Incorporation of SB 1383 Regulatory Changes into Solid Waste Information System (SWIS) Inspection Forms 52, 53, 73, 93, and 104

The following Solid Waste Information System (SWIS) inspection forms are being updated for the implementation of the SB 1383 regulations that go into effect on January 1, 2022.

- Disposal Facility Inspection Report (52)
- Transfer/Processing Facility Inspection Report (53)
- Transfer Operation Inspection Report (73)
- Compostable Materials Handling Operation and Facility Inspection Report (93)
- In-Vessel Digestion Operation and Facility Inspection Report (104)

Please see the attached document that lists the regulation(s) that are being added to the respective inspection form. The attached changes will be reflected on the applicable inspection forms in the SWIS Agency Portal on January 1, 2022.

Please note that if you begin writing your December 2021 inspection reports after January 1, 2022, the report will include the new regulations. If possible, start/draft your December 2021 inspection reports by the end of 2021. The SB 1383 regulations added to the inspection forms should not be cited as violations or areas of concern on inspection reports for inspections conducted prior to January 1, 2022, since the effective date for the new SB 1383 regulations is January 1, 2022.

In addition, for all inspection reports, the section/category headings (e.g. Permits, Operating Criteria, etc.) will be listed in alphabetical order on the Complete Inspection Reports. The drop-down options when adding or editing a violation, area of concern, or regulation comment will also be in alphabetical order.

This announcement is being sent on behalf of the Permitting and Assistance Branch, CalRecycle.
