WORKSHOP SUMMARY

The California Integrated Waste Management Board, in partnership with the Caltrans Headquarters Landscape Architecture Program, has developed new special provisions that focus on using compost to improve roadside vegetation and reduce erosion.

A series of five workshops has been scheduled across the state to introduce these new specifications to district designers, including landscape architects, biologists, and stormwater quality coordinators.

Compost incorporation, Placer County, Route 267.

These workshops will provide designers with the opportunity to comment, suggest revisions, and ask compost/water quality-related questions of a diverse team of experts. The workshop team will be staffed by University professionals, researchers, soil scientists, and California compost industry professionals as well as landscape architects with extensive compost experience from other state transportation departments.

These workshops will provide practical tools and information on using compost to reduce erosion and improve the establishment of roadside vegetation.

BENEFITS OF COMPOST AND MULCH

Compost and mulch benefits the environment in the following ways:

- Decreases runoff and erosion.
- Improves roadside revegetation establishment.
- Reduces irrigation requirements.
- Supplies significant quantities of organic matter.
- Improves drainage of clay-based soils and water-holding capacity of sand-based soils.
- Improves and stabilizes soil pH.
- Improves cation exchange capacity (CEC) of soils, improving their ability to hold nutrients for plant use.
- Supplies macro- and micronutrients.
- Supplies beneficial microorganisms.
- Suppresses certain soil-borne diseases.
- Binds and degrades specific pollutants.
- Reduces the need for fertilizers and pesticides.
- Encourages slow release of nitrogen.
- Improves drought tolerance.
- Improves plant health and vigor.

WORKSHOP AGENDA

9:00–9:15 a.m.

Welcome and Introductions

9:15–9:45 a.m.

Mulches, Soil Amendments, and Organic Fertilizers

Dr. David Crohn will discuss the characteristics and uses of mulches, soil amendments, and organic fertilizers.

9:45–11:15 a.m.

Improving Stormwater Quality through Compost-Based BMPs

Dr. Britt Faucette and Mr. Mark Maurer will discuss the benefits of compost for roadside applications, including reduced runoff, improved infiltration, improved erosion control, and filtration. Mr. Maurer will focus on the success of the Washington State Department of Transportation (WSDOT) in using compost on roadside applications.

11:15–11:30 a.m.

Break

11:30 a.m.–12:00 noon

New Caltrans Tools to Implement Compost-Based BMPs

Mr. Ron Alexander will discuss the U.S. Composting Council's Seal of Testing Assurance Program, the national compost quality and labeling program. The new special provisions specify that only compost supplied by producers participating in the Seal of Testing Assurance Program can be used.

12:00 noon–12:30 p.m.

New Caltrans Compost Specifications

Mr. Greg Balzer will present new special provisions that focus on using compost to reduce erosion and improve the establishment of roadside vegetation. His presentation will include how compost quality and safety can be ensured and the benefits of bulk versus hydroseed applications.

12:30–1:00 p.m.

Lunch

1:00–1:30 p.m.

Caltrans Project Presentations

Mr. Steve Nawrath will discuss innovative Caltrans projects, pros and cons of different types of applications, and lessons learned.

1:30–2:45 p.m.

Panel Discussion

An expert panel will be available to discuss using compost and mulch on roadside applications. The panel will be comprised of experts representing Caltrans, WSDOT, the compost industry, erosion control specialists, and academia.

2:45–3:00 p.m.

Closing Remarks

SPEAKER/PANELIST BIOS

Ron Alexander, United States Composting Council

Mr. Alexander is a horticulturist with more than 22 years of experience working with compost and other organic recycled products. He is the author of the American Association of State Highway and Transportation Officials Compost Erosion Control Specifications, Landscape Architecture Specifications for Compost Utilization, and Compost Use on State Highway Applications. He is currently co-managing the U.S. Composting Council's Seal of Testing Assurance Program, the national compost quality and labeling program. Mr. Alexander is also the President of R. Alexander Associates, Inc., a consulting company specializing in product and market development for organic recycled products.

Greg Balzer, Caltrans

Mr. Balzer is a Senior Landscape Architect with the California Department of Transportation (Caltrans) Office of Roadside Management, responsible for coordinating the development and updating of roadside policy, procedures, and standards. He has coordinated the implementation of a number of new erosion control specifications that will help reduce runoff and sedimentation and improve soil and plant health.

Dr. Larry Beran, Industry-Led Strategies (ILS)

Dr. Beran is currently acting as executive director for Industry-Led Strategies (ILS). He received a B.S. in civil engineering from the University of Nebraska, Lincoln, and a Ph.D. in applied economics from Clemson University.

In partnership with the Texas Commission on Environmental Quality and the Texas State Soil and Water Conservation Board, an incentive program was implemented to encourage use of

manure-derived compost by the Texas Department of Transportation (TX DOT) in new construction and maintenance projects. The incentive would accelerate the work underway to develop specifications for the use of compost in highway contracting. Today, TX DOT is the largest user of manure-derived compost in the U.S.

Matthew Cotton, United States Composting Council

Matthew Cotton has more than 18 years of experience in the composting industry. His company has provided technical composting-related consulting services to public and private clients in California for more than ten years. Mr. Cotton currently serves as the president of the Board of Directors of the U.S. Composting Council. The USCC is a national organization dedicated to the development, expansion, and promotion of the composting industry based upon science, principles of sustainability, and economic viability.

Dr. David Crohn, UC Riverside Extension

Dr. Crohn earned his Ph.D. in 1992 from Cornell University where he concentrated on soil and water engineering, water resource systems engineering, and biogeochemistry. Since then he has been working as a professor and Cooperative Extension specialist at the University of California, Riverside, where his research has emphasized beneficial uses for organic residues as composts, fertilizers, and mulches.

Dr. Britt Faucette, Filtrex International

Dr. Faucette is a Research Ecologist and the National Director of Research and Environmental Assistance for Filtrex International. His Ph.D. is from the University of Georgia where he

researched compost systems and industry standard BMPs used in erosion control and stormwater management applications. He also worked as a state compost/pollution prevention specialist in the Department of Biological and Agricultural Engineering. Dr. Faucette has a master's degree in agricultural ecology/sustainable systems. He serves on the ASTM Technical Committee to evaluate new erosion and sediment control technology, and he has published more than 50 articles relating to erosion and stormwater control and compost systems.

Brent Hallock, Chair, Earth and Soil Sciences Department, California Polytechnic State University, San Luis Obispo (Cal Poly)

Dr. Hallock teaches an undergraduate course in soil erosion and water conservation, an upper-division course in rangeland resources, and a graduate course in environmental assessment for erosion control. He earned Cal Poly's highest award of Distinguished Teacher in 2000. Dr. Hallock has taught more than 35 seminars and short courses in site analysis, erosion control, and selection of management measures and practices. He has obtained research grants from Caltrans, regional water quality control boards, the U.S. Environmental Protection Agency, and environmental firms on the use of vegetation in erosion control and water quality. The grants totaled more than \$3 million in the past eight years. Dr. Hallock arrived at Cal Poly in 1979 and is a Certified Professional Soil Scientist (CPSS) and Certified Professional in Erosion and Sediment Control (CPESC).

Janet Hartin, UC Riverside Extension

Janet Hartin has served as a University of California Cooperative Extension Environmental Horticulture Advisor since 1984 after earning B.S. and M.S. degrees in horticulture from the

University of Minnesota. Her program emphasis is on sustainable landscaping including water conservation and irrigation management, reduction of pesticide use by incorporation of integrated pest management practices, and the correct application and usage of compost in landscape and turfgrass plantings.

Mark Maurer, Washington State Department of Transportation

Mr. Maurer has worked for WSDOT since 1990 and is currently a roadside and site development manager. He works on broad policy issues such as the Highway Runoff Manual and the Standard Specifications and manages a staff that includes landscape architects and a horticulturist to support design, construction, and maintenance projects for the department.

Steve Nawrath, Caltrans

Mr. Nawrath is a California Licensed Landscape Architect and a Certified Professional in Erosion and Sediment Control (CPESC) currently working in the District 3, North Region Office of Landscape Architecture in Sacramento. He holds a B.S. in ornamental horticulture from Cal Poly, San Luis Obispo and a master's degree in landscape architecture from Cal Poly, Pomona. Currently, Mr. Nawrath is focused on the planning and design of "Environmental Improvement Projects" in the Tahoe Basin that aim to reduce and treat stormwater runoff from State highway facilities. A major component of this effort is the use of compost for effective soil restoration and long-term revegetation of disturbed sites. Compost is being used extensively to repair denuded roadside areas such as in cut and embankment slopes, in bio-treatment swales/basins, and in enhancing degraded stream environment zones that serve as natural filters for waters entering the lake.

Dan Noble, Association of Compost Producers

Mr. Noble is President/CEO of Noble Resources Group and is a nationally recognized recycling resource market development consultant based in Southern California. He is also Executive Director of the Association of Compost Producers (ACP) (www.healthysoil.org) and has more than 30 years of environmental education, market research, publishing, and strategic consulting experience in both the public and private sector. Mr. Noble has B.A. degrees in biology and chemistry from the University of California, San Diego, and M.S. degrees in molecular biology and environmental education from the University of Oregon.

Sandy Salisbury, Washington State Department of Transportation

Ms. Salisbury is the Region Liaison Landscape Architect for WSDOT. She has a B.A. in physical geography from California State University, Long Beach, and a master of landscape architecture degree from the University of Washington. She is a licensed landscape architect and has worked for WSDOT since 1998. Her focus is on natural systems restoration. Ms. Salisbury has worked on wetland mitigation sites and roadside restoration throughout eastern Washington. In addition, she is in charge of writing the Roadside Manual and the Roadside Classification Plan for the department. Ms. Salisbury participates in roadside policy teams, does visual impact assessments, and provides training on roadside matters both within and outside WSDOT.

A joint project of the California Integrated Waste Management Board, Caltrans, University of California, Association of Compost Producers, and United States Composting Council
