in Section 18991.1 or was unable to comply due to acts of God such as earthquakes, wildfires, flooding and other emergencies or natural disasters. Also, Section 18995.4 allows the jurisdiction to extend compliance deadlines if it finds that extenuating circumstances beyond the control of the respondent make compliance within the deadlines impracticable, such as edible food recovery capacity deficiencies.
1168	Macy, Jack San Francisco Department of the Environment	Section 17409.5.8. Incompatible Materials Limit in Recovered Organic Waste The contamination limit for compost feedstock should be much lower than 10 percent by weight. Processing contaminated feedstock only increases production costs and decreases product quality.	A change to the regulatory text is not necessary. It would be up to the receiving facility to determine what they can accept under their permit. In addition, the facility can reject any load the operator determines cannot be processed or if the level of contaminant is too high.
1169	Macy, Jack San Francisco Department of the Environment	Section 17409.5.1. Organic Waste Recovery Efficiency There should be a stipulated recovery rate or residual maximum at compost facilities as there is for mixed waste processing facilities	Comment noted. Compost facilities or organic waste recovery facilities are not required to meet a recovery rate, but instead, have a limitation on how much organic waste can be disposed. A Compost facility should have no more than 20 percent of organic waste sent for disposal on and after 2022 and 10 percent on and after 2024.
1170	Macy, Jack San Francisco Department of the Environment	Section 17409.5.1 Any residual would count as disposal, since ADC is being phased out.	Comment noted. To clarify, alternative daily cover (ADC) is not being phased out. However, pursuant to Section 18983.1 (a) organic waste used as ADC would be counted as disposal.

Comment Number	Received From	Question/Comment	Response(s)
1131	Macy, Jack, San Francisco Department of the Environment; Sloan, Lisa, Santa Barbara County Public Health Department, Environmental Health Services	18982(a) (51) Building insulation and panels should not be included among the paper products listed. They are typically not purchased along with the other consumer products. Add the clarification that plastic-coated paper is not considered a paper product.	CalRecycle has revised section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in section 18993.3(c)(2) and therefore agrees with the proposed revision. Section 18993.3(c)(2) requires that paper products and printing and writing paper is eligible to be labeled with an unqualified recyclable label as defined by the Federal Trade Commission. Currently, multi-material products (e.g. plastic-lined paper cups and plastic-coated) are not recyclable and are landfilled. The production of nonrecyclable organic materials compromises the state's ability to achieve the organic waste recycling goals. The purpose of this section is to ensure jurisdictions comply with the procurement requirement by purchasing recyclable items, thereby reducing the introduction of nonrecyclable organics into the marketplace. Jurisdictions can comply with this requirement by focusing their procurement on products that can actually be recycled. This limitation therefore alleviates the need to curtail the definition of paper products as suggested.
2035	Macy, Jack; San Francisco Department of the Environment	The required level of monitoring and reporting, especially for verifying adequate service annually, will be burdensome and unnecessarily onerous and costly for cities like San Francisco with many thousands of commercial accounts. Even with our comprehensive mandatory ordinance implemented over the last 10 years and extensive monitoring and compliance efforts this will require additional staff to meet proposed reporting requirements. More flexibility in ensuring adequate and reasonable compliance is needed such as being able to demonstrate high % program subscription and reasonable ongoing monitoring and recovery without reporting on all noncompliance findings and actions and being able to provide overall summaries.	A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.
2036	Macy, Jack; San Francisco Department of the Environment	We are also concerned about much more onerous requirements for 3 stream over 2 stream over 1 stream collection programs. Requiring less education, monitoring, reporting, and enforcement for 1 stream collection will incentivize a 1 stream over a 2 or a 3 stream program. There is a need to monitor and educate for 1 stream collection, such as to keep out hazardous and universal waste that can negatively impact resulting product quality produced by a high diversion processing facility. So a 1 stream program should not be given a pass compared to 2 or 3 stream program implementation and reporting. Otherwise, we will likely see the unintended consequences of greater mixed waste processing vs source separation and resulting lower product quality and product benefit.	CalRecycle revised Section 18984.5(b)(3) in response to this comment. This section requires a jurisdiction to monitor all 3 containers for prohibited contaminants to avoid this type of situation, and the definition of prohibited container contaminants specifies organic wastes placed in gray container. However, 19894.5(b)(3) allows the jurisdiction to impose additional penalties for prohibited contaminants. CalRecycle revised this section to include all containers, to provide clarity and consistency.
3791	Malik, A., County Sanitation District	The proposed regulations impose many new requirements on jurisdictions. In some instances, the prescriptive requirements on jurisdictions seem to go beyond what is	The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB

Comment Number	Received From	Question/Comment	Response(s)
	of Los Angeles County	necessary to achieve the goal of increased organics diversion. The burden of these requirements for load tracking, load checking, regulatory reporting, enforcement, and public education are largely going to be borne by the jurisdictions of origin for the waste.	1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3792	Malik, A., County Sanitation District of Los Angeles County	Beyond the financial and resource burdens imposed on jurisdictions, the requirements will likely result in adversarial relationships between the jurisdictions and their residents, local businesses, and waste haulers. Failure to meet the regulations would place these jurisdictions and their residents at risk for substantial monetary penalties. Instead of a detailed command and control approach, the Sanitation Districts recommends that CalRecycle provide an alternative approach that allows jurisdictions to develop their own programs and approaches to meet the performance goals, subject to reporting and oversight, similar to the way that AB 939 was originally implemented. This type of approach should also allow specific components of organic waste streams to be targeted first, rather than attempting to address all types of organic waste at the same time. Targeting food waste, for example, may be more manageable and achievable in the short term, and would achieve the greatest reductions in short-lived climate pollutant emissions. The lessons learned from implementing each process could then be used to improve the implementation of the next phase. It is key that jurisdictions have some discretion to determine the best approaches for their circumstances, due to the many site-specific differences that occur across the State.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
3793	Malik, A., County Sanitation District of Los Angeles County	Furthermore, as discussed in the Sanitation Districts' letter (attached) in response to the December 2018 Notice of Preparation for the SB 1383 Environmental Impact Report, CalRecycle should provide a realistic assessment of the amount of methane that will actually be reduced from diverting 75 percent of the organics from landfills. This assessment should include a full life cycle assessment of net greenhouse gas (GHG) emissions as a result of potential increased transportation, energy (e.g., increased energy due to operating individual digesters versus a regional landfill), and actual methane reduction at landfills due to organic diversion. This assessment is especially important given the significant investment that is needed to achieve the goals of SB 1383.	Comment noted. Environmental benefits including GHGs reductions are quantified in the Final Environmental Impact Report but methane reduction quantification is beyond the scope of regulatory authority for these regulations.
3794	Malik, A., County Sanitation District of Los Angeles County	(10) "Compost" <del>has the same meaning as in Section 17896.2(a)(4).</del> <b>is the product manufactured through the controlled aerobic, biological decomposition of organic waste.</b> To ensure that biosolids-derived compost falls under the definition for	CalRecycle has noted the comment. The definition of compost is an existing regulation (Section 19896.2). CalRecycle is not proposing any changes to this definition. This is not within the scope of this rulemaking.

Comment Number	Received From	Question/Comment	Response(s)
		compost, we recommend the change shown above to Article 1 Section 18982(a)(10).	
3795	Malik, A., County Sanitation District of Los Angeles County	<p>(36) "Jurisdiction" means a city or county, or a city and county or a special district that provides solid waste <del>handling</del> <b>collection</b> services. A city or county, or a city and county, may utilize a Joint Powers Authority to comply with the requirements of this chapter, except that the individual city, county, or city and county shall remain ultimately responsible for compliance.</p> <p>As it is currently written, the definition of 'Jurisdiction' is overly broad encompassing all special districts. For example, county sanitation districts do not have the authority to collect solid waste, and are only authorized to engage in some aspects of solid waste handling as it is defined in existing law. See Health &amp; Safety Code Section 4741 and Public Resources Code (PRC) Section 40195. Therefore, it is essential for the Sanitation Districts that the definition of "jurisdiction" in the proposed regulations be modified as shown above. The SB 1383 requirements that are applicable to local jurisdictions should only apply to special districts that provide solid waste collection services for a "jurisdiction" as defined in the PRC Section 40145.</p>	Thank you for the comment. CalRecycle revised the definition of 'jurisdiction' in Section 18982(a)(36) because the original term "handling" as used in the definition is overly broad. This change is necessary to provide clarity.
3796	Malik, A., County Sanitation District of Los Angeles County	<p>(46) "Organic Waste"</p> <p>The definition of organic waste, Article 1 Section 18982(a)(46), is extremely broad and does not prioritize organic diversion according to the potential of the waste to generate SCLPs. The definition should be narrowed to prioritize diversion of materials such as food waste as opposed to textiles or carpets when determining whether diversion goals are achieved. Furthermore, the definition may result in materials such as plastics being included since they contain "material originated from living organisms and their metabolic waste products." The inclusion of plastics does not fit into the concept of organic waste collection and processing</p>	Comment noted. CalRecycle disagrees that the definition of organic waste is too broad. The regulatory text is specifically designed to prioritize or deprioritize certain types of organic waste for specific requirements. For example, organic textiles and carpet, are not subject to the same collection requirements as other types of organic waste. The prioritization reflects the portion of organic waste these materials constitute, which is small, and therefore their total methane generation potential is smaller.
3797	Malik, A., County Sanitation District of Los Angeles County	<p>(62) "Renewable transportation fuel"</p> <p>The definition of Renewable Transportation Fuel in Article 1 Section 18982(a)(62), requires the fuel be derived "...from organic waste diverted from a landfill and processed at an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 to recycle organic waste." This definition appears to exclude renewable transportation fuel that is derived from sewage sludge anaerobic digestion alone, without co-digestion. We hope that is not CalRecycle's intent, since anaerobically digesting sewage sludge, land applying the resultant biosolids, and producing low carbon transportation fuel all contribute to reducing GHG emissions, and are consistent with the goals of SB 1383. All sewage sludge that is anaerobically digested and beneficially reused should be considered to be diverted from landfills. Another reason we request this change is to provide greater operational flexibility for POTWs that accept diverted, hauled-in organic waste (e.g. food waste and/or fats, oil &amp; grease) at their facilities, and in particular, their digesters. One factor in particular is important in this context, which is the current status of Renewable Identification Numbers (RIN) credits that provide financial incentives as part of the</p>	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs, as identified in the comment. The comment also references EPA's Renewable Fuel Standard (RFS) program. While CalRecycle recognizes that the RFS program may impact the economics of producing renewable gas, it is not within CalRecycle's purview to comment on implementation of that program.</p> <p>However, CalRecycle disagrees with the commenter's argument to allow renewable gas derived solely from sewage sludge to be eligible for procurement. The regulations clarify that only renewable gas derived from organic waste received at a POTW from solid waste facilities may count towards a jurisdiction's procurement target. Other materials digested at a POTW, such as sewage sludge, are ineligible. Renewable gas derived solely from sewage sludge is ineligible for procurement because a POTW is not a solid waste facility and therefore not in the scope of the legislative intent of SB 1383. Sewage sludge is also not typically destined for a landfill, so its use</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>federal Renewable Fuel Standard (RFS) program. Specifically, USEPA has stated that when wastewater solids, which qualify for the more valuable D3 RINs, and food waste, which qualifies for the less-valuable D5 RINs, are co-digested, all of the biogas that is produced is assigned the D5 RINs, thus, providing a disincentive to POTWs to accept organic waste for digestion (and, additionally, make co-digestion projects less financially viable). However, some facilities may have operational flexibility to produce fuel with their wastewater solids and direct the biogas derived from the hauled-in organic waste to other uses, such as on-site combined heat-and-power generation, which can allow them to qualify for D3 RINs. However, if that project configuration is pursued, the current restrictive definition in the proposed regulations would inadvertently result in disallowing procurement credit for renewable transportation fuel produced at POTWs that is available as a result of acceptance of diverted organic waste.</p> <p>To avoid these unintended consequences and clarify this definition, we request the definition of "renewable transportation fuel" be amended to read: "...gas derived from organic waste processed in an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 or Title 23."</p>	<p>does not help achieve SB 1383's landfill diversion goals. For the reasons noted above, gas generated from the inflows of a sewer system and not from organic waste diverted from the solid waste stream cannot logically be considered a recovered organic waste product. It is inconsistent with the requirements of SB 1383 to incentivize or mandate activities that do not contribute to landfill diversion of organic waste.</p> <p>However, POTWs that accept food waste can technically do so without a solid waste facility permit, they are explicitly authorized to do so per Title 14, making it functionally similar to incentivizing biomethane from a solid waste facility. Therefore it is justifiable to allow the portion of renewable gas resulting from the digestion of food waste that is recovered at POTWs that accept food waste from a facility or operation identified in Section 18993.1(h)(1)(A)-(C) to count toward the procurement targets.</p>
3798	Malik, A., County Sanitation District of Los Angeles County	<p>SECTION 18987.2 BIOSOLIDS AND SEWAGE SLUDGE HANDLING AT POTW</p> <p>As currently written, Article 6 Section 18987.2 implies a general ban on landfilling of biosolids. The Sanitation Districts strongly objects to any landfill prohibition since lack of available markets or disruption of markets due to emergencies may necessitate landfill disposal to protect public safety and the environment. Furthermore, CalRecycle repeatedly indicated at the SB1383 workshops that these regulations would not prohibit landfill disposal of organics but will rather categorize organic waste management methods into what is considered disposal or recovery for the purposes of achieving the diversion goals. It is up to the jurisdictions to implement programs to meet the diversion goals.</p> <p>Therefore, we recommend the following changes to Article 6 Section 18987.2:</p> <p>(a) Biosolids generated at a POTW shall be <b>categorized as a reduction in landfill disposal when removed for recovery if:</b></p> <p>(1) <del>Transported only to a solid waste facility or operation for additional processing, composting, in-vessel digestion, or other recovery</del> <b>Managed using one of the recovery processes or facilities, either on-site or off-site,</b> as specified in Section 18983.1(b) of this Division;</p>	CalRecycle has deleted Section 18987.2 in response to comments.
3799	Malik, A., County Sanitation District of Los Angeles County	<p>SECTION 18993.1 RECOVERED ORGANIC WASTE PRODUCT PROCUREMENT TARGET</p> <p>Article 12 Section 18993.1(f) is too restrictive and does not allow the flexibility for new organic waste products to enter the market, such as biochar, pelletized organic waste fertilizers, or other types of biogas projects that are beneficially using biogas. The language also makes it seem like the jurisdiction needs to procure both products. We recommend the following addition to Article 12 Section 18993.1(f):</p> <p>(f) For the purposes of this article, the recovered recycled organic waste products that must be procured are:</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(1) Compost, <del>and/or</del>  (2) Renewable natural gas transportation fuel <del>or "RNG", and/or</del>  <b>(3) Other organic waste products as approved by CalRecycle.</b></p>	<p>flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>Regarding "biochar, pelletized organic waste fertilizers", CalRecycle disagrees due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p> <p>Regarding an open-ended pathway for approval of "other organic waste products", CalRecycle disagrees with this approach for procurement. The broad range of potential recovered organic waste products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. As noted above, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>
3800	Malik, A., County Sanitation District of Los Angeles County	<p>ARTICLE 6.2 OPERATING STANDARDS  Notification Requirements  The requirement in these sections to inform the jurisdiction of origin or jurisdiction's designee of received loads with visible contamination is not useful or practical. Based on the Sanitation Districts' experience with processing blue-bin and</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>other recyclable materials, the “visible contamination” standard will require notification for virtually every load. The text in all these sections should be modified to require notification for “excessive” contamination only.</p> <p>The Sanitation Districts recommends the following change to the Notification Requirements:</p> <p>The operator shall inform the jurisdiction of origin or jurisdiction’s designee of received loads when it is determined during inspection that they contain <b>excessive</b> visible contamination. <b>Visual inspections are conducted while implementing an approved loadchecking program.</b></p>	<p>evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
3801	Malik, A., County Sanitation District of Los Angeles County	<p>SECTION 17409.5.6 SOURCE SEPARATED ORGANIC WASTE HANDLING</p> <p>As currently written, Section 17409.5.6(b) implies a general ban on landfilling of recovered organics. The Sanitation Districts objects to any landfill prohibition since lack of available markets or disruption of markets due to emergencies may necessitate landfill disposal. Furthermore, CalRecycle repeatedly indicated at the SB1383 workshops that these regulations will not prohibit landfill disposal of organics but rather will categorize organic waste management methods into what is considered disposal or recovery for the purposes of achieving the diversion goals. It is imperative that the regulations allow jurisdictions to implement programs that provide alternative methods to demonstrate their efforts to meet the diversion goals. Therefore, we recommend the following changes to Section 17409.5.6(b):</p> <p>(b) Source-separated organic waste and organic waste removed from a mixed waste organic collection service for recovery shall be:</p> <p>(1) stored away from other activity areas in specified, clearly identifiable areas as described in the Facility Plan or Transfer/Processing Report; and,</p> <p>(2) Removed from the site consistent with section 17410.1 and either:</p> <p>(A) <del>transported only to another solid waste facility or operation for additional processing, composting, in-vessel digestion, or other recovery</del> <b>considered diversion if managed using one of the recovery processes or facilities, either on-site or off-site</b>, as specified in Section 18983.1 of this Division; or,</p> <p>(B) used in a manner approved by local, state, and federal agencies having appropriate jurisdiction; or,</p> <p><b>(C) sent for disposal.</b></p>	<p>A change to the regulatory text is not necessary. This section focuses on recovered organic waste. Section 17409.5.6(b) is not directly banning organic waste disposal. The purpose of this section is to ensure that the source separated organic waste and organic waste removed from a mixed waste collection service, “for recovery,” is handled in a way that constitutes a reduction in organic waste disposal. A facility can choose not to recover organic waste that is processed and leave it in their residual waste stream, however, that will negatively affect their recovery efficiency.</p>
3802	Malik, A., County Sanitation District of Los Angeles County	<p>SECTIONS 17409.5, 17896.25.1, 17867 AND 20901 LOADCHECKING</p> <p>These sections require the implementation of a loadchecking program to prevent the acceptance of prohibited waste that is too onerous on operators, and in many processing facilities, difficult or impossible to achieve. The loadchecking requirements combined with Sections 17409.5.1 through 17409.5.5 require daily one cubic yard samples from each organic waste type or stream separated, which will result in multiple load checks per day for inspection of contamination. Moreover, the draft regulations also require daily load checks including one load check per source sector per day, further increasing processing/recovery costs, while reducing recovery efficiency and productivity.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>The number of samples that must be sorted through to accomplish the objectives of Section 17409.5 on a daily basis would require large lay down areas at processing facilities and a significant amount of additional staff to accomplish what is required, not even considering the additional resources required for recordkeeping and reporting. Many facilities, have limited excess space given all the simultaneous activities required to effectively sort through incoming solid waste streams. These physical restrictions will be exacerbated when processing facilities ramp up to handle greater volumes of organic waste, especially for facilities that sort multiple organic waste types from both source-separated and mixed waste streams. Section 17409.5.9 allows alternative measurement protocols, but it is not at all clear what will be allowed and how long it will take to obtain approval for such protocols. CalRecycle should expand this section to include more guidance on alternative measurement protocols and approval timeline. Furthermore, to make the overall proposed loadchecking program more workable, the Sanitation Districts recommends that CalRecycle take the following approach in all the sections listed above:</p>	<p>solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p> <p>Regarding the methodology: CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. For statewide consistency, it is necessary to specify how a facility is to measure recovery efficiency to determine if it meets the definition of a high diversion organic waste processing facility.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p> <p>CalRecycle staff will develop tools to assist in the implementation of the regulations.</p>
3803	Malik, A., County Sanitation District of Los Angeles County	<p>SECTION 17409.5. LOADCHECKING – PROHIBITED WASTES (a) The operator of an attended operation or facility shall implement a <b>random</b> loadchecking program to prevent the acceptance of waste which is prohibited by this Article. This program must include at a minimum: (1) <del>the number of random loadchecks to be performed</del> <b>will be performed at the frequency of a one-week period on a quarterly basis;</b> (2) a location for the storage of prohibited wastes removed during the loadchecking process that is separately secured or isolated, <b>or an alternative that is consistent with the physical constraints of the facility;</b> (3) records of loadchecks and the training of personnel in the recognition, proper handling, and disposition of prohibited waste. <b>In lieu of the use of the facility’s personnel to conduct loadchecks, an operator may use trained and certified contract inspection staff.</b> A copy of the loadchecking program and copies of the loadchecking records for the last year shall be maintained in the operating record and be available for review by the appropriate regulatory agencies.</p>	<p>CalRecycle staff has noted the comment. Section 17409.5, loadchecking for prohibited waste is an existing regulation and CalRecycle is not proposing a revision to this standard. This is not within the scope of this rulemaking.</p> <p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>Furthermore, the loadchecking requirements seem unnecessarily onerous for those facilities that are routinely managing preprocessed material or relatively clean material (i.e. biosolids composting facilities). We recommend sampling occur within a one-week period on a quarterly basis and reporting on a quarterly basis rather than monthly. Operators can apply the percentages to daily outbound loads of processed organics and residuals to provide a reasonable estimate of the quantity of organic material that is recovered and disposed. This is particularly applicable to Source Separated Organics (SSO) since SSO loads will be significantly cleaner than mixed waste loads. Periodic sampling will be much more cost effective and will provide similar data to daily sampling, without the additional labor, space and time burdens.</p> <p>The remaining section changes dealing with loadchecking should be implemented consistent with the conceptual approach outlined above. The intent of this proposal is to acknowledge that, over time, the facility will receive fairly consistent types of waste from similar sources. Statistically, it is not necessary to do the checks every day as the wastestream will typically not significantly change on a daily basis. Moreover, the monitoring may inhibit the facility's ability to properly sort and manage the mixed organic wastestream. If, over time, the data indicates significant variability, then more frequent loadcheck requirements may be more appropriate. In addition, the Sanitation Districts requests that the regulations allow loadchecking to be contracted out if the facility does not have personnel capable of performing these tasks or if it is more cost effective to use outside personnel.</p>	
3804	Malik, A., County Sanitation District of Los Angeles County	<p>SECTION 17409.5.11 REMNANT ORGANIC MATERIAL IN THE GRAY CONTAINER COLLECTION SYSTEM</p> <p>In Section 17409.5.11(b)(2) – Correct reference to source sector as follows: Section 18815.2(a)(5158)</p>	CalRecycle has revised Section 17409.5.11(b)(2) accordingly.
3805	Malik, A., County Sanitation District of Los Angeles County	<p>SECTION 20700.5 CALRECYCLE – LONG TERM INTERMEDIATE COVER</p> <p>The Sanitation Districts strongly objects to the requirement for at least 36 inches of cover to be placed on all landfill surfaces where no additional waste will be deposited within 30 months. This requirement is unnecessary as intermediate cover is already defined in 27 CCR and control of landfill methane emissions is already regulated in 17 CCR. These regulations establish surface emission testing criteria, methane emission thresholds, and regulatory requirements to meet established thresholds. Moreover, landfills in the Los Angeles area have consistently demonstrated compliance with these requirements and strict SCAQMD 1150.1 landfill emission regulations using existing intermediate cover practices and regulations. Placing excess cover will require additional transportation and heavy equipment which will produce additional air emissions, take up capacity that could otherwise be used for refuse placement, and result in substantial costs to rate-payers with no justifiable benefit. Since the aforementioned regulations are already in place to protect the environment and public health, imposition of a new long-term intermediate cover definition with additional requirements is unnecessary and</p>	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.

Comment Number	Received From	Question/Comment	Response(s)
		would increase costs without any commensurate benefit. Therefore, the Sanitation Districts requests this amended section be deleted in its entirety.	
3806	Malik, A., County Sanitation District of Los Angeles County	<p>SECTION 20750.1 CALRECYCLE - ORGANICS WASTE HANDLING</p> <p>The proposed language effectively requires landfills to construct material recovery facilities (MRF) to recover organic materials, improve an existing MRF, or only accept waste from a high organic diversion waste processing facility if the landfill proposes to "expand". The revised regulations, now exclude changing of hours of operation from the definition of expansion, but still do not provide clarity on what is considered a "significant change" per 27 CCR Section 21665. The definition of a "significant change to the design or operation" of a landfill is overly broad and may impose these requirements, and the associated increased costs, on landfills making minor changes that do not expand the design refuse footprint or capacity of the landfill. Existing facilities, which are not expanding their refuse capacity or footprint, may not have land available or the financial resources to construct or expand a MRF. Therefore, the Sanitation Districts requests the following modifications to Section 20750.1 part (c):</p> <p>(c) For the purposes of the section, "expanding" means a solid waste landfill proposing to make a significant change <b>significantly expand the landfill refuse footprint or refuse design. capacity to the design or operation as determined by the EA pursuant to 27 CCR Section</b></p> <p>~</p>	<p>A change to the regulatory text is not necessary. 27 CCR Section 20750.1(c) defines the term "expanding" to mean a solid waste landfill proposing to make a significant change to the design or operation pursuant to 27 CCR 21665. As noted in Subdivision (c)(1), a significant change does not include a change in hours of operation of a landfill.</p> <p>The purpose of this section is to require new or expanding solid waste landfills to implement an organic waste recovery activity for any waste received that has not been processed previously at a High Diversion Organic Waste Processing Facility or Designated Source Separated Organic Waste Facility. Organic waste recovery activities include (in addition to MRF's), composting facilities or operations, in-vessel digestion facilities or operations, and other activities listed under Section 18983.1(b). Landfills that do not have available land or the finance to implement an organic waste recovery activity on-site have the option to transport the waste off-site to another facility where a recovery activity can take place.</p>
3807	Malik, A., County Sanitation District of Los Angeles County	<p>SECTION 21695 CALRECYCLE- ORGANIC DISPOSAL REDUCTION STATUS IMPACT REPORT (SIR)</p> <p>The Sanitation Districts objects to the requirement to submit an SIR for every operating landfill within 180 days of the effective date of these regulations. Producing SIRs as described in the regulations would be costly, time consuming, and not cost-effective for the solid waste ratepayers in California that will ultimately bear the cost of preparing these documents. Data used to produce SIRs will be speculative and prone to error since significant diversion of organics will not have occurred by the time the reports are submitted. Moreover, substantial portions of the SIR document are duplicative with the five-year solid waste facility permit review documents, which are subject to thorough review and approval processes by the EA and CalRecycle.</p> <p>The Sanitation Districts recommends that CalRecycle produce one statewide impact report rather than requiring significant expenditure of resources, with minimal benefit, landfill operators to produce duplicative SIRs for each landfill that analyze the same impacts and data producing similar results and conclusions. Furthermore, the statewide SIR should be prepared no earlier than 3-5 years after the effective date of the regulation to allow collection of accurate and reliable data facilitating proper analysis of the impacts of organic diversion on landfills.</p>	<p>CalRecycle has revised Section 21695 in response to comments. The changes to the regulatory text include the requirement that operators identify those areas in the landfill that would remain with intermediate cover and to extend that date for submittal of the Status Impact Report (SIR) from 180 days to one year (365 days) from the effective date of these regulations.</p> <p>This standard is not duplicative of a five-year review. The purpose of the SIR is to assist operators better understand the potential impact the proposed regulations could have on their landfill which is different than the five-year review. A five-year review is completed by the EA every five years from the last review and evaluates (among other things) the information provided in the application for the proposed facility to determine whether or not the facility will be able to operate in accordance with state minimum standards and permit terms and conditions.</p> <p>Whereas, the SIR is a site specific, one-time submittal that is prepared by the operator after they have reviewed their landfill operations to determine any potential impacts from the reduction of organic disposal (waste flow) to their landfill. The one-year timeframe established in this regulation for the submittal of the SIR is necessary to assist the operator in determining and assessing in the timing of those impacts to properly implement any changes or modifications in a timely manner. Because only the potential impacts associated with the reduction of the amount waste disposed will be reviewed, staff believe that one-year from the effective date of the regulations is an adequate amount of time for the operator to meet the requirements of this section.</p>

Comment Number	Received From	Question/Comment	Response(s)
3808	Malik, A., County Sanitation District of Los Angeles County	<p>ARTICLE 3. OPERATING STANDARDS FOR IN-VESSEL DIGESTION OPERATIONS AND FACILITIES</p> <p>SECTION 17896.44.1 MEASURING ORGANIC WASTE IN RESIDUALS</p> <p>Measuring organics in the residuals from POTW in-vessel digesters, used to process organics received in a wet-slurry such as food waste, is not feasible since the slurry is co-digested with wastewater treatment solids. Moreover, the digesters typically have infrequent cleanout intervals, which are extremely costly to implement. We request an opportunity to establish alternatives to the proposed measurement protocols and the mandatory sampling and reporting requirements (similar to 17409.5.9). Furthermore, as discussed above, the Sanitation Districts have strict contractual requirements that include more restrictive infeed contamination restrictions than the regulations to protect pumps and equipment while reducing cleanout costs of the digester. The Sanitation Districts recommends that POTWs be exempted from the measurement requirements in this Section.</p>	CalRecycle has revised Section 17896.44.1(d) accordingly.
6411	Marchand, J., City of Livermore	<p>Food Recovery. Food Recovery requirements do not differentiate between healthy foods eligible for donation, and "junk" food which does not meet the requirements for redistribution at many food pantries and banks. This will encourage donation dumping and burden food rescue organizations, and a list of eligible food donation items should be included in the regulations.</p>	<p>CalRecycle would first like to clarify that SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. The statute does not state that 20% of healthy or nutritious food be recovered. As a result, SB 1383's regulations do not include requirements that only specific types of food be recovered. CalRecycle does however, recognize that a core value of many food recovery organizations and food recovery services is to reduce food insecurity in their communities by rescuing and distributing healthy and nutritious food to help feed people in need. CalRecycle also recognizes that many food recovery organizations and food recovery services have nutrition standards for the food they are willing to accept. To address this, Section 18990.2 Edible Food Recovery Standards and Policies subsection (d) specifies that nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from refusing to accept edible food from a commercial edible food generator. Therefore, nothing in SB 1383's regulations prohibits a food recovery organization or a food recovery service from following their own internal standards and requirements for acceptance related to nutrition or quality of the food when it is recovered. CalRecycle also recognizes that donation dumping occurs. The regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or service. If a food recovery organization or service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383's regulations prohibiting a food recovery organization or food recovery service from terminating their relationship with that particular generator. Also, CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model food recovery agreement does include language to protect food recovery organizations and services from donation dumping and unexpected donations. The model food recovery</p>

Comment Number	Received From	Question/Comment	Response(s)
			agreement is a template and is intended to be customized based on the needs of food recovery entities and commercial edible food generators.
6412	Marchand, J., City of Livermore	Reporting. Reporting requirements are onerous. Due dates do not align with current CalRecycle reporting schedule, and in some cases jurisdictions must track data from organizations that are not required to provide information, such as food recovery organizations or self-haulers. In some cases, requested information must be provided to Cal Recycle within one business day. While our franchise hauler provides the City with regularly recurring and timely reports, the regulations would require reporting to CalRecycle prior to receipt of reports even for the franchise hauler. It is not feasible to submit reports to Cal Recycle on time with the current proposed regulation.	CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.
6413	Marchand, J., City of Livermore	Monitoring and Enforcement. It will be difficult for jurisdictions to comply with generator monitoring and enforcement requirements. Onsite inspections are costly and time consuming, and the continued issuance of Notice of Violations until compliance is achieved may not be the most effective way to improve diversion. Specifically, monitoring and enforcing all 25,500 organics collection accounts, of which approximately 24,500 are single-family residences, would be tremendously onerous. It is not possible to monitor or enforce this requirement efficiently to be in compliance with the proposed regulation.	A change to the regulatory text is not necessary. The reporting and recordkeeping requirements are the minimum amount needed to allow CalRecycle to ensure a jurisdictions compliance with the Chapter. The recordkeeping requirements also assist a jurisdiction in verifying and tracking their own progress and if they are complying with the law. The Chapter allows a jurisdiction the flexibility to fulfill its oversight role by adopting their own enforceable ordinances that are consistent with the requirements of the Chapter.
6414	Marchand, J., City of Livermore	Procurement. Procurement requirements for organic waste products will be expensive and wasteful. For Livermore, nearly 3,700 tons of compost would need to be purchased annually, at a cost of nearly \$1,000,000 per year. Given the amount of City-maintained acres in Livermore, this amount of compost far exceeds the City's needs.	The draft procurement requirements do not mandate specific end uses for materials, so compost does not have to be used on city-maintained acres, as assumed in the comment. There are many alternative uses for compost, including city-hosted compost giveaways or community or school gardens, to name a few. The City can also procure energy products; CalRecycle has revised Section 18993.1 to expand the list of eligible recovered organic waste products to provide jurisdictions with even more flexibility. CalRecycle recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction's need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. Additionally, it is unclear how the commenter estimated \$1,000,000 per year for 3,700 tons of compost. The SRIA estimates 1 ton compost = \$25 + \$5 transportation, which means the cost would be approximately \$111,000 per year, which is orders of magnitude lower than the commenter's assumption.
6415	Marchand, J., City of Livermore	Organics Diversion and Contamination. Most organics collected from commercial customers are heavily contaminated with plastic, metals, and glass for current facilities to process, particularly given more stringent final compost product regulations, enforced by the California Department of Resources Recycling and Recovery (CalRecycle). Livermore is actively working with generators to reduce contamination and is working with the franchise hauler to remove contaminants from the organics stream to allow acceptance at the composting facilities. However, expectations of a "clean stream" is a number of years in the future.	A change to the regulatory text is not necessary. Section 18984.5 contains provisions for addressing contamination.

Comment Number	Received From	Question/Comment	Response(s)
3284	Martin, C., California Hospital Association	<p>As tier two commercial edible food generators, California hospitals have demonstrated a commitment to reducing organic waste disposal through the recovery of edible food. As testament to this commitment, several California hospitals have proactively implemented edible food recovery programs and, in doing so, have achieved reduction in edible food waste of up to 50 percent. With this in mind, we recommend that CalRecycle include provisions for de minimis waivers for tier two commercial edible food generators.</p> <p>The proposed regulations include a provision for de minimis waivers for generators of organic waste (Article 3, Section 18984.11). However, similar provisions are not included for commercial edible food generators. CHA respectfully requests that de minimis waivers be included for tier two commercial edible food generators. We would be happy to work with CalRecycle on determining the threshold for the waiver.</p>	<p>Adding a section for exemptions and de-minimis waivers to the regulations was not necessary because the regulations are already structured so that many food facilities and food service establishments are exempt from compliance due to the smaller amounts of edible food they typically dispose. Only the entities identified as tier one and tier two commercial edible food generators are required to comply. Every other food facility or food service establishment that is not a tier one or a tier two commercial edible food generator is exempt from SB 1383's regulations.</p> <p>CalRecycle recognizes however, that some commercial edible food generators could experience extraordinary circumstances that could make compliance impracticable. To address this issue, CalRecycle added language to Section 18991.3 to specify that a commercial edible food generator shall comply with the requirements of Section 18991.3 unless the commercial edible food generator can demonstrate extraordinary circumstances beyond its control that make such compliance impracticable. For the purposes of Section 18991.3, extraordinary circumstances are specified as (1) a failure by the jurisdiction to increase edible food recovery capacity as required by Section 18992.2, Edible Food Recovery Capacity. And (2) Acts of God such as earthquakes, wildfires, flooding, and other emergencies or natural disasters.</p>
6000	McClellon, R., San Joaquin County Environmental Health Department	<p>Section 18083 c. requires that the LEA view at least one (1) waste measurement each quarter. I think a much more reasonable approach (time and effort saved) would be to have the operators self-certify annually with the results of the measurements</p>	<p>This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. The labeling requirements were refined through the informal public rulemaking process to accommodate the various types of labels jurisdictions currently use on their containers. Stakeholders indicated that these types of labels are effective and durable. Correctly-colored labels may be applied to existing bins or lids until the containers are replaced at the end of their useful life.</p> <p>Labeling requirements, commencing January 1, 2022, only apply to new containers or lids. Thus, imprinting of labels would be directly onto new containers, either at the end of old containers' useful life or by 2036.</p> <p>A jurisdiction's designee can place labels on the containers.</p> <p>The regulations already apply to all containers provided by a hauler, including temporary dumpsters. The regulations specify that all containers provided by a hauler must meet both the container color and container label requirements by 2036. However, the regulations do allow for either the lid or the body to meet the color requirement.</p> <p>With respect to compactors owned by private businesses and not the hauler, the containers may conform with either the container color requirements or the container label requirements.</p> <p>In regards to the interior containers, this was the least costly and burdensome approach and still achieves the necessary organic disposal reduction. Those businesses subject to AB 827 will have to meet that statute's signage requirements. Nothing in these SB 1383 regulations precludes a jurisdiction from requiring businesses to have signage.</p> <p>In regards to the lid comment, a change was made to allow for the exposed portion of lid or body to be required color and to allow the required color to be on either the lid or the body, not just</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>the lid. The change is necessary because this approach is the least costly and burdensome one that still achieves the organics disposal reductions.</p> <p>For the text and graphics, this section references that primary materials must be included. If there is a change in the primary materials, then the information would need to be updated as containers are replaced. The regulations are allowing flexibility on size of the label (text and graphics), the requirement is only for primary materials, and all containers need labels. However, this includes all containers and residential/non-residential. Also, for consistency purposes, CalRecycle revised Section 18984.8(c)(1) to mention primary items.</p> <p>In regards to the new technology, CalRecycle is unclear on how that will help educate the generators.</p> <p>Nothing prohibits jurisdiction from mailing labels for existing containers, in addition to ensuring that new containers are properly labeled.</p> <p>he current text reflects stakeholder input during the informal rulemaking period that it would be costly to place labels on all containers. CalRecycle determined that this change would provide jurisdictions with flexibility to implement less burdensome education methods (e.g., labels on new containers) that ensure organic waste is collected and recovered, to support the state’s efforts to keep organic waste out of landfills and reduce greenhouse gas emissions. However, nothing in the regulations prohibits a jurisdiction from placing labels on all containers at an earlier time.</p>
5037	McDonald, N. OWS Inc.	<p>Modify:  (33) “High diversion organic waste processing facility” means a facility that is in compliance with the reporting requirements of Section 18815.5(d) of this division and meets or exceeds an annual average mixed waste organic content recovery rate of 65 percent between January 1, 2022 and December 31, 2024, and 85 percent after January 1, 2025 as calculated pursuant to Section 18815.5(e) of this division for organic waste received from the “Mixed Waste Organic Waste Collection Stream” as defined in Section 17402 (a)(11.5) of this division.  Rationale for proposed change: The recovery rate should be increased for both target dates to reflect the commercial availability of technology which can achieve the proposed modified rates.</p>	<p>CalRecycle declines the suggested language change. The percentages and dates are tied to the percentages in statute.</p>
5038	McDonald, N. OWS Inc.	<p>Modify/replace:  (41) “Non-compostable paper” means paper that is coated in a plastic material that is not a “qualifying bioplastic” or is otherwise not in compliance with ASTM D6868 “Standard Specification for Labeling of End Items that Incorporate Plastics and Polymers as Coatings or Additives with Paper and Other Substrates Designed to be Aerobically Composted in Municipal or Industrial Facilities”.  Modify:  (46) “Organic waste” means solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood, paper products, printing and writing paper, manure, biosolids, digestate, <b>and sludges, and qualifying bioplastics.</b></p>	<p>CalRecycle declines the suggested change and finds that it is unnecessary to define this term.</p>

Comment Number	Received From	Question/Comment	Response(s)
		and change each subsequent reference for “plastic coated paper” to “non-compostable paper” Rationale for proposed changes: The proposed changes harmonize this regulation with existing PRC provisions concerning biodegradable and compostable plastics, and with additional provisions contained in recently-enacted provisions for single-use plastics as part of the Coastal Communities Protection Act.	
5039	McDonald, N. OWS Inc.	Modify: (63) “Residual organic waste” means <b>organic waste that is not recovered and remains unprocessed</b> <del>after organic waste has been processed</del> which is then sent to landfill disposal. Rationale for proposed change: The proposed change clarifies that only the unprocessed organic waste is included in the definition, such as the portion that remains entrained with non-organic waste after preprocessing, or the portion excluded during preprocessing as physically incompatible with the organics processing facility.	A change to the regulatory text is not necessary. A text change is not necessary for the following reason: “Residual organic waste” is defined as: (63) “Residual organic waste” means waste that remains after organic waste has been processed which is then sent to landfill disposal. This sufficiently and correctly describes the intent of the definition which is to identify only the waste remaining and subsequently sent to a landfill after organic waste has been processed.
5040	McDonald, N. OWS Inc.	Add (XX) “Qualifying bioplastics” means bioplastics that are in compliance with PRC Division 30, Part 3, Chapter 5.7 Plastic Products and demonstrated acceptance by one or more of the following: ASTM D6400 “Standard Specification for Labeling of Plastics Designed to be Aerobically Composted in Municipal or Industrial Facilities”; ASTM D6868 “Standard Specification for Labeling of End Items that Incorporate Plastics and Polymers as Coatings or Additives with Paper and Other Substrates Designed to be Aerobically Composted in Municipal or Industrial Facilities”; OK Compost Home certification scheme of TUV Austria (formerly Vincotte). Rationale for proposed change: The proposed addition harmonizes this regulation with existing PRC provisions concerning biodegradable and compostable plastics, and with additional provisions contained in recently-enacted provisions for single-use plastics as part of the Coastal Communities Protection Act. The use of qualifying bioplastics for disposable products used in conjunction with food waste is widely recognized as beneficial for increasing participation and capture rates in source-separated organics collection.	CalRecycle generally supports processes that could help increase participation and capture rates, but SB 1383 provides that the intent of these regulations is to reduce the disposal of organic waste that generate methane in landfills. Bioplastics are generally not considered an organic waste and therefore is outside the purview of these regulations. In addition, bioplastics are designed to degrade in an aerobic composting environment but these regulations are not limited to just composting.
5041	McDonald, N. OWS Inc.	Add (XX) “Mixed Waste Organic Waste” means the organics contained within the Mixed Waste Organic Waste Collection Stream. Rationale for proposed change: The proposed addition provides a definition for the use of mixed waste organic waste in subsequent sections of the document.	The regulations include a definition of "mixed waste organic collection stream" in Section 17402(a)(11.5). CalRecycle does not find it necessary to define "mixed waste organic waste" since this phrase doesn't appear in the regulatory language.
5042	McDonald, N. OWS Inc.	Section 18983.2 Determination of Technologies That Constitute a Reduction in Landfill Disposal Modify:	CalRecycle has revised section 18983.2(a)(3) in response to this comment. The change removes the word “mixed” from the phrase “mixed organic waste.” This change is necessary to clarify that the assessment is being performed relative to the greenhouse gas emissions per short ton organic waste being processed.

Comment Number	Received From	Question/Comment	Response(s)
		<p>(3) To determine if the proposed operation counts as a permanent reduction in landfill disposal, the Department and/or CARB’s Executive Office shall compare the metric tons carbon dioxide equivalent (MTCO2e) per short ton organic waste reduced by the process or technology, with the emissions reduction from composting organic waste (0.30 MTCO2e/short ton organic waste).The Department shall only deem a proposed operation to constitute a reduction in landfill disposal if the process or technology has permanent greenhouse gas emissions reductions equal to or greater than the 0.30 MTCO2e/short ton of <del>mixed</del> organic waste. Rationale for proposed change: The proposed change ensures emission reductions for evaluation of the process or technology is done on an equivalent basis, per the definitions used in this proposed regulation.</p>	
5043	McDonald, N. OWS Inc.	<p>Section 18983.1 Landfill Disposal and Recovery Modify:  (a) The following dispositions of <b>residual</b> organic waste shall be deemed to constitute landfill disposal:  (1) Final deposition at a landfill.  (2) Use as Alternative Daily Cover or Alternative Intermediate Cover at a landfill, except the use of Material Recovery Fines that are approved pursuant to Section 20690 of Title 27 Division 2  (3) Any other disposition not listed in subsection (b) of this section.  (b) Organic waste sent to one of the following facilities, operations, or used for one of the following activities, and not subsequently sent for landfill <b>disposal as residual organic waste</b> shall be deemed to constitute a reduction of landfill disposal.  Rationale for proposed changes: The proposed changes clarify that the dispositions refer to residual organic waste as defined. This is consistent with existing PRC regulations for ADC and AIC.</p>	<p>For the purposes of these regulations, the definition of disposal or recovery is inclusive of all organic waste disposal, unless otherwise stated. As stated in the Initial Statement of Reasons:  SECTION 18983.1 LANDFILL DISPOSAL AND RECOVERY  Subdivision (a)  The purpose of this section is to specify which facilities, operations, end-uses, processes, and activities constitute landfill disposal of organic waste (hereafter collectively referred to as “landfill disposal activity” or “landfill disposal activities”) for the purposes of this regulation.  AND  The statute requires the state to reduce the presence of organic waste in landfills. Regardless of the sophistication of a pre-landfill treatment practice, if material is ultimately deposited in a landfill, the deposition cannot rationally be considered anything other than landfill disposal for the purposes this regulation and the state’s efforts to keep organic waste out of landfills and reduce greenhouse gas emissions.</p>
5044	McDonald, N. OWS Inc.	<p>Section 18993.1  Modify:  (b) (1) Per capita procurement target = 0.15 tons of <b>recovered</b> organic waste <b>product</b> per California resident per year.  Rationale for proposed change: The inserted words to make this provision consistent with definition #59. The proposed procurement target basis is too low. At only 0.07 tons per resident, the procurement target represents only 12% of the 23 million tons of organic waste being landfilled in the 2014 baseline. If the 0.07 tons is multiplied by the approximately 40 million residents of California, and the total procurement were in the form of renewable fuel, that is only 53.2 million diesel gallon equivalents. Given that obligated parties can meet the procurement target by procuring a combination of the recovered energy and compost product, the effective procurement impact is even lower for each recovered product market. The proposed level of 0.15 tons, while still modest, is achievable and will increase</p>	<p>CalRecycle has revised Section 18982(a)(59) in response to this comment. This change will clarify the definition of “recovered organic waste product procurement target” as the amount of organic waste in the form of a recovered organic waste product. This change is necessary to clarify that the procurement target is measured in tons of raw organic waste feedstock rather than amounts of recycled organic waste products, as may be interpreted using the current definition. This is necessary because the organic waste tonnage and the volume and tonnage of renewable transportation fuel and finished compost, respectively, are not equivalent and require conversion factors to obtain the amount recovered organic waste product. With revisions to the definition of “recovered organic waste product procurement target,” the issue of consistency between this definition and the per capita procurement target definition is now resolved. This per capita procurement target is measured in tons of organic waste per California resident per year, rather than tons of recovered organic waste product per California resident per year, because this target is focusing on the amount of organic waste that must be procured in the form of a recovered organic waste product, rather than the amount of recovered organic waste product itself.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>the deployment of organics processing facilities with sufficient capacity to achieve the targeted diversion.</p> <p>Modify/Replace:  <b>(g) The following conversion factors shall be used to convert tonnage in the annual recovered organic waste product procurement target for each jurisdiction to equivalent amounts of recovered organic waste products:</b>  <b>(1) One ton of annual recovered organic waste product shall be equivalent to the following:</b>  <b>(A) 19 diesel gallon equivalents, or "DGE," of renewable transportation fuel.</b>  <b>(B) 0.58 tons of compost on an equivalent dry weight basis to the collected organic waste.</b></p> <p>Rationale for proposed changes: The proposed change reflects the difference in recovered organic waste products obtainable from the waste as collected and the use of those collected tonnages</p>	<p>A change to the regulatory text is not necessary. A text change is not necessary for the following reason(s): The per capita procurement target is appropriate as is, as this was calculated using government's share of the statewide gross domestic product (GDP) and the projections of state population and organic waste diversion needed in 2025. In order to meet the 2025 organic waste diversion target mandated by SB 1383, jurisdictions will be required to procure a percentage of the diverted organic waste in the form of recovered organic waste products. As procurement will require local governments to create markets for these products, CalRecycle determined it would be appropriate to utilize the percentage of government's share of the statewide GDP, which has averaged 13% over the most recent 10 years of data from the United States Bureau of Economic Analysis, as the amount of diverted organic waste that must be procured by jurisdictions in the form of recovered organic waste products. Although higher procurement of recovered organic waste products by jurisdictions beyond the required per capita procurement target is encouraged, CalRecycle does not find it appropriate to increase this requirement beyond government's share of the GDP.</p> <p>A change to the regulatory text is not necessary. A text change to the regulatory text is not necessary for the following reason(s): The organic waste to compost conversion factor is based on the Air Resource Board's quantification methodology, "Method for Estimating Greenhouse Gas Emission Reductions from Diversion of Organic Waste from Landfills to Compost Facilities," May 2017. The conversion factors developed by ARB are based on wet weight. No rationale is provided in the comment for changing to measurement based on dry weight, therefore CalRecycle defers to the existing ARB quantification methodology.</p>
5045	McDonald, N. OWS Inc.	(1) Should Section 18984.2. Two-container Organic Waste Collection Services, (a) (2) refer to a gray container? The use of a blue container for this waste would seem to confuse consumers. The designated waste for the gray container is not clearly defined nor distinguished from the mixed waste organic waste collection stream, nor from the current "black bin".	CalRecycle agrees that in a two-container system, the container used for the collection of non-organic waste should be gray to avoid confusion about what is recyclable, as this could exacerbate contamination when generators move to jurisdictions that have a three-container collection system. CalRecycle made a corresponding change to the regulation to the color requirements for two container collection services.
5046	McDonald, N. OWS Inc.	(2) How could a physical space waiver apply (Section 18984.11 (a) (2) if an acceptable option is the unsegregated single gray container going to a high diversion mixed organic waste facility?	This waiver applies for small businesses that have legitimate space constraints for a separate organic waste container to meet the jurisdiction's waste collection system. An unsegregated gray container service does not require an additional bin, therefore the space waivers are inapplicable and unnecessary for this type of service.
5047	McDonald, N. OWS Inc.	(3) How are the targets outlined in Section 18993.1. Recovered Organic Waste Product Procurement Target calculated and expressed? For instance, dry weight basis of both collected organic waste and mixed waste organic waste, and of final procured product?	The final statement of reasons will be clarified to explain that 2025 projections of state population and organic waste diversion were used in the calculations of the per capita procurement target. CalRecycle projects that in order to meet the 2025 organic waste diversion target mandated by SB 1383, approximately 25,000,000 tons of organics must be diverted from California landfills. To meet this target, jurisdictions will be required to implement the SB 1383 regulations, which includes the procurement of a portion of the diverted organic waste in the form of recovered organic waste products. As procurement will require local governments to create markets for

Comment Number	Received From	Question/Comment	Response(s)
			<p>these products, CalRecycle determined it would be appropriate to utilize the percentage of government's share of the statewide GDP, which has averaged 13% over the most recent 10 years of data from the United States Bureau of Economic Analysis, as the amount of diverted organic waste that must be procured by jurisdictions in the form of recovered organic waste products. Therefore, statewide procurement by local governments will be approximately 3.3 million tons of organic waste in the form of recovered organic waste products, which accounts for approximately 13% of the 25,000,000 tons of organics that must be diverted from landfills by 2025. When approximately 3.3 million tons is divided by the projected 2025 statewide population of 42,066,880, the metric of approximately 0.08 tons of organic waste per California resident results. This value is the per capita procurement target and when multiplied by the number of residents in a jurisdiction, the annual recovered organic waste product procurement target for each jurisdiction results.</p> <p>In response to the comment about dry weight basis, the conversion factors listed in section 18993.1(g) are based on Air Resources Board quantification methodologies that use wet weight basis. The comment does not provide any rationale for changing the measurement based on dry weight, therefore CalRecycle defers to the existing ARB quantification methodology.</p>
5048	McDonald, N. OWS Inc.	<p>Section 17409.5.1. Organic Waste Recovery Efficiency. Modify:</p> <p>(a) This section applies to transfer and processing facilities and operations that conduct processing activities.</p> <p>(b) For purposes of compliance with the reporting requirements in Section 18815.5 of this division, and demonstrating that the facility is a "high diversion organic waste processing facility" as defined in Section 18982(a)(33) of this division that meets or exceeds an annual average mixed waste organic content recovery rate of <b>65</b> percent on and after January 1, 2022 and <b>85</b> percent on and after January 1, 2025 as determined in Section 18815.5(e), the operator shall conduct the measurements described in this section.</p> <p>(c) The operator shall:</p> <p>(1) Determine the quarterly sum of <del>outgoing</del> weights of organic waste recovered from the mixed waste organic collection stream, <b>whether processed on site or transferred to another facility</b>, by adding together all weights determined pursuant to Section 17409.5.2(b)(6) for each operating day for the quarterly period.</p> <p>(2) Determine the quarterly sum of outgoing weights of organic waste <del>either removed from</del> <b>remaining in (or recombined with after preprocessing)</b> the mixed waste organic collection stream that is sent to disposal as measured pursuant to Section 17409.5.3(b)(5) for each operating day for the quarterly period.</p> <p>And</p> <p>(d) The operator shall additionally:</p> <p>(1) Determine the quarterly sum of <del>outgoing</del> weights of organic waste recovered from the source separated organic waste collection stream, <b>whether processed on</b></p>	<p>A change to the regulatory text is not necessary. SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. In order to achieve these targets, regulatory limitations for high diversion organic waste processing facilities must be implemented.</p> <p>In regard to combing the sum of the organics waste streams: The source separated organic waste is kept separate from the mixed waste stream to ensure that the maximum amount of organic waste is kept clean by reducing cross contamination so it can be recovered and not disposed. However, the recovered organic waste from both waste streams can be combined once sampling/measurements have taken place. This is necessary to ensure that the organic waste recovery target established in statute can be met. In addition, combining the source separated organic waste with the mixed organic waste stream prior to sampling would skew the results to determine the facility's efficiency to recovery organic waste from the mixed organic waste stream for recycling. Furthermore, it also provides consumers the confidence that material they consciously separated for recovery is actually recovered.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p><b>site or transferred to another facility</b>, by adding together all weights determined pursuant to Section 17409.5.4(b)(6) for each operating day for the quarterly period. Rationale for proposed changes: Since the Section refers to both transfer and processing facilities, the organic waste may be processed onsite or be outgoing waste sent to another facility. The unprocessed organic waste sent to a disposal facility may arise from the inefficiencies or byproducts of preprocessing. As an alternative, this section could be narrowed to only include transfer and preprocessing activities, not organics recycling processes.</p>	
5049	McDonald, N. OWS Inc.	<p>Section 17409.5.2. Measuring Organic Waste Recovered from Mixed Waste Organic Collection Stream.  Modify:  Section 17409.5.2. Measuring Organic Waste Recovered from Mixed Waste Organic <b>Waste</b> Collection Stream.  (a) The operator of an attended operation or facility that accepts a mixed waste organic <b>waste</b> collection stream shall, each operating day, measure the amount by weight of organic waste separated from the mixed waste organic <b>waste</b> collection stream after processing for end-use, recovery or further processing.  Rationale for proposed changes: The insertion of “waste” makes this section consistent with the definitions and added sections.  Modify:  (b) The operator shall comply with subdivision (a) by using the following protocol:  (1) <b>On each operating day</b>, take at least a one (1) cubic yard sample from <b>of the separated organic waste</b> or of each of the organic waste types if separated <del>after processing at the operation or facility on that operating day</del> prior to sending to a destination for end- use, recovery, or further processing. Each sample shall be:  (A) Representative of a typical operating day;  (B) A random, composite sample taken either from various times during the operating day or from various locations within each pile of <b>the separated organic waste or of</b> each of the organic waste types separated after processing.  (2) Determine the weight of each sample <del>from each organic waste type.</del>  (3) For each sample, remove any <del>incompatible</del> non-organic material and determine the remaining weight of organic waste in that sample.  (4) Then determine a ratio for each type of organic waste in the mixed waste organic collection stream by dividing the total from subdivision (b)(3) by the total from subdivision (b)(2).  (5) Multiply the ratio determined pursuant to subdivision (b)(4) for <del>the separated organic waste</del> or of each type of organic waste by the total weight of all of the same type of organic waste separated after processing and destined for end-use, recovery or further processing</p>	Comment noted. CalRecycle declines the suggested change as unnecessary to implement the regulatory program.

Comment Number	Received From	Question/Comment	Response(s)
		<p>Rationale for proposed changes: A high diversion mixed waste organic waste processing facility may or may not segregate the separated organic fraction into different organic fractions prior to anaerobic digestion or other processing.</p>	
5050	McDonald, N. OWS Inc.	<p>Modify:  Section 17409.5.3. Measuring Organic Waste in Residuals Removed from Mixed Waste Organic <b>Waste</b> Collection Stream.  (a) The operator of an attended operation or facility that accepts a mixed waste organic waste collection stream shall, each operating day, measure the amount by weight of organic waste present in the residuals <del>removed</del> <b>remaining</b> from the mixed waste organic <b>waste</b> collection stream after processing that is sent to disposal.  (b) The operator shall comply with subdivision (a) by using the following protocol:  (1) Take at least one (1) cubic yard sample of the residuals <del>removed</del> <b>remaining</b> from mixed waste organic waste collection stream at the operation or facility on that operating day prior to sending to disposal. Each sample shall be;  (A) Representative of a typical operating day  (B) A random, composite sample taken either from various times during the operating day or from various locations within the pile after processing.  (2) Determine the total weight of the sample;  (3) Remove any incompatible material and determine the remaining weight of the organic waste in the sample;  (4) Then determine the ratio of organic waste present in the residuals <del>removed</del> <b>remaining from</b> the mixed waste organic collection <b>waste</b> stream by dividing the total from subdivision (b)(3) by the total from subdivision (b)(2).  (5) Determine the total weight of organic waste removed from the mixed <b>waste</b> organic <b>waste</b> collection stream that is sent for disposal by multiplying the ratio determined pursuant to subdivision (b)(4) by the total weight of the residuals <del>removed</del> <b>remaining</b> from the mixed waste organic collection stream after processing.  (c) The operator shall conduct a measurement in the presence of the EA when requested.  (d) If it is determined by the EA that the measurements do not accurately reflect the records, the EA may require the operator to increase the frequency of measurements and/or revise the measurement protocol to improve accuracy.  (e) The operator shall maintain records of measurements and the training of personnel in evaluating the amount of organic waste in the residual material <del>removed</del> <b>remaining from the</b> mixed waste organic <b>waste</b> collection stream.  Rationale for proposed changes: The insertion of "waste" makes this section consistent with the definitions used in the added sections. The substitution of "residuals removed" by "residuals remaining" is more inclusive of the processing options which may be positive or negative selection of organics or non-organics, and a combination of preprocessing of collected waste and post-AD processing of digestate and/or compost to refine a compost product.</p>	<p>Comment noted. The regulatory language includes "mixed waste organic collection stream."</p>

Comment Number	Received From	Question/Comment	Response(s)
		9. Section 17402 (a) (7.5)	
5051	McDonald, N. OWS Inc.	The definition of Incompatible Materials is too restrictive if meant to apply to the separated organics from mixed waste organic waste collection streams. Some AD facilities can accommodate high quantities of inert materials that are then removed from the digestate after the digestion process. As written, the definition assumes all of these materials are incompatible with all AD processes.	<p>CalRecycle has revised this section in response to comments. The section was revised to phase in the acceptable levels of incompatible material and the acceptable levels of organic waste in the material sent to disposal. The phase in will allow entities time to plan and make any adjustments in order to comply with the revised acceptable limits of 20% on and after 2022 and 10% on and after 2024.</p> <p>Incompatible material is defined to mean any human-made inert material and any waste the receiving facility is not designed, permitted, or authorized to process. However, CalRecycle revised the in-vessel digestion requirements to replace the term “incompatible material” to “material that is not organic waste” and would apply to the material that is sent to disposal. The incompatible definition would only apply to material that is sent for further processing or recovery. This change is necessary to differentiate between organic and non-organic material since incompatible material can contain both.</p>
5052	McDonald, N. OWS Inc.	There does not appear to be a definition for Recovered Organic Waste, only for Recovered Organic Waste Products. Based on the remaining provisions of this section, it appears this is meant to refer to organics separated from the original collection streams.	A definition of Recovered Organic Waste is not necessary. Organic waste separated from the mixed organic or source separated organic collection streams are considered recovered if material is sent to activities described in Article 2, Section 18983.1(b) (composting, in-vessel digestion, etc.) which constitute a reduction in landfill disposal.
5053	McDonald, N. OWS Inc.	Is Section 17409.5.8 (a) meant to pertain only to those transfer facilities that do not convert the removed organics to one or more products on site in a subsequent process, but pre-process and transfer? As written, it encompasses consolidate and transfer stations, transfer/preprocess/transfer stations, and full organics recycling facilities.	A change to the regulatory text is not necessary. Yes, you are correct that this requirement applies to operations and facilities that receive source separated organics and mixed organic waste, unless specifically stated otherwise in the regulations. Source separated organic can be processed with other solid waste streams after sampling has occurred for each waste streams. Until then, waste streams must be processed and kept separate. The reason for this is that it is hard to accurately determine the percentage of actual organic content recovered from each waste stream if they are combined prior to taking sampling/measurements.
5054	McDonald, N. OWS Inc.	The limit of 10 percent Incompatible Material in the separated (aka recovered) organic fraction is too restrictive particularly for the pre-processing of the mixed waste organic waste collection stream, whether done by a separate facility or a co-located facility. The amount of Incompatible Material remaining in the organics going into the AD facility should be determined on the tolerance of the AD facility and its capability and desire to do additional processing after digestion to produce marketable compost or other compliant product.	<p>CalRecycle has revised this section in response to comments. The section was revised to phase in the acceptable levels of incompatible material and the acceptable levels of organic waste in the material sent to disposal. The phase in will allow entities time to plan and make any adjustments in order to comply with the revised acceptable limits of 20% on and after 2022 and 10% on and after 2024.</p> <p>The incompatible material is determined by what the end-user is designed, permitted, or authorized to receive and process. This is necessary to ensure that the material sent out will be largely compatible with the facility for further processing. The facility can reject any load the operator determines cannot be processed or if the level of contaminant is too high.</p>
5055	McDonald, N. OWS Inc.	Section 17409.5.8 (c) is confusing in light of (a), appearing circuitous:	A change to the regulatory text is not necessary. Section 17409.5.8 (c) is intended to clarify that organic waste sent to a facility listed under Subsection (c)(1) is not subject to meet the

Comment Number	Received From	Question/Comment	Response(s)
		“(c) The recovered organic waste stream shall not be subject to Section 17409.5.8(a) if the recovered organic waste is sent to one of the following types of facilities: (1) A transfer/processing facility or operation that complies with Section 17409.5.8(a); or,”	incompatible material limit because it would be sent to a facility with at least a 80% recover rate by 2022 and 90% by 2024. Subsections (c)(1) through (4) identifies those operations and facilities that have the ability to recover heavily contaminated organic waste.
2015	McGovern, Sean; Jurupa Valley	For jurisdiction enforcement (slides 109-121), a specific process with specific fine amounts are described. In theory, a contract waste hauler would have the records needed to conduct this enforcement process on behalf of the jurisdiction (municipality). How do you think CalRecycle would feel about a solid waste contract that enables the solid waste haulers themselves to levy fines based on the amounts described in SB 1383 to non-compliant businesses? A business could still petition the City to intervene and mediate the dispute should any issues arise.	No. The regulatory language was amended in Section 18981.2(f) to clarify that the regulations do not authorize a jurisdiction to delegate to a private entity its authority to impose civil penalties or maintain an action to impose civil penalties.
2016	McGovern, Sean; Jurupa Valley	Basically, I'd like to know if CalRecycle is going to be okay with cities leaning on the haulers to enforce SB 1383. This would relieve the City of having to author letters, mail letters, mail follow-up letters, issue, and collect fines. The waste hauler would oversee that process and simply cut a check to the City on a quarterly basis which would cover the amount of the fines issued.	No. The regulatory language was amended in Section 18981.2(f) to clarify that the regulations do not authorize a jurisdiction to delegate to a private entity its authority to impose civil penalties or maintain an action to impose civil penalties.
5000	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	Definition 36, “Jurisdiction”, now includes a special district that provides solid waste handling services as well as a city or county, or a city and county. However the remainder of the definition implies that only a city or county, or a city and county, may utilize a Joint Powers Authority to comply with the requirements of the chapter, and that the individual city, county, or city and county shall remain ultimately responsible for compliance. That clause should be revised to reference “jurisdictions” to include special districts; or by adding special districts to the existing provision.	In response to comments, the definition was changed to allow a special district to utilize a JPA.
5001	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	Definition 42, “Non-local entity”, includes special districts. This should be revised since special districts providing solid waste handling services are included as “jurisdictions”. Special districts that don’t provide solid waste handling services would be subject to a jurisdiction’s regulations, so the reference is best eliminated.	In response to this comment, CalRecycle defined a “special district” as having the same meaning as Section 41821.2 of the Public Resources Code. Special districts can be jurisdictions or non-local entities depending on the nature of the district and its activities. There are special districts that oversee waste collection services. Accordingly, the definition of jurisdiction was amended to note that a “special district that provides solid waste collection services” is a jurisdiction. Additionally, a special district could be a non-local entity. Non-local entities are specifically defined as entities that are organic waste generators but are not subject to the control of a jurisdiction’s regulations related to solid waste. The definition of “non-local entity,” lists special districts as an example of a type of entity that could be a “non-local entity” but it does not definitively state that all special districts are non-local entities. Any special district that is a “jurisdiction” and also a “non-local entity” generator would be subject to enforcement by the Department for violations of generator requirements in Chapter 12 unless requirements are waived under Section 18986.3. CalRecycle revised the definition of ‘jurisdiction’ in Section 18982(a)(36) because the original term “handling” as used in the definition is overly broad. This change is necessary to provide clarity.

Comment Number	Received From	Question/Comment	Response(s)
5002	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	Definition 46, "Organic waste" does not address multi-material products that may include "non-organic recyclables" (Definition 43). Please clarify that organic waste items that include non-organic recyclables (or materials) are not "organic waste". Definition 51, "Paper products" has the same multi-material issues as Definition 46. Packaging, and building insulation and panels especially are problematic. "Non-compostable paper" is included in Definition 55B. Please include a definition of "non-compostable paper" that includes paper not accepted at an organic waste processing facility receiving the jurisdiction's collected organic material.	CalRecycle finds that the suggested changes are unnecessary for the implementation of the regulations.
5003	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	Please provide guidance for determining that a "Restaurant" (Definition 64) is primarily engaged in the retail sale of food and drinks for on-premises or immediate consumption. The threshold for "primarily engaged" isn't clear for fast-food businesses with both sit-down and take-out orders.	To clarify, whether the restaurant offers sit-down or take-out orders is irrelevant because fast food is prepared for 'immediate consumption.' If a fast food business is primarily engaged in the retail sale of food and drinks for on-premises or immediate consumption and meets the 250 or more seats or total facility size equal to or greater than 5,000 square feet threshold, then that restaurant must comply with SB 1383's commercial edible food generator requirements.
5004	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	Section 18984.2 describes "Two-container Organic Waste Collection Services." This section needs to be clarified as it tries to cover both source separation and limited mixed waste (unsegregated) collection. (a)(1) states that "[t]he green container shall be for the collection of organic waste only. The contents of the green container shall be transported to a facility that specifically recovers source separated organic waste". (a)(2) provides that "[t]he blue container shall be for the collection of all non-organic waste" and may be used for specified organic wastes. However (a)(3) allows either container to be used for the collection of both organic waste and non-organic waste, requiring transportation to high diversion organic waste processing. Please add specific language authorizing collection under (a)(3) regardless of the prior provisions. The prohibited materials in (a)(5) also should be allowed in a green container used per (a)(3). Section 18984.3(e) allows organic waste in bags placed in grey containers. Bags also should be allowed in the two-container option under 18984.2(a)(3).	The regulatory language referenced in the comment was substantially revised in response to stakeholder comments and released for public comment.
5005	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	Section 18984.5 requires two container system monitoring with no allowance for a container meeting 18984.2(a)(3), which should not be monitored as a source separated container. Please clarify that the container selected in 18984.2(a)(3) is exempt from such monitoring. Section 18984.5(c) triggers container inspections resulting from prohibited container contaminants at a facility. This provision sufficiently guards against container contamination, and should be used as the threshold for conducting route and container inspections. The 18984.5(b) provision requiring that all routes be monitored quarterly is unnecessarily burdensome and cost-ineffective and should be eliminated in favor of verified route contamination at a facility.	During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
5006	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	<p>Businesses should not need to provide organic containers if no organic material is sold or generated in customer areas, and 18984.9 should be revised accordingly. Paper accepted in a community’s recycling program should not be considered organic under this provision.</p>	<p>CalRecycle was provided broad regulatory authority in SB 1383 to adopt regulations to achieve the organic waste diversion goals for 2020 and 2025. Section 18984.9 is designed to ensure that organic waste generators properly sort organic waste for collection as required by the applicable collection service provided by their jurisdiction, or self-haul organic waste to a facility that recovers source-separated organic waste.</p> <p>Approximately 50 percent of disposed organic waste is attributable to residential properties, 40 percent is attributable to commercial businesses, and the balance is self- hauled to landfills. This section is necessary to complement the jurisdiction requirement to provide organic waste collection services to their generators. The state cannot achieve the required reductions if generators do not arrange to have their organic waste collected and recovered, or self-haul their organic waste to a facility for recovery.</p> <p>This section is necessary to ensure organic waste generators comply with the requirements of this chapter and the service provided by their jurisdiction.</p> <p>Subdivision (b) of this section places an additional set of specified requirements on organic waste generators that are commercial businesses. This section is necessary to increase the amount of organic waste recovered in order to achieve the diversion goals in SB 1383.</p>
5007	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	<p>The low population waiver, Section 18984.12(a), includes 2014 tonnage as a second threshold. Tonnage is a more appropriate threshold for achieving the regulations goals, and cities should be considered for waivers if their 2014 tonnage is below 5,000 regardless of population.</p> <p>13. Expand the rural area definition in 18984.12(c) to include the existing provisions of Section 14571(A) of the California Beverage Container Recycling &amp; Litter Reduction Act. This would provide flexibility to a rigid population limit, while focusing on low disposal and rural community issues not recognized by the traditional Rural County exemption.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a> ); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-document history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
5008	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	<p>Include 18984.12 waiver language recognizing the financial impacts on economically disadvantaged communities. California EPA sets its disadvantaged communities designation by using 80% of statewide median as the threshold, which is \$49,454. The cost of compliance with these regulations should not disproportionately burden California's economically disadvantaged communities. CalRecycle's Standardized Regulatory Impact Assessment estimates statewide annual direct impact costs of \$17 per household. Households in communities with 50% of statewide median income should not be expected to incur more than \$8.50 annually.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p> <p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-documented history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map. CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
5009	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	Section 18993.1 sets per capita organic procurement targets, including compost and renewable transportation fuel. That requirement may be limited by prior year's total fuel procurement. Need for jurisdiction compost should also be considered by calculating landscaped and turfed areas and appropriate application rates.	CalRecycle disagrees with the proposed method for basing procurement requirements on a jurisdiction's "landscaped and turfed areas." The term as proposed by stakeholders is undefined and subjective, making it prohibitively burdensome to verify. Allowing a jurisdiction to self-report public landscape areas and then estimate compost use without any reference dataset to back it up will create uneven standards and enforcement. Furthermore, counter to the apparent intent of the commenter this approach might make it less likely for a jurisdiction to reduce their procurement mandate.
5010	MDMRA (Davis, J, Mojave Desert and Mountain Recycling Authority)	Section 18996.2(a)(2)(C) describes extenuating circumstances that a jurisdiction may demonstrate when CalRecycle considers substantial compliance efforts. Economically disadvantaged communities should be considered for "extenuating circumstances" resulting from disproportionately high compliance costs; and "substantial effort" should reflect such cost considerations.	CalRecycle declines to revise the meaning of extenuating circumstances and substantial effort as doing so would negatively impact the ability to reach the statutory diversion targets.
1015	Mendoza, Maria, Alameda County Department of Environmental Health	3. Remove the edits under Section 21660.2(c). Informational Meeting for New and Revised Solid Waste Facilities Permit Applications. a. Additional responsibilities are being tasked or mandated to the LEAs for identifying disadvantaged communities in a manner that meets or exceeds the identification tools developed by Cal EPA. Learning and understanding how to navigate CalEPA's mapping and screening tool (EnviroScreen) requires additional staff time and perhaps a need to hire additional personnel. Although we don't disagree with the good intentions to include the disadvantaged communities	CalRecycle has revised this section in response to comments. This section was revised to define the term "affected disadvantaged communities." This is necessary to clarify and assist the LEAs better identify who would be covered under this term so that they are notified and are provided an adequate opportunity to attend and provide comments on the project.

Comment Number	Received From	Question/Comment	Response(s)
		affected by new or expanding solid waste facilities, an alternate language can be presented that does not mandate the LEAs but to only take this into consideration during the permitting process.	
1014	Mendoza, Maria, Alameda County Department of Environmental Health; Sanford, Karen, Kern Public Health Services Department	Section 18984.11 b. To be more consistent with Section 17331, include similar language "where deemed necessary by the local health officer" in the proposed changes. We agree to include the Local Enforcement Agency in Section 18984.11(3)(A)(1) as long as it does not conflict with any local franchise/hauler agreements between the city or county jurisdiction.	Section 18984.11 was revised to enforcement agency.
6220	Mertens, E., Town of Truckee	Residential Organics Collection: As mentioned, 55% of the homes in Truckee are primarily vacant throughout the year, and are utilized as second homes. Additionally, because we have bears roaming in our natural environment, homes that are not occupied by full-time residents have bear sheds that maintain the household's garbage cans for collection. The average bear shed only has enough room for one to two garbage cans. Requiring a curbside program would be extremely difficult given the current existing infrastructure. The bear sheds do not have enough capacity to fit an organics container, and even if a container were to fit, it would be serviced manually. This would require two additional residential routes to be created: one for automated carts, and one for manual service of bear sheds. This would not only be a logistical route issues resulting in an economic burden to ratepayers, but would also pose severe wildlife threat in bear country. Residential collection in carts would be susceptible to the black bears that are commonly known to break into cars and homes in search of food and garbage in our region. Leaving carts outside of the bear sheds would make food waste vulnerable to a bear, putting both residents and the bear in danger. These wildlife issues are also challenging amongst our business community which recently began collecting organics in Truckee, but are more easily mitigated with dumpsters, locking trash enclosures, and daily maintenance of materials by employees. Overall, snow, second-home vacancy, and wildlife issues make residential organics collection extremely challenging and complex to implement in Truckee.	CalRecycle added Section 18984.12(d) in response to this comment. The changes will allow jurisdictions located at or above 4,500 feet apply for a waiver from the food and food soiled paper organic waste collection requirements. Jurisdictions would also be waived from providing containers to their generators. This waiver would apply for residential and small commercial generators that are not regulated by AB 1826. As the commenter noted, jurisdictions 4,500 feet and above face specific waste collection challenges as high-elevation, forested areas that include bear and other wild animal habitat. Food waste collection can attract vectors, including bears, to populated areas creating collection and public safety issues. This change is necessary to prevent a public safety issue that food waste separation and recycling can pose. Generators in high-elevation jurisdictions will be able to continue to use customer provided containers that fit in their locked bear boxes. Jurisdictions that qualify for this waiver, however, will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. This comment argued that the limited space of locked bear boxes, which this commenter's jurisdiction uses to secure garbage bins, creates a capacity issue. Although CalRecycle recognizes the threat that vectors, like bears, pose from the collection of food waste, nothing prevents the jurisdiction from providing smaller containers that could fit inside bear boxes.
6221	Mertens, E., Town of Truckee	Single-container collection is not currently an option to us, as we do not have access to a high diversion organic waste processing facility. This would take millions of dollars of upgrading to the facility where our materials go—Eastern Regional Landfill—which is owned by Placer County. The County's ability and willingness to make such upgrades are unknown.	A change to the regulatory text is not necessary. A jurisdiction in this situation may have to consider moving to a three-container system. These requirements are necessary to ensure that organic waste is collected and recovered in a manner which supports the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions.
6222	Mertens, E., Town of Truckee	Re collection: The Town of Truckee is actively looking to provide a residential solution due to resident demands, but given the manual service and wildlife concerns, we are finding it difficult to reach a cost-effective method. We encourage you to consider an exemption for this to an optional program requirement for our residents.	CalRecycle added Section 18984.12(d) in response to this comment. The changes will allow jurisdictions located at or above 4,500 feet apply for a waiver from the food and food soiled paper organic waste collection requirements. Jurisdictions would also be waived from providing containers to their generators. This waiver would apply for residential and small commercial generators that are not regulated by AB 1826.

Comment Number	Received From	Question/Comment	Response(s)
			<p>Jurisdictions 4,500 feet and above face specific waste collection challenges as high-elevation, forested areas that include bear and other wild animal habitat. Food waste collection can attract vectors, including bears, to populated areas creating collection and public safety issues. This change is necessary to prevent a public safety issue that food waste separation and recycling can pose. Generators in high-elevation jurisdictions will be able to continue to use customer provided containers that fit in their locked bear boxes.</p> <p>Jurisdictions that qualify for this waiver, however, will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection. CalRecycle also included low population waivers.</p>
6223	Mertens, E., Town of Truckee	<p>Infrastructure Capacity: As we have noted, California lacks sufficient capacity today to be able to meet the needs for new organic waste processing. Many cities have expressed concern over an ability to comply with organic waste diversion requirements due to a lack of waste disposal infrastructure. There is an uneven distribution of waste disposal infrastructure, such as bio-digesters, across the state. Moreover, where the infrastructure does exist, capacity is limited. While the regulation provides five years to implement programs, cities are concerned that this is not sufficient time to develop and permit new facilities. In particular, where the Town of Truckee is situated, we are geographically extremely limited on facilities that are reliably accessible throughout the year, due to snow and weather constraints with road closures. Currently, there are only two compost facilities within a 60 mile radius that are accessible, which are both located in Nevada.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
6224	Mertens, E., Town of Truckee	<p>Funding: Lack of sufficient funds continues to be among the major challenges local governments face in the effort to implement new organic waste diversion programs. The Town of Truckee and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade" proceeds can be used to help offset the costs for developing organic recycling infrastructure; however, the Town of Truckee is ineligible for cap-and-trade grants because our materials do not go to California landfills. The most recent food rescue grant requirements funded projects that would divert materials from California landfills, but our organic materials are generated within California and are disposed of across the Nevada state line at the Lockwood Landfill, posing yet another challenge. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities, such as providing education and outreach and staff time for enforcement.</p>	<p>Comment noted. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>

Comment Number	Received From	Question/Comment	Response(s)
6225	Mertens, E., Town of Truckee	Enforcement: These regulations allow for Corrective Action Plans and establish extended timelines and milestones for achieving compliance. We appreciate the addition of a pathway to compliance. This is a step in the right direction, but this will pose a staffing challenge as a small jurisdiction with limited enforcement capabilities. Currently, the Town of Truckee has one code enforcement officer for the entire jurisdiction.	Comment noted. Comment is supporting regulatory text, not a change in language.
6226	Mertens, E., Town of Truckee	Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products targets set by CalRecycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations. We ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding.	A change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in “substantial additional costs”. CalRecycle disagrees with the suggestion to phase-in procurement or to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved. However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement
6227	Mertens, E., Town of Truckee	The Town of Truckee further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1(e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even were a fee to survive scrutiny under Prop. 26, it is questionable whether a city would not have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.) This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, the Town of Truckee requests that the procurement regulations be addressed in a separate regulatory proceeding.	CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate. First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)). Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.

Comment Number	Received From	Question/Comment	Response(s)
			<p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p>
2021	Mertens, Erica; Truckee	<p>I just wanted to reiterate the overzealous procurement requirements. In Truckee, we have a unique environment, where procurement and application of compost provides very little utility.</p> <p>Furthermore, we do procure some rng biofuels; however, we would need to purchase 20x more than we currently buy. Given the unique weather (ie snow) variables, many of our fleet vehicles cannot operate on rng.</p>	<p>The procurement requirements are designed to build markets for recovered organic waste products, which is an essential component of achieving the highly ambitious organic waste diversion targets mandated by SB 1383. CalRecycle developed an open and transparent method to calculate the procurement target that is necessary to help meet the highly ambitious diversion targets set forth by the Legislature. CalRecycle has also revised section 18993.1 to expand the list of eligible recovered organic waste products, including mulch and renewable electricity from in-vessel digestion and biomass conversion, to provide jurisdictions with even more flexibility to choose product that fit local needs.</p> <p>CalRecycle recognizes that, in some extraordinary cases, the procurement target may exceed a jurisdiction's need for recovered organic waste products. Section 18993.1(j) provides jurisdictions with a method to lower the procurement target to ensure that a jurisdiction does not procure more recovered organic waste products than it can use. If, as mentioned in the comment, the city has limited need for compost, mulch, or fuel, the city may procure electricity or heating applications derived from renewable gas. If the city is capable of reducing or eliminating its use of fossil gas entirely, it could correspondingly reduce or eliminate its procurement obligation under the regulation. This provision was added to ensure jurisdictions are not required to procure more material than they can actually use, and to ensure that the requirements do not conflict with other environmental goals to reduce the carbon intensity of products and activities cities procure material for use.</p>
6234	Michael, L., City of Rancho Cucamonga; Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M.,	<p>The current draft regulations prescribe standardized collection container colors, labeling, as well as standardizing what can be placed in each container. While we understand that standardizing the color of the collection containers helps to reduce contamination and eliminate any confusion about what goes in a specific container, the regulation does not consider the large volume of waste that will be generated by replacing existing collection containers to match the standardized colors in the regulation. The City of Rancho Cucamonga alone would be required to replace an estimated 50,000 collection containers. We ask that that CalRecycle remove this requirement from the regulation.</p>	<p>Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container.</p>

Comment Number	Received From	Question/Comment	Response(s)
	City of Irvine; Huffaker, M., City of Watsonville; N		
6235	Michael, L., City of Rancho Cucamonga; Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; N	Additionally, the regulation includes a prescribed list of what can be placed in each collection container. The prescribed list of materials for the blue recycling container includes items such as wood, dry lumber, and textiles that would be currently not processed as part of the commingled recycling program at the Material Recycling Facilities that serves the jurisdictions in our region. Wood and dry lumber are currently accepted with organic landscape waste. Textiles are extremely difficult to manage in a commingled recycling program and are collected separately. This level of standardization and regulation would require infrastructure changes that are costly and could not be achieved in the time-period provided. If included in the regulation, the City would be forced to implement changes that could potentially decrease waste diversion. We ask that CalRecycle remove the prescribed list of materials to be placed in each container and allow the jurisdictions the flexibility to select the type of collection programs that meet diversion requirements, utilize existing infrastructure and are cost effective.	These regulations specify the minimum standards that apply to each type of collections service that a jurisdiction provides to its generators. While there are minimum standards, CalRecycle is allowing some flexibility stating what 'may' go into the container in some subsections, instead of stating what 'shall' go into the container. These minimum standards ensure that every Californian understands what material types must go in each container. Regulatory oversight is necessary to ensure that source-separated organic waste is not mixed with non-organic waste. This section is necessary to ensure the state is able to meet organic waste recovery targets established in statute. Also, biohazardous and household hazardous materials must be managed in accordance with other state laws and regulations.
6236	Michael, L., City of Rancho Cucamonga; Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; N	The City is also concerned about the ability to comply with the edible food recovery requirements of this regulation. Regulations related to food rescue are managed by the County Public Health Department, not individual jurisdictions. San Bernardino County currently lacks the capacity and infrastructure. We ask that CalRecycle re-consider this requirement and focus on building capacity and infrastructure across the state.	Section 18981.2 of the regulations specifies that a jurisdiction may designate a public or private entity, which includes local environmental health departments, to fulfill its regulatory responsibilities. The exact regulatory text states: A jurisdiction may designate a public or private entity to fulfill its responsibilities under this chapter. A designation shall be made through any one or more of the following: (1) Contracts with haulers or other private entities; or, (2) Agreements such as MOUs with other jurisdictions, entities, regional agencies as defined in Public Resources Code Section 40181, or other government entities, including environmental health departments. (c) Notwithstanding subdivision (b) of this section, a jurisdiction shall remain ultimately responsible for compliance with the requirements of this chapter. With regard to the comment about edible food recovery capacity and infrastructure, SB 1383's regulations include edible food recovery capacity planning requirements. In addition, Section 18991.1 (a)(4) includes the requirement that jurisdictions shall increase edible food recovery capacity if it is determined that sufficient capacity does not exist. Assessing edible food recovery capacity at the local level is critical for jurisdictions to be able to understand if capacity needs exist, and exactly what their capacity needs are. It is at the discretion of the jurisdiction to determine what jurisdiction entity is best suited to assess edible food recovery capacity and ensure that compliance with this regulatory requirement becomes a part of their scope. CalRecycle would also like to mention that as a state agency we are heavily focused on increasing food recovery infrastructure and capacity in California. CalRecycle's Food Waste Prevention and Rescue Grant Program funds food waste prevention and food recovery projects across the state. To date, CalRecycle has awarded \$20 million dollars to over 60 grantees.

	Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; N		
6240	Michael, L., City of Rancho Cucamonga; Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; N	Penalties: The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, this regulation puts the cart before the horse by designing penalties before the sticking points and needs of generators are understood. We encourage CalRecycle to continue working through the programmatic scheme before implementing an appropriate set of penalties, particularly since programs have until 2022 to be implemented. We ask that CalRecycle adopt penalties in a second set of regulations to take effect at a future date.	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for 5053 waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.
6241	Michael, L., City of Rancho Cucamonga; Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; N	Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products set by CalRecycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate complying with the extensive programmatic requirements of the proposed regulations. We ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding.	A change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in "substantial additional costs". CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved. However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.
6242	Michael, L., City of Rancho	The City of Rancho Cucamonga further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state	CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.

Comment Number	Received From	Question/Comment	Response(s)
	Cucamonga; Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; N	mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1(e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even were a fee to survive scrutiny under Prop. 26, it is questionable whether a city would have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.) This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, The City of Rancho Cucamonga requests that the procurement regulations be addressed in a separate regulatory proceeding.	First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)). Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383. According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate. Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.
2019	Mills, Jeffery; L and D Landfill	Section 20700.5 L and D Landfill runs a privately held construction and demolition (C&D) landfill. As such, AB1383 has little impact on our waste streams, as we are specifically prohibited from accepting putrescible waste. However, the long term intermediate cover requirements do not differentiate us from facilities that take a higher percentage of organic material. We would urge CalRecycle to reconsider the requirement for 36” of compacted soil as long-term intermediate cover at a C&D landfill . The current requirement for 12” of compacted soil, in conjunction with AB-32 mandated surface emission testing, provides sufficient methane control (and attendant monitoring) based on our waste stream, which is largely non-organic. The addition of a further 24” of compacted soil is a needless expense that offers little to no additional control of methane	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.

Comment Number	Received From	Question/Comment	Response(s)
		emissions. Further, the application of this material (which will also need to be removed later prior to application of further waste or final cover) requires the use of heavy construction equipment, with its attendant pollution impacts. Thank you for your consideration.	
9080	Mitchell, T., Regional San	Section 18987.2 The language requires all biosolids produced at any wastewater treatment plant to be treated via anaerobic digestion and/or composting and sent for land application. Regional San anaerobically digests its biosolids, and both of our disposal methods further the state's goals of reducing greenhouse gas emissions and diverting organic materials from landfills. Regional San is one of roughly five Publicly Owned Treatment Works (POTWs) in California that have surface disposal sites located at a wastewater treatment plant. None of the sludge sent to surface disposal on our site is transported off-site or landfilled, and, thus, would seem beyond the purview of these regulations. It would be cost prohibitive to require our facility to change technology and management practices.	CalRecycle has deleted Section 18987.2 in response to comments.
9081	Mitchell, T., Regional San	Similarly, it is imperative that all treatment options in 40 CFR part 503 Appendix B (Class A and Class B) be allowed and viewed as "recovery" (not just anaerobic digestion and composting). Treatment technologies are themselves dynamic and emerging resulting in alternative treatment and final disposition of biosolids. We recommend all treatment technologies specified in Appendix B of 40 CFR part 503 that result in land application or land reclamation should be counted as a reduction in landfill disposal.	CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO <sub>2</sub> e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383. However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste. Please refer to Section 18983.2 for more information.
9082	Mitchell, T., Regional San	Existing biosolids management practices whereby biosolids do not leave the site should be excluded from these regulations. And emerging technology that may result in energy production (thermal) or avoid fossil-based fuels (cement kilns), but which do not send any biosolids to a landfill should be encouraged.	CalRecycle has revised the proposed regulations in response to comments. The change added Section 17409.5.10.5 to address co-located facilities or operations. The change was necessary to clarify when the measurement protocol is required to be completed if two activities are co-located.  Section 17409.5.10.5 requires the measurement protocol to be performed by each activity even if the material from the first activity is sent to the co-located activity, if the facility as a whole sends more than 20% of organic waste to disposal on and after 2022 and 10% on and after 2024. However, if the facility as a whole sends less than 20% of organic waste sent to disposal on and after 2022 and 10% on and after 2024, then the operator would not be required to perform the measurement protocol on the material sent to the co-located activity, only the material sent off-site.

Comment Number	Received From	Question/Comment	Response(s)
9083	Mitchell, T., Regional San	SECTION 18987.2 <b>(1) Treated and managed in accordance with the Land Application, Incineration, or Surface Disposal requirements specified in 40 CFR part 503</b>	CalRecycle has deleted Section 18987.2 in response to comments.
9084	Mitchell, T., Regional San	SECTION 18987.2 <b>(2)</b> Transported <del>only</del> to a solid waste facility or operation for additional processing, composting, in-vessel digestion, or other recovery as specified in Section 18983.1(b) of this division,	CalRecycle has deleted Section 18987.2 in response to comments.
9085	Mitchell, T., Regional San	SECTION 18987.2 <b>(3) Treated and managed in other approved manners, approved by the regional, state, or federal agencies having appropriate jurisdiction.</b>	CalRecycle has deleted Section 18987.2 in response to comments.
9086	Mitchell, T., Regional San	SECTION 18987.2 <b>(4)</b> Notwithstanding subdivision (a)(1), sewage sludge and biosolids <b>when it is not possible for them to be adequately treated and sent not suitable</b> for additional processing or recovery may be sent for disposal to a permitted facility that can receive that sewage sludge and biosolids and has obtained the applicable approvals by the regional, state, and federal agencies having appropriate jurisdiction, <b>or;</b>	CalRecycle has deleted Section 18987.2 in response to comments.
3009	Moss, R., Correctional Training Facility	I have a question. CTF consist of 700 + acres with lots of open land which we work our green waste back into the earth. We also on occasion acquire burn permits from our local Cal-Fire adjacent to our institution. So my question is are we in compliance as green waste goes. Please respond.	The proposed regulations are primarily concerned with how organic waste is collected and processed in order to achieve diversion from landfill disposal. If the commenter is not discarding organic waste, it doesn't appear that the material would be subject to these regulations.
9113	Mourad, M., Sciences Po Paris	Do "Food Recovery Organizations" need to be formally registered as non-profits? Would a group of people that recovers food (without being formally incorporated) be included in that definition? What about for-profit organizations? Allowing companies to generate profit (for example, by charging edible food generators) may be a way to support financially sustainable models of food recovery.	To clarify, food recovery organizations and food recovery services do not need to be registered as non-profits. For-profit food recovery entities could also be considered food recovery organizations or food recovery services. CalRecycle recognizes that many different types of food recovery organizations and services exist, and therefore broad definitions for "food recovery organization" and "food recovery service" were used in the regulations to ensure that the definitions would be inclusive of these non-traditional food recovery groups.
9114	Mourad, M., Sciences Po Paris	Are organizations that collect edible food from generators and distribute this food directly to individuals included in "Food Recovery Organizations" and/or "Food Service Organizations"? For example, OLIO is a platform that allows to recover food from businesses and to redistribute it to individuals. It also allows to redistribute food from an individual to another individual: would this be included in the scope of food recovery?	To clarify, the organization described in this comment could potentially be considered a food recovery organization. Food recovery organizations and food recovery services do not need to be registered as non-profits. For example, for-profit food recovery entities could also be considered food recovery organizations or food recovery services. CalRecycle recognizes that many different types of food recovery organizations and services exist, and therefore broad definitions for "food recovery organization" and "food recovery service" were used in the regulations to ensure that the definitions would be inclusive of these non-traditional food recovery groups.
9115	Mourad, M., Sciences Po Paris	Are organizations that re-sell recovered edible food at a small/discount price included in "Food Recovery Organizations"? Low-price supermarkets or restaurants (such as The Daily Table in Massachusetts) can be a way to offer a more dignified access to food, while recovering excess food.	To clarify, organizations that recover food and then sell the recovered food for a discounted price could potentially be considered a food recovery organization. CalRecycle recognizes that many different types of food recovery organizations and services exist, and therefore broad definitions for "food recovery organization" and "food recovery service" were used in the regulations to ensure that the definitions would be inclusive of these non-traditional food recovery groups.
9116	Mourad, M., Sciences Po Paris	Are café and bakeries, as well as farmers' markets, included in Tier 1 and/or Tier 2 commercial edible food generators? Are grocery stores smaller than 7,500 sq feet	The regulations are structured to place direct requirements on entities that dispose large amounts of edible food that could potentially be recovered for human consumption. These entities are identified in the regulations as tier one and tier two commercial edible food generators. Any

Comment Number	Received From	Question/Comment	Response(s)
		excluded from the scope of the regulation? In that case, are they excluded from the calculation of the baseline quantities of edible food waste?	<p>entities that meet the definitions and thresholds of a tier one or tier two commercial edible food generator will be required to comply with the commercial edible food generator requirements of SB 1383. If a bakery meets any of the commercial edible food generator definitions and thresholds, then the bakery will be subject to SB 1383's commercial edible food generator requirements. Regarding the question about cafés, some cafés could potentially be included as a tier two commercial edible food generator provided that they meet SB 1383's definition of a restaurant and that they also meet one of the established thresholds for restaurants. However, if the café does not meet the restaurant definition or either of the established thresholds, then the café most likely would not be considered a commercial edible food generator. CalRecycle would again like to clarify however, that any entities that meet the definitions and thresholds of a tier one or tier two commercial edible food generator will be required to comply with the commercial edible food generator requirements of SB 1383.</p> <p>Regarding the question about grocery stores, a grocery store under 10,000 square feet is not subject to SB 1383's commercial edible food generator requirements, unless the grocery store meets one of the other commercial edible food generator definitions and its associated threshold. Regarding the question about the baseline for currently disposed edible food, CalRecycle's 2018 statewide disposal facility-based waste characterization study will be used to help measure the edible food baseline for SB 1383. CalRecycle's 2018 disposal facility-based waste characterization study sorted food waste into eight separate categories based on the edibility of the food that was disposed. To clarify, all currently disposed edible food was measured in this study. CalRecycle will measure the state's success toward achieving the 20% edible food recovery goal by analyzing and compiling the data that each jurisdiction is required to submit on the total pounds recovered from commercial edible food generators in the previous calendar year.</p>
9117	Mourad, M., Sciences Po Paris	What additional resources will jurisdictions dispose of to meet this requirement?	Comment noted. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
9118	Mourad, M., Sciences Po Paris	Jurisdictions should be encouraged to develop collaborative, multi-stakeholders platforms in order to coordinate waste reduction and food recovery programs, and to take into account feedback from various organizations.	A change to the regulatory text is not necessary. This suggestion is outside scope of the regulations, but nothing precludes a jurisdiction from developing platforms to coordinate waste reduction and food recovery programs.
9119	Mourad, M., Sciences Po Paris	Jurisdiction may face confidentiality issues when they try to give information on commercial edible food generators. To what extent will food generators have to provide transparent information on the quantities of food they dispose of?	With regard to the comment that jurisdictions may face confidentiality issues when they try to get information from commercial edible food generators. CalRecycle would like to clarify that SB 1383's commercial edible food generator recordkeeping requirements do not require generators to maintain a record of the amount of food they dispose. However, generators are required to comply with SB 1383's commercial edible food generator requirements which includes the requirement to arrange to recover the maximum amount of edible food that would otherwise be disposed. If a jurisdiction learns that a generator is disposing of edible food that could be recovered, then they could face enforcement action by the jurisdiction depending on the

Comment Number	Received From	Question/Comment	Response(s)
			circumstances. In addition, a commercial edible food generator could face enforcement action if it is determined that the generator has falsified their records.
9120	Mourad, M., Sciences Po Paris	Education and outreach could include specific in-person trainings for food service workers, so that they receive information and guidance on food recovery and food safety regulations, tax incentives, issues related to the nutritional quality of recovered food, and dignified conditions of food recovery. Training opportunities and programs could be supported, if not provided, by the State administration.	Adding the proposed education and outreach suggested in this comment would be overly burdensome for jurisdictions and would potentially increase a jurisdiction's cost to administer education and outreach significantly. However, nothing in SB 1383's regulations prohibits a jurisdiction from conducting the suggested education and outreach voluntarily or having more stringent requirements on this issue. Please note, CalRecycle intends on providing resources prior to 2022 to assist with SB 1383 edible food recovery regulatory compliance.
9121	Mourad, M., Sciences Po Paris	Stating that Food Recovery Organizations do not have to accept food they do not want is a key point. Contract/agreements between Food Recovery Organization and Commercial Edible Food Generators could be a way to ensure the quality of food donations.	A change to the regulatory text was not necessary because the final regulations require commercial edible food generators to establish contracts or written agreements with food recovery organizations or services. However, there is no requirement in SB 1383's regulations mandating food recovery organizations and food recovery services to enter into contracts or written agreements with commercial edible food generators. Food recovery organizations and food recovery services can choose not to participate. If a commercial edible food generator approaches a food recovery organization or a food recovery service requesting a contract or written agreement, it is at the discretion of the food recovery organization or the food recovery service to determine if they want to enter into such contract or agreement. It is also at the discretion of food recovery organizations, food recovery services, and commercial edible food generators to determine the specific language that will be included in their contracts or written agreements for food recovery. CalRecycle would also like to note, that the final regulations include a provision in Section 18990.2 that states, "Nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible generator." As a result, food recovery organizations and food recovery services are not mandated to accept food.
9122	Mourad, M., Sciences Po Paris	Donations of food that ultimately gets thrown away (because it does not match the capacity or the nutritional or other quality criteria of Food Recovery Organizations) should not generate tax incentives for donors.	A change to the regulatory text is not necessary. This section does not specify tax incentives for donors of edible food.
9123	Mourad, M., Sciences Po Paris	Food Recovery Organizations, which have variable needs and capacity, should be able to transfer recovered edible food to one another.	A change to the regulatory text is not necessary. This section does not prohibit the transfer of edible food between food recovery organizations.
9124	Mourad, M., Sciences Po Paris	Food Recovery Programs should push Commercial Edible Food Generators to formally partner with Food Recovery Organizations or Services under specific conditions (e.g. through a contract) that would ensure the suitability and quality of the food. In France, the 2016 national law against food waste makes it mandatory for supermarkets above 400 sq. meters to sign a formal agreement with a food recovery organization. Three years later, these agreements seem to have improve both the quantities (by about 30%) and quality of edible food donations.	SB 1383's regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or a food recovery service. If a food recovery organization or a food recovery service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383's regulations prohibiting a food recovery organization or service from terminating their relationship with that particular generator. CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model agreement does include a section for allowable foods and also includes language to protect food recovery organizations and services from donation dumping and unexpected donations. The

Comment Number	Received From	Question/Comment	Response(s)
			model agreement is a template and is intended to be customized based on the needs of food recovery entities and commercial edible food generators.
9125	Mourad, M., Sciences Po Paris	Food Recovery Programs should favor local organizations, within a specific radius of Commercial Edible Food Generators. This would reduce the impacts of transportations while supporting local, grassroots or community-based organizations. The most appropriate radius could be chosen in accordance with each jurisdiction.	Nothing prohibits a jurisdiction from prioritizing local food recovery organizations and services as part of its food recovery program. If a jurisdiction would like to set a specific radius to help reduce the transportation impacts of their food recovery program then they may do so. However, this is not something CalRecycle will require as an appropriate radius could vary significantly from jurisdiction to jurisdiction.
9126	Mourad, M., Sciences Po Paris	CalRecycle should provide jurisdictions with case studies of successful food recovery programs.	CalRecycle agrees with this comment and intends on providing information and case studies about model food recovery programs and operations in California prior to 2022.
9127	Mourad, M., Sciences Po Paris	The regulation should encourage the prevention of overproduction and waste, before food recovery. In particular, if restaurants or cafés sell products that are about to expire at a discount rate, is this taken into account as “recovery” or a reduction of their waste? Or is it excluded from the baseline? Discount sales should be incentivized, since they allow to reduce waste with minimal transportation costs, while making food accessible and affordable in dignified conditions.	<p>A change to the regulatory text was not necessary because SB 1383’s statutory requirement is to recover 20% of currently disposed edible food for human consumption by 2025. The statute does not include any requirement for California to achieve a food waste prevention target. The law only includes an edible food recovery target. As a result, including requirements for commercial edible food generators or jurisdictions to prevent food waste is beyond CalRecycle’s rulemaking authority.</p> <p>CalRecycle does however recognize that some commercial edible food generators could have types of edible food available for donation that are not desired by food recovery organizations or services. One example would be a generator having significant quantities of food that does not meet the nutrition standards of food recovery organizations or services. To address this issue, CalRecycle added language to the edible food recovery education and outreach section to require jurisdictions to annually provide commercial edible food generators with information about the actions that commercial edible food generators can take to prevent the creation of food waste. To clarify, this is not a requirement for commercial edible food generators or jurisdictions to source reduce the amount of edible food disposed. This is an education requirement intended to help generators learn how they can reduce the volume of surplus edible food they generate. Providing this education is critical to help generators that struggle to find outlets for their currently disposed edible food comply with SB 1383’s commercial edible food generator requirements.</p> <p>With regard to the baseline, only edible food that would otherwise be disposed will be included in the edible food baseline. Edible food that would otherwise be sold will not be included in the baseline measurement.</p>
9128	Mourad, M., Sciences Po Paris	In case of edible food donations, Commercial Edible Food Generators should have to ensure the quality of the food. In France for example, the standard agreement with Food Recovery Organizations require them to sort produce items (taking out blemished, moldy ones), and to donate packaged goods at least 48 hours before their expiration date. Food Recovery Organization should not incur disposal costs for food donations of insufficient quality.	SB 1383’s regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or a food recovery service. If a food recovery organization or a food recovery service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383’s regulations prohibiting a food recovery organization or service from terminating their relationship with that particular generator. CalRecycle would also like to clarify that nothing in SB 1383’s regulations mandates that a food recovery organization or service establish a contract with a commercial edible food generator. Food recovery organizations and services can choose not to participate. A food recovery organization or service may wish to

Comment Number	Received From	Question/Comment	Response(s)
			<p>consider any costs associated with adding new food donors when deciding whether or not to enter into a contract or written agreement with commercial edible food generator.</p> <p>CalRecycle would also like to clarify that nothing in SB 1383’s regulations requires a food recovery organization or a food recovery service to accept edible food. Section 18990.2 of the regulations states, “(d) Nothing in this chapter prohibits a food recovery service or organization from refusing to accept edible food from a commercial edible food generator.”</p> <p>In addition, CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model agreement does include a section for allowable foods and also includes language to protect food recovery organizations and services from donation dumping and unexpected donations. The model agreement is a template and is intended to be customized based on the needs of food recovery entities and commercial edible food generators.</p>
9129	Mourad, M., Sciences Po Paris	The regulation states: “A large venue or large event operator that does not provide food services, but allows for food to be provided, shall require food facilities operating at the event to comply with the requirements of this section.” In such instance, if the large venue or large event operator has “required” food facilities to comply with the requirements, but that these food facilities have not complied, who is responsible for compliance? The large venue or event? The jurisdiction in which the event takes place or the venue is located?	CalRecycle would like to clarify that food vendors operating at large events and large venues are not exempt from the edible food recovery regulations. Large event and large venue operators must make arrangements to ensure that the food vendors operating at their event or venue are recovering the maximum amount of their edible food that would otherwise be disposed. In a situation where the food vendors at a large venue or large event are not in compliance with Section 18991.3 of the regulations, the operator of the large event or large venue would be responsible for compliance.
9130	Mourad, M., Sciences Po Paris	Generators should provide data on the quantities, distances, and mode of transportation for food recovery, as well as the number of volunteer / paid hours for food recovery. Food recovery programs should be promoted as a way to create job opportunities.	<p>Regarding adding more recordkeeping requirements for commercial edible food generators, a change to the regulatory text was not necessary. A text change was not necessary because adding the proposed recordkeeping requirements would be overly burdensome for commercial edible food generators and would also increase their recordkeeping costs significantly.</p> <p>Regarding the comment that food recovery programs should be promoted as a way to create job opportunities. CalRecycle intends on sharing information prior to 2022, about model food recovery programs and operations in California that have been successful and are actively creating employment opportunities.</p>
9131	Mourad, M., Sciences Po Paris	CalRecycle and/or jurisdictions should provide record-keeping tools and methods.	Prior to 2022, CalRecycle does intend on providing SB 1383 recordkeeping tools and resources to assist commercial edible food generators with compliance.
9132	Mourad, M., Sciences Po Paris	Edible Food Recovery Services and Organizations should track the quantities of food that they are actually able to use, vs. the ones that are not adapted and that they have to dispose of (whether given to animals, composted, etc.). Disposing of such data would be very helpful for jurisdictions in order to assess the effectiveness of their programs. It could also be useful to question tax incentives received by food donors.	A change to the regulatory text was not necessary because tracking the amount of food that actually was consumed by people would be very difficult and expensive for many food recovery organizations and services to track. A previous draft of the regulations included a requirement for food recovery organizations and services to track their residual food waste. However, the California Association of Food Banks and other key food recovery stakeholders urged CalRecycle to remove the requirement as it would be far too difficult and expensive to track. As a result, CalRecycle removed the requirement.
9133	Mourad, M., Sciences Po Paris	The regulation requires to “Estimate the amount of edible food that will be disposed of by commercial edible food generators that are located within the county and jurisdictions within the county.” How is this baseline going to be estimated? Will individual businesses have to provide numbers on their waste, or will the baseline	CalRecycle’s 2018 disposal-based and generator-based waste characterization studies sorted food waste into eight separate categories. The data collected from these studies will be used to help inform how CalRecycle measures the edible food baseline for SB 1383.

Comment Number	Received From	Question/Comment	Response(s)
		be based on sector numbers? How is the proportion of edible food calculated based on CalRecycle Waste Characterization Study? Do jurisdiction apply a coefficient of “edibility” based on other studies? Jurisdictions should be provided with additional tools and methods to estimate the quantities, nature, and location of excess edible food.	Also, CalRecycle does intend on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of the edible food recovery capacity planning section.
9134	Mourad, M., Sciences Po Paris	The regulation requires to recover 20% of the food. How is this 20% applied? Based on 2014 levels or at the time of implementation? Does it apply to consolidated numbers or for each commercial edible food generators?	CalRecycle’s 2018 statewide waste characterization studies will be used to help measure the edible food baseline for SB 1383. CalRecycle’s 2018 disposal-based and generator-based waste characterization studies sorted food waste into eight categories based on the edibility of the food that was disposed. The eight food waste categories were defined in a manner that will allow CalRecycle to quantify the amount of edible food (food intended for human consumption) that is disposed, and the amount of potentially donatable food (edible food that could have potentially been recovered for human consumption) that is disposed. CalRecycle would also like to clarify that the 2014 baseline year only applies to the organic waste disposal reduction targets. A baseline year is not specified in SB 1383’s statute for edible food recovery. CalRecycle will measure the state’s success toward achieving the edible food recovery goal by analyzing and compiling the data that each jurisdiction is required to submit on the total pounds recovered from commercial edible food generators in the previous calendar year.
9135	Mourad, M., Sciences Po Paris	Requiring a specific percentage of food recovery, based on a baseline of disposed food, would not promote prevention (because efforts to prevent the production of excess food would not be visible as “recovered” food). Additional incentives could be provided for commercial edible food generators that implement prevention efforts, rather than for recovery and recycling capacity and infrastructures.	A change to the regulatory text was not necessary because SB 1383’s statutory requirement is to recover 20% of currently disposed edible food for human consumption by 2025. The statute does not include any requirement for California to achieve a food waste prevention target. The law only includes an edible food recovery target. As a result, including requirements for commercial edible food generators or jurisdictions to prevent food waste is beyond CalRecycle’s rulemaking authority. CalRecycle does however recognize that some commercial edible food generators could have types of edible food available for donation that are not desired by food recovery organizations or services. One example would be a generator having significant quantities of food that does not meet the nutrition standards of food recovery organizations or services. To address this issue, CalRecycle added language to the edible food recovery education and outreach section to require jurisdictions to annually provide commercial edible food generators with information about the actions that commercial edible food generators can take to prevent the creation of food waste. To clarify, this is not a requirement for commercial edible food generators or jurisdictions to source reduce the amount of edible food disposed. This is an education requirement intended to help generators learn how they can reduce the volume of surplus edible food they generate. Providing this education is critical to help generators that struggle to find outlets for their currently disposed edible food comply with SB 1383’s commercial edible food generator requirements.
9136	Mourad, M., Sciences Po Paris	In their evaluation of food recovery capacity, jurisdictions (and CalRecycle) should track the distances travelled by edible food, with various modes of transportation, as well as job-creation (both volunteer and paid jobs).	Nothing in SB 1383's regulations prohibits a jurisdiction, commercial edible food generator, food recovery organization, or a food recovery service from tracking miles traveled to transport recovered food, various modes of transportation, and the number of jobs created and needed.

Comment Number	Received From	Question/Comment	Response(s)
			However, the regulations do not require this as it is overly prescriptive and not necessary for achieving SB 1383's edible food recovery goal.
9137	Mourad, M., Sciences Po Paris	Food Recovery Programs should ensure that various Food Recovery Organizations are equally supported, and avoid a situation of "monopoly" by one or a few large Food Recovery Organizations. Local, grassroots organizations could have other positive benefits for local communities.	It is at the discretion of commercial edible food generators to decide whom their food recovery partners will be, not the jurisdiction. Please note, nothing in SB 1383's regulations prohibits a jurisdiction from promoting local, grassroots organizations. However, the regulations do not specifically require this as it could be overly prescriptive for jurisdictions to comply with.
9138	Mourad, M., Sciences Po Paris	The proposed regulation should encourage innovative (re)use of organics materials, such as by-products processed into food products or animal feed, if possible, before composting and anaerobic digestion. Food/feed industries would have a higher value-added. They save resources by avoiding the use of new materials for similar food/feed.	Nothing precludes jurisdictions and haulers from utilizing facilities that produce animal feed, and animal feed is considered a reduction in landfill disposal under Article 2.
9139	Mourad, M., Sciences Po Paris	The regulation should maintain exceptions for community composting, so that local efforts are not negatively impacted by large-scale composting systems (in particular through franchise agreements).	The terms community benefit composting and supplemental on-site compost are not used in the regulation. This comment proposes to add the definitions of 'Community Benefit Composting' and 'Micro-composting' to Article 1, thereby creating two additional categories of composting that do not reference the size and volume limitations of Section 17855(a)(4). The proposed terms for these two activities would expand the suite of activities that are not excluded from regulatory requirements. CalRecycle is not proposing amendments to the compost size thresholds in Section 17855, therefore the comment is not germane to the text CalRecycle is adopting or amending. The existing exclusion thresholds were thoroughly vetted and subject to stakeholder comment in a previous rulemaking amending those standards. No change to the regulatory text is necessary to specifically mention community composting because Section 18990.1(b) establishes that a jurisdiction shall not implement or enforce an ordinance, policy, procedure, permit condition, or initiative that includes provisions that would prohibit the lawful processing and recovery of organic waste. Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.
3154	Mowles, L., City of La Mirada	Infrastructure Capacity: As previously noted, California lacks enough capacity today to be able to meet the needs for new organic waste processing. Many cities have expressed concern over an ability to comply with organic waste diversion requirements due to a lack of waste disposal infrastructure. Where the infrastructure does exist, capacity is limited. While the regulation provides five years to implement programs, cities are concerned that it does not provide sufficient time to finance, site permit, and build new facilities.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that

Comment Number	Received From	Question/Comment	Response(s)
			<p>was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3155	Mowles, L., City of La Mirada	<p>Funding: Lack of sufficient funds continues to be among the major challenges for local governments in the effort to implement new organic waste diversion programs. The City of La Mirada and other communities continue to seek solutions to address the need for substantial public sector funding. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like La Mirada, continue to work to address the need for funds to undertake prescribed activities, such as providing bins and labels, promoting education and outreach, and undertaking enforcement efforts.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3156	Mowles, L., City of La Mirada	<p>Enforcement: These regulations allow for Corrective Action Plans and establish extended timelines and milestones for achieving compliance. The addition of a pathway to compliance is appreciated. This is a step in the right direction, and careful consideration of the differences among local jurisdictions must be given, as well as the variety of community stakeholders and infrastructure challenges a local jurisdiction may face.</p>	<p>Comment noted, the comment does not recommend a regulatory change.</p>
3157	Mowles, L., City of La Mirada	<p>Penalties: The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, the needs of the generators should be understood first. CalRecycle should continue working through the programmatic scheme before implementing an appropriate set of penalties, particularly since programs have until 2022 to be implemented. The City requests that CalRecycle adopt penalties in a second set of regulations to take effect at a future date.</p>	<p>A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.</p>
3158	Mowles, L., City of La Mirada	<p>Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products at target levels set by CalRecycle. These requirements will likely result in substantial additional costs to local governments. The City requests that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding. The City further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1 (e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even if a fee were to survive scrutiny under Prop. 26, it is questionable whether a city would have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218). This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). The procurement regulations should be addressed in a separate regulatory proceeding.</p>	<p>CalRecycle has determined the procurement requirements are necessary to achieve the organic waste diversion goals set in statute by ensuring end uses for processed organic waste. In addition, CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.</p> <p>First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p> <p>Regarding “substantial additional costs,” a change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in “substantial additional costs”.</p>

Comment Number	Received From	Question/Comment	Response(s)
			CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.
3159	Mowles, L., City of La Mirada	Consistency with AB 939 and AB 1826: Any regulatory system that does not build upon the billions of dollars invested in the AB 939 infrastructure will not be cost-effective. Today's AB 939 infrastructure has been the backbone of implementing commercial recycling under AB 341 and AB 1826. While some obstacles have been experienced in implementing these programs, significant progress has been achieved. The fact that cities have already experienced significant barriers in implementing AB 341 and AB 1826 (such as the resistance by generators to increase solid waste handling costs and the lack of facilities) should serve as a precursor to the far more drastic changes that would be required under the proposed regulations	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
9140	Muir, J., Peninsula Sanitary Service	Regarding proposed revisions to SB 1383 Article 3 Organic Waste Collection Services Section 18984 and the container or lid for separated food waste in Article 3, Section 18984.1 (a)(6)(A), we ask that the color for "separated food waste" be specified as the color brown rather than yellow. There are several reasons for this: a) The color brown can be made with a higher level of recycled content plastic rather the color yellow, leading to market demand for recycled plastic. b) Brown is easier to keep clean and aesthetically pleasing compared to yellow which will show dirt and grim much faster than brown. c) Brown is the second most used color in the country for compostables. If a jurisdiction didn't use green (possible because they used that color for recycling in a dual stream program), they used brown. This would also require an update to the definition of "Yellow Container" in Article 1 Section 18982(a)(77).	CalRecycle responded to stakeholders who initial had issues with the container color being yellow because yellow containers will quickly become discolored and unattractive if used for the collection of food waste; and yellow coloration does not hold up well in UV conditions. Therefore, brown was chosen because brown coloration shows dirt less; and cart manufacturers can use higher percentages of recycled plastic to make brown versus yellow containers and lids, leading to more market demand for recycled plastic. The jurisdiction would be able to continue to use the brown containers for manure until they reach the end of their useful life or until 2036, whichever comes first.
9141	Muir, J., Peninsula Sanitary Service	For those programs that are dual stream, separating paper from bottles and cans (containers), it is important to regulate the shade of blue that will be used for paper and for bottles and cans so that jurisdictions use a color that is uniform with everyone in the state. This could be simply stated that light blue is used for bottles and cans and dark blue is used for paper. Section 18984.1 (a)(4) would need to be updated.	CalRecycle revised Section 18984.7(a) in response to this comment to clarify that jurisdictions have to provide containers for the collection service that the jurisdiction implements for organic waste generators, not the indoor bins of businesses. Sections 18984.1(a)(6)(B) and (C) and 18984.2(d)(1) do not require that only light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container. Additionally, if the color is an issue in

Comment Number	Received From	Question/Comment	Response(s)
			this circumstance, the business can use labels instead. CalRecycle will clarify in the FSOR that Section 18984.9(b), which allows a commercial business to provide containers that comply with either the color or the labeling requirements, applies to Section 18986.1 and Section 18986.2.
9142	Muir, J., Peninsula Sanitary Service	Regarding the paper products definition in Section 18982(a)(51). We are concerned about the inclusion of building insulation and panels. Unlike the other materials included in the definition of paper products, building insulation and panels are most frequently not made of paper. In addition, some insulation has a single paper backing to fiberglass layers which is not practically separable from the fiberglass. Since the regulations of "organic waste" (#46) includes paper products, the inclusion of building insulation will lead to confusion and contamination. This problem is magnified when procurement is considered. The regulations require jurisdictions to procure and track recycled content paper products and meet minimum purchasing percentages. Factors influencing the selection of insulation type and performance are highly technical and vary depending on a number of factors. There are a high number of high performing insulations which are not composed of recycled content and building architects should not be attempting to balance a building's energy performance with its recycled content when making these decisions. For these reasons, we request that "building insulation and panels" be removed from the definition of paper products.	CalRecycle has revised Section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in Section 18993.3(c)(2) and therefore agrees with the proposed revision.
9143	Muir, J., Peninsula Sanitary Service	The definition for "organics"/"organic waste" is not consistent among various legislation: SB 1383 - (46) "Organic waste" means solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood, paper products, printing and writing paper, manure, biosolids, digestate, and sludges. AB 1826 - (c) "Organic waste" means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste. AB 901 - (39) "Organics" means material originated from living organisms and their metabolic waste products. This includes, but is not limited to, food, "agricultural material" as defined in section 17852(a)(5) of this subdivision, "agricultural by-product material" as defined in section 17852(a)(4.5) of this subdivision, green material, landscape and pruning waste, nonhazardous lumber and dimensional wood, manure, compostable paper, digestate, biosolids, and biogenic sludges; and any product manufactured or refined from these materials, including compost, and wood chips. The definition of "organic waste" should be consistent with state law and should not include textiles or carpets.	Comment noted. The definition of organic waste employed in these regulations is specific to the purpose and necessity of this regulation. Regulations adopted by other agencies or codified in other portions of statute, can employ a different definition for a different purpose. Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.
9144	Muir, J., Peninsula Sanitary Service	Regarding Article 10, Section 18991.3 Commercial Edible Food Generators, the proposed regulation should clarify that food sales at large events and large venues that are NOT a part of the venue's direct concession services should be exempt from the food donation requirements. Examples include food trucks located in/at large venues and events, non-regulated food vendors, and persons serving food outside of the event or venue such as tailgating.	CalRecycle would like to clarify that food vendors operating at large events and large venues are not exempt from the edible food recovery regulations. Large event and large venue operators must make arrangements to ensure that the food vendors operating at their event or venue are recovering the maximum amount of their edible food that would otherwise be disposed. In a situation where the food vendors at a large venue or large event are not in compliance with Section 18991.3 of the regulations, the operator of the large event or large venue would be

Comment Number	Received From	Question/Comment	Response(s)
			responsible for compliance. CalRecycle would also like to mention in response to this comment, that tailgaters are not subject to this regulation.
3010	Murguia, I., City of Poway - Public Works	Under SB 1383, will food waste recycling/diversion be required of multi-family developments, specifically apartments? As CalRecycle knows, currently diverting food scraps is not required as part of AB 1826, only green waste.	The regulations require organic waste recycling services, including food waste recycling to be provided to multi-family dwellings, including apartments.
6160	Nason, R., City of Albany	As a small City of just 2 square miles with a small commercial district, we rely heavily on programs that are developed, implemented, and enforced on a Countywide or regional scale. We hope you will consider that some programs, such as food recovery, are better implemented at larger scales in the enforcement of these important initiatives.	CalRecycle included low population waivers in the proposed regulations.
6161	Nason, R., City of Albany	For our small City, staffing is the biggest challenge. Furthermore, we do not have space or resources to support additional staff even if funding were available.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
6162	Nason, R., City of Albany	In addition to implementation challenges, inevitable tracking and reporting requirements could create a burden for limited staff that may inhibit the ability to focus on implementation. We ask you to consider reporting requirements that are straightforward and not burdensome.	A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.
6163	Nason, R., City of Albany	Lack of sufficient funds continues to be among the major challenges local governments face in the effort to implement new organic waste diversion programs. The City of Albany and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade" proceeds can be used to help offset the costs for developing organic recycling infrastructure. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities,	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of

Comment Number	Received From	Question/Comment	Response(s)
		such as updating bins and labels, as well as providing education and outreach. Some costs, such as new bins, may have to be passed on to ratepayers, many of whom are already paying over 35% of their income on housing. We are very sensitive to increasing the burden of housing costs in the Bay Area.	complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
6164	Nason, R., City of Albany	These regulations allow for Corrective Action Plans and establishes extended timelines and milestones for achieving compliance. We appreciate the addition of a pathway to compliance. This is a step in the right direction and we urge careful consideration of the differences among local jurisdictions, as well as the variety of community stakeholders, and infrastructure challenges a local jurisdiction may face. In particular, we request support rather than penalties, especially for small jurisdictions with limited resources.	Comment noted, the comment does not recommend a regulatory change.
6165	Nason, R., City of Albany	The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, this regulation puts the cart before the horse by designing penalties before the sticking points and needs of generators are understood. We encourage CalRecycle to continue working through the programmatic scheme before implementing an appropriate set of penalties, particularly since programs have until 2022 to be implemented. We ask that CalRecycle adopt penalties in a second set of regulations to take effect at a future date.	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for 5053 waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.
6166	Nason, R., City of Albany	New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products targets set by CalRecycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations. We ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding. Additionally, it can be difficult to implement and adequately track procurement requirements.	A change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in "substantial additional costs". CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved. However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the

Comment Number	Received From	Question/Comment	Response(s)
			<p>regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p>
6167	Nason, R., City of Albany	<p>The City of Albany further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1(e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even were a fee to survive scrutiny under Prop. 26, it is questionable whether a city would not have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.) This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, The City of Albany requests that the procurement regulations be addressed in a separate regulatory proceeding.</p>	<p>The procurement requirements are necessary to achieve the diversion goals in statute by encouraging end uses for processed organic waste. CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.</p> <p>First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p> <p>Regarding “additional costs,” a change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in “additional costs”.</p>

Comment Number	Received From	Question/Comment	Response(s)
			CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.
4010	NCRA (Brooms, KD, NCRA)	We recommend that CalRecycle fold jurisdictional reporting into existing reporting requirements, such as those for AB 939.	Comment noted. CalRecycle may consider streamlined jurisdiction reporting opportunities, such as modifying the Electronic Annual Report process.
4011	NCRA (Brooms, KD, NCRA)	<p>(We recommend that CalRecycle) make the following tools and technical assistance available to local jurisdictions in order ease the challenge of complying with SB1383:</p> <ul style="list-style-type: none"> <li>● food donation guides (suggest using existing materials that can be customized)</li> <li>● methodology on how to estimate edible food recovery capacity &amp; baseline using CalRecycle waste characterization research</li> <li>● record keeping tools</li> <li>● education &amp; outreach material/resources</li> <li>● language to use with franchise agreements</li> <li>● case studies on jurisdictions contracts for edible food recovery including pros &amp; cons of various approaches</li> <li>● sample ordinance language re:Cal Green Building standards</li> <li>● load checking/sampling &amp; reporting contamination procedures</li> <li>● Sample amended/revise IWMPs and SWMPs</li> <li>● dynamic method to share all this information (i.e. web page) in real time with opportunities to add/update supported with sustainable funding (possibly through advertising/sponsorship)</li> <li>● technical assistance including facilitation and community education</li> <li>● translations or translation services of the material into relevant languages.</li> </ul>	Comment noted. This comment is not specific to any aspect of the regulatory text. CalRecycle intends to provide guidance to jurisdictions throughout 2020 and 2021 prior to the implementation date of the regulatory requirements. CalRecycle will additionally continue to provide regulatory guidance as the regulations take effect.
4429	NCRA (Brooms, KD, NCRA)	In addition, we would like to see the regulation giving just as much credit to prevention as recovery when it comes to edible food.	SB 1383's statutory requirement is to recover 20% of currently disposed edible food for human consumption by 2025. The statute does not include any requirement for California to achieve a food waste prevention target. As a result, CalRecycle will not require commercial edible food generators or jurisdictions to prevent or source reduce the amount of edible food they generate. CalRecycle does however recognize that some commercial edible food generators could have types of edible food available for food recovery that are not desired by food recovery organizations or services. One example would be a generator having food available that does not meet the nutrition standards of food recovery organizations or food recovery services. To help address this issue, CalRecycle added language to the edible food recovery education and outreach section to require jurisdictions to annually provide commercial edible food generators with information about the actions that commercial edible food generators can take to prevent the creation of food waste.
4555	Neff, H City of Elk Grove	Section 4 of the Standardized Regulatory Impact Assessment, which demonstrated that the proposed regulations would have a positive economic impact on the State contains a number of flawed assumptions and is overly optimistic. While there will	Comment noted. CalRecycle disagrees that the cost presented in the SRIA, and the subsequent estimates provided in the Appendix to the ISOR, "vastly underestimate the true cost of implementation." In the Appendix, CalRecycle presented a cost sensitivity of three scenarios. Each

Comment Number	Received From	Question/Comment	Response(s)
		<p>be a number of positive impacts, there will also be a number of negative impacts that will offset the benefits, and those should be appropriately reflected in the analysis.</p>	<p>scenario is based on a projected disposal level. CalRecycle projected cost based on the most conservative projections of disposal (highest estimates of disposal and required recover of 289 million tons). CalRecycle also provided cost sensitivity for the economic value of recycled commodities and costs for transporting recovered material to market. CalRecycle relied upon the most conservative estimates for each of these sensitivity analyses (the highest estimate of transportation costs and lowest value for recycled commodities). The general comment that CalRecycle understates costs was made by several commenters but failed to specify how costs were underestimated or recommend an alternative method for estimated costs. Regarding comments that cite specific areas where the commenter believes costs are underestimated, those comments are addressed in separate responses.</p>
4556	Neff, H City of Elk Grove	<p>Section 4.2 (SRIA)• The modeling of economic impacts did not include key factors such as non-industry sales, which would have demonstrated the impacts to businesses as a result of Consumer Prices changes. As consumer prices increase resulting from higher costs associated with organic waste collection, price elasticity dictates that the demand for at least some consumer items will decrease, thus California businesses will be faced with reduced sales as a result of these regulations. This, in turn, will decrease overall GDP for the State calculated in Section 4.4.4.</p>	<p>Comment noted. CalRecycle revised the economic modeling prepared for the regulations to account for this. The Appendix to the ISOR notes: Increased costs to businesses are assumed to be passed on through higher rates for waste management services, which businesses then have to absorb. Higher operating costs serve to make these firms less competitive, driving down exports and overall sales, all else being held equal. This effect is modeled with the production cost policy variable in the REMI model, and 50 percent of all costs were modeled with the production cost policy variables. It is assumed that households will also be impacted by higher costs for waste management services. As the costs of the new regulations filter through the industry, households will be faced with higher prices on consumption goods. To model these impacts, the analysis uses the consumer price policy variable to raise the cost of goods in relation to their utilization of waste management services. In the REMI model, as consumer prices for certain goods increase, consumers will consume relatively less of those goods. This decrease in consumption will lead to a decrease in output and employment, ceteris paribus. See page pages 35-39 of the Appendix to the ISOR.</p>
4557	Neff, H City of Elk Grove	<p>Section 4.2 (SRIA) Paragraph 5 of this section states that an assumption was made that the increased costs to private industry would be passed completely on to consumers. This assumption ignores the fact that California businesses have to compete with online and out-of-state firms and do not necessarily have the option of simply raising prices/service fees to pass costs onto to consumers. Many companies will have to absorb these additional costs leading them to cut spending elsewhere and possibly even cut employment or reduce future hiring. The multiplier effect from reduced business spending alone could potentially lead to significant detrimental effects on the California economy up to and including the closure of businesses and the associated loss of jobs at those companies. Some firms may choose to move out of state, as many are already doing. These negative impacts to non-industry businesses are not reflected in the analysis.</p>	<p>Comment noted. CalRecycle revised the economic modeling prepared for the regulations to account for this. The Appendix to the ISOR notes: Stakeholders raised concerns that this approach may understate the economic impacts of the regulations as many businesses would be required to absorb costs and could not pass costs through to consumers. To respond to stakeholder concerns, this analysis assumes that only 50 percent of costs are passed on to households through the consumer price policy variable and 50 percent of costs are absorbed by businesses through the production cost policy variable. The previous analysis modeled all program costs as consumer price increases. While it is speculative to assume the proportion of costs that will be absorbed as production costs, CalRecycle opted to revise the model to provide a mechanism for demonstrating potential impacts on the ability of California businesses to compete. The results of this analysis are below. See Addendum 1 for additional detail on the approach to economic modeling. See page 21-24 and pages 35-39 of the Appendix to the ISOR.</p>
4558	Neff, H City of Elk Grove	<p>Section 4.43 (SRIA) This section neglects to include the decrease in disposable income that individuals will be subject to from two sources:</p>	<p>Comment noted. CalRecycle disagrees that the cost per household is underestimated. Various commenters making this claim identified that they estimated the cost per household in their</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>o Increased fees residents will have to pay for garbage service due to organic waste collection. Section 3 estimates this amount to be approximately \$17 per household per year on average. That figure is likely grossly understated; the figure in Elk Grove is approximately \$62 and other communities have estimated it to be as high as \$140.</p>	<p>community is higher than the estimate estimated in the SRIA, or in the revised costs presented in the Appendix to the ISOR. The SRIA and the Appendix to the ISOR were not designed to specifically estimate the cost per household in, for example, Elk Grove or Santa Barbara. CalRecycle reiterates that the costs presented in both documents represent an estimated statewide average based on source documents that average costs from various regions across the state. Notably, the SRIA included the following disclaimer:  “Note that actual increases in rates may vary among jurisdictions and may reflect other factors specific to that jurisdiction, including the existing level of program implementation the jurisdiction is already performing without a statutory mandate. For example, lower costs will result if the city or county has already implemented mandatory food waste collection for residential and/or commercial, and other programmatic activities, such as edible food recovery programs, education, and/or contamination monitoring. And larger cities and counties will have higher costs, e.g., they will have a larger number of inspections to conduct, etc. Rural cities and counties may have lower costs as they will have fewer inspections and they may be able to phase in implementation due to a lack of recycling infrastructure.”  The Appendix to the ISOR also presents several statewide cost scenarios. CalRecycle conservatively estimated household costs based on the highest estimated cost scenario. CalRecycle acknowledges that jurisdictions that opted to require all businesses to have organic waste recycling services as a part of their implementation of AB 1826 will experience smaller cost increases than the jurisdictions that simply offered services rather than required them. CalRecycle additionally provided two regional variations in the Appendix to the ISOR to address</p>
4559	Neff, H City of Elk Grove	Section 4.43 (SRIA) Decreased personal incomes from job losses or reduced hiring due to increased costs in the private industry as noted in Item A above.	Comment noted. The commenter is expressing an opinion regarding the scope of the SRIA. CalRecycle made changes to the SRIA in response to stakeholder comments and released updates for public comment.
4560	Neff, H City of Elk Grove	Section 4.43 (SRIA) A decrease in disposable income from these two sources will lead to additional decreases in non-industry sales, which should also be reflected in the analysis.	Comment noted. The commenter is expressing an opinion regarding the scope of the SRIA. CalRecycle made changes to the SRIA in response to stakeholder comments and released updates for public comment.
4561	Neff, H City of Elk Grove	Section 4.4.3.4 (SRIA) • This section makes several assumptions indicating that VMTs will not increase. These assumptions are overly optimistic for several reasons. Even assuming that all of the regulatory hurdles for the development of new facilities were to be overcome, that does not necessarily mean that private or public financing is available to fund those facilities. There is likely to be some long-haul transportation of organic waste, at least in the first few years after implementation. Additionally, the assumption that trash collection will decrease as organic waste increases is incorrect, at least for many residential customers. Trash collection will still need to be collected weekly in most communities and those who are already collecting green waste separately may need to increase collection frequency once organics are added along with green waste. It is naïve to assume that there will be no net increase in VMTs. While decreases in some areas may offset increases in other areas, that is too broad of an assumption to make without further analysis. Similarly, with commercial trash service, some businesses may not find it practical to	<p>The SRIA and the Appendix to the ISOR note that a specific increase or decrease in Vehicle Miles Traveled (VMT) could not be projected. This assessment remains true today, as noted in the Final Program Environmental Impact Report for SB 1383 Regulations—Short-Lived Climate Pollutants: Organic Waste Methane Emission Reduction:  “Decisions by project proponents regarding the choice of compliance options and the precise location of new or modified facilities related to implementation of the proposed regulation cannot be known at this time. Furthermore, due to local planning, political (i.e., the willingness of jurisdictions to address local opposition to the siting of new or expanded facilities), and economic influences, attempting to predict project approvals about the specific location and design of facilities and operations undertaken in response to the proposed regulation would be speculative and infeasible at this stage...”  The commenter assumes that absent an explicit calculation of VMTs, CalRecycle has failed to account for potential fuel costs associated with hauling organic material. This assumption is inaccurate. CalRecycle notes that the projected collection costs disclosed in Table 3 of the SRIA,</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>reduce the frequency of trash service due to contaminated material that still needs to be serviced at least weekly.</p>	<p>and in Tables 7 and 8 of Appendix to the ISOR, include increased fuel costs associated with recycling.</p> <p>While this is not a direction calculation of VMT this cost does account for the costs associated with increased fuel purchases associated with increased hauling. Additionally, CalRecycle provided a cost sensitivity analysis in the Appendix to the ISOR which estimates a range of transportation costs (including fuel costs). A sensitivity analysis is provided as specific estimates of VMT would be speculative. In the Appendix to the ISOR CalRecycle notes:</p> <p>The collection costs calculated in the original SRIA, and shown in the following Collection and Processing of Organic Waste section, relied upon values derived from Cost Study on Commercial Recycling prepared by HF&amp;H Consulting and Cascadia Consulting Group for CalRecycle. The values in the cost study included fuel costs associated with collecting organic waste as a part of the total cost of collection. In this analysis, CalRecycle has additionally included data available from the cost study to project a range of potential costs associated with transporting finished products (e.g. compost, recycled paper, etc.) to market.</p> <p>While fuel costs were included in the original SRIA, this analysis shows a range of additional potential cost scenarios.</p> <p>The Cost Study on Commercial Recycling provides a statewide weighted average cost per ton for transporting a range of recovered commodities to market. The transportation costs represent the cost of delivering finished product to market. (As noted above, the fuel and transportation costs associated with collection are a part of the collection line-item shown in Collection and Processing of Organic Waste). For each material category, the per ton transportation costs include 1) base costs, 2) fuel costs, and 3) hauling costs.</p> <p>Base costs are defined as the minimum charge for picking up the materials from the processing facility. This represents the cost of loading, unloading, queuing, and a minimum travel distance of 10 miles. The fuel and hauling cost components represent the additional cost per ton per mile beyond the minimum charge. The calculator includes per ton costs for various material categories (e.g. compostables, glass, wood waste, etc.). The transportation costs were applied to the projected tons that would be recovered in each category. The Cost Study on Commercial Recycling, and the O&amp;M costs for compost and AD derived from the SLCP economic assessment, include several similar or duplicative costs associated with collecting material from a facility. This was controlled for in the following low and medium transportation costs summaries. For each sensitivity analysis for transportation costs, slight variations were made to the calculator.” (emphasis added).</p>
4562	Neff, H City of Elk Grove	<p>Section 4.5 SRIA This section does an excellent job of covering the scope of new businesses that will be created due to these regulations. However, it completely ignores the fact that there is a real likelihood that many businesses will close or migrate out of state due to the higher costs associated with these regulations. As noted above, many businesses simply cannot pass through higher costs to their customers as they have to compete with online and out-of-state businesses. A true economic impact analysis would incorporate these direct impacts as well as the</p>	<p>Comment noted. The SRIA, and the Appendix to the ISOR, included the estimated direct cost per business in the economic modeling which was performed in accordance with the standards established by CalRecycle of Finance.</p> <p>Comment noted. The SRIA, and the Appendix to the ISOR, included the estimated direct cost per household in the economic modeling which was performed in accordance with the standards established by CalRecycle of Finance. The gross costs and gross benefits were input into the economic modeling used to calculate disposable income. In the Appendix to the ISOR, gross costs</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>subsequent indirect impacts incurred from reduced business spending captured via a multiplier.</p>	<p>were weighted by household and business based on the total waste generation attributable to each sector. Additionally, in response to stakeholder comments, CalRecycle conservatively assumed a greater portion of the costs assigned to businesses would be absorbed by businesses rather than passed through directly to consumers. The revised estimates of economic impacts to individuals and businesses is on pages 21-24 of the Appendix to the ISOR.</p> <p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment.</p> <p>The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4563	Neff, H City of Elk Grove	<p>Section 6 SRIA Alternative 1 suggests that eliminating the mandatory local jurisdiction enforcement aspect of the regulation would not be as effective in achieving the needed reduction in organic waste disposal. This is not necessarily true. In our experience, as actual practitioners of local education, outreach, and enforcement programs we have found that punitive approaches do not necessarily prove to be any more effective than those involve education and/or rewards for doing the right thing. We find that most people want to do the right thing; they just need to understand the reason why it is the. right thing to do and, occasionally, some incentive to do so. Consequently, the assumptions behind this alternative are not correct. Although there would be fewer costs associated with less enforcement, the conclusion that there would also be fewer results is not necessarily true. That depends more upon the ·eartment's enforcement over jurisdictions rather than local jurisdictions" enforcement over generators.</p>	<p>Comment noted. The SRIA presents two alternatives. The first alternative considers implementing the regulation without requiring local governments to take enforcement against entities in violation. This assumption is not without evidence. The assumption relies on evidence from existing jurisdiction organic waste recycling programs with enforcement, compared to programs that lack enforcement.</p> <p>CalRecycle modeled the local enforcement provisions (monitoring, noticing processes, and penalties) jurisdictions must implement on the provisions included in the organic waste recycling and enforcement ordinances adopted by the City and County of San Francisco and the Alameda County Waste Management Authority. These jurisdictions enjoy the highest business compliance rates with more than 75 percent of their businesses subscribed to organic waste recycling service. Under existing law (AB 1826 (Chesbro, Chapter 727, Statutes of 2014)), certain commercial businesses are already required to subscribe to organic waste recycling services and jurisdictions are required to offer organic waste recycling to those businesses. However, that law does not currently require jurisdictions to take enforcement against businesses that fail to obtain service (the state is not authorized to take enforcement against businesses under AB 1826). The vast majority of jurisdictions have chosen not to take enforcement against any businesses that fail to</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>have service as required by law. These jurisdictions reported that fewer than 25 percent of their businesses are in compliance with existing organic waste recycling requirements.</p> <p>The compliance rates achieved in the jurisdictions that CalRecycle modeled the delegated local enforcement provisions on represent the minimum compliance levels necessary to meet the statewide organic waste reduction targets. Compliance levels in jurisdictions that lack enforcement mechanisms reveal that failure to include mandatory jurisdiction oversight and enforcement in the regulation is incompatible with the state’s ability to achieve its organic waste reduction and climate change goals.</p> <p>Comment noted. CalRecycle disagrees that the cost presented in the SRIA, and the subsequent estimates provided in the Appendix to the ISOR, “vastly underestimate the true cost of implementation.” In the Appendix, CalRecycle presented a cost sensitivity of three scenarios. Each scenario is based on a projected disposal level. CalRecycle projected cost based on the most conservative projections of disposal (highest estimates of disposal and required recover of 289 million tons). CalRecycle also provided cost sensitivity for the economic value of recycled commodities and costs for transporting recovered material to market. CalRecycle relied upon the most conservative estimates for each of these sensitivity analyses (the highest estimate of transportation costs and lowest value for recycled commodities). The general comment that CalRecycle understates costs was made by several commenters but failed to specify how costs were underestimated or recommend an alternative method for estimated costs. Regarding comments that cite specific areas where the commenter believes costs are underestimated, those comments are addressed in separate responses.</p>
4565	Neff, H City of Elk Grove	<p>Financial Burden</p> <p>SB 1383 and the draft regulations represent a significant expenditure mandate to local jurisdictions with little financial support from the State of California. This regulation will require the City of Elk Grove to hire new staff to comply with outreach and enforcement requirements, and to administer a comprehensive edible food recovery program. A significant financial burden will be placed on our residents and will require us to amend our existing franchise agreement with Republic Services. With an organics collection program, our residents will see a service level change from bi-weekly collection of green waste to weekly collection of organic waste. The City estimates that our residential monthly rates could increase by as much as 20 percent or more. Our Commercial haulers have estimated the impact to local businesses to be in a similar range of approximately a 20 to 30 percent increase in solid waste costs. The fiscal impact on our residents and businesses will be immediate and significant. For businesses, the increased staff time to separate organic waste and the increased solid waste rates will represent a significant increase in overall costs. California is already struggling to attract and retain businesses; anything that further increases the cost of doing business in our State will jeopardize our ability to create and grow jobs for our residents. While these regulations may grow jobs in the recycling industry, they will drive thousands more out of the State through increased business costs. As noted in Item 1 above, we</p>	<p>Comment noted. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p> <p>Comment noted. The SRIA provides a thorough overview of the fiscal and economic impact the implementation of the regulations will have on a statewide level. CalRecycle took a closer look and revised its fiscal and economic projections to reflect the final regulatory text. The revised estimates are presented in the Appendix to the ISOR.</p>

Comment Number	Received From	Question/Comment	Response(s)
		request that Cal Recycle take a closer look at the overall fiscal and economic impact of the proposed requirements.	
4568	Neff, H City of Elk Grove	Lack of Processing Facilities. Handling of residential food waste will require substantial improvements to existing solid waste facilities and the development of new organic waste processing facilities. By introducing food waste into the green waste, it is our understanding that the material will need to be managed inside covered facilities. According to Sacramento County, improvements at Sacramento area solid waste facilities to transfer organic wastes are estimated in the tens of millions of dollars. Further, development of new local processing facilities would likely cost in excess of \$100,000,000 and would unlikely be operational by 2022. Again, delay of the 2022 deadline for residential source separated food waste collection would reduce the significant, immediate burden on local jurisdictions, residents, and businesses and is more likely to ensure ultimate compliance.	Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
4569	Neff, H City of Elk Grove	Cart Requirements Article 3. Section 18984.1 requires a jurisdiction with a three-cart system to implement cart color changes by January 1, 2032. To comply with new standard cart colors for trash (gray cart), recyclables (blue cart), and organic (green) waste, jurisdictions will be required to plan and perform a costly and labor intensive cart exchange program. While jurisdictions have the option to comply with these changes when carts are beyond their useful life, the City opposes this option as it will create confusion amongst our customer base, which. may add unnecessary contamination. That said, the City suggests that the transition to new compliant cart colors occur once over a short period of time.	The collection container uniformity required by this and subsequent sections is necessary to respond to stakeholder feedback, enhance consumer education about organic waste recycling, reduce contamination, and maintain the highest degree of recoverability for source separated organic wastes. This will enhance the education of generators regardless of their location in California. This requirement was recommended by various stakeholders to create consistency and reduce generators' confusion about which container to place organic waste into and thus will result in less contamination and maximize organic waste recovery. See statement of purpose and necessity for Article 3 and for Section 18984.1 -18984.7 Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036.
4564	Neff, H City of Elk Grove and Selling, M. City of Galt	Punitive Nature of the Regulation The proposed SB 1383 regulatory language is too punitive in nature. The regulation is centered on the restriction of certain materials from certain containers. These restrictions are enforced through a series of annual inspections and reviews of organics generators, which result in violations and fines. The draft SB 1383 regulations mandate fines for all generators found in violation. These fines are detailed in 11 pages of the regulation text and range from \$50 to \$10,000 per day depending on the generator's violation. The City believes that this is the wrong approach, particularly for our residents. As noted previously, our experience has found that coercive or punitive approaches do not gain public cooperation, but	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations the require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for 5053waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that

Comment Number	Received From	Question/Comment	Response(s)
		rather decreases participation and increases activities to bypass the violations, such as illegal dumping. We recommend the regulatory approach emphasize enhanced generator education and incentive programs that attract generators to participate.	<p>have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.</p> <p>A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.</p>
4566	Neff, H City of Elk Grove and Selling, M. City of Galt	<p><b>Excessive Reviews, Inspections, Characterizations, and Reporting</b></p> <p>CalRecycle has proposed excessive route reviews, facilities inspections, waste characterizations, and reporting requirements. More is not always better, especially with the proposed language. Quarterly route reviews, annual facility inspections, characterization of waste every 500 tons, and documentation of every interaction a service provider has with their customers adds to the cost of a jurisdiction's program without commensurate additional value. Furthermore, the draft regulations do not provide any threshold or defined level of contamination allowed during these required inspections and route reviews. We believe this will create substantial confusion amongst operators, residents, and businesses, additionally diluting the intent of the draft regulations. We ask that CalRecycle take an alternative approach to data collection and ask itself "What do we need?" as opposed to "What can we get?" when formulating these requirements. In addition, we request Cal Recycle to define acceptable levels of contamination to help facilitate clear expectations, such as contamination over 5% by weight shall be documented.</p>	<p>In order for the Department to reduce short-lived climate pollutants, enhanced tracking of material streams will be required under this article. The purpose of the revisions to the reporting requirements for haulers is to ensure facilities are able to manage compliance with the regulatory requirements. The change requires haulers to identify, at the time of delivery to the receiving facility, the type of collection stream delivered. The purpose of the revisions to the reporting requirements for transfer/processors is to ensure each jurisdiction providing a service that combines organic waste with non-organic waste is meeting the requirements of Section 18984.1(c), 18984.2, or 18984.3 of Article 3, and transporting to a high diversion facility is meeting the 50 percent and 75 percent organic content recovery rates defined in Article 6.2 Section 17409.5.1. The purpose of the changes to the reporting requirements for composting facilities and operations is to crosscheck the percentage of organic waste in residuals. The change requires each recycling or composting facility or operation to report the quarterly percentage of organic waste contained in residuals. The data required is necessary to verify whether the facility is sending more than 20 percent of residual organics to disposal on and after 2022 and 10 percent on and after 2024, as calculated pursuant to 17869(e)(5) or 17896.45 (a)(1)(E). For inbound organic material, the adopted AB 901 regulations already track potential beneficial reuse green material by jurisdiction of origin. Outside of the requirements that have already been adopted in the AB 901 regulations, source sector/origin data is not part of the proposed SB 1383 amendments to the AB 901 regulations.</p>
4567	Neff, H City of Elk Grove and Selling, M. City of Galt	<p><b>Unrealistic Timeline</b></p> <p>The goals and compliance dates required by SB 1383 are unrealistic due to the lack of existing processing facilities. There are no solid waste facilities permitted to process food waste in the City or surrounding County. Even CalRecycle estimates that 80 to 90 new facilities will be needed to meet the demands of SB 1383. Sacramento County estimates the development of local facilities will take between 5</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>and 10 years. The City of Elk Grove requests Cal Recycle explore a legislative solution to this issue. Adjustment of the 2022 deadline for source separated collection of residential organics to 2027 would result in a goal that is more achievable for jurisdictions subject to SB 1383.</p>	<p>approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4570	Neff, H City of Elk Grove and Selling, M. City of Galt	<p>Jurisdiction Edible Food Recovery Program</p> <p>The draft language requires jurisdictions to increase food generator access to food recovery organizations and (a)(4) requires jurisdictions to increase edible food recovery capacity if sufficient capacity does not exist. These requirements are beyond the scope and expertise of the City's existing jurisdictional authority.</p> <ul style="list-style-type: none"> <li>• Rather than putting the City in the position of food recovery coordinator, consider working directly with food recovery organizations to help them increase their accessibility to food generators and their capacity to recover edible food.</li> <li>• Provide grant funding opportunities to Food Recovery Organizations to help them improve the efficiency of their operations. Most food recovery organizations are non-profits operating on minimal budgets. Providing funding opportunities directly to these organizations will allow them to make knowledgeable decisions on how best to use the funding to increase their accessibility and capacity.</li> <li>• These changes would put food recovery efforts in the hands of those who know it best and can make the best effort rather than those who are simply attempting to meet the minimum requirements.</li> </ul>	<p>With regard to the comment suggesting that these “requirements are beyond the scope and expertise of the city’s existing jurisdictional authority,” please refer to the Public Resources Code Section 42652.5 (a) (1)-(4) which grants CalRecycle the authority to impose requirements on jurisdictions and may include requirements to meet the goal that not less than 20% of edible food that is currently disposed is recovered for human consumption by 2025. This evinces an intent on the part of the Legislature to allow for CalRecycle to place requirements on jurisdictions to increase edible food recovery. In addition, assessing edible food recovery capacity at the local level is critical for jurisdictions to be able to understand if capacity needs exist, and exactly what their capacity needs are. It is at the discretion of the jurisdiction to determine what jurisdiction entity is best suited to assess edible food recovery capacity and ensure that compliance with this regulatory requirement becomes a part of their scope.</p> <p>Regarding the comment, “Rather than putting the City in the position of food recovery coordinator, consider working directly with food recovery organizations to help them increase their accessibility to food generators and their capacity to recover edible food.” SB 1383 does not require jurisdictions to act as food recovery coordinators. A food recovery coordinator typically acts as a liaison between food donors and food recovery organizations and food recovery services to ensure that food is recovered and distributed to the organization and services with the greatest need for the food. SB 1383 does not require jurisdictions to do this.</p> <p>SB 1383 requires jurisdictions to implement edible food recovery programs, which includes the requirement that a jurisdiction shall increase edible food recovery capacity if it is determined that they do not have sufficient capacity to meet their edible food recovery needs. Assessing edible food recovery capacity at the local level is critical for jurisdictions to be able to understand if capacity needs exist, and exactly what their capacity needs are. If sufficient capacity does not exist, then significant amounts of edible food will continue to be disposed rather than being put to its highest and best use of helping feed Californians in need, and could jeopardize the state’s ability to achieve its 20% edible food recovery goal.</p> <p>Regarding the comment that CalRecycle should consider working directly with food recovery organizations to help them increase their capacity, CalRecycle does work directly with food recovery organizations and services across the state through CalRecycle’s Food Waste Prevention and Rescue Grant Program. CalRecycle’s Food Waste Prevention and Rescue Grant Program has</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>given the Department insight into the significant differences in edible food recovery capacity needs that exist in cities, counties, and regions across California. These significant differences in capacity needs highlight the critical need for jurisdictions to perform their own local capacity needs assessments. The California Association of Food Banks has 41-member food banks and approximately 6,000 recipient agencies that they work with. The capacity needs of these organizations and food distribution agencies can vary widely from jurisdiction to jurisdiction. For a jurisdiction to implement an effective edible food recovery program it is critical that they are familiar with the food recovery organizations and services that operate in their area and the current capacity that exists.</p> <p>With regard to the comment about grant funding, CalRecycle has a food waste prevention and rescue grant program that funds food waste prevention and food rescue projects in California. CalRecycle has awarded 20 million dollars to over 60 grantees; the majority of the grantees are food recovery organizations and food recovery services. However, CalRecycle does recognize that there currently is a lack of sustainable funding for food recovery infrastructure and capacity in California. To address this, CalRecycle included language in Article 10 stating that a jurisdiction may fund the actions taken to comply with the jurisdiction edible food recovery program requirements through franchise fees, local assessments, or other funding mechanisms. This language was included in the regulations to encourage jurisdictions to establish a sustainable funding source to help fund their food recovery program.</p>
4571	Neff, H City of Elk Grove and Selling, M. City of Galt	<p>Good Faith Effort The County requests that CalRecycle insert "good faith effort" language that may be authorized within the framework of the legislation. The short timeline for compliance with the new regulations and the significant required change in generators' behavior makes a "good faith effort" clause essential to the successful implementation of new programs for both the State and local jurisdictions.</p>	<p>Early versions of the SB 1383 legislation included a specific reference to "good faith effort" that was stripped from the final version of the bill. CalRecycle reasonably concluded that this expressed legislative intent that this enforcement standard was inapplicable.,</p>
6355	Nilsson, L., Solid Waste Solutions	<p>Requiring organic waste collection services. It is not difficult to collect organics, but there are no permitted facilities within 50 miles of Agoura Hills, Malibu, or Calabasas. So, we are trucking this material all over the state to reach permitted composting/mulching facilities to be in compliance with State Mandated programs.</p>	<p>A change to the regulatory text is not necessary. Comment noted, it is not recommending a text change.</p>
6356	Nilsson, L., Solid Waste Solutions	<p>Collection services mandatory container color requirements. Section 18985.1 three-container services, section 18984.2 two-container services, and section 18984.3 unsegregated single container services dictates that all businesses that provide waste collection, NOT limited to organic waste service, use specifically State defined color-coded bins. Refuse Haulers have practiced individual color coding to help ease drivers deciphering bin ownership. This delegation that all businesses comply to specific, blanket color coding will cause confusion with the drivers and possibly cause issues for cities where multiple haulers have overlapping service areas. It will also place undue burden onto the small family haulers as the cost of repainting and replacing all of the bins they presently have out in service is unprecedented. Not only could the costs put extreme stresses onto small businesses, it will also in turn create a huge amount of waste. There will be millions of carts (plastic containers)</p>	<p>Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. The collection container uniformity required by this and subsequent sections is necessary to respond to stakeholder feedback, enhance consumer education about organic waste recycling, reduce contamination, and maintain the highest degree of recoverability for source separated organic wastes. This will enhance the education of generators regardless of their location in California. This requirement was recommended by various stakeholders to create consistency and reduce generators' confusion about which container to place organic waste into and thus will result in less contamination and maximize organic waste recovery. See statement of purpose and necessity for Article 3 and for</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>that can no longer be used merely because of the color and due to the lack of recyclability of plastic, these carts will now be entering into the waste stream. The very thing we are attempting to clean up. Even if some of the metal bins get repainted, the amount of paint that would be necessary to retrieve the right colors would be unfathomable and take a lot of time.</p>	<p>Section 18984.1 -18984.7 Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036. Also, a change was made to allow for the exposed portion of lid or body to be required color and to allow the required color to be on either the lid or the body, not just the lid. The change is necessary because this approach is the least costly and burdensome one that still achieves the organics disposal reductions. CalRecycle understands that metal containers are likely to last longer than plastic ones. However, metal containers can be and are repainted occasionally. Repainting large, roll-off metal bins would need to comply with the VOC emission limits of the particular air district where the painting is done. VOC emissions limits in a particular air district depend on several factors, including but not limited to the size (and material) of the container, the type(s) of coating used, and the type of drying process. Based on discussions with the South Coast Air Quality Management District, which has one of the more stringent air quality standards for VOC emissions, there are appropriate paints that could be used to paint roll-offs and metal containers that would adhere to local VOC limits such as SCAQMD Rule 1125 for smaller metal containers and Rule 1107 for metal parts and products.</p> <p>Hauling industry representatives recommend a 10-year period because that is the industry standard that is built into their contracts. Regarding lids on metal containers, the regulations allow a lid to be replaced either at the end of its useful life or by 2036, which provides a less burdensome option than replacing the entire metal container. Nothing prohibits a jurisdiction from painting metal containers and lids at an earlier time. In addition, the regulations already allow containers including their lids to be replaced at the end of their useful life.</p>
6357	Nilsson, L., Solid Waste Solutions	<p>The Bill states that there is a five-year timeframe to reach full implementation, but for cities such as Agoura Hills, Malibu, Calabasas, Ojai, Oxnard, and Carpinteria where new infrastructure is desperately needed to reach compliance, land is an issue. Not only will residents be resistant to have a factory/processing facility near to their homes, building new facilities and the compliance with the green building code will take upwards of 5 years from the planning of a new facility to and through construction. SB 1383 acknowledges the need for new infrastructure and technologies to achieve the Bill's goals but does not offer a plan in order to do so. Article 8 merely references the California Green Building Code section 4.408.1 which does not cover sites such as this would be i.e. a processing facility. The detailed regulations cover residential buildings and commercial.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). Comment Number	Received From	Question/Comment	Response(s)
6358	Nilsson, L., Solid Waste Solutions	Edible food recovery; There is a requirement for a city to participate and track a program for edible food recovery program. Many of our cities like Agoura Hills do not have access to any local non-profits gathering food for distribution, let alone have the staff available to create a program such as this.	Section 18991.1 requires a jurisdiction to implement an edible food recovery program that includes the actions the jurisdiction will take to increase edible food recovery capacity if the analysis required by Section 18992.2 indicates that the jurisdiction does not have sufficient capacity to meet its edible food recovery needs. The regulations are structured so that jurisdictions will be required to begin edible food recovery capacity planning in 2022 to ensure that sufficient capacity exists to recover edible food from commercial edible food generators in the jurisdiction. CalRecycle would also like to mention that as a state agency we are heavily focused on increasing edible food recovery infrastructure and capacity in California. CalRecycle's Food Waste Prevention and Rescue Grant Program funds food waste prevention and food rescue projects across the state. To date, CalRecycle has awarded 20 million dollars to over 60 grantees.
6359	Nilsson, L., Solid Waste Solutions	<ul style="list-style-type: none"> <li>2022 Enforcement: Compliance and enforcement beginning in 2022; How are cities to fund the enforcement of SB 1383? For many small jurisdictions staffing is an issue as are budget constraints.</li> </ul>	The Legislature put provisions in SB 1383 authorizing jurisdictions to charge fees to offset the costs of implementing the regulations.
6360	Nilsson, L., Solid Waste Solutions	Procurement requirements, Article 12. The requirements for calculating the procurement of organic waste by the number of employees is unclear and not conclusive enough of employment within cities (12.B.1) and needs to be more comprehensive. Cities need to be able to effectively report for SB 1833 including the different avenues from processing organic waste staff generates other than composting, and renewable gas. (12. F. 1 and 2)	As outlined in Section 18993.1, subdivision (b), the procurement target for recovered organic waste products is calculated by multiplying the per capita procurement target by the jurisdiction population, not number of employees. Regarding "different avenues" for organic waste, CalRecycle has revised section 18993.1 to expand the list of recovered organic waste products to provide jurisdictions more flexibility.
6361	Nilsson, L., Solid Waste Solutions	<ul style="list-style-type: none"> <li>Penalties: Penalties for this bill are very premature, and seem to step outside of the bounds of what Cal Recycle is allowed to enforce. The article cited below discusses how state and local governments cannot enforce excess penalties as ruled unanimously on by the Supreme Court. The penalties as written in Article 16 start on a range basis for daily penalties with no max limit. They also extend to evaluate the violators on intention, if revenue was gained from non-compliance. This is not only for haulers, this extends to businesses and how they manage their employee's sorting habits into the bins. This enforcement extends far beyond the normal regulations that a city typically enforces, and appears to be out of the bounds of what is legal according to the aforementioned Supreme Court Ruling (link below). o - See more at: <a href="http://www.cacities.org/Top/News/News-Articles/2019/February/League-Urges-Cities-to-Comment-by-March-4-on-New-0#sthash.EDVgkCAA.dpuf">http://www.cacities.org/Top/News/News-Articles/2019/February/League-Urges-Cities-to-Comment-by-March-4-on-New-0#sthash.EDVgkCAA.dpuf</a></li> </ul>	The initial language in Section 18997.2 regarding administrative civil penalties imposed by local jurisdictions was revised to be consistent with Government Code Sections 25132, 36900, and 53069.4 in response to comments.
3443	Noble, D., Association of Compost Producers	Performance-based regulatory framework: If the regulations were crafted to measure outcomes (e.g. GHG reduction) rather than only material flow from feedstocks to bioproducts, this would make more flexible the methods for reaching the SLCP reduction objectives which are the purpose of this regulatory package. We are envisioning another method of measuring those directly. However, it may be possible to build conversion factors that convert the materials management data into SLCP reduction performance. We have not created specific wording or conversion factors to make this workable, but we recommend that CalRecycle provide these, and ACP is prepared to participate in a collaborative industry working	Comment noted. CalRecycle declines to include regulations based on GHG reduction because that is inconsistent with the statutory mandate on CalRecycle to divert organic material from landfills rather than achieve a quantifiable GHG reduction.

Comment Number	Received From	Question/Comment	Response(s)
		group to do this work and ensure that it is oriented to building markets rather than slowing down necessary further market development.	
3444	Noble, D., Asociation of Compost Producers	Add “certified compost”, “compost end-use products” to the definitions.	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. However, CalRecycle disagrees with adding the specific terms listed in the comment due to lack of conversion factors and uncertain landfill diversion of feedstock for these products.
3445	Noble, D., Asociation of Compost Producers	Beyond only compost and biogas, don’t inadvertently limit bioproduct markets made from bioresource residuals (organic waste), e.g. mulch, woody material (composted overs, or uncomposted woodchips), biofertilizers, biochar, animal feed, materials and chemicals all exist in the current markets alongside compost and biogas and need to be recognized in these regulations.	Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards. CalRecycle disagrees with the recommendation to allow the various additional products mentioned in the comment due to lack of verifiable conversion factors. The broad range of potential products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.
3446	Noble, D., Asociation of Compost Producers	Make the “Organic wastes” definitions consistent in various parts of the regulation. A specific example is given with wording recommendations,	CalRecycle declines making a change to the "organic waste" definition because the comment doesn't indicate why a change is necessary.
3447	Noble, D., Asociation of Compost Producers	Add “Market Capacity” in addition to “Production Capacity” in a new definitions to make “Organic Waste Recycling Capacity” a balanced definition, referring to both “supply” and “demand”.	CalRecycle declines the suggestion because these are terms that do not appear in any meaningful way in the regulations.
3448	Noble, D., Asociation of Compost Producers	Contamination: Measuring contamination is key to determining the difference between a feedstock (unrefined organic waste, aka bioresource) and a finished, purified, refined bioproducts (e.g. compost end-use products, biogas, animal feed, etc.) measurable product purity specifications and standards, and a “waste” that must be landfilled.	Comment noted. Comment is not commenting on the regulatory language.
3449	Noble, D., Asociation of Compost Producers	Procurement: Procurement of bioproducts is further articulated in the following specific recommendations.	Comment noted. This comment is introducing another subsequent comment
3450	Noble, D., Asociation of Compost Producers	Add this definition.... “Certified Compost” – compost that has been tested for all the key parameters of what makes acceptable compost, e.g. the “Seal of Testing Assurance” and manufactured at a permitted compost facility. [for reference see <a href="http://www.certifiedcompost.com">www.certifiedcompost.com</a> ] Rationale: “Organic waste” is defined and used throughout this regulation package. While that’s acceptable, the industry terminology that’s being adopted in the marketplace is “bioresources”, or “bioresiduals”. The products that are manufactured from bioresources are being called “bioproducts”. As indicated in the	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. However, CalRecycle disagrees with adding the specific terms listed in the comment due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of potential products made from “bioresources” raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the

The broad range of potential products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>
3452	Noble, D., Asociation of Compost Producers	<p>Add this definition....  “Chip &amp; grind material” – these definitions already exist in other statutes, it is not composted, but is sold in the market as a viable “mulch” (ground cover) to increase water infiltration and soil moisture retention, as well as for aesthetic enhancement of landscapes.  Rationale: “Organic waste” is defined and used throughout this regulation package. While that’s acceptable, the industry terminology that’s being adopted in the marketplace is “bioresources”, or “bioresiduals”. The products that are manufactured from bioresources are being called “bioproducts”. As indicated in the above definitions, there are at least half a dozen bioproduct categories of value in addition to “compost” and “biogas”; for example: mulch, woody material (composted overs, or uncomposted woodchips), biofertilizers, biochar, animal feed, materials and chemicals. For these regulations to be relevant into the 2020’s, we recommend the inclusion of these bioproduct definitions in these regulation package. Otherwise, they will start to appear out of date, almost as they are written.</p>	<p>Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards. CalRecycle disagrees with replacing “organic waste” with the suggested terms listed in the comment. “Organic waste” is the term used in statute.</p>
3453	Noble, D., Asociation of Compost Producers	<p>Add this definition....  “Compost Overs” – the large wood material particles that have been composted in a permitted compost facility but are larger than 2”, i.e. 2” plus composted material.  Rationale: “Organic waste” is defined and used throughout this regulation package. While that’s acceptable, the industry terminology that’s being adopted in the</p>	<p>CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants.</p>

3457	Noble, D., Asociation of Compost Producers	<p>Organic Waste Recycling Capacity Add an explicit definition for “Organic Waste Recycling Capacity” in Section 18982. Definitions, specifically: 51) “Organic Waste Recycling Capacity” means processing capacity for organic wastes generated within a specific Jurisdiction, called ‘supply capacity’ and the land area or other product use capacity (e.g. for biogas, biochar, etc.) that exists within a specific Jurisdiction. Net-zero capacity in a jurisdiction would mean that the supply = demand for all bioresources generated and bioproducts produced in that jurisdiction. Rationale: There is a “market capacity” problem at the local level by not accounting for ALL the organic residuals (waste) that are generated in each County or jurisdiction, since all those materials must be recycled, i.e. not landfilled, or polluting air, water or land. The conscientious balancing of both supply and demand will make a given plan transparent for each County and the jurisdictions within that County.</p>	<p>CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. However, estimating how much capacity is needed to handle the amount of organics generated in a jurisdiction or region is dependent on organic waste generation not market availability. In addition, there is no need for a new definition as proposed. CalRecycle already defines organic waste in Section 18982(a)(46) and further delineates how this applies to the capacity planning requirements in Section 18992.1. Also, CalRecycle cannot expand the universe of organic waste to include materials that are not landfilled and thus are outside the scope of SB 1383. However, CalRecycle has already worked with the Governor’s Office of Planning and Research to include capacity planning and related issues into the General Plan Guidelines (<a href="https://www.calrecycle.ca.gov/organics/slcp">https://www.calrecycle.ca.gov/organics/slcp</a>).</p>
3458	Noble, D., Asociation of Compost Producers	<p>jurisdictions within that County. Difference in definition between “Section 18982. Definition (46)” and Section 18992.1. Organic Waste Recycling Capacity Planning special definition (e) Section 18982. Definitions (46) “Organic waste” means solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood, paper products, printing and writing paper, manure, biosolids, digestate, and sludges. [the bolded items in this definition do not exist in the abridged definition used for capacity planning] Recommend: Add “Compostable materials” to the above definition of “organic waste”</p>	<p>CalRecycle declines to add "compostable materials" to the definition of organic waste. Virtually all organic waste is compostable material so it is unclear why the addition is necessary if it is implicit in the existing definition.</p>
3459	Noble, D., Asociation of Compost Producers	<p>Section 18992.1. Organic Waste Recycling Capacity Planning (e) For the purposes of this section, organic waste shall only include the following type of organic waste: food, green waste, landscape and pruning waste, wood, paper products, printing and writing paper, digestate and biosolids. Question: Why have the “organic textiles and carpets, lumber, manure, and sludges” been excluded from the capacity planning at the county level? Comment: There is a compost “market capacity” problem at the local level by not accounting for ALL the organic residuals (waste) that are generated in each County, since all those materials must be recycled, i.e. not landfilled, or polluting air, water</p>	<p>CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. However, estimating how much capacity is needed to handle the amount of organics generated in a jurisdiction or region is dependent on organic waste generation not market availability. In addition, there is no need for a new definition as proposed. CalRecycle already defines organic waste in Section 18982(a)(46) and further delineates how this applies to the capacity planning requirements in Section 18992.1. Also, CalRecycle cannot expand the universe of organic waste to include materials that are not landfilled and thus are outside the scope of SB 1383. However, CalRecycle has already worked</p>

		<p>or land. Even if they are not currently landfilled, their recycling must collectively not harm the environment. By integrating organic waste from agriculture (especially manure) and natural &amp; working lands (e.g. vegetation management on power lines, or dead trees in the forests, etc.) organics residual planning can occur within a “whole systems perspective” ... both rural and municipal market areas. Especially in Counties where there is a large area of rural lands (e.g. Sonoma, Marin, Ventura, etc.) relative to urban and suburban homes and residences, the balance will tip toward those lands and markets. This is in contradistinction to the highly urbanized counties, e.g. Orange, San Francisco, Alameda, etc. This problem does not refer to the 22 or so of the designated “rural” Counties that are already potentially exempt, as they have much more land for managing these materials, so they wouldn’t either be landfilled, or improperly land applied.</p> <p>Recommendation:</p> <ol style="list-style-type: none"> <li>1. Delete: (e) For the purposes of this section, organic waste shall only include the following type of organic waste: food, green waste, landscape and pruning waste, wood, paper products, printing and writing paper, digestate and biosolids.</li> <li>2. Add new Definition (in Section 18982. Definitions) – “organic waste recycling infrastructure capacity” – is both the organic waste processing (or manufacturing/supply), e.g. compost production, anerobic digestion, etc., and the available land area, energy, animal feed, etc. (i.e. market capacity, or demand potential) for recycled organic products.</li> </ol> <p>Rationale: Manage ALL the organic wastes at the County jurisdiction level that are both generated as well as imported into each County, including their respective jurisdictions who are both generating organic waste, as well as procuring the bioproducts (compost, renewable natural gas, and any other bioproducts, e.g. animal feed, biochar, biomaterials, biochemicals, etc.)</p>	<p>with the Governor’s Office of Planning and Research to include capacity planning and related issues into the General Plan Guidelines (<a href="https://www.calrecycle.ca.gov/organics/slcp">https://www.calrecycle.ca.gov/organics/slcp</a>).</p>
3460	Noble, D., Asociation of Compost Producers	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>Recommendation:</p> <ol style="list-style-type: none"> <li>1. Delete: <del>(e) For the purposes of this section, organic waste shall only include the following type of organic waste: food, green waste, landscape and pruning waste, wood, paper products, printing and writing paper, digestate and biosolids.</del></li> <li>2. Add new Definition (in Section 18982. Definitions) “organic waste recycling infrastructure capacity” – is both the organic waste processing (or manufacturing/supply), e.g. compost production, anerobic digestion, etc., and the available land area, energy, animal feed, etc. (i.e. market capacity, or demand potential) for recycled organic products.</li> </ol> <p>Rationale: Manage ALL the organic wastes at the County jurisdiction level that are both generated as well as imported into each County, including their respective jurisdictions who are both generating organic waste, as well as procuring the bioproducts (compost, renewable natural gas, and any other bioproducts, e.g. animal feed, biochar, biomaterials, biochemicals, etc.)</p>	<p>CalRecycle declines the suggested change as unnecessary. The existing language serves the purpose of reflecting the types of organic waste that should be considered in capacity planning and is necessary to ensure that jurisdictions do not estimate capacity to process types of organic waste that aren't typically part of the solid waste collection stream.</p>

Comment Number	Received From	Question/Comment	Response(s)
3461	Noble, D., Asociation of Compost Producers	<p>CONTAMINATION</p> <p>Recommendation: Add new (e) to replace the (e) that we struck through above. [See Comment 3459] Add as follows: (e) Each public jurisdiction generating more than 250 tons per month shall pay the receiving compostable materials handling operation (CMHO) \$250.00 to perform a load-check once per quarter. The CMHO shall check a visibly contaminated load once per quarter for each Public Jurisdiction. The load shall be separated between Compostable organics and Non-compostable with the non-compostable's then weighed and reported as a percentage of the total gross load weight. These two numbers shall be reported to CalRecycle and EA/LEA. Alternatively, this could be added to the "Article 13. Reporting. Section 18994.1. Initial Jurisdiction Compliance Report", or one of the other reporting sections.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
3462	Noble, D., Asociation of Compost Producers	<p>Section 18992.1 Additional Topic: Waste Decontamination Strategy</p> <p>Some general concepts that we haven't put into regulatory language to be considered:</p> <p>Counties shall develop strategies to decontaminate organic waste by reducing glass, plastic, concrete or non-compostable materials from organic waste streams. Counties shall seek decontamination proposals from waste haulers and waste generators and shall coordinate planning steps, community outreach and contamination measurement practices.</p> <p>Counties shall coordinate planning efforts with jurisdictions and submit written decontamination plans to their county waste administrators. Counties will submit a report of decontamination planning to CalRecycle along with descriptions of how to measure and gather decontamination statistics.</p> <p>Rationale: decontamination negatively impacts costs and value of products and thereby influences the successful commercial diversion implementation of organics.</p>	<p>A change in the regulatory text is not necessary. CalRecycle agrees that contamination of organic waste impacts product value and the successful diversion of organics from landfills. CalRecycle already has incorporated specific provisions that responsible cities and counties must implement to reduce contamination, along with provisions related to solid waste facility and hauler responsibilities to reduce contamination. The suggestions in this comment would place more responsibility at the County level only. This is inappropriate because County governments are only responsible for the unincorporated areas of the County, not for programs run by individual cities.</p>
3463	Noble, D., Asociation of Compost Producers	<p>Section 18993.1. Recovered Organic Waste Product Procurement Target</p> <p>(b) (1) Per capita procurement target = 0.07 tons of organic waste per California resident per year.</p> <p>Comment: We are generally supportive of this new metric. Some numbers of representative cities for procurement: SEE CHART IN ORIGINAL LETTER.</p> <p>While these numbers seem reasonable, they may be a bit low to meet the state's recycling goals. However, once they are tracked for a few year, we will all have a better idea of who workable this is.</p> <p>(f) For the purposes of this article, the recovered recycled organic waste products that must be procured are:</p> <p>Recommendation: Add the following words to this item (f) [this is supported by the two new recommended definitions of "Certified Compost" and "Compost end-use products":</p> <p>(1) Compost or Compost end-use products that has been tested and Certified at a permitted compost facility in California, specifically:</p>	<p>The per capita procurement target is appropriate as is; this was calculated using government's share of the statewide gross domestic product (GDP) and the projections of state population and organic waste diversion needed in 2025. In order to meet the 2025 organic waste diversion target mandated by SB 1383, jurisdictions will be required to procure a percentage of the diverted organic waste in the form of recovered organic waste products. As procurement will require local governments to create markets for these products, CalRecycle determined it would be appropriate to utilize the percentage of government's share of the statewide GDP, which has averaged 13% over the most recent 10 years of data from the United States Bureau of Economic Analysis, as the amount of diverted organic waste that must be procured by jurisdictions in the form of recovered organic waste products. Although higher procurement of recovered organic waste products by jurisdictions beyond the required per capita procurement target is encouraged, CalRecycle does not find it appropriate to increase this requirement beyond government's share of the GDP.</p> <p>CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(i) Submit the compost producer's compost technical data sheet including test results and seal of testing assurance certificate before application.</p> <p>(ii) Compost producers must be permitted by the Department of Resources Recycling and Recovery, Local Enforcement Agencies, and any other State and local agencies that regulate solid waste plants. If exempt from State permitting provisions, the composting plant must certify it complies with the guidelines and procedures for production of compost under 14 CA Code of Regulations, Division 7, Chapter 3.1. Compost producers must be participants in the United States Composting Council's seal of testing assurance program. [this could be added to a new definition of "permitted compost producer"</p> <p>(2) Renewable natural gas transportation fuel</p> <p>(3) Other biorproducts approved by the Department, based on agreed upon standards for production and end-use applications.</p>	<p>However, CalRecycle disagrees with adding the specific terms listed in the comment due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of potential products made from "bioresources" raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>
3464	Noble, D., Asociation of Compost Producers	<p>We recommend the following concept that needs to be put into regulatory wording: Section 18993.1 Additional Topic: Recovered Organic Waste Products Procurement</p> <p>The Department shall identify and work with procurement administrators in city and county jurisdictions to coordinate the acquisition of bioproducts ["waste products"] derived from bioresources ["organic diversion waste"] from landfills including:</p> <ul style="list-style-type: none"> <li>• Procurement targets such as regional city parks and recreation administrators, public school district facilities managers, public golf course managers, government natural lands managers, and municipal road departments; for applications including but not limited to:</li> <li>• Water efficient landscaping, stormwater management and erosion control, fire remediation, etc.</li> </ul> <p>The Department shall conduct an outreach program to procurement targets and create a report of waste products that have been successfully procured by local targets.</p> <p>The Department shall also contact potential procurement targets of energy products (e.g. municipal bus lines, county and city vehicles powered by natural gas, public utility agency vehicles, and city maintenance vehicles powered by natural gas) created from waste organics and report results in the same way described in the procurement targets mentioned above.</p> <p>Impact/Rationale: By contacting other government agencies in the jurisdiction, procurement of products made from diverted organics waste become more sustainable and can find a long-term market to support the organics diversion effort.</p>	<p>CalRecycle generally agrees that outreach and education to procurement administrators is beneficial, but will not be making formal changes to the regulatory language. After the regulations are finalized, CalRecycle plans to provide additional guidance and tools to jurisdictions.</p>
3823	Noble, D., Association of Compost Producers	<p>Again, we want to reinforce our context differences between CalRecycle and generically as material management "rules-based" vs. a GHG reduction "performance-based" approach. The comments reinforced in this letter which we will express at the Public Hearing, are focused on some key definition changes and will serve to integrate the actions of the compost producer industry with their local jurisdictions.</p>	<p>Comment noted. It is beyond CalRecycle's authority to put GHG reduction performance requirements in these regulations since regulatory authority is limited to organic waste diversion from landfills.</p>

Comment Number	Received From	Question/Comment	Response(s)
3824	Noble, D., Association of Compost Producers	In general we see three main approaches to improve these regulations to make them more integrated and performance based, at the local level: 1. "Capacity" should include both supply and demand, not merely supply.	CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. However, estimating how much capacity is needed to handle the amount of organics generated in a jurisdiction or region is dependent on organic waste generation not market availability. In addition, there is no need for a new definition as proposed. CalRecycle already defines organic waste in Section 18982(a)(46) and further delineates how this applies to the capacity planning requirements in Section 18992.1. Also, CalRecycle cannot expand the universe of organic waste to include materials that are not landfilled and thus are outside the scope of SB 1383. However, CalRecycle has already worked with the Governor's Office of Planning and Research to include capacity planning and related issues into the General Plan Guidelines ( <a href="https://www.calrecycle.ca.gov/organics/slcp">https://www.calrecycle.ca.gov/organics/slcp</a> ).
3825	Noble, D., Association of Compost Producers	In general we see three main approaches to improve these regulations to make them more integrated and performance based, at the local level: 2. Operationally integrate supply planning with demand assessment and planning (procurement)	A change to the regulatory text is not necessary. A text change is not necessary for the following reason. This comment suggests that in planning to identify organic waste recycling capacity that is verifiable available to the jurisdiction, a finite and knowable unit of measure, jurisdictions should also be required to estimate end-use capacity that exists within the jurisdiction for products made through the recycling of organic waste. CalRecycle disagrees with the given rationale, and finds that such a requirement would impose a significant burden on local jurisdictions while providing little tangible value. Such an assessment would likely require significant investment in outside consulting services to conjecture estimates that cannot be proven accurate. Any value that is provided would be difficult to justify as essential to achieving the SB 1383 targets. As noted above organic waste recycling capacity, e.g. throughput at organic waste recycling facilities that is permitted and verifiably available to a jurisdiction is finite and quantifiable. Given that, local governments are required to provide services that collect and transport organic waste to organic waste recycling facilities, it is reasonable and justifiable to require jurisdictions to estimate current and future capacity at those facilities that is available to the jurisdiction. These estimates have a tangible relationship to the other requirements of this article and will help the state and jurisdictions estimate the need for additional and expanded capacity on a regular basis. Regarding estimates of end-use or "supply capacity," while local jurisdictions are subject to procurement requirements, they are not required to secure end-uses for all of the recovered organic waste products developed from the organic waste they generate. The premise of requiring jurisdictions to estimate "supply capacity" appears to assume that all recycled organic waste products must be used in their home jurisdiction. While that is a desirable outcome, it is not a requirement of the regulations.
3826	Noble, D., Association of Compost Producers	In general we see three main approaches to improve these regulations to make them more integrated and performance based, at the local level: 3. Collaborate with local stakeholders to implement, with guidance from CalRecycle	Comment noted. The commenter is suggesting that CalRecycle provide collaborative guidance to implement the regulations but does not make a specific suggestion on regulatory language or regulatory process.
3827	Noble, D., Association of Compost Producers	1. Article 11 - Capacity Building a. Add "Capacity" = Supply Capacity + Market Capacity! Do this because "capacity" is both "supply" and "demand", NOT merely supply. See specific definition recommendation below.	CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. However, estimating how much capacity is needed to handle the amount of organics generated in a jurisdiction or region is dependent on organic waste generation not market availability. In addition, there is no need for a new definition as

			<p>proposed. CalRecycle already defines organic waste in Section 18982(a)(46) and further delineates how this applies to the capacity planning requirements in Section 18992.1.</p> <p>Also, CalRecycle cannot expand the universe of organic waste to include materials that are not landfilled and thus are outside the scope of SB 1383. However, CalRecycle has already worked with the Governor’s Office of Planning and Research to include capacity planning and related issues into the General Plan Guidelines (<a href="https://www.calrecycle.ca.gov/organics/slcp">https://www.calrecycle.ca.gov/organics/slcp</a>).</p>
3828	Noble, D., Association of Compost Producers	<p>b. Proactively collaborate with stakeholders to implement the “capacity plan”</p> <ul style="list-style-type: none"> <li>☐ ACP to collaborate both with CalRecycle at the state level, and jurisdictions at the local level to provide ongoing assistance to integrate “capacity (supply + demand) planning” with local planning and development efforts. This can be accomplished via ACP’s regional membership support network)</li> <li>☐ Develop relationship to General Plans - Guidelines - as a “Project” within the General Plan. There is a need to integrate capacity planning with other planning, see the local General Plans, see “OPR_COMPLETE_7.31.17”) <a href="http://www.calrecycle.ca.gov/publications/documents/recycling/2011009.pdf">www.calrecycle.ca.gov/publications/documents/recycling/2011009.pdf</a></li> <li>☐ Consider the use of “Regenerative Development &amp; Design” as a process for “General Planning” and “City/County/Regional” development, including organics facilities and compost markets.</li> </ul>	<p>CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. However, estimating how much capacity is needed to handle the amount of organics generated in a jurisdiction or region is dependent on organic waste generation not market availability. In addition, there is no need for a new definition as proposed. CalRecycle already defines organic waste in Section 18982(a)(46) and further delineates how this applies to the capacity planning requirements in Section 18992.1.</p> <p>Also, CalRecycle cannot expand the universe of organic waste to include materials that are not landfilled and thus are outside the scope of SB 1383. However, CalRecycle has already worked with the Governor’s Office of Planning and Research to include capacity planning and related issues into the General Plan Guidelines (<a href="https://www.calrecycle.ca.gov/organics/slcp">https://www.calrecycle.ca.gov/organics/slcp</a>).</p>
3829	Noble, D., Association of Compost Producers	<p>2. Article 12 Procurement Regulations</p> <p>a. Since the recycled organics (bioproducts, especially compost) markets are replacing the landfilling of these resources by beneficial use, jurisdictions need to work together with local compost producers on this. They can’t simply leave it up to the Private Sector, especially given the Public Sector, including County, State, and Federal Lands, have more land mass than the entire private sector combined!</p> <ul style="list-style-type: none"> <li>☐ Build on the “draftsb1383infrastructurandmarketanalysisreport”</li> <li>☐ Build compost use/applications (aka markets) that address many needs that Municipalities have</li> </ul>	<p>CalRecycle generally agrees that jurisdictions should work together with producers of recovered organic waste products to build markets and plan for the procurement requirements. If the written “agreements” made with a direct service provider, or other manner of written authorization to procure on behalf of a jurisdiction, contains the necessary aspects of a typical contract, this may be considered a contract between the direct service provider and jurisdiction. Regardless of the term used, whether it be contract, agreement, etc., CalRecycle requires jurisdictions to obtain this written record, which should contain typical components of a contract, such that it is a written document binding two entities with terms and conditions. This is not only necessary to ensure a legally binding obligation between the direct service provider and jurisdiction, but is in the best interest of the jurisdiction, as it is they who remain ultimately responsible for carrying out their specific jurisdictional responsibilities under Chapter 12: Short-lived Climate Pollutants. Section 18981.2 outlines this implementation requirement on jurisdictions and establishes that if a jurisdiction designates a public or private entity to fulfill any of its responsibilities under Chapter 12, such as procurement, the jurisdiction must maintain appropriate records of all agreements and contracts, or other records, regarding the designation [see Section 18981.2, subdivision (d)].</p> <p>A designee, such as a hauler, is eligible to count towards a jurisdiction’s procurement target. The current draft regulations allow a jurisdiction to meet its recovered organic waste product procurement target through a direct service provider, who procures recovered organic waste product(s) on behalf of that jurisdiction. Section 18993.1(e)(2) clarifies this and allows a separate entity that has a written contract or agreement with the jurisdiction to procure recovered organic waste product(s) to help fulfill the jurisdiction’s procurement target. Similarly, Section 18981.2 establishes that a jurisdiction may designate a public or private entity to fulfill specific</p>

			jurisdictional responsibilities outlined in Chapter 12: Short-lived Climate Pollutants, which includes procurement of recovered organic waste products. As Section 18981.2(b)(1) and the definition of “designee” [Section 18982 (a)(15)] establish, this designation can be made through a contract with a hauler or other public or private entity.

3831	Noble, D., Association of Compost Producers	Since the local carbon, nutrient and water economy are already integrated and circular at the local level, the application uses development will need to be integrated throughout each local organics value cycle, baring any other barriers to market integration that keep that from being environmentally sound. That means that Article 12 must not only be integrated with Article 11 (supply and demand) it must be integrated with the other articles in this regulation: Article 3. Organic Waste Collection Services Article 4. Education and Outreach Article 5. Generators of Organic Waste Article 6. Biosolids Generated at a Publicly Owned Treatment Works (POTW) Article 7. Regulation of Haulers Article 8. Cal-Green Building Standards Article 9. Locally Adopted Standards and Policies Lastly, this should also be integrated with the local compost producers, linking local supply with demand.	A change to the regulatory text is not necessary. A text change is not necessary for the following reason. This comment suggests that in planning to identify organic waste recycling capacity that is verifiable available to the jurisdiction, a finite and knowable unit of measure, jurisdictions should also be required to estimate end-use capacity that exists within the jurisdiction for products made through the recycling of organic waste. CalRecycle disagrees with the given rationale, and finds that such a requirement would impose a significant burden on local jurisdictions while providing little tangible value. Such an assessment would likely require significant investment in outside consulting services to conjecture estimates that cannot be proven accurate. Any value that is provided would be difficult to justify as essential to achieving the SB 1383 targets. As noted above organic waste recycling capacity, e.g. throughput at organic waste recycling facilities that is permitted and verifiably available to a jurisdiction is finite and quantifiable. Given that, local governments are required to provide services that collect and transport organic waste to organic waste recycling facilities, it is reasonable and justifiable to require jurisdictions to estimate current and future capacity at those facilities that is available to the jurisdiction. These estimates have a tangible relationship to the other requirements of this article and will help the state and jurisdictions estimate the need for additional and expanded capacity on a regular basis. Regarding estimates of end-use or “supply capacity,” while local jurisdictions are subject to procurement requirements, they are not required to secure end-uses for all of the recovered organic waste products developed from the organic waste they generate. The premise of requiring jurisdictions to estimate “supply capacity” appears to assume that all recycled organic waste products must be used in their home jurisdiction. While that is a desirable outcome, it is not a requirement of the regulations.
3832	Noble, D., Association of Compost Producers	Add seven (7) new definitions: “Certified Compost” – compost that has been tested for all the key parameters of what makes acceptable compost, e.g. the “Seal of Testing Assurance” and manufactured at a permitted compost facility. [for reference see <a href="http://www.certifiedcompost.com">www.certifiedcompost.com</a> ]	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants.
3833	Noble, D., Association of Compost Producers	“Compost end-use products” – end use products that are made with compost as a primary ingredient that has been manufactured and/or formulated using Certified Compost; including but not limited to compost soil blends, garden soil amendment, potting soil, bioswale engineered soils, turf grass top dressing, compost erosion control socks, etc.	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. Once the regulations are finalized, CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products. CalRecycle disagrees with the need to add definitions or examples of specific end uses in the regulatory language as recommended. For example, a jurisdiction has the flexibility to use

Comment Number	Received From	Question/Comment	Response(s)
			compost for its local needs, which could be as varied as erosion control, school and community gardens, or a compost giveaway. It is overly burdensome and not feasible to list all the possible compost uses in the regulations.
3834	Noble, D., Association of Compost Producers	“Chip & grind material” – these definitions already exist in other statutes, it is not composted, but is sold in the market as a viable “mulch” (ground cover) to increase water infiltration and soil moisture retention, as well as for aesthetic enhancement of landscapes.	Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
3835	Noble, D., Association of Compost Producers	“Compost Overs” – the large wood material particles that have been composted in a permitted compost facility but are larger than 2”, i.e. 2” plus composted material.	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. Once the regulations are finalized, CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products. CalRecycle disagrees with the need to add definitions or examples of specific end uses in the regulatory language as recommended. For example, a jurisdiction has the flexibility to use compost for its local needs, which could be as varied as erosion control, school and community gardens, or a compost giveaway. It is overly burdensome and not feasible to list all the possible compost uses in the regulations.
3836	Noble, D., Association of Compost Producers	“Compostable materials” – means any bioresource and bioproduct, e.g. eating utensils, service ware, etc., that is compostable in a permitted compost facility.	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. Once the regulations are finalized, CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products. CalRecycle disagrees with the need to add definitions or examples of specific end uses in the regulatory language as recommended. For example, a jurisdiction has the flexibility to use compost for its local needs, which could be as varied as erosion control, school and community gardens, or a compost giveaway. It is overly burdensome and not feasible to list all the possible compost uses in the regulations.
3837	Noble, D., Association of Compost Producers	“Bioproduct” – any product manufactured from a bioresource feedstock, includes but is not limited to: compost, chip & grind material (mulch), composted overs, biofertilizer, biochar, biogas, biochemicals, biomaterials.	CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. Once the regulations are finalized, CalRecycle will develop tools to aid jurisdictions with procurement-related questions, including examples of eligible recovered organic waste products. 3838	Noble, D., Association of Compost Producers	<p>“Bioresource” – another term for “organic waste” (denotes a ‘resource’, rather than a ‘waste’).</p> <p>Rationale: “Organic waste” is defined and used throughout this regulation package. While that’s acceptable, the industry terminology that’s being adopted in the marketplace is “bioresources”, or “bioresiduals”. The products that are manufactured from bioresources are being called “bioproducts”. As indicated in the above definitions, there are at least half a dozen bioproduct categories of value in addition to “compost” and “biogas”; for example: mulch, woody material (composted overs, or uncomposted woodchips), biofertilizers, biochar, animal feed, materials and chemicals. For these regulations to be relevant into the 2020’s, we recommend the inclusion of these bioproduct definitions in these regulation package. Otherwise, they will start to appear out of date, almost as they are written.</p>	<p>CalRecycle has added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. 3839	Noble, D., Association of Compost Producers	<p>Add an explicit definition for “Organic Waste Recycling Capacity” in Section 18982. Definitions, specifically:</p> <p>(51) “Organic Waste Recycling Capacity” means processing capacity for organic wastes generated within a specific Jurisdiction, called ‘supply capacity’ and the land area or other product use capacity (e.g. for biogas, biochar, etc.) that exists within a specific Jurisdiction. Net-zero capacity in a jurisdiction would mean that the supply = demand for all bioresources generated and bioproducts produced in that jurisdiction.</p>	<p>CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. However, estimating how much capacity is needed to handle the amount of organics generated in a jurisdiction or region is dependent on organic waste generation not market availability. In addition, there is no need for a new definition as proposed. CalRecycle already defines organic waste in Section 18982(a)(46) and further delineates how this applies to the capacity planning requirements in Section 18992.1.</p>
3840	Noble, D., Association of Compost Producers	<p>Difference in definition between “Section 18982. Definition (46)” and Section 18992.1. Organic Waste Recycling Capacity Planning special definition (e) Section 18982. Definitions</p> <p>(46) “Organic waste” means solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood, paper products, printing and writing paper, manure, biosolids, digestate, and sludges. [the bolded items in this definition do not exist in the abridged definition used for capacity planning]</p> <p>Recommend: Add “Compostable materials” to the above definition of “organic waste”</p>	<p>Also, CalRecycle cannot expand the universe of organic waste to include materials that are not landfilled and thus are outside the scope of SB 1383. However, CalRecycle has already worked with the Governor’s Office of Planning and Research to include capacity planning and related issues into the General Plan Guidelines (<a href="https://www.calrecycle.ca.gov/organics/slcp">https://www.calrecycle.ca.gov/organics/slcp</a>).</p>
3841	Noble, D., Association of Compost Producers	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>(e) For the purposes of this section, organic waste shall only include the following type of organic waste: food, green waste, landscape and pruning waste, wood, paper products, printing and writing paper, digestate and biosolids.</p> <p>Question: Why have the “organic textiles and carpets, lumber, manure, and sludges” been excluded from the capacity planning at the county level?</p> <p>Comment: There is a compost “market capacity” problem at the local level by not accounting for ALL the organic residuals (waste) that are generated in each County, since all those materials must be recycled, i.e. not landfilled, or polluting air, water or land. Even if they are not currently landfilled, their recycling must collectively not harm the environment. By integrating organic waste from agriculture (especially</p>	<p>CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. 		<p>manure) and natural &amp; working lands (e.g. vegetation management on power lines, or dead trees in the forests, etc.) organics residual planning can occur within a “whole systems perspective” ... both rural and municipal market areas. Especially in Counties where there is a large area of rural lands (e.g. Sonoma, Marin, Ventura, etc.) relative to urban and suburban homes and residences, the balance will tip toward those lands and markets. This is in contradistinction to the highly urbanized counties, e.g. Orange, San Francisco, Alameda, etc. This problem does not refer to the 22 or so of the designated “rural” Counties that are already potentially exempt, as they have much more land for managing these materials, so they wouldn’t either be landfilled, or improperly land applied.</p> <p>Recommendation: 1) Delete: (e) For the purposes of this section, organic waste shall only include the following type of organic waste: food, green waste, landscape and pruning waste, wood, paper products, printing and writing paper, digestate and biosolids</p>	
3842	Noble, D., Association of Compost Producers	<p>2. Add new Definition (in Section 18982. Definitions) – “organic waste recycling infrastructure capacity” – is both the organic waste processing (or manufacturing/supply), e.g. compost production, anerobic digestion, etc., and the available land area, energy, animal feed, etc. (i.e. market capacity, or demand potential) for recycled organic products.</p> <p>Rationale: Manage ALL the organic wastes at the County jurisdiction level that are both generated as well as imported into each County, including their respective jurisdictions who are both generating organic waste, as well as procuring the bioproducts (compost, renewable natural gas, and any other bioproducts, e.g. animal feed, biochar, biomaterials, biochemicals, etc.)</p>	<p>CalRecycle understands that capacity building recycling ultimately depends on the availability of markets for the products of any new capacity. However, estimating how much capacity is needed to handle the amount of organics generated in a jurisdiction or region is dependent on organic waste generation not market availability. In addition, there is no need for a new definition as proposed. CalRecycle already defines organic waste in Section 18982(a)(46) and further delineates how this applies to the capacity planning requirements in Section 18992.1.</p>
3375	Northrup, L., City of Agoura Hills	<p>New infrastructure capacity and planning: As you are aware, California lacks sufficient capacity today to be able to meet the needs for new organic waste processing. While many cities recognize and support the collection of organics, many cities have expressed concern over the challenge to comply with organic waste diversion requirements due to a lack of waste disposal infrastructure, such as bio-digesters, across the state. Moreover, where the infrastructure does exist, capacity is limited.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>

Comment Number	Received From	Question/Comment	Response(s)
3376	Northrup, L., City of Agoura Hills	<p>Funding: Lack of sufficient funds continues to be among the major challenge local governments face in the effort to implement new organic waste diversion programs. The City of Agoura Hills and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade" proceeds can be used to help offset the costs for developing organic recycling infrastructure. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities, such as updating bins and labels, as well as providing education and outreach.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3377	Northrup, L., City of Agoura Hills	<p>Enforcement: The regulations allow for Corrective Action Plans and establishes extended timelines and milestones for achieving compliance. We appreciate the addition of a pathway to compliance. This is a step in the right direction and we urge careful consideration of the differences among local jurisdictions, as well as the variety of community stakeholders, and infrastructure challenges a local jurisdiction may face.</p>	<p>Comment noted, the comment does not recommend a regulatory change.</p>
3378	Northrup, L., City of Agoura Hills	<p>Procurement. New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products targets set by CalRecycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations. Again, as the City does support the need for organic waste collection, we respectfully ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding.</p> <p>The City of Agoura Hills further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1 ( e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even were a fee to survive scrutiny</p>	<p>CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.</p> <p>First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, "No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code." Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a "tax" under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe "any fees" that may in the future be imposed by the numerous local jurisdictions in California as "likely" to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>under Prop. 26, it is questionable whether a city would have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.) This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, the City of Agoura Hills requests that the procurement regulations be addressed in a separate regulatory proceeding.</p>	<p>how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>Finally, according to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate. Regarding "substantial additional costs", a change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in "substantial additional costs".</p> <p>CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p>
3379	Northrup, L., City of Agoura Hills	<p>Penalties: The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, this regulation puts the cart before the horse by designing penalties before the sticking points regulation puts the cart before the horse by designing penalties before the sticking points and needs of generators are understood. We encourage CalRecycle to continue working through the programmatic scheme before implementing an appropriate set of penalties, particularly since programs have until 2022 to be implemented. We ask that CalRecycle adopt penalties in a second set of regulations to take effect at a future date</p>	<p>CalRecycle disagrees with the comment's proposal to consider compost "overs" a recovered organic waste product. The procurement requirements are designed to help the state achieve the organic waste disposal targets by requiring the procurement of products intentionally created through the recycling of organic waste. This helps achieve the statutory targets by incentivizing recycling of organic waste such as digestate, food waste, green material which through their use as feedstock to create recovered organic waste products that can be procured and count toward a jurisdiction's recovered organic waste product procurement target.</p> <p>All of the methods for creating recovered organic waste products identified in the regulations can also result in byproducts or rejected material that are or include organic waste as defined in the regulations. "Overs", or material typically screened out compost piles, are considered a byproduct. The rejected materials and byproducts of organic waste recycling may include or be comprised entirely of organic waste; however, they are not in and of themselves "recovered organic waste products" as defined in the regulations. Organic waste that is present at a compost facility is not compost, much less a recovered organic waste product simply because it is present at the facility. Large wood logs are an organic waste, as defined in the regulation. In this case the logs rejected from the composting process as overs, could be further processed to create mulch. Mulch produced at one of the facilities identified in 18993.1(f)(4)(B) is considered a recovered organic waste product, however the feedstock for the mulching operation, which may be identical to rejected byproducts from a transfer operation or composting operation (e.g. the large wood log from the composting overs) is organic waste. The feedstock of organic waste is not a recovered organic waste product as defined in the regulation.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>Further there are technical challenges with considering byproducts of organic waste processing as recovered organic waste products. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors. Each recovered organic waste product has a conversion factor that is used to determine the amount of a product that must be procured in order for a jurisdiction to meet the recovered organic waste product procurement target. Such conversion factors cannot uniformly be established for byproducts. Many byproducts are not wholly organic (e.g. overs may not include non-organic material mixed in with organic material which must be further screened out), and the generation of a ton of byproduct would vary dramatically by facility. A compost operation with a very clean uniform feedstock may produce fewer overs per ton of feedstock than a facility with heavily contaminated feedstock.</p>
5033	Nudd, G. Bay Area Air Quality Management District	<p>We recommend an expansion of the compliance options included under Article 12 (Procurement of Recovered Organic Waste Products). Section 18993.1 of the draft regulations contains a requirement that can be satisfied through procurement of one of the following products of organics recovery: (1) Compost, or (2) Renewable transportation fuel. We encourage CalRecycle to include procurement of these additional products as compliance options in subsection (f): (3) Biogas, (4) Renewable natural gas, (5) Biochar, and (6) Digestate. The draft text in subsection (g) states that "One ton of organic waste in a recovered organic waste product procurement target shall constitute: (A) 19 diesel gallon equivalents, or 'DGE,' of renewable transportation fuel. (B) 0.58 tons of compost." Data from industrial operations in the Bay Area suggest that one ton of organic feedstock may be equivalent to the following recovered organic product procurement targets: (C) 3,500 cubic feet of raw biogas, (D) 2,000 cubic feet of pipeline-compatible renewable natural gas, and (E) 0.3 tons of biochar, per ton of dry bio-feedstock. These trackable alternatives to compost and to renewable natural gas in transportation will increase compliance flexibility, market development opportunities, and the economic viability of organics recovery supply chains. They also align with State and local climate goals. For example, use of renewable natural gas in combined heat and power supports the California Clean Energy Jobs Plan goal of install 6500 megawatts of new capacity by 2030. Greater flexibility also supports the work of ABAG Power, a public natural gas procurement program in the San Jose-San Francisco-Oakland metropolitan area. A program of the Association of Bay Area Governments (ABAG), ABAG Power helps local governments procure natural gas for non-transportation, municipal services and is actively working to bring renewable natural gas into its portfolio to help cities achieve goals in their climate action plans. The inclusion of biogas and digestate options increases the feasibility of diverting waste stream to anaerobic digesters at wastewater treatment plants. It facilitates the conversion of biogas to electricity in commercially available fuel cells, thereby avoiding emissions in sensitive areas from on-site combustion in turbines, engines, or flares. The inclusion of digestate and biochar as solid material procurement</p>	<p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>Regarding biochar and digestate to be considered recovered organic waste products, CalRecycle disagrees. Counting digestate or biosolids resulting from in-vessel digestion as a recovered organic waste product, or considering them equivalent to compost or mulch could drastically undercut the effectiveness of the procurement regulations, jeopardizing the state's ability to achieve the</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>options both increases compliance flexibility and helps turn these potential wastes into marketable, nutrient-rich end product fertilizers and lightweight soil amendments. In sum, restricting compliance to only renewable transportation fuel and compost creates potential barriers to regional bioproduct market development and production of renewable bioenergy resources.</p>	<p>organic waste reduction targets. Under the current regulations 100 tons of organic waste could be used to produce 2,100 diesel gallon equivalents of renewable gas used as transportation fuel. If digestate were also considered a recovered organic waste product comparable to compost or mulch, the same facility that produced 2,100 diesel gallon equivalents from recycling that 100 tons organic waste, could also claim production of 100 tons of mulch or 58 tons of compost as recovered organic waste products that jurisdictions could procure in order to meet their procurement targets, regardless of how many tons of digestate actually resulted from the in-vessel digestion of the original organic waste feedstock. Under the worst case, this could cut the effectiveness of the procurement requirements in half. For example, a jurisdiction could procure products valued at 200 tons of organic waste feedstock, when those products were only created from 100 tons of landfill diverted organic waste. Digestate and biosolids, like other organic waste can be a feedstock to create compost or mulch, however digestate and biosolids alone is not equivalent to compost or mulch as defined in the regulations.</p> <p>Further there are technical challenges with considering byproducts of organic waste processing as recovered organic waste products. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors. Each recovered organic waste product has a conversion factor that is used to determine the amount of a product that must be procured in order for a jurisdiction to meet the recovered organic waste product procurement target. Such conversion factors cannot uniformly be established for byproducts. Many byproducts are not wholly organic (e.g. overs may not include non-organic material mixed in with organic material which must be further screened out), and the generation of a ton of byproduct would vary dramatically by facility. A compost operation with a very clean uniform feedstock may produce fewer overs per ton of feedstock than a facility with heavily contaminated feedstock. Further, as noted above this would allow a single ton of organic waste feedstock to be credited toward the procurement target twice. Once for the gas produced, and once for the resulting byproduct.</p>
5034	Nudd, G. Bay Area Air Quality Management District	<p>We encourage CalRecycle to consider universal replacement of the term "organic waste" with "organic materials" in these regulations. This wording choice better aligns with the legislative intent of SB 1383 in Section 3, which calls for a reduction in "statewide disposal of organic waste from the 2014 level." We interpret the word "waste" as an artifact of an economic system built around resource extraction, single-use products, and disposal. The regulatory purpose of SB 1383 should be to encourage a system based on life-cycle management and circular economy and to denote materials entering a process of recovery and reuse rather than wastage. For this reason, we encourage a switch to "organic materials" for recovery feedstocks.</p>	<p>Comment noted. CalRecycle agrees that organic waste should be viewed as a resource. The term organic waste is used in the enabling statute of SB 1383, CalRecycle disagrees with departing from the term used in statute.</p>
5035	Nudd, G. Bay Area Air Quality Management District	<p>We encourage a reporting requirement that tracks disposal of any and all materials sent to landfill. The extensive reporting required in these regulations supports diversion accounting. We encourage CalRecycle to assure that this accounting includes materials initially accepted at a diversion operation but</p>	<p>The AB 901 regulations that went into effect March 5, 2019 already capture the material that is sent to landfills. Disposal facilities are required to report to CalRecycle on the tons received for disposal from other reporting entities, including recycling and composting facilities. Residuals generated by a recycling or composting facility or operation on the same site as the disposal</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>rejected and landfilled thereafter. For example, a composting operation may initially accept a load of organic materials but later reject part or all of it due to contamination, processing incompatibility, or temporal constraints on storage. We encourage CalRecycle to assure that the final regulations create a reporting requirement that can track disposal of any materials that enter a diversion operation and are later sent to landfill, even if such materials are initially accepted or partially processed. Solid waste disposal facilities in the Bay Area require disposal of material rejected partway through the composting process. We encourage statewide regulations to require reporting on any such disposal.</p>	<p>facility will be assigned to the jurisdiction within which the site is located. Recycling and composting facilities report by material type the quantities of material sent to a disposal facility or to a transfer/processor. This may include rejected loads.</p>
5036	Nudd, G. Bay Area Air Quality Management District	<p>We encourage CalRecycle to require landfill operators to document the amount of compost or other recovered organic materials applied at the landfill for slope stabilization. This regulation should require a facility to document their frequency of application, the total area covered, and the depth of material applied in a single application and in a cumulative total. We further suggest that CalRecycle set standards for acceptable frequency, area, and depth and that the regulation prevent the disposal of immature, poor, or incomplete compost in slope stabilization.</p>	<p>A change to the regulatory text is not required. For the purposes of slope stabilization, recovered organic material already has to meet the application standards specified in Section 18983.1 (a)(5). In addition, landfills are required to maintain records of beneficial reuse in accordance with Title 27, Section 20686.</p>
3519	Obermeit, H., City of Berkeley for StopWaste	<p>No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code. Is implementing the fee subject to Prop 218 requirements? If not, why (cite regulatory answer); If so what is the expectation for implementation if voters do not approve the fee?</p>	<p>CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate.</p> <p>First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)).</p> <p>Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p>

Comment Number	Received From	Question/Comment	Response(s)
			Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.
3520	Obermeit, H., City of Berkeley for StopWaste	(b) A jurisdiction may designate a public or private entity to fulfill its responsibilities under this chapter. A designation shall be made through any one or more of the following: (1) Contracts with haulers or other private entities; or (2) Agreements such as MOUs with other jurisdictions, entities, regional agencies as defined in Public Resources Code Section 40181, or other government entities, including environmental health For (2), would our original JPA MOU along with our MRO that member agencies opted-in to be sufficient or would a new MOU be needed detailing the designation?	It is impossible to answer this question without reading the terms of the JPA MOU.
3521	Obermeit, H., City of Berkeley for StopWaste	18982 (6) -- Create separate definition for "multifamily residential dwelling." There are enough differences in requirements between businesses and multifamily that it would be clearer to separate them in the regulations. We support the clarification that multifamily consists of greater than five units.	CalRecycle agrees that the provisions for commercial business sometimes need to differentiate between businesses and multifamily residential dwellings. However, rather than creating a new and separate definition of multifamily residential dwellings, CalRecycle added clarifying language in Section 18984.9.
3522	Obermeit, H., City of Berkeley for StopWaste	Edible Food Definition -- Proposed language... Edible food means unsold or unserved <b>nutritious or wholesome</b> food that is fit for human consumption and/or <b>allowed by FRO's even</b> though the food may not be readily marketable due to..... Most food banks, pantries and soup kitchens are looking for food withat is nutrient rich not empty calories. Allow for some room either in the edible food definition or in the tracking to allow for food to not be donated by generators or be refused by food recovery orgs if it does not meet their dietary standards. Bread dumping is a big issue and unwanted food will cause hardship to FRO's that end up having to dispose of unwanted donations.	SB 1383's statute requires CalRecycle to adopt regulations that include requirements intended to meet the goal that not less than 20 percent of edible food that is currently disposed is recovered for human consumption by 2025. The statute does not state that 20% of healthy or nutritious food must be recovered. As a result, SB 1383's regulations do not include requirements that only specific food types be recovered. CalRecycle recognizes however, that a core value of many food recovery organizations and services is to reduce food insecurity in their communities by recovering healthy and nutritious food to help feed people in need, and that some organizations have nutrition standards for the food they are willing to accept. As a result, CalRecycle included language in Section 18990.2 that states, "nothing in this chapter prohibits an edible food recovery service or organization from refusing to accept edible food from a generator." Regarding the comment about "bread dumping," the regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or service. If a food recovery organization or service is concerned that bread dumping could occur, then they should include language in their contract or written agreement to protect themselves against bread dumping. In addition, CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model food recovery agreement does include a section to protect food recovery organizations and services from donation dumping and unexpected donations. The model food recovery agreement is a template and is intended to be customized based on the needs of food recovery entities and commercial edible food generators.
3523	Obermeit, H., City of Berkeley for StopWaste	Add definition for recycled mulch: <b>Mulch made from recycled or post-consumer materials and aged and/or</b> composted green material. Definition and specification important to ensure quality products are purchased and continue to be purchased.	CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.

Comment Number	Received From	Question/Comment	Response(s)
			Regarding a definition of mulch, a change to the regulatory text is not necessary. The land application standards and the facility origin limitations referenced in Section 18993.1(f)(4)(A) and (B), respectively, are sufficient to define the material for purposes of procurement.
3524	Obermeit, H., City of Berkeley for StopWaste	"Non-local entity" means...Add <b>county facilities</b> in list. County facilities are considered agents of the state and not subject to local ordinances so it would provide additional clarification to add them to the list.	The term 'special districts,' which is part of the definition of 'non-local entity,' includes county facilities that are considered to be agents of the state and are not subject to local ordinances. Also, to clarify that the definition Section 18982(a)(42) for 'Non-local entity' includes county fairgrounds that are under the authority of the California Department of Food and Agriculture.
3525	Obermeit, H., City of Berkeley for StopWaste	Grocery Store -- Either delete "convenience store" or add a definition. Most convenience stores do not carry the same goods at grocery stores and product carried may not be wanted by FRO's	CalRecycle revised the definition of grocery store in response to this comment. The definition of grocery store was revised to no longer include convenience stores because convenience stores typically do not carry a full line of grocery items and most likely will not have the same amount of edible food available for food recovery as a grocery store would have. For this reason, convenience stores were removed from the definition of "grocery store."
3526	Obermeit, H., City of Berkeley for StopWaste	<p>"Paper products" include, but are not limited to, paper janitorial supplies, cartons, wrapping, packaging, file folders, and hanging files, <del>building insulation and panels</del>, corrugated boxes, tissue, and toweling. <b>Paper products do not include plastic-coated paper.</b></p> <p>Since this will also pertain to procurement requirements by jurisdictions, building insulation and panels are typically purchased very differently than other office paper products and would be harder to get an amount spent since they are often part of a building construction or remodel contract.</p> <p>For purposes of compliance with the regulation, plastic-coated paper should not be considered organics because it can not be recycled or composted per Section 30.1.</p>	<p>CalRecycle has revised section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in section 18993.3(c)(2) and therefore agrees with the proposed revision.</p> <p>Section 18993.3(c)(2) requires that paper products and printing and writing paper is eligible to be labeled with an unqualified recyclable label as defined by the Federal Trade Commission. Currently, multi-material products (e.g. plastic-lined paper cups and plastic-coated) are not recyclable and are landfilled. The production of nonrecyclable organic materials compromises the state's ability to achieve the organic waste recycling goals. The purpose of this section is to ensure jurisdictions comply with the procurement requirement by purchasing recyclable items, thereby reducing the introduction of nonrecyclable organics into the marketplace. Jurisdictions can comply with this requirement by focusing their procurement on products that can actually be recycled. This limitation therefore alleviates the need to curtail the definition of paper products as suggested.</p>
3527	Obermeit, H., City of Berkeley for StopWaste	<p>Paper purchase" means all purchases by a jurisdiction of items in the following categories: (A) Paper products <b>except building insulation and panels</b>. (B) Printing and writing papers.</p> <p>Since this will also pertain to procurement requirements by jurisdictions, building insulation and panels are typically purchased very differently than other office paper products and would be harder to get an amount spent since they are often part of a building construction or remodel contract.</p> <p>For purposes of compliance with the regulation, plastic-coated paper should not be considered organics because it can not be recycled or composted per Section 30.1.</p>	<p>CalRecycle has revised section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in section 18993.3(c)(2) and therefore agrees with the proposed revision.</p>

Comment Number	Received From	Question/Comment	Response(s)
		This is only applicable if the definition of "paper products" isn't changed to exclude building insulation and panels.	Section 18993.3(c)(2) requires that paper products and printing and writing paper is eligible to be labeled with an unqualified recyclable label as defined by the Federal Trade Commission. Currently, multi-material products (e.g. plastic-lined paper cups and plastic-coated) are not recyclable and are landfilled. The production of nonrecyclable organic materials compromises the state's ability to achieve the organic waste recycling goals. The purpose of this section is to ensure jurisdictions comply with the procurement requirement by purchasing recyclable items, thereby reducing the introduction of nonrecyclable organics into the marketplace. Jurisdictions can comply with this requirement by focusing their procurement on products that can actually be recycled. This limitation therefore alleviates the need to curtail the definition of paper products as suggested.
3528	Obermeit, H., City of Berkeley for StopWaste	<p>"Recycled content paper" means <del>paper products and</del> printing and writing paper that consists of at least 30 percent, by fiber weight, postconsumer fiber.</p> <p>30% PCR is ok for writing paper, but will be hard to meet for other paper products. From Alameda County GSA: I think the copy paper requirement is fine. 30% PCR is adequate as a statewide goal and the tracking, while time consuming, is pretty straightforward, as long as we can use vendor reports to track. I am concerned about the other paper product requirement. Some of the PCR thresholds for the products listed are typically set lower than 30% PCR currently. So it will be more difficult to meet it within the current national markets. It will also add a significant burden of time for tracking.</p>	<p>The language has been changed to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content.</p> <p>Regarding the comment about "significant burden of time for tracking", CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them by early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p>
3529	Obermeit, H., City of Berkeley for StopWaste	<p>"Renewable transportation fuel" -- Add renewable diesel to this definition.</p> <p>This definition is too narrow and benefits anaerobic digestion, and when used in the procurement targets inadvertently penalizes cities committed to composting, which we know is not the intent. There is very little fuel meeting this definition, and what is produced is used entirely by production facilities to fuel a fraction of its fleet. Even with the projected expansion of AD in the state, the production of RTF will not increase to the point where there will be enough left over for cities not using AD (or their direct service providers) to purchase it. Also, many cities are converting to renewable diesel; a portion of the feedstock for which is organic waste. From Neste, one of the largest renewable diesel producers in the US: For any feedstock that we use for renewable fuel sold in California there is a pathway approved by California Air Resources Board (CARB). These pathways, which are publicly listed at CARB's website, allow us to sell fuel made of UCO, animal fat, fish fat and technical corn oil (a residue from ethanol production) - all of them waste or residue from some other activity. So, these are the feedstocks that we use for your and other customers' fuel in California. How much RTF meeting this definition is available currently? Does this include renewable diesel? What types of fuels does this include?</p>	<p>SB 1383's goals focus on the diversion of organic materials from California landfills. Feedstocks traditionally utilized for the production of renewable diesel, though potentially organic material, are not typically landfilled. Article 1 of the proposed regulations define recovered organic waste products as "products made from California, landfill-diverted recycled organic waste processed in a permitted or otherwise authorized facility." CalRecycle generally recognizes the benefits of various low carbon renewable fuels; however, for the purpose of achieving SB 1383's organic waste diversion goals, such fuels must be produced from feedstocks that would otherwise be landfilled in California to count towards a jurisdiction's procurement target. In response to the amount of renewable transportation fuel (RTF) currently available to meet this definition, the intent of the procurement requirements are to build markets for recovered organic waste products. Therefore, the amount of renewable transportation fuel available today is likely not a reliable indicator of the amount that will be available once the regulations take effect.</p>

Comment Number	Received From	Question/Comment	Response(s)
3530	Obermeit, H., City of Berkeley for StopWaste	<p>Subsequent violation means a violation of this chapter by a jurisdiction or entity that has previously been subject to an enforcement action for a violation of this chapter. <del>For purposes of this chapter, a subsequent violation may only be found when it has occurred within five years of the violation that as already been the subject of an enforcement action.</del></p> <p>Either delete second sentence or otherwise modify to allow for a jurisdiction that may have a long standing Mandatory Recycling Ordinance and either may not want to "re-set" violation status or may want to "re-set" at a different timeframe. Currently, with our MRO, our fine amounts re-set to the baseline amount after 12 months. Also, by 2022, we will have been enforcing our MRO for almost 10 years and it would be burdensome to have to keep track of a rolling 5 years of enforcement history with specific accounts.</p>	<p>CalRecycle has revised section 18995.4 in response to this comment. The definition for "subsequent violation" has been removed and for a "subsequent violation" has been changed to "subsequent offense" and the timeframe has been revised to one year to align with the provisions of the Government Code. SB 1383 authorized jurisdictions to impose penalties but did not set penalty levels. The penalty requirements default to local penalty requirements in Government Code Sections 53069.4, 25132 and 36900. The timing for first, second and third and subsequent offenses of a violation of the same ordinance is one year. CalRecycle does not have discretion to alter this timing.</p>
3531	Obermeit, H., City of Berkeley for StopWaste	<p>"Tier One commercial edible food generator" means...(B) Grocery store with a total facility size <del>equal to or</del> greater than <del>7,500</del> 10,000 square feet. To streamline enforcement and reporting, this definition should allow for regional variation in how these types of generators are categorized To align with Alameda County Environmental Health Dept. (and possibly other County EH Depts?) food permit types for Food Markets: under 3,000 sq ft, 3,000 sq ft to 10,000 sq ft, over 10,000 sq ft.</p>	<p>CalRecycle revised the threshold for grocery stores in response to this comment. The threshold for grocery stores was revised from 7,500 square feet to 10,000 square feet. This change was made in an effort to have the threshold align with environmental health inspections of grocery stores, so that these generators can be more easily identified by the jurisdiction.</p>
3532	Obermeit, H., City of Berkeley for StopWaste	<p>Tier two commercial edible food generator" means...(B) Hotel with an on-site food facility...(C) Health facility with an on-site food facility...(H) A Local Education Agency facility with an on-site food facility. Define "on-site food facility" separately. Provide more clarity on what an on-site food facility means or thresholds for it (does it include only food storage or does it include heating up of food, etc.). Would a hotel that only sold packaged food mean on-site food facility? What about a public school that just got food from a district facility? Food facilities may be onsite but not active or used. Many schools/LEA's have kitchens that are non-functioning.</p>	<p>CalRecycle would like to clarify that a reference to the term 'on-site food facility' is only used in the thresholds for the following tier two commercial edible food generators: local education agencies, hotels, and health facilities. The regulations specify that 'food facility' has the same meaning as in Section 113789 of the California Health and Safety Code. To clarify, if something meets the definition specified in Section 113789 of the California Health and Safety Code and is also permitted as a food facility by the local health department, then it is a food facility. Section 113789 of the California Health and Safety Code is already well established through use in the California Retail Food Code and CalRecycle has determined it to be appropriate for use in this rulemaking to avoid duplication, conflict, or confusion.</p>
3533	Obermeit, H., City of Berkeley for StopWaste	<p>A jurisdiction may comply with the requirements of this article by implementing a two-container organic waste collection service providing a green container and a blue container to each generator in the following manner:...(2) The <del>blue gray</del> container shall be for the collection of all nonorganic waste. Blue container being recycling in two-container systems, and garbage in three-container systems is confusing as people move across jurisdictions. This confusion could exacerbate contamination in recycling in three-container systems.</p>	<p>The regulations already allow for blue container eligible recyclables into either the green or gray containers or contained organics into the blue container for the blue and gray container option. CalRecycle agrees that in a two-container system, the container used for the collection of non-organic waste should be gray to avoid confusion about what is recyclable, as this could exacerbate contamination when generators move to jurisdictions that have a three-container collection system. CalRecycle mad a corresponding change to the regulation to the color requirements for two container collection services.</p>
3534	Obermeit, H., City of Berkeley for StopWaste	<p>Unsegregated Single-Container Collection Services  <b>(a) If a jurisdiction had a mixed solid waste collection system in place on or before September 19, 2016, that</b> A-jurisdiction may comply with the requirements of this article by providing a single grey container...  We are concerned about the perverse incentives created by the regulation for cities to opt for a single container collection system. We urge CalRecycle to create a</p>	<p>CalRecycle considered this concept in the initial draft regulatory text but rather than setting an earlier deadline instead established performance metrics for high-diversion facilities. Further the regulations cannot take effect prior to 2022, establishing an earlier cutoff would be in conflict with the intent of the statute.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>performance-based pathway to compliance for new and existing SSO programs. The burden on jurisdictions using SSO collection is significantly higher almost all sections regs: enforcement, reporting, education, labeling, penalties. We acknowledge that there are few high diversion facilities meeting the 50% target and none meeting the 75% target, but for jurisdictions with no current organics program, MSW processing is the cheaper and easier option. This could lead to more MSW compost entering the market. Currently there is little market for this compost due to its poor quality. However, by requiring cities to buy compost, especially in the excessive quantities proposed in the current draft, the regulations significantly weaken the ability of the market to influence quality.</p> <p>We know that the recovery rate from MSW processing is lower than source-separated organics and it results in a product that does not meet existing regulated contamination limits, which also has significant concentrations of unregulated contaminants, including inerts under 4mm, dioxins, heavy metals (Brinton, 2000). The effects of microplastic on soil ecosystems is an emerging field, and early research indicates the effects are similar to those in aquatic ecosystems (Weithmann et al., 2018). If MSW processing is recovering less than 75% of organics, it puts the state at risk of not meeting the diversion goal of SB 1383. Note: Brinton, W. (2000) Compost Quality Standards &amp; Guidelines: An International View. Report for New York State Association of Recyclers by Woods End Research Laboratory <a href="http://solvita.com/pdf-files/nysar-ne.pdf">http://solvita.com/pdf-files/nysar-ne.pdf</a> Weithmann et al., Sci. Adv. 2018;4: eaap8060</p>	
3535	Obermeit, H., City of Berkeley for StopWaste	<p>A jurisdiction shall conduct a route review for prohibited container contaminants on randomly selected containers in a manner that results in <del>all</del> <b>commercial</b> collection routes being reviewed quarterly. Feedstock from SFR typically has contamination 1-2% according to composters serving Alameda County. A more efficient and effective approach to minimizing contamination would be to review routes only if contamination is reported to the jurisdiction by the facility. This will allow resources to be spent reviewing commercial accounts, which are the source of most contaminants. Also, looking in residential containers could lead to violation of privacy challenges to cities.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term 'physically.' This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>would be in alignment with the definition of "route review" in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
3536	Obermeit, H., City of Berkeley for StopWaste	<p>Container Contamination Minimization</p> <p>No change to language, but enforcement must be realistic and acknowledge that contamination will sneak in. Jurisdictions should not be penalized for small amounts of contamination if following other practices.</p> <p>We support a regulation that strives for zero contamination because it is simplest to verify, and works toward the goal of creating quality compost. However, during implementation CalRecycle must allow for enforcement practices that allow flexibility for very minimal contaminants that may be relatively easily sorted out in pre-processing. Currently, in our MRO implementation, we don't give a contamination violation if it appears minimal such as one or two items. Jurisdictions should not be penalized because they did not fine generators for minimal contamination or illegally dumped contamination.</p>	Comment noted, the comment does not recommend a regulatory change.
3537	Obermeit, H., City of Berkeley for StopWaste	<p>Container Contamination Minimization</p> <p>If a jurisdiction's designee observes visible prohibited <del>container</del> contaminants in a container, the designee shall inform the jurisdiction in writing, each month, with the address of the generator and the date the contaminated container was observed, <del>and if available, any photographic documentation,</del> and what action was taken.</p> <p>We provide monthly reports (in a spreadsheet) to our member jurisdictions of the accounts found in violation and sent an MRO enforcement letter, but we do not provide photos in those monthly spreadsheets. It would be overly burdensome to have to transfer photo files monthly. Or, only make it so you transfer photos if the generator has contaminants on more than three occasions to align with (b)(3).</p>	The requirement does not specify that photographs be transferred to the jurisdiction, only that the designee maintain a record of photographic documentation. Designees are not required to take photographs.
3538	Obermeit, H., City of Berkeley for StopWaste	<p>If a jurisdiction is informed by a solid waste facility operator...that the waste collected by one of its hauler container prohibited container contaminants while the hauler was servicing the jurisdiction's generators, ...</p> <p>No change to language.</p> <p>Allow flexibility during enforcement for very minimal contaminants to acknowledge that all contaminants are not equal (10 plastic bottles vs 2 glass bottle vs one engine block vs one milk carton). See rationale for pg 14 line 52.</p>	CalRecycle provided enforcement flexibility in the regulations, including relieving jurisdictions of having to issue penalties on generators for container contaminants.
3539	Obermeit, H., City of Berkeley for StopWaste	<p>(3) Copies of <b>or information regarding</b> all written notices, violations, education and enforcement actions issued or given by the jurisdiction, or its designee, to the generator with prohibited container contaminants. <del>(A) If direct contact other than written contact is made in lieu of written notification, the jurisdiction shall include a record of the type of contact provided, and the date contact was made in the implementation record.</del></p> <p>If jurisdiction has a designee, then allow them to provide reports/data to jurisdiction about what was done, but not necessarily copies of all notices, education (may be</p>	CalRecycle declines the suggested change as it has determined that actual copies are necessary to ensure an adequate compliance record.

Comment Number	Received From	Question/Comment	Response(s)
		multiple times of calling), to reduce burden on transferring copies of everything. Other items in the section were changed from "copies" to "documentation", but not this line.	
3540	Obermeit, H., City of Berkeley for StopWaste	(a) A jurisdiction shall provide collection containers <b>for collection service</b> to generators that comply with the container color requirements specified in this article. Current language could be interpreted, particularly since "collection containers" is not defined, that the jurisdiction also has to provide indoor bins to businesses. That would be of enormous cost to jurisdictions.	CalRecycle revised Section 18984.7(a) in response to this comment to clarify that jurisdictions have to provide containers for the collection service that the jurisdiction implements for organic waste generators, not the indoor bins of businesses.
3541	Obermeit, H., City of Berkeley for StopWaste	Section 18984.7 -- Modify so that language doesn't make it seem like once one container is at end of useful life, it needs to be replaced by correct color requirements. Would not want a mix-match of containers in old colors and containers in new correct colors because it would be confusing. Allow for waiting for the majority of containers in a jurisdiction to be at the end of useful life and switch out all at once.	Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036.
3542	Obermeit, H., City of Berkeley for StopWaste	(a) Commencing January 1, 2022, a jurisdiction shall place <del>and maintain</del> a label on each new container or lid provided to generators consistent with the applicable container collection requirements and limitations of this article specifying what materials are allowed to be placed in each container. Comment -- "and maintain" could be strictly interpreted to mean the jurisdiction has make sure that there's always an appropriate label on the container which would be very difficult to do.	CalRecycle revised Section 18984.8(a) in response to this comment to remove "maintain". Since new containers will be properly colored, this change will provide some guidance to generators. In addition, CalRecycle clarified in FSOR that jurisdictions may replace labels if needed or if requested, but CalRecycle does not expect jurisdictions to inspect all containers to ensure that labels are maintained.
3543	Obermeit, H., City of Berkeley for StopWaste	(b) Generators that are commercial businesses shall also: (1) Provide containers for the collection of organics waste and nonorganic <del>recyclables in all areas where disposal containers are provided for customers. The containers provided by the business shall conform with the containers provided through the organic waste recovery service provided in their jurisdiction.</del> If all three streams aren't generated in certain areas, such as bathrooms, then businesses shouldn't have to put all three containers. Plus, some customer areas could be very likely to have a lot of contamination by customers even if good labeling/signage and we should allow flexibility for the business to make that judgement. Also, would be very difficult/onerous for a jurisdiction to inspect/enforce that business generators are providing the correct containers in all disposal areas. Currently in our MRO implementation, if the hauler-serviced bins are in outdoor publically accessible locations, our inspectors don't go inside the business (would take a lot more time!).	For situations where the business' total solid was collection service is two cubic yards or more per week, but the business is not generating any of the materials (either green or blue or both) that would be collected in any one type of container; the regulations already state that generators do not have to have a container type if they do not generate the materials. CalRecycle revised Section 18984.11to clarify the allowance of de-minimis waivers. As a part of the de-minimis waiver, a jurisdiction can waive business from its obligation to comply with "some or all of the organic waste generator requirements..." This includes the obligation to provide internal organic waste recycling containers adjacent to disposal containers. Since they are not generating the material at all, the business should not have to subscribe to the collection service for that type of container. It would not be practicable to require a business to subscribe to collection service for a type of collection container when it does not generate any material that would be deposited into the container. Jurisdictions are required to conduct compliance reviews to ensure that generators have service and are in general compliance with the regulations, however the regulations do not require that jurisdictions to inspect the internal containers of a business.
3544	Obermeit, H., City of Berkeley for StopWaste	(b) Generators that are commercial businesses <b>that are not multifamily residential dwellings</b> shall also:...(2) Prohibit their employees from placing organic waste in a container not designated to receive organic waste as set forth in 30.1(a)(5) and 30.2(a)(5) of this chapter. Commercial business definition currently includes multifamily residential dwelling with 5 or more units. Multifamily property	CalRecycle agrees that the provisions for commercial business sometimes need to differentiate between businesses and multifamily residential dwellings. However, rather than creating a new and separate definition of multifamily residential dwellings, CalRecycle added clarifying language in Section 18984.9.

Comment Number	Received From	Question/Comment	Response(s)
		owners/managers can not control the sorting behavior of their residential tenants. Our MRO gives violations for improper sorting for commercial accounts, but not multifamily accounts. Also, multifamily accounts are much harder to inspect due to inability to gain access to many properties with locked gates. (We found that about half the multifamily accounts we tried to inspect, we couldn't get in to inspect.) Jurisdictions should not be penalized when circumstances beyond their control keep them from effectively enforcing upon the generator.	
3545	Obermeit, H., City of Berkeley for StopWaste	(1) Property owners shall provide information to new tenants <b>before or within 14 days of</b> <del>upon</del> occupation of the premises. The actual date of occupation of the tenant can be hard to determine sometimes (may be moving in over a week or two). Allow more flexibility to provide before move-in or within 14 days. Our MRO specifies within 14 days.	CalRecycle revised Section 18984.10(b)(1) in response to this comment. This change is necessary to specify the time frame for providing information, recognizing that the actual date of occupancy can vary.
3546	Obermeit, H., City of Berkeley for StopWaste	(1) De Minimis Waivers...(B) A jurisdiction shall <del>annually</del> verify <b>at least every four years</b> that the commercial businesses' organic waste generation meets the waiver thresholds set forth in this subdivision. Too onerous and not an efficient use of resources to have to inspect de Minimis waiver accounts every year. If we are only getting to about 20% of the accounts inspected every year, we shouldn't have to waste time to verify the threshold on these smallest generators	CalRecycle has revised the verification period to five years in response to this comment. Thank you for the support comment. This comment is in support of the current language.
3547	Obermeit, H., City of Berkeley for StopWaste	Emergency Circumstances...(1) If the facility processing a jurisdiction's organic waste notifies the jurisdiction that operational restrictions have been imposed upon it by a regulatory agency....for up to <b>180 90</b> days from the date of the restriction or failure What if it takes longer than 90 days to fix the problems?	CalRecycle does not concur with changing the language to 'shall' as there may be instances where a jurisdiction wants the material to be taken to another facility for recycling rather than disposing of the material. It is unclear why CalRecycle would require the disposal of organic waste. If a processing issue extends beyond 90-days a jurisdiction could seek additional time under a corrective action plan for extenuating circumstances. CalRecycle does not concur with the addition of a new waiver because planned and routine maintenance should already be accounted for and the material should not be disposed.
3548	Obermeit, H., City of Berkeley for StopWaste	Recordkeeping Requirements for Waivers and Exemptions...(2) A copy of all De Minimus Waivers, including the location, date issued, and name of <b>generators or account holders</b> . (3)...name of account holders <b>generators or account holders</b> . (4)...name of generators <b>or account holders</b> . If the account is multi-tenant/shared, we may not know all the generators, but we would know the name of the account holder.	CalRecycle declines the suggested changes. By necessity, jurisdictions will know the name of the generator(s) to whom waivers or exemptions are issued or they can't actually issue them.
3549	Obermeit, H., City of Berkeley for StopWaste	(a) Prior to February 1, 2022, and annually thereafter, a jurisdiction shall provide the following to organic waste generators <del>that are provided a three-container or two container organic waste collection service:</del> Items 3, 4, 5, and 6 are also applicable to generators with single-container organic waste collection service. Single-container systems should also be educating generators.	CalRecycle revised Section 18985.1(d) to provide consistency in required education and outreach requirements for the three different container service options.
3550	Obermeit, H., City of Berkeley for StopWaste	...annually thereafter, a jurisdiction shall provide the following to organic waste generators.. <del>(5) Information related to the public health and safety and environmental impacts associated with the disposal of organic waste.</del>	This provision is necessary as written so that generators understand the purpose behind the law, how to recycle, and the impacts of disposal. This information does not have to be included on every educational piece, but rather must be provided once per year.

Comment Number	Received From	Question/Comment	Response(s)
		Requirements for what education and outreach has to include is too much. We've found that too much information on educational pieces can be overwhelming and less effective at behavior change. Specifically, items 3 and 5 should be optional for source-separated organics services and not required to be on the education piece.	In addition, CalRecycle added Article 17 to provide that a jurisdiction will be waived from specified articles and sections in the regulations if they can meet performance requirements specified in this new article.
3551	Obermeit, H., City of Berkeley for StopWaste	(b) Prior to February 1, 2022, and annually thereafter, <b>the the extent that a jurisdiction has information about self-haulers, a jurisdiction shall provide to self-haulers</b> information regarding the requirements of Section 70.3 of this chapter. If a jurisdiction has a transfer station or other facility in their jurisdiction, they can provide self-haulers that come with information, but otherwise they may not have knowledge of who is selfhauling especially if they are cash customers	CalRecycle deleted requirements that jurisdictions specifically identify and educate self-haulers in response to this comment. Jurisdictions can meet the requirement to educate self-haulers by including information oneself-hauling in their general education and outreach material provided to all generators. CalRecycle deleted language requiring solid waste facility operators to educate self-haulers as it would be overly burdensome and is outside the scope of what EAs monitor at solid waste facilities. This change was made to provide the least burdensome approach and still achieve the required disposal reduction. CalRecycle revised Section 18988.3 to clarify that self-haulers should not be held to more stringent standards than contracted haulers and should be allowed to take mixed waste to an approved high-diversion organic waste processing facility meeting all applicable requirements.
3552	Obermeit, H., City of Berkeley for StopWaste	(f) If more than five percent of a jurisdiction's generators are defined as "Limited English Speaking Households,"...the jurisdiction shall provide the information required by this section in a language or languages <b>and/or graphics</b> that will assure the information is understood by those generators. Graphics can transcend languages.	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
3553	Obermeit, H., City of Berkeley for StopWaste	A jurisdiction shall develop a list of food recovery organizations and food recovery services operating within the jurisdiction, <del>and maintain the list</del> on the jurisdiction's website Comment: "maintain" is not descriptive enough. There are lots of food pantries, banks, churches, and shelters that operate differently than larger food banks. These alternative operators are usually 100% volunteer-driven and very informal. We foresee challenges keeping lists up to date. For example, one local pantry just had a fire which put them out of commission for 6 weeks. Another lost their volunteer truck driver so they were unable to pick up donated food for several months. Update on an annual schedule? Can a jurisdiction comply by providing a link to other websites or regional search results which may mouse a list of orgs in a region such as ACCFB, Feeding America, StopWaste's Recycle Where?	To clarify, the requirement does not specify that the jurisdiction shall maintain a list of all food recovery organizations and services operating within the jurisdiction, just that a list be created, maintained on the jurisdiction's website, and updated annually. To the commenter's point, in a previous draft of the regulations the requirements did not specify how often the list should be updated. Recognizing the validity of this comment and that food recovery organizations and services can go in and out of operation from year to year, CalRecycle added language to Section 18985.2 to specify that the list shall be updated annually. CalRecycle would also like to clarify that it is at the discretion of the jurisdiction to determine the method that will be used for maintaining the list (e.g. updating/keeping the list current and relevant). How each jurisdiction's list is maintained will differ from jurisdiction to jurisdiction. For this reason, the regulations do not specify the procedures outlining how each list should be maintained. Regarding the question asking if jurisdictions can comply with this requirement by providing a link to other websites, the answer is NO. The regulatory text specifies that jurisdictions must "develop" a list. Providing links to other websites will not be sufficient to comply with this requirement, as that would not meet all the requirements specified in Section 18985.2 (a)(1)(A)-(D) The list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with pursuant to Section 18991.3 (b), and thereby help ensure that edible food in the jurisdiction is not sent to landfills, but rather put to its highest and best use of helping feed people in need. Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human

Comment Number	Received From	Question/Comment	Response(s)
			consumption will help commercial edible food generators find food recovery organizations and services that are capable of safely handling and distributing edible food on a regular basis.
3554	Obermeit, H., City of Berkeley for StopWaste	A jurisdiction shall develop a list of food recovery organizations and food recovery services operating within the jurisdiction <b>that accept food from Tier 1 and Tier 2 generators, and maintain the list</b> on the jurisdiction's website. Does the list need to include all food recovery organizations or only those who accept food from Tier 1 and Tier 2 generators? For the purposes of the regulations, a jurisdiction should not be required to list all smaller orgs that are not affected by and whose collections not directly support SB1383 regs. Similarly, some FRO's operate out of churches. Are organizations not primarily engaged with food recovery (e.g., libraries, rec centers, churches) required to be listed since their primary function is not "in the collection or receipt of food"?	A change to the regulatory text was not necessary for the following reasons. The requirement does not specify that the jurisdiction shall maintain a list of all food recovery organizations and services operating within the jurisdiction, just that "a list" be developed and maintained on the jurisdiction's website. It is at the jurisdiction's discretion to determine the food recovery organizations and services that they feel should be included on the list. Please note that the list is intended to serve as a tool to help generators find appropriate food recovery organizations and services to have a contract or written agreement with for food recovery, and thereby help ensure that edible food in the jurisdiction is not disposed in landfills, but rather put to its highest and best use of helping to feed people in need. Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help commercial edible food generators find food recovery organizations and services that are capable of safely handling and distributing large amounts of recovered edible food on a regular basis.
3555	Obermeit, H., City of Berkeley for StopWaste	<del>(E) Hours of operation</del> Concerned that a website is not necessarily helpful. A directory of orgs with hours of operation may reveal to generators where they can donate/dump" food during closed hours. Big issue with Charity Thrift stores.	CalRecycle removed "hours of operation" from Section 18985.2 in response to this comment and several other comments raising the same concern. The commenter is concerned that including "hours of operation" could lead to commercial edible food generators dropping off food at a food recovery organization without having permission to do so. This change was necessary to help protect food recovery organizations from receiving food that they were not expecting to receive.
3556	Obermeit, H., City of Berkeley for StopWaste	1) Provide <b>Tier one and Tier two that generate edible food generators, once their requirements are in effect</b> , with the following information:... If a jurisdiction can determine who the Tier one and Tier two edible food generators are, they should only be required to provide the information to those parties that have the requirements, not all businesses. Also, commercial business definition currently includes multifamily properties.	CalRecycle revised Section 18985.2 in response to this comment. The regulatory text was changed to: (b) At least annually a jurisdiction shall: (1) Provide commercial edible food generators with the following information: This change was necessary because as the commenter pointed out, it is not necessary for businesses that are not commercial edible food generators to receive education about the commercial edible food generator requirements of SB 1383. Regarding the commenter's suggested language, "once their requirements are in effect," a text change was not necessary. A text change is not necessary for the following reasons. The regulations are structured so that tier two generators have an extra two years to prepare for compliance. They have been given an additional two years to prepare because many of these generators do not have existing food donation practices in place, and many tier two generators will have hot prepared foods to donate, which can be more challenging to recover than other types of non-prepared foods. These generators need to be educated early so that they have ample time to prepare for compliance. Receiving education early is critical for helping ensure a higher rate of compliance among tier two commercial edible food generators, and therefore critical for helping California achieve its 20% edible food recovery goal. For these reasons, tier two commercial edible food generators must receive education materials at the same time as the tier one commercial edible food generators.

Comment Number	Received From	Question/Comment	Response(s)
3557	Obermeit, H., City of Berkeley for StopWaste	<p>18985.2  <b>(D) Information on food items accepted/needed by Food Recovery Organizations and how to package.</b>  Missing requirement to include information on food items accepted/needed by Food Recovery Organizations and how to package. Addresses issue of donation dumping. Where food recovery organizations participate in grocery rescue or other regularly scheduled donations of food, food banks say that they do not want to turn a donation away, because the desirable food comes with unwanted food.</p>	<p>Regarding the commenter’s suggested language, “and how to package,” a text change was not necessary. A text change was not necessary because this is information that the food recovery organization or service can include in their contract or written agreement with the commercial edible food generator. If a jurisdiction feels this information is critical and would like to include it with their list, then they may do so. As stated in Article 9, Section 18990.1 (a), nothing in this chapter is intended to limit the authority of a jurisdiction to adopt standards that are more stringent than the requirements of this chapter, except as provided in subdivision (b) of section 18990.1.</p> <p>Regarding the comment about donation dumping, CalRecycle recognizes that donation dumping occurs. The regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or a food recovery service. If a food recovery organization or service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383’s regulations prohibiting a food recovery organization or service from terminating their relationship with that particular generator.</p> <p>In addition, CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, commercial edible food generators, and jurisdictions. This model agreement does include language to protect food recovery organizations and services from donation dumping and unexpected donations. The model food recovery agreement is a template and is intended to be customized based on the needs of food recovery groups and commercial edible food generators.</p>
3558	Obermeit, H., City of Berkeley for StopWaste	<p>18985.2  <b>Accepted Food Types for donation</b>  No information on acceptable food types for donation. Addresses issue of donation dumping.</p>	<p>CalRecycle added a requirement to Section 18985.2 in response to this comment and other comments that raised a similar concern. The new language requires the following to also be included with the list of food recovery organizations and food recovery services that the jurisdiction develops and maintains - an indication of the types of food the food recovery service or organization can accept for food recovery.</p>
3559	Obermeit, H., City of Berkeley for StopWaste	<p>18985.3 (2) The date, and to whom the information or direct contact was disseminated. Replace with a requirement to do direct outreach or at least one mailing, outreach to covered businesses per year and track where and how the information was shared with generators. i.e. mailing, bill insert, through local chamber, hauler accounts, etc. Tracking date and contact info for disseminating information too onerous on counties or jurisdictions. "To whom" could also be interpreted to mean that we have to keep exact names of who the information was distributed to, when it seems the intention is a jurisdiction more broadly keeps records of how they disseminated the information to businesses. If the education/outreach was social media, how would a jurisdiction really be able to keep track of who the information was disseminated to. Rmove "To Whom" and "date" requirement, too onerous to track.</p>	<p>The language was amended to clarify that if a jurisdiction provides mass distribution through mailing the jurisdiction is only required to keep a copy of the information and a list of accounts receiving the information. The jurisdiction is not required to keep a copy of each individual piece of information. It is necessary for jurisdictions to keep a record of recipients in order to demonstrate compliance.</p>
3560	Obermeit, H., City of Berkeley for StopWaste	<p>Non-Local Entity Requirements 1) The following shall not be collected in the green or blue container:.. Change to</p>	<p>Thank you for the comment. CalRecycle amended the applicable sections for consistency.</p>

Comment Number	Received From	Question/Comment	Response(s)
		be consistent with changes made in Section 18984.1: Three-container Organic Waste Collection Services.	
3561	Obermeit, H., City of Berkeley for StopWaste	Self-haulers of Organic Waste -- Question: Are small businesses allowed to self-haul their organics or recyclables to their home to save money on separate business collection service? If so, would they still need to record and report weights? For MRO implementation, we allow businesses to complete a Certification of Recycling Service Form that indicates they are back-hauling their recyclables home and we don't require amounts to be	Nothing in the regulation prohibits a business owner from self-hauling their organic waste. A change in language is not needed. The regulations require self-haulers to keep a record but do not require self-haulers to report as it would be unnecessarily burdensome to require self-haulers to report. Language was ultimately changed to remove the annual reporting to jurisdictions for all self-haulers.
3562	Obermeit, H., City of Berkeley for StopWaste	CalGreen Building Codes -- Would incorporating it into plan review/permit requirements be sufficient?	There are various forms of enforceable mechanisms. Requiring compliance with the applicable aspects of CalGreen or MWELo prior to issuing a permit for construction or demolition, is a potential type of enforceable mechanism. Thus, incorporating in the plan review/permit requirements be acceptable.
3563	Obermeit, H., City of Berkeley for StopWaste	Organic Waste Recovery Standards and Policies Organic Waste <b>Recycling</b> Previous language "Recycling" that was struck out, clears up confusion with food recovery to feed people through donation and Food Recycling to feed compost.	A change to the regulatory text is not necessary. CalRecycle uses the term "recovery" throughout the regulations, not only to distinguish edible food.
3564	Obermeit, H., City of Berkeley for StopWaste	Add language citing SB 557 School Food Share and Donation legislation. Previous language "Recycling" that was struck out, clears up confusion with food recovery to feed people through donation and Food Recycling to feed compost. Reinforces intention of legislation to allow for establishing food share tables and school food donation.	Comment noted. A change to the regulatory text is not necessary, though CalRecycle will cite the legislation in the Final Statement of Reasons.
3565	Obermeit, H., City of Berkeley for StopWaste	Record keeping requirements for generators should mention tracking "chain of custody" including transportation time and anything related to safe food handling, keeping food that is hot or cold in the Safe Food Temperature Zone (STZ) Reinforces safe food handling practices. Will standardized templates for tracking and reporting be provided for generators and jurisdictions? Or a system or portal for reporting similar to green halo for C&D reporting? What if a generator has edible food and can't find a FRO that will take it?	A change to the regulatory text was not necessary because adding the proposed recordkeeping requirement would be overly burdensome for commercial edible food generators and could also increase their recordkeeping costs significantly. In addition, the proposed recordkeeping requirements are to reinforce safe food handling practices. While CalRecycle recognizes that safe food handling is paramount, the California Health and Safety Code specifies food safety and safe food handling requirements. Not SB 1383. Regarding the comment about standardized templates for tracking and reporting, CalRecycle intends on providing tools and resources to assist with SB 1383 compliance prior to 2022. Regarding the comment about what could potentially occur if a commercial edible food generator cannot find a food recovery organization or a food recovery service to establish a contract or written agreement with, CalRecycle provided information in the FSOR to clarify that the expectation for commercial edible food generators is that they contract with food recovery organizations and food recovery services that are willing and capable of recovering their edible food. If a commercial edible food generator only has "unhealthy" foods available, then the commercial edible food generator must contract with an organization or service that is willing to accept that type of food. For example, if a commercial edible food generator contracts with a food recovery organization that will accept all of the generators grocery rescue, but will not accept the generator's baked goods, then the generator must contract with an additional food recovery organization or service willing to accept the generator's baked goods.

Comment Number	Received From	Question/Comment	Response(s)
			<p>Commercial edible food generators are not exempt from compliance if they only have “unhealthy” foods available for donation. Note that SB 1383’s statute requires that 20% of currently disposed edible food be recovered for human consumption by 2025. The statute does not specify that only “healthy foods” be recovered.</p>
3566	Obermeit, H., City of Berkeley for StopWaste	<p>(2) A copy of contracts, written agreements or other documents between the edible food generator and a food recovery service or organization. Requirement is too onerous for commercial generators to track, especially collecting food recovery contracts, because many don’t have contracts. Nationally, Feeding America holds contracts with donors for grocery rescue. Would it be possible to have a county-wide blanket agreement that covers generators, something that outlines I agree to do the following things....</p>	<p>CalRecycle conducted significant outreach with stakeholders during the rulemaking process to ensure that the recordkeeping requirements are feasible. In addition, CalRecycle worked with many food recovery organizations and services throughout the state to learn more about the information they track, and to learn about the information they provide to their donors. The majority of the organizations and services that CalRecycle engaged with provide their donors with some kind of receipt of donation. By providing a receipt of donation, donors are able to track the amount of food they have donated over time and can claim their federal enhanced tax deduction. Without the recordkeeping requirements for commercial edible food generators, jurisdictions will not be able to verify if a commercial edible food generator is complying with SB 1383’s edible food recovery regulations. The recordkeeping requirements are a critical enforcement mechanism. For that reason, they were not removed from the regulatory text. CalRecycle does intend on making SB 1383 recordkeeping tools available to commercial edible food generators to assist them with compliance prior to 2022.</p> <p>Another commenter noted that the requirement for commercial edible food generators to maintain a record of their contract(s) or written agreement(s) for food recovery organizations and services is too onerous to track, because many do not have contracts. In the same comment, the commenter noted that Feeding America holds contracts with donors for grocery rescue, and asked if it would be possible to have a county-wide blanket agreement that covers generators. To clarify, commercial edible food generators are required to establish a contract or written agreement. If a contract has been established, then maintaining a copy of the contract at the commercial edible food generator-site should not be a challenge. Regarding the commenter’s question about the county-wide blanket agreement, CalRecycle cannot provide a final answer without more clarification of the “county-wide blanket agreement” that the commenter is referring to. CalRecycle would like to clarify that every tier one and tier two commercial edible food generator must have a contract or written agreement in place and maintain a record of its contract or written agreement. Requiring commercial edible food generators to maintain these records is critical to help jurisdictions verify compliance.</p> <p>In addition, requiring a contract or written agreement with supporting documentation of the contract or written agreement is critical to ensure that edible food is recovered in a safe, professional, and reliable manner. Contracts and written agreements add a layer of food safety, professionalism, and reliability into food recovery and can also serve as a mechanism to help protect food recovery organizations and services from donation dumping. CalRecycle would also like to note that CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators.</p>
3567	Obermeit, H., City of Berkeley for StopWaste	<p>"Quantity of food collected or transported to a FRS or FRO shall be measured in pounds recovered per month." Needs clarification.</p>	<p>To clarify, Section 18991.4(D) requires commercial edible food generators to maintain a record of the quantity of food collected or self-hauled to a food recovery organization or a food recovery service. The regulations also state that the quantity shall be measured in pounds recovered per</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>Since the current language says "recovered" and not collected or transported does that mean there needs to be a subtraction of what food doesn't get used by the FRO that's donated? How can we use the metrics to monitor donation dumping without being overly burdensome on FRO's that have to track? What happens if there are discrepancies in the numbers reported between generators and FRO's?</p>	<p>month. To clarify, commercial edible food generators are only required to track the pounds of food that were collected or self-hauled. They are not required to track the amount of food that was recovered and consumed by people as this would be very difficult and expensive for generators to track.</p> <p>During the informal rulemaking process the California Association of Food Banks also expressed concerns that tracking residual food waste would be very difficult and expensive for food recovery organizations and food recovery services to track. If it is already difficult for food recovery organizations and services to track the amount of recovered food that is actually consumed by people, then it is unreasonable to think that commercial edible food generators would be able to acquire this data from food recovery organizations and services.</p> <p>Regarding the question about discrepancies in the numbers reported, a commercial edible food generator could face enforcement action if it is determined that they have falsified their records. Please note however, that recordkeeping and reporting are different. Commercial edible food generators are not required to report any information, but they are required to maintain records. CalRecycle would also like to clarify that there is no requirement in the regulations to track donation dumping. However, the regulations require commercial edible food generators to have a contract or written agreement with a food recovery organization or service. If a food recovery organization or service is concerned that donation dumping could occur, then they should include language in their contract or written agreement to protect themselves against donation dumping. If a commercial edible food generator repeatedly donation dumps, there is nothing in SB 1383's regulations prohibiting a food recovery organization or food recovery service from terminating their relationship with that particular generator.</p> <p>CalRecycle developed a model food recovery agreement that can be customized and used by food recovery organizations, food recovery services, and commercial edible food generators. This model agreement does include a section for self-hauled edible food, which also includes designated delivery and drop off days and times to establish as well as language to protect food recovery organizations and services from donation dumping and unexpected donations. The model food recovery agreement is a template and is intended to be customized based on the needs of food recovery entities and commercial edible food generators.</p>
3568	Obermeit, H., City of Berkeley for StopWaste	<p>Require feedback loop in form of receipt or report to generators on lbs. and food types donated to incentivize the prevention of wasted food.</p> <p>To help edible food generators better manage inventory, reducing donation in favor of prevention. We have made this comment on past drafts of concepts and regulations. If the goal of this legislation is to reduce wasted organics and concomitant methane emissions, preventing food waste upstream is more effective. Food donation is not the most efficient way to feed hungry people or to reduce wasted food.</p>	<p>A change to the regulatory text was not necessary because commercial edible food generators are already required to maintain records of this information. CalRecycle would also like to clarify that the edible food recovery goal established by SB 1383 is to recover 20% of currently disposed edible food for human consumption by 2025. This is a food recovery goal, not a food waste prevention or source reduction of food waste goal.</p>
3569	Obermeit, H., City of Berkeley for StopWaste	<p>(B) Using a <del>jurisdiction-specific</del> waste characterization study for the tons disposed by the county or a jurisdiction within the county if the study is more recent than the Department's most recent waste characterization study. A jurisdiction-specific study shall include a statistically significant sampling of solid waste disposed of by the jurisdiction or <b>within the county</b>. When we've done previous waste</p>	<p>Thank you for the comment. The language was revised to address this situation.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>characterization studies for the county with statistically significant sampling at the jurisdictional level (1995, 2000, 2008), we found that the differences between our member jurisdictions were not statistically different. When planning for our recent 2017/2018 waste characterization study, it would have been hundreds of thousands of dollars more to conduct the study with statistically significant sampling at the jurisdictional level, so it was determined that it wasn't worth the extra significant cost as inter-jurisdictional differences were not statistically significant, so we conducted the study at a statistically significant level for the whole county.</p>	
3570	Obermeit, H., City of Berkeley for StopWaste	<p>Organic Waste Recycling Capacity Planning -- e) For the purposes of this section, organic waste shall only include the following type of organic waste: food, green waste, landscape and pruning waste, wood, paper products, printing and writing paper, digestate and biosolids. Does the current AB 876 include paper products, printing and writing paper, digestate and biosolids in its organic waste definition?</p>	The identified materials are not included in the requirements of AB 876.
3571	Obermeit, H., City of Berkeley for StopWaste	18992.2 -- Will CalRecycle be providing methodology for calculating estimates of amount of edible food, capacity of generators to recover 20%, etc.?	CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. In addition, CalRecycle also intends on providing other resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.
3572	Obermeit, H., City of Berkeley for StopWaste	18992.2 -- This section does not address characterizing surplus food. In order to identify existing and expanded capacity at food recovery organizations, there must be some effort to characterize the type of surplus being generated by commercial food operators.	Although the regulations do not require the types of food to be measured, CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. In addition, CalRecycle also intends on providing other resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.
3573	Obermeit, H., City of Berkeley for StopWaste	February August 1, 2022 counties shall report... Why does this report not align with EAR schedule? Aligning with existing reporting will be less onerous for cities, resulting in better reports.	Annual jurisdiction reports are due August 1 of each year. It is unclear from the comment how the dates are inconsistent.
3574	Obermeit, H., City of Berkeley for StopWaste	<p><del>Recovered Organic Waste Product Procurement Target (a) Except as otherwise provided, commencing January 1, 2022, a jurisdiction shall annually procure a quantity... (i) A jurisdiction shall identify additional procurement opportunities within the jurisdictions' departments and divisions for expanding the use of recovered organic waste products replacing comparable virgin products with recovered organic waste products.</del> <b>Commencing January 1, 2022, jurisdictions shall:</b></p>	Regarding MWELo, the proposed regulations have been changed to include a requirement that jurisdictions shall adopt ordinances or other enforceable mechanisms to requirement compliance with MWELo. CalRecycle generally agrees that training for the use of compost is valuable. Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.

Comment Number	Received From	Question/Comment	Response(s)
		<p><b>(1) require compliance with the following provisions of the California Model Water Efficient Landscape Ordinance: 492.5 Soil Management Report, 492.6(a)(3) Soil Preparation, Mulch and Amendments, and 492.9(a)(6) Certificate of Completion, soil analysis report and documentation verifying implementation.</b></p> <p><b>(2) provide a specification for compost and mulch and other documents, such as standard details, lists of local providers, and educational materials, necessary to facilitate compliance.</b></p> <p><b>(3) include compost and recycled mulch in all bid specifications for landscape contractors and in maintenance procedures for internal maintenance staff.</b></p> <p><b>(4) require that staff go to training on the use of compost and mulch for promotion or other advancement.</b></p> <p>We support building urban compost markets, but disagree with this mechanism for several reasons, based on our experience building compost and mulch markets in Alameda County. It does not make sense to base a compost procurement target on how much organics is generated. This target should be based on the potential for use. Also, it does not make sense to set the target for compost on transportation fuel use (which is unrelated). We recommend separate compost and RTF procurement requirements, especially because cities that do not send organics to AD are highly unlikely to have access to RTF as defined in the regs. In our experience, a better approach to incentivizing compost procurement in cities would be to require the cities to enforce the Water Efficient Landscape Ordinance (WELO). This approach is similar to that of Article 8, compliance with existing CALGreen requirements to require space for recycling and minimum C&amp;D diversion. Enforcing the WELO would require compost use when appropriate, rather than requiring a consistent and arbitrary quantity every year, regardless of need and responding to the unrelated baseline of fuel use. In addition, cities could be required to use compost as part of landscape maintenance, with an application rate of 1/2 inch on certain types of landscape.</p> <p>Composters in Northern California sell out of compost, and in the landscape market, the market price ranges from \$10-100/cubic yard (not ton). Requiring cities to buy compost could be financially crippling (e.g., City of Pleasanton would spend about \$200k in materials cost (more with delivery) for over 7,790 CY of material; their current use is about 1,500 CY with which they are able to topdress 16 acres with available staff. Through WELO enforcement, the city required the use of 2,750 CY). As currently written, this measure could have unintended negative consequences on compost markets by forcing city procurement. If cities incorporate give-backs into franchise agreements at a reduced \$/CY, that could undermine composters' existing markets and potentially artificially increase market prices for other purchasers, including landscape contractors and ag.</p> <p>Currently, we see cities who have givebacks included in their contracts receiving the lowest quality compost, material that has gone anaerobic, is immature, and high</p>	<p>CalRecycle disagrees that the procurement target methodology needs revision. The purpose for the procurement target methodology is to create a transparent method for local governments to create markets for products generated by organics recycling facilities that is proportional to the number of residents in a jurisdiction. California has over 400 diverse jurisdictions and it would be prohibitively difficult to account for each jurisdiction's "potential for use" and to develop a procurement target and enforcement policy for each one.</p> <p>Regarding the comment about cubic yards, CalRecycle has added the following conversion: 1 ton of organic waste feedstock = 0.58 tons compost = 1.45 cubic yards compost. This is based on 1 ton compost = 2.5 cubic yards using the commenter's recommended bulk density factor of 800 lbs/cubic yard, which is the same value used by the Department of Transportation (CalTrans). Note that cubic yards does not replace tons in the regulatory language; it is simply an alternative unit of measure.</p> <p>The intent of the procurement requirements is to build markets for recovered organic waste products in response to the over 25 million tons of organics that are required to be diverted by SB 1383. There are numerous ways a jurisdiction can choose to meet the procurement target, and compost is only one of the pathways. CalRecycle has revised section 18993.1 to expand the list of eligible recovered organic waste products to provide even more flexibility to jurisdictions. If a jurisdiction chooses to procure compost, nothing in the draft regulations mandates that a jurisdiction must "incorporate givebacks", as suggested by the comment. Regarding the comment about low quality compost, nothing in the draft regulations forces a jurisdiction to accept material that does not meet their quality standards. If a city chooses not to procure compost, they can procure other recovered organic waste products such as mulch or renewable gas energy products. To clarify this point, CalRecycle has added language requiring that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. The definition of renewable gas specifies that it must be processed at a facility that is "permitted or otherwise authorized by Title 14 to recover organic waste."</p> <p>Regarding the proposal for a second regulatory proceeding, CalRecycle disagrees with the suggestion to phase-in procurement or to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved. However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>levels of glass and plastic. If a city rejects loads due to poor quality, will they be penalized the state for not meeting their procurement targets? Given the complexity of this issue, we support the League of California Cities' recommendation to address procurement in a second regulatory proceeding.</p>	
3575	Obermeit, H., City of Berkeley for StopWaste	<p>See note for 3574 for proposed language. This comment addresses the SLCP and SRIA and their effects on the regulatory language. This measure is affected by mistakes and incorrect assumptions in the Short-Lived Climated Pollutant Plan and in the SRIA. This measure should include procurement of mulch. The SLCP Economic Analysis did not address the fact that the wood markets have crashed due to biomass plant closures, and there is no incentivizing or requirements for mulch purchases. This is a major oversight in the SLCP Economic Analysis and this issue needs to be addressed in the regs. The Economic Analysis also underestimated the cost of compost by at least half, stating the market price of compost as \$12-26/ton, rather than cubic yard (1 CY compost weighs 0.25-0.5 ton). The application rate used in the SRIA to estimate compost usage by cities is based on WELO (4 CY/1000 sf or ~1.3 inches), which is not appropriate for landscape maintenance. This rate is for new construction projects; a city is more likely to use compost as a top-dressing on existing landscape areas, which would have an application rate of 1/2 inch or ~1.5 CY/1000 sf) How can CalRecycle address these mistakes in upcoming draft language?</p>	<p>Comment noted. CalRecycle disagrees that the cost per ton of compost is underestimated. CalRecycle revised the estimated cost of compost in the Appendix to the ISOR. CalRecycle estimated the cost of compost by conducting a survey of several facilities in California, which found that the overall cost to purchase compost at a bulk rate, transport it, and apply the compost to land was \$30 per ton of compost.</p>
3576	Obermeit, H., City of Berkeley for StopWaste	<p>(g)(1)A Renewable transportation fuel -- Reduce this target and broaden definition of renewable transport fuel. This target seems high. CR&amp;R says they fuel 90 of their 900 trucks with their current production. If SB1383 creates 45-75 more facilities similar to theirs, that would be 6,750 trucks that could be fueled, and it seems that this product would be easily consumed by these new facilities' fleets, as with CR&amp;R. How much RTF is produced in the state? Isn't most of it used by the AD facility's fleet? Please explain the methodology and assumptions to arrive at 19 DGE.</p>	<p>CalRecycle disagrees with the comment's interpretation that the regulatory language mandates a specific target for renewable transportation fuel. That is not the case. The procurement requirements provide flexibility for a jurisdiction to procure recovered organic waste products that fit local needs. Renewable transportation fuel is only one of the pathways. CalRecycle has revised section 18993.1 to expand the list of recovered organic waste products to provide more flexibility to jurisdictions. In response to the amount of renewable transportation fuel (RTF) currently available, the intent of the procurement requirements are to build markets for recovered organic waste products. Therefore, the amount of renewable transportation fuel available today is likely not a reliable indicator of the amount that will be available once the regulations take effect. Regarding the use of renewable transportation fuel, section 18993.1(e)(2) specifically allows for "direct service providers" to procure and use recovered organic waste products on behalf of a jurisdiction. The example of CR&amp;R, as a direct service provider, using renewable transportation fuel in their fleet would likely qualify towards a jurisdiction's procurement target, provided all other requirements are met.  CalRecycle works closely with the Air Resources Board (ARB) to determine conversion factors for recovered organic waste products. The conversion factor for renewable fuel has since been updated from 19 diesel gallon equivalents (DGE) to 21 DGE based on the use of a higher heating value (HHV) basis versus the lower heating value (LHV) basis in order to be more consistent with most utility bills and other financial transactions for renewable gas. The conversion for 1 ton of organic waste to 21 DGE of renewable transportation fuel is based on ARB's "Simplified CI</p>

			<p>Calculator for Biomethane from Anaerobic Digestion of Organic Waste” and CA-GREET3.0, which was also subject to public comment.</p>
3577	Obermeit, H., City of Berkeley for StopWaste	<p>(g)(1)(B) <del>0.58 tons</del> X cubic yards of compost  Compost is not purchased by the ton in the landscape market because weight is highly dependent on moisture content and moisture content varies widely. Change tons to cubic yards and use a bulk density of 800 lb/CY to convert to tons. Cities should not be penalized because moisture content is low in a load.</p>	<p>CalRecycle has added the following conversion: 1 ton of organic waste feedstock = 0.58 tons compost = 1.45 cubic yards compost. This is based on 1 ton compost = 2.5 cubic yards using the commenter’s recommended bulk density factor of 800 lbs/cubic yard, which is the same value used by the Department of Transportation (CalTrans). Note that cubic yards does not replace tons in the regulatory language; it is simply an alternative unit of measure.</p>
3578	Obermeit, H., City of Berkeley for StopWaste	<p>Delete or change to "(h) If a jurisdiction's annual recovered organic waste product procurement target exceeds the jurisdiction's total procurement of transportation fuel <del>and renewable transportation fuel</del> from the previous calendar year as determined by the conversion factors in subdivision (g), the jurisdiction is only required to procure recovered organic waste products described in (f) in an amount equal to its total purchase of transportation fuel <del>and renewable transportation fuel</del> from the previous calendar year."  Does transportation fuel include gas and diesel? Add definition. Does the baseline include the fuel used by direct service providers? How will a jurisdiction measure this? How will CalRecycle enforce this? What documentation will be required?</p>	<p>A change to the regulatory text is not necessary. A text change is not necessary for the following reason. This requirement was renumbered to section 18993.1(j) and revised to add previous year’s procurement of electricity and gas for heating applications, along with fuel. The intent of section 18993.1(j) is to provide jurisdictions with a method to lower the procurement target calculated in subdivision (b). The purpose is to ensure the recovered organic waste product procurement target does not result in the jurisdiction procuring more products than it can use. Jurisdictions have the option to use their previous year’s procurement of fuel, electricity, and gas for heating applications to show that those amounts were not procured in sufficient volumes to meet the procurement target. The baseline includes those energy products used by direct service providers. A jurisdiction can measure their previous year’s energy procurement by accounting for receipts, invoices, or any other documentation showing a known quantity of energy was purchased or produced. CalRecycle will enforce consistent with the provisions of Record Keeping (18993.2), Reporting (Article 13), and Enforcement (Article 14). If, during enforcement, CalRecycle determines that a jurisdiction has not met its procurement target, then a jurisdiction must show at that time that it has met the requirements for a lowered procurement target pursuant to 18993.1(j).</p>
3579	Obermeit, H., City of Berkeley for StopWaste	<p>18993.1 -- Add (1) Recycled Mulch  Considering that green material will also be increasing, providing a requirement for cities to require the use of recycled mulch on all city landscapes will be a useful outlet for this material. Wood markets are suffering, and using mulch has multiple co-benefits, including reduced use of herbicides due to weed suppression, water savings of 40-70%, reduced soil compaction, and reduced N2O emissions. Mulch procurement can be enforced by requiring delivery tags noting mulch type and source for purchased mulch. Mulch generated through city landscape maintenance should also count toward this target and can be enforced through review of city specifications and requirements.  Note: Fentabil et al. Effect of micro-irrigation type, N-source and mulching on nitrous oxide emissions in a semi-arid climate: An assessment across two years in a Merlot grape vineyard. Agricultural Water Management 171 (2016) 49–62</p>	<p>CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.</p>
3580	Obermeit, H., City of Berkeley for StopWaste	<p>(a) A jurisdiction shall include all documents supporting its compliance with this article in the implementation record required by Section 14.40 of this chapter, including, but not limited to, the following:  <b>(1) City standard details and/or specifications requiring use of compost and recycled mulch on all projects in city.</b></p>	<p>A change to the regulatory text is not necessary. A text change is not necessary for the following reason. CalRecycle disagrees with the comment’s rationale for replacing the recovered organic waste product procurement target with specifications for compost and mulch use only, as this approach ignores the jurisdictions that have no need for these products. This same argument applies the proposed revisions in the record-keeping requirements. CalRecycle also disagrees with</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p><b>(2) City landscape maintenance practices, manuals, or schedules showing requirements to use compost and recycled mulch</b></p> <p><b>(3) Policy for landscape maintenance staff to take and pass a training on use of compost and mulch as criterion for promotions or other advancement.</b></p> <p><del>(1) A description of how the jurisdiction will comply with the requirements of this article.</del></p> <p><del>(2) The name, physical location, and contact information of the entity from whom the recovered organic waste products were procured.</del></p> <p>(3) All invoices or similar records, <b>such as delivery tags, or annual vendor statement</b>, evidencing all purchases. (4) If a jurisdiction will include purchases of recovered organic waste products made by a direct service provider to comply with this article, the jurisdiction shall include all records of purchases of recovered organic waste products made by the direct service provider on behalf of the a jurisdiction including invoices or similar records evidencing purchases. Flexibility for jurisdictions on purchasing what they need. Reduces already onerous reporting burden on jurisdictions and reviewing burden on the department. Description of how jurisdiction will comply does not demonstrate compliance; replace with specs/details, etc. Also, if requiring invoices or similar, requiring the name etc. of the supplier is redundant.</p>	<p>the proposed language additions in (3) as it is redundant to the existing language requiring “similar records evidencing all procurement”.</p>
3581	Obermeit, H., City of Berkeley for StopWaste	<p>(1) At least 75 percent of a jurisdiction's annual purchases of paper products shall be recycled content paper.</p> <p>"Paper products" is very broadly defined and it would be very difficult for smaller jurisdictions to track paper product purchasing that might be integrated with other office supply purchasing that are currently coded as just office supplies purchased, so it would be better to focus on tracking a subset of the paper purchases. From Alameda County: I think the copy paper requirement is fine. 30% PCR is adequate as a statewide goal and the tracking, while time consuming, is pretty straightforward, as long as we can use vendor reports to track. I am concerned about the other paper product requirement. Some of the PCR thresholds for the products listed are typically set lower than 30% PCR currently. So it will be more difficult to meet it within the current national markets. It will also add a significant burden of time for tracking.</p>	<p>The language has been changed to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content.</p> <p>Regarding the comment about “significant burden of time for tracking”, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them by early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p>
3582	Obermeit, H., City of Berkeley for StopWaste	<p>c) A jurisdiction shall require all businesses from whom it <del>purchases paper products</del> and printing and writing paper to certify in writing: (1) The minimum percentage, if not the exact percentage, of postconsumer material in the <del>paper products and</del> printing and writing paper offered or sold to the jurisdiction. The certification shall be furnished under penalty of perjury in a form and manner determined by the jurisdiction. A jurisdiction may waive the certification requirement if the percentage of postconsumer material in the <del>paper products</del>, printing and writing paper, <del>or both</del> can be verified by a product label, catalog, invoice, or a manufacturer or vendor Internet website.</p>	<p>The language has been changed to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content.</p>

Comment Number	Received From	Question/Comment	Response(s)
3583	Obermeit, H., City of Berkeley for StopWaste	<p>(a) A jurisdiction shall include all documents supporting its compliance with this Article in the implementation record...including, but is not limited to, the following:            (1) Copies of invoices or receipts <b>or other electronic records</b> for all <b>printing and writing</b> paper purchases.            Paper products is very broadly defined and it would be very difficult for smaller jurisdictions to track paper product purchasing that might be integrated with other office supply purchasing that are currently coded as just office supplies purchased, so it would be better to focus on tracking a subset of the paper purchases. From Alameda County: I think the copy paper requirement is fine. 30% PCR is adequate as a statewide goal and the tracking, while time consuming, is pretty straightforward, as long as we can use vendor reports to track. I am concerned about the other paper product requirement. Some of the PCR thresholds for the products listed are typically set lower than 30% PCR currently. So it will be more difficult to meet it within the current national markets. It will also add a significant burden of time for tracking. Also, for some jurisdictions, they may be able to get vendor reports of the purchases which would lessen the burden of having to keep copies of all invoices/receipts.</p>	<p>The language has been changed to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content.            CalRecycle disagrees with narrowing the definition of “paper products”. Paper is an organic material, and as such is subject to the ambitious organic waste diversion targets required by SB 1383. Therefore, it is within the purview of this regulation to build markets for recycled content procurement of all paper products, not just a certain subset of paper. It should also be noted that the broad range of products is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. There is no requirement to purchase all of the paper products listed.</p>
3584	Obermeit, H., City of Berkeley for StopWaste	<p>(a) Commencing August 1, <del>2023</del> <u>2022</u>, and annually thereafter, a jurisdiction shall report the information required by this section. <del>The report submitted in 2022 shall cover the period of January 1, 2022-June 30, 2022.</del> Each subsequent report shall cover the entire previous calendar            One month (July 2022) is way too short a time to pull together the extensive reporting required for a Jan to Jun 2022 time period. Many franchise agreements require haulers to report data to the jurisdiction, but the time specified to submit the reports may be longer than one month. It's also repetitive for the full calendar year 2022 to be reported in Aug. 2023.</p>	<p>A change to the regulatory text is not necessary. CalRecycle has revised section 18994.2 in response to this comment. If a jurisdiction submits its initial compliance report pursuant to section 18994.1 by April 1, 2022, a jurisdiction may submit its first report, covering the period of January 1, 2022 through June 30, 2022, on October 1, 2022. The Department will conduct a mid-year review (6 months) of the jurisdiction's compliance and implementation with the requirements of this Chapter. This will allow CalRecycle an opportunity to assist jurisdictions in the implementation phase of the regulations. Most of the information required in the Annual Reporting can be assembled prior to the October 1, 2022 due date. The following Annual Report will cover January 1, 2022-December 31, 2022 and will be due August 1, 2023.</p>
3585	Obermeit, H., City of Berkeley for StopWaste	<p>e) A jurisdiction shall report the following regarding its implementation of education and outreach required in Article 4. (1) The number of organic waste generators and edible food generators that received information required by Article 4. (2) <del>The number of limited English speaking and linguistically isolated households that received information required by Article 4.</del> <b>An explanation of how limited English speaking and linguistically isolated households were provided information.</b>            A jurisdiction will most likely not have access to how many households exactly are limited English speaking and linguistically isolated at any one time. What if the households are in apartment buildings that have high turn-over rate? If a jurisdiction includes multiple language on their mailed educational materials that are sent to every residential garbage account, then they can explain that's how they communicated with limited English speaking and linguistically isolated households rather than providing a number.</p>	<p>CalRecycle has revised section 18994.2(e) in response to this comment. This was removed from the reporting requirements due to the difficulty of knowing the number of limited English speaking and linguistically isolated households that received information as required by Article 4.</p>
3586	Obermeit, H., City of Berkeley for StopWaste	<p>(f) A jurisdiction shall report the following regarding its implementation of the hauler oversight requirements of Article 7:...<del>(5) The total amount, in tons, of source separated organic waste that was self-hauled by organic waste generators and</del></p>	<p>Jurisdictions are not required to identify every self-hauler. They are required to adopt an ordinance that requires compliance and provide general education about self-hauler requirements.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p><del>reported to the jurisdiction pursuant to Section 18988.3. The number of accounts with at least 2 cubic yards of weekly garbage service that are approved to self-haul their source-separated organic waste.</del></p> <p>Not all self-haulers are equal and some are very small in amount self-hauled. Currently, for our MRO implementation at commercial accounts, if they are self-hauling, back-hauling, sharing service or using a third-party recycler, they are supposed to submit a Certification of Recycling Service (CRS) form to indicating what they are doing and that they are complying with our MRO, but we do not require reporting of weights. Some of these accounts report that they are taking their recyclables home or otherwise don't have a lot of garbage service because they are smaller businesses. We have about 400 accounts county-wide (out of ~21,000 total commercial accounts) that have approved CRS forms and it would be very difficult and time-consuming to try and get annual tons reported to us, entered into our database and tracked.</p>	<p>Many comments noted that it would be difficult to identify and provide education information to all self-haulers, such as landscape companies, because jurisdictions do not have business license information on these entities; dedicating additional resources to identifying and educating all self-haulers would be burdensome and costly. Some jurisdictions do require businesses that self-haul, back-haul, share service, or use a third-party independent recycler to submit a Certification of Recycling Service form with information about where they are taking the recyclables or organics. CalRecycle modified deleted the requirements that jurisdictions separately identify and provide education to all self-haulers, along with associated reporting requirements. CalRecycle added a new Section 18985.1(a)(7) to require jurisdictions to include educational material on self-hauling requirements in the educational material that the jurisdictions already are required to provide to all generators. CalRecycle revised Section 18985.1(b) to include all education requirements for single unsegregated collection systems.</p>
3587	Obermeit, H., City of Berkeley for StopWaste	<p>(2) The number of food recovery services and organizations located and operating within the jurisdiction that collect or receive more than 6 tons of food per <b>year from Tier one or Tier two commercial edible food generators.</b></p> <p>Would reduce the reporting burden if there are food recovery services or organizations that collect edible food from other entities than Tier one or Tier two commercial edible food generators. Reporting all food received, if not received from Tier I or II generators, does not support regulatory requirements, and should not be required.</p>	<p>To help clarify the reporting requirements for food recovery organizations and food recovery services the regulatory text was revised. The revised text clarifies that a jurisdiction shall require food recovery organizations and food recovery services that are physically located within the jurisdiction and contract with or have written agreements with commercial edible food generators pursuant to Section 18991.3 (b) to report the total pounds of edible food recovered (from commercial edible food generators) in the previous calendar year to the jurisdiction. To clarify further, any food recovery organization or food recovery service that has a contract or written agreement with one or more commercial edible food generators is required to report to the jurisdiction. Specifically, they are required to report (to one jurisdiction) the total pounds of edible food that were collected or received directly from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Regulated food recovery organizations and food recovery services are not required to report the pounds of edible food recovered from entities that are not commercial edible food generators, nor are they required to track or report residual food waste as such a requirement could be overly burdensome and infeasible to comply with. Food recovery organizations and services should have the data on the pounds of edible food recovered from tier one and tier two commercial edible food generators because Section 18991.5 requires them to maintain a record of the quantity in pounds of edible food collected and received from each commercial edible food generator that they contract with or have a written agreement with pursuant to Section 18991.3 (b). If food recovery organizations and food recovery services are in compliance with the recordkeeping requirements specified in Section 18991.5, then they will have the information that is necessary to comply with the requirement to report the total pounds collected from tier one and tier two commercial edible food generators in the previous calendar year to the jurisdiction.</p>
3588	Obermeit, H., City of Berkeley for StopWaste	<p>(3) The jurisdiction shall report on the total amount of edible food recovered by edible food recovery organizations and services that are located within its jurisdiction <b>and required</b> to report to the jurisdiction. How would the jurisdiction know the amounts of from those that aren't to report to it? Some food recovery</p>	<p>The regulations are structured to ensure that double counting of pounds recovered will not occur. Double counting should not occur because the requirement is for food recovery organizations and food recovery services to only report the pounds they collect or receive directly from commercial edible food generators. For example, if a food recovery service collects food directly from a</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>services may transport edible food to food recovery organizations, so have to reduce the likelihood of double counting.</p>	<p>commercial edible food generator, then the food recovery service is responsible for maintaining a record of those pounds collected and also responsible for reporting those pounds to one jurisdiction (the jurisdiction where the food recovery service's primary address is physically located). If a food recovery organization receives food from a food recovery service, that food recovery organization is not responsible for reporting those pounds of food to the jurisdiction because the food was not collected or received directly from a commercial edible food generator. To clarify further, any food recovery organization or food recovery service that has a contract or written agreement with one or more commercial edible food generators is required to report to the jurisdiction. Specifically, they are required to report (to one jurisdiction) the total pounds of edible food that were collected or received directly from the commercial edible food generators that they contract with or have written agreements with pursuant to Section 18991.3 (b). Food recovery organizations and food recovery services are not required to report the pounds of edible food recovered from entities that are not commercial edible food generators, nor are they required to track or report residual food waste as such a requirement could be overly burdensome and expensive to track.</p> <p>Food recovery organizations and services should have the data on the pounds that were recovered directly from tier one and tier two commercial edible food generators because Section 18991.5 requires them to maintain a record of the quantity in pounds of edible food collected and received directly from each commercial edible food generator that they contract with or have a written agreement with pursuant to Section 18991.3(b). If food recovery organizations and food recovery services are in compliance with SB 1383's recordkeeping requirements, then they will have the information that is necessary to comply with the requirement to report the total pounds recovered directly from tier one and tier two commercial edible food generators.</p>
3589	Obermeit, H., City of Berkeley for StopWaste	<p>(2) The total dollar amount spent on all <b>printing and writing</b> paper purchases. (3) The total dollar amount spend on all <b>printing and writing</b> recycled content paper purchases. See above comments about the difficulty of purchasing and tracking purchasing of such a broad definition of paper product purchases. Printing and writing paper purchases may be more doable.</p>	<p>The language has been changed to remove the 75% requirement and instead applies a blanket requirement that purchases of paper products and printing and writing paper be consistent with existing Public Contract Code requirements regarding recycled content.</p> <p>Regarding the comment about "significant burden of time for tracking", CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them by early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.</p>
3590	Obermeit, H., City of Berkeley for StopWaste	<p>(1) The number of commercial businesses subject to compliance reviews and the number of violations found <del>and corrected</del> through compliance reviews. It is difficult to determine with an entity has "corrected" their violation. May not have real-time information about when an account has added service.</p>	<p>A change is not necessary. Jurisdictions are not required to report in real time. Records must be kept accurate within 60 days, and reporting is on an annual basis.</p>
3591	Obermeit, H., City of Berkeley for StopWaste	<p>(7) The number of entities by type (generator, hauler, edible food generators) that came into compliance in the calendar year.</p>	<p>A change is not necessary. Jurisdictions are not required to report in real time. Records must be kept accurate within 60 days, and reporting is on an annual basis.</p>

Comment Number	Received From	Question/Comment	Response(s)
		As noted above, it is often difficult to determine who came into compliance in any one year and not until the next inspection which may not be in that same reporting year.	
3592	Obermeit, H., City of Berkeley for StopWaste	<p>(1) On or before January 31, 2022, and at least annually thereafter,...the jurisdiction shall: 1. Complete a compliance review of <del>all</del> garbage accounts for commercial businesses that are subject to its authority, and that generate two cubic yards or more per week of solid waste and produce organic waste, in order to determine compliance with: i. Organic waste generator requirements set forth in Section 18984.9. ii. Self-haul requirements set forth in Section 18988.3, including whether a business is complying through backhauling organic waste. 2. Conduct route reviews of commercial businesses <b>that are not multifamily properties and residential areas</b> for compliance with organic waste generator requirements set forth in Section 18984.9 and container contamination requirements set forth in Section 18984.5. Section 18984.9 includes organics service and for commercial businesses (defined as also including multifamily accounts with 5 or more units) and also includes providing containers in all disposal areas and prohibiting their employees from placing organics in garbage. What if a jurisdiction can't get access to inspecting all accounts? In MRO implementation, when we tried to inspect multifamily accounts, we found that we couldn't get access to about half the accounts and we don't currently inspect unless there's a complaint (and then only for provision of service, not improper sorting). For commercial accounts above 1 cy garbage/week, we've found that about 15% of the time, we can't get access to inspect. Need some allowance for no access. Also, route review means visual inspection and particularly as it pertains to container contamination, there is a higher level of expected privacy at residential accounts (single-family and multi-family).</p>	<p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter. The Department wanted to ensure a fair playing field for all entities and to identify that jurisdictions have the primary responsibility in monitoring compliance and taking enforcement on entities failing to comply with the chapter. A compliance review is intended to be a "desk audit" to verify that all solid waste accounts for commercial businesses, that generate two cubic yards or more per week of solid waste, are subscribing to service or self-hauling organic waste to a facility that processes source separated organic waste or to a high diversion organic waste processing facility, whichever if applicable. The regulations allow the jurisdiction flexibility when conducting a "sufficient number of route reviews and inspections." Jurisdiction may prioritize route reviews and inspections to large generators or entities it determines to be more likely out of compliance. If an entity is found to be noncompliant between January 1, 2020 through December 30, 2023, jurisdictions are required to provide educational material describing the applicable requirements of this Chapter.</p>
3593	Obermeit, H., City of Berkeley for StopWaste	<p>(2) Conduct inspections of Tier One commercial edible food generators <b>that have not provided documentation of their compliance with the requirements set forth in Section 10.3 and 10.4</b> and food recovery organizations for compliance with this chapter. Even jurisdictions that already have an MRO would have to adopt a new ordinance to give them the authority to inspect/enforce for the commercial edible food generator requirements. Lessen the need for costly on-site inspections by allowing edible food generators to submit their records. Having CalRecycle work with an entity, such as Green Halo or Feeding America, to help facilitate a streamlined, standardized reporting platform that jurisdictions could use would significantly reduce the reporting burden. We would need to adopt a new Ordinance to give us authority to inspect/enforce for the commercial edible food generator requirements. But, the tier one commercial edible food generators are already inspected by the Environmental</p>	<p>Section 18981.2 specifies that a jurisdiction may designate a public or private entity to fulfill its responsibilities through a contract or MOU. A jurisdiction could enter into an MOU with an environmental health department to achieve the benefits noted in the comment.</p>

Comment Number	Received From	Question/Comment	Response(s)
		Health Dept, so maybe they could more easily incorporate this into their inspection process.	
3594	Obermeit, H., City of Berkeley for StopWaste	Delete or change to (6) <del>Annually</del> <b>Periodically</b> verify through inspection, annual review or route review businesses are meeting de minimus and physical space waivers for compliance with the requirements of Section 18984.11. These are the smallest generators so we should not waste our time on inspecting these accounts on an annual basis, which may be more frequent than we are inspecting other larger accounts/generators. The physical space constraints aren't going to change every year. In our MRO implementation, we do a site investigation in the waiver approval process and then require them to tell us if anything changes regarding their solid waste situation. We do not go back to inspect or annually review these accounts because we are prioritizing inspections at accounts that don't have a waiver (and are likely larger).	CalRecycle has revised the verification period to five years in response to this comment. Thank you for the support comment. This comment is in support of the current language.
3595	Obermeit, H., City of Berkeley for StopWaste	c. A jurisdiction shall generate a written report <b>or keep electronic records</b> for each inspection, route review, and compliance review conducted pursuant to this Chapter. We contain all our inspection/enforcement data in our CRM and provide monthly reports to member jurisdictions about enforcement letters that went out in the prior month, but providing a written report for every inspection (we have conducted thousands a year) would be overly burdensome/expensive.	Thank you for the comment. CalRecycle has revised this section to include electronic records.
3596	Obermeit, H., City of Berkeley for StopWaste	(3) A list of the date <b>that the jurisdiction determined</b> the entities issued a Notice of Violation <b>for lack of organics collection service</b> came into compliance and evidence that supports compliance. We won't necessarily know the exact date an entity came into compliance, but if we inspected again and they were in compliance then, we would know the date that we determined they were in compliance. In MRO implementation, we don't have real-time access to hauler data to know when they started organics service. Also, if they have an improper sorting violation, it's transient and it could be the next collection day when the materials are taken away that they could be considered in compliance and it can go back and forth from compliance to noncompliance in subsequent inspections.	The regulatory language was changed to address stakeholder comments and now reflects the date that the jurisdiction determined that an entity complied with a Notice of Violation
3597	Obermeit, H., City of Berkeley for StopWaste	(b) The Implementation Record shall be stored in one central location, physical or electronic, <b>for records to be provided to the Department if the Department has evidence that the jurisdiction may be out of compliance with this Chapter that can be readily accessed by the Department.</b> <del>The jurisdiction shall provide its central location for records and a point of contact to the Department to facilitate the Department's review of the records.</del> <b>Service level data that is under trade secrets protection shall not be subject to Public Records Request Act disclosure.</b> The annual reporting to CalRecycle is already extensive. Our enforcement data is in our CRM and it would be difficult to have it be readily accessed by the Department. Either in this item or elsewhere, it should be stated that proprietary/trade secret-protected service level data should be protected against disclosure in the Public Records Request Act. Can jurisdictions designate another entity (e.g. StopWaste) to	Section 18981.2 specifies that a jurisdiction may designate a public or private entity to fulfill its responsibilities through a contract or MOU. A jurisdiction could enter into an MOU with an environmental health department to achieve the benefits noted in the comment.

Comment Number	Received From	Question/Comment	Response(s)
		be the keeper of portions of their Implementation Record, such as generator inspection records, photos and enforcement letters (if we could work out a way for it to be accessed by the Department upon request)?	
3598	Obermeit, H., City of Berkeley for StopWaste	(c) Upon request by the Department, the jurisdiction shall provide access to the Implementation Record within <del>fifteen</del> <b>one</b> business days. One business day is too short. What if the jurisdiction point of contact is on vacation? Jurisdictions have more to do than just work on this.	CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.
3599	Obermeit, H., City of Berkeley for StopWaste	<p>(2) The jurisdiction shall conduct follow-up inspections to determine if compliance is achieved, at least every 90 days following the date of the first Notice of Violation, and continue to issue Notice of Violation until compliance is achieved or a penalty has been issued. (3) The jurisdiction shall commence actions to impose a penalty pursuant to Article 16 on the entity within the following timeframes: (A) For a first violation no later than 150 days after the issuance of the Notice of Violation. (B) For a second violation and all subsequent violations, no later than 90 days after the issuance of the Notice of Violation.</p> <p>Delete item 2 or 3 or combine/merge. Items 2 and 3 are duplicative and its not clear how they are different. If keep item 3, for (A), what if the entity comes into compliance after the Notice of Violation and the language reads that</p>	<p>With respect to the time frame for issuing NOVs; The comment is not directed at the changes to the third regulatory draft. The 90-day timeline was established in the first draft of regulatory text. The 180-day timeline is not a substantive change from the original draft. The original text allowed for an extension of up to 90 days (allowing a total extension of 180 days), the text was changed to read more clearly to state that an extension may be granted for up to a total of 180 days which is functionally equivalent to the original text.</p> <p>Comments on the NOV timeline are addressed in Enforcement Table I which addresses comments on the original draft of text.</p> <p>CalRecycle established the timeline of 90 days and allowed for 90- day extensions as it is a common regulatory timeline for correcting violations or complying with regulatory orders or agreements. The 90-day timeline and the 90-day extension (providing for a total of 180 days) reflects timelines for stipulated agreements issued by solid waste Enforcement Agencies (EAs) to bring facility operators into compliance. This is articulated in CCR Section 17211.2. This section allows an EA to issue a stipulated agreement establishing terms and conditions that must be met within 90 days and provides EAs an allowance to extend the timeline once by 90 days. Similarly, CCR Section 18072 requires EAs to correct staffing deficiencies within 90 days, and CCR Section 18362 provides solid waste facilities 90 days to correct violations of state minimum standards prior to being listed in the facility inventory.</p> <p>The timelines for correcting NOVs and extended NOVs is intended to accommodate violations that can be corrected within three months or six months respectively, such as a deficiency in records, or similar to CCR Section 18072 a deficiency in staffing. For violations that require additional time to cure, CalRecycle established the Corrective Action Plan in this article with minimum timeframes.</p> <p>The language allows initial CAPs (which allow up to 24 months to achieve compliance) to be issued when a jurisdictions has made substantial effort to correct violations but extenuating circumstances prevent compliance within 180 days. The regulations further allow an initial CAP issued specifically due to a lack of recycling capacity to be extended and additional 12 months, allowing a CAP to extend a total of 36 months providing three years to correct a violation.</p> <p>The commenter requests that rather than allowing CAPS due to infrastructure deficiencies to be extended for a period of 12 months, that CAPS can be extended in perpetuity. This proposal would violate the intent and the provisions of SB 1383. The statute requires CalRecycle to adopt regulations to achieve organic waste reduction goals for 2020 and 2025. The timelines for the CAP were carefully crafted in consideration of these statutory timelines and the effective date of the regulation. An extended CAP allows a jurisdiction that is in violation of requirements due to infrastructure deficiencies, 36 months from the effective date of the regulations to come into</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>compliance. This effectively allows jurisdictions to be in violation of the requirements of SB 1383 through the year 2025.</p> <p>The timelines allowed for in the CAP represent the maximum amount of flexibility CalRecycle can provide while still meeting the requirements of the statute. The statute requires that the regulations are designed to achieve the statutory targets required by 2025. The regulations comply with this requirement by imposing requirements on regulated entities that those entities must implement beginning in 2022. To ensure that the regulations are effective and are affirmatively designed to meet the required intent of the statute, the regulations necessarily include penalties for violations of the requirements. In recognition of stakeholder feedback regarding a lack of infrastructure, CalRecycle developed the CAP to allow jurisdictions that are in violation of the requirements, such as the requirement to provide organic waste recycling services to generators due to a lack of infrastructure, additional time to come in to compliance by 2025. The requirement to provide organic waste recycling services is the foundational requirement of the regulation, and it is indisputably essential to achieving the 2025 reduction targets.(see Article 3 of the Statement of Reasons) Allowing jurisdictions to violate the requirement to provide service beyond 2025 with no penalties or consequences would invalidate the regulations. That is the department could not adopt the regulations as they would not meet the basic statutory obligation that they be designed to achieve the statutory target to reduce disposal 75 percent below 2014 levels by the year 2025.</p> <p>In other words, intentionally crafting language allowing jurisdictions to violate the requirement to provide organic waste recycling service beyond 2025 is fundamentally incompatible with the requirement to achieve the 2025 organic waste reduction targets.</p> <p>With respect to the timelines in the CAP, CalRecycle notes the CAP must be viewed with consideration of existing statutory timelines and requirements, not only the timelines in this regulation. Requirements for jurisdictions to provide organic waste recycling services are not novel or unique to these regulations. The state began phasing in requirements for jurisdictions to provide organic waste recycling requirements 2014 (see AB 1826), and as early as 2008 the State's Scoping Plan established reductions in organic waste disposal as a key part of the state's climate strategy. Existing state law requires jurisdictions to gradually offer organic waste recycling services to an increasing number of generators. As a result, jurisdictions are required to offer organic waste recycling service to the vast majority of their commercial businesses prior to the effective date of these regulations. As noted in Appendix A to the ISOR, commercial businesses constitute 60 percent of solid waste generation. If jurisdictions took action to secure capacity necessary to comply with the provisions of existing law, the requirements to provide service to the balance of their generators will be a smaller step. Even if jurisdictions have not made a good faith effort to comply with existing organic waste recycling statutes, CalRecycle further notes that the SB 1383 was adopted in 2016. One should not view the timeline the years 2022-2025 in isolation, but should consider that many of the basic requirements of the statute were clear as early as 2016, nine years prior to when the first CAPS will expire.</p> <p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p> <p>Finally, CalRecycle notes that the commenter recommends replacing all timelines with "for a reasonable period according to the actions required." The established timelines are specifically designed to allow a reasonable period for compliance depending on the circumstances of the violation (whether it can be corrected in the timeline of an NOV, or if it the violation requires and warrants a CAP). The proposed language of "reasonable" is open-ended and provides no regulatory certainty to entities subject to oversight. The commenters have provided no recommendation for factors to determine how "reasonable" would be interpreted as an objective standard that can be applied equally to all regulated entities. As proposed, the alternative text could result in an uneven application of enforcement.</p> <p>With respect to allowing CAPS to also be extended for "any extenuating circumstance" or any violation in general, to clarify, the existing language provides that a CAP may be issued for any violation that occurs provided that the jurisdiction made a substantial effort to achieve compliance, but extenuating circumstances prevented compliance. Extenuating circumstances are not limited to infrastructure deficiencies. They also include circumstances such as natural disasters. The section identified by the commenter applies additional prerequisites to the use of CAPs that are issued due to a lack of infrastructure, but it does not preclude CAPs from being issued for circumstances not related to infrastructure. No change to the regulatory text is necessary as the existing text accommodates the policy requested by the commenter.</p> <p>The comment is not germane to changes made in the third draft of the regulatory text. The timelines were established in the first draft of the regulatory text released in January of 2019. CalRecycle disagrees with the comment that the enforcement timelines are unrealistic. The timelines established in the regulation reflect the ambitious organic waste reduction targets and the essential role compliance with the regulation plays in achieving those targets. The timelines proposed by the comment would frustrate the purpose of the statute, and would establish minimum fines for violations that are orders of magnitude lower than cost of compliance.</p> <p>The department notes that as structured this section requires a jurisdiction to take action to commence a penalty 150 days after issuing the NOV, the NOV can be issued up to 60 days after a violation was discovered. This allows the commencement of an enforcement action to occur 210 days after an entity was found out of violation. This provides a jurisdiction up to 7 months to educate a violator and bring them into compliance before a penalty action must commence. This is in accordance with the requirements established in Section 53069.4 which require a local agency to provide a reasonable period of time to remedy a violation prior to the imposition of administrative fines. The actual issuance of the penalty may require additional time as well,</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>further extending the time to correct a violation, and the time between the occurrence of the violation and the issuance of a penalty for that violation.</p> <p>Extending the timelines as proposed would confound the timelines conceivably preventing the issuance of a penalty for a second or subsequent violation or offense as provided in the relevant sections of the Government Code. As noted above Section 53069.4 of the Government Code establishes procedures for issuing penalties, which these regulations conform to. Sections 25132 and 36900 of the Government Code additionally establish maximum penalty amounts, and timelines for issuing penalties for a second offense and subsequent offense.</p> <p>Under Sections 25132 and 36900 of the Government Code, a jurisdiction can only issue a fine for a second or third violation if the violation occurs within one year of the first violation. In practice, if a jurisdiction delays the levying of a penalty to the maximum amount of time permitted in the regulation to commence a penalty (7 months), the issuance of a second penalty for that violation is nearly precluded. Extending the timelines as proposed by the commenter would effectively make the minimum timelines for issuance of a first penalty preclude the issuance of a penalty for a second violation in all circumstances. This would artificially limit the maximum fine amount to no more than \$100 per year for a violation as fundamental as the requirement that businesses participate in organic waste recycling service provided by the jurisdiction. The department estimates the cost of compliance with obtaining organic waste recycling service will average \$80 per month. Under the text proposed by the commenter, the minimum fine amount for failure to have organic waste recycling service would be orders of magnitude less than the cost of compliance. Therefor the language proposed in the comment is incongruent with achieving the statutory targets.</p>
3600	Obermeit, H., City of Berkeley for StopWaste	<p>c) A jurisdiction shall provide the following information in any Notice of Violation or other enforcement actions:...(4) The penalty for not complying within the specified compliance date <b>or the penalty issued.</b></p> <p>Added language allows for if the enforcement letter is the citation where the penalty is already imposed.</p>	<p>A change to the regulation is not necessary, nothing in the regulation precludes a jurisdiction from including a penalty in a notice of violation.</p>
3601	Obermeit, H., City of Berkeley for StopWaste	<p>Property owner or business owner fails to provide or arrange for organic waste collection services consistent with Article 3 of this chapter for employees, contractors, tenants, and customers, including supplying and allowing access to adequate numbers, size, and location of containers <del>and sufficient signage and container color</del>, as prescribed by this Section. 1st violation = Penalty Level 1 (\$50-\$100/violation). 2nd violation = Penalty Level 2 (\$100-\$200/violation). 3rd violation = Penalty Level 3 (\$250-\$500/day). It's to hard to verify for sufficient signage and container color inside the business. Plus, if they are providing the service and they are properly sorting (they don't get a violation for Section 30.9 (b)(2) failing to prohibit their employees from placing organic waste in a container not designated to receive organic waste), then the internal signage and container color doesn't matter so much. It's also too difficult to for a jurisdiction to determine the exact number of days they are in violation of this requirement, so it should be a per violation instead of per day penalty. When the penalties get too high on the</p>	<p>Comment noted. In section 18995.1, jurisdictions are required to complete a compliance review of all garbage accounts for commercial business that generate two cubic yards or more per week of solid waste and produce organic waste to verify they are subscribing to service and educate organic waste generators as prescribed in Article 4.</p> <p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p> <p>The penalty tables containing the language the commenter is referring to were deleted from the proposed regulations.</p>

Comment Number	Received From	Question/Comment	Response(s)
		generators, they often just don't pay and it's difficult for jurisdictions to actually get them to pay. In MRO implementation, we have about a 25% delinquent rate in our fines.	
3602	Obermeit, H., City of Berkeley for StopWaste	Property owner or business owner fails to provide information to employees, contractors, tenants, and customers about organic waste recovery requirements and proper sorting annually, as prescribed by this section. It's too difficult for a jurisdiction to inspect/verify if they provided the information annually or not. In MRO, we have this requirement, but we are not enforcing against it because it's too difficult to verify.	<p>Comment noted. In section 18995.1, jurisdictions are required to complete a compliance review of all garbage accounts for commercial business that generate two cubic yards or more per week of solid waste and produce organic waste to verify they are subscribing to service and educate organic waste generators as prescribed in Article 4.</p> <p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p> <p>The penalty tables containing the language the commenter is referring to were deleted from the proposed regulations.</p>
3603	Obermeit, H., City of Berkeley for StopWaste	Organic waste generator, that is a commercial business, fails to provide containers for the collection of organic waste and nonorganic <del>recyclables in all areas where disposal containers are provided for customers.</del> 1st violation = Penalty Level 1 (\$50-\$100/violation). 2nd violation = Penalty Level 2 (\$100- \$200/violation). 3rd violation = Penalty Level 3 (\$250-\$500/day). It's too difficult, onerous and costly for a jurisdiction to inspect/verify if they provided the containers in all areas where disposal containers are provided for customers. Plus, what if certain areas such as bathrooms do not generate 3 separate streams of materials or if the business knows that bins (even with good signage) in certain customer areas will be too contaminated? It's also too difficult to for a jurisdiction to determine the exact number of days they are in violation of this requirement, so it should be a per violation instead of per day penalty.	<p>Comment noted. In section 18995.1, jurisdictions are required to complete a compliance review of all garbage accounts for commercial business that generate two cubic yards or more per week of solid waste and produce organic waste to verify they are subscribing to service and educate organic waste generators as prescribed in Article 4.</p> <p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p> <p>The penalty tables containing the language the commenter is referring to were deleted from the proposed regulations.</p>
3604	Obermeit, H., City of Berkeley for StopWaste	Organic waste generator, that is a commercial business, fails to periodically inspect waste containers for contamination, and inform employees if containers are contaminated and of the requirements to only use those containers for organic waste. 1st violation = Penalty Level 1 (\$50-\$100/violation). 2nd violation = Penalty Level 1 (\$50-\$100/violation). 3rd violation = Penalty Level 2 (\$100-\$200/violation). It's too difficult for a jurisdiction to verify that a generator failed to periodically inspect their own containers and inform employees. Even if they continue to get a contamination penalty, maybe they still did periodically inspect their own containers and inform employees but the employees are still not sorting properly.	<p>Comment noted. In section 18995.1, jurisdictions are required to complete a compliance review of all garbage accounts for commercial business that generate two cubic yards or more per week of solid waste and produce organic waste to verify they are subscribing to service and educate organic waste generators as prescribed in Article 4.</p> <p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p>

			The penalty tables containing the language the commenter is referring to were deleted from the proposed regulations.
3605	Obermeit, H., City of Berkeley for StopWaste	<p>Tier Two and Tier Two commercial edible food generator fails to arrange to recover edible food and comply with this section...1st violation = Penalty Level 1 (\$50-\$100/violation). 2nd violation = Penalty Level 2 (\$100-\$200/violation). 3rd violation = Penalty Level 3 (\$250-\$500/day).</p> <p>Recommendation -- Modify so there's some allowance for if there is not an organization or service that wants the edible food that they generate. Commercial edible food generator shouldn't be penalized if local food recovery organizations or services don't have the capacity to collect/accept or the need for the edible food that the business generates.</p>	<p>Comment noted. In section 18995.1, jurisdictions are required to complete a compliance review of all garbage accounts for commercial business that generate two cubic yards or more per week of solid waste and produce organic waste to verify they are subscribing to service and educate organic waste generators as prescribed in Article 4.</p> <p>CalRecycle has revised section 18991.3 in response to this comment. Section 18991.3 allows for a commercial edible food generator to demonstrate the existence of extraordinary circumstances beyond its control that make compliance impractical. This was necessary to provide relief from enforcement if the edible food generator has proved the jurisdiction failed to increase edible food recovery capacity as required in Section 18991.1 or was unable to comply due to acts of God such as earthquakes, wildfires, flooding and other emergencies or natural disasters. Also, Section 18995.4 allows the jurisdiction to extend compliance deadlines if it finds that extenuating circumstances beyond the control of the respondent make compliance within the deadlines impracticable, such as edible food recovery capacity deficiencies.</p> <p>In addition, the penalty tables in Section 18997.2 were deleted from the rulemaking and discretion is left to local jurisdictions to set penalties consistent with applicable limitations in the Government Code.</p>
3606	Obermeit, H., City of Berkeley for StopWaste	<p>Jurisdiction fails to procure a quantity of recovered organic waste products that meets or exceeds its procurement target, as prescribed in this section.</p> <p>Recommendation -- Reduce fine levels and make them per year instead of per day. Only if proposed procurement targets remain. If procurement targets are annual, it is not appropriate to calculate the fine on a per-day basis. Example: a city fails to meet its annual procurement goal by 1,000 CY. Is the fee charged per day until the city procures the additional 1,000 CY? Is it retroactive? If the city has to during the next enforcement year, and doesn't meet the target again because of attributing the 1,000 CY to the previous year, is the fine assessed again for the next year? This could lead to a never-ending string of fines. Alternatively, are the fines automatically set to cover a full year, until the city reports for the following year, making the minimum fine \$182,500? Note: 500-2400/day, 1000-5000/day</p>	CalRecycle has revised section 18997.3 in response to this comment. The penalty levels have been modified for procurement violations in response to comments.
3607	Obermeit, H., City of Berkeley for StopWaste	<p>Base Table 8 for Organic Waste Generators Requirements, Base Table 9 for Property Owner and Business Owner Responsibilities, Base Table 10 for Commercial Edible Food Generators.</p> <p>Recommendation -- Better explain the difference between Property Owner and Business Owner Responsibilities different penalty levels in Section 16.2 Table 1 versus Section 16.3 Tables 8, 9, and 10. It's not clear why the same violations carry different penalty levels in Section 16.2 Table 1 compared to Section 16.3 Tables 8, 9 and 10.</p>	<p>Comment noted. In section 18995.1, jurisdictions are required to complete a compliance review of all garbage accounts for commercial business that generate two cubic yards or more per week of solid waste and produce organic waste to verify they are subscribing to service and educate organic waste generators as prescribed in Article 4.</p> <p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p> <p>The penalty tables containing the language the commenter is referring to were deleted from the proposed regulations.</p>
3608	Obermeit, H., City of Berkeley for StopWaste	<p>Measuring Organic Waste -- (1) Take at least a <del>four</del> one (1) cubic yard samples from each of the organic waste type separated after processing at the operation or facility on that operating day prior to sending to a destination for end-use, recovery, or further processing. MSW contains a wider range of contaminants compared to SSO--includingbatteries, and other hazardous waste items. To ensure that these materials do not reach the compost facility, require more frequent load checks before material reaches composting facility.</p>	<p>CalRecycle staff has noted the comment and will not make any further text changes in response. However, loadchecking for the removal of prohibited waste, such as batteries and other hazardous waste is covered under the existing Section 17409.5.</p>
3609	Obermeit, H., City of Berkeley for StopWaste	<p>Section 17409.5.6 Source Separated Organic Waste Handling  (1) Remnant organic material spearated from the gray contrainer collection stream can be combined with organic material removed from the source separated organic waste collection stream one the material from the separated organic waste stream has gone through the measurement protocol described in Section 17409.5.4  Question -- Does this mean that organics from MSW can be added to SSO organics after the SSO organics have been decontaminated? If so, why? Is it because some streams are so contaminated that the limit is approximately the same as MSW? If so, there should be a minimum contamination threshold in the SSO material to allow it to be blended. Otherwise, this measure could inadvertently become a technique to dilute MSW compost to meet contamination limits on finished product, and result in an increase in contaminant-rich material being sold. Add language requiring that this blended product must be sold as MSW compost.</p>	<p>A change to the regulatory text is not necessary. Finished compost still needs to meet the Physical Contamination requirements under Title 14. The purpose of 17409.5.11 is to allow for facilities that receive gray container waste to be allowed to recover organic material after processing it and add it to their organic waste being sent out for recovery once the source separated waste organic and mixed waste organic collection streams have been sampled.</p>
3610	Obermeit, H., City of Berkeley for StopWaste	<p>Loadchecking - Contamination in Source Separated Organic Waste -- One (1) loadcheck shall be conducted for every 500 tons of source separated organic waste received per operating day.  Add language reducing frequency of load checks for facilities that are consistently demonstrating low contamination over a period of time. Facilities that are consistently receiving and/or producing a high quality feedstock stream do not need daily monitoring. We recommend consulting with operations about appropriate frequencies (e.g., daily to weekly to every two weeks to monthly?).</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
6346	Okoro, A., City of Norco	<p>Additionally, we remain concerned about critical points that hinder our ability to implement the proposed regulation. As a small rural animal-keeping community with limited financial and human resources, the City of Norco is severely limited in its capacity to implement the provisions of this new legislation. It is to be noted that the City generates significant amount of horse manure which cost residents</p>	<p>A change to the regulatory text is not necessary. Manure is an organic material that leads to methane emissions if landfilled. Other jurisdictions collect other organics and manure together to maximize efficiency.</p>

Comment Number	Received From	Question/Comment	Response(s)
		substantial amount to dispose away from traditional landfills. The requirements of SB 1383 will add costs that could make it potentially very difficult for Norco residents to afford their animal-keeping lifestyle.	
3650	Olmos, T., City of Brea	<p>Section 18985.2(a) - This section requires that each jurisdiction develop a list of edible food recovery services and organizations operating within each jurisdiction and post the information on their website. It seems that many food recovery service providers and organizations work across jurisdictional boundaries including across county boundaries. There may be a significant amount of duplication of effort and dozens of inquiries to the food recovery services and organizations (who are typically short-staffed, understaffed or run by volunteers).</p> <p>The City recommends that Ca/Recycle consider establishing a State-wide database similar to FACIT where food recovery service providers and organizations can register and provide their information once for access to all jurisdictions and generators. This would also allow for a comparable level of information to be requested and provided in these lists (such as what type of food will and will not be accepted). Alternatively, Ca/Recycle may want to consider establishing the generation of the list as a county requirement with the posting of the county-produced list on a jurisdiction's website as a jurisdictional requirement.</p>	<p>Although CalRecycle intends to provide tools and resources prior to 2022 to assist with SB 1383 edible food recovery regulatory compliance, it is critical that jurisdictions develop their own lists of food recovery organizations and services operating in their area.</p> <p>Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help jurisdictions assess their edible food recovery capacity and identify capacity needs that exist. In addition, developing local lists will help commercial edible food generators find organizations and services that are capable of safely handling and distributing recovered food on a regular basis in their area.</p> <p>The list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with, and thereby help ensure that edible food in the jurisdiction is not sent to landfills, but rather put to its highest and best use of helping to feed people in need.</p>
3656	Olmos, T., City of Brea	<p>Section 18995.1(a)(1)(A) - This section states that compliance reviews and route reviews shall be conducted to ensure compliance with the generator requirements outlined in Section 18984.9. It appears that this section is requiring the compliance reviews and route review to entail more than what the definition of these terms require in Sections 18982(a)(9) and 18982(a)(65). Under Section 18984.9(b) it states that commercial businesses shall periodically inspect organic waste containers for contamination and inform employees if containers are contaminated. It is unrealistic to expect that a jurisdictions designee will be monitoring communication between businesses and their employees.</p> <p>The City recommends that Section 18995.1(a)(1)(A) be amended to require that compliance reviews and route reviews ensure compliance with the generator requirements set forth in Section 18984.9. This will align the requirements of Section 18995.1(a)(1)(A) with the definitions specified in Article 1.</p>	<p>CalRecycle has revised section 18995.1(a)(1)(A) in response to this comment. Section 18995.1(a)(1)(A) has been revised to state that a jurisdiction shall determine compliance with the organic waste generator requirements set forth in section 18984.9(a). The clarification was added by adding the (a) to exempt jurisdictions from the requirements in subsections (b) through (e) of section 18984.9.</p>
3647	Olmos, T., City of Brea, Berkman, K., City of El Segundo	<p>Section 18984.11(a)(2) - This subsection allows for jurisdictions to waive organics program requirements due to limited physical space. There are certainly locations around the state that will have trouble finding space to accommodate additional service containers and it seems appropriate and necessary to allow for some waiver. However, those waivers could potentially exempt a significant number of generators in older buildings and in urban areas where parking and rentable space are highly valuable. In addition, in nonexclusive service areas, the ability of the hauler to sign off on the space accommodation waiver may result in a "race to the bottom" with some haulers signing off on those waivers in order to undercut competition, avoid providing organics recycling service, and gain business.</p>	<p>Since it is a jurisdiction provided waiver, a jurisdiction can set more stringent criteria in administering the physical space waiver. CalRecycle rejects the assumption that a significant number of generators could demonstrate legitimate physical space constraints. According to jurisdictions with similar space constraints waivers, very few businesses can demonstrate the existences of space constraints that cannot be addressed. There are few instances where a business's existing waste collection space could not accommodate an additional organic waste recycling container if the existing containers are downsized (e.g. two 90-gallon bins could be replaced with three 60-gallon bins and occupy the same space). This waiver intends to allow flexibility for businesses with legitimate and cost-prohibitive space constraints without compromising the state's ability to achieve the organic waste reduction targets.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>The City recommends that Ca/Recycle clarify what constitutes "evidence demonstrating a lack of adequate space." Implementing standards, a process for allowing potential waivers for space constraints, or minimum documentation requirements will encourage a consistent application of this section across jurisdictions, as opposed to leaving interpretation up to the Local Enforcement Agencies.</p>	<p>In regards to levying fees jurisdictions should consult their city or county counsel on how to appropriately structure fees.            CalRecycle has not included implementation standards or minimum documentation requirements to allow jurisdictions set appropriate criteria. Jurisdictions, not haulers, administer the waiver, so the physical space waiver will not result in a race to the bottom in nonexclusive service areas. A hauler, licensed architect, or licensed engineer, may provide evidence that a premise has a legitimate space constraint. If a jurisdiction has concerns about haulers in nonexclusive service areas, they can opt not to issue waivers or use a qualified source other than a hauler to demonstrate lack of adequate space for separate organic waste containers.</p>
3649	Olmos, T., City of Brea, Berkman, K., City of El Segundo	<p>Section 18985.(f)- This section requires public education materials in various languages if more than 5% of the jurisdiction's population is identified as a "limited English speaking household," or as "linguistically isolated" by the U.S Census Bureau. This can be burdensome, particularly if a community has several different languages spoken among its population.            The City recommends that Ca/Recycle consider increasing the percentage threshold to reduce the cost associated with preparation of public education materials in multiple languages, and/or allow for the compliance to be accomplished with a short statement (in the applicable language) that directs the non-English speaking person to the jurisdiction's website for materials in other languages, or allows for graphic-rich public education materials as a possible substitute.</p>	<p>Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.</p>
3653	Olmos, T., City of Brea, Berkman, K., City of El Segundo	<p>Section 18993.(f) - The provisions of this section require that jurisdictions procure a minimum amount of recycled organic waste products (compost and renewable transportation fuel) annually, or contract with direct service providers to procure these materials. The City believes that the requirement to procure recycled organic waste products is limited in scope as to the types of products that may be procured. The City recommends that CalRecycle add ground cover, mulch, soil amendments, and an allowance for additional recycled organic waste products (as approved by Ca/Recycle) to account for future technological and product developments. Soil amendments are considered a reduction in landfill disposal per Section 18983.(b)(5) and therefore should also be an acceptable form of recovered organic waste for procurement to close the loop. Furthermore, it would be beneficial for Ca/Recycle to post a list of approved recycled organic waste products on their website so that other jurisdictions are aware of additional procurement opportunities. Additionally, it may be useful for Ca/Recycle to have a vendor web portal that allows jurisdictions to procure recovered organic waste products from other jurisdictions or companies who output more products than they can currently utilize.</p>	<p>Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.            Regarding soil amendments and adding an option for approval of "future technological and product developments", CalRecycle disagrees due to lack of conversion factors and uncertain landfill diversion of feedstock for these products. The broad range of "soil amendments" and "future technological and product development" raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors. CalRecycle has also added language to clarify that procured compost must be from a permitted or authorized compostable material handling operation or facility or a permitted large volume in-vessel digestion facility which will mean that the compost will be required to meet environmental health standards in Title 14, including for pathogens, metals, and physical contaminants. If soil amendments meet that criteria, they may be considered compost.            Regarding a "vendor web portal", once the regulations are finalized CalRecycle will develop tools to aid jurisdictions with procurement-related questions.</p>
3660	Olmos, T., City of Brea, Berkman, K., City of El Segundo	<p>Section 18995.2 - SB 1383 currently requires a voluminous centralized repository for all information related to SB 1383 programs, which entails over 40 units of observations and potentially millions of data points. Subsection 14.2 (c) requires</p>	<p>CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>that the jurisdiction shall provide access to the implementation record within one business day of request. The City believes that this timeframe is unreasonable as City staff may have other priorities or scheduled time off, and it is unfair to jurisdictions to expect that they prioritize CalRecycle over other responsibilities, particularly in rural or smaller jurisdictions that may have limited staff and budget. The City recommends that the timeframe for providing or reviewing the implementation record be changed for consistency with The California Public Records Act, which indicates an agency must provide the records within a reasonable period of time and allows a ten-day period for response. This allows City staff flexibility to tend to their other responsibilities. Alternatively, Ca/Recycle could require an expedited timeframe only for those cities who have been found to be in violation of the implementation record requirements.</p>	
6023	Orsi, J., Citizen - Oakland	<p>Worried that the regs will pressure cities to enter into contracts with corporate waste management haulers. Haulers have pressured cities like Oakland to create legal monopolies, making most forms of small-scale composting impossible in Oakland. Please make rules that protect the right of the people in our communities to share green material and food scraps to create rich compost and healthy soil. Do not allow cities to comply with 1383 by entering into exclusive franchise agreements.</p>	<p>No change to the regulatory text is necessary. The regulations do not prohibit community. In addition, CalRecycle doesn't have authority to directly regulate franchise agreements.</p>
4396	Orsi, Janelle, Sustainable Economies Law Center; California Farm Link; Northern California Recycling Ass'n; Berkeley Climate Action Coalition; DelNorte and Tribal Lands Community Food Council; San Francisco Permaculture Guild; Multinational Exchange for S	<p>Already, most CA cities with city-wide organics hauling programs have created challenging – even insurmountable – barriers to the transport of organic materials. That, alone, can destroy an entire ecosystem of solutions.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
4397	Orsi, Janelle, Sustainable Economies Law Center; California Farm Link;	<p>CalRecycle, you have both the mandate and the power to implement rules that protect and encourage small-scale and diverse composting. Without such protections, 1383 will create a massive environmental setback for California. The risk is: In the rush to comply with 1383 rules, cities will be pressured by large-scale hauling companies to grant exclusive franchise agreements. Exclusive</p>	<p>This comment proposes to add the definitions of 'Community Benefit Composting' and 'Micro-composting' to Article 1, thereby creating two additional categories of composting that do not reference the size and volume limitations of Section 17855(a)(4). The proposed terms for these two activities would expand the suite of activities that are not excluded from regulatory requirements. CalRecycle is not proposing amendments to the compost size thresholds in Section</p>

Comment Number	Received From	Question/Comment	Response(s)
	Northern California Recycling Ass'n; Berkeley Climate Action Coalition; DelNorte and Tribal Lands Community Food Council; San Francisco Permaculture Guild; Multinational Exchange for S	agreements result in rules that prohibit or create barriers for other people wishing to transport organics, cutting off countless composting solutions at their source. The 1383 rules need to create strong protections for small-scale and community-based composting and prevent exclusive agreements from disrupting the ecosystem of solutions.	17855, therefore the comment is not germane to the text CalRecycle is adopting or amending. The existing exclusion thresholds were thoroughly vetted and subject to stakeholder comment in a previous rulemaking amending those standards. No change to the regulatory text is necessary to specifically mention community composting because Section 18990.1(b) establishes that a jurisdiction shall not implement or enforce an ordinance, policy, procedure, permit condition, or initiative that includes provisions that would prohibit the lawful processing and recovery of organic waste. Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.
4398	Orsi, Janelle, Sustainable Economies Law Center; California Farm Link; Northern California Recycling Ass'n; Berkeley Climate Action Coalition; DelNorte and Tribal Lands Community Food Council; San Francisco Permaculture Guild; Multinational Exchange for S	To meet state landfill diversion goals and reduce short-lived climate pollutants under SB 1383, CalRecycle estimates that California will need 75 to 100 new composting facilities each processing an average of 60,000 tons of organic matter per year. Many regulators and industry leaders have expressed doubt that this is possible, given the high costs and long time it takes to site and permit a compost facilities of this size. By contrast, small-scale compost sites can be established quickly, and if we enable them in every neighborhood, we could more quickly scale to meet landfill diversion goals and reduce methane emissions.	Comment noted. CalRecycle acknowledges the benefits associated with community-scale composting and included provisions relative to such activities in the regulations in response to prior stakeholder comments. Jurisdiction should be aware of community composting activities. Additionally, since community composting is a method for recovering organic waste, such as food and green waste, it is worthwhile to still determine how much can be handled through these activities.
4399	Orsi, Janelle, Sustainable Economies Law Center; California Farm Link; Northern California Recycling Ass'n; Berkeley Climate Action Coalition; DelNorte and Tribal Lands Community Food Council; San Francisco	Add this definition to Section 18982 - "Micro-Composting" Any activity that composts green material, agricultural material, food material, agricultural by-product material, herbivore manure, and vegetative food material, alone or in combination, and the total amount of feedstock and compost on-site at any one time does not exceed 20 cubic yards and 200 square feet.	The terms community benefit composting and supplemental on-site compost are not used in the regulation. This comment proposes to add the definitions of 'Community Benefit Composting' and 'Micro-composting' to Article 1, thereby creating two additional categories of composting that do not reference the size and volume limitations of Section 17855(a)(4). The proposed terms for these two activities would expand the suite of activities that are not excluded from regulatory requirements. CalRecycle is not proposing amendments to the compost size thresholds in Section 17855, therefore the comment is not germane to the text CalRecycle is adopting or amending. The existing exclusion thresholds were thoroughly vetted and subject to stakeholder comment in a previous rulemaking amending those standards.

	Permaculture Guild; Multinational Exchange for S		
4400	Orsi, Janelle, Sustainable Economies Law Center; California Farm Link; Northern California Recycling Ass'n; Berkeley Climate Action Coalition; DelNorte and Tribal Lands Community Food Council; San Francisco Permaculture Guild; Multinational Exchange for S	Add this definition to Section 18982 - "Community Benefit Composting" Composting conducted primarily for advancing educational, charitable, scientific, social welfare, or environmental purposes by a nonprofit public benefit corporation under CA Corp. Code 5060, a nonprofit mutual benefit corporation under CA Corp. Code 5059, a nonprofit association under CA Corp Code 18020, or a public or governmental agency.	The terms community benefit composting and supplemental on-site compost are not used in the regulation. This comment proposes to add the definitions of 'Community Benefit Composting' and 'Micro-composting' to Article 1, thereby creating two additional categories of composting that do not reference the size and volume limitations of Section 17855(a)(4). The proposed terms for these two activities would expand the suite of activities that are not excluded from regulatory requirements. CalRecycle is not proposing amendments to the compost size thresholds in Section 17855, therefore the comment is not germane to the text CalRecycle is adopting or amending. The existing exclusion thresholds were thoroughly vetted and subject to stakeholder comment in a previous rulemaking amending those standards.
4401	Orsi, Janelle, Sustainable Economies Law Center; California Farm Link; Northern California Recycling Ass'n; Berkeley Climate Action Coalition; DelNorte and Tribal Lands Community Food Council; San Francisco Permaculture Guild; Multinational Exchange for S	Add this definition to Section 18982 - "Supplemented On-Site Composting" Composting of organic materials generated on-site, where up to 30% of feedstock may include green material, agricultural material, agricultural by-product material, herbivore manure, food material, and vegetative food material sourced from off-site in order to supplement and enrich the compost.	The terms community benefit composting and supplemental on-site compost are not used in the regulation. This comment proposes to add the definitions of 'Community Benefit Composting' and 'Micro-composting' to Article 1, thereby creating two additional categories of composting that do not reference the size and volume limitations of Section 17855(a)(4). The proposed terms for these two activities would expand the suite of activities that are not excluded from regulatory requirements. CalRecycle is not proposing amendments to the compost size thresholds in Section 17855, therefore the comment is not germane to the text CalRecycle is adopting or amending. The existing exclusion thresholds were thoroughly vetted and subject to stakeholder comment in a previous rulemaking amending those standards.
4402	Orsi, Janelle, Sustainable Economies Law Center; California	Amend §18988.1 to add section (d): Jurisdiction Approval of Haulers and Self-Haulers [...]	No change to the regulatory text is necessary to specifically mention community composting because Section 18990.1(b) establishes that a jurisdiction shall not implement or enforce an ordinance, policy, procedure, permit condition, or initiative that includes provisions that would prohibit the lawful processing and recovery of organic waste.

Comment Number	Received From	Question/Comment	Response(s)
	Farm Link; Northern California Recycling Ass'n; Berkeley Climate Action Coalition; DelNorte and Tribal Lands Community Food Council; San Francisco Permaculture Guild; Multinational Exchange for S	(d) A jurisdiction shall not create unreasonable barriers to or prohibitions against the transport of organic material to Micro-Composting sites, Community Benefit Composting sites, or Supplemented On-Site Composting sites.	
4403	Orsi, Janelle, Sustainable Economies Law Center; California Farm Link; Northern California Recycling Ass'n; Berkeley Climate Action Coalition; DelNorte and Tribal Lands Community Food Council; San Francisco Permaculture Guild; Multinational Exchange for S	Amend the excluded activity in §17855(a)(1) to say: (1) An activity is excluded if it takes place on an agricultural site and produces compost for use on that same agricultural site, or an agricultural site owned or leased by the owner, parent, or subsidiary of the composting activity. Feedstock may include green material, agricultural material, agricultural by-product material, herbivore manure, food material, and vegetative food material sourced from off-site in order to supplement and enrich the compost. No more than an incidental amount of up to 1,000 cubic yards of compost product may be given away or sold annually. Further background: This is to address the problem that many farms need to bring material from off-site in order to supplement the composting of on-site material. We've talked to farms and farm advocacy groups that have told us that CalRecycle's compost facility permitting rules make this difficult for them by restricting the introduction of material from off-site.	Comment noted. Section 17855(a)(1)) is an existing regulation and describes an excluded activity. CalRecycle is not proposing to revise the regulatory permitting tier structure. This is not within the scope of this rulemaking.
9010	Oseguera, A., Waste Management	(33) "High diversion organic waste processing facility" means a facility that is in compliance with the reporting requirements of Section 18815.5(d) of this division and meets or exceeds an annual average mixed waste organic content recovery rate of 50 percent between January 1, 2022 and December 31, 2024, and 75 percent after January 1, 2025 as calculated pursuant to Section 18815.5(e) of this division for organic waste received from the "Mixed Waste Organic Waste Collection Stream" as defined in Section 7 17402 (a)(11.5) of this division. Please provide Section 18815.5(d) and ( e) for review. Based on our review, this Section does not exist in California Code of Regulations.	Section 18815.5(d) and (e) are amendments to Title 14, Division 7, Chapter 9, Article 9.25 regulations. These regulations went into effect March 5, 2019.
9011	Oseguera, A., Waste Management	(51) "Paper products" include, but are not limited to, paper janitorial supplies, cartons, wrapping, packaging, file folders, and hanging files, building insulation and	CalRecycle has revised Section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of

Comment Number	Received From	Question/Comment	Response(s)
		panels, corrugated boxes, tissue, and toweling. Please remove "building insulations and panels" as these items are not acceptable as paper products in most situations.	options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in Section 18993.3(c)(2) and therefore agrees with the proposed revision.
9012	Oseguera, A., Waste Management	(52.5) "Permanent" means, in the context of the determination of processes or technologies that constitute a reduction in landfill disposal, that greenhouse gas emissions reductions are not reversible, or when these emissions reductions may be reversible, that mechanisms are in place to replace any reversed greenhouse gas emissions reductions to ensure that all reductions endure for at least 100 years. Please clarify what would constitute reversible and non-reversible GHG emissions.	Greenhouse gas reductions and removals can be "reversed" if the stored carbon associated with them is released (back) to the atmosphere. Many biological and non- biological agents, both natural and human-induced, can cause reversals. Some of these agents cannot completely be controlled and may therefore result in an unintentional reversal, such as natural agents like fire, insects, and wind. Other agents can be controlled, such as the human activities like land conversion and over-harvesting.
9013	Oseguera, A., Waste Management	(70)"Subsequent violation" means a violation of this chapter by a jurisdiction or entity that has previously been subject to an enforcement action for a violation of this chapter. For purposes of this chapter, a subsequent violation may only be found when it has occurred within five years of the violation that has already been the subject of an enforcement action.The regulations appear to establish a penalty structure with "Subsequent violations" to address chronic and recalcitrant violators (i.e., where there is a pattern of neglect or disregard with respect to the regulations). The five-year period in the definition, however, results in potentially excessive fines and penalties being applied to operators/owners who have a very good compliance record and yet will be treated like a chronic/recalcitrant violator where there is a single violation in year one and then another in year 5. We recommend that the period be changed to a 12-month period so that the regulation appropriately penalizes chronic/recalcitrant violators while fairly and equitably treating good-faith operators/owners.	CalRecycle has revised section 18995.4 in response to this comment. The definition for "subsequent violation" has been removed and for a "subsequent violation" has been changed to "subsequent offense" and the timeframe has been revised to one year to align with the provisions of the Government Code. SB 1383 authorized jurisdictions to impose penalties but did not set penalty levels. The penalty requirements default to local penalty requirements in Government Code Sections 53069.4, 25132 and 36900. The timing for first, second and third and subsequent offenses of a a violation of the same ordinance is one year. CalRecycle does not have discretion to alter this timing.
9014	Oseguera, A., Waste Management	(75) "Violation" means a lack of compliance with a requirement of this chapter or local ordinance(s) adopted pursuant to this chapter. The term "violation" is not ordinarily defined except as to classes or degrees of violations (i.e., minor violation vs Class I violation). Here the definition could be interpreted to mean any de minimis deviation without regard for the gravity of the violation or the potential environmental harm but potentially imposing a similar penalty. Furthermore, the definition is not necessary and creates potential confusion as Article 16 sets forth in detail treatment of potential violations. Please consider deleting the definition or amending to "lack of substantial compliance".	CalRecycle agrees that the originally proposed definition of violation was problematic and removed the definition from the final regulator text. An entity is either in violation or not. The issues of gravity and potential harm of the violation are factors in determining how to address the violation, not whether or not a violation has occurred.
9015	Oseguera, A., Waste Management	(b) Organic waste sent to one of the following facilities, operations, or used for one of the following activities, and not subsequently sent for landfill disposal shall be deemed to constitute a reduction of landfill disposal.WM requests that the language in Section 18983.1(b) be changed to the following: Organic Waste sent to one of the following facilities, operations, or used for one of the following activities shall be deemed to constitute a reduction of landfill disposal.	The purpose of section 18983.1(b) is to specify facilities, operations, end-uses, processes and activities that will be considered reductions in landfill disposal (hereafter referred to as "recovery activity" or "recovery activities") because they contribute to the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions. This section also clarifies that organic waste sent to an identified recovery activity is only considered to have reduced organic waste disposal if the material is not subsequently sent to landfill disposal. Stakeholders requested clarity regarding whether material transported to a recovery facility can be considered recovered once

Comment Number	Received From	Question/Comment	Response(s)
			the material “arrives” at a facility that recovers organic waste. This section clarifies that simply transporting organic waste to or passing organic waste through a facility that recovers organic waste does not necessarily reduce the landfill disposal of organic waste if the material is subsequently disposed.
9016	Oseguera, A., Waste Management	(a) Emergency Processing Facility Temporary Equipment or Operational Failure Waivers: (1) If the facility processing a jurisdiction’s organic waste notifies the jurisdiction that operational restrictions have been imposed upon it by a regulatory agency or that a temporary equipment or operational failure will prevent the facility from processing or recovering organic waste, the jurisdiction may allow the organic waste stream transported to that facility to be deposited in a landfill or landfills for up to 90 days from the date of the restriction or failure. WM recommends adding maintenance and retro-fit activities as events which would qualify for a request waiver.	CalRecycle does not concur with the addition of a new waiver because planned and routine maintenance should already be accounted for and the material should not be disposed.
9017	Oseguera, A., Waste Management	(a) A hauler providing residential, commercial, or industrial organic waste collection services shall comply with all of the following: (1) Organic waste collected by the hauler shall be transported to a facility, operation, activity or property that recovers organic waste as defined in Article 2. WM recommends adding the ability to transport to transfer station. The language is too limiting considering the lack of infrastructure. This would only allow use of facilities that have organics processing or recovery as defined in Article 2.	Article 3 allows the contents of containers to be initially transported to a consolidation site.
9018	Oseguera, A., Waste Management	(2) The generator shall haul source separated organic waste to a solid waste facility operation, activity, or property that processes or recovers source separated organic waste. WM recommends adding the ability to transport to transfer station. The language is too limiting considering the lack of infrastructure. This would only allow use of facilities that have organics processing or recovery.	Article 3 allows the contents of containers to be initially transported to a consolidation site.
9019	Oseguera, A., Waste Management	(b) A jurisdiction shall not implement or enforce an ordinance, policy, procedure, permit condition, or initiative that includes provisions that do any of the following: (4) Require a generator or a hauler to transport organic waste to a solid waste facility or operation that does not process or recover organic waste. This language should be removed as it does not consider transfer facilities and has the potential to create conflicts with franchise agreements and or limit recovery. "Solid waste facility" is defined as follows in Section 40194 of the PRC: "Solid waste facility" includes a solid waste transfer or processing station, a composting facility, a gasification facility, a transformation facility, and a disposal facility." This is too limiting considering the lack of infrastructure. This would allow use of facilities that have organics processing or recovery.	A change to the regulatory text is not necessary. Section 189901 (c) (4) provides that this section does not prohibit a jurisdiction from arranging through a contract or franchise for a hauler to transport organic waste to a particular solid waste facility or operation for processing or recovery. Nothing in the regulations prohibits facilities from contracting with various parties, including jurisdictions, for capacity within their facility. What the regulations do prohibit is a jurisdiction adopting an ordinance or similar restriction to legally prohibit material from other jurisdictions from going to facilities within its boundaries simply because of where the material originated. This is consistent with existing case-law. A change to the regulatory text is not necessary. This section does not limit franchise agreements or limit recovery. The regulations in Article 3 provide jurisdictions with the option of providing single, two, or three container organic waste collection services. The single container organic waste bin must go to a facility that recovers organic waste. This provision means that a jurisdiction that provides a single container organic waste collection service cannot send its waste to a facility that does not process organic waste. If this section would impact franchise agreements, that franchise agreement would be in conflict with the single, two, or three container organic waste collection services requirements in these regulations. This section is necessary to

Comment Number	Received From	Question/Comment	Response(s)
			ensure that organic waste is collected and recovered in a manner that supports the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions.
9020	Oseguera, A., Waste Management	(5) Require a generator to use an organic waste collection service or combination of services that do not recover at least the same types of organic waste recovered by a service the generator previously had in place. This language should be removed as it has the potential to create conflicts with franchise agreements. For example, if a municipality switches from one hauling company to another, and the second hauling company uses a processing facility that excludes a certain type of organic waste (that had be processed by the previous hauler), but achieves the same or higher overall diversion, residents of the municipality would seemingly have the option, under this language, to not use the exclusive hauler with which the municipality contracted. This would frustrate the purpose of exclusive franchise agreements.	A change to the regulatory text is not necessary. Earlier versions of the regulatory text prohibited organic waste from being taken to a facility with a lower recovery rate. That section of the regulatory text was removed to ensure that all types of material would be recovered. The statutory constraints of SB 1383 require CalRecycle to take a prescriptive approach to the design of the regulations. Absent the authority to set a jurisdiction-specific recycling target or to ban the landfill disposal of organic waste, CalRecycle is required to develop regulations that require jurisdictions and other entities to implement specific programs and meet minimum standards necessary to achieve the state's targets. The prescriptive approach necessitated by the statute is reflected in the design of the entire set of regulations, and is most apparent in the collection requirements described in this article. This is a paradigm shift for jurisdictions, which is why CalRecycle conducted two years of informal workshops to vet the specifics of the regulatory requirements included in this article and throughout the regulations.
9021	Oseguera, A., Waste Management	(f) For the purposes of this article, the recovered organic waste products that must be procured are: (1) Compost. (2) Renewable transportation fuel. WM recommends the expansion of recovered organic waste products that must be procured to include mulch and other soil amendments. Municipal customers likely use mulch, bark and other soil amendments in addition to compost.	Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards.
9022	Oseguera, A., Waste Management	(a) Upon presentation of proper credentials, an authorized Department employee or agent shall be allowed to enter an entity's premises during normal working hours to conduct inspections and investigations in order to examine organic waste recovery activities, edible food recovery activities, and records pertaining to the entity in order to determine compliance with this chapter. Methods may include, but are not limited to, allowing the review or copying, electronically or through mechanical methods (i.e., photocopying) of any paper, electronic, or other records required by this chapter, such as invoices, memoranda, books, papers, or records .The review or copying of any paper, electronic, or other records required by this chapter, such as invoices, memoranda, books, papers or records should be an activity scheduled in advance as requested by an authorized Department employee or agent and based on availability of authorized entity employees. Also, this Section should contain a provision allowing for the assertion of confidentiality and protections for materials that are trade-secret and business proprietary and not subject to public disclosure under Government Code Section 6250 et seq.	A change to the regulatory text is not necessary. Section 18994.6 allows the Department access to the premises of an entity subject to the Chapter during normal working hours to conduct inspections and investigations. Section 18996.1 does state that the Department shall notify the jurisdiction prior to conducting a compliance evaluation, which may include inspections, compliance reviews and route reviews. To the extent that such information is valid confidential, proprietary, or trade secret information, there are protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow the appropriate withholding of such information from public disclosure by the jurisdiction and the proposed regulations were modified to reflect that.
9023	Oseguera, A., Waste Management	(b) If an entity has been found in violation, the Department shall: (1) For a first violation: (A) Issue a Notice of Violation (NOV) requiring compliance within 60 days.	CalRecycle has revised Section 18995.4 and Section 18996.9 in response to this comment. The changes will clarify the differences between the first, second, third and subsequent violations and to clarify a subsequent offense is a commencement of an action against the same person or entity for a violation of the same subsection of this chapter.

Comment Number	Received From	Question/Comment	Response(s)
		<p>(B) If the violation continues after the NOV compliance date, the Department shall issue a Notice and Order to Correct (NOTC) requiring compliance within 30 days. The NOTC shall include the potential penalties for failing to comply.</p> <p>(C) If the violation continues after the NOTC compliance deadline of 30 days, the Department shall commence action to impose a penalty on the entity no later than 90 days after the issuance of the NOTC.</p> <p>(2) For a second violation and all subsequent violations:</p> <p>(A) Issue a Notice and Order to Correct (NOTC) requiring compliance within 30 days. The NOTC shall include the potential penalties for failing to comply.</p> <p>(B) If the violation continues after the NOTC compliance deadline, the Department shall commence action to impose a penalty on the entity no later than 90 days after its determination of the violation. The regulation appears to provide a thoughtful and fair process for assuring compliance with the regulations and providing appropriate notice and opportunity to cure based on whether the violation is a first or second violation such that a first violation allows for a 3-step process and the second violation skips the requirement for NOV and goes directly to the NOTC. Please confirm that "first violation" and "second violation" mean violation of the same section.</p>	
9024	Oseguera, A., Waste Management	<p>(a) A jurisdiction shall impose penalties that are equivalent or stricter than those amounts in Table 1 of this section and shall be calculated by determining the type of violations that have occurred, the number of violations that have occurred, and the corresponding penalty level in subsection (b). A hauler providing residential, commercial or industrial organic waste collection service fails to transport organic waste to a facility, operation, activity, or property that recovers organic waste, as defined in Article 2. Clarification is required to identify that "a hauler" means a hauler operating in a particular jurisdiction. Otherwise, a violation by an entity operating somewhere else in the State could count toward a violation of that entity in another jurisdiction. The same change should be made for the following three penalty amounts, as well as the violation relating to "A hauler providing residential, commercial, or industrial organic waste collection service fails to transport organic waste to a facility, operation, activity, or property that recovers organic waste, as defined in Article 2."</p>	<p>A change to the regulatory text is not necessary. Section 18981.2 states that a jurisdiction shall adopt enforceable ordinance(s), or similar mechanisms consistent with the requirements of this chapter on entities subject to the jurisdiction's authority. A jurisdiction does not have authority to enforce on entities/activities outside their authority or jurisdiction.</p>
9025	Oseguera, A., Waste Management	<p>(a) A jurisdiction shall impose penalties that are equivalent or stricter than those amounts in Table 1 of this section and shall be calculated by determining the type of violations that have occurred, the number of violations that have occurred, and the corresponding penalty level in subsection (b). A hauler providing residential, commercial or industrial organic waste collection service fails to transport organic waste to a facility, operation, activity, or property that recovers organic waste, as defined in Article 2. Delete "or stricter than those" and insert "to" after "equivalent" because the language allowing a jurisdiction to impose stricter penalties would result in unfair and unequal penalties assessed across the State for the same violation. The potential penalties across the State should be uniform and consistent.</p>	<p>CalRecycle has revised section 18997.1 in response to this comment. The reference to imposing penalties that are "equivalent or stricter" than the amount listed in section 18997.2 has been deleted. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900, which set the maximum penalties that local agencies may impose.</p>

Comment Number	Received From	Question/Comment	Response(s)
		The proposed language would result in unfair application across the State for the same violation and potentially forum-shopping meaning development of infrastructure in jurisdictions where penalties are lower than another jurisdiction.	
9026	Oseguera, A., Waste Management	(a) A jurisdiction shall impose penalties that are equivalent or stricter than those amounts in Table 1 of this section and shall be calculated by determining the type of violations that have occurred, the number of violations that have occurred, and the corresponding penalty level in subsection (b). A hauler providing residential, commercial or industrial organic waste collection service fails to transport organic waste to a facility, operation, activity, or property that recovers organic waste, as defined in Article 2. Penalties imposed on a "per day" basis will result in unconstitutional excessive fines and penalties and should be deleted except where the daily accrual relates to the actual harm caused by the violation rather than a blanket "per day" assessment with no relationship to the gravity of the violation or the resulting harm.	The initial language in Section 18997.2 regarding administrative civil penalties imposed by local jurisdictions was revised to be consistent with Government Code Sections 25132, 36900, and 53069.4 in response to comments.
9027	Oseguera, A., Waste Management	17409.5.2 (a) The operator of an attended operation or facility that accepts a mixed waste organic collection stream shall, each operating day, measure the amount by weight of organic waste present in the residuals removed from the mixed waste organic collection stream after processing that is sent to disposal. (b) The operator shall comply with subdivision (a) by using the following protocol: (1) Take at least one (1) cubic yard sample of the residuals removed from mixed waste organic collection stream at the operation or facility on that operating day prior to sending to disposal. Each sample shall be; (A) Representative of a typical operating day. WM recommends a minimum auditing frequency of monthly. Daily auditing places an unrealistic burden on the operator regarding auditing and recordkeeping. INADVERT USE OF 9027 TWICE	CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling.  The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data. In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.
9029	Oseguera, A., Waste Management	17409.5.4 (a) The operator of an attended operation or facility that accepts source separated organic waste shall, each operating day, measure the amount by weight of organic waste separated from the source separated organic waste collection stream after processing for end-use, recovery or further processing. (b) The operator shall comply with subdivision (a) by using the following protocol: (1) Take at least a one (1) cubic yard sample from each of the organic waste type separated after processing at the operation or facility on that operating day prior to sending to a destination for end-use, recovery, or further processing. Each sample shall be: (A) Representative of a typical operating day; WM recommends a minimum auditing frequency of monthly. Daily auditing places an unrealistic burden on the operator regarding auditing and recordkeeping.	CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling.  The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.

Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>
9031	Oseguera, A., Waste Management	<p>17409.5.7 (a) The operator of an attended operation or facility that accepts source separated organics waste shall perform loadchecking to identify the amount of visible contamination in source separated organic waste according to the following schedule:</p> <p>(1) One (1) loadcheck shall be conducted for every 500 tons of source separated organic waste received per operating day. If the operator receives less than 500 tons for the operating day, a minimum of two (2) loadchecks shall be conducted for that operating day.</p> <p>(2) At least one random loadcheck per day for each source sector as defined in Section 18815.2(a)(51). WM recommends a minimum load inspection frequency of weekly. Daily load inspections based on inbound volume and random loadcheck for each source sector places an unrealistic burden on the operator regarding recordkeeping and reporting.</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>
9032	Oseguera, A., Waste Management	<p>17409.5.8(a) On and after January 1, 2022, a transfer/processing facility or operation shall send organic waste recovered after processing from the source separated organic waste stream and from the mixed waste organic collection stream with no more than 10 percent of incompatible material by weight to the destination it is being sent per operating day. Section 17409.5.8 should be removed because it will likely result in negative unforeseen consequences. For additional processing of organic waste by a second facility, limiting the level of incompatible material to less than 10% or to a facility/process that achieves less than 10% organic</p>	<p>CalRecycle has revised this section in response to comments. The section was revised to phase in the acceptable levels of incompatible material and the acceptable levels of organic waste in the material sent to disposal. The phase in will allow entities time to plan and make any adjustments in order to comply with the revised acceptable limits of 20% on and after 2022 and 10% on and after 2024. SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. In order to achieve these targets, regulatory limitations for processing organic waste must be implemented.</p>

Comment Number	Received From	Question/Comment	Response(s)
		waste. The decision to process organic waste in the residual unnecessarily restricts full recovery of organic waste. The decision to process organic waste should be based on contractual and business purposes, not regulatory limitations.	
9033	Oseguera, A., Waste Management	<p>Section 20700.5 (a) Compacted earthen material at least 36 inches shall be placed on all surfaces of the fill where no additional solid waste will be deposited within 30 months to control methane emissions.</p> <p>(1) The EA may approve, with concurrence by the Department, an alternative long-term intermediate cover if the operator demonstrates that the alternative is equivalent to 36 inches of earthen material.</p> <p>(b) For waste classification, composition, and liquid percolation requirements of intermediate cover, refer to the SWRCB requirements set forth in 27 CCR Section 20705. Please publish the performance criteria for the use of 36 inches of earthen material that the EA will use to evaluate alternative long-term intermediate cover.</p>	CalRecycle has deleted the Long-Term Intermediate Cover, Section 20700.5 in response to comments. The section was removed and the requirement was included as part of the Status Impact Report (SIR). The SIR was amended to add the requirement to identify areas in the landfill that would remain with intermediate cover. The addition of this requirement to the SIR ensures that areas with intermediate cover are maintained to meet the intermediate cover criteria of controlling the infiltration of precipitation into waste, vectors, fires, odors, blowing litter, and scavenging to reduce threats to public health and safety and the environment.
9034	Oseguera, A., Waste Management	20750.1(b) For the purposes of this section “organic waste recovery activities” means activities that divert organic waste from disposal to constitute a reduction of landfill disposal of organic waste as defined in Article 2 of Chapter 12 of Division 7 of Title 14 of the California Code of Regulations (commencing with Section 18983), either on-site or transport to another site where those activities occur. Please clarify if this section is specific to Source Separated Organics.	Comment noted. This section is for all organic waste received at a Landfill. It does not just pertain to Source Separated Organics.
9035	Oseguera, A., Waste Management	<p>Section 21570(f) (13) For new or expanded solid waste facilities, provide evidence that the operator held a public meeting with any affected groups or disadvantaged communities within 180 days prior to submittal of the permit application package.</p> <p>(A) Provide copies (hard copy or electronic) of notices distributed to the affected groups or disadvantaged communities.</p> <p>(B) Provide a summary of the comments received at the public meeting and, where applicable, responses to public comments and any other steps taken by the applicant relative to those comments.</p> <p>(C) For the purposes of this section disadvantaged communities means communities identified by the California Environmental Protection Agency pursuant to Section 39711 of the Health and Safety Code. §21570 (13) should be deleted. Requiring a public meeting 180 days prior to the submittal of the permit application will only prolong the permitting process and it duplicative to §21660.2</p>	<p>CalRecycle has revised this section in response to comments. The section was modified to clarify that the operators of a new or expanded facility hold a public meeting with any affected disadvantage communities 180 days of submitting a permit application package. This change in this section is necessary to clarify that the 180 days is not an extension to the already established time in regulations for a permit application package but part of it. The purpose of this section is to ensure that if there are any affected disadvantage communities, they are provided an opportunity to attend the meeting and comment on the project.</p> <p>Section 21660.2 is an Enforcement Agency’s (EA) requirement. EA’s are required to hold informational meetings for new and revised Solid Waste Facility Permits. This is different than the operator’s requirements under Section 21570(f)(13), which has been renumbered to Subdivision (g).</p>
9036	Oseguera, A., Waste Management	<p>Section 21660.2 (c) The informational meeting shall meet the following criteria:</p> <p>(1) The meeting shall be held in a suitable location not more than one (1) mile from the facility that is the subject of the meeting and from any disadvantaged communities affected; if no suitable and available location exists within one (1) mile of the facility and from any disadvantaged communities affected, as determined by the EA, the EA may designate an alternative suitable location that is as close to the facility disadvantaged communities as reasonably practical.</p> <p>(A) The EA shall identify disadvantaged communities in a manner that meets or exceeds the methods of the identification tools developed by the California</p>	<p>The informational meeting requirements requires a single meeting to be held within 60 days of the Enforcement Agency (EA) receiving a permit application package for a new or revised solid waste facility permit. This specific requirement in the regulation is part of the existing regulations, Section 21660.2(b).</p> <p>The requirements under Subdivision (c), which requires the meeting to be held in a “reasonably practical” location if no location exists within one mile of the facility, is also existing language. The proposed changes under SB 1383 rulemaking, only added language to included “affected disadvantaged communities” as an entity to consider when determining a location for the meeting. This is necessary to specify that the informal meeting required under this section take</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>Environmental Protection Agency pursuant to Section 39711 of the Health and Safety Code.</p> <p>(2) The meeting shall be held on a day and at a time that the EA determines will enable attendance by residents, including those of affected disadvantaged communities, living in the vicinity of the facility that is the subject of the meeting.</p> <p>(3) EAs may shall undertake additional measures to increase public notice and to encourage attendance by any persons who may be interested in the facility that is the subject of the meeting, including which may include, but not be limited to, additional posting at the facility entrance, noticing beyond 300 feet one (1) mile if the nearest residence or business is not within 300 feet one (1) mile of the site, posting in a local newspaper of general circulation, and multilingual notice and translation and, multiple meeting dates, times and locations. Subsection (c) is unclear on whether a single meeting is required or whether multiple meetings are required. Based on the title of the section and the other language, it appears that a single meeting is required. Please clarify that the informational meeting requirement is a single meeting within one mile from the facility that is the subject of the meeting. Please consider deleting the language requiring a meeting outside of the one-mile area because it will only lead to litigation and ambiguity to determine what is "reasonably practical"; furthermore, a one-mile distance from the facility would reliably and adequately capture potential impacts from the proposed facility.</p>	<p>into consideration affected disadvantage communities in order to allow them an opportunity to attend and provide comments.</p> <p>CalRecycle has revised Section 21600.2 (c) in response to comments. The "one (1) mile" requirement in Subsection (c)(3) has been deleted and "shall" has been changed to "may," reverting back to the existing regulatory language.</p>
6228	<p>Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Michael, L., City of Rancho Cucamonga; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; Ni</p>	<p>Infrastructure Capacity: As we have noted, California lacks sufficient capacity today to be able to meet the needs for new organic waste processing. Many cities have expressed concern over an ability to comply with organic waste diversion requirements due to a lack of waste disposal infrastructure. There is an uneven distribution of waste disposal infrastructure, such as bio-digesters, across the state. Moreover, where the infrastructure does exist, capacity is limited. While the regulation provides five years to implement programs, cities are concerned that this is not sufficient time to develop and permit new facilities.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
6229	<p>Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Michael, L., City of</p>	<p>Funding: Lack of sufficient funds continues to be among the major challenges local governments face in the effort to implement new organic waste diversion programs. The City of Belmont and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade"</p>	<p>Comment noted. CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. 	Rancho Cucamonga; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; Ni	proceeds can be used to help offset the costs for developing organic recycling infrastructure. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities, such as updating bins and labels, as well as providing education and outreach.	legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.
6230	Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Michael, L., City of Rancho Cucamonga; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; Ni	Enforcement: These regulations allow for Corrective Action Plans and establishes extended timelines and milestones for achieving compliance. We appreciate the addition of a pathway to compliance. This is a step in the right direction and we urge careful consideration of the differences among local jurisdictions, as well as the variety of community stakeholders, and infrastructure challenges a local jurisdiction may face.	Comment noted, the comment does not recommend a regulatory change.
6231	Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Michael, L., City of Rancho Cucamonga; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; Ni	Penalties: The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, this regulation puts the cart before the horse by designing penalties before the sticking points and needs of generators are understood. We encourage CalRecycle to continue working through the programmatic scheme before implementing an appropriate set of penalties, particularly since programs have until 2022 to be implemented. We ask that CalRecycle adopt penalties in a second set of regulations to take effect at a future date.	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for 5053 waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.

Comment Number	Received From	Question/Comment	Response(s)
6232	Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Michael, L., City of Rancho Cucamonga; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; Ni	Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products targets set by CalRecycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations. We ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding.	A change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in “substantial additional costs”. CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved. However, CalRecycle recognizes the significant effort and resources needed for program implementation, which is why the rulemaking process has been ongoing since 2017. Although the regulations will not take effect until 2022, adopting them in early 2020 allows regulated entities approximately two years to plan and implement necessary budgetary, contractual, and other programmatic changes. In other words, it is an opportunity for jurisdictions to phase-in compliance. Jurisdictions should consider taking actions to implement programs to be in compliance with the regulations on January 1, 2022.
6233	Oskoui, A., City of Belmont; Pinon, F., City of Reedley; Michael, L., City of Rancho Cucamonga; Weber, M., City of Palm Desert; Evans-Fudem, E., League of Cities; Parker, A., City of Hemet; Steuer, M., City of Irvine; Huffaker, M., City of Watsonville; Ni	The City of Belmont further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1(e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even were a fee to survive scrutiny under Prop. 26, it is questionable whether a city would not have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.) This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, The City of Belmont requests that the procurement regulations be addressed in a separate regulatory proceeding.	CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate. First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code.” Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)). Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383. According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.

Comment Number	Received From	Question/Comment	Response(s)
			<p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p> <p>Regarding "additional costs," a change to the regulatory text is not necessary. The draft regulatory proposal is designed to provide flexibility to jurisdictions in procuring the recovered organic waste product(s) that best fit local needs. Many jurisdictions already procure these products, or their equivalent forms, and this requirement should not result in "additional costs".</p> <p>CalRecycle disagrees with the suggestion to hold a subsequent rulemaking. If the state is to achieve the ambitious landfill diversion targets required by SB 1383, it would be detrimental to delay the much-needed organics diversion that these procurement regulations are designed to encourage. CalRecycle notes that the regulations do not even take effect until two years after the date the first target is supposed to be achieved.</p>
8	Oster, R, Compology	<p>As a best practice for content assessment, remote monitoring is growing rapidly and is completely consistent with the regulatory package. Remote content monitoring and assessment empower municipalities with the responsibility of enforcing SB 1383 with automated information and reporting to monitor generators to ensure their compliance with the law, provide feedback to change behavior and use of their containers, assist their hauling partners, and levy fees and penalties, as needed. Haulers can also receive necessary information ahead of collection day to make collection adjustments to pick up containers with the right truck (depending on contents) and have documentation about contents automatically so that generators can pay the true cost of service. Compology acknowledges CalRecycle's attempt with the regulatory package to allow and support remote monitoring. Compology applauds CalRecycle for considering the future of innovation in the industry around the use of cameras in bins and on trucks for assessing container contents.</p>	<p>Thank you for the comment. There is nothing in the regulations that prohibits organic waste generators from monitoring their container contents, remotely or otherwise. And CalRecycle finds it unnecessary for the regulations to specifically state that organic generators can do so. Additionally designees are not required to inspect a set minimum number of individual generators on a monthly basis. The regulations do not prohibit organic waste generators from monitoring their container contents, remotely or otherwise. And it is unnecessary for the regulations to specifically state that organic generators can do so. It is unclear what the commenter means about such generators being 'protected by doing the right thing.'</p>
9	Oster, R, Compology	<p>While there is a cost for remote monitoring, it is far less than the costs already built into the system for inefficient use of driver time, waste auditors and scouts, customer service documentation, and the true cost of managing contaminated streams. Historically communities have used "designees", independent of the haulers, to conduct audits, enforce ordinances and provide feedback to enhance recycling. Effectively, "monitoring" is already taking place across the state, albeit manually. We are very supportive of 1383 specifically allowing for Designees to conduct the monitoring and auditing mandated by 1383.</p>	<p>There is nothing in the regulations that prohibits organic waste generators from monitoring their container contents, remotely or otherwise. And CalRecycle finds it unnecessary for the regulations to specifically state that organic generators can do so. Additionally designees are not required to inspect a set minimum number of individual generators on a monthly basis. The regulations do not prohibit organic waste generators from monitoring their container contents, remotely or otherwise. And it is unnecessary for the regulations to specifically state that organic generators can do so. It is unclear what the commenter means about such generators being 'protected by doing the right thing.'</p>
10	Oster, R, Compology	<p>We do request some clarification on Section 18984.5. Container Contamination Minimization. In Compology's experience, 'monitoring' and 'monitoring to minimize' contamination are 2 distinct and separate activities. We'd like to have further clarification on the distinction between simply monitoring and 'monitoring to</p>	<p>The term "monitor to minimize" is not used in the regulation. Jurisdictions are required to monitor containers so they can identify contaminants and take actions to reduce and minimize contamination. The specific actions required to minimize contamination when it is identified are specifically laid out in Section 18984.5 further definition is not necessary.</p>

Comment Number	Received From	Question/Comment	Response(s)
		minimize' by perhaps defining 'monitoring to minimize' in the definitions section of the regulation.	
4140	Pane J, Athens Services	<p>1. Operational Issues, Route Review/Container Contamination Minimization Frequency of Reporting, Inspections and audits of residuals and contamination are excessive and cannot be justified from a cost/GHG benefit perspective. Costs of reporting should be balanced with operational expense and net environmental benefits offset by the costs to implement. Recommendation: Eliminate AB 1826 duplication and conflicts, as SLCP/1383 regulation requirements are phased-in. Proposal: The industry is proposing the following fix: replacing the language "randomly selected containers in a manner that results in all collection routes being reviewed quarterly," with "statistically significant sample, based on visible contamination in load checking samples that results in collection routes being reviewed annually".</p>	Thank you for the comment. CalRecycle modified the regulations to be annual. For clarity, the regulations allow the jurisdictions to determine random selection, which is the least costly and burdensome approach compared to requiring statistically significant sampling.
4141	Pane J, Athens Services	<p>2. Load-checking Contamination CalRecycle has alluded to a new methodology they will offer in the next iteration of the regulatory text that will reduce the load-checking frequency. Proposal: Load-checking every 500 tons of material coming into a facility is onerous and most loads will have some form of visible contamination. Random sampling should be sufficient.</p>	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
4142	Pane J, Athens Services	<p>3. Organic Waste Recovery Sampling The excessive nature of the proposed sampling of outbound organics and material being sent to the landfill – one cubic yard per day of each material type – is burdensome and unnecessary to achieve the GHG targets. Proposal: A protocol can and should be developed to achieve CalRecycle's goals without the negative impacts daily sampling is certain to cause. As is the case with load checking, the industry needs a more flexible and individually tailored mechanism to achieve the balance that will work to achieve the GHG targets. Allow facilities to create protocols appropriate to their facilities and business.</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite sample be a random and representative of a typical operating day for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data. In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>

Comment Number	Received From	Question/Comment	Response(s)
4143	Pane J, Athens Services	<p>4. Container Requirements</p> <p>Some in the industry want to be able to use any containers in stock and purchased prior to 2022 to replace old containers before obligating the use of a new container that meets the regulatory color and labeling requirements. Requiring specific colors for collection bins and labeling all existing containers by 2025 will be costly.</p> <p>Proposal: Container replacement should be allowed with new contracts, new line of service change or by 2034. This would ease the cost impact but not diminish GHG reduction benefits. There is also a question as to whether commercial containers should be obligated to meet the labeling requirements, when most of the separation in these cases occurs within the commercial buildings of the generator.</p>	<p>Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036. The regulations allow using existing containers in stock. Also, the regulations have specific requirements for commercial businesses regarding container color or signage.</p>
4144	Pane J, Athens Services	<p>5. Organic Waste Definition</p> <p>The definition includes paper products, which is further defined as “paper janitorial supplies, cartons, wrapping, packaging, file folders, and hanging files, building insulation and panels, corrugated boxes, tissue, and toweling.”</p> <p>Proposal: Many of these material types are not accepted in recycling streams and confuse the issue about what is considered organic for the purposes of contamination sampling. A definitional change is needed.</p>	<p>Comment noted. CalRecycle disagrees that the definition of organic waste is too broad. The statute requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.</p> <p>“Non-compostable paper includes, but is not limited, to paper that is coated in a plastic material that will not breakdown in the composting process.” It is clear from how the term is used that “breakdown” means to fully breakdown from the original material into compost. There is no degree or “extent” of breakdown to define. If a material does not breakdown into compost during the composting process it is non-compostable. Non-compostable paper should not be collected for composting and put into the composting process.</p> <p>However; the regulation is not limited to requiring the recovery of “compostable” organic waste composting is not the only method of recovery, and just because a material is not “readily compostable” does not mean that it is not organic waste, and not a part of the material the state must reduce from disposal and include in the regulations. There are other means of recovering organic waste. Non-compostable paper may be more suited for collection and recovery with other paper material for recovery, rather than food waste and green waste.</p> <p>Comment noted. The regulations are structured to specify material that cannot be collected in certain containers, e.g. glass cannot be collected in green containers with organic waste. Further, the regulations define organic waste however they do not specifically require organic specific materials to be collected together, e.g. the regulations do not require food and textiles to be collected together. The regulations allow jurisdictions to source separate materials that are recoverable when mixed together.</p> <p>The definition of organic waste itself does not govern how specific types of materials are handled. The definition identifies which materials are organic waste. The active text of the regulation, not the definition, controls how material is handled. Nothing in the regulatory text requires textiles or dead animals to be placed in the green container.</p>
4145	Pane J, Athens Services	6. Impact on Customer Rates	<p>Comment noted. CalRecycle disagrees that the cost presented in the SRIA, and the subsequent estimates provided in the Appendix to the ISOR, “vastly underestimate the true cost of</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>SB 1383 stated that local jurisdictions “may” charge and collect fees to recover the locals’ costs. The industry is already dealing with cost pressures of current regulations in the roll out of the new franchise territories in Los Angeles. Even with the changes suggested by both haulers and local governments there will be no choice but to raise rates due to the costs imposed by the proposed SLCP Regulations.</p> <p>Proposal: Reevaluate financial impacts of proposed regulations. A relaxation or modification of the regulations as proposed by Athens and others will have the dual benefit of making it more likely to approach the diversion targets while mitigating some of the significant costs that would have to be passed on to rate payers</p>	<p>implementation.” In the Appendix, CalRecycle presented a cost sensitivity of three scenarios. Each scenario is based on a projected disposal level. CalRecycle projected cost based on the most conservative projections of disposal (highest estimates of disposal and required recover of 289 million tons). CalRecycle also provided cost sensitivity for the economic value of recycled commodities and costs for transporting recovered material to market. CalRecycle relied upon the most conservative estimates for each of these sensitivity analyses (the highest estimate of transportation costs and lowest value for recycled commodities). The general comment that CalRecycle understates costs was made by several commenters but failed to specify how costs were underestimated or recommend an alternative method for estimated costs. Regarding comments that cite specific areas where the commenter believes costs are underestimated, those comments are addressed in separate responses.</p>
4146	Pane J, Athens Services	<p>7. Change Existing 0.5% Contamination Standard for Compost and Material for Land Application</p> <p>The existing max 0.5% contamination level for compost will not be attainable with this organic fraction otherwise GHG targets will not be achieved. This is no scalable technology that can economically remove this amount of contamination. There will be an organic fraction of this material that is best suited for landfill ADC and such application should be allowed.</p> <p>Proposal : Outside of these regulations, change the 0.5% contamination standard for compost and allow organic fraction – not suited for compost or land application market to be used as landfill ADC.</p>	<p>Comment noted. Section 17852 is an existing regulation and CalRecycle is not proposing any changes to this section. This is not within the scope of this rulemaking.</p>
5056	Pardo, V. California Refuse Recycling Council	<p>Section 18981.2. Implementation Requirement on Jurisdictions</p> <p>We realize that jurisdictions have limited resources to implement their responsibilities under these regulations and that most often contract haulers are well positioned to carry out many of these obligations. However, Section 18981.2(b) gives jurisdictions blanket authority to delegate all of their responsibilities. We read this as an inadvertent oversight as there are some responsibilities, such as those regarding enforcement and the imposition of penalties, that would be inappropriate for haulers to perform.</p>	<p>Comment noted, CalRecycle revised Section 18981.2 to clarify activities that may be delegated and to clarify that levying of penalties cannot be delegated to a private entity. CalRecycle finds that the imposition of administrative civil penalties involves a level of decision-making of substantial enough import regarding the success of this program that it should be made by jurisdictions as public agencies rather than being delegated to a private entity</p>
5057	Pardo, V. California Refuse Recycling Council	<p>“Notice and Order to Correct (NOTC)” and “Notice of Violation” –</p> <p>We seek more clarity on these definitions as it pertains to Article 16. Administrative Civil Penalties for Violations of Requirements of This Chapter. Are these definitions strictly for department enforcement action against entities and jurisdictions? What about jurisdiction-imposed penalties and enforcement?</p>	<p>Comment noted. Notice and Order to Correct (NOTC) and Notice of Violation (NOV) are for the Department use.</p>
5058	Pardo, V. California Refuse Recycling Council	<p>“Organic waste” –</p> <p>We understand that CalRecycle would like to include an organic waste definition to describe material that emits methane when anaerobically degrading and decomposing in the landfill. However, this definition is much broader than the programmatic elements of the Proposed Organic Waste Reduction Regulations and should be reduced in scope to accurately reflect the programmatic organic solid waste fraction we are endeavoring to recycle beyond the traditional recycling commodities we already manage. We strongly recommend the organic waste</p>	<p>Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>definition be consistent with the language in AB 1826 and be replaced with “food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in the food waste.” If it is crucial to include a definition of relevant methane producing material, CalRecycle could consider the addition of a “Degradable Organic Carbon Waste” definition.</p> <p>At a minimum, the “organic waste” definition should not include any materials included under green container “prohibited container contaminants in Section 18982(a)(55) such as “carpet,” “hazardous wood waste” and “non-compostable” paper.</p>	<p>by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.</p>
5059	Pardo, V. California Refuse Recycling Council	<p>“Source separated organic waste” –</p> <p>We support the definition that organic waste placed in a container specifically intended for the separate collection of organic waste by the generator is considered source separated. It is important to note, however, that we do not interpret this material to include single-stream, dual-stream or tri-stream material collected in the “blue container.” The proposed organic waste definition is limited to food-soiled paper mixed with food waste and does not include paper material traditionally collected in the “blue container” recycling stream. This should be clarified in the regulatory text.</p>	<p>The regulations allow each jurisdiction to decide which recycling container to place paper in. This provision was included in response to previous comments from jurisdictions about the need for such flexibility.</p>
5060	Pardo, V. California Refuse Recycling Council	<p>Section 18984.1. Three-container Organic Waste Collection Systems –</p> <p>We appreciate the addition of meeting the container requirements through an appropriate lid color, but still require more clarity regarding this section. We recommend that split containers of traditional recyclable materials, most often collected in the blue can, have the option of using a lighter or darker blue lid to comply with the color requirements of this section. For example, a split container that collects bottles and cans on one side and paper on the other could have a lighter blue lid color to distinguish the sections, not necessarily a color other than blue, gray or green.</p> <p>We also seek clarity on whether these regulations limit loose in the street collection of green waste material. Many communities collect green waste loose in the street, often on a seasonal basis (e.g. leaf season). During leaf season in particular, loose in the street collection is important as it allows generators to place larger volumes at the curb than would normally fit in their 96-gallon container. This also supports additional diversion of green material from the landfill.</p>	<p>Sections 18984.1(a)(6)(B) and (C) and 18984.2(d)(1) do not require that only light and dark blue be used for a split container; they allow any color not already designated for other materials specified in this section to be used for the split container. Additionally, if the color is an issue in this circumstance, the business can use labels instead. CalRecycle will clarify in the FSOR that Section 18984.9(b), which allows a commercial business to provide containers that comply with either the color or the labeling requirements, applies to Section 18986.1 and Section 18986.2. CalRecycle revised Sections 18984.1, 18984.2, 18984.3, and 18984.5(b)(1)(B) to clarify that loose-on street (i.e., un-containerized) green waste collection is allowed as long as it does not include food waste, which must be containerized, and the receiving facility will accept the green waste and still be in compliance with operational and product quality standards. This is necessary because some jurisdictions use this method year-round to collect green waste and others use it as a supplement in the fall due to spikes in green waste generation; it would be costly to provide extra containers for this material when it can be allowed to accumulate on streets where it can be efficiently collected.</p> <p>This revision necessitated another change to Section 18984.5 to modify the contamination monitoring education requirements, since there would not be a container available to place educational materials on for routes that are exceeding contamination levels. Recommend adding “or door” after the term “container” in section 18984.5(b)(1)(B) to allow for notification in areas where non-containerized loose in the street collection is utilized.</p> <p>Thank you for the comments in support of the language change that was made in response to concerns about green waste loose on the street.</p>
5061	Pardo, V. California Refuse Recycling Council	<p>Section 18984.5. Container Contamination Minimization –</p> <p>We understand and support the need for contamination reduction at the curbside to encourage cleaner streams and improved material recovery. However, the</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>language as proposed does not provide a targeted approach that would focus valuable resources on the most contaminated routes. Route reviews should be directly tied to loadchecking outcomes of “significant visible contamination.” As the requirement is written in both Section 18984.5(b) as well as Section 18997.3, it appears that all containers on all routes will need to be reviewed quarterly, no matter how clean or contaminated the route is. We propose replacing “randomly selected containers in a manner that results in all collection routes being reviewed quarterly” with “randomly selected containers on routes identified to have significant visible contamination in loadchecking samples, that results in all targeted routes being reviewed annually.” The goal is to review routes that truly are contaminated, not those routes that provide predominantly clean material, thereby targeting the relevant generators. We also recommend all routes be reviewed on an annual, not quarterly basis.</p> <p>Furthermore, we believe designees should inform the jurisdiction in writing about generators with contaminants on a quarterly, not monthly basis. The jurisdiction would include this information in their report to the state on an annual basis. Any adjustments to this section would also impact the description of violation for Section 18984.5(b) under Section 18997.3. Department Penalty Amounts. As currently drafted, this description of violation imposes a daily route review each collection day in a manner that results in all route reviews being reviewed quarterly. Again, this approach does not direct the route review to the most contaminated generator streams. It is also overly burdensome, costly, and time-consuming. Route reviews should occur on an annual basis and be directed at generator streams with significant contamination.</p> <p>Of course, with all sections, nothing precludes a jurisdiction from adopting more stringent route review standards.</p>	<p>to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements. CalRecycle also revised the route reviews to be annual. Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
5062	Pardo, V. California Refuse Recycling Council	<p>Section 18984.6. Recordkeeping Requirements for Container Contamination Minimization</p> <p>Members are concerned that copies of all written notices, violations, education, and enforcement actions issued or given to the generator with prohibited container contaminants is unnecessarily excessive and should be limited in scope to notice of violations and enforcement actions issued.</p> <p>For example, there is no need to copy every “Oops” tag a generator might receive as this is an additional and disproportionate layer of recordkeeping in an already time-consuming monitoring process.</p> <p>This section should be adjusted to reflect that a summary report of written notices and education should suffice as a recordkeeping requirement.</p>	<p>The language was amended to clarify that if a jurisdiction provides mass distribution through mailing the jurisdiction is only required to keep a copy of the information and a list of accounts receiving the information. The jurisdiction is not required to keep a copy of each individual piece of information. It is necessary for jurisdictions to keep a record of recipients in order to demonstrate compliance.</p>
5063	Pardo, V. California Refuse Recycling Council	<p>Section 18984.7. Container Color Requirements</p> <p>We support the inclusion that a jurisdiction is not required to replace functional containers that do not comply with the color requirements prior to the end of their</p>	

Comment Number	Received From	Question/Comment	Response(s)
		<p>useful life, or prior to January 1, 2032, whichever comes first. We ask that CalRecycle clarify in this section that useful life includes containers in stock purchased prior to 2022.</p> <p>Additionally, roll-offs, compacters and debris boxes that are often used interchangeably for various collection programs should be excluded from the proposed color and labeling requirements.</p>	
5064	Pardo, V. California Refuse Recycling Council	<p>Section 18984.9. Organic Waste Generator Requirements</p> <p>The proposed regulations currently read, “containers provided by the business shall conform with the containers provided through the organic waste recovery service provided by their jurisdiction.”</p> <p>We ask that you clarify if this requirement pertains to all service containers provided (e.g. gray, blue, green, etc.) or strictly the organic waste container (e.g. green in many cases).</p>	
5065	Pardo, V. California Refuse Recycling Council	<p>Section 18984.11. Waivers and Exemptions Granted by a Jurisdiction</p> <p>We appreciate that these regulations extend beyond the generator obligations of AB 1826 and provide more opportunity to collect organics from commercial streams. We ask that you specify how a jurisdiction would provide “evidence” that a commercial business meets the De Minimis Waiver expectations as currently outlined.</p> <p>We continue to remain concerned about the inclusion of a Collection Frequency Waiver, as some form of putrescible material (e.g. diapers) will always be present in the gray container. We ask that this waiver be removed.</p>	
5066	Pardo, V. California Refuse Recycling Council	<p>Article 5. Generators of Organic Waste</p> <p>For California to meet the organic waste diversion goals of SB 1383, it is critical that all generators play a role in complying with the regulations. To that point, non-local entities and local education agencies should have more direct oversight by CalRecycle and be subject to the same penalties as other generators.</p>	A change to the regulatory text is not necessary. Pursuant to 18996.7, the Department has oversight and enforcement over local education agencies, CalRecycle does not find it is appropriate to impose penalties out of concern over impacts to limited local education funding.
5067	Pardo, V. California Refuse Recycling Council	<p>Section 18990.1. Organic Waste Recovery Standards and Policies</p> <p>We support additional flexibility in the requirement that generators use an organic waste collection system that recovers “at least the same types of organic waste” recovered by a previous collection service. This provision must take into account incompatible material processing issues (e.g. bioplastics, palm fronds, etc.) and market conditions (e.g. National Sword).</p>	A change to the regulatory text is not necessary. This section will not conflict with market conditions. Potential market shifts will impact all facilities. This section is necessary because the statute is intended to increase organics recycling, not decrease organics recycling. This provision is simply designed to prohibit a jurisdiction from requiring a generator to send its material to a facility that will recycle less of it than one they are currently sending it to.
5068	Pardo, V. California Refuse Recycling Council	<p>Section 18993.1. Recovered Organic Waste Product Procurement Target</p> <p>The inclusion of a procurement target for recovered organic waste products sends an important market signal and supports education around organic waste recovery more generally. However, like many other stakeholders, we believe it is incumbent on non-local agencies and local education agencies to participate in a procurement target obligation as well.</p>	Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor’s office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.

Comment Number	Received From	Question/Comment	Response(s)
			<p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to “develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state.” These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>Regarding “nonlocal entities”, it is important to clarify that the populations in, for example, local education agencies and special districts are already included in a jurisdiction’s population-based procurement target; the population data published by the Department of Finance (DOF) includes universities, community colleges, and other local education agencies. The populations inherent in these entities are built into the procurement target calculation, and jurisdictions are encouraged to work with these entities to meet their procurement targets, which may be accomplished through a contract or agreement, such as a Memorandum of Understanding (MOU). Applying procurement targets to these entities, especially population-based procurement targets, would result in double counting individuals contributing to the procurement requirements.</p>
5069	Pardo, V. California Refuse Recycling Council	<p>Additionally, biomass conversion is an activity deemed to constitute a reduction in landfill disposal under Section 18983.1(b)(4). Therefore, the procurement target should include electricity generated from recycled organic waste as well as pipeline injected biogas. Moreover, these products are consistent with the recommendations of the 2017 Integrated Energy Policy Report (IEPR).</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
5070	Pardo, V. California Refuse Recycling Council	CalRecycle should also consider a pathway for jurisdictions to obtain approval of an unlisted organic commodity, similar to the provisions of Section 18983.2 for additional technologies that constitute a reduction in landfill disposal.	CalRecycle disagrees with adding an option for approval of “unlisted organic commodities” for procurement. The broad range of potential recovered organic waste products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.
5071	Pardo, V. California Refuse Recycling Council	The agency may also consider if a jurisdiction can meet their procurement obligations by implementing and enforcing ordinances that facilitate additional organic commodity procurement. Jurisdictions would need to provide documentation to demonstrate how much compost, for example, was procured annually through the ordinance obligation.	Nothing in the regulations prevents a jurisdiction from establishing a subsidy program or implementing and enforcing an ordinance to support the use of recovered organic waste products. If those subsidies or ordinances help drive procurement and use of eligible recovered organic waste products and all applicable requirements of Article 12 are met, then a jurisdiction may count that procurement towards its target.
5072	Pardo, V. California Refuse Recycling Council	<p>This article contains sections describing the methodology by which a transfer and processing facility will determine if they are meeting the organic waste recovery efficiency expectations of a “high diversion organic waste processing facility” and/or the 10% incompatible material limit in recovered organic waste.</p> <p>We have several concerns with the described methodology and offer the following recommendations. Please note that these recommendations also apply to Section 17869 (Article 8. Composting Operation and Facility Records) and Section 17896.44.1 (Article 3. Operation Standards for In-Vessel Digestion Operations and Facilities) as they pertain to organic waste residual calculations.</p> <p>There are too many variables and unknowns regarding the proposed organic waste recovery efficiency protocol to include in the regulatory text. The regulations should reference a guidance document that will include a CalRecycle approved protocol that can be more easily altered and updated as we implement these regulations. Flexibility is necessary both for CalRecycle and the reporting entities to ensure we create a workable methodology based on implementation realities. This guidance document should be created separately from the current rulemaking with substantial facility stakeholder input that can be beta-tested at facilities prior to adoption.</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite sample be a random and representative of a typical operating day for 10 consecutive days per reporting period, instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data. Also, Sections 17409.5.9 for transfer/processing facilities, 17867(16)€ for composting facilities, and 18896.44.1(d) for In-Vessel Digestion facilities allows operators to propose an alternative measurement protocols for these sections with approval by the EA and concurrence from CalRecycle if the operator can ensure that the measurements will be as accurate. CalRecycle staff will develop tools to assist in the implementation of the regulations.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>The guidance document should take into account several issues, including, but not limited to:</p> <ul style="list-style-type: none"> <li>• Wet versus dry processing measurement methods</li> <li>• Particle size in sampling protocol</li> <li>• Reduced sampling frequency based on consistently meeting a 10% or better efficiency standard</li> <li>• Alternative measurement protocols that have been concurred by CalRecycle</li> </ul>	
5073	Pardo, V. California Refuse Recycling Council	<p>Additionally, the frequency of sampling as proposed requires excessive mobilization for data that can be collected with less frequency. A daily sampling requirement is time-consuming, cost prohibitive, labor intensive, and requires valuable facility space to implement. We strongly recommend that sampling occur one business week a quarter, thereby capturing daily and seasonal fluctuations at a reduced cost to facilities and, ultimately, rate paying customers.</p>	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. The operator will now be taking composite samples for 10 consecutive days per reporting period, which is on a quarterly basis. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.</p>
5074	Pardo, V. California Refuse Recycling Council	<p>This section also needs to clarify that sampling does not need to occur for on-site transfer of organic waste for further processing. For example, a transfer/processing facility may accept organic waste for processing, which is then sent to an in-vessel digestion operation on the same site. The regulations need to clarify that this material is not subject to the organic waste recovered measurement requirements.</p>	<p>CalRecycle has revised the proposed regulations in response to comments. The change added Section 17409.5.10.5 to address co-located facilities or operations. The change was necessary to clarify when the measurement protocol is required to be completed if two activities are co-located.</p> <p>Section 17409.5.10.5 requires the measurement protocol to be performed by each activity even if the material from the first activity is sent to the co-located activity, if the facility as a whole sends more than 20% of organic waste to disposal on and after 2022 and 10% on and after 2024. However, if the facility as a whole sends less than 20% of organic waste sent to disposal on and after 2022 and 10% on and after 2024, then the operator would not be required to perform the measurement protocol on the material sent to the co-located activity, only the material sent off-site.</p> <p>In your example the transfer/processing facility would not be subject to the measurement protocols if the total material sent for disposal from both the transfer/processing facility and the in-vessel digestion (IVD) facility has less than 20 percent of organic waste on and after 2022 and 10 percent on and after 2024. If the residual of the whole of the permitted facility (both facilities) contains more than the acceptable percentage levels of organic waste, then the transfer/processing facility would be required to perform the measurement protocol on the organics waste sent to the IVD on-site. Regardless of how much organic waste is in the residual,</p>

Comment Number	Received From	Question/Comment	Response(s)
			any organic waste not sent to the IVD but off-site for further processing would be required to comply with the measurement protocol.
5075	Pardo, V. California Refuse Recycling Council	We also ask that the regulations clarify that digestate from an in-vessel digestion operation sent for compost is not subject to the organic waste recovered measurement requirements.	<p>CalRecycle has revised the proposed regulations in response to comments. The change added Section 17409.5.10.5 to address co-located facilities or operations. The change was necessary to clarify when the measurement protocol is required to be completed if two activities are co-located.</p> <p>Section 17409.5.10.5 requires the measurement protocol to be performed by each activity even if the material from the first activity is sent to the co-located activity, if the facility as a whole sends more than 20% of organic waste to disposal on and after 2022 and 10% on and after 2024. However, if the facility as a whole sends less than 20% of organic waste sent to disposal on and after 2022 and 10% on and after 2024, then the operator would not be required to perform the measurement protocol on the material sent to the co-located activity, only the material sent off-site.</p> <p>In your example, if the in-vessel digestion operation is composting the digestate on site, then it would depend on whether the total amount of organic waste in the material sent for disposal by the facility as a whole meets the 20% on and after 2022 and 10% on and after 2024. If the digestate is sent off-site to be composted, then it would be subject to the recovery measurement.</p>
5076	Pardo, V. California Refuse Recycling Council	It is critical to note that our interpretation is that sampling expectations are for mixed waste collection and source-separated organic collection streams only. This means that material collected in the blue bin of a three-container organic waste collection service is not subject to these requirements, whether the collection be single-stream, dual-stream, tri-stream or otherwise.	CalRecycle has revised this section in response to comments. The change will clarify which blue containers are subject to the efficiency recovery rate. Yes, organic waste in a blue container of a three-container system is not subject to High diversion organic waste processing facility. It would be source separated organic waste not subject to the organic waste recovery efficiency but it would be subject to the acceptable levels of organic waste in the material sent for disposal.
5077	Pardo, V. California Refuse Recycling Council	Organic waste recovery reporting for all facilities, including compost and in-vessel digestion operations, should occur on a quarterly basis. We also ask that CalRecycle clarify what is the definition of "measurement protocol" when determining an alternative measurement protocol.	<p>CalRecycle has revised the reporting frequency for all facility types in response to comments. The reporting frequency requirement was revised to "reporting period" which is on a quarterly basis. The four reporting periods in each calendar year are:</p> <p>(A) Reporting Period 1- January 1 to March 31  (B) Reporting Period 2 -April 1 to June 30  (C) Reporting Period 3 - July 1 to September 30  (D) Reporting Period 4 - October 1 to December 31</p> <p>The measurement protocols for determining the organic waste recovery are explained in Sections 17409.5.2 through 17409.5.5, and 17409.8 for the transfer/processing facilities, Section 17867(a)(16) for the composting facilities, and Section 17896.44.1 for the in-vessel digestion facilities.</p>
5078	Pardo, V. California Refuse Recycling Council	Finally, we seek clarity on how the 10% incompatible limit relates to transfer/processing facilities that process source-separated organic waste, as well as go above and beyond to process remnant organic material. Our interpretation is	A change to the regulatory text is not necessary. Section 17409.5.8 explicitly states that this requirement is only for source separated organics and mixed organic waste streams sent for recovery, not remnant organic material.

Comment Number	Received From	Question/Comment	Response(s)
		that facilities in this case are only obliged to measure incompatibles from the source-separated stream and use that percentage in meeting the expectations of Section 17409.5.8.(a). However, we recommend Section 17409.5.8 include language that clearly excludes remnant organic material from the 10% incompatible limit.	
5079	Pardo, V. California Refuse Recycling Council	Section 17409.5.7 Loadchecking – Contamination in Source Separated Organic Waste As described under our route review recommendations, this section should be revised to identify sources of “significant visible contamination.”	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.
5080	Pardo, V. California Refuse Recycling Council	A lead enforcement agency should also be able to approve an alternative frequency for loadchecking if the incoming material is consistently demonstrated to not have significant visible contamination.	CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.  In addition, Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.
5081	Pardo, V. California Refuse Recycling Council	We also seek clarity on the alternative frequency provision of (c)(2). Why would a source separated organic waste collection stream contain remnant organic material when that material would be found in the gray container?	CalRecycle has deleted the loadchecking requirement Section 17409.5.11 in response to comments.
5082	Pardo, V. California Refuse Recycling Council	Section 17409.5.10. Solid Waste Handling at Consolidation Sites. This section needs to also include language that consolidation sites are not subject to the requirements of Section 17409.5.11. Remnant Organic Material in the Gray Container Collection Stream.	CalRecycle has revised this section to include Section 17409.5.11.
5083	Pardo, V. California Refuse Recycling Council	Section 17409.5.11. Remnant Organic Material in the Gray Container Collection Stream	CalRecycle has deleted the loadchecking requirement Section 17409.5.11 in response to comments.

Comment Number	Received From	Question/Comment	Response(s)
		<p>We appreciate the recent addition and clarification that remnant organic material is not subject to the requirements of Sections 17409.5.1 and 17409.5.8. However, as written, the regulations would require duplicative loadchecking and recordkeeping on material at both a transfer station and the landfill to which it is sent despite that material not having been processed. We recommend transfer stations transferring solid waste from the gray container to the landfill be exempt from these loadchecking and recordkeeping requirements as they will be performed at the receiving landfill.</p>	
6034	Pardo, V., California Refuse Recycling Council	<p>Section 19896.44.1            Can you please clarify the intention of lines 22-23 on page 63 of the proposed regulatory text as it relates to loadchecking requirements? If the source separated organic waste collection stream “does not contain any remnant organic material” it may be eligible for approval of an alternative loadchecking frequency by the EA. I am unclear what this means and hoping you can provide some clarity. Remnant organic waste, as defined, is that which is recovered from the gray container stream, so by definition it seems like no remnant organic waste should be in a separated organic waste collection stream? Perhaps you can share what the intent is in this language? Any help you could offer would be greatly appreciated.</p>	<p>CalRecycle has deleted the loadchecking requirement for In-vessel digestion operations and facilities in response to comments</p>
6376	Parker, A., City of Hemet	<p>As a disadvantaged community, implementation and enforcement of the Regulation as proposed will place a heavy financial burden on the community, its businesses and residents. We remain concerned about the following critical points that specifically hinder our ability to implement the proposed Regulation:            Article 3, Section 30.5 Container Contamination Minimization.            Upon finding prohibited container contaminants in a container, the jurisdiction, or its designee, shall contact the generator or provide written notice to the generator. This City of Hemet's curbside collection system is automated. Drivers remain in their collection vehicle and use the trucks mechanical arm to lift containers 10 feet into the air to dump in to the body of the vehicle. In order to find contaminated containers, drivers would have to exit their vehicles to inspect individual containers. Route drivers are expected to collect 800 to 900 containers each day. Adhering to the proposed legislation would require route drivers to physically examine hundreds of containers on each route on a daily basis and additional staffing resources to issue notices. This will result in additional costs and place an additional financial burden on the residents of our already severely economically disadvantaged community. The City of Hemet recommends to exempt residential routes from this requirement.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.            Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.            CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.            In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>

Comment Number	Received From	Question/Comment	Response(s)
6377	Parker, A., City of Hemet	<p>Requires route review on randomly selected containers in all collection routes quarterly (pg. 14, line 51).</p> <p>The City's franchise hauler services tens of thousands of containers every week. A quarterly route review for all routes in the City is not possible without the addition of staffing and funding. It is not feasible for drivers to perform this task, and complete their routes in a timely manner. The required additional work will directly impact our franchise hauler. As a result, the City would likely have to hire additional staffing to inspect individual containers. The City of Hemet recommends to exempt residential routes from this requirement.</p>	<p>During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. Comment Number	Received From	Question/Comment	Response(s)
			<p>However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.</p>
6379	Parker, A., City of Hemet	<p>Article 10: Jurisdiction Edible Food Generators and Food Recovery.</p> <ol style="list-style-type: none"> <li>1. Edible food generators must participate in food recovery and keep records of who collects and receives its edible food, frequency, and quantity collected, and contracts/written agreements with food recovery services and organizations.</li> <li>2. Jurisdictions shall develop and maintain a list of food recovery organizations and services; monitor compliance of edible food generators, food recovery services and organizations; and ensure proper data collection.</li> </ol> <p>This is a significant administrative, training, and logistical burden for small businesses to manage its excess edible food, until it can be retrieved by a food recovery organization. The burden on the City to monitor and enforce the proposed rules related to edible food generators and food recovery creates an adversarial and punitive tone to a program that intends positive beneficial outcomes for those going hungry in our community. The City recommends that Cal Recycle seek guidance from the community to understand what is needed to gather, store and deliver edible food in a safe and efficient manner.</p>	<p>Removing the commercial edible food generator requirements from the regulations, and the jurisdiction requirement to monitor commercial edible food generator compliance (enforcement) would make it voluntary for commercial edible food generators to arrange for their edible food to be recovered, which is the current situation in California. We have seen that when food donation is voluntary millions of pounds of edible food are disposed rather than being put to the highest and best use of helping feed people in need.</p> <p>In response to 2., a change to the regulatory text was not necessary for the following reasons. Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help commercial edible food generators find food recovery organizations and services that are capable of safely recovering large quantities of edible food on a routine basis. Please note that the list is intended to serve as a tool to help generators find appropriate food recovery organizations and services to establish a contract or written agreement with, and thereby help ensure that edible food in the jurisdiction is not disposed in landfills, but rather put to its highest and best use of helping feed people in need.</p> <p>Regarding the comment that CalRecycle “seek guidance from the community to understand what is needed to gather, store and deliver edible food in a safe and efficient manner.” For the past three years of SB 1383 rulemaking CalRecycle has worked very closely with key food recovery stakeholder groups to help develop SB 1383's edible food recovery regulations. In addition, CalRecycle works directly with food recovery organizations and services across the state through the Department’s Food Waste Prevention and Rescue Grant Program. CalRecycle’s Food Waste Prevention and Rescue Grant Program has given the Department insight into the significant differences in edible food recovery capacity needs that exist in cities, counties, and regions in California. The significant differences in capacity needs that exist only emphasize and highlight the critical need for jurisdictions and counties to perform their own local capacity assessments.</p>
6380	Parker, A., City of Hemet	<p>Article 13 and 14 Regarding Reporting and Enforcement Requirements</p> <ol style="list-style-type: none"> <li>1. The jurisdiction is responsible and required to ensure regulations are enforced. This includes applicable account (generator and hauler) record keeping, various inspections for compliance, addressing complaints and issuing violations.</li> </ol> <p>In the current draft legislation, a tremendous amount of effort is placed on enforcement and recordkeeping, which will require the City to divert scarce funds and resources away from initiatives to an enforcement based system. The City recommends reducing the burden of enforcement and record keeping so that the City may focus on education, source reduction and organics collection.</p>	<p>A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions. The reporting information summarizes elements of the Implementation Record and the recordkeeping requirements provide sufficient evidentiary record so the Department can ensure jurisdictional compliance with the chapter.</p>

Comment Number	Received From	Question/Comment	Response(s)
3064	Perez, J., Imperial County	<p>Remove Section 18083(c) At least once per quarter, the EA shall oversee a minimum of one (1) measurement as described in 14 CCR Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867 and 17896.44.1, during an inspection required in subdivision (a).</p> <p>a. The sections listed (14 CCR Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867 and 17896.44.1) give LEAs authority to require operators to perform measurements and load checking, therefore not needed in Section 18083.</p> <p>b. The new section creates a mandate and a performance standard for the LEA, binding the LEA to a specific amount of time and effort to review one action at a facility. Current measurement time is estimated to be 3-5 hours.</p> <p>c. This section disregards LEA determination of compliance of a facility unlike the statements in the other sections that leaves the option of observation to the LEA. This is important because if a facility is determined to be consistently in compliance with measurement and load checking, the LEA is mandated to observe quarterly regardless instead of putting time and resources to less compliant facilities.</p>	<p>CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.</p>
3065	Perez, J., Imperial County	<p>Revise Section 18984.11(a)(3)(A)(1) The jurisdiction, or its authorized hauler, demonstrates to the Solid Waste Local Enforcement Agency that less frequent collection than required by Section 17331 of Title 14 of the California Code of Regulations will not result in the propagation of vectors or other public health and safety, or nuisance issues.</p> <p>a. Section 18984 identifies the Solid Waste Local Enforcement Agency as the designee to allow less frequent collection whereas Section 17331 designates the Local Health Officer. This section conflicts with the section that it cites.</p> <p>b. As an LEA, we do not wish to be the designee for less frequent collection and would like it to remain a Health Officer duty.</p>	<p>Section 18984.11 was revised to enforcement agency.</p>
6439	Perkins, J., City of San Diego	<p>Article 3. Section 18984.12 as written does not allow for good faith effort: Given the realities of lengthy environmental review and permitting for new facilities, and other unavoidable impediments to implementation of the regulations, provisions should be made for good faith effort. Section 18984.12 should include a subsection (e) stating that "Waivers and extensions may be granted to any generator, hauler, or jurisdiction that has made a good faith effort to comply with these requirements but has been unable to identify a facility with sufficient capacity to process the materials".</p>	<p>A change to the regulatory text is not necessary. When the Legislature enacted the Recycling of Commercial Waste ("MCR") law (PRC Section 41649.3(h) and (i) and the Recycling of Organic Waste ("MORE") law (PRC Section 42649.82(g) and (h) both statutes expressly required that the Department evaluate these programs using the "good faith effort" standard contained in PRC section 41825.</p> <p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p>

Comment Number	Received From	Question/Comment	Response(s)
			Further, Making a good faith effort to achieve a unique jurisdiction target that fluctuates with annual generation is not compatible with the SB 1383 mandate to achieve a specific statewide organic waste disposal cap of 5.6 million tons on and after 2025. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
6440	Perkins, J., City of San Diego	Additionally, subsection 9 ( c) should be added to section 18996.3 stating, "Notwithstanding the preceding, if a jurisdiction demonstrates good faith effort at complying with these requirements, the department shall not seek administrative penalties. "	The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
6441	Perkins, J., City of San Diego	For comparison, Section 18996.6 specifies that while a State agency may receive a notice of violation, and various bodies may be notified of this, there is a provision for "substantial effort», however, there is no provision for administrative penalties. Local governments cannot compel a State agency ( or non-local entity) to comply with the requirements, and be responsible for the resultant waste. Failure of a State agency or a non-local entity to fully comply with all requirements could potentially result in not compliance with the requirements. Thus section 18996.3 should include a subsection 9 (d) stating, "No penalties shall be assessed on a jurisdiction for failure of State, non-local, or other entity's failure to comply with the requirements of these regulations if the local government has no legal authority over the actions of the entity» .	A change to the regulatory text is not necessary. Pursuant to 18996.6, the Department has oversight and enforcement over state agencies and facilities. Local jurisdictions do not authority to enforce against these entities. Enforcement actions against these entities is fundamentally different in nature from enforcement action against other regulated entities.
6442	Perkins, J., City of San Diego	Article 9. Section 18990.1 (b)(2) as proposed would prohibit facilities from preventing organic waste coming from outside of the jurisdiction: It is imperative that facilities are able to control the source of materials. For example, if a jurisdiction elects to construct a Resource Recovery Facility it would likely need to focus first on providing organics recycling services for waste streams generated within that jurisdiction, in order to ensure compliance with the SB 1383 regulation. To date, the State has provided very little incentive funding for the construction or expansion of organics recycling infrastructure, if ratepayer funds are used to finance these facilities then the jurisdiction will need to prioritize ratepayers' waste (both residential and commercial) and ensure that sufficient capacity is available at the new facility to process it. As a result, there should be flexibility for facility owners and operators to choose which waste streams they will take on. The following language would clarify the intent: "Whether public or private,	. A change to the regulatory text is not necessary. Nothing in the regulatory text would limit the application of appropriate standards to imported waste. Section 189901 (c) (1) provides that this section does not require a solid waste facility or operation to accept organic waste that does not meet the quality standards established by the solid waste facility or operation.

Comment Number	Received From	Question/Comment	Response(s)
		the operator of a facility may limit the origin, sources, and types of materials entering its facility".	
6443	Perkins, J., City of San Diego	Article 9. Section 18992.3 (a) (1-4) has an infeasible timeline: The timelines for the reporting periods, as written, request a reporting deadline for information that occurs in the future. I.e. "(1) February 1, 2022 counties shall report to CalRecycle on the period covering January 1, 2022 through December 31, 2024". This should be revised to reflect the proper dates. In addition, the reporting periods should stay consistent. Please change (1) to reflect the August 1, 2022 reporting period.	Thank you for the comment. CalRecycle revised the date for the first reporting period to be August 1, 2022. However, since this is a planning activity it is intended to plan for future capacity so CalRecycle is not changing the dates for the first and subsequent planning timeframes.
6444	Perkins, J., City of San Diego	Article 12. Section 18993.1(f) procurement mandate for byproducts of organics recycling is too narrowly structured: Throughout the SB 1383 implementation process, the City has advocated to CalRecycle that for this program to work and be feasible for localities and agencies to implement, viable markets need to be developed for the valuable byproducts of the organics recycling process. These byproducts include both biogas and solids, both of which have numerous beneficial uses available in the marketplace today. Communities incorporating more sustainable solutions into their solid waste and wastewater management practices should be allowed to objectively evaluate these options and adopt a waste management strategy that achieves the greatest environmental benefits (reduced GHG and criteria air pollutant emissions, renewable energy generation and use, soil health, agricultural best practices, etc.) while also being cost-effective for ratepayers.	CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Regarding biosolids products, the current draft regulatory text considers compost an eligible recovered organic waste product as long as the final product meets the definition of compost, per Section 17896.2(a)(4), and is produced either at a compost operation or facility or large volume in-vessel digestion facility that composts on-site (refer to Section 18993.1(f)(1)(A) and (B)). Biosolids and/or digestate that do not meet the compost definition will not count towards the procurement target.
6445	Perkins, J., City of San Diego	To address the market development issue, Article 12 of the draft regulation includes a procurement mandate, requiring jurisdictions to annually procure a certain quantity of the byproducts of organics recycling, and the City supports this approach. Unfortunately, the procurement requirement in the current draft is structured far too narrowly, as it provides only a single option each for the use of solids (compost) and biogas ("renewable transportation fuel 1") to comply. This limited approach to compliance ignores the much broader variety of beneficial uses to which both solids and biogas may be put. For example, biogas may be beneficially reused not just as low-carbon transportation fuel, but also to produce clean, renewable baseload energy, or the biogas can be injected directly into existing common carrier pipelines for use at other facilities. Each of these uses feature valuable and recognized environmental benefits, and they should qualify under the Article 12 procurement requirement.	The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction's procurement target. SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable

Comment Number	Received From	Question/Comment	Response(s)
			<p>transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
6446	Perkins, J., City of San Diego	<p>This unduly restrictive limitation could have the unfortunate impact of forcing agencies that have been good stewards of resources to abandon successful projects in operation today in order to comply with the State's narrow view of beneficial reuse. As an example, the City of San Diego has long operated multiple biogas renewable energy generation projects, as well as our biomethane direct pipeline injection project (at the Point Loma Wastewater Treatment Plant). Since the City has extensive experience with these two types of biogas beneficial reuse-but not with renewable transportation fuel-CalRecycle should give the City and other regulated entities the flexibility to implement reuse strategies that align with existing core competencies, utilize existing, in-place infrastructure, and that also support achievement of local sustainability initiatives such as the City of San Diego's Climate Action Plan. The goal of SB 1383 is to reduce methane emissions by reducing landfilling of organic waste streams, while also drastically expanding recycling and beneficial reuse of these materials. The State should not use the SB 1383 regulatory process to pick application and technology winners and losers and impose a one-size-fits-all approach on regulated entities. Moreover, both the State's 2030 Scoping Plan and the Short-Lived Climate Pollutant Reduction Strategy call for the use of biogas for both pipeline injection and electricity generation, as well as vehicle fuel. As long as a locality's waste management practices meet both of the fundamental methane-related goals of SB 1383, their projects should be deemed compliant.</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. 6447	Perkins, J., City of San Diego	<p>Article 13. Section 18994.2 (d) and (f) puts an undue burden on cities with non-exclusive franchise agreement:  Requiring the City to be responsible for all tracking and reporting of the self-haulers and back-haulers found in § 18994.2(f) requires strict regulations on small businesses like contractors, landscapers, and small community composters or recyclers. The City has thousands of small contractors, landscapers, and community composter and recyclers, it will not be feasibly possible to track and ensure these small self-haulers are compliant. The City has carved these specific classifications out of the franchise hauler agreements due to inability of enforcing against these small haulers without owning every landfill and transfer facility in the county.</p>	<p>CalRecycle has revised section 18994.2 in response to this comment. The reporting requirements to report the number of self-haulers approved to operate within the jurisdiction has been removed.</p>
6448	Perkins, J., City of San Diego	<p>The waiver program mentioned in§ 18994.2(d) is also difficult to track due to the non-exclusive franchise hauler system. It is more appropriate to place the responsibility on the self-haulers and use the reporting requirements from AB 901 to track them.</p>	<p>A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.</p>
6449	Perkins, J., City of San Diego	<p>Article 14. Section § 18995.1(a)(1)(A) as written may cause duplicative reporting:  A jurisdiction must complete a compliance review of all garbage accounts for commercial businesses that are subject to its authority, that generate two cubic yards or more per week of solid waste and produce organic waste, determine their compliance with the self-haul requirements by back-hauling waste, and conduct route reviews of commercial businesses and residential areas for compliance with generator requirements and container contaminants. The City has a non-exclusive franchise system, which makes it very difficult to have precise tracking for route reviews and compliance with generator requirements.  Facilities have the ability to switch franchisees anytime based on price or service, therefore, tracking could result in numerous duplicate facilities even if done on a monthly basis. Facilities can also have multiple waste hauling services for different</p>	<p>CalRecycle has revised section 18995.1 in response to this comment. Section 18995.1 was revised to include the option of conducting route reviews or waste composition studies to meet the container contamination minimization requirements. If the jurisdiction chooses to conduct waste composition studies and contaminants exceed the allowed 25 percent, the jurisdiction shall notify all generators on the sampled hauler route or perform a targeted route review. This allows the jurisdiction flexibility if jurisdiction finds it difficult to have precise tracking for route reviews if hauler change, the facilities should stay consistent. Route reviews are to be conducted annually to verify compliance with Section 18984.9(a) that organic waste generators are subscribing to and complying with organic waste collection services or self-hauling organic waste. A jurisdiction shall conduct a sufficient number of route reviews of entities to adequately determine overall compliance. Section 18994.2 was revised to remove the reporting requirements related to self-</p>

Comment Number	Received From	Question/Comment	Response(s)
		aspects of the business. Further, being able to track self-haul and back-hauling requirements would be difficult if the business itself is not a customer of any franchisee. This further complicates reporting requirements for the City.	haulers, such as the number of self-haulers approved and the amount of source separated organic waste self-hauled.
6450	Perkins, J., City of San Diego	Article 14. Section 18995.2 (b) and (c) a one-day request for complete reporting information is infeasible: Considering annual reports are mandatory, (c) should be deleted from this section or revised to reflect a reasonable reporting time period.	CalRecycle has revised section 18995.2 (c) in response to this comment to allow for 10 business days rather than one.
6451	Perkins, J., City of San Diego	Article 15. Section 18996.2 (a)(2)(B) as written does not consider jurisdictional budgets: Jurisdictions have competing regulations to comply with. Given the reality of jurisdictional budgets and the cost for newly required infrastructure, "a failure to provide sufficient funding to assure compliance,,, should be removed from this section. Jurisdictions should be given credit for their good faith efforts.	A change to the regulatory text is not necessary. This exclusion of the circumstance where a decision-making body of a jurisdiction has not taken action as "substantial effort" was to prevent delayed enforcement action due to a jurisdiction failing to take adequate steps to comply with the Chapter. The success of the Short-lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. This strict timeframe does not allow for a multi-year and multi-step process for achieving compliance or a "good faith effort" as with AB 939. Enforcement by the Department allows a jurisdiction extended timeframes to come into compliance through extensions and the Correction Action Plan (CAP). Absolving the jurisdiction of their responsibility to comply with the regulations due to the failure of a decision-making body would render the state incapable of achieving the SB 1383 targets. The jurisdiction is ultimately responsible for their compliance with the Chapter and shall be subject to penalties for noncompliance and the decision-making body will need consider the possibility of penalties if it fails to take the necessary steps to comply. By adopting the SB 1383 regulations as early as possible, impacted stakeholders will be provided the maximum amount of time to prepare and budget for implementation and compliance. The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a CAP. This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3749	Pestrella, M., County of Los Angeles	The proposed definition of "Food recovery organization" as written includes temporary food facilities, as defined under Section 113842 of the Health and Safety Code. According to the Health and Safety Code: Nonprofit charitable temporary food facilities" means either one of the following: (a) A temporary food facility, as defined in Section 113930, that is conducted by a nonprofit charitable organization, as defined in Section 113841. (b) An established club or organization of students that operates under the authorization of a school or other educational facility.	Removing "nonprofit charitable temporary food facilities" from the definition of "food recovery organization" was not necessary. The proposed change was not necessary because these entities are a type of food recovery organization that should be recognized and also can help California achieve its 20% edible food recovery goal. However, CalRecycle also recognizes that that assessing edible food recovery capacity at nonprofit charitable temporary food facilities could be onerous given that these entities include clubs or organizations of students that operate under the authorization of a school or other educational facility. To address this concern, CalRecycle revised Section 18992.2. (a)(2) so that jurisdictions will not be required to assess capacity at nonprofit

Comment Number	Received From	Question/Comment	Response(s)
		<p>Should these clubs and organization be included, local jurisdictions would have to:</p> <p>1) Annually identify all clubs or organizations at schools and other educational facilities (which are considered non-local entities) operating within the jurisdiction and maintain these school clubs and organizations on the jurisdiction’s website and outreach materials as potential temporary food facilities for use by commercial edible food generators pursuant to Section 18985.2(a)(1).</p> <p>2) Assess the edible food recovery of school clubs and organizations which are involved in food recovery activities - pursuant to Section 18991.2(a)(2).</p> <p>Public Works recommends that nonprofit charitable temporary food facilities be excluded from the requirements listed under Section 18985.2(a)(1) and Section 18991.2(a)(2), as they do not contribute greatly to existing food recovery capacity, and it would be an undue burden to both jurisdictions and student organizations to have to comply with these regulations.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(25) “Food recovery organization” means an entity that primarily engages in the collection or receipt of edible food from edible food generators and distributes that edible food to the public for consumption, including, but not limited to:</p> <p>(A) A food bank as defined in Section 113783 of the Health and Safety Code;</p> <p>(B) A nonprofit charitable organization as defined in Section 113841 of the Health and Safety code; and,</p> <p><del>(C) A nonprofit charitable temporary food facility as defined in Section 113842 of the Health and Safety Code.</del></p>	<p>charitable temporary food facilities located within the county and jurisdictions within the county. This revision was necessary to help jurisdictions comply with the edible food recovery capacity planning requirements specified in Article 11.</p> <p>Regarding the comment pertaining to Section 18985.2. Edible Food Recovery Education and Outreach (a)(1). The commenter has misinterpreted the requirement to develop a list of food recovery organizations and services operating within the jurisdiction. To clarify, the requirement does not specify that the jurisdiction shall maintain a list of all food recovery organizations and services operating within the jurisdiction, just that “a list” be created, maintained on the jurisdiction’s website, and updated annually.</p> <p>It is at the discretion of the jurisdiction to determine the food recovery organizations and services that they believe should be included on the list. Please note that the list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with pursuant to Section 18991.3(b), and thereby help ensure that edible food in the jurisdiction is not disposed in landfills, but rather put to its highest and best use of helping feed people in need.</p> <p>Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help commercial edible food generators find food recovery organizations and services that are capable of safely handling and distributing recovered edible food on a routine basis.</p>
3750	Pestrella, M., County of Los Angeles	The definition of “organic waste” in (a)(46) does not specifically include “food-soiled paper,” but it includes “paper products”. The definition of paper products in (a)(51) does not specify if food-soiled paper is considered a paper product. The regulations should clarify if food-soiled paper is considered a type of organic waste subject to the landfill disposal reduction requirements of these regulations.	Food soiled paper can be composted and should be appropriately diverted from landfill disposal.
3751	Pestrella, M., County of Los Angeles	The definition of “organic waste” in (a)(46) includes “lumber” and “wood.” The terms “lumber” and “wood” are not defined elsewhere in the regulations. Public Works recommends that the regulations specify which materials would be considered lumber and wood to allow jurisdictions to collect and recycle these materials.	CalRecycle finds that the existing "organic waste" definition is adequate. The regulations have a definition of "hazardous wood waste" which describes the type of wood or lumber which shouldn't be sent to organic waste recovery because it is incompatible with composting, anaerobic digestion or other organic waste recovery facilities or operations.
3752	Pestrella, M., County of Los Angeles	<p>“Route review” is defined in (a)(65) as “a visual inspection of containers along a hauler route...” However, the terms “hauler route” or “route” are not defined in the regulations. To facilitate compliance with the requirements to perform route reviews pursuant to Section 18984.5, the regulations should define the scope of the terms “hauler route” or “route.”</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p><b>(32) “Hauler route” or “route” means a way or course taken by one truck from a starting point and returning to that point at the end of the work day.</b></p>	CalRecycle added a definition of ‘hauler route.’ Section 18984.5 requires jurisdictions to minimize contamination of organic waste containers by either conducting route reviews or conducting waste composition studies on each hauler route. The term “hauler route” is key to the jurisdiction’s compliance with these requirements because it describes where the jurisdiction should direct its contamination minimization efforts in order to increase detection of container contamination by generators. What constitutes a “hauler route” is dependent upon the designated itinerary or geographical configuration of the jurisdiction’s waste collection system. For example, a jurisdiction’s collection system may consist of one continuous itinerary or series of stops that services both commercial generators and residential generators for garbage, dry recyclables and organics or the system could be divided into two or more itineraries or segments

Comment Number	Received From	Question/Comment	Response(s)
			based on each type of generator and/or material type collected. This section is necessary to maximize detection of container contamination so that the jurisdiction's education and outreach and/or enforcement efforts can be targeted to the generators serviced along the affected routes, thereby reducing contamination and increasing the recoverability of organic waste.
3753	Pestrella, M., County of Los Angeles	<p>In addition to anaerobic digestion and composting, biosolids can also be processed through gasification. Biosolids that are gasified produce biochar, an organic soil amendment. Public Works recommends that CalRecycle include the land application of biochar produced from biosolids as a reduction of landfill disposal. The California Energy Commission's 2017 Integrated Energy Policy Report (2017 IEPR), published on April 16, 2018, states that the gasification of biosolids to produce biochar is a revenue source to promote the development of renewable natural gas (RNG) projects, which will be needed if jurisdictions are to meet the requirements to procure RNG transportation fuel per Section 18993.1(f)(2) .</p> <p>In addition, Part 503, Title 40 of the Code of Federal Regulations, Appendix B includes several acceptable pathogen treatment processes for biosolids. Public Works recommends that CalRecycle include the land application of biosolids processed through any of these processes.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(6) (B) Biosolids shall:</p> <ol style="list-style-type: none"> <li>Have undergone <del>anaerobic digestion or composting</del>, <b>any of the pathogen treatment processes</b> as defined in Part 503, Title 40 of the Code of Federal Regulations, Appendix B, <b>or a thermal conversion process to produce biochar, as defined in Section 14513.5. of the Food and Agriculture Code</b>, and,</li> </ol>	<p>CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2e</sub> per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383.</p> <p>However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste.</p> <p>Please refer to Section 18983.2 for more information.</p>
3754	Pestrella, M., County of Los Angeles	<p>Section 18984.4. Recordkeeping Requirements for Compliance with Organic Collection</p> <p>6. Comment(s):</p> <p>Public Works is concerned about requirement (a)(3)(D) of Section 18984.4 which states that the jurisdiction must provide the geographical areas served by the haulers, along with routes serviced, or a list of addresses served. Jurisdictions, through their franchise agreements and contracts, have committed to protecting proprietary information which may result in an economic disadvantage should the information be disclosed to our haulers' competitors.</p> <p>Section 18988.4. (a)(3)(A) similarly requires "copies of all reports required by haulers" be included in the Implementation Report. These reports include proprietary information which the jurisdiction may have committed to keeping secure as it contains trade secrets which may potentially be damaging to the haulers should the information be released.</p> <p>Public Works recommends removing the language stating "or a list of addresses served" from Section 18984.4 (a)(2)(D) and removing the language "copies of all reports required by haulers" in Section 18988.4. (a)(3)(A) in order to protect the haulers' proprietary information.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p>	<p>The comment refers to recordkeeping requirements for jurisdictions to retain. This information is not required to be reported publicly. To the extent that documents required to be retained in a jurisdiction's Implementation Record contains truly proprietary or trade secret information, there are existing protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow public agencies to withhold such information from public disclosure. The proposed regulations provide for this.</p> <p>CalRecycle changed the requirement for a "written report" to a "written record" in 18995.1(c) to make clear that information gathered during inspections such as route reviews and compliance reviews is not required to be disclosed in a public report. These are written records that are to be maintained in the files of the local jurisdiction. To the extent that such information is valid confidential, proprietary, or trade secret information, there are protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow the appropriate withholding of such information from public disclosure by the jurisdiction. The proposed regulations, in Section 18991.5(f), were amended to provide for this.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(a) A jurisdiction shall include the following information and documents in the Implementation Record required by Section 18995.2 of this chapter:</p> <p>(1) A description of which collection method(s) it will use to comply with this article.</p> <p>(2) The geographical area for each collection method.</p> <p>(3) If the jurisdiction is using a service that requires the contents of containers provided by the jurisdiction to be transported to a high diversion organic waste processing facility, the jurisdiction shall at a minimum:</p> <p>(A) List all high-diversion organic waste processing facilities used by the jurisdiction.</p> <p>(B) Include copies of, quarterly and annual average mixed waste organic content recovery rates, for each of those facilities, as defined in Section 30.3.</p> <p>(C) List all approved haulers in the jurisdiction that are allowed to take organic waste to the jurisdiction’s identified high-diversion organic waste processing facility or facilities.</p> <p>(D) <del>Include the geographical area the hauler serves or the routes serviced, or a list of addresses served</del></p>	
3755	Pestrella, M., County of Los Angeles	<p>Section 18984.5. Container Contamination Minimization</p> <p>This section indicates that if a jurisdiction is utilizing a two or three-container collection system, all collection routes must be reviewed quarterly for prohibited container contaminants. Due to the size of the County's geographical jurisdiction and the number of routes presently served, this presents an incredible burden on the County's labor and financial resources. For example, the residential franchise areas of unincorporated Los Angeles County have 3,383 miles of routes alone and this is only a subset of the waste collection accounts overseen by the County. Public Works recommends reducing the monitoring frequency requirement to not less than annually, which is a requirement that jurisdictions can more realistically satisfy. In addition, Public Works recommends shifting this requirement to sample a statistically representative sample of containers from each route, but not to sample every container on each route.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and <b>Recommended Changes/Revisions:</b></li> </ul> <p>(b) A jurisdiction shall conduct a route review for prohibited container contaminants on randomly selected containers in a manner that results in <b>a statistically representative sample of</b> all collection routes being reviewed <del>quarterly</del> <b>annually</b></p>	<p>CalRecycle agrees. The intent of the procurement requirement is to develop regional markets for recovered organic waste products.</p> <p>Regarding mulch, CalRecycle has revised the regulatory language to add mulch provided it is derived from certain solid waste facilities and the jurisdiction requires such material to meet land application environmental health standards. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. This is an example of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p>
3756	Pestrella, M., County of Los Angeles	<p>If a jurisdiction is informed by a solid waste facility operator that the waste collected by one of its haulers contains prohibited container contaminants, the regulations require a jurisdiction to physically inspect containers along route(s) that contaminants came from. Public Works recommends that the term “physically” be removed from the definitions to allow for jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p>	The term "physically" was removed from the regulatory language.

Comment Number	Received From	Question/Comment	Response(s)
		(c) (1) Investigate by <del>physically</del> inspecting containers along the route(s) that the contaminants came from to determine the sources of contamination and provide written notification, either by placement on organic waste containers, mailing education notices, or direct contact with generators, which shall, at a minimum, include information regarding the generator's requirement to properly separate materials into the appropriate containers and may include photographic evidence of the violation.	
3757	Pestrella, M., County of Los Angeles	<p>Section 18984.9. Organic Waste Generator Requirements It may not be feasible for commercial businesses to “prohibit their employees from placing organic waste in a container not designated to receive organic waste.” Commercial businesses can provide the education, signage, tools, and guidance on the proper separation of organic waste but cannot actually “prohibit” improper separation. Therefore, Public Works recommends that this requirement be reworded to require commercial businesses to “discourage” employees from placing organic waste in the incorrect containers.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions: (b) Generators that are commercial businesses shall also: (1) Provide containers for the collection of organic waste and non-organic recyclables in all areas where disposal containers are provided for customers, except for restrooms. The containers provided by the business shall conform with the containers provided through the organic waste recovery service provided by their jurisdiction. (2) <del>Prohibit</del> <b>Discourage</b> their employees from placing organic waste in a container not designated to receive organic waste as set forth in Sections 18984.1(a)(5) and 18984.2(a)(5) of this chapter. (3) Periodically inspect organic waste containers for contamination and inform employees if containers are contaminated and of the requirement to only use those containers for organic waste.</p>	The regulations already require education. CalRecycle disagrees with removing the term ‘prohibit’, because using this term clarifies that there are consequences for improper handling of organic waste.
3758	Pestrella, M., County of Los Angeles	<p>The regulations require organic waste generators, defined in Section 18982 (a)(48) as “a person or entity that is responsible for the initial creation of organic waste” to either subscribe to organic waste collection service, self-haul organic waste, prevent or reduce waste generation, manage organic waste on-site, or use community composting. Public Works recommends that the regulations should exempt certain organic waste generators, such as public parks and beaches, from these requirements without needing to apply for a waiver pursuant to Section 18984.11. It may be very difficult to communicate the requirements to separate organic waste to visitors at public parks and beaches and to prevent the public from placing prohibited container contaminants in the organic waste bin. In addition, the use of separate organic waste bins at public parks and beaches may result in scavenging.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul>	A change to the regulatory text is not necessary. CalRecycle acknowledges that contamination of organic waste at public parks and beaches may be a problem as there is no ability to monitor these containers. Organic waste is not required to be collected at public parks and beaches. CalRecycle removed proposed requirements considered in the informal process that would have required cities and counties to containers in public locations such as streets and parks.

Comment Number	Received From	Question/Comment	Response(s)
		<b>(d) Organic waste generators at public parks and beaches are exempt from the requirements of this Article.</b>	
3759	Pestrella, M., County of Los Angeles	<p>Section 18984.10. Property and Business Owner Responsibilities  Section 18984.10. (c) indicates that property and business owners shall provide or arrange for access to their properties during all inspections conducted pursuant to Article 14 of this chapter. PublicWorks recommends that the regulations specify that this does not apply to individual residential units within commercial or multifamily residential properties, but only common areas where solid waste and recycling containers are stored or may be stored for general and staff use.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:  (c) Property and business owners shall provide or arrange for access to their properties, <b>excluding the interior of each residential unit within the property</b>, during all inspections conducted pursuant to Article 14 of this chapter (commencing with Section 18995). <b>Residential containers can be inspected if they are placed in the designated area for collection.</b></li> </ul>	This section does not prohibit or authorize a jurisdiction to enter a common area. The language in question simply clarifies that these regulations do not provide new authority to enter a private living space. If a jurisdiction currently inspects common areas they are doing so under existing authority, which these regulations do not inhibit.
3760	Pestrella, M., County of Los Angeles	<p>Section 18984.11. Waivers and Exemptions Granted by a Jurisdiction  Public Works recommends that the regulations clarify if the definition of “organic waste” that is required to be separated either at the source or at a high-diversion materials recovery facility and diverted from landfill includes organic waste collected from routine non-emergency cleanouts of flood control infrastructure including but not limited to dams, debris basins, and catch basins. Public Works recommends that jurisdictions be allowed to grant a waiver for organic waste collected from debris and catch basin cleanouts to exempt it from the requirements of this chapter. Because this organic waste accumulates in the stormwater system and is not disposed by any particular generator in a container, it is likely to contain significant contamination and is difficult to separate from other waste and recyclables.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:  (a) A jurisdiction may grant one or more of the following types of waivers to a generator of organic waste:  <b>(4) Flood Control Infrastructure Waivers</b>  <b>(A) A jurisdiction may waive some or all of the requirements of this chapter for organic waste removed from routine non-emergency cleanouts of flood control infrastructure, including but not limited to dams, debris basins, and catch basins.</b></li> </ul>	This situation is already covered in Section 18984.13(b)(3). This section allows for disposal of sediment debris removed from dams, culverts, reservoirs, channels and other flood control infrastructure.
3761	Pestrella, M., County of Los Angeles	<p>Section 18985.1. Organic Waste Recovery Education and Outreach  Section 18985.1. states that prior to February 1, 2022, and annually thereafter, a jurisdiction shall provide education and outreach to organic waste generators that are provided a three-container or two-container organic waste collection service. Public Works recommends that the regulations specify that this requirement of the jurisdictions excludes non-local entities and local education agencies.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul>	Local jurisdictions should still provide education to non-local entities and local education agencies within their geographic boundaries, as they already are doing under AB 1826 and AB 341. It is Important for these entities to know what collection options are available locally. CalRecycle will also provide assistance to local education agencies in implementing programs. The regulations already provide that compliance with this provision by these entities would be enforced by CalRecycle.

Comment Number	Received From	Question/Comment	Response(s)
		(a) Prior to February 1, 2022, and annually thereafter, a jurisdiction shall provide the following to organic waste generators, <b>with the exception of non-local entities and local education agencies</b> , that are provided a three-container or two-container organic waste collection service:	
3762	Pestrella, M., County of Los Angeles	<p>Solid waste facility operators are in direct contact with self-haulers and jurisdictions currently have no way of identifying a generator who is a self-hauler. Even in the future when/if we have requirements for self-haulers to report to the County, facility operators that see what materials the self-haulers are bringing are still in the best position to provide tailored messaging and information to self-haulers. We recommend giving solid waste facility operators the defined role of providing information regarding the requirements of Section 70.3 of this chapter to the self-haulers.</p> <p><input checked="" type="checkbox"/> Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p>(b) Prior to February 1, 2022, and annually thereafter, <b>solid waste facility operators</b> <del>a jurisdiction</del> shall provide to self-haulers information regarding the requirements of Section 18988.3 of this chapter.</p>	CalRecycle deleted requirements that jurisdictions specifically identify and educate self-haulers in response to this comment. Jurisdictions can meet the requirement to educate self-haulers by including information on self-hauling in their general education and outreach material provided to all generators. CalRecycle deleted language requiring solid waste facility operators to educate self-haulers as it would be overly burdensome and is outside the scope of what EAs monitor at solid waste facilities. This change was made to provide the least burdensome approach and still achieve the required disposal reduction.
3763	Pestrella, M., County of Los Angeles	<p>Los Angeles County is a very linguistically diverse County. Within the unincorporated areas alone, there are many generators that are “Limited English Speakers”. Public Works is concerned that the regulations may require jurisdictions to provide the education and outreach materials in every language spoken by generators within a given jurisdiction.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p>(f) If more than five percent of a jurisdiction’s generators are defined as “Limited English Speaking Households,” or “linguistically isolated,” as defined by the U.S. Census Bureau, the jurisdiction shall provide the information required by this Section in <del>a</del> <b>the most common</b> language or languages <del>that will assure the information is understood by those generators</del> <b>and may provide the information in other languages, upon request from a generator.</b></p>	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
3764	Pestrella, M., County of Los Angeles	<p>Section 18986.2. Local Education Agencies Requirements</p> <p>The requirements for local education agencies are not consistent with the requirements for commercial businesses, multifamily properties, and non-local entities. Unlike the other aforementioned groups, Section 18986.2. does not include requirements for local education agencies to prohibit the placement of organic waste in containers not designated for organic waste, and to periodically inspect collection containers for and inform employees of observed contamination. Public Works recommends including this requirement, but revising it to “prohibit” employees from placing organic waste in the incorrect containers to “discourage” this practice. It may not be feasible for local education agencies to “prohibit their employees from placing organic waste in a container not designated to receive organic waste.” Local education agencies can provide the education, signage, tools, and guidance on the proper separation of organic waste but cannot actually “prohibit” improper separation. Regardless, Public Works recommends that the</p>	CalRecycle has revised Section 18986.2 to reflect that local education agencies shall prohibit their employees from placing organic waste in the incorrect container.

Comment Number	Received From	Question/Comment	Response(s)
		<p>State create uniform requirements for all regulated entities, including local education agencies, so as to afford equal treatment.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:           <ol style="list-style-type: none"> <li>Local education agencies shall comply with the requirements of this chapter to prevent and reduce the generation of organic waste by:               <ol style="list-style-type: none"> <li>Subscribing and complying with the requirements of an organic waste collection service that meets the requirements of Article 3 of this chapter; or</li> <li>Self-hauling organic waste to a facility that processes source-separated organic waste in a manner that complies with the requirements of Article 7 of this chapter.</li> </ol> </li> <li>Local education agencies shall <b>also</b>:               <ol style="list-style-type: none"> <li><del>Provide</del> Provide containers for the collection of organic waste and nonorganic recyclables in all areas where disposal containers are located. The containers provided shall conform to the requirements of the containers provided through the organic waste recovery service to which the local education agency is subscribed.</li> <li><b>Discourage their employees and students from placing organic waste in containers not designated for organic waste as set forth in 30.1(a)(5) and 30.2(a)(5) of this chapter.</b></li> <li><b>Periodically inspecting organic waste containers for contamination and inform employees if containers are contaminated, and of the requirement to only use those containers for organic waste</b></li> </ol> </li> <li>Local education agencies shall provide information to employees and students on methods for the prevention of organic waste generation,</li> <li>Nothing in this Section prohibits a local education agency from preventing waste generation, managing organic waste on site, or using a community composting site.</li> </ol> </li> </ul>	
3765	Pestrella, M., County of Los Angeles	<p>Section 18988.3. Self-haulers of Organic Waste As written, the regulations require self-haulers to source-separate all organic waste generated on site. Self-haulers should not be held to more stringent standards than contracted haulers and should also be allowed to take mixed waste to an approved high-diversion organic waste processing facility meeting all applicable requirements.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:           <ol style="list-style-type: none"> <li>Generators of organic waste may, in compliance with Section 18988.1 of this Division self-haul their own organic waste.</li> <li>A generator who is a self-hauler of organic waste shall comply with the following:               <ol style="list-style-type: none"> <li><del>The generator shall source-separate all organic waste generated on site in a manner consistent with Sections 18984.1 and 18984.2 of this chapter.</del></li> <li><b>(1) The generator shall haul source-separated organic waste to a solid waste facility operation, activity, or property that processes or recovers source-separated organic waste.</b></li> </ol> </li> </ol> </li> </ul>	CalRecycle revised Section 18988.3 in response to this comment to clarify that self-haulers should not be held to more stringent standards than contracted haulers and should be allowed to take mixed waste to an approved high-diversion organic waste processing facility meeting all applicable requirements.

Comment Number	Received From	Question/Comment	Response(s)
		<p><del>(3)</del> <b>(2)</b> The generator shall keep a record of the amount of organic waste delivered to each solid waste facility, operation, activity, or property that processes or recovers organic waste; this record shall be subject to inspection by the jurisdiction.</p> <p>(A) The records shall include delivery receipts and weight tickets from the entity accepting the waste.</p> <p>(B) The record shall indicate the amount of material in cubic yards or tons transported by the generator to each entity.</p> <p>(C) Notwithstanding subdivision (b)(3)(A), if the material is transported to an entity that does not have scales on site, the self-hauler is not required to record the weight of material but shall keep a record of the entities that received the organic waste.</p> <p><del>(4)</del> <b>(3)</b> A self-hauler shall annually report the following to the jurisdiction in which it is located:</p> <p>(A) The total amount of <del>source-separated</del> organic waste in tons that was self-hauled; and,</p> <p>(B) The location or address of each entity that accepted self-hauled waste from the generator.</p> <p><del>(5)</del> <b>(4)</b> A residential organic waste generator that self-hauls organic waste is not required to record or report the information identified in subdivision (b)(3) and (b)(4).</p>	
3766	Pestrella, M., County of Los Angeles	<p>Section 18988.4. Recordkeeping Requirements for Compliance with Jurisdiction Hauler Program</p> <p>Section 18988.4. (a)(3)(A) requires "copies of all reports required by haulers" be included in the Implementation Report. These reports include proprietary information which the jurisdiction may have committed to keeping secure through their franchise agreements and contracts as these reports contain trade secrets which may potentially be damaging to the haulers should the information be released. Therefore, the regulations should not require copies of all reports to be included in the Implementation Report.</p> <ul style="list-style-type: none"> <li>• Proposed Regulatory Text and Recommended Changes/Revisions</li> </ul> <p>(a) A jurisdiction shall include all relevant documents supporting its compliance with this article in the Implementation Record required by Article 14 of this chapter. Records maintained shall include but are not limited to copies of:</p> <p>(1) Ordinances, contracts, franchise agreements, policies procedures, or programs relevant to this Section.</p> <p>(2) A description of the jurisdiction's hauler program including:</p> <p>(A) Type of hauler systems the jurisdictions uses.</p> <p>(B) Type and conditions of approvals per type of hauler, and criteria for approvals, denials, and revocations.</p> <p>(C) Process for issuing, revoking, and denying written approvals.</p> <p>(D) Any requirements associated with self-hauling and back-hauling.</p>	<p>The comment refers to recordkeeping requirements for jurisdictions to retain. This information is not required to be reported publicly. To the extent that documents required to be retained in a jurisdiction's Implementation Record contains truly proprietary or trade secret information, there are existing protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow public agencies to withhold such information from public disclosure. The proposed regulations provide for this.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(3) A record of hauler compliance with local ordinance(s) and the requirements of this article including the following information:  <del>(A) Copies of all reports required by haulers.</del>  <b>(BA)</b> Copies of reports from self-hauler as required by Section 18988.3.  <del>(CB)</del> Copies of all written approvals, denials, and revocations.            (b) All records required by this article shall include the date of action, the name of the hauler, and the type of the action taken by the jurisdiction.</p>	
3767	Pestrella, M., County of Los Angeles	<p>Section 18991.1. Jurisdiction Edible Food Recovery Program            Public Works recommends that the regulations specify that local jurisdictions are not required to provide education and monitor compliance of edible food generators that are non-local entities and local education agencies. Because nonlocal entities and local education agencies do not report to local jurisdictions, CalRecycle is the best entity for managing the requirements of 18991.1. for these generators. CalRecycle is the entity that is tracking waivers and exemptions for these groups, and would be in the best position to educate, monitor, and conduct outreach to these generators.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions</li> </ul> <p>(a) A jurisdiction shall implement an edible food recovery program that shall include the actions that the jurisdiction plans to take to accomplish the following:            (1) Educate commercial edible food generators <b>with the exception of nonlocal entities and local education agencies</b> as set forth in Section 18985.2.            (2) Increase <b>the access of</b> commercial edible food generators <del>access with the exception of non-local entities and local education agencies</del> to edible food recovery organizations and edible food recovery services.            (3) Monitor <b>the compliance of</b> commercial edible food generators <del>compliance with the exception of non-local entities and local education agencies</del> as required in Article 14.            (4) Increase edible food recovery capacity if the analysis required by Section 18992.1 indicates that the jurisdiction does not have sufficient capacity to meet its edible food recovery needs.</p>	<p>Although jurisdictions will not enforce non-local entities or local education agencies, jurisdictions are still required to provide non-local entities and local education agencies with edible food recovery education and outreach pursuant to Section 18991.1 (a)(1) and Section 18985.2 of the regulations. CalRecycle would also like to clarify that jurisdictions are required to increase all commercial edible food generators' access to food recovery organizations and food recovery services including local education agencies and non-local entities located within the jurisdiction. In addition, it is clear from the definition of "non-local entity" and "local education agency" that they are not subject to the control of a jurisdiction's authority; therefore, is it implicit that jurisdictions are only to enforce on those they have authority over. CalRecycle is responsible for monitoring compliance and enforcement of those entities.</p> <p>Regarding the comment about CalRecycle being responsible for tracking waivers and exemptions for these groups and would be in the best position to educate, monitor, and conduct outreach to these generators, the regulatory text does not include commercial edible food generator waivers or exemptions.</p>
3768	Pestrella, M., County of Los Angeles	<p>Section 18991.2. Recordkeeping Requirements for Jurisdiction Edible Food Recovery Program            Public Works recommends that the regulations be revised to clarify that local jurisdictions are not required to satisfy recordkeeping requirements for edible food generators that are non-local entities and local education agencies.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions</li> </ul> <p>(a) A jurisdiction shall include all documents supporting its compliance with Section 18991.1 in the Implementation Record required by Section 18995.2 of this chapter and shall also include at a minimum:            (1) A list of commercial edible food generators <b>with the exception of nonlocal entities and local education agencies</b> in the jurisdiction that have</p>	<p>A change to the regulatory text is not necessary. Section 18996.5 and Section 18996.7 state that a jurisdiction does not have authority to take enforcement action against entities outside their boundaries or that are not subject to local solid waste control.</p>

Comment Number	Received From	Question/Comment	Response(s)
		arrangements with edible food recovery organizations or services. <b>Nonlocal entities and local education agencies are to report to the Department, as appropriate.</b>	
3769	Pestrella, M., County of Los Angeles	Section 18991.3. Commercial Edible Food Generators If a large event is held at a state-owned facility, such as a state park, please clarify that it is the responsibility of the State and not local jurisdictions to ensure compliance with Sections 18991.3. Commercial Edible Food Generators and Section 18997.2. Penalty Amounts.	To clarify, if the commercial edible food generator operating at the event or facility is subject to the jurisdiction's authority then it is the responsibility of the jurisdiction to monitor compliance and enforce. If the commercial edible food generator is not subject to a jurisdiction's authority, then is it CalRecycle's responsibility to monitor compliance and enforce.
3770	Pestrella, M., County of Los Angeles	Section 18992.1. Organic Waste Recycling Capacity Planning Public Works is concerned about the requirements for jurisdictions to verify that capacity is available to them through contracts, permits, franchise or guarantees of access documentation. Considering the significant shortfall in organic waste capacity statewide, it is inevitable that some jurisdictions will not have sufficient capacity available to them. <ul style="list-style-type: none"> <li>• Proposed Regulatory Text and Recommended Changes/Revisions: (a) (2) Identify the amount in tons of existing organic waste recycling infrastructure capacity, located both in the County and outside of the County, that is verifiably available to the County and jurisdictions located within the County. (A) A county can demonstrate the capacity is verifiably available to the county or its jurisdictions through a contract, permit, franchise, or other documentation of the following: <ol style="list-style-type: none"> <li>1. <del>A guarantee of access to</del> <b>Identification of</b> existing permitted or authorized capacity at a facility, activity, operation, or property that recovers organic waste.</li> <li>2. <del>A guarantee of access to</del> <b>Identification of</b> new or expanded capacity at a facility, activity, operation, or property that recovers organic waste that will be available prior to the end of the reporting period.</li> </ol> </li> </ul>	Thank you for the comment. CalRecycle revised the language to remove the two subsections and added Section 18992.1(a)(3)(A).
3771	Pestrella, M., County of Los Angeles	Cities or regional agencies are required to respond within 120 days to a County when contacted about the amount of organic waste in tons that will be disposed by the cities. Since counties are penalized financially for failing to estimate organic waste disposed, Public Works recommends including language within this section that ensures that counties are not liable if cities or regional agencies fail to respond within the given time frame. <input checked="" type="checkbox"/> Proposed Regulatory Text and Recommended Changes/Revisions: (b) A city or regional agency contacted by a county pursuant to subdivision (a) shall respond to the county's request for the information necessary to comply with the requirements of this article within 120 days of receiving the request from the county. <b>(1) If a city or regional agency does not provide the necessary information to the County within the required timeframe, the County will not be held liable for failing to report on this jurisdiction's organic waste disposal.</b>	CalRecycle will appropriately exercise enforcement discretion to hold appropriate parties responsible for regulatory violations. CalRecycle will not be changing the regulatory language in response to this comment.

Comment Number	Received From	Question/Comment	Response(s)
3772	Pestrella, M., County of Los Angeles	<p>The regulations state that the County shall conduct community outreach regarding locations being considered for new or expanded facilities. We recommend that this responsibility be the role of the jurisdiction (city if located within a city or County if located in a County unincorporated area) in which the new or expanded facility is being proposed, and not solely the role of the County regardless of the location of the new or expanded facility.</p> <p>In addition, the regulations state that haulers and owners of facilities, operations and activities that recover organic waste shall respond to the jurisdiction regarding potential new or expanded capacity at their facilities. However, the regulations as written do not require them to respond regarding “existing capacity” .</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(c) In complying with this Section the County, <b>city, and/or applicable jurisdiction in which the proposed facility or activity will be located</b> shall:</p> <p>(1). Consult with the Enforcement Agency and the local task force created pursuant to Section 40950 of the Public Resources Code on the status of locations for new or expanded solid waste facilities and locations.</p> <p>(2). Consult with haulers and owners of facilities, operations, and activities that recover organic waste including, but not limited to, compost facilities, in-vessel digestion facilities, and Publicly Owned Treatment Works to gather information on the existing capacity and potential new or expanded capacity at those facilities, operations, and activities.</p> <p>(A) Entities contacted by a jurisdiction shall respond to the jurisdiction regarding <b>existing</b>, potential new or expanded capacity at their facilities, operations, and activities, including information about throughput and permitted capacity necessary for planning purposes.</p>	<p>The community outreach required in Section 18992.1(c)(3) is intended for the facilities or activities located within the county. Counties can work in coordination with cities to provide this outreach. Nothing precludes cities from providing outreach.</p>
3773	Pestrella, M., County of Los Angeles	<p>The requirements for jurisdictions to create a schedule for obtaining funding or financially supporting the expansion of organic waste recycling facilities is difficult for local jurisdictions to satisfy due to factors outside of their control. PublicWorks recommends that this language be revised to require jurisdictions to prepare a plan with strategies to ensure additional new or expanded capacity.</p> <p>In addition, according to SB 1383, CalRecycle, in consultation with CARB, shall adopt regulations that achieve the specified targets for reducing organic waste in landfills (i.e., a 50 percent reduction by 2020 and a 75 percent reduction by 2025). The current draft of the regulations states that a jurisdiction that lacks sufficient capacity shall “demonstrate how it will ensure there is enough new or expanded capacity to recover the organic waste currently disposed by generators within their jurisdiction by the end of the report period.” The way it is currently written, it appears that the regulations are requiring that all organic waste that is currently disposed be recovered (or planned for recovery) by the end of the report period.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p>(d) If a County determines that organic waste recycling capacity, in addition to the existing and proposed capacity identified pursuant to subsection (a), is needed</p>	<p>The current provisions are necessary to ensure that jurisdictions are taking specific steps to ensure access to capacity in the future. As has been stated by many stakeholders and jurisdictions, a distinct lack of organic waste recycling capacity will be a hinderance to achieving the organic waste reduction targets by 2025. The regulations are not only designed to achieve the target by 2025, they are, and must be, designed to achieve and maintain organic waste disposal 75 percent below the 2014 levels beyond the year 2025. This requires active planning by jurisdictions to identify future needs and secure capacity. The propose language is vague and subjective, it is unclear what minimum standard discussing ‘strategies’ could be held to.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>within that County, the County shall notify the jurisdiction or jurisdictions that lack sufficient capacity that each jurisdiction is required to:</p> <p>(1) Submit an implementation <del>plan schedule</del> to the Department that demonstrates how it will ensure there is enough new or expanded capacity to recover <del>an amount of the organic waste</del> <b>that is equivalent to a 50-percent reduction in 2014 organic waste disposal levels by 2020, and a 75-percent reduction by 2025</b> <del>currently disposed by generators</del> within their jurisdiction by the end of the report period <b>set forth in Section 18992.3 of this article.</b></p> <p>(A) The implementation <del>plan schedule</del> shall include <b>strategies for ensuring timelines and milestones for planning efforts to access</b> additional new or expanded capacity, including, but not limited to:</p> <ol style="list-style-type: none"> <li>1. Obtaining funding for organic waste recycling infrastructure, including, but not limited to, modifying franchise agreements or demonstrating other means of financially supporting the expansion of organic waste recycling.</li> <li>2. Identification of facilities, operations, and activities that could be used for additional capacity.</li> </ol>	
3774	Pestrella, M., County of Los Angeles	<p>“Identify” is spelled incorrectly.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(d) (2) <del>Identify</del> <b>Identify</b> proposed new or expanded organic waste recycling facilities that will be used to process the organic waste identified pursuant to subsection (a)(3).</p>	Thank you for the comment. CalRecycle corrected the spelling.
3775	Pestrella, M., County of Los Angeles	<p>Public Works recommends revising Section 18992.1, Subsection (d)(3) to clarify when Counties are required to notify jurisdictions that they have submitted the implementation schedule/report to cities.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(d) (3) The County shall notify the jurisdiction <b>on or before the day that at the same time</b> <del>at the same time</del> it submits the report to the Department required pursuant to Section 18992.3.</p>	Thank you for this comment. The language has been removed.
3776	Pestrella, M., County of Los Angeles	<p>In Section 18992.1(e), the regulations include “digestate and biosolids” within the organic waste material types that must be analyzed for capacity planning purposes. In the latest version of CalRecycle’s Characterization of Solid Waste in California report, these two materials are not included in the report. Since the regulations list the waste characterization study as a means to estimate the Countywide disposal, Public Works recommends that CalRecycle provide Counties with the disposal composition of these materials to assist in the capacity planning analysis.</p>	<p>CalRecycle has revised Section 18992.1(f) in response to this comment. The change adds another information source that can be used for this requirement. The change is necessary because statewide or local characterization studies typically do not characterize digestate/biosolid, as they are not a part of the commercial and residential waste stream. However, this information should be limited to using a published report or another form of data generated by the appropriate solid waste management entities within the county that provides organic waste disposal tonnages or percentages for digestate/biosolids. This data would be used in addition to either statewide or local characterization studies.</p> <p>The RDRS system will have some reporting of the disposal and other end destinations for some digestate and biosolids (if the reporting entity is over the tonnage thresholds and is not just sending it to another POTW or if they are using it onsite). Since this data will include large generators, CalRecycle will include this data in the capacity planning tool.</p>

Comment Number	Received From	Question/Comment	Response(s)
3777	Pestrella, M., County of Los Angeles	<p>Section 18992.2. Edible Food Recovery Capacity</p> <p>Section 18992.2 (a) (1) requires counties to “Estimate the amount of edible food that will be disposed of by commercial edible food generators . . .” . Currently, there are no tools to quantify the amount of edible food in the disposal stream. Therefore, Public Works recommends that CalRecycle provide counties with a methodology to estimate the amount of edible food within the disposal stream.</p>	<p>CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. In addition, CalRecycle also intends on providing other resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.</p>
3778	Pestrella, M., County of Los Angeles	<p>The regulations should not require counties to identify proposed new or expanded edible food recovery organizations if counties are already able to identify the amount of capacity at existing or new edible food recovery organizations that is necessary to recovery 20 percent of the edible food that is estimated to be disposed. In addition, the regulations should include a requirement for cities, regional agencies and edible food recovery organizations to respond to and provide the requested capacity data/information to counties or other applicable jurisdictions within a specified time frame for edible food capacity planning purposes.</p> <ul style="list-style-type: none"> <li>• Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(a) Counties, in coordination with cities and regional agencies located within the county, shall:</p> <p>(1) Estimate the amount of edible food that will be disposed of by commercial edible food generators that are located within the county and jurisdictions within the county.</p> <p>(2) Identify existing capacity at edible food recovery organizations that is available to commercial edible food generators located within the county and jurisdictions within the county.</p> <p><del>(3) Identify proposed new or expanded edible food recovery organizations that will be used to process edible food identified pursuant to subsection (1).</del></p> <p><del>(4)</del><b>(3)</b> Identify the amount of capacity at edible food recovery organizations that is necessary to recover 20 percent of the edible food that is estimated to be disposed.</p> <p><b>(i) If a County determines that it lacks sufficient existing capacity at edible food recovery organizations to recover 20 percent of the edible food that is estimated to be disposed, the County shall identify proposed new or expanded edible food recovery organizations.</b></p> <p><b>(b) A city or regional agency contacted by a county pursuant to subdivision (a) shall respond to the county’s request for the information necessary to comply with the requirements of this article within 120 days of receiving the request from the county.</b></p> <p><b>(c) Food recovery organizations contacted by a jurisdiction shall respond to the jurisdiction regarding potential new or expanded food recovery capacity at their</b></p>	<p>CalRecycle added language to the regulatory text in response to the comment that the regulations should include a requirement for jurisdictions and regional agencies to respond to and provide the requested capacity information to counties within a specified time frame for edible food capacity planning purposes. CalRecycle added language to the regulatory text specifying that if a jurisdiction or regional agency fails to provide the county with the information necessary to comply with Article 11 within 120 days, then the county is not required to include estimates for that jurisdiction in the report it submits pursuant to Section 18992.3 If a jurisdiction fails to comply with its requirements under Article 11, then the jurisdiction could be subject to enforcement action.</p> <p>CalRecycle would also like to clarify that in order for a jurisdiction to be able to implement an effective edible food recovery program it is critical that they are familiar with the food recovery organizations and services that operate in the jurisdiction and identify proposed new or expanded edible food recovery organizations and food recovery services in case the demand for recoveries grows in their area. Even if the demand did not increase, this is still very important information to identify especially if a major food recovery organization or service stops operating in the jurisdiction. Each requirement in Section 18992.2 is critical to ensure that edible food recovery capacity is expanded, and that jurisdiction edible food recovery programs are successful. Each requirement in Section 18992.2 is in place to help ensure effective capacity planning measures are taken, which will ultimately serve to help keep edible food out of landfills, and be redirected to help feed people in need.</p>

3779	Pestrella, M., County of Los Angeles	<p>Section 18993.1. Recovered Organic Waste Product Procurement Target</p> <p>The recovered organic waste products that may be procured to satisfy the target are limited to compost and renewable transportation fuel only. Therefore, the renewable electricity generated from the diverted organic waste would not count toward a jurisdiction’s procurement requirement. Public Works believes that CalRecycle should revise the regulations to also allow the procurement of renewable electricity created from recovered organic waste through anaerobic digestion, biomass conversion, or other technologies that demonstrate greenhouse gas and short-lived climate pollutant emissions reductions as specified in the regulations. Making this change to the regulations would help jurisdictions achieve their procurement targets and facilitate infrastructure development.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(f) For the purposes of this article, the recycled organic waste products that must be procured are:</p> <ol style="list-style-type: none"> <li>Compost.</li> <li>Renewable transportation fuel</li> <li><b>Renewable electricity</b></li> <li><b>Any other recycled organic waste products approved by the Department</b></li> </ol> <p>(g) The following conversion factors shall be used to convert tonnage in the annual recycled organic waste product procurement target for each jurisdiction to equivalent volumes of recycled organic waste products:</p> <ol style="list-style-type: none"> <li>One ton of organic waste in a recycled organic waste product procurement target shall constitute: <ol style="list-style-type: none"> <li>19 diesel gallon equivalents, or “DGE,” of renewable transportation fuel</li> <li>0.58 tons of compost.</li> <li><b>XX kilowatt-hours of renewable electricity</b></li> </ol> </li> </ol>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p> <p>SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements.</p> <p>The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
3780	Pestrella, M., County of Los Angeles	<p>Section 18994.1. Initial Jurisdiction Compliance Report and Section 18994.2. Jurisdiction Annual Reporting</p> <p>Public Works recommends that CalRecycle clarify that the jurisdictions’ reporting requirements under Article 13 Reporting exclude non-local entities and local education agencies not receiving services through the jurisdiction’s collection system.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p>	<p>A change to the regulatory text is not necessary. Article 5, Section 18986.1 and Section 18986.2 described the compliance requirements for non-local entities and local education agencies. For the purposes of these regulations, non-local entities and local education agencies are considered organic waste generators and have specific requirements to comply and are not held to the same standards as jurisdictions. Section 18996.7 does not require local jurisdictions to enforce against local education agencies. This enforcement will be conducted by the Department.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(a) Each jurisdiction shall report to the Department on its implementation and compliance with the requirements of this chapter. Each jurisdiction shall report to the Department by February 1, 2022 the following information:</p> <p>(1) A copy of ordinances adopted pursuant to this chapter.</p> <p>(2) The date that the jurisdiction will ensure that all containers used by generators subject to the jurisdiction's authority <b>(with the exception of nonlocal entities and local education agencies)</b> will be in compliance with the container color requirements as specified in Section 18984.7.</p>	
3781	Pestrella, M., County of Los Angeles	<p>Public Works recommends that CalRecycle clarify that the jurisdictions' reporting requirements under Article 13 Reporting exclude non-local entities and local education agencies not receiving services through the jurisdiction's collection system.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(b) Each jurisdiction shall report the following, relative to its implementation of the organic waste collection requirements of Article 3 of this chapter:</p> <p>(1) The type of organic waste collection service(s) provided by the jurisdiction to its generators <b>with the exception of non-local entities and local education agencies.</b></p> <p>(2) The total number of generators that receive each type of organic waste collection service provided by the jurisdiction <b>with the exception of non-local entities and local education agencies.</b></p>	<p>A change to the regulatory text is not necessary. Article 5, Section 18986.1 and Section 18986.2 described the compliance requirements for non-local entities and local education agencies. For the purposes of these regulations, non-local entities and local education agencies are considered organic waste generators and have specific requirements to comply and are not held to the same standards as jurisdictions. Section 18996.7 does not require local jurisdictions to enforce against local education agencies. This enforcement will be conducted by the Department.</p>
3782	Pestrella, M., County of Los Angeles	<p>Section 18995.1. Jurisdiction Inspection and Enforcement Requirements Reporting requirements may require jurisdictions to provide information, such as customer lists, to CalRecycle that is considered confidential by hauler franchise agreements and contracts. The reporting requirements should be modified to allow for jurisdictions to keep such information confidential.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p>(c) A jurisdiction shall generate a written report for each inspection, route review, and compliance review conducted pursuant to this Chapter. Each report shall include, at a minimum, the following information <b>unless such information is restricted by a confidentiality agreement:</b></p> <p>(1) Identifying information for the subject or subjects of the inspection, route review, or compliance review, such as, but not limited to:</p> <p>(A) The name or account name of each person or entity.</p> <p>(B) A description of the route and addresses covered by a route review.</p> <p>(C) A list of accounts reviewed for each compliance review.</p>	<p>The comment refers to recordkeeping requirements for jurisdictions to retain. This information is not required to be reported publicly. To the extent that documents required to be retained in a jurisdiction's Implementation Record contains truly proprietary or trade secret information, there are existing protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow public agencies to withhold such information from public disclosure.</p>
3783	Pestrella, M., County of Los Angeles	<p>Section 18996.2. Department Enforcement Actions Over Jurisdictions Pursuant § 42653 of the Public Resources Code, CalRecycle and CARB, not local jurisdictions, are responsible for identifying the barriers to organic waste recycling, the status of new organics recycling infrastructure development, the commitment of state funding to support infrastructure expansion, the progress in reducing regulatory barriers to the siting of organics recycling facilities, the timing and effectiveness of policies that will facilitate the permitting of organics recycling</p>	<p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure</p>

3786	Pestrella, M., County of Los Angeles	<p>Section 18997.1. Scope</p> <p>The proposed regulations impose requirements on Counties and cities that exceed the authority granted to CalRecycle by State law or are contrary to it.</p>	<p>Public Resources Code Section 42652.5(a)(1) explicitly contemplates CalRecycle requiring "local jurisdictions to impose requirements on generators or other relevant entities within their</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>Senate Bill 1383 does not provide CalRecycle with the authority to require local jurisdictions to impose penalties on residential or commercial generators for noncompliance. Section 18997.1 of the proposed regulations require jurisdictions to “adopt ordinance(s) or enforceable mechanisms to impose penalties that are equivalent or stricter than those amounts in Section 18997.2...” While SB 1383 grants CalRecycle the authority to “require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction,” this authority does not extend to the imposition of penalties. Section 42652.5. (a)(1) of SB 1383 only provides that CalRecycle “may authorize local jurisdictions to impose penalties on generators for noncompliance.” In requiring Counties and cities to impose steep penalties on residents and businesses for noncompliance with the regulations, CalRecycle would exceed its authority under the law. Therefore, Public Works recommends the proposed regulations be revised to delete any and all provisions that require Counties and cities to impose penalties on their residents or businesses. The language may be revised to authorize Counties and cities to do so, as they deem appropriate.</p>	<p>jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.”</p> <p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, “CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code.” That section also provides that CalRecycle may “include different levels of requirements for local jurisdictions...”</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, “The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code.” SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that “[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. ‘[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . .’ The [administrative agency] is authorized to “fill up the details” of the statutory scheme.”</p> <p>Consistent with rules of statutory construction, Public Resources Code Section 42652.5(a)(1) must be read as a whole and interpreted in a way that renders the text as compatible, not contradictory. This section states that the regulations “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.” The first part of this section explicitly contemplates regulatory requirements on entities besides generators as long as they are relevant to meeting the mandates of SB 1383. Thus, the second part of the section regarding penalties must be read harmoniously and as a whole with the first part to permit penalties on the other entities that may be subject to regulatory requirements. Without enforcement penalties on the other entities, the regulatory requirements are not actually requirements but mere suggestions. Bolstering this interpretation is the Assembly Floor Analysis for SB 1383 (August 31, 2016) which stated that the bill, “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and impose penalties for noncompliance.”</p> <p>Regarding the language “authorizing” penalties by local jurisdictions, the clear intent of the legislation was that jurisdictions must penalize non-compliance with SB 1383 requirements. First, the language of Assembly Floor Analysis described above makes this intent clear – CalRecycle may require jurisdictions to impose requirements “and impose penalties for noncompliance.” Second, the Legislature designed the bill to achieve the organic waste reduction goals in part by requiring</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>local jurisdictions to impose requirements. These requirements must be enforceable through penalties or:</p> <p>(a) they will not actually be requirements but suggestions; and (b) there will be no way to ensure compliance by regulated entities and thus achieve the goals of the statute. Given these considerations, CalRecycle has authorized local jurisdictions to impose penalties as long as they meet the conditions described in the regulations regarding categories of violations, requirements to enforce against those violations, and minimum penalty levels.</p> <p>Regarding Section 18995.1(a)(1)(B)(5), CalRecycle notes that the language of this section was amended to simply specify that jurisdictions enforce according the enforcement timetables and compliance extensions in Section 18995.4 and the administrative civil penalty provisions in 18997.2.</p>
3787	Pestrella, M., County of Los Angeles	<p>Section 18997.2. Penalty Amounts</p> <p>The monetary penalties for all Property and Business Owners should not be based on the proposed penalty severity levels listed in Section 18997.2 (b) (1) (2) and (3). The penalties for small businesses, economically disadvantaged communities, non-profit organizations, and other applicable entities should be calculated as a percentage of property value or gross receipts so as not to cause substantial hardship.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(a) A jurisdiction shall impose penalties that are equivalent or stricter than those amounts in Table 1 of this Section, <b>except in cases where these penalties may cause substantial hardship to small businesses, economically disadvantaged communities, non-profit organizations, or other applicable entities</b>, and shall be calculated by determining the type of violations that have occurred, the number of violations that have occurred, and the corresponding penalty level in subsection (b).</p> <p>(b) The penalty severity levels <b>for all entities except those listed in (c)</b> are as follows:</p> <p>(1) For a violation classified as Level 1, the amount of the base penalty may be \$50–\$500 per violation.</p> <p>(2) For a violation classified as Level 2, the amount of the base penalty may be \$100–\$200 per violation.</p> <p>(3) For a violation classified as Level 3, the amount of the base penalty may be \$250–\$500 per violation.</p> <p>(c) <b>In cases where penalties may cause substantial hardship to small businesses, economically disadvantaged communities, non-profit organizations, or other applicable entities, a jurisdiction may impose penalties listed in Table 2 of this Section, which may be calculated by determining the type of violations that have occurred, the number of violations that have occurred, and the corresponding penalty level in subsection (d). The penalties shall not exceed the penalty severity levels in subsection (b).</b></p>	<p>CalRecycle has revised the penalty amounts in Section 18997.2 from per day violations to per violation. The penalty provisions are consistent with the existing penalty limitations in the Government Code Sections 53069.4, 25132 and 36900. Entities in violation are given ample time through the Notice of Violation process to comply and avoid penalties.</p> <p>A change to the regulatory text is not necessary. The penalty fines listed in Section 18997.2 Base Table 1 are the minimum penalty thresholds imposed by a jurisdiction. The severity levels allow a jurisdiction the discretion to penalize smaller businesses at the minimum penalty and levy a more substantial penalty against larger businesses that may be contributing more to the organic waste stream. These penalties are consistent with the limitations on fine levels for local agencies in the Government Code. The penalty fines listed in section 18997.3 Base Table 1-10 are minimum penalty threshold to be imposed by the Department and are specifically contemplated in the language of SB 1383 as being up to \$10,000 per day. These penalties are reserved for the jurisdictions and for entities when the jurisdiction has failed to enforce. In most programs with a progressive enforcement process, generators or operators have ample time to comply, resulting in very few fines. For example, Section 18995.4 explains the minimum timeframe for the process of issuing a Notice of Violation to an entity if they are found non-compliant. A jurisdiction has 60 days from the date of inspection to issue a NOV. This allows time for the entity to remedy the situation before the jurisdiction has to issue a NOV. If an NOV is issued, the entity has up to 150 days to come into compliance before the jurisdiction must commence action to impose a penalty. This allows an entity up to 210 days to remedy a violation before a penalty is imposed. Additional extensions are available due to extenuating circumstances or infrastructure deficiencies.</p> <p>CalRecycle has revised the penalty amounts in Section 18997.2 from per day violations to per violation. The penalty provisions are consistent with the existing penalty limitations in the Government Code Sections 53069.4, 25132 and 36900. Entities in violation are given ample time through the Notice of Violation process to comply and avoid penalties. Jurisdictions have the discretion to develop their own factors to be considered when determining a penalty amount, such as but not limited to, the impact on a disadvantaged community or the ability to pay, similar to the factors used by the Department listed in section 18997.3(d).</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>For Table 2, see original letter.</p> <p><b>(d) For certified small businesses, economically disadvantaged communities, nonprofit organizations, and other applicable organic waste generators may submit an application to the jurisdiction imposing penalties requesting the penalties to be waived or reduced due to substantial economic hardship.</b></p> <p><b>(1) For a violation classified as Level 0.1, the amount of the base penalty may be waived or reduced to XX percent of property value, XX percent of rental value, or XX percent of gross receipts, as applicable.</b></p> <p><b>(2) For a violation classified as Level 0.2, the amount of the base penalty may be waived or reduced to XX percent of property value, XX percent of rental value, or XX percent of gross receipts, as applicable.</b></p> <p><b>(3) For a violation classified as Level 0.3, the amount of the base penalty may be reduced to XX percent of property value, XX percent of rental value, or XX percent of gross receipts, as applicable.</b></p> <p><b>(e e) For the purposes of subsection (a), revoking, suspending, or denying a permit, registration, license, or other authorization shall be considered stricter than the penalties in this Section.</b></p>	
3788	Pestrella, M., County of Los Angeles	The definition of Tier Two Commercial Edible Food Generators in Section 18982 (a) (74) includes any state agency with a cafeteria with 250 or more seats or total cafeteria facility size equal to or greater than 5,000 square feet and any local education agency facility with an on-site food facility. The regulations should clarify that it will be the responsibility of the State and not the responsibility of local jurisdictions to assess and issue penalties against State agencies or local education agencies pursuant to Table 1.	It is clear from the definition of "non-local entity" and "local education agency" that they are not subject to the control of a jurisdiction's authority; therefore, is it implicit that jurisdictions are only to enforce on those they have authority over. CalRecycle is responsible for monitoring compliance and enforcement of those entities.
3789	Pestrella, M., County of Los Angeles	<p>Some requirements in this Section cannot feasibly be enforced through the assessment of penalties. For example, according to Table 1, an "organic waste generator, that is a commercial business, [that] fails to prohibit their employees from placing organic waste in a container not designated to receive organic waste" would be subject to penalties ranging from \$50 - \$200 per violation per day. The penalties listed in Table 1 for commercial businesses that do not provide education, signage, tools, and guidance on placing organic waste in the correct container pursuant to Section 18984.10 are feasible. However, local jurisdictions cannot feasibly determine if a commercial business is "prohibiting" or "discouraging" employees (as recommended by Public Works in comment 9) from placing organic waste in the incorrect container. Therefore, this violation should be removed from Table 1.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions: For Table 1, see original letter.</p>	<p>CalRecycle has revised section 18991.3 in response to this comment. Section 18991.3 allows for a commercial edible food generator to demonstrate the existence of extraordinary circumstances beyond its control that make compliance impractical. This was necessary to provide relief from enforcement if the edible food generator has proved the jurisdiction failed to increase edible food recovery capacity as required in Section 18991.1 or was unable to comply due to acts of God such as earthquakes, wildfires, flooding and other emergencies or natural disasters. Also, Section 18995.4 allows the jurisdiction to extend compliance deadlines if it finds that extenuating circumstances beyond the control of the respondent make compliance within the deadlines impracticable, such as edible food recovery capacity deficiencies.</p> <p>In addition, the penalty tables in Section 18997.2 were deleted from the rulemaking and discretion is left to local jurisdictions to set penalties consistent with applicable limitations in the Government Code.</p> <p>A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.</p>
3790	Pestrella, M., County of Los Angeles	<p>Section 18997.3. Department Penalty Amounts According to Table 8, the jurisdiction that fails to assess penalties on an “organic waste generator, that is a commercial business, [that] fails to prohibit their employees from placing organic waste in a container not designated to receive organic waste” would be subject to penalties up to \$2,500 per day. The penalties listed for jurisdictions failing to assess penalties on commercial businesses that do not provide education, signage, tools, and guidance on placing organic waste in the correct container pursuant to Section 18984.10 are feasible. However, local jurisdictions cannot feasibly determine if a commercial business is “prohibiting” or “discouraging” (as recommended by Public Works in comment 9) employees from placing organic waste in the incorrect container. Therefore, this violation should be removed from Table 8.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions: For Table 8, see original comment letter.</li> </ul>	<p>CalRecycle has revised section 18991.3 in response to this comment. Section 18991.3 allows for a commercial edible food generator to demonstrate the existence of extraordinary circumstances beyond its control that make compliance impractical. This was necessary to provide relief from enforcement if the edible food generator has proved the jurisdiction failed to increase edible food recovery capacity as required in Section 18991.1 or was unable to comply due to acts of God such as earthquakes, wildfires, flooding and other emergencies or natural disasters. Also, Section 18995.4 allows the jurisdiction to extend compliance deadlines if it finds that extenuating circumstances beyond the control of the respondent make compliance within the deadlines impracticable, such as edible food recovery capacity deficiencies.</p> <p>In addition, the penalty tables in Section 18997.2 were deleted from the rulemaking and discretion is left to local jurisdictions to set penalties consistent with applicable limitations in the Government Code.</p> <p>A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.</p>
6325	Pinon, F., City of Reedley	<p>The City of Reedley is extremely concerned about critical points that hinder our ability to implement the proposed regulation. The City of Reedley is a Disadvantaged community, with portions classified as Severely Disadvantaged, in the heart of the San Joaquin Valley. This regulation will create a financial hardship for our community as it WILL require us to increase solid waste rates to our residents. There is truly NO easy or economical solution to compliance of this regulation.</p>	<p>CalRecycle revised Section 18984.12(a) regarding low-population waivers for areas that lack collection and processing infrastructure, specifically to include cities with disposal of less than 5,000 tons and total population of less than 7,500, and census tracts in unincorporated areas of a county that have a population density of less than 75 people per square mile. Making these changes results in an increase of 0.5% in the amount of organic waste disposal that is potentially exempted. CalRecycle also added a new subsection (d) regarding waivers for specified high-elevation areas where bears create problems with food waste collection containers.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle initially proposed allowing waivers only for incorporated cities that disposed of less than 5,000 tons of solid waste in 2014 and that had a total population of less than 5,000, and for unincorporated areas of a county that had a population density of less than 50 people per square mile. Under these provisions, if waivers were granted to all eligible entities, then the total amount of organic waste disposal that would potentially be exempted would be 3.6% of total organic waste disposal in the state.</p> <p>Numerous stakeholders suggested revisions to this section to expand the number and type of areas eligible for these waivers. In response, CalRecycle analyzed how allowing one or more of the following to be eligible would impact organic waste disposal: 1) cities with disposal of less than 5,000 tons and total population of less than 7,500 or 10,000; 2) cities with disposal of less than 5,000 tons but with no population limit; 3) census tracts in unincorporated areas of a county that have a higher range of population densities (e.g., 75, 100, 250 people per square mile); 4) jurisdictions with populations &gt; 5,000 people and that are low-income disadvantaged communities with no organic processing facilities within 100 miles; 5) cities that are entirely disadvantaged communities under CalEPA's definitions (see <a href="https://oehha.ca.gov/calenviroscreen/sb535">https://oehha.ca.gov/calenviroscreen/sb535</a>); 6) areas with less than 50 people per square mile but which are located within a census tract with greater than 50 people per square mile; and 7) rural areas as defined under Section 14571(A) of the California Beverage Container Recycling and Litter Reduction Act.</p> <p>As noted above, CalRecycle revised Section 18984.12(a) to include two of the recommended alternatives. However, most of the other alternatives would result in much large amounts of organic waste disposal being potentially exempted. For example, replacing the existing rural waiver with one based on Section 14571(A) or increasing the census tract threshold to 250 to 500 people per square mile would both result in much greater amounts of tons of organic waste disposal being potentially exempted. CalRecycle also did not accept the proposed alternative to only use the &lt;5000 tons threshold because all of the affected jurisdictions have organics processing facilities within 100 miles. CalRecycle also did not accept the proposed revision to allow submittal of reasonable jurisdiction-proposed alternatives, because this is too open-ended and it was not clear what the basis would be for evaluating the reasonableness of such proposals. Absent clear objective standards the proposal is unworkable. Lastly, CalRecycle did not accept the proposals to allow waivers for all disadvantaged communities, because many of these communities are located in urban areas where collection and processing is readily available, and this would exempt a substantial portion of the organic waste stream.</p> <p>The established elevation allows flexibility for jurisdictions that face specific waste collection challenges while still achieving the legislatively mandated goals. CalRecycle analyzed the amount of organic waste exempted by all of the waivers in order to determine if the regulations could still achieve the organic waste diversion and greenhouse gas reduction goals established in SB 1383. Allowing an elevation waiver on case by case basis or for jurisdictions with a well-document history of animal instruction is not quantifiable, therefore the Department cannot determine if this waiver would impede achieving the goals mandated by SB 1383. CalRecycle compared the map of jurisdictions eligible for the elevation, low population, or rural waivers and found it to overlap considerably with the Department of Fish and Wildlife's black bear habitat map.</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>CalRecycle understands that bears and other wildlife do not adhere strictly to elevation thresholds. CalRecycle, however, had to set an elevation threshold in order to quantify the organic waste that would not be diverted from landfills with this waiver. Quantifying the amount of waiver organic waste diversion was critical in order to determine if the waiver would impede achieving SB 1383's organic waste diversion and greenhouse gas reduction goals. Many census tracts in the counties the comment identifies will be eligible for other exceptions granted by CalRecycle. Additionally, the elevation waiver is limited in scope and jurisdictions that qualify for this waiver will still be subject to other 1383 requirements, including procurement, edible food recovery, and other types of organic waste collection.</p> <p>Allowing submittal of jurisdiction-proposed alternatives is too open-ended and it is not clear what the basis would be for evaluating the reasonableness of such proposals.</p>
6326	Pinon, F., City of Reedley	A separate organics can and yet another truck route down every street and alley would increase solid waste rates substantially to our residents and seems a step in the wrong direction when addressing our air quality concerns, not to mention the additional wear and tear to our streets.	CalRecycle has revised section 18982(51) in response to this comment. The changes include the deletion of "building insulation and panels" from the Paper Products definition. The change clarifies that these products are excluded from the definition and are not part of the suite of options available to a jurisdiction for purchasing recycled content and recyclable paper. While CalRecycle has made the recommended change, it should be noted that the broad range of products listed in the Paper Products definition is intended to provide more flexibility to jurisdictions in terms of the paper products eligible for purchase. However, CalRecycle recognizes that building insulation and panels would likely not meet the requirements for recyclability specified in section 18993.3(c)(2) and therefore agrees with the proposed revision.
6327	Pinon, F., City of Reedley	Disposing of organics into the existing green waste can will create strong odors and attract animals, insects, and maggots. If the organics waste is bagged up and then deposited into the green waste cans, our com poster has stated they will NOT take the product if it has bags in it. Additionally, we currently dump our green waste on the ground at a transfer point and the com poster hauls it away due to the far distance of the compost facility from our City. If organics are placed in the green waste can, the County of Fresno has stated that we can no longer dump the green waste on the ground for transfer and our own garbage trucks will have to haul directly to the compost facility which is more than one hour away from our City. This will not only increase the amount of our trucks on the road, but we will have to purchase additional trucks, hire additional drivers and all of the additional cost will have to be passed on to our residents, many of whom have household incomes at or below the poverty level.	A change to the regulatory text is not necessary. If organics are already being placed in one container, then moving them to another container is not going to increase odors, etc. The regulations do not force food waste to be placed in the green container. In addition, the City should already be addressing this with businesses as part of their existing implementation of AB 1826. The regulations will likely result in additional costs for ratepayers, but the City should be planning now for that increase.
6046	Pirie, G., County of Marin	Recommend removing section 18083(c): existing regulations already give LEAs authority to require operators to perform measurements and load checking.	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.

Comment Number	Received From	Question/Comment	Response(s)
6047	Pirie, G., County of Marin	Recommend removing section 18083(c): the time needed to carryout this provision could be better spent reviewing other activities that may have a greater effect on environmental health and safety	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
6048	Pirie, G., County of Marin	Recommend removing section 18083(c): the LEA determination of compliance is already addressed in regulation with loadcheck requirements. Any requirements should leave the option of observance to the LEA	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
6049	Pirie, G., County of Marin	Recommend removing section 18083(c): Reference to the function in the EPP should be deleted.	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
6050	Pirie, G., County of Marin	Recommend removing section 18083(c): Recommend new language: "the EA may request the operator perform a measurement at any time, during a routine inspection. References to the function in the EPP should be deleted."	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements under Section 17409.5.12. The change will be aligned with the current standards the EA are already required as part of the EA Roles and Responsibilities. The EA will evaluate the operating standard as described in the operation document. The change was necessary for statewide consistency and ensures the measurements prescribed in the regulations are performed properly.
6051	Pirie, G., County of Marin	Revise LEA determinatin of Less Frequent Service: Re Section 18984.11(a)(3)(A)(1) -- "the jurisdiction, or its authorized hauler, demonstrates to the Solid Waste Local Enforcement Agency that less frequent collection than required by Section 17331 of Title 14 of the California Code of Regulations will not result in the propogation of vectors or other public health and safety, or nuisance issues.	CalRecycle has revised this section in response to comments. The section was revised to replace "Solid Waste Local Enforcement Agency" with "Enforcement agency," and better clarify the LEAs role and responsibility.
6052	Pirie, G., County of Marin	Section 18984 conflicts with the section that it cites and the authority involves many other agencies that have oversight over collection services.	CalRecycle has revised this section in response to comments. The section was modified to better clarify the LEAs role and responsibility as it pertains to this section. Section 17331 allows the local health officer to grant a waiver for the storage of waste for less than seven days. Whereas, Section 18984.11 (a)(3) (A)(1) will allow the jurisdiction, in consultation with the LEA, the ability to grant a waiver for the collection of waste at a frequency beyond the seven days. Including the LEA in this section gives them the opportunity to provide input before a jurisdiction grants a waiver. The jurisdiction or authorized hauler would demonstrate to the LEA that the longer storage of waste is done in a manner that would not cause the receiving solid waste facility or operation to

Comment Number	Received From	Question/Comment	Response(s)
			be in violation of any applicable state minimum standards. It would be the jurisdiction's responsibility to (among other things) review and consider the franchise hauling agreements, city/county code, the public health and safety, and the LEAs recommendation whether the longer storage would impact the receiving facility before granting the waiver under this subsection.
6053	Pirie, G., County of Marin	Re: Section 18984 -- the section indicates the local health officer determination and is appropriate	CalRecycle has revised this section in response to comments. The section was modified to better clarify the LEAs role and responsibility as it pertains to this section. Section 17331 allows the local health officer to grant a waiver for the storage of waste for less than seven days. Whereas, Section 18984.11 (a)(3) (A)(1) will allow the jurisdiction, in consultation with the LEA, the ability to grant a waiver for the collection of waste at a frequency beyond the seven days. Including the LEA in this section gives them the opportunity to provide input before a jurisdiction grants a waiver. The jurisdiction or authorized hauler would demonstrate to the LEA that the longer storage of waste is done in a manner that would not cause the receiving solid waste facility or operation to be in violation of any applicable state minimum standards. It would be the jurisdiction's responsibility to (among other things) review and consider the franchise hauling agreements, city/county code, the public health and safety, and the LEAs recommendation whether the longer storage would impact the receiving facility before granting the waiver under this subsection.
6054	Pirie, G., County of Marin	Re: Section 18984 -- LEA would not want to be in conflict with other documents that may regulate or stipulate collection frequency requirements - city/county code, franchise hauling agreements, etc.	CalRecycle has revised this section in response to comments. The section was modified to better clarify the LEAs role and responsibility as it pertains to this section. Section 17331 allows the local health officer to grant a waiver for the storage of waste for less than seven days. Whereas, Section 18984.11 (a)(3) (A)(1) will allow the jurisdiction, in consultation with the LEA, the ability to grant a waiver for the collection of waste at a frequency beyond the seven days. Including the LEA in this section gives them the opportunity to provide input before a jurisdiction grants a waiver. The jurisdiction or authorized hauler would demonstrate to the LEA that the longer storage of waste is done in a manner that would not cause the receiving solid waste facility or operation to be in violation of any applicable state minimum standards. It would be the jurisdiction's responsibility to (among other things) review and consider the franchise hauling agreements, city/county code, the public health and safety, and the LEAs recommendation whether the longer storage would impact the receiving facility before granting the waiver under this subsection.
6055	Pirie, G., County of Marin	Re: Section 18984 -- Frequency of collection determinations could have an impact on franchise haulers and facilities that would receive the material after longer period of storage time in a residential/commercial cart, often a mix of green and food material. Adequacy of reduced frequency must include criteria/determining factors such as material type (green, or food and green), processing facility able to receive, process quickly. Approvals should also include criteria if the frequency, material type, receiving facility changes after initial approval.	CalRecycle has revised this section in response to comments. The section was modified to better clarify the LEAs role and responsibility as it pertains to this section. Section 17331 allows the local health officer to grant a waiver for the storage of waste for less than seven days. Whereas, Section 18984.11 (a)(3) (A)(1) will allow the jurisdiction, in consultation with the LEA, the ability to grant a waiver for the collection of waste at a frequency beyond the seven days. Including the LEA in this section gives them the opportunity to provide input before a jurisdiction grants a waiver. The jurisdiction or authorized hauler would demonstrate to the LEA that the longer storage of waste is done in a manner that would not cause the receiving solid waste facility or operation to be in violation of any applicable state minimum standards. It would be the jurisdiction's responsibility to (among other things) review and consider the franchise hauling agreements, city/county code, the public health and safety, and the LEAs recommendation whether the longer storage would impact the receiving facility before granting the waiver under this subsection.
6056	Pirie, G., County of Marin	Re: Section 18984 -- Recommendation: city or county jurisdiction may allow collection frequency waivers with approval of LEA or Environmental Health Director,	CalRecycle has revised this section in response to comments. The section was modified to better clarify the LEAs role and responsibility as it pertains to this section. Section 17331 allows the local

Comment Number	Received From	Question/Comment	Response(s)
		Local Health Office, and does not conflict with franchise hauling agreements or solid waste facilities permits or operational state minimum standards.	health officer to grant a waiver for the storage of waste for less than seven days. Whereas, Section 18984.11 (a)(3) (A)(1) will allow the jurisdiction, in consultation with the LEA, the ability to grant a waiver for the collection of waste at a frequency beyond the seven days. Including the LEA in this section gives them the opportunity to provide input before a jurisdiction grants a waiver. The jurisdiction or authorized hauler would demonstrate to the LEA that the longer storage of waste is done in a manner that would not cause the receiving solid waste facility or operation to be in violation of any applicable state minimum standards. It would be the jurisdiction's responsibility to (among other things) review and consider the franchise hauling agreements, city/county code, the public health and safety, and the LEAs recommendation whether the longer storage would impact the receiving facility before granting the waiver under this subsection.
6057	Pirie, G., County of Marin	<p>Funding for local jurisdictions the are currently unfunded in the proposed regulations for education, outreach, implementation: Article 4, Education and Outreach, Edible Food Implemenation etc. The fiscal analysis indicates there will be a cost to local agencies. There is discussion that some costs can be addressed by services rates to customers receiving garbage or recycling service. Not all costs from can be directly passed through from collection service programs (rate increases) to Environmental Health Departments managing the edible food oversight (education, enforcement, permitting, reporting etc.)</p> <p>What funding will be available from Cal Recycle for program impemenation that is currently unfunded?</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
1191	Potashner, Eric, Recology	<p>Loadchecking: Contamination in Source Separated Organic Waste [Sections 17409.5.7, 17867(a)(4), 20901]</p> <p>The draft loadchecking requirements of one loadcheck per 500 tons of source separated organic waste received per operating day far exceeds existing random loadchecking frequency approved under Title 14 for several Recology organics facilities. Moreover, the proposed regulations also require at least one random loadcheck per day for each source sector. Recology compost facilities receive inbound loads that contain combined material from different sectors, making this requirement difficult to meet.</p> <p>These proposed requirements will be overly burdensome on operations and will necessitate additional resources to meet the performance and reporting of the new standard. These increased resources will ultimately translate into higher rates at the gate of compost and anaerobic digestion (AD) facilities. We suggest the random loadchecking frequency for facilities that receive source separated organics be once</p>	<p>CalRecycle has deleted the loadchecking requirements and replaced it with the gray container waste evaluations under Section 17409.5.7 in response to comments. The changes replace the number of waste evaluations and frequency of samples that will now be required. This change is necessary to replace the provision with a less burdensome alternative. The waste evaluation changes will reduce the frequency of sampling and reporting requirements. The gray container waste evaluations will now only be required at Transfer/Processing operations and facilities that receive a gray container collection stream and more than 500 tons of solid waste from at least one jurisdiction annually will now only have to conduct one waste evaluation per quarter. The change will also allow operators to perform the gray container waste evaluations at an alternative solid waste facility. This is necessary to lessen the burden for operators that have limited space, resources, or finance to conduct the evaluations on-site.</p>

Comment Number	Received From	Question/Comment	Response(s)
		per seven day operating week and the requirement to loadcheck by source sector be removed.	
1192	Potashner, Eric, Recology	<p>Loadchecking: Remnant Organic Material in the Gray Container Collection Stream [Section 17409.5.11]</p> <p>Similarly, the draft loadchecking requirements for the gray container collection stream, of one loadcheck per 500 tons of gray container waste per operating day, is too onerous. The necessary additional headcount and required physical space to perform frequent loadchecks is overly burdensome and would add significant operational costs. We suggest that transfer/processing operations that are sending source separated organics to a certified compost or AD facility, should be required to loadcheck gray container collection stream waste once per seven day operating week.</p>	CalRecycle has deleted the loadchecking requirement Section 17409.5.11 in response to comments.
1193	Potashner, Eric, Recology	<p>Measuring level of contamination in recovered organics and level of organics in residuals [Sections 17409.5.2 -17409.5.5]</p> <p>Recology, recognizes that the Department is mindful to ensure that processing facilities are truly recovering as much source separated organic waste as possible, however we feel the current draft requirements and reporting obligations are too burdensome.</p> <p>It is in the best interest of a facility that receives source separated organics to increase the amount of organic material recovered to create a marketable product. Moreover, it is in the best interest of a facility to decrease the amount of residual as much as possible to limit disposal costs. Market demand and business systems will drive processing efficiency such that requiring these measurements based on a precise protocol, as written in the draft regulations, is not necessary.</p>	<p>CalRecycle has revised Sections 17409.5.2 -17409.5 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative.</p> <p>The methodology described in Sections 17409.5.2 through 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 was revised to require that at least a 200-pound composite for 10 consecutive days per reporting period (which is on a quarterly basis), instead of daily sampling of one cubic yard. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.</p> <p>SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. In order to achieve these targets, the measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. For statewide consistency, it is necessary to specify how a facility is to measure recovery efficiency to determine if it meets the definition of a high diversion organic waste processing facility.</p>
1194	Potashner, Eric, Recology	Moreover, the required type analysis and measuring protocols of post-processed materials is far too onerous to be completed each operating day. Since our incoming feedstock and processing techniques do not change significantly each day, the additional effort and cost of implementing the proposed sampling frequency is unnecessary.	CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. The operator will now be taking composite samples for 10 consecutive days per reporting period. Using 10 consecutive days instead of daily will help minimize concerns over frequency of sampling and cost to facilities associated with extra time, labor, space and other logistics required for the analysis and still get the needed data.

Comment Number	Received From	Question/Comment	Response(s)
			Section 17409.5.9 allows the EA, with concurrence by the Department, to approve alternatives to the measurement protocols described in these sections if the operator can ensure that the measurements will be as accurate.
1195	Potashner, Eric, Recology	Recology suggests that testing and analysis of residual material be conducted once per operating week.	<p>CalRecycle has revised Sections 17409.5.2, 17409.5.3, 17409.5.4, 17409.5.5, 17409.5.8, 17867(a)(16)(B), 17896.25.1(a)(1) and 17896.44.1 in response to comments. The changes to the measurement protocols to determine the amount of organic waste recovered and sent for disposal include a reduction in sample size and frequency. The change is necessary to replace the provision with less burdensome alternative. The measurement protocol is necessary to determine the level of efficiency of a facility to separate organic material for recycling. The operator will now be taking composite samples for 10 consecutive days per reporting period, which is on a quarterly basis. 1196	Potashner, Eric, Recology	Tracking land application - Recology is supportive of the language regarding land application that ties it to the current contamination and application rate standards. However, it is unclear whether the reporting requirements for solid waste facilities would capture material that is ultimately land applied. Excessive land application of highly contaminated material is already a problem in areas that lack sufficient organics processing infrastructure and regulatory oversight. This problem will only be exacerbated when even more organic material will need to be recycled under SB 1383. Recology strongly suggests that more stringent land application tracking, reporting, and control provisions be added to the draft regulations to curb abuse of land application practices.	CalRecycle has deleted Section 18083(c) in response to comments. The subdivision was removed, and the requirements were included as part of the transfer/processing EA verification requirements. The EA verification requirement was amended to add the requirement that LEAs perform visual inspections to verify compostable material that will be sent off site to any destination other than a permitted solid waste facility or operation complies with the physical contamination requirement in existing land application definition.
4092	Prinz, LGVSD	Article 2 section 18983.1(b)(6)(B)(1) - This section delineates activities which are deemed to be "recovery" and thus a reduction in landfill disposal. This section includes biosolids land application and references Appendix B of the federal part 503 regulations, which stipulate technology and other standards for both Class B and Class A pathogen reduction necessary for land application. The language in this section of the draft regulatory text, however, specified only anaerobic digestions and compost as recovery activities. Appendix B provides detail on a suite of Class B and Class A pathogen reduction technologies, including far more options for achieving each Class, all of which are deemed equivalent to anaerobic digestion or composting. None of the treatment processes delineated in Appendix B would generate methane. The greenhouse gas reduction achieved via land application rather than landfilling is the same regardless of the technology employed to meet the pathogen reduction and vector attraction reduction criteria. The methane	<p>CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2</sub>e per short ton organic waste processed. Therefore, section 18983.1(b)(6)(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383.</p> <p>However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste.</p> <p>Please refer to Section 18983.2 for more information.</p>

Comment Number	Received From	Question/Comment	Response(s)
		reduction is realized in the avoidance of landfilling not by the process utilized to treat biosolids. While it is true that most biosolids in California undergo either anaerobic digestion and/or composting, other compliant technologies are also utilized and entities should not be penalized for using them. LGVSD strongly urges CalRecycle to replace the words "...anaerobic digestion or composting..." with "...one of the processes..." In support of this argument, please refer to the BEAM model at this link <a href="https://casaweb.org/wp-content/uploads/2015,12/1-BrownetalEST-GHGCalculator19.pdf">https://casaweb.org/wp-content/uploads/2015,12/1-BrownetalEST-GHGCalculator19.pdf</a> Which has been adopted by the Canadian Ministries of the Environment as a means to quantify the climate change mitigation benefits of biosolids land application .	
4093	Prinz, LGVSD	Article 2 section 18983.1 © - Includes "...or any other disposal of waste as defined in Section 40192© of the Public Resources Code.", in the definition of Landfill. This is a very broad definition and seems to limit the disposition to organic waste deposited on land. We believe this is an overly restrictive definition, and will create confusion because of the inclusion of technologies other than landfilling in the definition of landfill )by virtue of the cross-reference to PRC Section 40192(s)). We request that CalRecycle clarify the scope of this definition.	It is unclear from the comment what "technologies" the commenter is referring to or what clarity they are seeking as to the scope of this section. To the extent the comment is addressing land application of compostable material, that activity is specifically identified as a reduction in landfill disposal if it meets the conditions of the section. To the extent the comment is addressing surface disposal sites at wastewater treatment plants, that would be considered landfill disposal under this section unless it meets the requirements of land application of biosolids under this section or qualifies as an alternative technology that constitutes a reduction in landfill disposal under Section 18983.2.
4094	Prinz, LGVSD	Article 6 Action 18987.2 (a)(1) - The language requires all biosolids produced at any wastewater treatment plant to be treated via anaerobic digestion and/or composting and sent for land application. In addition to other treatment technologies as mentioned in comment 1 above, there are also other end uses employed which would be disallowed under this requirement. California has two incinerators and roughly five surface disposal sites located at wastewater treatment plants. None of the sludge produced at those facilities would ever be transported off site and would neither be landfilled or land applied and thus would seem beyond the purview of these regulations. It would be cost prohibitive to require these facilities to change technology and management practices.	CalRecycle has deleted Section 18987.2 in response to comments.
4095	Prinz, LGVSD	Similarly, it is imperative that all treatment options in 40 CFR part 503 Appendix B (Class A and Class B) be allowed and viewed as "recovery" (not just anaerobic digestion and composting). Treatment technologies are themselves dynamic and emerging resulting in alternative treatment and final disposition of biosolids. For example, thermal processes can produce energy and biochar. These technologies should be encouraged, not excluded as the language in this section appears to do. Dried biosolids have long been used effectively as alternative fuel at cement kilns in place of fossil-based fuels. We recommend all treatment technologies specified in Appendix B of 40 CFR part 503 which result in land application or land reclamation should be counted as a reduction in landfill disposal. Existing biosolids management practices whereby biosolids do not leave the site should be excluded from these regulations. And emerging technology which may result in energy production (thermal) or avoid fossil-based fuels (cement kilns), but which do not send biosolids to a landfill should be encouraged.	CalRecycle understands the importance of the various pathogen treatment processes provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emissions equivalent to the baseline of 0.30 MTCO <sub>2e</sub> per short ton organic waste processed. Therefore, section 18983.1(b)(6)(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383. However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste. Please refer to Section 18983.2 for more information.

Comment Number	Received From	Question/Comment	Response(s)
4096	Prinz, LGVSD	Additionally, our understanding is that CalRecycle does not intend (and lacks the authority) to ban any organic waste stream from landfills. Rather, future use was to be negotiated between a wastewater plan and their jurisdiction of origin. We request that these regulation be revised to explicitly articulate that approach.	Comment noted. Section 18987.2 was removed from the regulations. The regulations do not ban any organic waste stream from landfills. This is prohibited in statute and it is therefore unnecessary to explicitly articulate this.
4097	Prinz, LGVSD	We recommend the following revisions to this section: Sectio 18987.2 Biosolids and Sewage Sludge Handling at a POTW (a) Biosolids generated at a POTW shall be: (1) Treated and managed in accordance with the Land Application, Incineration, or surface disposal requirements specified in 40 CFR part 503, (2) Transported to a solid waste facility or operation for additional processing, composting, in-vessel digestion, or other recovery as specified in Section 18983.1(b) of this division, (3) Notwithstanding subdivision (a)(1), sewage sludge and biosolids when it is not possible for them to adequately treated and sent for additional processing or recovery may be sent for disposal to a permitted facility that can receive that sewage sludge and biosolids and has obtained the applicable approvals by the regional, state, and federal agencies having appropriate jurisdiction, or; (4) be treated and managed in other approved manners.	CalRecycle has deleted Section 18987.2 in response to comments.
4098	Prinz, LGVSD	Article 9 Section 18990.1©(3) seems inconsistent with the language added to s. 18990.1 (a&b) which restricts local ordinances such that they may not impede organics recycling. Sub ©(3) seems to supersede that restriction. Clarity or revision of this language is requested to ensure an open market across California for recycling.	<p>A. The requested changes to the regulatory text are not necessary. However, CalRecycle is adding additional language to Section 18990.1(b)(1) to further clarify its meaning in light of comments received regarding it. Article 9, Sections 18990.1 (a) and (b) are not contradictory. 18990.1 (a) clarifies that it does not limit a jurisdiction in adopting more stringent standards than the ones outlined in this chapter. The purpose of the specific limitations set forth in paragraphs 1-5 of 18990.1 (b) are to ensure that jurisdictions do not impose restrictions on the movement and handling of waste and waste-derived recyclables that would interfere with or prevent meeting the organic waste recovery targets established in SB 1383.</p> <p>B. Article 2, Section 18983.1 (b)(6)(b) clarifies that land application of biosolids constitutes a reduction in landfill disposal provided that the application complies with minimum standards. This section specifies that to be considered a reduction in landfill disposal for the purposes of this regulation, land application of biosolids must comply with existing regulatory requirements and have undergone composting or anaerobic digestion. While this regulation defines land application as recovery, this regulation does not allow land application of biosolids be done in a manner that conflicts with existing public health and safety regulations and requirements. Land application of composted or digested biosolids prevents the landfill disposal of this material and reduces greenhouse gas emissions. This supports the state’s efforts to keep organic waste out of landfills and reduce greenhouse gas emissions and is therefore considered a recovery activity for the purposes of this regulation. The additional language will ensure that such restrictions can be reviewed on a case-by-case basis to determine if they are actually necessary and tailored to protect the public health and safety, or if they are actually unnecessary and overbroad restrictions.</p> <p>CalRecycle added clarifying language to this section to indicate that Article 9 section 189901 (c) (3) provides that this section does not prohibit a jurisdiction from superseding or otherwise affecting the land use authority of a jurisdiction, including, but not limited to, planning, zoning, and</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>permitting, or an ordinance lawfully adopted pursuant to that land use authority consistent with this section.</p>
4099	Prinz, LGVSD	<p>Article 12 Section 18993.1(f) defines eligible recovered organic waste products which satisfy the procurement requirements of s 18993.1 (e a Sub (f)(1) stipulates that compost is an eligible product. We assume this includes biosolids compost but request explicit confirmation of that. Furthermore, there are many other biosolids products which should be considered as eligible recovered organic waste products. A jurisdiction should be given broad latitude in meeting this requirements and all biosolids products meeting the land application requirements of 40 CFR part 503 should be eligible.</p>	<p>The current draft regulatory text considers compost an eligible recovered organic waste product as long as the final product meets the definition of compost, per Section 17896.2(a)(4), and is produced either at a compost operation or facility or large volume in-vessel digestion facility that composts on-site (refer to Section 18993.1(f)(1)(A) and (B). Biosolids and/or digestate that do not meet the compost definition will not count towards the procurement target.</p> <p>CalRecycle disagrees with adding any products that include biosolids, that don't meet the above criteria. The broad range of potential products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors</p>
4100	Prinz, LGVSD	<p>Article 12 Section 18993.1(f) sub (f)(2) stipulates that renewable transportation fuel is also an eligible recovered organic waste product. While we support the intent of this requirement to help create end markets, we question the definition of Renewabel Transportation Fuel in Article1 18982(a)(62) which requires the fuel be derived "...from organic waste diverted from a landfill and processed at an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 to recycle organic waste." Does this exclude renewable transportation fuel which is derived from sewage sludge anaerobic digestion alone, with co-digestion? We trust that is not the intnet, since anaerobically digesting sewage sludge, land applying the resultant biosolids, and producing low carbon transportation fuel is certainly consistent with the requirements of SB 1383 and these regulations. All sewage sludge which is anaerobically digested could be considered to be diverted from landfills. Please clarify whether the intent of the language is to include all sewage sludge and co-digested materials under this eligibility requirement. Alternatively, we repectfully request this definition be amended to read: "...gas derived from organic waste processed in an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 or Title 23.</p>	<p>CalRecycle disagrees with the commenter's argument to allow renewable gas derived solely from sewage sludge to be eligible for procurement. The regulations clarify that only renewable gas derived from organic waste received at a POTW from solid waste facilities may count towards a jurisdiction's procurement target. Other materials digested at a POTW, such as sewage sludge, are ineligible. Renewable gas derived solely from sewage sludge is ineligible for procurement because a POTW is not a solid waste facility and therefore not in the scope of the legislative intent of SB 1383. Sewage sludge is also not typically destined for a landfill, so its use does not help achieve SB 1383's landfill diversion goals. For the reasons noted above, gas generated from the inflows of a sewer system and not from organic waste diverted from the solid waste stream cannot logically be considered a recovered organic waste product. It is inconsistent with the requirements of SB 1383 to incentivize or mandate activities that do not contribute to landfill diversion of organic waste.</p> <p>However, POTWs that accept food waste can technically do so without a solid waste facility permit, they are explicitly authorized to do so per Title 14, making it functionally similar to incentivizing biomethane from a solid waste facility. Therefore it is justifiable to allow the portion of renewable gas resulting from the digestion of food waste that is recovered at POTWs that accept food waste from a facility or operation identified in Section 18993.1(h)(1)(A)-(C) to count toward the procurement targets.</p>
4101	Prinz, LGVSD	<p>Article 12 Section 18993.1(f) (2) - we also request than any other beneficial uses of methane be deemed eligible to qualify as fulfilling the procuremnet obligations. This includes pipeline injection, on-site power production of renewable transportation fuel. All should be deemed to be recovered organic waste products and eligible to satisfy the procurement requirements</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. Note that pipeline injection is not an eligible</p>

Comment Number	Received From	Question/Comment	Response(s)
			procurement option in order to eliminate the potential for double-counting the same gas for different procurement targets. For example, by including pipeline injection, a jurisdiction(s) could count pipeline injected gas as well as the end use of that gas. The draft regulations do not preclude renewable gas facilities from injecting gas into the pipeline, but the language has been streamlined to clarify that only the end use of that gas (transportation fuel, electricity, heating applications) will be counted towards a jurisdiction's procurement target.
4102	Prinz, LGVSD	2014 Waste Characterization Table - Please confirm that this Table has been updated to include biosolids data from 2014, since this serves as the baseline upon compliance with the draft regulations is based. DUPLICATE 9009, 4102, 3143, 3165, 6324	The table has not been updated. For the purposes of these regulations, the biosolids data were gathered from US EPA and the California Association of Sanitation Agencies. For 2014, the reported number was 173,000 dry metric tons (ADC 113,000 and landfilled 60,000).
3040	Purtee, J., City of Palmdale	For example, City staff and staff of our franchised hauler are going out encouraging businesses to divert their organic waste and due to the increased costs to do so, it has been very difficult to convince the businesses to add to their employee workload for a program that will cost them more than if they did nothing.	A change to the regulatory text is not necessary. The comment is noting that businesses have not been complying with organic waste recycling requirements, but those requirements are pursuant to AB 1826, not SB 1383. The SB 1383 regulations require jurisdictions to take enforcement action against non-compliant generators.
3041	Purtee, J., City of Palmdale	For residential programs, out of necessity we have cart colors that are not in compliance with the proposed cart color regulations and it will be very costly and confusing to change it.	<p>The regulations provide that a jurisdiction is not required to replace functional containers, including containers purchased prior to January 1, 2022, that do not comply with the color requirements of this article prior to the end of the useful life of those containers, or prior to January 1, 2036, whichever comes first. Container Color Requirements need to be in place by the end of useful life of the containers or prior to January 1, 2036, whichever comes first. The regulations do not specify how containers are phased in. The regulations allow for phasing in at the discretion of the jurisdiction and their designees provided that the correct colors are phased in by 2036. Having a definitive replacement date is necessary to ensure that color is ultimately standardized to support generator education, which will help minimize contamination. Since these regulations will be adopted in early 2020, that will provide another two years, for a total of 16 years, for jurisdictions to plan for replacement of containers. Additionally, during that time nothing precludes a jurisdiction from placing labels on a container. This section is necessary to ensure that containers are properly labeled which is necessary to ensure that collected organic waste is clean and recoverable. The section specifies that a jurisdiction may comply by placing a label (e.g., sticker or hot-print) with text or graphics indicating acceptable materials for that container on the body or lid of the container, or by imprinting text or graphics on the body or lid of the container that indicate which materials may be accepted in that container. The labeling requirements were refined through the informal public rulemaking process to accommodate the various types of labels jurisdictions currently use on their containers. Stakeholders indicated that these types of labels are effective and durable. Correctly-colored labels may be applied to existing bins or lids until the containers are replaced at the end of their useful life.</p> <p>Labeling requirements, commencing January 1, 2022, only apply to new containers or lids. Thus, imprinting of labels would be directly onto new containers, either at the end of old containers' useful life or by 2036.</p> <p>A jurisdiction's designee can place labels on the containers.</p> <p>The regulations already apply to all containers provided by a hauler, including temporary dumpsters. The regulations specify that all containers provided by a hauler must meet both the</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>container color and container label requirements by 2036. However, the regulations do allow for either the lid or the body to meet the color requirement.</p> <p>A change was made to allow for the exposed portion of lid or body to be required color and to allow the required color to be on either the lid or the body, not just the lid. The change is necessary because this approach is the least costly and burdensome one that still achieves the organics disposal reductions.</p> <p>For the text and graphics, this section references that primary materials must be included. If there is a change in the primary materials, then the information would need to be updated as containers are replaced. The regulations are allowing flexibility on size of the label (text and graphics), the requirement is only for primary materials, and all containers need labels. However, this includes all containers and residential/non-residential. Also, for consistency purposes, CalRecycle revised Section 18984.8(c)(1) to mention primary items.</p> <p>Nothing prohibits jurisdiction from mailing labels for existing containers, in addition to ensuring that new containers are properly labeled.</p> <p>The current text reflects stakeholder input during the informal rulemaking period that it would be costly to place labels on all containers. CalRecycle determined that this change would provide jurisdictions with flexibility to implement less burdensome education methods (e.g., labels on new containers) that ensure organic waste is collected and recovered, to support the state's efforts to keep organic waste out of landfills and reduce greenhouse gas emissions. However, nothing in the regulations prohibits a jurisdiction from placing labels on all containers at an earlier time.</p>
3042	Purtee, J., City of Palmdale	<p>Infrastructure Capacity: As we have noted, California lacks sufficient capacity today to be able to meet the needs for new organic waste processing. Many cities have expressed concern over an ability to comply with organic waste diversion requirements due to a lack of waste disposal infrastructure. There is an uneven distribution of waste disposal infrastructure, such as bio-digesters, across the state. Moreover, where the infrastructure does exist, capacity is limited. While the regulation provides five years to implement programs, cities are concerned that this is not sufficient time to develop and permit new facilities.</p>	<p>Comment noted. The Legislature mandated ambitious organic waste diversion targets in SB 1383 on a short timeline and the Department acknowledges that infrastructure to handle the diversion of this material is key to achieving those legislative mandates. The Department has included provisions in the proposed regulations allowing for delayed enforcement in cases where extenuating circumstances beyond the control of a jurisdiction, such as deficiencies in organic waste recycling infrastructure or delays in obtaining discretionary permits or governmental approvals, make compliance with the regulations impracticable. The Legislature in SB 1383 furthermore authorizes local jurisdictions to charge and collect fees to offset the cost of complying with the proposed regulations. Regarding environmental issues regarding expected infrastructure expansion, those issues were addressed in the Environmental Impact Report that was prepared and certified by the Department for this rulemaking, and was subject to public comment, pursuant to the requirements of the California Environmental Quality Act (CEQA). CalRecycle acknowledges that the proposed regulations will require regulated entities to invest in actions and programs that will reduce pollution and protect the environment. The timelines were established in the statute and the regulations are necessarily designed to impose requirements in a manner that is in alignment with the ambitious statutory timelines. The legislation did not provide a dedicated source of state funding to fund compliance with the regulations but did provide a specific allowance for local jurisdictions to charge fees to offset their costs of complying.</p>
3043	Purtee, J., City of Palmdale	<p>Funding: Lack of sufficient funds continues to be among the major challenges local governments face in the effort to implement new organic waste diversion programs. The City of Palmdale and other communities continue to seek solutions to address the need for substantial public sector funding. For example, "Cap-and-Trade"</p>	<p>SB 1383 provided statutory authority for jurisdictions to charge fees to offset the costs of implementing the proposed regulations. In addition, CalRecycle is looking into opportunities for providing supplemental funding to assist jurisdictions in complying with these mandates.</p>

Comment Number	Received From	Question/Comment	Response(s)
		proceeds can be used to help offset the costs for developing organic recycling infrastructure. However, even if additional appropriations were made to the Waste Diversion Program, it will not address much of the local need. Local governments, like ours, continue to work to address the need for funds to undertake prescribed activities, such as updating bins and labels, as well as providing education and outreach.	
3044	Purtee, J., City of Palmdale	Enforcement: These regulations allow for Corrective Action Plans and establishes extended timelines and milestones for achieving compliance. We appreciate the addition of a pathway to compliance. This is a step in the right direction and we urge careful consideration of the differences among local jurisdictions, as well as the variety of community stakeholders, and infrastructure challenges a local jurisdiction may face.	Comment noted, the comment does not recommend a regulatory change.
3045	Purtee, J., City of Palmdale	Penalties: The penalties outlined in these regulations are premature. If the purpose of penalties is to ensure generators are sufficiently deterred from non-compliance, this regulation puts the cart before the horse by designing penalties before the sticking points and needs of generators are understood. We encourage CalRecycle to continue working through the programmatic scheme before implementing an appropriate set of penalties, particularly since programs have until 2022 to be implemented. We ask that CalRecycle adopt penalties in a second set of regulations to take effect at a future date	A change to the regulatory text is not necessary. The legislature specifically authorizes CalRecycle's to develop regulations that "require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance." Also, the statute states the regulations "may include penalties to be imposed by the Department." This text clearly authorizes CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction. This approach mirrors CalRecycle's delegated enforcement approach for waste tire hauler oversight and solid waste facility oversight, where primary oversight is conducted at the local level (typically by county offices of environmental health) with CalRecycle concurrence. Programs that have enforcement generally see a higher rate of compliance than programs that do not have enforcement. The success of the Short-Lived Climate Pollutant Strategy relies on achieving significant reductions in landfill disposal of organic waste by 2020 and 2025. Delaying enforcement would impede California's goal of achieving these targets.
3046	Purtee, J., City of Palmdale	Procurement: New procurement requirements in these proposed regulations require local governments to purchase recovered organic waste products targets set by CalRecycle. We anticipate these requirements will result in substantial additional costs to local governments, over and above the costs we already anticipate to comply with the extensive programmatic requirements of the proposed regulations. We ask that CalRecycle instead work to develop markets for such materials in a second regulatory proceeding. The City of Palmdale further notes the additional costs that will result from complying with the procurement regulations represent an unfunded state mandate under Cal. Const. Art. XIII B, sec. 6(a) as the regulations would impose a new program on cities and neither the draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local jurisdictions in SB 1383. Any fee that a city attempted to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1 (e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, were a fee to survive scrutiny under	CalRecycle has determined that procurement requirements are necessary to achieve the statutory organic waste diversion targets by ensuring an end use for processed organic waste. In addition, CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate. First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, "No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code." Such a fee authorization, and costs being recoverable from sources other than taxes, overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)). Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a "tax" under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that

Comment Number	Received From	Question/Comment	Response(s)
		<p>Prop. 26, it is questionable whether a city would not have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Prop. 218.) This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, The City of Palmdale requests that the procurement regulations be addressed in a separate regulatory proceeding.</p>	<p>discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383.</p> <p>According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate.</p> <p>Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p>
3679	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>The Task Force recognizes the significant responsibility CalRecycle has under State law to achieve the Statewide 75 percent “recycling” goal by 2020, reduce organic waste disposal by 75 percent by 2025, support the Air Resources Board in reducing climate pollutants, and the limited time granted by the State Legislature to achieve these goals. However, while the Task Force strongly supports efforts to reduce climate pollutants, the Task Force is very concerned about the approach that CalRecycle has selected, which places a tremendous burden and responsibility on counties and cities (more than any other stakeholder group, including, but not limited to, state agencies, public and private colleges and universities, school districts, local education agencies and non-local entities as defined in Article 1, Section 18982 (a) (40) and (42), respectively, etc.), while relying on extremely prescriptive requirements, excessive “bean counting” and reporting, and requiring counties and cities to impose steep penalties on residents and businesses. State law, Section 40001(a) of the Public Resources Code (PRC), declares that “the responsibility for solid waste management is a shared responsibility between the state and local governments (emphasis added).” Furthermore, SB 1383 recognizes the shared responsibility “the waste sector, state government, and local governments” have in achieving the organic waste reduction goals for 2020 and 2025, and thus requires CalRecycle to analyze the progress made by the three sectors, in that order, including “commitment of state funding”, in achieving the said goals {PRC Section 42653. (a)} (emphasis added). However, under the proposed regulations, the responsibility weighs much more heavily on counties and cities, including programmatic and penalty requirements, than on state agencies, school</p>	<p>Comment noted. The commenter is expressing an opinion regarding the overall regulatory model used by CalRecycle. CalRecycle has determined this model is necessary to achieve the ambitious organic waste diversion mandate in statute.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>districts, and special districts, local education agencies, and non-local entities (as an example, see provisions of Articles 14 and 15 of the proposed regulations). For example, SB 1383 notes that the California Constitution requires the state to “reimburse local agencies and school districts for certain costs mandated by the state (see SB 1383, preamble). SB 1383, Section 7 further states that “No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act...” While both local agencies and school districts may have authority to levy service charges, fees, or assessments, the proposed regulations disproportionately place the responsibility on counties and cities, even though they may encounter as much difficulty in raising charges, fees, or assessments as school districts. State agencies similarly are held to a much lower standard than counties and cities, while not being subject to a measurable penalty. Therefore, the Task Force strongly recommends the proposed regulations be revised to provide for a more equitable distribution of the responsibility for achieving the disposal reduction goals among all sectors, including industry, state government, school districts, public and private colleges and universities, and other non-local entities and local education agencies, etc.</p>	
3680	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>The proposed regulations impose requirements on counties and cities that exceed the authority granted to CalRecycle by State law or are contrary to it.</p> <p>a. SB 1383 does not provide CalRecycle with the authority to require local jurisdictions to impose civil (monetary) penalties on residential or commercial organic waste generators for non-compliance.</p> <p>The proposed regulations (Article 16, Section 18997.1) require jurisdictions to “adopt ordinance(s) or enforceable mechanisms to impose penalties that are equivalent or stricter than those amounts in Section 18997.2...” (emphasis added). In addition, Section 18997.2. Penalty Amounts, requires: “(a) A jurisdiction shall impose penalties that are equivalent or stricter than those amounts in Table 1 of this section and shall be calculated by determining the type of violations that have occurred, the number of violations that have occurred, and the corresponding penalty level in subsection (b).” (emphasis added).</p> <p>While SB 1383 grants CalRecycle the authority to “require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction,” this authority does not extend to the imposition of penalties (emphasis added). SB 1383 only provides that CalRecycle “may authorize local jurisdictions to impose penalties on generators for noncompliance” {see Section 42652.5. (a)(1) of the Public Resources Code (PRC)} (emphasis added).</p> <p>In requiring counties and cities to impose steep civil penalties (\$500 per day per violation) on residents and businesses for non-compliance with each requirement of the regulations, CalRecycle would exceed its authority under the law. Such authority is vested on local governmental agencies by PRC Section 40059, which states that,</p>	<p>Regarding Public Resources Code Section 40059, there are two phrases that must be taken into account in its application to SB 1383.</p> <p>First, Public Resources Code Section 40059 applies to aspects of solid waste handling “which are of local concern.” The organic waste diversion mandates in SB 1383 are of statewide application and statewide concern. As described in other responses to comments, CalRecycle was granted broad statutory authority by the Legislature to create rules designed to implement these statewide mandates and ensure the statutory organic waste diversion requirements are met. To the extent there are provisions in the rulemaking that touch on aspects of local solid waste handling, these are regarding matters of statewide concern that have been determined by CalRecycle to be necessary to achieve the goals of SB 1383.</p> <p>Second, Public Resources Code Section 40059 contains the introductory phrase, “Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine...aspects of solid waste handling which are of local concern...” This phrase contemplates that other laws exist that may affect local solid waste handling and that the mere existence of those laws does not automatically preempt local governments from regulating the enumerated subject areas. It was designed to make clear that the state was not preempting the entire field of solid waste handling and that local jurisdictions were still allowed to regulate in certain areas.</p> <p>As such, Public Resources Code 40059 is not a limitation on CalRecycle from regulating aspects of solid waste handling to the extent they are of statewide concern.</p> <p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, “CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>“each county, city, district, or other local governmental agency may determine...aspects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services.” (emphasis added).</p> <p>Therefore, the Task Force strongly recommends the proposed regulations be revised to delete any and all provisions that require counties and cities to impose civil (monetary) penalties on their residents or businesses. The language may be revised pursuant to PRC Section 42652.5 (a)(1) to authorize counties and cities to do so, as they deem appropriate (emphasis added).</p>	<p>39730.6 of the Health and Safety Code.” That section also provides that CalRecycle may “include different levels of requirements for local jurisdictions...”</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, “The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code.” SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that “[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. ‘[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . .’ The [administrative agency] is authorized to “fill up the details” of the statutory scheme.”</p> <p>Administrative Civil Penalty tables, including “Base Table 6,” were deleted from the proposed regulations</p> <p>Consistent with rules of statutory construction, Public Resources Code Section 42652.5(a)(1) must be read as a whole and interpreted in a way that renders the text as compatible, not contradictory. This section states that the regulations “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.” The first part of this section explicitly contemplates regulatory requirements on entities besides generators as long as they are relevant to meeting the mandates of SB 1383. Thus, the second part of the section regarding penalties must be read harmoniously and as a whole with the first part to permit penalties on the other entities that may be subject to regulatory requirements. Without enforcement penalties on the other entities, the regulatory requirements are not actually requirements but mere suggestions. Bolstering this interpretation is the Assembly Floor Analysis for SB 1383 (August 31, 2016) which stated that the bill, “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and impose penalties for noncompliance.”</p> <p>Regarding the language “authorizing” penalties by local jurisdictions, the clear intent of the legislation was that jurisdictions must penalize non-compliance with SB 1383 requirements. First, the language of Assembly Floor Analysis described above makes this intent clear – CalRecycle may require jurisdictions to impose requirements “and impose penalties for noncompliance.” Second, the Legislature designed the bill to achieve the organic waste reduction goals in part by requiring local jurisdictions to impose requirements. These requirements must be enforceable through penalties or:</p> <p>(a) they will not actually be requirements but suggestions; and (b) there will be no way to ensure compliance by regulated entities and thus achieve the goals of the statute. Given these considerations, CalRecycle has authorized local jurisdictions to impose penalties as long as they meet the conditions described in the regulations regarding categories of violations, requirements to enforce against those violations, and minimum penalty levels.</p>

Comment Number	Received From	Question/Comment	Response(s)
			Regarding Section 18995.1(a)(1)(B)(5), CalRecycle notes that the language of this section was amended to simply specify that jurisdictions enforce according the enforcement timetables and compliance extensions in Section 18995.4 and the administrative civil penalty provisions in 18997.2.
3681	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>b. SB 1383 does not preclude CalRecycle from considering county or city "good faith efforts" to comply with the regulations.</p> <p>CalRecycle's Statutory Background and Primary Regulatory Policies document states, in part, that "Legislative guidance directs CalRecycle not to...utilize the "Good Faith Effort" compliance model specified in PRC Section 41825." This is inaccurate and contrary to the language of SB 1383. Section 42652.5. (a)(4) of the PRC specifically requires CalRecycle to consider "good faith effort" in determining a jurisdiction's progress in complying with the law. It states that CalRecycle "shall base its determination of progress on relevant factors, including, but not limited to, reviews conducted pursuant to Section 41825..." (emphasis added).</p> <p>Since PRC Section 41825 establishes the process to determine whether a jurisdiction has made a "good faith effort" to comply with the law, it is clear that CalRecycle is required to consider "good faith effort" in making its determination of a jurisdiction's progress. Therefore, the proposed regulations need to be revised to provide for this provision.</p>	The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3682	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	As proposed, the definition of "organic" is extremely broad and basically includes plastics. The inclusion of plastic does not fit into the concept of organic collection and processing. This definition should be narrowed to prevent confusion, be consistent with state law, and should not include textiles, carpets, fiber, biosolids, digestate, or sludges. Textiles, carpets, and any other new materials should not be considered "organic" material unless their greenhouse gas (GHG) potential is analyzed. See the "Specific Comments" section of this letter, Article 1, Section 18982 (a) (46), for further comments and recommendations.	Comment noted. CalRecycle disagrees that the definition of organic waste is too broad, or should be limited to the types of organic waste included in the definition used in AB 1826. SB 1383 requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. AB 1826 only requires that collection services be offered to commercial businesses. SB 1383 requires the state to reduce the disposal of organic waste that is landfilled, it is a substantially broader legislative mandate and requirement. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition, including organic waste that are not generated by commercial businesses. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.
3683	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	The proposed regulations require local governments to purchase recovered/recycled organic waste products targets set by CalRecycle. While we cannot see any statutory procurement requirement within the provisions of SB 1383, the implementation of these requirements will result in substantial additional costs to local governments over and above the costs jurisdictions already anticipate to incur for complying with the extensive programmatic requirements of the proposed regulations. Therefore, the Task Force respectfully request that CalRecycle instead work to develop markets for recovered/recycled organic waste products. Further, the additional costs that will result from complying with the proposed regulations' procurement requirements represent an unfunded state mandate under California Constitution, Article XIII B, Section 6 (a) since the proposed regulations would impose a new program on local governments and neither the	CalRecycle determined that procurement requirements were necessary to achieve the organic waste diversion targets in statute by ensuring an end use for processed organic waste. Furthermore, CalRecycle disagrees with the characterization of procurement requirements as an unfunded mandate. First, the Legislature, in SB 1383, explicitly authorized local jurisdictions to charge and collect fees to recover its costs incurred in complying with the regulations (Pub. Res. Code § 42652.5(b)). In addition, Section 7 of the bill states that, "No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because a local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the program or level of service mandated by this act, within the meaning of Section 17556 of the Government Code." Such a fee authorization, and costs being recoverable from sources other than taxes,

Comment Number	Received From	Question/Comment	Response(s)
		<p>draft regulations nor the Initial Statement of Reasons identifies a state funding source. CalRecycle should not rely on the fee authority granted to local governments in SB 1383. Any fee that a city, a county or city and county attempts to impose to fund the additional costs of these regulations would likely be treated as a tax under Cal. Const. Art. XIII C, sec. 1(e) (Prop. 26) as it would not meet any of the exceptions identified in that section. Further, even if a fee were to survive scrutiny under Proposition 26, it is questionable whether a jurisdiction would not have the authority to impose the fee without first complying with the majority protest procedures of Cal. Const. Art. XIII D, sec. 6 (Proposition 218). This latter concern is currently the subject of litigation in the Third District Court of Appeal (Paradise Irrigation District v. Commission on State Mandates, Case No. C081929). For these additional reasons, the Task Force requests that the proposed procurement requirements be addressed in a separate regulatory proceeding.</p>	<p>overcomes any requirement for state subvention of funds for reimbursement for a state mandate (see Gov. Code § 17556, County of Fresno v. State of California, 53 Cal.3d 482 (1991)). Second, local jurisdictions have discretion to design legitimate regulatory fees that charge, collect, and use funds in a manner that meets the exceptions to the definition of a “tax” under Cal. Const. Art. XIII C, Section 1 (e). There are no provisions in the SB 1383 regulations that limit that discretion. As such, it is overbroad and speculative to describe “any fees” that may in the future be imposed by the numerous local jurisdictions in California as “likely” to be treated as taxes. If a fee were to be challenged, the determination would be highly dependent on the particulars of how a local charge is purposed, collected and used. CalRecycle is not aware of any facts indicating that local jurisdictions are outright prevented from designing valid regulatory fees consistent with Prop. 26 and Prop. 218 to offset the costs of complying with SB 1383. According to the October 1, 2018 decision in Paradise Irrigation Dist. v. Commission on State Mandates, a statutory authorization to levy fees, such as that provided in SB 1383, is the relevant and dispositive factor in overcoming claims of subvention for a state mandate. This is true whether or not a local fee is subject to, or defeated by, a majority protest procedure. The court found the protest procedure to be a practical consideration for a local government as opposed to a legal factor in determining a requirement for subvention for a state mandate. Finally, it should be recognized that the procurement requirements are designed to apply to existing needs for a jurisdiction, such as for paper products, compost and mulch, and fuel for transport, heating and electricity, and require jurisdictions to instead purchase that material in a form derived from recovered organic waste. Thus, it is not designed to mandate new purchases but instead to make existing needs purchased from an alternate source.</p>
3684	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>The Task Force strongly believes that jurisdictions and regulated agencies would like to see the proposed regulations to be less prescriptive, more flexible, and less punitive, as well as to include reasonable timeframes for compliance. At the same time CalRecycle should focus state efforts on market development, technical support, including efforts to investigate emerging technologies leading to the development of new facilities and products, and funding for infrastructure.</p>	<p>Public Resources Code Section 42652.5(a)(1) explicitly contemplates CalRecycle requiring “local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.”</p> <p>SB 1383 provides a broad grant of regulatory authority to CalRecycle in Public Resources Code Section 42652.5, “CalRecycle, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code.” That section also provides that CalRecycle may “include different levels of requirements for local jurisdictions...”</p> <p>Furthermore, CalRecycle also maintains broad, general rulemaking authority in Public Resources Code Section 40502, “The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code.” SB 1383 is included within Division 30.</p> <p>As stated in PaintCare v. Mortensen (2015) 233 Cal. App. 4th 1292, where CalRecycle successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that “[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. “[The] absence of any specific [statutory] provisions</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . .’ The [administrative agency] is authorized to “fill up the details” of the statutory scheme.”</p> <p>Consistent with rules of statutory construction, Public Resources Code Section 42652.5(a)(1) must be read as a whole and interpreted in a way that renders the text as compatible, not contradictory. This section states that the regulations “May require local jurisdictions to impose requirements on generators or other relevant entities within their jurisdiction and may authorize local jurisdictions to impose penalties on generators for noncompliance.” The first part of this section explicitly contemplates regulatory requirements on entities besides generators as long as they are relevant to meeting the mandates of SB 1383. 3685	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/	“Special Districts” should be defined in the regulations. Furthermore, the regulations should clarify whether special districts are considered “jurisdictions” or “non-local entities,” since “special districts” are included in both definitions.	Thank you for the comment. CalRecycle revised the definition of ‘jurisdiction’ in Section 18982(a)(36) because the original term “handling” as used in the definition is overly broad. This change is necessary to provide clarity. In response to this comment, CalRecycle defined a “special district” as having the same meaning as Section 41821.2 of the Public Resources Code. Special districts can be jurisdictions or non-local entities depending on the nature of the district and its activities. There are special districts that oversee waste collection services. Accordingly,

Comment Number	Received From	Question/Comment	Response(s)
	Integrated Waste Management Task Force comments		<p>the definition of jurisdiction was amended to note that a “special district that provides solid waste collection services” is a jurisdiction.</p> <p>Additionally, a special district could be a non-local entity. Non-local entities are specifically defined as entities that are organic waste generators but are not subject to the control of a jurisdiction’s regulations related to solid waste. The definition of “non-local entity,” lists special districts as an example of a type of entity that could be a “non-local entity” but it does not definitively state that all special districts are non-local entities. Any special district that is a “jurisdiction” and also a “non-local entity” generator would be subject to enforcement by the Department for violations of generator requirements in Chapter 12 unless requirements are waived under Section 18986.3.</p>
3686	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>The proposed definition of "Food recovery organization" as written includes temporary food facilities, as defined under Section 113842 of the Health and Safety Code. According to the Health and Safety Code (H&amp;SC):</p> <p>Nonprofit charitable temporary food facilities" means either one of the following:</p> <p>(a) A temporary food facility, as defined in Section 113930 of the H&amp;SC, that is conducted by a nonprofit charitable organization, as defined in Section 113841 of the H&amp;SC.</p> <p>(b) An established club or organization of students that operates under the authorization of a school or other educational facility.</p> <p>Should these clubs and organization be included, local jurisdictions would have to:</p> <p>1) Annually identify all clubs or organizations at schools and other educational facilities (which are considered non-local entities) operating within the jurisdiction and maintain these school clubs and organizations on the jurisdiction’s website and outreach materials as potential temporary food facilities for use by commercial edible food generators - pursuant with Section 18985.2 of the proposed regulations.</p> <p>2) Assess the edible food recovery of school clubs and organizations which are involved in food recovery activities - pursuant to Section 18991.2(a)(2) of the proposed regulations.</p> <p>The Task Force recommends that nonprofit charitable temporary food facilities be excluded from the requirements listed under Section 18985.2(a)(1) and Section 18991.2(a)(2) of the proposed regulations, as they do not contribute greatly to existing food recovery capacity, and it would be an undue burden to both jurisdictions and student organizations to have to comply with these regulations.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(25) “Food recovery organization” means an entity that primarily engages in the collection or receipt of edible food from edible food generators and distributes that edible food to the public for consumption, including, but not limited to:</p> <p>(A) A food bank as defined in Section 113783 of the Health and Safety Code;</p> <p>(B) A nonprofit charitable organization as defined in Section 113841 of the Health and Safety code; and,</p> <p><del>(C) A nonprofit charitable temporary food facility as defined in Section 113842 of the Health and Safety Code.</del></p>	<p>Removing “nonprofit charitable temporary food facilities” from the definition of “food recovery organization” was not necessary because these entities are a type of food recovery organization that should be recognized and also can help California achieve its 20% edible food recovery goal. However, CalRecycle recognizes that that assessing edible food recovery capacity at nonprofit charitable temporary food facilities could be onerous given that these entities include clubs or organizations of students that operate under the authorization of a school or other educational facility. To address this concern, CalRecycle revised section 18992.2. (a)(2) so that jurisdictions will not be required to assess capacity at nonprofit charitable temporary food facilities located within the county and jurisdictions within the county. This revision was necessary to help jurisdictions comply with the edible food recovery capacity planning requirements specified in Section 18992.2.</p> <p>Regarding the comment pertaining to Section 18985.2. Edible Food Recovery Education and Outreach (a)(1). The commenter has misinterpreted the requirement to develop a list of food recovery organizations and services operating within the jurisdiction. To clarify, the requirement does not specify that the jurisdiction shall maintain a list of all food recovery organizations and services operating within the jurisdiction, just that “a list” be created, maintained on the jurisdiction’s website, and updated annually.</p> <p>It is at the discretion of the jurisdiction to determine the food recovery organizations and services that they believe should be included on the list. Please note that the list is intended to serve as a tool to help commercial edible food generators find appropriate food recovery organizations and services to establish a contract or written agreement with pursuant to Section 18991.3(b), and thereby help ensure that edible food in the jurisdiction is not disposed in landfills, but rather put to its highest and best use of helping feed people in need.</p> <p>Developing a list that includes food recovery organizations and services that have sufficient capacity and a proven track record of safely and efficiently recovering food for human consumption will help commercial edible food generators find food recovery organizations and services that are capable of safely handling and distributing recovered edible food on a routine basis.</p>

Comment Number	Received From	Question/Comment	Response(s)
3687	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>The definition of “organic waste” as specified in the proposed regulations is extremely broad and means “solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood, paper products, printing and writing paper, manure, biosolids, digestate, and sludges.” This highly broad definition seems to state that organic waste includes any type of waste other than “inert waste.” It may include solid waste, medical waste, non-inert hazardous waste, etc. The scope of this proposed definition can be reduced by limiting it to “organic solid waste.” Furthermore, the definition in the regulations is inconsistent with the definition of “organic waste” in Section 42649.8(c) of the Public Resources Code (PRC), as established by Assembly Bill 1826 (2014). AB 1826 defines “organic waste” as “food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.” The intention of SB 1383 is to establish a statewide goal to reduce the landfill disposal of the types of organic waste listed under AB 1826. Therefore, the definition of organic waste in the proposed regulations should be revised to be consistent with the definition in AB 1826. Also see General Comment No. 3.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:  (46) “Organic waste” or “<b>organic solid waste</b>” means <del>solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood, paper products, printing and writing paper, manure, biosolids, digestate, and sludges.</del> food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.</li> </ul>	<p>Comment noted. CalRecycle disagrees that the definition of organic waste is too broad. The statute requires CalRecycle to reduce the disposal of organic waste. These reductions are required as a means of achieving the methane emission reduction targets of the SLCP Strategy. Organic waste that break down in a landfill and create methane must therefore be included in the regulatory definition. Organic waste defined in the regulation are subject to specific requirements (e.g. collection, sampling etc). These requirements are necessary to achieve the purpose of the statute.</p>
3688	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>The definition of “renewable transportation fuel” without any justifiable reason and/or scientifically supported analysis, limits it to fuel derived from renewable gas through in-vessel digestion of organic waste only. The regulations should expand the definition of “renewable transportation fuel” to include fuel derived from renewable gas from other technologies, including thermal conversion technologies such as gasification and pyrolysis, as well methane gas generated from municipal solid waste landfills since it is biogenic in origin.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:  (62) “Renewable transportation fuel” means fuel derived from renewable gas <del>generated from organic waste that has been diverted</del> from a landfill, and processed at an in-vessel digestion facility that is permitted or otherwise authorized by Title 14 to recycle organic waste, <b>a biomass conversion facility that is permitted or otherwise authorized by Division 30 of the Public Resources Code to recycle organic waste, or any other process or technology that is subsequently deemed under section 18983.2 to constitute a reduction in landfill disposal.</b></li> </ul>	<p>Regarding expanding “renewable gas” to include gas from technologies such as gasification and pyrolysis, CalRecycle disagrees with this approach. These technologies are not yet in practice on a commercial scale in California and lack the necessary conversion factors to include in Article 12. For the current regulatory proposal, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products using publicly available pathways and conversion factors.</p> <p>Regarding landfill gas, the SB 1383 mandate is to recover organic waste that would be disposed. Generating gas in municipal solid waste landfills requires disposal of organic waste in landfills; therefore, it is inconsistent with statute to incentivize or mandate activities that do not reduce landfill disposal.</p> <p>CalRecycle revised the proposed regulatory text to allow for the use of electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.</p>

Comment Number	Received From	Question/Comment	Response(s)
3689	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	The term "entity," which is referenced multiple times in the regulations, should be defined in the regulations.	CalRecycle did not include a definition for "entity" because it is using the term in the regulations consistent with the commonly understood dictionary definition of the word as opposed to a specialized term requiring regulatory clarification. The term "entity" is used thousands of times in various state statutes without definition for the same reason.
3690	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	The term "regional agency," which is referenced in Sections 18981.2 (b) (2), 18987.2 (a) (1), 18992.1 (a), 18992.1 (b), 18992.2 (a), and 18992.3 (a), should be defined in the regulations.	Regional agencies are defined in Public Resources Code Section 40181. Per Public Resources Code Section 40100, that definition extends to regulations adopted under Division 30 of the Public Resources Code.
3691	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	The term non-organic waste, which is referenced in Sections 18982 (55) (A), 18984.1 (a) (1), 18984.1 (a) (2), 18984.1 (a) (3), 18984.2 (a) (2), 18984.2 (a) (3), 18984.9 (b) (1), 18986.1 (b), and 18986.2 (b), should be defined in the regulations.	Comment noted. The definition of organic waste clearly identifies materials that are types of organic waste. It is not necessary to define the inverse of this definition because anything not included in the organic waste definition is implicitly non-organic waste.
3692	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	The definition of "jurisdiction" has been modified in the proposed regulations to include "special districts that provide solid waste handling services." No definition of solid waste handling is included in the proposed regulations; however, this phrase is defined in two sections of the Public Resources Code, (1) Section 40195 "the collection, transportation, storage, transfer, or processing of solid wastes", and (2) Section 49505 "the collection, transportation, storage, transfer, or processing of solid waste for residential, commercial, institutional, or industrial users or customers." This has created a problem in that some special districts provide some of those services but not all of them. Therefore, the Task Force requests that the proposed regulations be modified to only apply the requirements intended for a "jurisdiction" (as defined in the PRC Section 40145). As such the proposed change in the definition of jurisdiction is overly broad and should be narrowed to be consistent with the Public Resources Code definition of "jurisdiction" contained in	In response to this comment, CalRecycle defined a "special district" as having the same meaning as Section 41821.2 of the Public Resources Code. Special districts can be jurisdictions or non-local entities depending on the nature of the district and its activities. There are special districts that oversee waste collection services. Accordingly, the definition of jurisdiction was amended to note that a "special district that provides solid waste collection services" is a jurisdiction. Additionally, a special district could be a non-local entity. Non-local entities are specifically defined as entities that are organic waste generators but are not subject to the control of a jurisdiction's regulations related to solid waste. The definition of "non- local entity," lists special districts as an example of a type of entity that could be a "non- local entity" but it does not definitively state that all special districts are non-local entities. Any special district that is a "jurisdiction" and also a "non-local entity" generator would be subject to enforcement by the Department for violations of generator requirements in Chapter 12 unless requirements are waived under Section 18986.3.

Comment Number	Received From	Question/Comment	Response(s)
		<p>Section 40145. In general, the Task Force recommends that CalRecycle keeps the definitions consistent with those in the Public Resources Code.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions: (36) "Jurisdiction" means a city, or county or a city and county <del>or a special district that provides solid waste handling services</del>. A city, county or county and city may utilize a Joint Powers Authority to comply with the requirements of this chapter, except that the individual city, county, or city and county shall remain ultimately responsible for compliance.</li> </ul>	
3693	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>In addition to anaerobic digestion and composting, biosolids can also be processed through gasification. Biosolids that are gasified produce biochar, an organic soil amendment. The Task Force recommends that CalRecycle include the land application of biochar produced from biosolids as a reduction of landfill disposal. The California Energy Commission's 2017 Integrated Energy Policy Report (2017 IEPR), published on April 16, 2018, states that the gasification of biosolids to produce biochar is a revenue source to promote the development of renewable natural gas (RNG) projects, which will be needed if jurisdictions are to meet the requirements to procure RNG transportation fuel per Section 18993.1(f)(2) of the proposed regulations.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions: (b) (6) Land application, as defined in Section 17852(a)(24.5), of this division subject to the following conditions: (A) Green waste or green material shall meet the definition of Section 17852(a)(21) and shall have been processed at a solid waste facility, as defined by Section 40194 of the Public Resources Code. (B) Biosolids shall: 1. Have undergone <del>anaerobic digestion or composting</del>, <b>any of the pathogen treatment processes</b> as defined in Part 503, Title 40 of the Code of Federal Regulations, Appendix B, <b>or gasification, as defined in Section 40117 of the Public Resources Code, to produce biochar, as defined in Section 14513.5. of the Food and Agriculture Code</b>, and, 2. Meet the requirements in Section 17852(a)(24.5)(B)(6) of this division for beneficial reuse of biosolids. (C) Digestate shall: 1. Have been anaerobically digested at an in-vessel digestion operation or facility, as described in 14 CCR sections 17896.8 through 17896.13; and, 2. Meet the land application requirements described in 14 CCR Section 17852(a)(24.5)(A). 3. Have obtained applicable approvals from the State and/or Regional Water Quality Control Board requirements</li> </ul>	<p>CalRecycle understands the importance of the various pathogen treatment process provided in Appendix B to Part 503. Currently, only biosolids that have been processed by anaerobic digestion or composting have been verified to reduce greenhouse gas emission equivalent to the baseline of 0.30 MTCO<sub>2</sub>e per short ton organic waste processed. Therefore, section 18983.1(b)(6(B) can only consider these technologies when the resulting products are applied to land to ensure the state meets the prescribed emissions reduction target delineated in SB 1383. However, to maintain flexibility to consider additional activities and/or technologies not already verified to minimally meet the baseline, section 18983.2 provides a regulatory pathway for a determination process. Section 18983.2 allows CalRecycle, in consultation with CARB, to make a determination if a project that is not already identified in Section 18983.1(b) can achieve permanent greenhouse gas emissions reductions equivalent to those achieved by composting the same organic waste. Please refer to Section 18983.2 for more information.</p>
3694	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste	<p>SB 1383, Section 42652 of the PRC reads as follows: "The Legislature finds and declares all of the following: "(a) The organic waste disposal reduction targets are essential to achieving the statewide recycling goal identified in Section 41780.01.</p>	<p>Several commenters suggested using avoided landfill emissions as the benchmark in the determination of processes or technologies that constitute a reduction in landfill disposal. Although this proposal might increase diversion of organics from landfills, it would not achieve the greenhouse gas emissions reductions required to meet the methane reduction target required by</p>

Comment Number	Received From	Question/Comment	Response(s)
	Management Committee/ Integrated Waste Management Task Force comments	<p>(b) Achieving organic waste disposal reduction targets require significant investment to develop organics recycling capacity.</p> <p>(c) More robust state and local funding mechanisms are needed to support the expansion of organics recycling capacity.”</p> <p>Based on the foregoing, it is clear that the Legislature and the Governor, as a part of the SB 1383 enactment, emphasized the need for development of alternative technology facilities beyond composting and anaerobic digestion technologies/facilities, upon which CalRecycle has heavily relied, while not placing sufficient emphasis on development of alternative technologies and even subjecting them to heavily restrictive standards that other methods and processes are not subjected to (such as land application). In doing so, the state has created a significant obstacle to development of facilities utilizing these technologies without a clear and scientifically substantiated justification. For example, Section 18983.2 states “To determine if the proposed operation counts as a permanent reduction in landfill disposal, the Department and/or CARB’s Executive Office shall compare the metric tons carbon dioxide equivalent (MTCO<sub>2e</sub>) per short ton organic waste reduced by the process or technology, with the emissions reduction from composting organic waste” (emphasis added). To be consistent with requirements of PRC Section 42652 and technically correct, the analysis should be made in comparison to “landfilling” and not “composting.” The Task Force would like to emphasize that the SB 1383 mandates reduction of organic waste disposal in landfills and not any other type of facilities such as those utilizing conversion technology, (emphasis added).</p>	SB 1383 or the organics diversion targets specified in the Short-Lived Climate Pollutant Reduction Strategy. The benchmark value of 0.30 MTCO <sub>2e</sub> per short ton organic waste was set to ensure emission reductions for any new process or technology are comparable to the emission reductions necessary to achieve the strategy’s emission reduction goal of 4 MMTCO <sub>2e</sub> for this sector.
3695	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>This section does not specify obligations on the Department or the California Air Resources Board (CARB) to review the applications in a timely manner. The regulations must require the Department and CARB to make a determination in a realistic timeframe to facilitate the development of organics recycling infrastructure.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(2) The Department shall consult with CARB’s Executive Officer <b>within 30 days of receiving the application</b> to evaluate if the information submitted by the applicant is sufficient to determine the greenhouse gas emissions reduction potential of the proposed operation, and whether or not the proposed operation results in a permanent reduction in greenhouse gas emissions, and therefore counts as a reduction in landfill disposal. <b>The Department shall provide a response to the applicant within 90 days of receiving the application whether the information submitted by the applicant is sufficient to determine the greenhouse gas emissions reduction potential of the proposed operation and, in the response, request additional information, if needed. The Department shall make a determination whether or not the proposed operation results in a permanent reduction in greenhouse gas emissions, and therefore counts as a reduction in</b></p>	The commenters request greater certainty at to when to expect CARB and/or CalRecycle will determine whether a proposed process or technology constitutes a reduction in landfill disposal. CalRecycle added clarification in the regulation, including that CalRecycle would let applicants know within 30 days of receipt of the application whether or not CalRecycle needs more information to process the application, and that CalRecycle will inform the applicant within 180 days after they have all needed information as to whether or not the process or technology is deemed to count as a reduction in landfill disposal. This timeline will provide applicants with a reasonable timeline for receiving determinations on proposed processes or technologies.

Comment Number	Received From	Question/Comment	Response(s)
		<b>landfill disposal, and inform the applicant of the decision within 180 days of receiving the application.</b>	
3696	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	CalRecycle and CARB have joint authority over the verified technology determination. As the SB 1383 regulation text currently reads, either CalRecycle, CARB, or both can make this determination. The roles must be better defined to avoid delaying the technology verification process and to facilitate the development of new infrastructure.	CalRecycle modified the text to clarify that CalRecycle, as the entity overseeing implementation of this regulation, makes the final determination of whether a process or technology constitutes a reduction in landfill disposal. This change is needed to clarify roles.
3697	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	Section 18983.2 specifies the process used to determine if operations, facilities or activities not expressly identified in the regulation shall be deemed to constitute a reduction of landfill disposal. Once this determination is made, it would be reasonable for comparable processes or technologies to be similarly deemed to constitute a reduction of landfill disposal. Section 18983.2(c) appears to provide this opportunity. The regulations must clarify if this is the intent and the section must be expanded to more specifically outline the streamlined approach that would be followed. To facilitate infrastructure development, future applicants should not be required to repeat the verification process for an already-approved process.	As noted in the Initial Statement of Reasons, the purpose of subdivision 18983.2(c) "is to allow an applicant to request that CalRecycle consider additional information not otherwise required in Article 2 that shows that the applicant's proposed recovery activity should be considered identical or equivalent to a proposed recovery activity already deemed by CalRecycle, through the process outlined in 18983.2(a), to result in a reduction in landfill disposal. This section is necessary to clarify that applicants may submit additional information to CalRecycle for consideration." This section is not meant to streamline applications but is meant to allow for applicants not to go through the full process/technology application process if an identical or equivalent technology for process has already been approved.
3698	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	Section 42652.5. (a)(4) of the PRC specifically requires CalRecycle to consider "good faith effort" in determining a jurisdiction's progress in complying with the law. It states that CalRecycle "shall base its determination of progress on relevant factors, including, but not limited to, reviews conducted pursuant to Section 41825..." (emphasis added). Therefore, the Task Force recommends that CalRecycle revise the regulations to incorporate provisions for jurisdictions demonstrating a "good faith effort" to comply. <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:  (a) This article specifies the <del>minimum</del> <b>recommended</b> standards for organic waste collection services provided by jurisdictions, outlines efforts jurisdictions must <b>demonstrate a good faith effort</b> to engage in to reduce container contamination, delineates <b>recommended</b> container color and labeling requirements, specifies criteria for rural jurisdictions to be exempt from specified requirements of this section and criteria for jurisdictions to waive requirements for specified generators. This article additionally specifies associated recordkeeping requirements for these standards.</li> </ul>	A change to the regulatory text is not necessary. When the legislature enacted the Recycling of Commercial Waste ("MCR") law (PRC Section 41649.3(h) and (i) and the Recycling of Organic Waste ("MORE") law( PRC Section 42649.82(g) and (h) both statutes expressly required that the Department evaluate these programs using the "good faith effort" standard contained in PRC section 41825. The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction
3699	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste	Pursuant to SB 1383, Subdivision 45652 of the PRC, the Legislature, among other things, finds and declares that "(a) The organic waste disposal reduction targets are essential to achieving the statewide recycling goal identified in Section 41780.01." The "simplest" way to measure the reduction of organic waste disposal is to	SB 1383 provides a broad grant of regulatory authority to CalRecycle to impose requirements on jurisdictions in order to achieve the organic waste diversion goals of a 50-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75-percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2025. This

Comment Number	Received From	Question/Comment	Response(s)
	Management Committee/ Integrated Waste Management Task Force comments	<p>quantify the tonnages of organic waste being diverted. As such, the Task Force questions the prescriptive/mandatory collection services, including the required containers and their colors, which would be mandated by the proposed regulations, are unnecessarily onerous and would impose a significant cost to counties, cities, and their residents and businesses. The Task Force strongly recommends that CalRecycle conduct and make available a detailed cost benefit analysis of the various alternative approaches to the mandatory organic waste collection service requirements considered. The Task Force also believes that said requirements are inconsistent with the state law, PRC Section 40059.</p> <p>The Task Force respectfully requests CalRecycle to address these issues in the next version of the proposed regulations.</p>	<p>authority includes creation of rules designed to implement these statewide mandates and ensure that the statewide organic requirements are met. CalRecycle has determined that the mandatory collection service requirements and container color and labeling provisions are necessary to maintain consistent standards throughout the state to reduce contamination of organic waste and ensure that collected organic waste is clean and recoverable in order to meet the aforementioned diversion goals.</p> <p>Regarding Public Resources Code Section 40059, there are two phrases that must be taken into account in its application to SB 1383.</p> <p>First, Public Resources Code Section 40059 applies to aspects of solid waste handling “which are of local concern.” The organic waste diversion mandates in SB 1383 are of statewide application and statewide concern. As described in other responses to comments, CalRecycle was granted broad statutory authority by the Legislature to create rules designed to implement these statewide mandates and ensure the statutory organic waste diversion requirements are met. To the extent there are provisions in the rulemaking that touch on aspects of local solid waste handling, these are regarding matters of statewide concern that have been determined by CalRecycle to be necessary to achieve the goals of SB 1383. CalRecycle does not believe a cost/benefit analysis is necessary.</p> <p>Second, Public Resources Code Section 40059 contains the introductory phrase, “Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine...aspects of solid waste handling which are of local concern...” This phrase contemplates that other laws exist that may affect local solid waste handling and that the mere existence of those laws does not automatically preempt local governments from regulating the enumerated subject areas. It was designed to make clear that the state was not preempting the entire field of solid waste handling and that local jurisdictions were still allowed to regulate in certain areas.</p> <p>As such, Public Resources Code 40059 is not a limitation on CalRecycle from regulating aspects of solid waste handling to the extent they are of statewide concern.</p>
3700	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18984.4. Recordkeeping Requirements for Compliance with Organic Collection</p> <p>The Task Force is concerned about the requirement (a)(3)(D) which states that the jurisdiction must provide the geographical areas served by the haulers, along with routes serviced, or a list of addresses served. Jurisdictions, through their franchise agreements/contracts, have committed to protecting proprietary information which may result in an economic disadvantage should the information be disclosed to haulers' competitors. The Task Force recommends order to protect the hauler's proprietary information.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(a) A jurisdiction shall include the following information and documents in the Implementation Record required by Section 18995.2 of this chapter:</p> <ol style="list-style-type: none"> <li>(1) A description of which collection method(s) it will use to comply with this article.</li> <li>(2) The geographical area for each collection method</li> </ol>	<p>The comment refers to recordkeeping requirements for jurisdictions to retain. This information is not required to be reported publicly. To the extent that documents required to be retained in a jurisdiction's Implementation Record contains truly proprietary or trade secret information, there are existing protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow public agencies to withhold such information from public disclosure. The proposed regulations provide for this.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(3) If the jurisdiction is using a service that requires the contents of containers provided by the jurisdiction to be transported to a high diversion organic waste processing facility, the jurisdiction shall at a minimum:</p> <p>(A) List all high diversion organic waste processing facilities used by the jurisdiction.</p> <p>(B) Include copies of, quarterly and annual average mixed waste organic content recovery rates, for each of those facilities, as defined in Section 18984.3.</p> <p>(C) List all approved haulers in the jurisdiction that are allowed to take organic waste to the jurisdiction’s identified high diversion organic waste processing facility or facilities.</p> <p>(D) The geographical area the hauler(s) serves, <del>or the routes serviced, or a list of addresses served.</del></p>	
3701	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18984.5. Container Contamination Minimization</p> <p>The regulations require jurisdictions to monitor containers and conduct route reviews as part of the container contamination minimization protocol. Furthermore, Section 18997.3 Base Table 1 lists monetary penalties for jurisdictions not implementing a container contamination minimization protocol. However, Section 17409.5.7.(c), Section 17409.5.11(b)(4), Section 17867(a)(4)(E), Section 17896.25.1(d), and Section 20901(d) state that the enforcement agency (EA) may approve an alternative frequency for load checking at a facility if the facility receives waste from jurisdictions that are monitoring containers using the container contamination minimization described in Section 18984.5. This implies that a jurisdictions’ implementation of the container contamination minimization protocol is not required. CalRecycle should clarify in the regulations whether jurisdictions are required to implement a container contamination minimization protocol.</p>	<p>Jurisdictions are required to conduct container contamination monitoring. Under Section 18995.1, states that a jurisdiction shall conduct a sufficient number of route reviews and inspections of entities to adequately determine overall compliance with the Chapter. It is not intended for a route review to include the inspection of every container on a route, but a random sampling of containers during the year. Section 18995.1 also states a jurisdiction shall have an overall inspection and enforcement program that is designed to ensure overall compliance with the Chapter. This allows the jurisdiction the flexibility and discretion to develop programs that set minimum standards and best fits their jurisdiction. During the informal rulemaking period, stakeholders commented on the difficulty of measuring contamination on a volume or weight basis, the associated costs, and the inability to justify a particular percentage. In response, CalRecycle modified the contamination monitoring provision to eliminate the percentage threshold and allow more flexibility to jurisdictions, while still maintaining enforceable requirements.</p> <p>Moreover, in response to comments received during the 45-Day comment period, CalRecycle revised the contamination monitoring provision to allow primarily solid waste facility based monitoring, as an alternative to requiring jurisdictions to conduct individual route reviews. These changes will result in a less costly alternative that will still have the desired results in addressing contamination. This could result in increased inspections and follow-up education in areas where there is consistent contamination, with associated savings of not having to conduct reviews in areas that do not exhibit consistent contamination. It would also address the issue of what constitutes significant contamination, because the facility would sample and measure contamination levels.</p> <p>CalRecycle disagrees with the recommendation to exempt residential routes from the, since the residential section makes up approximately more than half of organic waste generation. The revisions to Section 18984.5 address the cost issues raised by this comment. CalRecycle also disagrees that contamination monitoring should be totally at the discretion of jurisdictions. However, CalRecycle revised Section 18984.5(c)(1) to remove the term ‘physically.’ This change is necessary to allow jurisdictions to use video monitoring to inspect the containers. This change would be in alignment with the definition of “route review” in Section 18982 (a)(65) which allows the use of cameras to determine container contamination.</p>

Comment Number	Received From	Question/Comment	Response(s)
			In addition, nothing would restrict a jurisdiction from developing its own requirements for how the facility would conduct waste characterization.
3702	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18984.5. Container Contamination Minimization</p> <p>This section indicates that if a jurisdiction is utilizing a two or three-container collection system, all collection routes must be reviewed quarterly for prohibited container contaminants. Due to the size of a jurisdiction, such as the County of Los Angeles geographical jurisdiction and the number of routes presently served, this presents an incredible burden on the jurisdiction's labor and financial resources. The Task Force recommends reducing the monitoring frequency requirement to something that jurisdictions may more realistically meet. The Task Force recommends shifting this requirement to not less than annually with statistically representative sampling. The Task Force believes similar results can be derived if certain routes are sampled by specific geographic regions (such as community) or population density.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(b) A jurisdiction shall conduct a route review for prohibited container contaminants on randomly selected containers in a manner that results in all collection routes being reviewed <del>quarterly</del> <b>annually</b>.</p>	Thank you for the comment. The language was revised to annually.
3703	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18984.10. Property and Business Owner Responsibilities</p> <p>The Task Force recommends that this section be revised to specify that residential property owners do not have to arrange for access to individual residential unit, but only to common areas where solid waste and recycling containers are stored or may be stored. Inspectors cannot enter a private property without a Court order. However, inspections of residential containers can be made once the containers are placed in the designated area for collection.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(c) Property and business owners shall provide or arrange for access to their properties, <b>excluding the interior of each residential unit within the property</b>, during all inspections conducted pursuant to Article 14 of this chapter (commencing with Section 18995). <b>Residential containers can be inspected if they are placed in the designated area for collection.</b></p>	CalRecycle revised Section 18984.10(c) in response to this comment to specify that residential property owners do not have to arrange for access to individual residential unit.
3704	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18984.12. Waivers and Exemptions Granted by the Department</p> <p>This section does not recognize the good faith efforts of a jurisdiction to comply with the provisions of this chapter but that is unable to fully comply due to circumstances beyond its control. Provisions need to be provided for good faith efforts.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p><b>(d) The Department may grant waivers and/or extensions to any generator, hauler, or jurisdiction that has made good faith efforts to comply with the requirements of this article but has been unable to identify a facility with sufficient capacity to process the materials.</b></p>	Section 18996.2 includes all circumstances outside of a jurisdiction's control, including the inability to identify a facility with sufficient capacity to process the materials. The regulations require a jurisdiction to demonstrate that extenuating circumstances exist and that it has made a "substantial effort" which means that it has taken all practicable actions to comply.

Comment Number	Received From	Question/Comment	Response(s)
3705	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Chapter 3.1, Article 3, Section 17867 and Chapter 3.2, Article 3, Section 17867 of the proposed regulations state that material subject to a quarantine on movement issued by a county agricultural commissioner is considered incompatible material rather than organic waste. The regulations should clarify whether quarantined green waste will be exempt from the landfill disposal reduction requirements for organic waste. If quarantined green waste is required to be that the disposed tonnage will not count against the 50 percent and 75 percent landfill disposal reduction targets.</p> <p>In addition, CalRecycle should grant a waiver or exemption for material subject to a quarantine on movement issued by a county agricultural commissioner. Once this quarantined material is collected, it could be transferred to a facility outside of the quarantined zone contaminating other non-quarantined organic waste and spread disease, pests, or harmful bacteria or microorganisms. Additionally, the regulations should also provide a definition for “quarantined material.”</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:  <b>(d-e) Quarantined Material</b>  <b>(1) The Department shall grant an exemption for organic waste collection, as specified in this chapter, for material subject to a quarantine on movement issued by a county agricultural commissioner. A jurisdiction may dispose of organic material if it is subject to a quarantine on movement issued by a county agricultural commissioner.</b> </li> </ul>	<p>Comment noted. With regard to quarantine materials the measurement standards in Section 18984.5 that apply to performance-based source separated organic waste collection systems was amended to state: “For the purposes of demonstrating compliance with 18998.1, organic waste that is textiles, carpet, hazardous wood waste, human waste, pet waste, or material subject to a quarantine on movement issued by a county agricultural commissioner, is not required to be measured as organic waste.”</p> <p>These materials may be disposed without counting against a jurisdiction as they comprise a minimal portion of the organic waste stream and/or are uniquely difficult or problematic to recover from a health and safety perspective.</p>
3706	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Please clarify if the definition of “organic waste” that is required to be separated either at the source or at a high-diversion materials recovery facility and diverted from landfill includes organic waste collected from routine non-emergency debris and catch basin cleanouts. The Task Force recommends that organic waste collected from debris and catch basin cleanouts be excluded from the diversion requirements. Because this organic waste accumulates in the stormwater system and is not disposed by any particular generator in a container, it is likely to contain significant contamination and is difficult to separate from other waste and recycle. The Task Force recommends adding a waiver to the regulations addressing organic waste collected from routine cleanouts of debris basins, catch basins, and other stormwater infrastructure.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:  <b>(d) Stormwater Infrastructure Exemptions:</b>  <b>(1)The Department shall grant waivers for organic waste collected from routine clean-outs of catch basins, debris basins, and other stormwater infrastructure. A local jurisdiction or private contractor may apply to the Department for a general waiver to exempt the organic waste collected from stormwater infrastructures.</b>  <b>(d-e) Nothing in this section exempts a jurisdiction from complying with the other requirements to promote and provide information to generators about, waste prevention, community composting, managing organic waste on-site, and other means of recovering organic waste, or any other requirements of this chapter</b> </li> </ul>	<p>This situation is already covered in Section 18984.13(b)(3). This section allows for disposal of sediment debris removed from dams, culverts, reservoirs, channels and other flood control infrastructure.</p>

Comment Number	Received From	Question/Comment	Response(s)
3707	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18984.13, Emergency Circumstances</p> <p>This section does not address compliance requirements for those cases for which “State of Emergency” as proclaimed by the Governor and defined by the California Code of Regulations, Title 14, Section 17210.1 (k).</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:           <p><b>(b) (3) In a case of a “State of Emergency” as proclaimed by the Governor and defined in Section 17210.1 (k) of this division, the Department shall grant a waiver to a jurisdiction(s) from complying with the requirements of this article. Additionally, disaster debris generated from such an emergency shall not be counted as jurisdictional disposal for the purpose of measuring compliance with requirements of this chapter by the Department.</b></p> </li> </ul>	<p>Section 18984.13 allows jurisdictions to submit requests for waivers for disposal of disaster debris that cannot be diverted and allows disposal of sediment debris under specified conditions. The commenter’s proposal would provide an overly broad waiver to jurisdictions of all regulatory requirements, even if a particular emergency does not affect the jurisdiction’s ability to comply with regulatory requirements.</p> <p>The proposal is also unnecessary because, if the Governor has declared a State of Emergency pursuant to the California Emergency Act (Government Code Sections 8550-8668) for conditions that are beyond the control of the jurisdiction to comply with particular aspects of the regulation, that proclamation will take precedence and the jurisdiction would be relieved from that regulatory requirement.</p> <p>As for the suggested amendment regarding counting jurisdictional disposal for measuring compliance with SB 1383, under 1383 the disposal reduction goal is statewide and not jurisdiction specific. Therefore, the text is unnecessary. Insofar as disaster debris affects an individual jurisdiction’s per capita disposal target, CalRecycle has procedures for allowing the jurisdiction to submit a disposal modification.</p>
3708	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18984.13, Emergency Circumstances</p> <p>The Department should grant a waiver for jurisdictions demonstrating a good faith effort to comply with the regulations but are unable to do so due to factors outside of their control. Section 42652.5. (a)(4) of the PRC specifically requires CalRecycle to consider “good faith effort” in determining a jurisdiction’s progress in complying with the law. It states that CalRecycle “shall base its determination of progress on relevant factors, including, but not limited to, reviews conducted pursuant to Section 41825...” (emphasis added).</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:           <p>(c) Rural Exemptions:</p> <p>(1)The Department shall grant an exemption from complying with the organic waste collection requirements specified in this article for Rural Jurisdictions that meet the definition of a “Rural Jurisdiction” in Section 42649.8 of the Public Resources Code, if the governing body of the jurisdiction adopts a resolution that includes a finding as to the purpose of and need for the exemption.</p> <p>(2) An exemption implemented pursuant to this subdivision shall be valid until January 1, 2025, or until five years after the Department makes a determination pursuant to Section 42649.82 (a)(2)(D) that the statewide disposal of organic waste has not been reduced to 50 percent of the level of disposal during the 2014 calendar year, whichever is later.</p> <p><b>(d) Good Faith Effort Exemptions:</b></p> <p><b>(1) The Department shall grant an exemption from complying with a part of or all of the requirements of the regulations for a jurisdiction demonstrating a “good faith effort” to comply but cannot do so due to factors outside of its control.</b></p> <p>(d e) Nothing in this section exempts a jurisdiction from complying with the other requirements to promote and 40 provide information to generators about, waste</p> </li> </ul>	<p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p>

		prevention, community composting, managing organic waste 41 on-site, and other means of recovering organic waste, or any other requirements of this chapter.	
3709	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18985.1. Organic Waste Recovery Education and Outreach</p> <p>Since solid waste facility operators are in direct contact with self-haulers and jurisdictions currently have no way of identifying a generator who is a self-hauler, the Task Force recommends giving solid waste facility operators the defined role of providing information regarding the requirements of Section 18988.3 of this chapter to the self-haulers.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(b) Prior to February 1, 2022, and annually thereafter, <del>a jurisdiction</del> <b>solid waste facility operators</b> shall provide to self-haulers information regarding the requirements of Section 18988.3 of this chapter.</p>	CalRecycle deleted requirements that jurisdictions specifically identify and educate self-haulers in response to this comment. Jurisdictions can meet the requirement to educate self-haulers by including information on self-hauling in their general education and outreach material provided to all generators. CalRecycle deleted language requiring solid waste facility operators to educate self-haulers as it would be overly burdensome and is outside the scope of what EAs monitor at solid waste facilities. This change was made to provide the least burdensome approach and still achieve the required disposal reduction.
3710	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18985.1. Organic Waste Recovery Education and Outreach</p> <p>Los Angeles County is a very linguistically diverse county. Within the unincorporated areas alone, there are many generators that are "Limited English Speakers". The Task Force is concerned that the regulations may require jurisdictions to provide the education and outreach materials in every language spoken by generators within a given jurisdiction.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(f) If more than five percent of a jurisdiction's generators are defined as "Limited English Speaking Households," or "linguistically isolated," as defined by the U.S. Census Bureau, the jurisdiction shall provide the information required by this section in <del>a</del> <b>the most common</b> language or languages <del>that will assure the information is understood by those generators</del> <b>and may provide the information required by this section in other languages, upon request from a generator.</b></p>	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
3711	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	Section 18986.1. Non-Local Entities Requirements states that "materials subject to a quarantine on movement issued by a county" shall not be deposited in organic waste containers (green) or recycling containers (blue). However, the proposal does not prohibit disposal in the gray container, leading to the ultimate transfer of these materials to solid waste facilities which would cause the spread of contamination and/or disease. This issue needs to be addressed in the next version of the proposed regulations. Furthermore, collection requirements for non-local entities should be consistent with the requirements for collection services provided by jurisdictions to other generators, including residents and businesses. The requirements for collection services provided by local jurisdictions do not make reference to restrictions on the disposal of "materials subject to a quarantine on movement by a county" in any collection container.	Thank you for the comment. CalRecycle amended the applicable section to state that a non-local entity's collection service shall be in compliance with the requirements in Article 3.
3712	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste	Section 18986.2. Local Education Agencies Requirements requirements for commercial businesses, multifamily properties, and non-local entities. Unlike the other aforementioned groups, Section 18986.2 does not include requirements for local education agencies to prohibit the placement of organic waste in containers not designated for organic waste, and to periodically inspect	CalRecycle has revised Section 18986.2 to reflect that local education agencies shall prohibit their employees from placing organic waste in the incorrect container and inspect containers.

Comment Number	Received From	Question/Comment	Response(s)
	Management Committee/ Integrated Waste Management Task Force comments	<p>collection containers for and inform employees of observed contamination. The Task Force recommends that the Department create uniform requirements for all regulated entities, included local education agencies, so as to afford equal treatment.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:               <ol style="list-style-type: none"> <li>Local education agencies shall <b>also</b>:                   <ol style="list-style-type: none"> <li>Provide containers for the collection of organic waste and non-organic recyclables in all areas where disposal containers are located. The containers provided shall conform to the requirements of the containers provided through the organic waste recovery service to which the local education agency is subscribed.</li> <li><b>Prohibit their employees and students from placing organic waste in containers not designated for organic waste as set forth in Section 18984.1.(a)(5) and Section 18984.2.(a)(5) of this chapter.</b></li> <li><b>Periodically inspect organic waste containers for contamination and inform employees if containers are contaminated, and of the requirement to only use those containers for organic waste</b></li> </ol> </li> </ol> </li> </ul>	
3713	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>It is unclear what conditions would render sewage sludge and biosolids not suitable for additional processing or recovery and require them to be sent for disposal. In addition, as written, the regulations seem to indicate that biosolids can only be disposed if they cannot be recovered. CalRecycle should not require all biosolids to be recovered and should not limit landfill disposal of biosolids as long as the organic waste landfill disposal reduction targets can be satisfied. Additionally, the remaining sewage sludge and biosolids sent for disposal to appropriate permitted disposal facilities should not be counted as disposal against the host jurisdictions in which the POTW and disposal facility is located.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:               <ol style="list-style-type: none"> <li><del>Sewage sludge and biosolids</del> generated at a POTW <del>shall</del> <b>may</b> be:                   <ol style="list-style-type: none"> <li>Transported <del>only</del> to a solid waste facility or operation for additional processing, composting, in-vessel digestion, or other recovery as specified in Section 20.1(b) of this Division, <b>or</b></li> <li><del>Notwithstanding subdivision (a)(1), sewage sludge and biosolids not suitable for additional processing or recovery may be</del> <b>Sent for disposal to a permitted facility that can receive that sewage sludge and biosolids and has obtained the applicable approvals by the local, regional, state, and federal agencies having appropriate jurisdiction.</b></li> <li><b>Residual sewage sludge and biosolids that are remaining after treatment at a POTW and destined for disposal are not subject to requirements of this chapter including, but not limited to, organic waste disposal reduction .</b></li> </ol> </li> </ol> </li> </ul>	CalRecycle has deleted Section 18987.2 in response to comments.
3714	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste	<p>Section 18988.3. Self-haulers of Organic Waste As written, the regulations require self-haulers to source-separate all organic waste generated on site. Self-haulers should not be held to more stringent standards than</p>	CalRecycle revised Section 18988.3 in response to this comment to clarify that self-haulers should not be held to more stringent standards than contracted haulers and should be allowed to take mixed waste to an approved high-diversion organic waste processing facility meeting all applicable requirements.

Comment Number	Received From	Question/Comment	Response(s)
	Management Committee/ Integrated Waste Management Task Force comments	<p>contracted haulers and should also be allowed to take mixed waste to an approved high-diversion organic waste processing facility meeting all applicable requirements.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:               <ol style="list-style-type: none"> <li>Generators of organic waste may, in compliance with Section 18988.1 of this Division self-haul their own organic waste.</li> <li>A generator who is a self-hauler of organic waste shall comply with the following:                   <ol style="list-style-type: none"> <li><del>The generator shall source separate all organic waste generated on-site in a manner consistent with 14 CCR Section 30.1 and 30.2 of this chapter.</del> <b>(1)</b> The generator shall haul <del>source separated</del> organic waste to a solid waste facility operation, activity, or property that processes or recovers <del>source separated</del> organic waste.</li> <li><del>(3)</del> <b>(2)</b> The generator shall keep a record of the amount of organic waste delivered to each solid waste facility, operation, activity, or property that processes or recovers organic waste; this record shall be subject to inspection by the jurisdiction.                       <ol style="list-style-type: none"> <li>The records shall include delivery receipts and weight tickets from the entity accepting the waste.</li> <li>The record shall indicate the amount of material in cubic yards or tons transported by the generator to each entity.</li> <li>Notwithstanding subdivision (b)(3)(A), if the material is transported to an entity that does not have scales on-site, the self-hauler is not required to record the weight of material but shall keep a record of the entities that received the organic waste.</li> </ol> </li> <li><del>(4)</del> <b>(3)</b> A self-hauler shall annually report the following to the jurisdiction in which it is located:                       <ol style="list-style-type: none"> <li>The total amount of <del>source separated</del> organic waste in tons that was self-hauled; and,</li> <li>The location or address of each entity that accepted self-hauled waste from the generator.</li> </ol> </li> <li><del>(5)</del> <b>(4)</b> A residential organic waste generator that self-hauls organic waste is not required to record or report the information identified in subdivision (b)(2) and (b)(3).</li> </ol> </li> </ol> </li> </ul>	
3715	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18988.4. Recordkeeping Requirements for Compliance with Jurisdiction Hauler Program</p> <p>jurisdiction must provide copies of all reports required by haulers to the Department (emphasis added). Jurisdictions, through their franchise agreements/contracts, have committed to protecting proprietary information which may result in an economic disadvantage should the information be disclosed to haulers' competitors. The Task Force recommends removing the requirement for jurisdictions to provide copies of all reports in order to protect the hauler's proprietary information.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul>	The comment refers to recordkeeping requirements for jurisdictions to retain. This information is not required to be reported publicly. To the extent that documents required to be retained in a jurisdiction's Implementation Record contains truly proprietary or trade secret information, there are existing protections built into the Public Records Act (Gov. Code Sections 6250 et seq.) to allow public agencies to withhold such information from public disclosure.

Comment Number	Received From	Question/Comment	Response(s)
		<p>(a) A jurisdiction shall include all relevant documents supporting its compliance with this article in the Implementation Record required by Article 14 of this chapter. 3716	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18989.1 Cal Green Building Code</p> <p>The “non-local entities” and “local education agencies” do not report to local jurisdictions and, in most cases, they are not regulated by the local jurisdiction’s building officials. As such, the Department is the best entity for managing the requirements of Section 18989.1. for these generators. The Department will be responsible for tracking and ensuring compliance by non-local entities and local education agencies.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p><b>(b) Non-local entities and local education agencies are to comply with requirements of Subsections (a)(1) and (a)(2) and reporting to the Department.</b></p>	A change to the regulatory text is not necessary. Article 5, Section 18986.1 and Section 18986.2 described the compliance requirements for non-local entities and local education agencies. For the purposes of these regulations, non-local entities and local education agencies are considered organic waste generators and have specific requirements to comply and are not held to the same standards as jurisdictions. Section 18996.7 does not require local jurisdictions to enforce against local education agencies. This enforcement will be conducted by the Department and that is made clear in other sections of the regulations.
3717	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18990.1. Organic Waste Recovery Standards and Policies</p> <p>Based on provisions of Subsection (c)(4), the proposed requirements of the Subsection(b)(3) contradict the decision in UNITED HAULERS ASSOCIATION, INC., ET AL V. ONEIDA-HERKIMER SOLID WASTE MANAGEMENT AUTHORITY ET AL., that prevents jurisdictions to utilize flow control.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(b)(3) Limit the export <del>outside</del> of organic waste to a facility, operation, property or activity outside the jurisdiction that recovers the organic waste through a method identified in Article 2 of this chapter.</p> <p>(c)(4) Prohibit a jurisdiction from arranging through a contract or franchise for hauler <b>or a self-haul organic waste generator</b> to transport organic waste to a particular solid waste facility or operation for processing or recovery.</p>	A change to the regulatory text is not necessary. United Haulers Association Inc., et al. v. Oneida-Herkimer Solid Waste Management Authority et al. states that an ordinance requiring waste go to a public facility does not violate the flow control restrictions of the Interstate Commerce Clause, does not authorize or require that municipalities be allowed to do so under the U.S. Constitution, nor does it prohibit a state from prohibiting such restrictions. State law explicitly promotes the free movement of material under the Integrated Waste Management Act, Public Resources Code Sections 40001 and 40002, and this restriction is designed to ensure that. The regulatory text was revised in response to this comment to remove the word "outside" for syntax purposes. Section 18990.1 (b)(3) prohibits the limitation of exports outside the jurisdiction, which is necessary to address the need for regional collaboration and to ensure the highest diversion rates are achieved to meet the statute’s goals.
3718	Rapp L., City of Lakewood -- refers	Section 18991.1. Jurisdiction Edible Food Recovery Program	Although jurisdictions will not enforce non-local entities or local education agencies, jurisdictions are still required to provide non-local entities and local education agencies with edible food

Comment Number	Received From	Question/Comment	Response(s)
	to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>The Task Force recommends that the State specify that jurisdictions are required to provide education and monitor compliance of commercial edible food generators but that this requirement excludes certain Tier Two commercial edible food generators, namely “non-local entities” and “local education agencies”. Because non-local entities and local education agencies do not report to local jurisdictions, the Department is the best entity for managing the requirements of Section 18991.1 for these generators. The Department will be responsible for tracking waivers and exemptions for these groups and would be in the best position to education, monitor, and conduct outreach to these generators.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:           <ol style="list-style-type: none"> <li>A jurisdiction shall implement an edible food recovery program that shall include the actions that the jurisdiction plans to take to accomplish the following:               <ol style="list-style-type: none"> <li>Educate commercial edible food generators <b>with the exception of non-local entities and local education agencies</b> as set forth in Section 18985.2.</li> <li>Increase <b>the access of</b> commercial edible food generators <del>access</del> <b>with the exception of non-local entities and local education agencies</b> to edible food recovery organizations and edible food recovery services.</li> <li>Monitor <b>the compliance of</b> commercial edible food generators <del>compliance with</del> <b>the exception of non-local entities and local education agencies</b> as required in Article 14.</li> <li>Increase edible food recovery capacity if the analysis required by Section 18992.1 indicates that the jurisdiction does not have sufficient capacity to meet its edible food recovery needs.</li> </ol> </li> <li>A jurisdiction may fund the actions taken to comply with this section through franchise fees, local assessments, or other funding mechanisms.</li> </ol> </li> </ul>	<p>recovery education and outreach pursuant to Section 18991.1 (a)(1) and Section 18985.2 of the regulations. CalRecycle would also like to clarify that jurisdictions are required to increase all commercial edible food generators' access to food recovery organizations and food recovery services including local education agencies and non-local entities located within the jurisdiction. In addition, it is clear from the definition of "non-local entity" and "local education agency" that they are not subject to the control of a jurisdiction's authority; therefore, is it implicit that jurisdictions are only to enforce on those they have authority over. CalRecycle is responsible for monitoring compliance and enforcement of those entities.</p> <p>Regarding the comment about CalRecycle being responsible for tracking waivers and exemptions for these groups and would be in the best position to educate, monitor, and conduct outreach to these generators, the regulatory text does not include commercial edible food generator waivers or exemptions.</p>
3719	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18991.2. Recordkeeping Requirements for Jurisdiction Edible Food Recovery Program</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:           <ol style="list-style-type: none"> <li>A jurisdiction shall include all documents supporting its compliance with Section 18991.1 in the Implementation Record required by Section 18995.2 of this chapter and shall also include at a minimum:               <ol style="list-style-type: none"> <li>A list of commercial edible food generators <b>with the exception of non-local entities and local education agencies</b> in the jurisdiction that have arrangements with edible food recovery organizations or services. <b>Non-local entities and local education agencies are to report to the Department, as appropriate.</b></li> </ol> </li> </ol> </li> </ul>	<p>Section 18991.2 requires jurisdictions to include all documents supporting its compliance with Section 18991.1 in the Implementation Record. To clarify, since jurisdictions are not required to monitor the compliance of non-local entities or local education agencies, jurisdictions are therefore not required to include non-local entities or local education agencies on their list pursuant to Section 18991.2 (a)(1). However, all commercial edible food generators in the jurisdiction (that are not non-local entities or local education agencies) that have established a contract or written agreement pursuant to Section 18991.3 (b) must be included on the jurisdiction's list required in Section 18991.2 (a)(1).</p> <p>CalRecycle would also like to clarify that jurisdictions are still required to provide all tier one and tier two commercial edible food generators with education and outreach. This includes commercial edible food generators that are non-local entities and local education agencies. Therefore, the jurisdiction must identify all commercial edible food generators in the jurisdiction (including non-local entities and local education agencies) and include the number of all those commercial edible food generators on its list required in Section 18994.2 (h)(1).</p>

3720	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18991.3. Commercial Edible Food Generators</p> <p>If a large event is held at a State-owned facility, such as a state park, the regulations should clarify that it is the responsibility of the Department to ensure compliance with this Section 18991.3. and Section 18997.2. Penalty Amounts.</p>	<p>To clarify, if the commercial edible food generator operating at the event or facility is subject to the jurisdiction's authority then it is the responsibility of the jurisdiction to monitor compliance and enforce. If the commercial edible food generator is not subject to a jurisdiction's authority, then is it CalRecycle's responsibility to monitor compliance and enforce.</p>
3721	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>It should be recognized that the local task force created pursuant to Section 40950 of the Public Resource Code can be an asset to the county and the cities within the county in data collection and planning efforts listed in Section 18992.1(a).</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions: <ul style="list-style-type: none"> <li>(a) "Counties in coordination with cities, <del>and</del> regional agencies located within the county, <b>and the local task force created pursuant to Section 40950 of the PRC,</b> shall:"</li> </ul> </li> </ul>	<p>A change in the regulatory text is not necessary because the regulations already identify local task forces as needing to be consulted.</p>
3722	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>There is major concern with jurisdictions being required to "verify" that capacity is available to them through contracts, permits, franchise or guarantees of access documentation. Considering that there is already a shortfall in organic waste management capacity statewide, it is inevitable that some jurisdictions will be without capacity. This may result in a competitive bidding war and/or implementation of flow control by some entities.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p>(a) (2) <b>The jurisdiction in which the facility is located, and all appropriate Regional, State and Federal non-local entities and local education agencies, shall</b> identify the amount in tons of <b>the existing</b> organic waste recycling infrastructure capacity <b>at each fully permitted facility</b>, which they are or intent to use, located both in the county and outside of the county, that is verifiably available to the county, and jurisdictions, non-local entities and local education agencies located within the county.</p> <p>(A) A county can demonstrate the capacity is verifiably available to the county or its jurisdictions through a contract, permit, franchise, or other documentation of the following:</p> <ol style="list-style-type: none"> <li><del>A guarantee of access to existing permitted or authorized capacity at a</del> <b>A binding guarantee of access and tonnage capacity to an existing and fully permitted facility, activity, operation, or property that recovers organic waste.</b></li> <li>A guarantee of access to new or expanded capacity at a <b>fully permitted</b> facility, activity, operation, or property that recovers organic waste that will be available prior to the end of the reporting period.</li> </ol>	<p>The purpose of this section is to require counties, in coordination with cities and regional agencies located within the county, to comply with provisions referenced in the following sections, and to provide CalRecycle with the ability to ensure that counties, cities, and regional agencies are cooperating on their overall organic waste capacity planning. The purpose of this section is to require that counties, and other local entities within their boundaries, work in conjunction with each other when compiling information related to estimating their organic waste tonnage, identifying existing organic waste recycling capacity, and estimating organic waste recycling capacity that will be needed. The capacity planning required by this section is necessary to ensure local jurisdictions are aware of and can address their capacity shortfalls and secure access to facilities that recovery organic waste. This will help increase organic waste recovery in California. A county is not required to account for waste generated outside its boundaries. Counties are required to identify the amount of organic waste that will be generated within the county and identify locations that can recycle that material that are verifiably available to the county and its jurisdictions. The capacity does not have to be located within the county's physical borders. It is true that one facility's verifiably available capacity may be used by a jurisdiction located outside of the county. In this case the county and its jurisdiction may have to locate another facility or contemplate the development on new capacity so they can meet their obligation to demonstrate that they have verifiable access to organic waste recycling capacity. This is necessary to ensure the sufficient organic waste recycling capacity is available for the state to achieve and maintain the organic waste reduction targets of SB 1383.</p>

3723	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>Cities or regional agencies are required to respond within 120 days to a county when contacted about the amount of organic waste in tons that will be disposed by the cities. A similar requirement also needs to be imposed on non-local entities and local education agencies because most likely these entities will be using facilities/capacity within the said county. Since counties are penalized financially for failing to estimate organic waste disposed, the Task Force recommends including language within this section that ensures that counties are not liable if cities, non-local entities, local education agencies or regional agencies fail to respond within the given time frame.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(b) A city, non-local entity, local education agency or regional agency contacted by a county pursuant to subdivision (a) shall respond to the county's request for the information necessary to comply with the requirements of this article within 120 days of receiving the request from the county.</p> <p><b>(1) If a city, non-local entity, local education agency or regional agency does not provide the necessary information to the County within the required timeframe, the County will not be held liable for failing to fully comply with requirements of this Article 11. <del>report on this jurisdiction's organic waste disposal.</del></b></p>	<p>Comment noted. CalRecycle would consider appropriate responsibility for failure to comply with capacity planning mandates and would exercise its enforcement discretion as appropriate. No change to the regulatory language is necessary.</p>
3724	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>The regulations state that the county shall conduct community outreach regarding locations being considered for new or expanded facilities, in- or outside the county. We recommend that this responsibility be the role of the jurisdiction (host city or host county for unincorporated area) in which the new or expanded facility is being proposed, and not solely the role of the county regardless of the location of the new or expanded facility.</p> <p>In addition, the regulations state that haulers and owners of facilities, operations, and activities that recover organic waste shall respond to the jurisdiction regarding potential new or expanded capacity at their facilities; however, it does not include "existing capacity".</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p>(c) In complying with this section, the <b>county, city, and/or regional agency depending on the location of the facility or activity</b> shall:</p> <p>(1) Consult with the Enforcement Agency and the local task force created pursuant to Section 40950 of the Public Resources Code on the status of locations for new or expanded solid waste facilities including the potential capacity increase each facility may provide if approved.</p> <p>(2) Consult with haulers and owners of facilities, operations, and activities that recover organic waste including, but not limited to, compost facilities, in-vessel digestion facilities, and Publicly Owned Treatment Works to gather information on the existing capacity and potential new or expanded capacity at those facilities, operations, and activities.</p>	<p>The community outreach required in Section 18992.1(c)(3) is intended for the facilities or activities located within the county. Counties can work in coordination with cities to provide this outreach. Nothing precludes cities from providing outreach. CalRecycle also addressed the timeframe and adding "existing and."</p>

Comment Number	Received From	Question/Comment	Response(s)
		(A) Entities contacted by a jurisdiction shall respond <b>within 60 days of receiving the request</b> to the jurisdiction regarding <b>existing and</b> potential new or expanded capacity at their facilities, operations, and activities, including information about throughput and permitted capacity necessary for planning purposes	
3725	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>The regulations state that the county shall conduct community outreach regarding locations being considered for new or expanded facilities. The regulations should clarify if this outreach must be done throughout an entire city that a new or expanded facility is being considered or within a radius of a certain number of miles from the address at which the facility is being proposed.</p> <p>For example, if a facility is being considered in City A, does the outreach need to take place in all areas of City A, only or does it need to take place within an "X" mile radius of the proposed facility?</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p>(3) Conduct community outreach regarding locations being considered for new or expanded facilities, operations, or activities to seek feedback on the benefits and impacts that may be associated with new or expanded facilities, operations, or activities. The community outreach shall:</p> <p><b>(A) Be conducted within a X mile radius of the location of the proposed new or expanded facility.</b></p> <p><del>(A)</del><b>(B)</b> Include at least one of the following forms of communication: public workshops or meetings, print noticing, and electronic noticing.</p> <p><del>(B)</del><b>(C)</b> If applicable be conducted in coordination with potential solid waste facility operators that may use the location identified by the county.</p> <p><del>(C)</del><b>(D)</b> Specifically include communication to disadvantaged communities that may be impacted by the development of new facilities at the locations identified by the county. If more than five percent of that community is defined as "Limited English Speaking Households," or "linguistically isolated," as defined by the U.S. Census Bureau, the jurisdiction shall provide the information required by this section in a language or languages that will assure that the information is understood by that community.</p>	Comment is on text that was removed from the final regulation and replaced with reference to the Government Code Section 7295 linguistic standards.
3726	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>According to SB 1383, CalRecycle, in consultation with CARB, shall adopt regulations that achieve the specified targets for reducing organic waste in landfills (i.e., a 50-percent reduction by 2020 and a 75-percent reduction by 2025). The current draft of the regulations state that a jurisdiction that lacks sufficient capacity shall "demonstrate how it will ensure there is enough new or expanded capacity to recover the organic waste currently disposed by generators within their jurisdiction by the end of the report period." The way it is currently written, it appears that the regulations are requiring that all organic waste that is currently disposed be recovered (or planned for recovery) by the end of the report period.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul>	A change to the regulatory text is not necessary because the proposed change would entail placing a numerical limit on a jurisdiction, which is not allowed by the statute.

Comment Number	Received From	Question/Comment	Response(s)
		<p>(d) If a county determines that organic waste recycling capacity, in addition to the existing and proposed capacity identified pursuant to subsection (a), is needed within that county, the county shall notify the jurisdiction or jurisdictions that lack sufficient capacity that each jurisdiction is required to:</p> <p>(1) Submit an implementation schedule to the Department that demonstrates how it will ensure there is enough new or expanded capacity to recover <b>an amount of the organic waste that is equivalent to a 50-percent reduction in 2014 organic waste disposal levels by 2020, and a 75-percent reduction by 2025</b> <del>currently disposed by generators within their jurisdiction</del> by the end of the report period <b>set forth in Section 18992.3 of this article.</b></p>	
3727	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>Including options that would require jurisdictions to plan for obtaining funding or provide financial support for expansion of organic waste recycling facilities would put an undue burden on jurisdictions. The Task Force recommends that this language be removed and replaced with other options including efforts by the Department and State to promote the development of new facilities.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(d)(1) Submit an implementation <del>schedule</del> <b>plan</b> to the Department that demonstrates how it will ensure there is enough new or expanded capacity to recover the organic waste currently disposed of by generators within their jurisdiction by the end of the report period.</p> <p>(A) The implementation <del>schedule</del> <b>plan</b> shall <del>include timelines and milestones for planning efforts to access</del> <b>strategies for ensuring</b> additional new or expanded capacity, including, but not limited to:</p>	Section 18992.1 does not contain language regarding funding.
3728	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>“Identify” is spelled incorrectly.</p> <p>Proposed Regulatory Text and Recommended Changes/Revisions:</p> <p>(d)(2) <del>Identify</del> <b>Identify</b> proposed new or expanded organic waste recycling facilities that will be used to process the organic waste identified pursuant to subsection (a)(3).</p>	Thank you for the comment, the error was corrected.
3729	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.1. Organic Waste Recycling Capacity Planning</p> <p>For capacity planning purposes, the regulations include “digestate and biosolids” within the organic waste material types. In the latest version of CalRecycle’s Characterization of Solid Waste in California report, these two materials are not included in the report. Since the regulations lists the waste characterization study as a means to estimate the countywide disposal, will CalRecycle provide counties with the disposal composition of these materials to assist in the capacity planning analysis? We recommend that CalRecycle provide counties with the statewide</p>	CalRecycle has revised Section 18992.1(f) in response to this comment. The change adds another information source that can be used for this requirement. The change is necessary because statewide or local characterization studies typically do not characterize digestate/biosolid, as they are not a part of the commercial and residential waste stream. However, this information should be limited to using a published report or another form of data generated by the appropriate solid waste management entities within the county that provides organic waste disposal tonnages or percentages for digestate/biosolids. This data would be used in addition to either statewide or local characterization studies.

Comment Number	Received From	Question/Comment	Response(s)
		disposal composition of digestate and biosolids before the first capacity plan is due to CalRecycle on February 1, 2022.	The RDRS system will have some reporting of the disposal and other end destinations for some digestate and biosolids (if the reporting entity is over the tonnage thresholds and is not just sending it to another POTW or if they are using it onsite). Since this data will include large generators, CalRecycle will include this data in the capacity planning tool.
3730	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	Section 18992.2. Organic Edible Food Recovery Capacity Counties are required to "Estimate the amount of edible food that will be disposed of by commercial edible food generators . . .". Currently, there are no tools to quantify the amount of edible food in the disposal stream. Therefore, we recommend that CalRecycle provide Counties with a methodology to estimate the amount of edible food within the disposal stream.	CalRecycle intends on developing a tool to assist counties, jurisdictions, and regional agencies with estimating the amount and types of edible food that will be disposed by commercial edible food generators that are located within the county and jurisdictions within the county. In addition, CalRecycle also intends on providing other resources to assist with completing capacity planning analyses. Please note that this requirement does not require estimates to be exact or absent of any error or uncertainty. Rather it requires that each estimate is defensible and conducted in compliance with the requirements of Section 18992.2.
3731	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	Section 18992.2. Organic Edible Food Recovery Capacity It should be recognized the local task force created pursuant to Section 40950 of the Public Resource Code can be an asset to the county and the cities within the county in data collection and planning efforts listed in Section 18992.2 (a). In addition, the regulations should include a requirement on cities, regional agencies and edible food recovery organizations to respond to and provide the requested capacity data/information to Counties or other applicable jurisdictions for edible food capacity planning purposes. Additionally, in Section 18992.2(a)(3), counties are required to "Identify proposed new or expanded edible food recovery organizations". Additionally, in Section 18992.2(b)(2), jurisdictions are required to "Consult with edible food recovery organizations. . . regarding existing, or proposed new and expanded capacity". This appears to be a very repetitive requirement. We recommend that Counties be required to focus on existing edible food recovery capacity and cities (jurisdictions) be required to focus on the new or expanded edible food recovery capacity. Proposed Regulatory Text and Recommended Changes/Revisions: (a) Counties in coordination with cities, <del>and</del> regional agencies located within the county, <b>and the local task force created pursuant to Section 40950 of the PRC</b> shall: (1) Estimate the amount of edible food that will be disposed of by commercial edible food generators that are located within the county and jurisdictions within the county. (2) Identify existing capacity at edible food recovery organizations that is available to commercial edible food generators located within the county and jurisdictions within the county. <del>(3) Identify proposed new or expanded edible food recovery organizations that will be used to process edible food identified pursuant to subsection (1).</del> <del>(4)</del> <b>(3)</b> Identify the amount of capacity at edible food recovery organizations that is necessary to recover 20 percent of the edible food that is estimated to be disposed.	Regarding the comment that "the regulations should include a requirement on cities, regional agencies, and edible food recovery organizations to respond to and provide the requested capacity data and information to Counties or other applicable jurisdictions for edible food capacity planning purposes." CalRecycle agrees with this comment and added language to the regulatory text specifying that if a jurisdiction or regional agency fails to provide the county with the information necessary to comply with the Article within 120 days, then the county is not required to include estimates for that jurisdiction in the report it submits pursuant to Section 18992.3. If a jurisdiction fails to comply with their requirements under Article 11, then the jurisdiction could be subject to enforcement action. With regard to the commenter's suggested changes to the edible food recovery capacity planning requirements, a change to the regulatory text was not necessary. A change to the regulatory text was not necessary because in order for a jurisdiction to be able to implement an effective edible food recovery program it is critical that they are familiar with the food recovery organizations and services that operate in their jurisdiction and identify proposed new or expanded edible food recovery organizations and food recovery services in case the demand for recoveries grows in their area. Even if the demand did not increase, this is still very important information to identify especially if a major food recovery organization or service stops operating in the jurisdiction. Each requirement in Section 18992.2 is critical to ensure that edible food recovery capacity is expanded, and that jurisdiction edible food recovery programs are successful. Each requirement in Section 18992.2 is in place to help ensure effective capacity planning measures are taken, which will ultimately serve to help keep edible food out of landfills, and be redirected to help feed people in need.

		<p><b>(b) A city or regional agency contacted by a county pursuant to subdivision (a) shall respond to the county's request for the information necessary to comply with the requirements of this article within 120 days of receiving the request from the county.</b></p> <p><b>(c) Food recovery organizations contacted by a jurisdiction shall respond to the jurisdiction regarding potential new or expanded food recovery capacity at their facilities, operations, and activities.</b></p> <p><del>(b)</del> <b>(d)</b> If a county identifies that new or expanded capacity is needed to recover the amount of edible food identified in (a)(4), then each jurisdiction(s) within that county that lacks capacity shall.</p>	
3732	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18992.2. Organic Edible Food Recovery Capacity</p> <p>The Task Force recommends that this section be expanded to add a subsection including appropriate provisions for compliance by non-local entities and local education agencies a consistent with requirements of this Article 11.</p>	<p>A change to the regulatory text is not necessary. Article 5, Section 18986.1 and Section 18986.2 described the compliance requirements for non-local entities and local education agencies. For the purposes of these regulations, non-local entities and local education agencies are considered organic waste generators and have specific requirements to comply and are not held to the same standards as jurisdictions. Section 18996.7 does not require local jurisdictions to enforce against local education agencies. This enforcement will be conducted by the Department.</p>
3733	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>For the purpose of this Article, the discussions and requirements need to be expanded to include appropriate provisions for compliance by non-local entities and local education agencies consistent with requirements of this article.</p>	<p>Regarding state agencies. State agency procurement is within the purview of the Legislature through the annual budgeting process, the Governor's office through Executive Orders, the Department of General Services through the establishment of the State Administrative Manual (SAM), and other control agencies that oversee budgeting and procurement. CalRecycle cannot supersede those existing authorities and impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>There are existing procurement requirements on state agencies and this rulemaking will not be adding to those. CalRecycle currently works with sister agencies to implement existing procurement-related legislation. For example, CalRecycle coordinates with the Department of General Services (DGS) to implement the State Agency Buy Recycled Campaign (SABRC), Public Contract Code 12200 to 12217, which requires state agencies to purchase products, including compost and paper, containing recycled content. Additionally, AB 2411 (McCarty, Statutes of 2018), requires CalRecycle to develop a plan for compost use in wildfire debris removal efforts, and to coordinate with the Department of Transportation to identify best practices for compost use along roadways. CalRecycle also worked with sister agencies through the AB 1045 process, which directed CalEPA, CalRecycle, the Water Board, ARB, and CDFA to "develop and implement policies to aid in diverting organic waste from landfills by promoting the composting of specified organic waste and by promoting the appropriate use of that compost throughout the state." These are examples of how CalRecycle works with sister agencies, but CalRecycle cannot impose procurement mandates on other state agencies without the necessary statutory authority, which SB 1383 lacks.</p> <p>Regarding "nonlocal entities", it is important to clarify that the populations in, for example, local education agencies and special districts are already included in a jurisdiction's population-based</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>procurement target; the population data published by the Department of Finance (DOF) includes universities, community colleges, and other local education agencies. The populations inherent in these entities are built into the procurement target calculation, and jurisdictions are encouraged to work with these entities to meet their procurement targets, which may be accomplished through a contract or agreement, such as a Memorandum of Understanding (MOU). Applying procurement targets to these entities, especially population-based procurement targets, would result in double counting individuals contributing to the procurement requirements.</p>
3734	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18993.1. Recovered Organic Waste Product Procurement Target</p> <p>While the Task Force recognizes the need and importance of market development, such efforts must be mandated by legislative authority with associated funding to assist local jurisdictions. The Task Force recommends that the requirement for local jurisdictions to procure recovered organic waste products be eliminated from the regulations, since this requirement is not supported by legislative authority.</p>	<p>SB 1383 provides a broad grant of regulatory authority to the Department in Public Resources Code Section 42652.5, "The department, in consultation with the State Air Resources Board, shall adopt regulations to achieve the organic waste reduction goals for 2020 and 2025 established in Section 39730.6 of the Health and Safety Code." That section also provides that the Department may "include different levels of requirements for local jurisdictions..."</p> <p>Furthermore, the Department also maintains broad, general rulemaking authority in Public Resources Code Section 40502, "The [department] shall adopt rules and regulations, as necessary, to carry out this division [Division 30 of the Public Resources Code] in conformity with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code." SB 1383 is included within Division 30.</p> <p>As stated in <i>PaintCare v. Mortensen</i> (2015) 233 Cal. App. 4th 1292, where the Department successfully prevailed in a court action alleging a lack of authority to pass administrative regulations, the Court stated that "[a]n administrative agency is not limited to the exact provisions of a statute in adopting regulations to enforce its mandate. '[The] absence of any specific [statutory] provisions regarding the regulation of [an issue] does not mean that such a regulation exceeds statutory authority . . . .' The [administrative agency] is authorized to 'fill up the details' of the statutory scheme."</p> <p>Consistent with CalRecycle's broad rulemaking authority, the proposed procurement requirements are designed to help achieve the organic waste diversion goals in SB 1383 by supporting markets for recovered organic waste products. The regulations have a direct nexus to achieving those organic waste diversion goals by preventing initially diverted organic waste from being disposed due to lack of end uses.</p> <p>Health and Safety Code Section 39730.8, also in SB 1383, refers to CalRecycle considering recommendations in the California Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for the use of biomethane and biogas. The IEPR recommended that "state agencies should consider and, as appropriate, adopt policies and incentives to significantly increase the sustainable production and use of renewable gas." As such, provisions for the procurement of renewable transportation fuel generated from recovered organic waste.</p> <p>The Air Resources Board's Short Lived Climate Pollutant Strategy states, "CalRecycle will continue to work towards strengthening state procurement requirements relative to use of recycled organic products."</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>The inclusion of compost as an eligible recovered organic waste procurement product aligns with policies and mandates for methane reduction as described in the Air Resources Board’s SLCP Strategy. The Economic Analysis conducted for the SLCP Strategy notes several scenarios that can achieve the needed reductions in short-lived climate pollutants from the waste sector, and every scenario modeled includes new compost facilities. The purpose of a compost procurement requirement is to establish markets for compost, which is a product generated by organics recycling facilities which the SLCP Strategy identified as in need of market development.</p> <p>Regarding paper procurement requirements, CalRecycle’s 2014 Waste Characterization Study found that paper accounts for 17.4 percent of the disposed waste stream. Requirements on jurisdictions to meet the recycled content paper procurement requirements will help grow markets for recycled content paper. Given the prevalence of paper in the disposal stream, increased procurement of recycled paper is needed to grow the market for recycled paper in order to achieve the organic waste reduction goals. This is necessary to help achieve the organic waste diversion goals in SB 1383 by ensuring an end use for diverted organic waste.</p>
3735	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18993.1. Recovered Organic Waste Product Procurement Target  In addition to compost and renewable transportation fuel, CalRecycle should add electricity generated from recycled organic waste to the list of recycled organic waste products that may be procured to meet the recovered organic waste procurement target. In-vessel digestion and biomass conversion are activities deemed to constitute a reduction in landfill disposal per Section 18983.1(b) (3) and (4) of the proposed regulations, respectively. In-vessel digestion produces biogas and biomass conversion produces syngas, both of which can be used to produce renewable natural gas (RNG) and electricity, as well as transportation fuel. and a variety of options to meet the procurement target. Producing compost in densely-populated urban and suburban jurisdictions can be challenging due to odors, space constraints, and permitting issues. The stringent requirements for pipeline injection of RNG transportation fuel in the state will make it extremely challenging for jurisdictions to procure RNG transportation fuel from remote production facilities and will require each jurisdiction to develop several of its own RNG production and on-site fueling facilities.  CalRecycle needs to be a tool rather than an obstacle in promoting development of facility using emerging technologies (such as low- and mid- temperate thermal conversion technologies) to develop products in assisting the reduction of organic waste landfill disposal.</p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications.  CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs.  SB 1383 requires state agencies to consider recommendations in the Energy Commission’s 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 “Renewable Gas” states that renewable gas is not “one size fits all” and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy’s Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends</p>

Comment Number	Received From	Question/Comment	Response(s)
			<p>electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p>
3736	<p>Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments</p>	<p>Section 18993.1. Recovered Organic Waste Product Procurement Target Should CalRecycle pursue any mandatory procurement requirements, then CalRecycle should phase in such requirements since the availability of these products may be limited in the first few years of program implementation and jurisdictions should not be penalized if they are unable to procure the required amounts of these products. Proposed Regulatory Text and Recommended Changes/Revisions: (f) For the purposes of this article, the recycled organic waste products that <del>must</del> <b>may</b> be procured are: (1) Compost. (2) Renewable transportation fuel <b>(3) Electricity</b> <b>(4) Renewable natural gas</b> <b>(5) Any other recycled organic waste products approved by the Department</b> (g) The following conversion factors shall be used to convert tonnage in the annual recycled organic waste product procurement target for each jurisdiction to equivalent volumes of recycled organic waste products: (1) One ton of organic waste in a recycled organic waste product procurement target shall constitute: (A) 19 diesel gallon equivalents, or "DGE," of renewable transportation fuel (B) 0.58 tons of compost. <b>(C) XX kilowatts of renewable electricity</b> <b>(D) XX cubic feet of renewable natural gas</b></p>	<p>The regulatory proposal provides jurisdictions with flexibility to choose the recovered organic waste products that fit local needs, including various renewable gas options such as transportation fuel, electricity, and heating applications. CalRecycle revised the proposed regulatory text to allow for the use of renewable gas for transportation fuel, electricity, and heating applications. CalRecycle is also allowing electricity from biomass conversion provided that the biomass facility receives feedstock from certain solid waste facilities. The intent is to be consistent with SB 1383 language to support beneficial uses of biomethane derived from solid waste facilities. The changes are necessary to provide more flexibility to jurisdictions in meeting the procurement target with recovered organic waste products in a manner consistent with local needs. SB 1383 requires state agencies to consider recommendations in the Energy Commission's 2017 Integrated Energy Policy Report (IEPR) for priority end-uses of renewable gas. Chapter 9 "Renewable Gas" states that renewable gas is not "one size fits all" and the best end-use depends on factors such as feedstock, location, and timing. While the IEPR identified renewable transportation fuel as the most likely near-term, cost-effective solution to maximizing greenhouse gas emissions reduction benefits, it also notes that priority end uses may evolve over time in reaction to state climate change goals, market transformations, and technology advancements. The IEPR supports electricity generation using in-state renewable gas, noting its utility towards meeting the waste reduction requirements and reducing short-lived climate pollutants. The IEPR recognizes that electricity can be more cost-effective than transportation fuel, and specifically mentions the Renewable Portfolio Standard (RPS) and the Bioenergy Market Adjusting Tariff (BioMAT) mechanisms that offer long-term, fixed-price contracts for exporting grid electricity. The proposed end uses also align with recommendations in the SLCP Strategy's Economic Analysis. While the analysis focuses on transportation fuel via pipeline injection as the highest value use of biomethane generated through organic waste diversion, it also identified barriers such as the economic uncertainty associated with RIN and LCFS prices. The report recommends electricity generation for use on-site and export to the grid as an alternative and potentially more stable revenue stream compared transportation fuel.</p> <p>Regarding an open-ended pathway for approval of "any other recycled organic waste products", CalRecycle disagrees with this approach for procurement. The broad range of potential recovered organic waste products raises the possibility that evaluation on an individual basis would be overly burdensome and would not be transparent to all stakeholders. As noted above, CalRecycle worked closely with the Air Resources Board to determine the eligibility of the recovered organic waste products in the current regulatory proposal using publicly available pathways and conversion factors.</p>

3737	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	For the purpose of this Article, include a section to stipulate appropriate provisions for compliance by non-local entities and local education agencies consistent with requirements of this article.	A change to the regulatory text is not necessary. Article 5, Section 18986.1 and Section 18986.2 described the compliance requirements for non-local entities and local education agencies. For the purposes of these regulations, non-local entities and local education agencies are considered organic waste generators and have specific requirements to comply and are not held to the same standards as jurisdictions. Section 18996.7 does not require local jurisdictions to enforce against local education agencies. This enforcement will be conducted by the Department.
3738	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18994.2. Jurisdiction Annual Reporting</p> <p>The Task Force recommends that CalRecycle clarify that the jurisdictions' reporting requirements under this Article 13 exclude non-local entities and local education agencies not receiving services through local jurisdictions' collection systems.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(b) Each jurisdiction shall report the following, relative to its implementation of the organic waste collection requirements of Article 3 of this chapter:</p> <p>(1) The type of organic waste collection service(s) provided by the jurisdiction to its generators <b>with the exception of non-local entities and local education agencies.</b></p> <p>(2) The total number of generators that receive each type of organic waste collection service provided by the jurisdiction <b>with the exception of non-local entities and local education agencies.</b></p>	If non-local entities and local education agencies are not generators receiving collection services from a jurisdiction, they are not part of the reporting requirements.
3739	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18994.2. Jurisdiction Annual Reporting</p> <p>Requiring a jurisdiction to be responsible for all tracking and reporting of self-haulers and non-exclusive franchise haulers as stipulates in subsections (d) and (f) requires strict regulation, inspection and enforcement activities by the jurisdiction while placing significant activities on small businesses like landscapers, small community composter, etc. To reduce the impact of this costly and time-consuming requirement, the proposal should allow the information collected from affected self-haulers pursuant to AB 901, Chapter 746 of the 2015 State Statutes.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(d) Each jurisdiction shall report the following relative to its implementation of waivers pursuant to Article 3.</p> <p>(1) The number of days an emergency circumstances waiver as allowed in 18984.13 was in effect and the type of waiver issued.</p> <p>(2) The tons of organic waste that were disposed as a result of waivers identified in (1).</p> <p>(3) The number of generators issued a de-minimis waiver.</p> <p>(4) The number of generators issued a physical space waiver.</p> <p>(5) A jurisdiction that receives a waiver from the Department pursuant to Section 18984.12 of Article 3 shall report the following information for each year the waiver is in effect:</p>	A change to the regulatory text is not necessary. Article 13 and 14 are necessary to set the minimum requirements for reporting and recordkeeping by jurisdictions so that the Department can review the jurisdiction's compliance with these requirements and the other requirements of this Chapter, including but not limited to the jurisdiction's implementation and enforcement of the Chapter within their jurisdiction. Unfortunately, the AB 901 regulations will not be collecting the data for tons disposed due to waivers or by self-haulers. A jurisdiction has the discretion to include a process to track this information in their local ordinances.

		<p>(A) The number of generators waived from the requirement to subscribe to an organic waste collection service.</p> <p><b>(6) In lieu of the above, the jurisdiction and self-haulers can utilize the data collected pursuant to AB 901, Chapter 746 of the State Statute of 2015.</b></p> <p>(f) A jurisdiction shall report the following regarding its implementation of the hauler oversight requirements of Article 7.</p> <p>(1) The number of haulers approved to collect organic waste in the jurisdiction.</p> <p>(2) The Recycling and Disposal Reporting System number of each facility that is receiving organic waste from haulers approved by the jurisdiction.</p> <p>(3) The number of haulers that have had their approval revoked or denied.</p> <p>(4) The number of self-haulers approved to operate within the jurisdiction.</p> <p>(5) The total amount, in tons, of source separated organic waste that was self-hauled by organic waste generators and reported to the jurisdiction pursuant to Section 18988.3.</p> <p><b>(6) In lieu of the above, the jurisdiction and self-haulers can utilize the data collected pursuant to AB 901, Chapter 746 of the State Statute of 2015.</b></p>	
3740	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	For the purpose of this Article, include a section to stipulate appropriate provisions and identify/specify the entity that would be responsible to measure compliance {i.e. conduct inspection(s), take enforcement action(s), recordkeeping, and possible imposition of penalties} of non-local entities, including federal agencies/facilities) and local education agencies} with appropriate requirements of this Article.	Comment noted. The Department has enforcement authority over these entities as described in Sections 18996.5, 18996.6, 18996.7.
3741	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18995.1. Jurisdiction Inspection and Enforcement Requirements</p> <p>There is concern with maintaining confidentiality of some information in that in order to comply with the regulations, the jurisdiction would need to provide its customer lists to CalRecycle.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul> <p>(c) A jurisdiction shall generate a written report for each inspection, route review, and compliance review conducted pursuant to this Chapter. Each report shall include, at a minimum, the following information, <b>unless such information is restricted by a confidentiality agreement or considered proprietary information:</b></p> <p>(1) Identifying information for the subject or subjects of the inspection, route review or compliance review, such as, but not limited to:</p> <p><del>(A) The name or account name of each person or entity.</del></p> <p><b>(A B) A general description of the route and address location covered by a route review.</b></p> <p><del>(B-C) A general description of the list of accounts reviewed for each compliance review.</del></p>	The documentation of inspections, route reviews, and compliance reviews are not reports to CalRecycle but instead are records to be maintained as a compliance record for the jurisdiction. The Public Records Act has provisions for the protection from disclosure of confidential and proprietary information and the proposed regulatory language reflects that.

Comment Number	Received From	Question/Comment	Response(s)
3742	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p><b>(C) A list of accounts, including addresses along with names of the account holders, determined by the jurisdiction to be subject to enforcement actions.</b></p> <p>Section 18996.2. Department Enforcement Actions Over Jurisdictions Pursuant § 42653 of the PRC, CalRecycle and CARB (not local jurisdictions) are responsible for identifying the barriers to organic waste recycling, the status of new organics recycling infrastructure development, the commitment of state funding to support infrastructure expansion, the progress in reducing regulatory barriers to the siting of organics recycling facilities, the timing and effectiveness of policies that will facilitate the permitting of organics recycling infrastructure, and the status of markets for the products generated by organics recycling facilities. Therefore, the Task Force recommends that the regulatory language include allowances for jurisdictions and other entities that demonstrate a substantial effort to comply with the regulations but are unable to do so due to factors outside of their control. Furthermore, the Task Force recommends that CalRecycle revise the regulations to incorporate provisions for jurisdictions demonstrating a “good faith effort” to comply. Public Resources Code § 42652.5 (4) states, “The department shall base its determination of progress on relevant factors, including, but not limited to, reviews conducted pursuant to Section 41825...” (See General Comment A.2.b).</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions: <ul style="list-style-type: none"> <li>(a) If the Department finds that a jurisdiction is violating one or more of the requirements of this Chapter, <b>and has not made a good faith effort to fulfill these requirements</b>, then the Department may take the following actions: <ol style="list-style-type: none"> <li><b>Hold a public hearing, which, to the extent possible, shall be held in the local or regional agency’s jurisdiction, to determine whether or not the jurisdiction has failed to make a good faith effort towards compliance.</b></li> <li><del>(1)</del> <b>(2)</b> Issue a Notice of Violation requiring compliance within 90 days. An extension may be granted for an additional 90 days, if the jurisdiction submits a written request to the Department within 60 days of the Notice of Violation’s issuance that includes: <ol style="list-style-type: none"> <li>Evidence that additional time is needed to comply.</li> <li>The steps the jurisdiction will take to correct the violation, including demonstration that it can comply within 180 days of the Notice of Violation’s issuance date.</li> </ol> </li> <li><del>(2)</del> <b>(3)</b> The Department may extend the timeframe for a jurisdiction to comply beyond 180 days from the Notice of Violation issuance date by issuing a Corrective Action Plan (CAP) for up to 24 months, setting forth steps to achieve compliance, if the jurisdiction has demonstrated, that it has made a <b>substantial good faith</b> effort to comply and there are extenuating circumstances that have prevented it from complying. <ol style="list-style-type: none"> <li>A jurisdiction shall submit a written request for the extension at least 30 days prior to the Notice of Violation final compliance date. The request shall provide documentation demonstrating its <b>substantial good faith</b> effort to comply, and the</li> </ol> </li> </ol> </li> </ul> </li> </ul>	<p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p>

The NOTC shall include the potential penalties for failing to comply.</li> <li>(C) If the violation continues after the NOTC compliance deadline of 30 days, the Department shall commence action to impose a penalty on the entity no later than 90 days after the issuance of the NOTC.</li> </ul> </li> <li>(2) For a second violation and all subsequent violations: <ul style="list-style-type: none"> <li>(A) Issue a Notice and Order to Correct (NOTC) requiring compliance within 30 days. The NOTC shall include the potential penalties for failing to comply.</li> <li>(B) If the violation continues after the NOTC compliance deadline, the Department shall commence action to impose a penalty on the entity no later than 90 days after its determination of the violation.</li> <li>(c) The Department may grant extensions to the compliance deadlines set forth in subsection (b) if it makes the following findings: <ul style="list-style-type: none"> <li>(1) The entity is making timely progress toward compliance, and</li> <li>(2) The entity's failure to comply within the deadline is due to: <ul style="list-style-type: none"> <li>(A) Extenuating circumstances outside its control, including a correction to a long term infrastructure or capacity change which requires a correspondingly longer length of time to achieve compliance. Examples of extenuating circumstances include acts of God such as inclement weather, <del>and</del> earthquakes, <b>wildfires, mudslides, flooding, and other emergencies or natural disasters</b>, and delays in obtaining discretionary permits or other government agency approvals, but where the entity's actions or failure to act was not the cause of the delay</li> </ul> </li> </ul> </li> </ul> </li> </ul> </li> </ul> </li></ul>	<p>The legislature amended SB 1383 to strip the requirement that CalRecycle use the "Good Faith Effort" requirement of AB 939 (Sher, Chapter 1095, Statutes of 1989) for enforcement for SB 1383. SB 1383 requires a more prescriptive approach and state minimum standards; jurisdictions must demonstrate compliance with each prescriptive standard. CalRecycle does exercise its enforcement discretion to allow consideration of "substantial efforts" made by the jurisdiction and the placement on a "Corrective Action Plan" (CAP). This effectively allows CalRecycle to consider efforts made by a jurisdiction, while not absolving them of responsibility. This structure allows CalRecycle to focus on compliance first and dedicate enforcement efforts to egregious offenders. The 75 percent organic waste diversion target in 2025 will not be reachable with the longer compliance process under the Good Faith Effort standard. Implementation of the prescriptive regulatory requirements of the regulation are designed to achieve the organic waste reduction targets, which is consistent with the explicit statutory direction</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(B) Limitations in infrastructure and the jurisdiction in which it is located is under a Corrective Action Plan (CAP) pursuant to Section 15.2 due to long term infrastructure or capacity deficiencies.</p> <p>(d) The Department shall provide the following information in any Notice of Violation or other enforcement notices:</p> <p>(1) The account name, name, or names of each person or entity to whom it is directed. Notices must go to the legally responsible party, such as a business owner, service account holder, property owner, etc.</p> <p>(2) The list and description of the violations of this chapter, including the section of this chapter being violated.</p> <p>(3) A compliance date by which the entity is to take specified action(s).</p> <p>(4) The penalty for not complying within the specified compliance date</p> <p><b>(e) If an entity can demonstrate to the Department that it has made a good faith effort to comply with the requirements set forth in this chapter, but is unable to fulfill those responsibilities or obligations, due to factors outside of its control, then the Department may consider a hardship allowance for said entity.</b></p>	
3747	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Article 16 needs to be expanded to provide and discuss in detail the following:</p> <p>(a) The process and the time frame that an affected organic waste generator and/or an entity could appeal the Department's decision regarding compliance with the requirements of this chapter and the agency that the appeal must be filed with.</p> <p>(b) What are the allowable uses of revenue generated from the collected penalties and the agency with the decision-making authority for its use?</p>	<p>To clarify, both local jurisdictions and CalRecycle have enforcement responsibilities under the proposed regulations. Procedures for CalRecycle's imposition of administrative civil penalties and related hearings are already included in Sections 18997.5 and 18997.6 of the proposed regulations. Administrative procedures for jurisdictional imposition of administrative civil penalties are committed to local discretion and control as informed by due process and other applicable requirements, such as Government Code Section 53069.4.</p> <p>Regarding uses of penalty revenue, SB 1383 was silent on this issue. As such, use of local penalty revenue is left to applicable local requirements and discretion. Department penalty revenue is required to be deposited in the Integrated Waste Management Account pursuant to Public Resources Code Section 47901 and appropriated consistent with the requirements of Government Code Section 13332.18.</p>
3748	Rapp L., City of Lakewood -- refers to Los Angeles County Solid Waste Management Committee/ Integrated Waste Management Task Force comments	<p>Section 18997.2. Penalty Amounts</p> <p>See General Comment A.2.a.</p> <p>The monetary penalties for Property and Business Owners should not be based on established penalty severity levels. The penalties should have a maximum limit so as not to disproportionately penalize certified small businesses, non-profit organizations, or other entities for whom the penalties may cause substantial hardship.</p> <p>The monetary penalties for residential organic waste generators should be given their own category in Table 1 separate from all other organic waste generators. The penalties for residential organic waste generators should not be based on established penalty severity levels. The penalties should have a maximum limit so as not to disproportionately penalize economically disadvantaged communities in the state.</p> <ul style="list-style-type: none"> <li>Proposed Regulatory Text and Recommended Changes/Revisions:</li> </ul>	<p>CalRecycle has revised section 18997.2 in response to this comment. The change modified 18997.2(b) to be consistent with local penalty requirements in the Government Code by removing per day penalties.</p> <p>Also, A change to the regulatory text is not necessary. The legislature, in SB 1383, directed CalRecycle to adopt regulations that require specified action from jurisdictions, including regulations that require jurisdictions to impose requirements on entities subject to their jurisdiction and authorizes penalties. The Chapter allows the flexibility to consider jurisdiction's differences and unique challenges by allowing the jurisdiction to develop and adopt their own enforceable ordinances that meet or exceed the requirements of the Chapter. The penalty ranges in section 18997.2 are consistent with Government Code sections 53069.4, 25132 and 36900 which already apply to penalties levied by jurisdictions. These set the maximum penalties that local agencies may impose. Regarding fees, SB 1383 provides broad discretion for local jurisdictions to charge and collect fees to recover its costs in complying with the regulations. These regulations do not curtail that statutory authority.</p>

Comment Number	Received From	Question/Comment	Response(s)
		<p>(a) A jurisdiction shall impose penalties that are equivalent or stricter than those amounts in Table 1 of this section, <b>except in cases where these penalties may cause substantial hardship to certified small businesses, non-profit organizations, economically disadvantaged communities, or other applicable entities</b>, and shall be calculated by determining the type of violations that have occurred, the number of violations that have occurred, and the corresponding penalty level in subsection (b).</p> <p>Table 1 can be viewed in the original comment letter.</p> <p>(b) Consistent with the requirements prescribed in Government Code Sections 53069, 25132 and 36900, the penalty severity levels are as follows:</p> <p>(1) For a violation classified as Level 1, the amount of the base penalty may be \$50–\$500 per violation.</p> <p>(2) For a violation classified as Level 2, the amount of the base penalty may be \$250–\$1000 per violation.</p> <p>(3) For a violation classified as Level 3, the amount of the base penalty may be \$500–\$2,500 per violation.</p> <p>(c) For the purposes of subsection (a), revoking, suspending, or denying a permit, registration, license, or other authorization shall be considered stricter than the penalties in this section.</p> <p><b>(d) For a violation classified as Level 0, certified small businesses, non-profit organizations, residents of economically disadvantaged communities, and other applicable organic waste generators may submit an application to the Department or to the jurisdiction imposing penalties requesting the penalties to be waived due to substantial economic hardship.</b></p> <p>Pursuant to Chapter 3.67 of the Los Angeles County Code and the California Integrated Waste Management Act of 1989 (Assembly Bill 939 [AB 939]), the Task Force is responsible for coordinating the development of all major solid waste planning documents prepared for the County of Los Angeles and the 88 cities in Los Angeles County with a combined population in excess of ten million. Consistent with these responsibilities and to ensure a coordinated, cost-effective, and environmentally sound solid waste management system in Los Angeles County, the Task Force also addresses issues impacting the system on a countywide basis. The Task Force membership includes representatives of the League of California Cities-Los Angeles County Division, County of Los Angeles Board of Supervisors, City of Los Angeles, the waste management industry, environmental groups, the public, and a number of other governmental agencies.</p>	
3678	Rapp, L., City of Lakewood	The City supports Statewide efforts to reduce greenhouse gas (GHG) emissions, including SLCP emissions. However, we are concerned that the proposed regulations, as currently drafted, place a disproportionate burden on local governments to achieve the desired SLCP emissions reductions (more than any other stakeholder group, including State agencies). The City is also concerned that the proposed regulations are highly punitive and rely on excessive	Comment noted. The commenter is expressing an opinion regarding the overall regulatory model used by CalRecycle. CalRecycle has determined this model is necessary to achieve the ambitious organic waste diversion mandate in statute.

Comment Number	Received From	Question/Comment	Response(s)
		<p>micromanagement and reporting, which would further add to the expected high cost of implementing the new requirements for all affected stakeholders. For these reasons, the City of Lakewood shares the concerns and recommendations expressed in the enclosed February 25, 2019, letter from the Los Angeles County Solid Waste Management Committee/Integrated Waste Management Task Force to CalRecycle in referenced to the subject matter.</p>	
2026	Redic, Wanda; Oakland Public Works	<p>Edible Food Generators are usually heavily regulated and inspected by Environmental Health agencies state-wide as well as a host of other agencies. Additional inspections by an additional agency is onerous and disruptive to a business operation. Additionally, solid waste and recycling staff do not have the expertise needed to inspect these businesses to determine whether they are in compliance with proper handling of food that is intended for donation. For example, if a donor does not maintain food at a certain temperature while awaiting collection, that food can be deemed as having been deliberately rendered unsuitable for donation. It will then become the responsibility of the receiving entity to compost it since it could not be donate</p>	<p>Section 18981.2 specifies that a jurisdiction may designate a public or private entity, which includes local environmental health departments to fulfill its regulatory responsibilities. If a jurisdiction designated their local environmental health department to monitor commercial edible food generator compliance, then the inspections would not be duplicative. Rather the local environmental health department could add to their existing food facility inspections to verify that commercial edible food generators are maintaining records. In addition, if a jurisdiction designated their environmental health department to monitor commercial edible food generator compliance, then health inspectors could also provide guidance to commercial edible food generators about safe surplus food donation best practices and food safety requirements. Please note that SB 1383 does not include food safety requirements. Food safety requirements are established by the California Health and Safety Code and enforced by environmental and public health departments.</p>
2027	Redic, Wanda; Oakland Public Works	<p>While we have attempted to include Env. Health staff in the planning process, we cannot compel them to assist us. We also do not have the reach necessary to gain cooperation from their management staff. Each jurisdiction desiring the same cooperation would have to spend time cultivating a relationship with the local environmental health agency. We urge CalRecycle to work with the proper State authority such as Department of Public Health to: gain cooperation with inspection implementation; make these inspections more efficient by adding them to the section of code the health inspectors reference. Env. Health professionals are already in these businesses and can perform inspections with the proper expertise which is more efficient and cost-effective. We would be happy to work out a division of labor to receive their reports and perform the necessary reporting obligations.</p>	<p>Comment noted. The commenter is expressing an opinion about dealing with practicalities in inspection requirements after the regulations are finalized as opposed to suggestions on regulatory language.</p>
2032	Redic, Wanda; Oakland Public Works	<p>Our existing franchise agreements are already set and we would not be able to increase rates to implement this legislation. The City would very much like guidance around enacting fees with details about available methods particularly in light of Prop. 218 and any other State legislation that may impact our ability to gain the revenue necessary to implement.</p>	<p>Comment noted. This comment is not specific to any aspect of the regulatory text. CalRecycle intends to provide guidance to jurisdictions throughout 2020 and 2021 prior to the implementation date of the regulatory requirements. CalRecycle will additionally continue to provide regulatory guidance as the regulations take effect.</p>
6464	Relis, P., CR&R	<p>As a result of these forward looking efforts, CR&amp;R is proposing that consideration be given to implementing a Performance Based source-separated collection system. We believe that implementation of a Performance Based source separation system as an "Alternative Compliance Pathway" (ACP) will offer the appropriate flexibility for those jurisdictions that have already proactively taken the initiative to</p>	<p>Comment noted, CalRecycle amended the draft regulatory text to include a performance-based source separated organic waste collection service provision.</p>

Comment Number	Received From	Question/Comment	Response(s)
		commence with ambitious organic waste recycling programs. This will also ensure that their efforts and investments are not in vain.	
6465	Relis, P., CR&R	See letter. The main features of our ACP would include the following parameters: A jurisdiction would implement a Performance Based source-separated collection system that requires 90% of its generators to use a three-bin Source Separated Organic Waste Recycling program by 2025 and 75% of its generators use a three -bin source separated organic waste recycling program by 2020.	Comment noted. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.
6466	Relis, P., CR&R	See letter. All organic waste contained in a green container would be required to be processed at a facility or facilities that recovers at least 50% in years 2020-2024 and 75% thereafter of the organic content the facility receives.	See newly added Article 17, Performance-Based Source Separated Organic Waste Collection Service, addressing the need for a new alternative compliance pathway that was developed in response to comments.
6467	Relis, P., CR&R	See letter. A jurisdiction implementing this system would be considered in compliance with specific aspects of the prescribed collection requirements, e.g. education and outreach, contamination and monitoring and enforcement requirements. Record keeping and reporting requirements could be relaxed to reflect the more streamlined set of obligations.	See newly added Article 17, Performance-Based Source Separated Organic Waste Collection Service, addressing the need for a new alternative compliance pathway that was developed in response to comments.
6468	Relis, P., CR&R	see letter for context A jurisdiction would be required to send material to a facility that meets the 50% and 75%, respective recovery standard. The facility recovery rate shall be based on a rolling annual average, where the average for the previous 12 months will be determined quarterly. If two consecutive quarters fall below 50/75 percent, the jurisdiction would be out of compliance.	See newly added Article 17, Performance-Based Source Separated Organic Waste Collection Service, addressing the need for a new alternative compliance pathway that was developed in response to comments.
6469	Relis, P., CR&R	see letter for context The jurisdictions obligations under the ACP would be as follows: • The jurisdiction would be required to provide a mandatory three-bin organic waste collection system to every generator subject to its authority	Comment noted, CalRecycle amended the draft regulatory text to include a performance-based source separated organic waste collection service provision. Comment noted. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.
6470	Relis, P., CR&R	see letter for context The jurisdiction could exempt up to 10% of generators from service beginning in 2025 and 25% of its generators from service beginning in 2020.	Comment noted, CalRecycle amended the draft regulatory text to include a performance-based source separated organic waste collection service provision. Comment noted. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.
6471	Relis, P., CR&R	see letter for context The jurisdiction must have a system for requiring automatic service for new businesses and residences (e.g. business license, lease requirements, initial service start-ups and new construction requirements).	Comment noted, CalRecycle amended the draft regulatory text to include a performance-based source separated organic waste collection service provision. Comment noted. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.

Comment Number	Received From	Question/Comment	Response(s)
6472	Relis, P., CR&R	see letter for context The source-separated organic waste (all organics in the green container) collected by the jurisdiction or its hauler must be transported to a facility that recovers 50% through the year 2024 and 75 percent thereafter of the organic content it receives.	See newly added Article 17, Performance-Based Source Separated Organic Waste Collection Service, addressing the need for a new alternative compliance pathway that was developed in response to comments.
6473	Relis, P., CR&R	see letter for context The jurisdiction's disposal container waste must not exceed specified organic waste levels as expressed in regulations.	See newly added Article 17, Performance-Based Source Separated Organic Waste Collection Service, addressing the need for a new alternative compliance pathway that was developed in response to comments.
6474	Relis, P., CR&R	see letter for context • The jurisdiction must comply with basic recordkeeping and reporting requirements to verify the above.	CalRecycle has revised Section 18988.3 in response to this comment. The change omits the requirement for a self-hauler to annually report the amount and location/address of source separated organic waste in tons that was self-hauled in the jurisdiction. In respect to Section 18994.1, the reporting requirement for the tons of organic waste that were disposed as a result of waivers identified in Subsection (1), the data collected in regard to AB 901 in the Recycling and Disposal Reporting System (RDRS) does not track the amount of organic waste disposed. If it is considered solid waste, the regulations do not require solid waste disposed to be divided between "trash" and "green material," so obtaining this information from RDRS is not possible.
6475	Relis, P., CR&R	The jurisdiction would be waived from the following requirements and/or regulations under the proposed ACP: • Article 3 - Organic Waste Collection Services o Section 18984.5 - Container Contamination Minimization - exempt from all this section o Section 18984.6 - Record Keeping for Container Contamination Minimization o Section 18984.7 - Container Color Requirements - exempt from all this section o Section 18984.8 - Container Labeling Requirements - exempt from all this section	Thank you for the comment. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements that apply to collection systems established under Article 3.
6476	Relis, P., CR&R	see letter for context The jurisdiction would be waived from the following requirements and/or regulations under the proposed ACP: Article 4- Education related only to organic waste recycling -exempt from all (food recovery still applies)	Thank you for the comment. CalRecycle added Article 17 to allow jurisdictions to implement a performance-based source separated organic waste collection system as an alternative to some if the prescriptive requirements, including in Section 18985.1..
6477	Relis, P., CR&R	see letter for context The jurisdiction would be waived from the following requirements and/or regulations under the proposed ACP Article 12 - Procurement of Recovered Organic Waste Products o Section 18993.1- Recovered Organic Waste Product Procurement Target o Section 18993.2 - Record Keeping for Recovered Organic Waste Procurement Target	CalRecycle has revised the regulatory text to exempt rural counties and jurisdictions located within those counties from the procurement requirements until January 1, 2027.
6478	Relis, P., CR&R	see letter for context The jurisdiction would be waived from the following requirements and/or regulations under the proposed ACP: Article 14 - Enforcement Requirements o Section 18995.1- Jurisdiction Inspection and Enforcement Requirements o Section 18995.2 - Implementation Record and Recordkeeping Requirements	See newly added Article 17, Performance-Based Source Separated Organic Waste Collection Service, addressing the need for a new alternative compliance pathway that was developed in response to comments.
6479	Relis, P., CR&R	see letter for context The jurisdiction would be waived from the following requirements and/or regulations under the proposed ACP: Title 14- Chapter 3 Minimum Standards - Article 6.2 - Operating Standards	See newly added Article 17, Performance-Based Source Separated Organic Waste Collection Service, addressing the need for a new alternative compliance pathway that was developed in response to comments.
