

SB 54 Plastic Pollution Prevention and Packaging Producer Responsibility Act

Update to Covered Material Categories (CMC)

Released July 1, 2024

Public Resources Code (PRC) Section 42061(a)(1) requires CalRecycle to establish and post a list of material categories covered by [SB 54 \(Allen, Chapter 75, Statutes of 2022\)](#) (called “covered material categories”) by July 1, 2024. As defined in PRC 42041(f), covered material categories (CMCs) are categories that include covered material of a similar type and form, as determined by the department.

CMCs were previously published on December 28th, 2023, pursuant to PRC 42061(c) and (d), which require CalRecycle to identify categories that contain recyclable or compostable materials. This document provides an update of covered material categories. However, it does not include an update to determinations of recyclability or compostability by CMC. CalRecycle will update the recyclability and compostability determinations annually (starting January 1, 2025), to meet requirements of PRC 42061(e).

The table below is an updated list of covered material categories. The list includes 94 CMCs. A list of changes that have been made since the prior publication is provided at the end of the document.

Each covered material category identifies a combination of material type and form that describes covered materials. The categories are intended to apply to each detachable component of covered material individually. For items composed of multiple materials, “Material Class” and “Material Type” refer to the material constituting the greatest percentage of an item’s weight. Forms indicating “with a plastic component” refer to items that contain plastic but for which plastic is not the material constituting the greatest percentage of the item’s weight.

The first through fourth columns of the table describe the covered material in each category.

- The **first column** of the table lists a category identification code (category ID) for each covered material category.
 - Each category ID starts with a number that references the year of publication of the list. For example, the “24” in category “24_M1N” refers to the July 1, 2024 update.
 - Each category ID has one or two letters that indicate the Material Class of the covered material category:
 - G = Glass
 - C = Ceramic
 - M = Metal
 - PF = Paper and Fiber

- P = Plastic
 - WO = Wood and Other Organics
- Category IDs ending with “N,” indicate the category is for material **without** a plastic component.
- Category IDs ending with “P,” indicate the category is for material **with** a plastic component.
- An asterisk (*) indicates the category has changed since the last published list of CMCs ([December 28, 2023 publication](#)). All changes are listed by category ID at the end of this document.
- Note: When a CMC changes it is assigned a new category ID, and its previous category ID is retired. As a result, the category IDs may not be in numerical order.
- The **second column** describes the Material Class.
- The **third column** describes the Material Type.
- The **fourth column** describes the Form of the covered materials included in that covered material category, including whether that covered material includes a plastic component.
