

1 TRANSCRIPT OF THE CALRECYCLE MONTHLY PUBLIC MEETING

2 OCTOBER 16, 2024

3 **Video:**

4 Making a waste free future happen together. Your partner for  
5 change, CalRecycle, is advancing world leading reforms to cut waste  
6 and build circular use systems for all materials. CalRecycle managed  
7 grids Launch the next phase of clean up to return clean safe  
8 properties to wildfire survivors. Plus new funding for businesses to  
9 help California turn more empty beverage containers into new products  
10 and to restoring tribal lands that have been overrun by illegal  
11 dumping. Join California's climate fight and shift to a circular use  
12 economy. CalRecycle's monthly public meeting starts now.

13 **End Video**

14 Maria West: Good morning, everyone. Thanks for joining us for  
15 CalRecycle's October 2024 Public Meeting, where we share important  
16 progress and updates as we work together to build a circular system  
17 that cuts waste and reuses all materials and products. Before we  
18 begin, here is a safety message and language access message.

19 **Video**

20 In the event of a fire alarm, we are required to evacuate. Take  
21 your valuables and use the exit signs.

22 Do not use the elevators. If you cannot use the stairs, you will  
23 be directed to a protective vestibule inside a stairwell.

24 If relocated, exercise caution while crossing the street.  
25 Language shouldn't be a barrier when it comes to protecting our air,  
26 water and land. CalRecycle is simulcasting this meeting in both  
27 English and Spanish.

1 Click the public meeting banner at the top of CalRecycle.ca.gov  
2 for a link to our webcasts in English and Spanish.

3 If you're attending this meeting in person in Byron Share  
4 Auditorium, we have Spanish interpretation devices available.

5 Let our team on the left-hand side of the dais know if you need  
6 one

7 (Message repeated in Spanish)

8 **End Video**

9 Maria West: To help our Spanish language live interpreter, during  
10 this meeting, we will briefly pause after each item to give our  
11 interpreters time to relay the information and to respond to your  
12 requests, we have changed our order starting a couple of months ago.  
13 We will give you a chance to give live public comments throughout the  
14 meeting on each topic instead of taking all comments at the end of the  
15 meeting. So, we don't want to take comments for agenda items that  
16 haven't happened yet. So, if you're calling in with a comment or  
17 question on a specific agenda item, we will let you know it's time to  
18 call in right before the agenda item. I hope that makes sense. So  
19 please do not call in before your agenda item begins.

20 Thank you. Here's a little bit more about public comments.

21 **Video:**

22 California wants your input on recycling and trash pollution  
23 issues. Join CalRecycle's decision making process by making a live  
24 public comment on any of today's monthly public meeting agenda items  
25 in person or by phone. Microphones are available for those of you in  
26 the room with in-person comments. If you're joining remotely, you can  
27 call in with your comment. Just click the public meeting banner at the

1 top of our website and click the public comments button for step-by-  
2 step caller instruction.

3 **End Video**

4 Maria West: Let's see. So please call in now if you have comments  
5 on the upcoming items: the director's report includes the including  
6 the newly passed laws and disaster debris recovery operations, and  
7 California's plastic pollution prevention and packaging producer  
8 responsibility at law.

9 I think that's a little bit of a tongue twister but. So our first  
10 agenda item today is the director's report CalRecycle Director Zoe  
11 Heller is here with updates. Good morning, Zoe.

12 Zoe Heller: Good morning, Maria, and good morning, everybody.  
13 Happy Autumn. Nice to see you all. We have a lot to get through today,  
14 so I'll keep the remarks relatively short.

15 We're very excited that we published a draft of the SB 54  
16 regulations yesterday. I'll also say the tongue twister that Maria  
17 just said, the Plastic Pollution Prevention and Packaging Producer  
18 Responsibility Act. So this is a 15 day comment period. We published  
19 them yesterday, so it'll be open through the 29th.

20 Please visit our website for more information. And just want to  
21 acknowledge that I heard from several people that there's some  
22 challenges accessing some parts of our website this morning. We're  
23 working on that. It seems to be across CalEPA and hopefully that will  
24 be up and going again very, very soon.

25 A reminder that the SB 54 Advisory Board will meet October 25th  
26 and November 1<sup>st</sup> from 10 to 4, and there's more information as to how  
27

1 you can participate on our CalRecycle Events page, which you can find  
2 on our homepage.

3 Mindy McIntyre is going to go over our the new legislation that  
4 that passed this past year that just passed that the governor just  
5 signed. And I just want to thank Mindy for also in her role as chief  
6 deputy. She's been acting as our legislative director in this interim  
7 time. And yesterday, the governor announced the appointment of a new  
8 legislative director for CalRecycle. Allegra Curiel who was formerly  
9 with the department will be starting with us in a couple of weeks. And  
10 when she joins we'll have her come up at our at our next public  
11 meeting and provide a little bit more on her background. I'm very  
12 excited to announce another new addition to our team today. I'd like  
13 to welcome Jennifer Hogan who just joined last week and Jennifer is  
14 our new or Jen rather is our new deputy for disaster debris recovery  
15 operations. So relatively new but very important office within  
16 CalRecycle and critical given the need for ensuring that we have safe  
17 and efficient debris removal after most commonly wildfires in  
18 California, but other disasters as well. So welcome, Jen. So Jen joins  
19 us from the California Earthquake Authority, where she served as the  
20 mitigation director. Prior to that, she was with the California Office  
21 of Emergency Services as assistant director for Hazard Mitigation  
22 Assistance and State and state Hazard mitigation officer. I won't go  
23 through Jen's entire resumé, but she has a deep experience in  
24 emergency response and recovery, and we couldn't be more excited to  
25 welcome her to the CalRecycle executive team. So welcome, Jen.

26 \*applause\*

1 Jennifer Hogan: All right, that's me. So thank you very much,  
2 Zoe. I appreciate it. For disaster debris recovery operations.  
3 CalRecycle has been mission tasked by CalOES to oversee disaster  
4 cleanup operations in both northern, northern and southern California.  
5 Our incident management teams are deployed to Chico and Bakersfield to  
6 clear debris from more than 500 properties that were destroyed by the  
7 Park, Thompson, Borel and Boyles Fires.

8 Assessment and Monitoring Contractors are actively assessing  
9 properties enrolled in the Consolidated Debris Removal program to  
10 verify site conditions and disaster debris and hazard tree removal  
11 currently out for solicitation and physical debris removal operations  
12 are expected to begin before the end of the month. That's it.

13 Zoe Heller: Thank you, Jen. And we're hearing that some people  
14 are unable to access the call in number to provide public comment from  
15 the website right now. So, Maria, do you have that number?

16 Maria West: Yes, they're getting it to me and I will share it  
17 momentarily.

18 So we're having an issue with our website with PDFs downloading.  
19 Our I.T. crew is working diligently to resolve it.

20 And I will give you the number in just a few minutes. But in the  
21 meantime, California lawmakers advanced exciting new circular economy  
22 reforms this season, this session, including the nation's first  
23 extended producer responsibility program for textiles and apparel.  
24 Chief Deputy director Mindy McIntyre is here with an overview of newly  
25 signed laws that impact CalRecycle and its mission.

26 Mindy McIntyre: Thank you, Maria. First, I'd like to thank our  
27 legislative affairs team who did a stellar job this year, including

1 Anthony, Reggie, Lana, Delina, Andrea and Delina. Sorry about that.  
2 For some reason I just all of a sudden got names mixed up. Okay, so  
3 the legislature had a number of bills this year in our area. And I  
4 would also like to thank Erin Rodriguez, who's a fantastic leg  
5 director, really looking forward to Allegra coming on as well. But we  
6 had a number of bills. 11 were signed into law, including new EPR  
7 programs. This year, just one new EPR program, and that's textiles SB  
8 707, which creates a new extended producer responsibility program for  
9 apparel and textiles. Two other bills relating to EPR are AB 863,  
10 which made a number of changes to the carpet stewardship program and  
11 SB 1143, which expands the Paint Stewardship program to include  
12 architectural paint, non-industrial coatings and paint and other paint  
13 related products.

14 Under consumer products, we have SB 1053 which will require  
15 retailers to sell only paper bags at the point of sale and no longer  
16 allowed for the sale of reusable plastic or other plastic bags at the  
17 point of sale. SB 1280 requires propane cylinders to be reusable or  
18 refillable after 2028. AB 2346 is relating to 1383 increases the  
19 flexibility for jurisdictions to meet their procurement requirements  
20 for recovered organic products. AB 2902 extends rural exemptions from  
21 organics recycling requirements and includes bear bins and excludes  
22 fare bins from meeting colored lid requirements. SB 1046 directs  
23 CalRecycle to develop programmatic EIR for small and medium size  
24 composting facilities

25 Under beverage container only three this year. AB 2511 extends  
26 the sunset date for the Plastic Market Development program. SB 1113  
27 extends the sunset and repeal date of the Beverage Container Pilot

1 program to 2034. And then SB 551 allows manufacturers of plastics CRV  
2 containers to submit consolidated reports to meet recycled content  
3 requirements.

4 That's all for this year. Thanks Maria.

5 Maria West: Thank you so much. And just to get back to the  
6 technical issues that we're having today, we're having trouble on our  
7 website with downloading PDFs. So usually when you call in, all the  
8 instructions are on a PDF because that phone number changes every  
9 month. So this month and I will give the number as we go through the  
10 meeting today. But the number to call in if you have comments and you  
11 can do that when you're when right after we talk about each of the  
12 subjects or at the very end the number is (669)900-9128. That phone  
13 number again is (669)990-9128. And the meeting ID unfortunately, is a  
14 little long. It's 813 4851 8939 that's 81348518939. And then the  
15 passcode is 83 58 62, that's 83 58, 62. And if you didn't get that,  
16 you may be able to rewind the broadcast. But also I will give the  
17 number again.

18 So I'm moving along to keep California up to date on new law  
19 implementation. CalRecycle published today, a new Responsible Textile  
20 Recovery Act of 2024 Web page, and you can check out the page for  
21 progress updates on regulation, development, implementation management  
22 and enforcement of producer stewardship programs. Its general Overview  
23 At this time, as we just began implementation, California is building  
24 a comprehensive circular strategy to reduce and reuse all materials.  
25 And to that end, a new web page has also been published on  
26 California's Zero Waste Plan with development updates and an  
27 implementation timeline.

1 So now to public comments. Again, the number is (669)900-9128,  
2 (669)900-9128.

3 Meeting I.D. 813 4851 8939.

4 Just have to bear with us today. 813 is meeting I.D. 813 4851  
5 8939 and the passcode is 83 58 62 again 83 58 62 and pound after each  
6 of the meeting I.D. and the passcode. So now to public comments.

7 Do we have any public comments on the director's report,  
8 legislative updates or disaster debris removal in the room right now?

9 Doesn't look like anyone's moving to come to the front. If you  
10 have one, you can come to the microphone up here.

11 Okay. And then do we have any callers calling in at this time?

12 Lance Klug: No.

13 Maria West: Okay. So again, you will have an opportunity if you have  
14 been unable to get a hold of us so far, you will have an opportunity  
15 at the end of the meeting to address any of the agenda items. And so  
16 now we will move on. And looking ahead, let's see if please call in  
17 now if you have comments on upcoming items which include the Mattress  
18 Recycling Council's 2023 annual report and 2025 annual budget,  
19 approval of MED-project's proposed changes to its stewardship plan for  
20 home generated sharps waste or the annual biomass conversion  
21 reporting.

22 And bear with me again, if you need to call in its (669)900-9128,  
23 (669)900-9128 and oh they've, they've added it to our they've added it  
24 to our slideshow, which is really helpful. I think everyone will  
25 agree. And we do have a caller was it is a caller for the end now.  
26 Right. And we can take that call.

1 Lance Klug: Thanks for the last four digits of 1109. Please go ahead  
2 and unmute yourself and go ahead and make your comment.

3 Heidi Sanborn: All right. This is Heidi Sanborn and can you hear  
4 me?

5 Lance Klug: We can.

6 Maria West: Yes.

7 Heidi Sanborn: Okay. Oh, great. Thank you. I just wanted to thank  
8 you for the update, um, and request that because as before is so  
9 important and we have not been able to download these regulations off  
10 the website and yesterday for some of us it was Indigenous Indigenous  
11 Peoples Day and we were off. We would ask that there be a one-day  
12 delay and the comment period which is already extremely tight for  
13 regulations that are so important. So we just wanted to make that  
14 comment. Thank you so much.

15 Zoe Heller: Thank you, Heidi. We'll take that under  
16 consideration.

17 Maria West: Any more call callers?

18 Lance Klug: No.

19 Maria West: Okay. So we're going to move on to the Mattress  
20 Recycling Council, top topic, MED-Project and annual biomass  
21 conversion reporting. And you can see the phone number, meeting I.D.  
22 and and the hashtag. That's well it was on the webpage, the slideshow.  
23 And then there it is. So if you're going to call, grab those. All  
24 right.

25 So now we're going to welcome environmental program manager  
26 Cynthia Dunn to provide updates on our extended producer  
27 responsibility programs.

1 Good morning.

2 Cynthia Dunn: Thank you. Good morning. Would you like to give the  
3 phone number one more time? No, I'm just teasing. I think we're all  
4 going to know it by heart

5 Maria West: No everyone wants me to do that.

6 Cynthia Dunn: We have two mattress stewardship program updates  
7 today, so I'll just get into it. On September 30th, the director  
8 approved Mattress Recycling Council's 2023 Annual Report and 2025  
9 Program Budget. Mattress Recycling Council MRC reported achieving all  
10 statewide and program goals in 2023 and collected 1.4 over 1.4 million  
11 program units, recovered 61 million pounds of mattress materials and  
12 increased program convenience for California residents and businesses.

13 As part of its 2025 budget, MRC did determine that it needed to  
14 increase the mattress recycling charge for the first time to fund its  
15 program in a prudently in a prudent and fiscally responsible manner,  
16 which it's required to do by statute. So starting January 1, 2025, the  
17 mattress recycling charge will increase from \$10.50 to \$16 per unit.

18 Next, for a home generated Sharps Waste Stewardship Update. On  
19 August 23rd, MED-Project notified CalRecycle of proposed changes to  
20 its stewardship plan regarding local agencies. So the change allows  
21 med project to arrange for the removal of home generated sharps waste  
22 from a local household hazardous waste facility unless it elects to  
23 reimburse the local agency for transportation and disposal costs, both  
24 consistent with statute. MED-Project's plan previously only described  
25 the reimbursement to local agencies for transportation and disposal  
26 costs.  
27

1 On September 20th, the director approved MED-Project's proposed  
2 changes. And for more information on either of these items, you can  
3 find links in today's agenda and also to receive updates directly on  
4 these or any of the other EPR programs, you can subscribe to the work  
5 of delivery, the surf. That's all I have. Back to you.

6 Maria West: Thank you. Thank you, Cynthia. So, again, we'll take  
7 comments after the biomass conversion topic. But next on the agenda is  
8 the Environmental Program Manager, Dan Brown, who joins us with  
9 CalRecycle's annual update on California biomass facilities.

10 Good morning Dan.

11 Dan Brown: Good morning. Okay, so biomass conversion facilities  
12 turn materials like wood waste and nut shells into electricity. SB 498  
13 requires annual reporting on the amounts, types and sources of biomass  
14 conversion in California. Next slide, please.

15 California has 24 active biomass conversion facilities. Back in  
16 the 1980s, there were more than 50 in the state. The decline is due in  
17 part to cheaper sources of energy, like natural gas and solar, the  
18 cheap costs of landfilling as an alternative to biomass, and  
19 fluctuations in subsidies for these facilities.

20 Next slide, please. For 2023, facilities reported on material  
21 accepted from four source categories.

22 More than 800,000 tons came from agriculture, 900,000 tons from  
23 in-forestry, over 800,000 tons came from mill residue, and finally  
24 over 600,000 tons from urban sources.

25 Next slide, please. Overall, the amount accepted by biomass  
26 facilities decreased by about 400,000 tons or 11% from 2022 to 2023.

1       Agricultural sources decreased by 4%, in-forestry increased by  
2 10%.

3       This increase in in-forestry is a small step in dealing with all  
4 of our dead and dying trees, but only addresses about 1% of the amount  
5 that needs to be dealt with. Mill residue decreased by about 21%, and  
6 finally urban decreased by 24%. Next slide, please.

7       So taking a look at this chart and to see how these tonnages have  
8 decreased by about a million tons over the last eight years, we see  
9 in-forestry with an upward trend with all other sources on a slight  
10 decline.

11       So feel free to email questions to biomass reporting at  
12 calrecycle.ca.gov.

13       Maria West: Thank you, Dan. And so now to public comment so it  
14 looks like we have that number on the screen with the meeting ID on  
15 the screen and the passcode on the screen and press six to unmute  
16 yourself, do we have any callers or actually we have someone in the  
17 room. So I'll take first eight comments in the room.

18       Public Commenter: A quick clarification on mattresses. What  
19 happens to them, I'm assuming? Are they reprocessed? What what happens  
20 to the mattresses?

21       Cynthia Dunn: Thank you for your question. Yeah, the mattresses  
22 are collected from the Mattress Recycling Council's collection system  
23 and they're taken and some are renovated and the others are that are  
24 able to be which most of them are, there, they're dismantled and the  
25 materials are then sent to other markets for, for recycling.

26       Yeah. Yeah.  
27

1 Maria West: Thank you so much Cynthia. And did we have any  
2 callers online?

3 Lance Klug: No calls.

4 Maria West: Okay. So now we will see. We will look ahead on the  
5 next section for those who may call in or speak in the room.

6 We are now going to move on to the Beverage Container Recycling  
7 Program and Grants and Loans. So if you have any comments on the  
8 beverage container recycling program grants and loans, including  
9 eligible eligibility criteria for Beverage Container Loan Program,  
10 awards for the Tire Incentive Grant Program, or awards for the Farm  
11 and Ranch Solid Waste Cleanup and Abatement Grant Program. Please call  
12 in now and your call will be taken after we give our updates. So now,  
13 Beverage Container Recycling Program Deputy Director Amy Cameron has  
14 some program updates to share. Good morning, Amy.

15 Amy Cameron: Good morning, Maria. Good morning, everyone. We're  
16 excited to announce some upcoming workshops and new resources  
17 available to beverage retailers and other program participants. These  
18 are part of the Beverage Container Recycling Program reforms to make  
19 redemption easier for consumers and get more recycled materials to  
20 manufacturers to make new products. Beverage dealer registration is  
21 now available online.

22 Reforms require beverage dealers in convenience zones to register  
23 with CalRecycle. In 2025 stores less than 5000 square feet or less  
24 than \$1.5 million in annual sales, excluding fuel, will be exempt from  
25 redemption requirements.

26 Larger stores in unserved convenience zones must choose to either  
27 redeem, in-store or join the dealer cooperative system. We encourage

1 dealers in California to register now through the Dreams Portal System  
2 on our website. We have step by step registration instructions  
3 available on the CalRecycle YouTube channel.

4 CalRecycle is hosting a series of workshops and webinars in the  
5 coming weeks. On October 29th, we will host an informal, hybrid  
6 workshop for new beverage container types starting at 10 a.m..

7 The 2025 rate hearing for co-mingled and segregated beverage  
8 containers is set for October 31st at 1:30 p.m.

9 Maria West: Hold on for a moment we're having feedback in the  
10 room. This is our Oh, there we go. Okay, go ahead, Amy. Thanks.

11 Amy Cameron: Thanks for the beat.

12 Maria West: I feel like they were doing a phone number beat, and  
13 I should make a song out of that.

14 Amy Cameron: Back to workshops for beverage container. We will  
15 host another Dealer Register Registration webinar on November 20th,  
16 and that will be on Zoom. So please register. You can find  
17 registration information on our website or are welcome to join us in  
18 person for all of the October events.

19 Last but not least, we are also planning an informal workshop in  
20 Southern California to share concepts on a new methodology for  
21 handling fees. We are finalizing the details, but the workshop will  
22 happen in the second or third week of November and you will also be  
23 able to participate by Zoom. Please sign up to the beverage container  
24 recycling program's LISTSERV for instant updates. Back to you, Maria.

25 Maria West: Thanks, Amy. And just an aside for the retailers whom  
26 we call dealers in California to register through the Dream System,  
27 you can go to our home page at [CalRecycle.ca.gov](http://CalRecycle.ca.gov) and there is an

1 orange banner across the page right under all of our progress numbers  
2 on recycling that gives you a link to register and also a link to more  
3 information on dealer cooperative redemption options. So we're trying  
4 to make that as easy for you to find and and do as possible. So let us  
5 know if you need any assistance.

6 So now, CalRecycle funding is available to help boost recycling  
7 businesses in California and Division of the Circular Economy Deputy  
8 Director Michelle Martin has a new loan and grant announcements to  
9 share.

10 Good morning, Michelle.

11 Michelle Martin: Thanks, Maria. Good morning, everybody. We're  
12 happy to announce the new Beverage Container Recycling Loan Program.

13 It will provide low interest loans to build new certified  
14 beverage container processing facilities that buy empty beverage  
15 containers from certified recyclers, drop offer collection community  
16 service and curbside programs, and prepare these recyclable materials  
17 for sale to end users where recyclable materials are turned into new  
18 products.

19 The program will prioritize funding for projects in underserved  
20 areas in California. The total allocation for this program is \$30  
21 million, with a maximum loan amount of 10 million and minimum of 3  
22 million. Loan terms are typically up to ten years with a 4% interest  
23 rate. Loan applications will be accepted continuously and awarded  
24 subject to available of available program funds.

25 For more details, please see the public notice on our website.  
26 Public comments on this item will be taken through October 27<sup>th</sup> and  
27 please send any of those comments to [loans@calrecycle.ca.gov](mailto:loans@calrecycle.ca.gov).

1 And next. Today we're announcing \$2.35 million entire incentive  
2 program grant awards to turn nearly 1.5 million waste tires into new  
3 products. The six grantees will help California cut pollution in  
4 landfilling by turning waste tires into things like rubber tiles for  
5 gym flooring, patio flooring and roofing shingles.

6 And next. Since 1997, CalRecycle has awarded over 13 million in  
7 Farm and Ranch Grants to clear over 1000 sites of tires, appliances,  
8 vehicles, construction debris and other trash.

9 Let's watch a quick video on the difference. Grant funded  
10 cleanups are making in communities.

11 **Video:**

12 Narrator: A peach orchard is flourishing again in the heart of  
13 Yuba County after a \$154,000 CalRecycle funded illegal dumping  
14 cleanup.

15 DJ Baker: I would say there's easily debris out here dumped at  
16 least once a month.

17 Narrator: The piles of trash grew so much in this orchard and  
18 neighboring properties in the Central Valley community of Olivehurst  
19 that they were visible from Highway 70. Yuba Sutter County Resource  
20 Conservation District says it has been able to remove over 100 tons of  
21 waste to date.

22 DJ Baker: We've had anything from tires, sofas and couches,  
23 refrigerators, freezers, washers, dryers, wood scrap.

24 Narrator: Illegal dumping with slowing down operations at the  
25 peach orchard, threatening employee safety and raising concerns about  
26 fires and toxic contamination.

1 DJ Baker: All of those waterways within orchards and next to the  
2 levee systems, it can contaminate the fish habitat, wildlife habitat  
3 and go into the river and on downstream.

4 Narrator: Grant funded gates. Signs and surveillance cameras are  
5 now in place to keep illegally dumped trash from spoiling the harvest,  
6 giving the land back to farmers to feed Californians.

7 **End Video**

8 Michelle Martin: We're announcing \$250,000 in farm and ranch  
9 cleanup grants to Kings County and Pit River Tribe.

10 The tribal cleanup project will work to clear and prevent future  
11 dumping on six sites with a history of agricultural use.

12 Thank you. And back to you Maria.

13 Maria West: Thanks so much, Michelle. And now we're going to go  
14 back to public comments. So as you can see, the slide on screen has  
15 the number meeting ID and passcode. And we will now take public  
16 comments on the Beverage Container Recycling Program updates or the  
17 Grant and Loan announcements.

18 First we'll take any comments from the public present in our  
19 Sacramento, CalEPA headquarters meeting room today and looks like we  
20 have a commenter.

21 Good morning.

22 Public Commenter: Hey again. I'm from Nevada County Solid Waste  
23 Commission and stuff and you know CRV is one of my projects, one of my  
24 pet projects and trying to get it going, I want to clarify is what  
25 you're offering for the stores, because it's my understanding that the  
26 stores are paying like \$100 a day fine for not doing anything. And  
27 then so now you're going to do make something available so that

1 there's there's a way for the stores to be able to make money or at  
2 least break even on taking these in, because we have we have nothing.  
3 You know, we have the facility is 25 minutes away from just about  
4 everything. And we do have Save Mart putting in one of those reverse  
5 vending machines, which is really cool. But because I want to I'm  
6 working with the supervisors next week and I want to find out what is  
7 this for the dealers? How do we get to those guys? I mean, it's  
8 stores, you know.

9       Zoe Heller: Yeah. Great question and thanks for asking it. We  
10 also are very interested in getting more convenience throughout the  
11 state in ways that make sense for those geographies within the state.  
12 So starting January 1st, dealers are required to either redeem in  
13 store or join a new program called the Dealer Cooperative.

14       And we're developing the regulations right now for those dealer  
15 cooperatives. And what those are are essentially a nonprofit. We'll  
16 start a program working with various dealers in California to come up  
17 with a solution for convenient redemption so it can look like more of  
18 those reverse vending machines or backdrop or mobile recycling to be  
19 able to best serve that community.

20       Okay, so we'll be wrapping up those regulations soon. We'll  
21 probably start seeing some applications coming in in the new year that  
22 will identify where there's interest in in sighting these dealer  
23 cooperatives throughout the state.

24       But in the meantime, there are some entities that have received  
25 some grant funding for us to put in some of these new technologies  
26 throughout the state, like the one that you mentioned to provide that  
27 additional level of convenience.

1 Amy, did you want to fill in any any gaps there?

2 Amy Cameron: No, I think you have it covered. But just to  
3 confirm, you are correct, beginning January 1st, 2025, dealers will no  
4 longer have the opportunity to pay the \$100 of fee to not participate  
5 in our program. They will either have to redeem in person or join the  
6 dealer.

7 Commenter: And that's starting January 25.

8 Amy Cameron: Yes, January 1st, 2025. For dealers that are over  
9 5000 square feet and have more than \$1.5 million in annual sales.

10 Public Commenter: Okay. So Danner, Ward Danner, always gets a  
11 name backwards word there. He's he's our representative I think for  
12 Nevada County. You turned me on to him before. And would he be the  
13 person that we would talk to to bring in to help the dealers and get  
14 help, help the county and the supervisors to start setting this up? I  
15 don't mean like if I'm just one person, right?

16 Yeah, right. How do we get some connection?

17 Zoe Heller: Yeah. You know, Ward works on our local assistance  
18 team, so he's a great contact for you. But if you specifically want to  
19 talk about some of these in the beverage container program, you can  
20 always follow up with Amy and her team, but we'll all we'll make sure  
21 that you're connected to the right person regardless of who you reach  
22 out to.

23 Public Commenter: Yeah I feel like I don't really know where to  
24 go, but we want to and we think it's important. We know it's important  
25 to our people. You know, I'm a retailer. My career, you know, I care  
26 about the customer. And the customer is going I'm not going 25 minutes  
27

1 to take 25, \$0.25 back, you know, and but it adds up. We have one. I  
2 have to tell you about this real fast Penn Valley is near us.

3 And there's a guy there that started about four years ago to get  
4 citizens who care. They all pick up Wildwood like Wildwood area. And  
5 every month he takes a load to a recycler because he can't take it to  
6 the facility. Because the facility says it's too much for us. He takes  
7 it to a recycler somewhere, Rocklin whatever. And this last month, he  
8 got \$900 back.

9 He donates that to the Interfaith Ministry. Now, to me, this is,  
10 this is it. This is where I'm at is let them get that money and give  
11 it to good use in the community. Okay? Yeah. All right. So what am I  
12 doing? Amy Okay.

13 Zoe Heller: Thank you.

14 Maria West: Are there any other comments in the room? Okay, so  
15 now we will take any comments by phone. Are there any callers?

16 Lance Klug: None by phone, No.

17 Maria West: All right. So we will now move on and now we will. If  
18 you are interested in commenting, please call in now for the topics of  
19 approval of the Grover Hot Springs Burn Dump Remediation under the  
20 Solid Waste Disposal and Co-Disposal Site Cleanup Program and the  
21 Solid Waste Facility Permit and Waivers updates.

22 So let's get right to the latest Solid Waste Disposal on Co-  
23 Disposal Site Cleanup Project. Approved sites may be eligible for  
24 CalRecycle funding when the responsible party is or unable

25 to pay for actions needed to protect public health and the  
26 environment. Our deputy director, Mark De Bie joins us now with this  
27 item. Good morning, Mark.

1 Mark De Bie: Good morning, Maria. The Grover Hot Springs Burn  
2 Dump site will be remediated as a CalRecycle led cleanup project. It  
3 is about a quarter of an acre and it's in Alpine County and it is  
4 located within Grover Hot Springs State Park near Markleeville.

5 CalRecycle is working with the U.S. Forest Service on this  
6 project and it will be mostly removing metals from the surface of an  
7 old burn dump and then placing additional soil on top as much as two  
8 feet.

9 The work is being performed during this month and the estimated  
10 cost is \$62,000 and that funds funds are coming out of the solid waste  
11 cleanup program.

12 And moving on to facility permits and emergency waivers. Here's a  
13 quick overview of California facility standards and a statewide  
14 facility permit update from the environmental program manager, Pauline  
15 Lawrence.

16 **Video:**

17 Narrator: Protecting the health of Californians and their land,  
18 Food, water and air is a big job. Local State and federal agencies  
19 play different roles to enforce public health and environmental safety  
20 standards. In California, solid waste local enforcement agencies  
21 process applications, issue, and enforce permits for solid waste  
22 facilities. These include landfills, transfer stations, compost  
23 facilities, or similar operations.

24 CalRecycle must verify permits are consistent with state  
25 requirements. Permits can only address areas within the authority of  
26 local enforcement agencies and CalRecycle. Check out the link below  
27 for more detailed information.

1       Emergency waivers allow temporary changes to solid waste permit  
2 requirements in response to local or state disasters. Local  
3 enforcement agencies may approve the waivers, which are good for up to  
4 120 days and may be extended. CalRecycle must review approved waivers  
5 and can condition limit, suspend or terminate them. Check out the link  
6 for more detailed information.

7       For waste tire facilities, CalRecycle processes applications,  
8 issues and enforces waste tire permits. These include requirements to  
9 make tires are stored and processed in a way that reduces potential  
10 threats from fire and disease carrying vectors like mosquitoes. Check  
11 out the link for more detailed information.

12       Pauline Lawrence: Since last month's public meeting, the  
13 department concurred or issued on for Sacramento County. The  
14 department issued on October 4th, 2024, a new minor waste hire  
15 facility permit for Rubicon Logistics. Action was needed December 7,  
16 2024. For the City of Los Angeles., the department concurred on  
17 October 8, 2024, a modified solid waste facility's permit for Crown  
18 RecyclingSservices. Action was needed October 15, 2024.

19       Continuing on this month's agenda for Kern County, U.S. Borax  
20 Inc. This is a modified solid waste facilities permit. Action is  
21 needed. December 31st, 2024. For Riverside County, Coachella Valley  
22 Compost. This is a revised solid waste facilities permit. Action is  
23 needed October 23rd, 2024.

24       For Madera County, USA Tire Recycling. This is a new minor waste  
25 tire facility permit. Action is needed February 19th, 2025.  
26  
27

1 Orange County, Rainbow Disposal Co, Inc or Rainbow Transfer  
2 Recycling, Inc. This is a modified solid waste facilities permit.  
3 Action is needed. October 28, 2024.

4 For Monterey County, Madison Lane Material Recycling Center.  
5 This is a new minor waste tire facility permit. Action is needed  
6 February 26, 2025.

7 For Merced County, Highway 59 Landfill. This is a revised solid  
8 waste facilities permit. Action is needed November 9th, 2024.

9 New to this month's agenda, for Monterey County Converted  
10 Organics, LLC. This is a modified solid waste facilities permit.  
11 Action is needed Nov 17, 2024.

12 Preliminary review of the permit package indicates the following  
13 proposed changes: modifying current solid waste facilities permit from  
14 a compost activity to an in-vessel digestion activity.

15 Also for Monterey County, AgroThrive Inc. This is a revised solid  
16 waste facilities permit. Action is needed November 17th, 2024.

17 Preliminary review of the permit package indicates the following  
18 proposed changes: Updates of the solid waste facilities permit from a  
19 compost activity to an in-vessel digestion activity, an increase in  
20 the maximum daily tonnage from 71.4 tons to 350 tons, an expansion of  
21 the facility from one acre to six acres and an increase in the maximum  
22 traffic volume per day from 15 vehicles to 16 vehicles per day.

23 For San Luis Obispo County, B. Goodrow Inc. This is a revised  
24 compostable materials handling facility Permit action is needed.  
25 December 13, 2024. CalRecycle is a designated enforcement agency for  
26 this jurisdiction. Preliminary review of the permit package indicates  
27 the following changes. Increase to the permitted maximum tonnage from

1 200 tons per day to 300 tons per day. Increase to the design capacity  
2 from 50,000 cubic yards to 50,000 tons, which is approximately 100,000  
3 cubic yards.

4 **End Video**

5 Mark De Bie: So you can see that we've been very busy or  
6 paulina's group has been very busy. And in fact there's some  
7 additional items that came to us after the agenda was put together. So  
8 Paulina's here to tell us about those items.

9 Paulina Lawrence: Thank you, Mark. So we have two additional  
10 items we want to add in. For Imperial County, we have Salton City  
11 Solid Waste site. This is a modified solid waste facilities Permit  
12 action is needed. December 8, 2024.

13 Preliminary review of the permit indicates the following proposed  
14 change: Remove the remaining capacity and replacing it with the  
15 permitted capacity. And then we received one waiver from Ventura  
16 County. This is for Simi Valley Landfill and Recycling Center. On  
17 October 8, 2024, Ventura County Resource Management Agency, local  
18 enforcement agency, issued a stipulated agreement that allows a  
19 temporary waiver of solid waste facility permit terms 4C and 17BC  
20 excuse me 17B5 pertaining to the permitted maximum tonnage until  
21 December 31st, 2024, due to a temporary emergency. Thank you.

22  
23 Maria West: Thanks Paulina. So before we move on to the final  
24 comments segment, I just want to let you know that you can find more  
25 information on any of today's agenda items just go to CalRecycle's  
26 home page at [CalRecycle.ca.gov](http://CalRecycle.ca.gov) and click on either the public meeting  
27 web banner at the top of the home page or if you're watching the

1 webcast live or if you're watching the recording, you can find it  
2 halfway down CalRecycle's home page with a link to all things for that  
3 meeting, including the agenda and associated public notices. So now it  
4 is time for the final public comments. And we before we ask for  
5 comments in the room again, you can see the number on the screen just  
6 for ADA compliance, I'll read it one more time. I'm sure you're all  
7 excited about that. The number is (669)900-9128. That's (669)900-9128.  
8 The meeting ID is 813 4851 8939 pound symbol or what we now call  
9 hashtag symbol. And then again 813 4851 8939 pound symbol and then the  
10 passcode is 83 58 62 pound and then again 83, 58, 62 pound or the hash  
11 tag symbol.

12 And so now we will ask, are there any comments on the most recent  
13 agenda items or any other topic in the room today?

14 Looks like we have one.

15 Same Public Commenter: This is why I drove down from Grass Valley  
16 so I could talk to you. Grass Valley, Nevada County is delayed in the  
17 1383 process, but that January there there are new facilities ready  
18 and they should be starting it. So we're in the process of all the all  
19 the little things and they reviewed that process with on solid waste  
20 commission the other day and I have some some questions like the first  
21 thing that that I wonder about is that waste management said we're  
22 required to buy all new bins, right? And so I went, Oh yeah, oh yeah.  
23 And they have to have decals or they have to be imprinted with  
24 whatever new, new things is that right. Okay. I mean, anyway, that's  
25 what, that's what they said. It was their requirement. I'm challenging  
26 their requirement. Okay. And so my brain says, Oh really? And what are  
27

1 they going to do with the old ones? Because they're plastic and  
2 they're methane. And, well, like, did anybody think about this?

3 Zoe Heller: Yes. Thank you for that question. And we'll get back  
4 to you on the the specifics and the regulations.

5 Commenter: The fix?

6 Zoe Heller: Well, with the specifics and the regulations.

7 Commenter: Oh specifics I thought you were going to fix it for  
8 me:

9 Zoe Heller: But my understanding is that the existing bins can go  
10 through there, their lifespan before the new bins have to be  
11 purchased. But I want to make sure that I am correct on that and get  
12 back to you at the specifics.

13 Commenter: That's important.

14 Zoe Heller: Or Mark, you're here. Yeah, Yeah.

15 Mark De Bie: Yes. There is an option to continue using old bins  
16 and there are some nuances to it and my understanding is a number of  
17 jurisdictions that have changed out bins have found ways to recycle  
18 the old bins so they don't just throw them in the landfill. Some  
19 people might, but there are options to recycle the use bins.

20 Public Commenter: Okay, I think I need to know the options. I  
21 have a card I can give it to you on how I can be here.

22 Maria West: And we do have our MMLA deputy director on Zoom right  
23 now.

24 Commenter: Oh good.

25 Maria West: Cara Morgan, if you are able to unmute, did you want  
26 to address.

27 Cara Morgan: Yeah!

1 Maria West: Great.

2 Cara Morgan: I would be happy to. Thank you so much for being  
3 here. I always appreciate your engagement and involvement. And yes. To  
4 Zoe and Mark's point, the regulations do allow for phasing in the  
5 containers. So what I'd like to do is set up a follow up meeting with  
6 you and probably the jurisdiction folks and maybe the hauler to talk  
7 through, maybe I'm not exactly sure what's going on there. Maybe they  
8 misunderstood or maybe there's, you know, kind of a different plan.  
9 But the regulations do allow up until 2036, if a container is still,  
10 you know, useful, it it can be replaced up until then, if the  
11 container, if it's life, needs to be ended and replaced, then there  
12 can be a phased in approach to the containers. Any new container that  
13 is provided, however, must be the required color as well as have the  
14 correct labeling. So there's a lot of flexibility and I'd love to set  
15 up a conversation and let's work through this and then figure out  
16 what's good and provide some good guidance.

17 Public Commenter: Okay? Okay, Perfect. Thank you. Well, I have  
18 one other thing on 1383, I'm just you know, I live in Grass Valley.  
19 I'm just a homeowner, you know, just posted x amount of things. Well,  
20 they're telling me that there is a requirement that I must have three  
21 bins and and pay for three bins. And of course, the fees have gone up  
22 significantly. And, you know, I compost, you know, I send all my  
23 plastic to TerraCycle. I have this much trash once a week that that I  
24 take over to my neighbor's bin with his permission. And and now  
25 they're telling me I have to have these three bins, whether you want  
26 them or not, and I have to pay for them even if I don't get them. Now  
27 this is, and so I said this to the commission and they said, well,

1 you're out. You're a high achiever. I get I get punished for being a  
2 high achiever. You know, I mean, we're about circular economy and zero  
3 waste and this is not compatible. Okay.

4 Cara Morgan: Yeah. Yeah. And thank you for that. And I so  
5 appreciate that you are a high achiever. I think that is great. And I  
6 think again, we could have some conversations. The regulations do  
7 provide flexibility to jurisdictions that want to allow for some self-  
8 help options for residential customers. So I think again, we should  
9 have a conversation specific to Grass Valley and explore what the  
10 options are, the regulations don't allow a specific waiver for  
11 residential, but they do allow for self-help. So again, let's set up a  
12 follow up and and work through some of these and and get our team  
13 together with the Grass Valley team to work through some of the  
14 questions that are coming both from you and other residents.

15 Public Commenter: Okay. Good. Yes. I say we should be rewarding  
16 people who want to do what we want them to do is zero waste, not  
17 punish them.

18 But thank you. Okay. And who was the voice in the room?

19 Zoe Heller: Cara Morgan, our deputy director for Materials  
20 Management and Local Assistance

21 Commenter: Maybe I can check in with one of you and get some  
22 input. Thanks.

23 Zoe Heller: Thank you.

24 Maria West: Great. And are there any other comments in the room  
25 today? Okay. It doesn't look like it. So are there any comments  
26 commentors on the phone? And if you're on the phone when your number,  
27 that's four digits of your number is called, you'll need to unmute

1 yourself with the start by pressing star six. Are there any other  
2 callers?

3 Lance Klug: Yes, we have four callers first caller the last four  
4 is 43571. Please unmute and go ahead.

5 Kristina Brown: Four, three, five, seven.

6 Lance Klug: You're on. Yes, go ahead.

7 Kristina Brown: Okay, great. Hi, this is Kristina Brown. I live  
8 in the Antelope Valley. I had a solid waste facility, put next door to  
9 my home, 160 acres. First it was hundreds and hundreds and hundreds  
10 and hundreds, thousands of tons of C&D dumped there. Then it is now  
11 mulch that's just strewn with litter. It's so far past what your  
12 regulations are in Title 14 that there's there's trash pickers  
13 multiple times per week coming and taking trash out of the top top  
14 layer of it. I just wanted to say I think that there's like a lot of  
15 greenwashing happening with 1383. I think also the fact that you guys  
16 even have an environmental justice meeting is a complete sham because  
17 we are being just buried in waste out in the Antelope Valley because  
18 of your regulations. There was a there was a a meeting with the  
19 between the LEA and CalRecycle asking our LEA asked for clarification  
20 on the applicability of PRC 44000.5, which is a person shall not  
21 dispose of solid waste, caused solid waste to be disposed of, arrange  
22 for the disposal of solid waste, transport solid waste for purposes of  
23 disposal, or accept solid waste for disposal, except that a solid  
24 waste disposal facility for which a solid waste facilities permit has  
25 been issued pursuant to this chapter, or as otherwise authorized  
26 pursuant to this division and the regulations adopted by the Board  
27 pursuant to this division. I have emailed Dorcas Hanson Lugo several

1 times asking her how this is supposed to work if only the landowner is  
2 on, you know, on the hook for all of this solid waste being dumped out  
3 by us because of 1383.

4 So I'm just confused about like who is in charge of the haulers  
5 and who is in charge of the generators and nobody's giving me an  
6 answer on that. So I'm calling you during this meeting and I'd like  
7 somebody to answer this for me. We've also put in a PRA request to get  
8 some information about this meeting that was had because none of this  
9 is making sense and you guys are just dumping solid waste on us.

10 Zoe Heller: Hi, Kristina. Thank you for reaching out and for  
11 calling and for sharing the concerns and the acknowledging the  
12 challenges with the various entities that are responsible for various  
13 components of implementation of of 1383. I think it would be helpful  
14 if we had a follow-up discussion to take a little bit of a deeper dive  
15 into some of the conversations that have happened. Our intent with  
16 implementation of 1383 to avoid this exact scenario that that you're  
17 talking about. So it's certainly something that that we take seriously  
18 and want to explore and see where there's options for resolution. I'm  
19 just looking over at my colleague Mark to see if he's familiar with  
20 the conversations between the LEA and the Department.

21 Mark De Bie: Yeah so

22 Kristina Brown: I would also like to ask if I hold on one second,  
23 please. I'd like to ask if there's anyone at CalRecycle that truly  
24 believes that anything agronomically beneficial about dumping mulch  
25 six feet, 12 feet, 20 feet high in the high desert where there's no  
26 water where nobody's overseeing anything, if that's going to actually  
27 do anything. Because what it just seems like is that it's a horizontal

1 landfill. I mean, you guys are trying to save Chiquita and, you know,  
2 do this greenwashing of California, where zero waste, which is total  
3 B.S. and you're just dumping it sideways all around our homes. And  
4 there is something there is something called inverse condemnation,  
5 where that's everybody in the Antelope Valley that's experiencing this  
6 should sue you guys for creating this thing that you've absolutely  
7 taken no responsibility for on the back end. And every single  
8 department keeps shifting blame over and my home is ruined. I have  
9 trucks going at one a.m., 2 a.m., 3 a.m., 4 a.m., 5 a.m. They're  
10 dumping the. And it's not just next door to me. It's all over these  
11 giant, giant facilities that are completely unregulated. There's no  
12 swift permitting, there's no permitting of anything at all. And we're  
13 doing it on top of a bunch of poor and and middle income people that  
14 have no way to fight back. I think that this like I would really like  
15 a meeting with you and I think somebody from CalRecycle should come  
16 and talk to our community because I can't get our supervisor to come  
17 and look at any of this, any of these things. And I've spent three  
18 days down, you know, trying to give comments at the supervisors  
19 meeting and they're finally going to try to do something about it. But  
20 this is horrific. It's horrific. You guys are very quickly just  
21 obliterating certain areas on the map. Is anybody familiar with what  
22 I'm talking about?

23 Mark De Bie: Yes, This is Mark De Bie, deputy director that  
24 oversees a program here at CalRecycle that works with local law  
25 enforcement agency in their efforts to enforce solid waste law. And I  
26 am familiar that our staff have been consulting with the local  
27 enforcement agency, Los Angeles County, on a number of illegal

1 disposal activities and in your area. And my understanding is that the  
2 local enforcement agency has taken initial enforcement action against  
3 a number of landowners and are working through their enforcement  
4 process to resolve the issues. I also understand that there are, as  
5 you're indicating, a number of sites and the LEA is endeavoring to get  
6 ahead of many of those sites and begin action against any of the sites  
7 that are illegally disposing of the solid waste. Just very quickly,  
8 you mentioned an interest in knowing of who oversees haulers and  
9 generators and the responsibility for collecting waste from generators  
10 and hauling waste is primarily with local jurisdictions, cities and  
11 counties. The state does not have any responsibility in that area, but  
12 we do have a responsibility to address what happens to the waste in  
13 terms of how it's processed. And its final deposition should be if  
14 it's waste in the landfill and not on private property. And if it is  
15 considered to be illegal dumping. And I know that the LEA has made  
16 those determinations on a number of sites that and action will be  
17 taken to remediate those sites and it will be at the responsibility of  
18 the landowner to engage on that. Unlike hazardous waste law,  
19 responsibility for the generator and the hauler is not part of the  
20 non-hazardous solid waste law. So our ability to address issues with  
21 them is as limited, if not existent. So we struggle with the tools we  
22 have and but I can assure you that steps are being taken and I and my  
23 staff would be open in talking more in-depth about your experience and  
24 letting you know what we're doing in assisting the local enforcement  
25 agency.

1 Lance Klug: Thank you, Mark. I did take down her contact  
2 information, so I'll pass that along to the leadership after the  
3 meeting.

4 Um next. We have a caller with last four digits, 0922. Go ahead  
5 and unmute your mic by pressing star six and then go ahead, make your  
6 comment.

7 Katie: Hello, my name is Katie. Can you hear me?

8 Lance Klug: We can.

9 Katie: Okay, Great. I'm calling about the SB 54, the CMC report.  
10 So that report indicates that number five DP plastic is potentially  
11 recyclable and that is a bit confusing to me.

12 The other CalRecycle data indicates that that is not accurate.  
13 There was a public records request into CalRecycle's Recycling and  
14 Disposal Report System. The RDRS data was found that only 2.7% of  
15 California's number five rigid plastic waste was even sorted in  
16 quarter 1 to 3 of 2023.

17 If you also look at the CalRecycle 2023 processing fee final  
18 report, it indicates that they use the calculated change in number 2  
19 HDPE to determine that the cost per ton to recycle plastics, number  
20 three to number seven because they made up less than 5% of the total  
21 number of containers recycled. This is the seventh cost survey that  
22 the cost per ton for plastics, number three to number seven were based  
23 off the percentage change in HDPE Number two,

24 I'm just confused about why then if that data indicates that the  
25 plastic number five is actually not recyclable, why that why it was  
26 placed on that CMC list as potentially recyclable and if Cal  
27

1 recyclable, if CalRecycle will be publishing the data they relied on  
2 in order to make that determination.

3 Zoe Heller: Hi Katie, Thanks so much for calling in and really great  
4 question. Acknowledging that there's a number of different datasets  
5 that Cal Recycle looks at to make determinations for different parts  
6 of our our programs. And one of the things that we're looking at as a  
7 whole for California and for CalRecycle is ways in which we can align  
8 that data better so there's more clarity around the data that we have  
9 and how it's used for different determinations. So I just to  
10 acknowledge that. Specific to the covered material categories and  
11 those determinations of potential recyclability and composability,  
12 those determinations were made on Jan one of last year.

13 And what we utilized per our statutory responsibility, and I  
14 think I'm getting this right, but looking out at the team in case I  
15 say anything that's not quite right, is the criteria that were a part  
16 of Senate Bill 343 that look at collection of certain covered material  
17 categories at the jurisdiction level and then how those material are  
18 processed at large volume transfer processors. And through that data,  
19 that's how we made those determinations of potential recyclability and  
20 compostability. Not going to remember the exact percentages off the  
21 top of my head, but it's in the 60% as far as residential collection  
22 and sorting out those large volume transfer processors, and that's  
23 specific to that covered material category so that that category of  
24 that package of support for polypropylene, for example, it may have  
25 said like a polypropylene take out container or something along those  
26 lines or a bin like a you know what I'm trying to like thinking of  
27 like a yogurt container or like something along those lines. So that

1 was the data that was used. In Jan 1 we're going to be updating those  
2 determinations of recyclability and composability for the covered  
3 material categories list based on any new data that we've collected or  
4 analyzed from last year to this year. So as it relates to the other  
5 data sets, those are those are collected differently. That data is  
6 collected differently for different outcomes. And our packaging team  
7 responds to each question that comes in and will lay out those  
8 different ways in which we collect data and how it's utilized. But at  
9 a high level, that's how those determinations were made for the  
10 covered material category list and how we're going to update them in  
11 the beginning of the year.

12 Lance Klug: Thank you. And yeah, have a caller can email  
13 packaging@calrecycle.ca.gov and we can speak to more of the specifics  
14 on that.

15 The next caller with the last four digits, five, four, seven,  
16 eight. Go ahead and unmute your mic by pressing star six and go ahead  
17 with your comment.

18 Cher: Hi, can you hear me?

19 Lance Klug: Yes.

20 Cher: Awesome, thanks. Hi I'm Cher community of Cyclei. What  
21 we're looking at is essentially helping to build out reuse  
22 infrastructure and the way we're doing that is starting with curbside  
23 collection of reusable packaging. We are about to pilot curbside  
24 collection of reusable packaging in the city of Berkeley. But we have  
25 a question as we are planning on collecting and returning wine bottles  
26 for resale, as there are a couple wineries that are willing to take  
27 back and resell their wines. But I also know that wine bottles have

1 been added to the CRV. So my question is, I'm not sure if CalRecycle  
2 has kind of thought through the reuse cycle of, you know, CRV  
3 associated bottles and how that would work.

4 So, you know, would we have to be added to some processing list  
5 and, you know, how would all of that CRV get refunded when we bring it  
6 to winery bottles who are reusing it and not really breaking it down?  
7 I'm just trying to understand, you know, where I can find more  
8 information on this and maybe who I would be able to talk to just to  
9 understand what the right process is for this.

10 Amy Cameron: Hi. Thank you so much for calling. This is Amy  
11 Cameron, and I am happy to set up a meeting with you offline so we can  
12 talk about this a little bit more. But yes, in essence, you would need  
13 to become a certified processor with our program. And we have specific  
14 regulations that we did as a result of AB 962 and they were finalized  
15 last year for processors who are in the reusable bottle space but  
16 happy again to reach out and have a meeting with you to talk a little  
17 bit more about this. Thank you.

18 Lance Klug: Thank you. And we have one more caller with the last  
19 four digits, 3606. Go ahead and ask you to unmute by pressing star six  
20 and then go ahead with your comment.

21 Jose Centeno: Hi, everyone. This is Jose Centeno. I'm calling  
22 from the Association of Rural Town Councils. So we are mainly out in  
23 the unincorporated area of Los Angeles County and I'm calling with  
24 regards to the issue that the prior caller called in about and this is  
25 with regard to illegal waste dumping in the unincorporated area,  
26 particularly with the issue of mulch being disguised as being  
27 disguised as mulch. So throughout the Antelope Valley, there's illegal

1 dumping that's happening and where to call it in in amounts that are  
2 unbelievable to be seen. I recently attended a meeting about that near  
3 the community of Neenach, Antelope Acres and Three Points, and there  
4 were over 90 people who spoke on this issue and how this is affecting  
5 their health, meaning that they have piles of waste and this has been  
6 happening since 2020 on that they been recording this. So now to the  
7 point where you have a there's a few spots where they're literally  
8 running a landfill or a complete waste disposal. I've seen it with my  
9 own eyes, but the deputy spoke earlier with regards to L.A. County  
10 addressing the issue, but it has not been addressed for the urgency  
11 that it requires. The last update was that there is they're trying to  
12 allocate funds, they're trying to do an ordinance, but this is going  
13 to take months, if not years. The last thing that they did was they  
14 were trying to assign two people from the health department of Los  
15 Angeles County. They have no idea who those people were. There is no  
16 real plan of action. So when earlier it was stated that CalRecycle is  
17 responsible for it where illegal waste ends up. This is where it's  
18 ending up. And it's we don't know exactly where it's coming from.  
19 Meaning, that it could also come from construction waste, from other  
20 facilities. So it's the communities are being devastated by what's  
21 going on and we're not getting straight answers. I live on the  
22 opposite end of the Antelope Valley where the problem is not that big,  
23 but it's also starting to happen on our end. The goes all the way from  
24 the 15, all the to the 14 where this is happening. So we truly wish  
25 that at least CalRecycle can demand or at least get a true, accurate  
26 update of what's really going on from LA County if it's possibly we  
27 can provide with pictures videos of everything that's going on as

1 proof. But it is frustrating that all these communities are suffering.  
2 They've been suffering for months and years. And there is no immediate  
3 action. So I'm not sure you guys can this on your agenda for the next  
4 meeting so we can provide more input. But something has to happen.

5       Zoe Heller: Yeah. Thank you for your call and for sharing with us  
6 what you're experiencing. You know, Mark shared, some details with the  
7 previous caller about our process here and where where our authority  
8 lies. But as he stated and similarly, we're we're happy to meet with  
9 to discuss more details specific to what you're saying and what you're  
10 facing and see where there's an opportunity for us to convene with the  
11 other regulatory agencies to identify a resolution or a path towards  
12 resolution. So if you could leave your or your contact information  
13 with Lance, we'll follow up with you and explore further to see where  
14 there's additional options.

15       Kristina Brown: Hi, this is Kristina Brown again, and I just  
16 unmuted myself because I was muted before. I just wanted to say that  
17 Los Angeles is pointing its finger at you and saying they can't help  
18 us because of your laws and you guys are I don't know what you're  
19 doing, but I mean, you're guiding the LEA as far as the materials that  
20 we're seeing. And so if you could guide them in a different direction  
21 to actually take some initiative to help us, stop what's happening  
22 right next to all of our homes, that would be really helpful. And  
23 there has not been a clear answer about who's in charge of anyone else  
24 but the landowners. And it's just a big gaping hole. And I'm wondering  
25 if anybody needs my contact information in order to have a meeting  
26 about this.

1 Lance Klug: Hi Kristina, I got your contact information earlier,  
2 and I'm passing that along to the deputy directors.

3 Kristina Brown: Okay. Because, like, we just we can't keep going  
4 on like this. It's it's absolutely it's just it's devastating. It's  
5 devastating.

6 Lance Klug: All right. Thank you. And so we'll follow up with you  
7 on that. We do have one more caller, and I'm going to go ahead and ask  
8 you to unmute your mic with the last four digits.

9 Kristina Brown: Thank you

10 Lance Klug: Three, Four, Eight, Three. Three, four, eight, three.  
11 Thank you.

12 Ashley Mroz: Hello? Can you hear me?

13 Lance Klug: Yes

14 Ashely Mroz: Hi. My name is Ashley Mroz and I also live here in  
15 the Antelope Valley, surrounded by the devastation of illegal,  
16 hazardous solid waste dumping. We really, truly are watching the  
17 destruction of the natural environment by deliberate and negligent  
18 human action. And I just really I think my community, all of us want  
19 to know who is letting this unregulated, solid hazardous waste dumping  
20 continue, who can be held accountable for hiding their noncompliance  
21 by dumping this hazardous waste in a secluded which is us, rather than  
22 paying for it, be taken to a treatment facility? Our community is  
23 experiencing injustice that is affecting our health and wellness due  
24 to the toxins and airborne chemicals from this boiler fuel which is  
25 right down the street from me and many others, quality of life is  
26 gone. The smell after these mulch fires, mind you, they combust all  
27 the time burns your throat and eyes immediately. It smells so

1 disgusting. That induces nausea, headaches, bloody noses and  
2 respiratory issues all of us are experiencing. This criminal activity.  
3 Not if, but when the next most fire happens -- mind you, these trucks  
4 are dumping day in and day out all night-- and there's more damage to  
5 surrounding homes, livestock or worse, bodily injury or fatality, the  
6 blood will be on the hands of the people behind this. It has become  
7 unbearable, inhumane and pure evil. This is just a glimpse of our  
8 daily life since it started. It's not just people suffering at the  
9 hands of greed due to this illegal dumping. It's changing our entire  
10 ecosystem here. We need environmental justice and put this to an end.  
11 I just want to know who is who is responsible for this doing this to  
12 our community.

13         Zoe Heller: Ashley, thank you for the call. And, you know, as  
14 we've we've stated

15         Kristina Brown: I just wanted to add one more thing after Ashley,  
16 two of our neighbors' homes just burnt down from combustion, from  
17 combusting mulch that was dumped there. It just completely burnt down.  
18 And I just think we're at a level now where we need you guys to  
19 actually look at this area and what 1383 and the other four laws about  
20 aversion have have done, have done and has if there's going to be any  
21 enviro environmental impact report done on just the area in general  
22 and over mulchification and what that looks like because we just we  
23 can't handle it it's just nonstop trucks and L.A. is not moving fast  
24 enough. And they keep pointing fingers at you guys saying that you  
25 guys are in charge and then you're, you know, not I just we help.

26         Zoe Heller: Yeah, well, we'll prioritize getting a meeting.  
27

1 Kristina Brown: That's, that's all I'll add. Thanks for your  
2 time.

3 Zoe Heller: With you guys as soon as possible so that we can  
4 explore this further and bring the other regulatory agencies in as  
5 well.

6 Thank you.

7 Lance Klug: Thank you. So we do have the contact information for  
8 that last caller. We will follow up and send it back to you. Maria, no  
9 additional calls.

10 Maria West: Okay. Thank you so much, Lance. And we do have one  
11 additional comment in the room, maybe a couple of them. So go ahead,  
12 Nick.

13 Nick Lapis: Good morning. Nick Lapis of Californians Against  
14 Waste. I wanted to comment on the Antelope Valley situation, but  
15 almost more broadly than that, I think it warrants us having a new set  
16 of conversations about illegal land app. I mean, seeing the photos  
17 from the Antelope Valley, it is really staggering. Like we hear  
18 illegal dumping and we assume it's a pickup truck load of material  
19 that somebody dumps. But this is, you know, dozens of transfer trailer  
20 trucks arriving every day with that are taller than the people in the  
21 photos and just so clearly in violation of the Title 14 regulations,  
22 which you updated about a decade ago specifically to address this  
23 issue. The requirement previously had been that you can't apply mulch  
24 beyond agronomic grade, and that had never been defined. And you all  
25 took on this issue and put specific parameters that you can visually  
26 see from the photos are being completely ignored. If nothing else, the  
27 one-foot depth is clearly being ignored. But this isn't just an

1 Antelope Valley issue and it is a systemic issue. And whether it's,  
2 you know, just enforcing the existing regulations, further updating  
3 Title 14, maybe you're relooking at 901 in some of the reporting  
4 there. You know, this was an area that I personally don't think was  
5 handled sufficiently 901. There's a broader conversation needs to  
6 happen here. I think we're very open to supporting legislation on this  
7 if necessary. But it's it is staggering if you've seen the photos and  
8 it's not unpredictable there.

9 Thank you.

10 Maria West: Thank you. And we have one more caller or one more  
11 person in the room.

12 Evan Edgar: Evan Edgar, California Compost Coalition. It is  
13 staggering. It's inhumane. What's going on out in the high desert is  
14 bigger than what you can even imagine. It's miles long of levees 15  
15 feet high piled 6 to 10 feet deep. And you do have current regulations  
16 on this. We don't need to have another ordinance or another law. We  
17 have all the tools in the toolbox today. There's no reason why this is  
18 not being handled today. I rest assured none of my California Compost  
19 Coalition members are doing this. What we are doing for a land  
20 application. We take Title 14 compost from a permitted facility and we  
21 take it out to the ranches and you be hearing more about it in 2025  
22 where we're developing carbon credits because we take Title 14 compost  
23 to a quarter inch to a half inch, lay it out and do the do the  
24 science, do the math. We have all types of carbon projects. We have  
25 four ranches that will begin carbon credits through their  
26 certification process, which is robust. And what is going on in upper  
27 desert is anywhere near that is unproductive ag land. It is maybe zone

1 ag, but it's unproductive agland without any water, any treatment.  
2 Everything heard on a on a phone from the residents of Antelope Valley  
3 is true, seen the pictures and at the local level the LEA says they  
4 don't have the tools and they want to pass an ordinance or they point  
5 up here to Sacramento. But they're the local enforcement agency local.  
6 You guys are the enforcement agency, the EA that needs to take this  
7 very seriously. And it's it's it's a sham going on in L.A. with  
8 Chiquita Canyon crisis impacting folks coupled with the closure. Alpha  
9 Olinda, we have a new landfill crisis coming in in L.A. and the crisis  
10 going on right now with these horizontal landfills. So we don't need  
11 another stinking law to enforce the laws we have today. Do your job,  
12 please. Thank you.

13 Maria West: Are there any other comments in the room? Okay. If  
14 there's nothing else on the phone, we can end the session today and  
15 just let you know that you can find the recordings in both English and  
16 Spanish of today's October Monthly Public Meeting posted on YouTube as  
17 soon as possible, and then please follow us on social media platforms  
18 and govdelivery email lists for updates. Thanks to everyone who  
19 participated in today's public meeting, we do expect that our PDFs  
20 will be available as a few minutes after this meeting ends because we  
21 have to reboot our reboot the entire system, including the one that  
22 was broadcasting this meeting. So we're expecting the PDFs will be  
23 downloadable after that time. If there's any other issues, please let  
24 us know. Have a great day and we will see you next month. Thank you.
